ARMCortexA520CT_CortexA725CT_CortexX925CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexA520CT_CortexA725CT_CortexX925CT.DSU.PPU_coreU (where $U = 0-2$ )	PPUV1
ARMCortexA520CT_CortexA725CT_CortexX925CT.DSU.PPU_coreU.busslave (where $U = 0-2$ )	PVBusSlave
ARMCortexA520CT_CortexA725CT_CortexX925CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA520CT_CortexA725CT_CortexX925CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA520CT_CortexA725CT_CortexX925CT.DSU.shared_cache	PVCache
ARMCortexA520CT_CortexA725CT_CortexX925CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA520CT_CortexA725CT_CortexX925CT.DSU.shared_cache.upstream[U] (where $U = 0-8$ )	PVBusSlave
ARMCortexA520CT_CortexA725CT_CortexX925CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexA520CT_CortexA725CT_CortexX925CT.MMAP	PVBusLogger
ARMCortexA520CT_CortexA725CT_CortexX925CT.MMAP.mapper	PVBusMapper
ARMCortexA520CT_CortexA725CT_CortexX925CT.RAS	PVBusLogger
ARMCortexA520CT_CortexA725CT_CortexX925CT.RAS.mapper	PVBusMapper
ARMCortexA520CT_CortexA725CT_CortexX925CT.cpuU.debug_rom (where $U = 0-2$ )	debug_rom
ARMCortexA520CT_CortexA725CT_CortexX925CT.ext_bus	PVBusLogger
ARMCortexA520CT_CortexA725CT_CortexX925CT.ext_bus.mapper	PVBusMapper
ARMCortexA520CT_CortexA725CT_CortexX925CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA520CT_CortexA725CT_CortexX925CT.global_debug_rom	debug_rom
ARMCortexA520CT_CortexA725CT_CortexX925CT.secondary_debug_rom	debug_rom
ARMCortexA520CT_CortexA725CT_CortexX925CT.subcluster0	Subcluster_ARM_Cortex-A520
ARMCortexA520CT_CortexA725CT_CortexX925CT.subcluster0.cpu0	ARM_Cortex-A520
ARMCortexA520CT_CortexA725CT_CortexX925CT.subclusterU.cpu0.UTLB (where $U = 0-2$ )	TLB
ARMCortexA520CT_CortexA725CT_CortexX925CT.subclusterU.cpuV.dtlb (where $U = 0-2$ ; $V = 0-2$ )	TLB
ARMCortexA520CT_CortexA725CT_CortexX925CT.subclusterU.cpu0.l1dcache (where $U = 0-2$ )	PVCache
ARMCortexA520CT_CortexA725CT_CortexX925CT.subclusterU.cpu0.l1dcache.downstream[0].pvbusmaster (where $U = 0-2$ )	PVBusMaster
ARMCortexA520CT_CortexA725CT_CortexX925CT.subclusterU.cpu0.l1dcache.upstream[0] (where $U = 0-2$ )	PVBusSlave
ARMCortexA520CT_CortexA725CT_CortexX925CT.subclusterU.cpu0.l1icache (where $U = 0-2$ )	PVCache
ARMCortexA520CT_CortexA725CT_CortexX925CT.subclusterU.cpu0.l1icache.downstream[0].pvbusmaster (where $U = 0-2$ )	PVBusMaster
ARMCortexA520CT_CortexA725CT_CortexX925CT.subclusterU.cpu0.l1icache.upstream[0] (where $U = 0-2$ )	PVBusSlave

Name	Instance type
ARMCortexA520CT_CortexA725CT_CortexX925CT.subclusterU.cpu0.l2cache (where $U = 0-2$ )	PVCache
ARMCortexA520CT_CortexA725CT_CortexX925CT.subclusterU.cpu0.l2cache.downstream[0].pvbusmaster (where $U = 0-2$ )	PVBusMaster
ARMCortexA520CT_CortexA725CT_CortexX925CT.subclusterU.cpu0.l2cache.upstream[A] (where $U = 0-2$ ; $A = 0-1$ )	PVBusSlave
ARMCortexA520CT_CortexA725CT_CortexX925CT.subclusterU.sve (where $U = 0-2$ )	ScalableVectorExtension
ARMCortexA520CT_CortexA725CT_CortexX925CT.subcluster1	Subcluster_ARM_Cortex-A725
ARMCortexA520CT_CortexA725CT_CortexX925CT.subcluster1.cpu0	ARM_Cortex-A725
ARMCortexA520CT_CortexA725CT_CortexX925CT.subcluster2	Subcluster_ARM_Cortex-X925
ARMCortexA520CT_CortexA725CT_CortexX925CT.subcluster2.cpu0	ARM_Cortex-X925

This model has the following MTI trace components:

Name	Component type
ARMCortexA520CT_CortexA725CT_CortexX925CT.AMU	PVBusLogger
ARMCortexA520CT_CortexA725CT_CortexX925CT.AMU.mapper	PVBusMapper
ARMCortexA520CT_CortexA725CT_CortexX925CT.DAP	PVBusLogger
ARMCortexA520CT_CortexA725CT_CortexX925CT.DAP.mapper	PVBusMapper
ARMCortexA520CT_CortexA725CT_CortexX925CT.DSU	DSU-120
ARMCortexA520CT_CortexA725CT_CortexX925CT.DSU.PPU_cluster	PPUv1
ARMCortexA520CT_CortexA725CT_CortexX925CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexA520CT_CortexA725CT_CortexX925CT.DSU.PPU_coreU (where $U = 0-2$ )	PPUv1
ARMCortexA520CT_CortexA725CT_CortexX925CT.DSU.PPU_coreU.busslave (where $U = 0-2$ )	PVBusSlave
ARMCortexA520CT_CortexA725CT_CortexX925CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA520CT_CortexA725CT_CortexX925CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA520CT_CortexA725CT_CortexX925CT.DSU.shared_cache	PVCache
ARMCortexA520CT_CortexA725CT_CortexX925CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA520CT_CortexA725CT_CortexX925CT.DSU.shared_cache.upstream[U] (where $U = 0-8$ )	PVBusSlave
ARMCortexA520CT_CortexA725CT_CortexX925CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexA520CT_CortexA725CT_CortexX925CT.MMAP	PVBusLogger
ARMCortexA520CT_CortexA725CT_CortexX925CT.MMAP.mapper	PVBusMapper
ARMCortexA520CT_CortexA725CT_CortexX925CT.RAS	PVBusLogger
ARMCortexA520CT_CortexA725CT_CortexX925CT.RAS.mapper	PVBusMapper
ARMCortexA520CT_CortexA725CT_CortexX925CT.ext_bus	PVBusLogger
ARMCortexA520CT_CortexA725CT_CortexX925CT.ext_bus.mapper	PVBusMapper
ARMCortexA520CT_CortexA725CT_CortexX925CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA520CT_CortexA725CT_CortexX925CT.subcluster0.cpu0	ARM_Cortex-A520
ARMCortexA520CT_CortexA725CT_CortexX925CT.subclusterU.cpu0.UTLB (where $U = 0-2$ )	TLB

Name	Component type
ARMCortexA520CT_CortexA725CT_CortexX925CT.subclusterU.cpu0.l1dcache (where $U = 0-2$ )	PVCache
ARMCortexA520CT_CortexA725CT_CortexX925CT.subclusterU.cpu0.l1dcache.downstream[0].pvbusmaster (where $U = 0-2$ )	PVBusMaster
ARMCortexA520CT_CortexA725CT_CortexX925CT.subclusterU.cpu0.l1dcache.upstream[0] (where $U = 0-2$ )	PVBusSlave
ARMCortexA520CT_CortexA725CT_CortexX925CT.subclusterU.cpu0.l1icache (where $U = 0-2$ )	PVCache
ARMCortexA520CT_CortexA725CT_CortexX925CT.subclusterU.cpu0.l1icache.downstream[0].pvbusmaster (where $U = 0-2$ )	PVBusMaster
ARMCortexA520CT_CortexA725CT_CortexX925CT.subclusterU.cpu0.l1icache.upstream[0] (where $U = 0-2$ )	PVBusSlave
ARMCortexA520CT_CortexA725CT_CortexX925CT.subclusterU.cpu0.l2cache (where $U = 0-2$ )	PVCache
ARMCortexA520CT_CortexA725CT_CortexX925CT.subclusterU.cpu0.l2cache.downstream[0].pvbusmaster (where $U = 0-2$ )	PVBusMaster
ARMCortexA520CT_CortexA725CT_CortexX925CT.subclusterU.cpu0.l2cache.upstream[A] (where $U = 0-2$ ; $A = 0-1$ )	PVBusSlave
ARMCortexA520CT_CortexA725CT_CortexX925CT.subcluster1.cpu0	ARM_Cortex-A725
ARMCortexA520CT_CortexA725CT_CortexX925CT.subcluster2.cpu0	ARM_Cortex-X925

### Ports for ARMCortexA520CT\_CortexA725CT\_CortexX925CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AEND0MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.

Port	Direction	Protocol	Description
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcs_m_pchannel	master	PChannel	Cluster PCSM signal
cluster_powerdown_out	master	Signal	DEPRECATED - An output from PPU that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamiQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIRQ	master	Signal	Timer signals to SOC
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcs_m_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPU that informs thermal controller of the core power info
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error
coreinstrrun	master	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.

Port	Direction	Protocol	Description
dbgnopwrdown	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicreset	master	Signal	An output from PPU that can be used to reset GICCLK domain components
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_cluster_wakerequest	slave	Signal	PPU cluster wake request signal.
ppu_core_irq	master	Signal	PPU core interrupt.
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU core wake request signal.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Reset signal to cluster.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq	master	Signal	Interrupt signal from the trace buffer unit.
utility_bus_s	slave	PVBus	Utility bus slave
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.

Port	Direction	Protocol	Description
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

## Parameters for ARM CortexA520CT\_CortexA725CT\_CortexX925CT

### **AEND0\_DEFAULT**

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

Type: uint64\_t

Default value: 0x0

### **AEND1\_DEFAULT**

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

Type: uint64\_t

Default value: 0x0

### **AEND2\_DEFAULT**

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

Type: uint64\_t

Default value: 0x0

### **AEND3\_DEFAULT**

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

Type: uint64\_t

Default value: 0x0

### **ASTART0\_DEFAULT**

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

Type: uint64\_t

Default value: 0x0

#### **ASTART1\_DEFAULT**

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

Type: `uint64_t`

Default value: 0x0

#### **ASTART2\_DEFAULT**

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

Type: `uint64_t`

Default value: 0x0

#### **ASTART3\_DEFAULT**

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

Type: `uint64_t`

Default value: 0x0

#### **BROADCASTATOMIC**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: `true`

#### **BROADCASTCACHEMAIN**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: `false`

#### **BROADCASTOUTER**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: `false`

### **BROADCASTPERSIST**

Enable broadcasting of cache clean to the point of persistence operations. The `broadcastpersist` signal will override this value if used.

Type: `bool`

Default value: `true`

### **CLUSTER\_ID**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

### **CMO\_broadcast\_when\_cache\_state\_modelling\_disabled**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. This value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain even when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: `1`

### **GICDISABLE**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: `true`

### **bus\_type**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: `0`

**core\_power\_on\_by\_default**

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: `false`

**dcache-state\_modelled**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

**default\_opmode**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

**diagnostics**

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: `false`

**enable\_simulation\_performance\_optimizations**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of `stage12_tlb_size` parameter to 1024).

Type: `bool`

Default value: `true`

**has\_peripheral\_port**

If true, an additional AXI peripheral port is configured.

Type: `bool`

Default value: `false`

**l1cache-state\_modelled**

Set whether L1-cache has stateful implementation.

Type: `bool`

Default value: `false`

**l3cache-has\_mpam**

L3 Cache has MPAM support.

Type: `bool`

Default value: `true`

**l3cache-hit\_latency**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-maintenance\_latency**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-miss\_latency**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-read\_access\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size `l3cache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-read\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l3cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

**l3cache-size**

L3 Cache size in bytes.

Type: `uint32_t`

Default value: 0x80000

**l3cache-snoop\_data\_transfer\_latency**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

**l3cache-snoop\_issue\_latency**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

**l3cache-ways**

L3 Cache number of ways (sets are implicit from size).

Type: `uint16_t`

Default value: 16

**l3cache-write\_access\_latency**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size `l3cache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

### **l3cache-write\_latency**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **mpmm\_accumulator\_multiplier**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of n means the accumulator will use (n \* accumulator value) to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantum in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: uint8\_t

Default value: 1

### **num\_acp**

Number of ACP ports.

Type: uint8\_t

Default value: 0

### **subcluster0.CPUCFR**

Value of CPU Configuration Register.

Type: uint64\_t

Default value: 0x0

### **subcluster0.NUM\_CORES**

Number of cores in the subcluster. Total number of cores in cluster may not exceed 14.

Type: uint8\_t

Default value: 1

### **subcluster0.core\_cache\_protection**

core\_cache\_protection can change ERROFR, ERROPFGF and ERROPFGCTL fields. Possible values are: -1:Not implemented (by default), 0:Disabled, 1:Enabled.

Type: int8\_t

Default value: 1

**subcluster0.cpi\_div**

Divider for calculating CPI (Cycles Per Instruction).

Type: uint32\_t

Default value: 0x1

**subcluster0.cpi\_mul**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: uint32\_t

Default value: 0x1

**subcluster0.cpu0.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: bool

Default value: false

**subcluster0.cpu0.CRYPTODISABLE**

Disable cryptographic features.

Type: bool

Default value: false

**subcluster0.cpu0.RVBARADDR**

Value of RVBAR\_ELx register.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu0.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter trace\_special\_hlt\_imm16.

Type: bool

Default value: false

**subcluster0.cpu0.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu0.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu0.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu0.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu0.l2cache-read\_bus\_width\_in\_bytes**

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: uint32\_t

Default value: 0x10

**subcluster0.cpu0.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu0.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**subcluster0.cpu0.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu0.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu0.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

**subcluster0.cpu0.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu0.l2cache-write\_bus\_width\_in\_bytes**

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: uint32\_t

Default value: 0x20

**subcluster0.cpu0.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu0.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster0.cpu0.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster0.cpu0.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu0.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu0.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster0.cpu0.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

### **`subcluster0.cpu0.semihosting-Thumb_SVC`**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

### **`subcluster0.cpu0.semihosting-cmd_line`**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

### **`subcluster0.cpu0.semihosting-cwd`**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

### **`subcluster0.cpu0.semihosting-enable`**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

### **`subcluster0.cpu0.semihosting-heap_base`**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu0.semihosting-heap_limit`**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster0.cpu0.semihosting-stack_base`**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

### **`subcluster0.cpu0.semihosting-stack_limit`**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster0.cpu0.trace_special_hlt_imm16`**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster0.cpu0.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu0.vfp-present`**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

### **`subcluster0.cpu1.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **`subcluster0.cpu1.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster0.cpu1.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu1.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster0.cpu1.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu1.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu1.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu1.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

**subcluster0.cpu1.l2cache-read\_bus\_width\_in\_bytes**

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: uint32\_t

Default value: 0x10

**subcluster0.cpu1.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu1.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**subcluster0.cpu1.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu1.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu1.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

**subcluster0.cpu1.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu1.l2cache-write\_bus\_width\_in\_bytes**

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: uint32\_t

Default value: 0x20

**subcluster0.cpu1.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu1.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster0.cpu1.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster0.cpu1.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu1.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu1.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster0.cpu1.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**subcluster0.cpu1.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

**subcluster0.cpu1.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster0.cpu1.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster0.cpu1.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster0.cpu1.semihosting-heap\_base**

Virtual address of heap base.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu1.semihosting-heap\_limit**

Virtual address of top of heap.

Type: uint64\_t

Default value: 0xf000000

**subcluster0.cpu1.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: uint64\_t

Default value: 0x10000000

**subcluster0.cpu1.semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint64\_t

Default value: 0xf000000

**subcluster0.cpu1.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu1.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: bool

Default value: false

**subcluster0.cpu1.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

### **`subcluster0.cpu10.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **`subcluster0.cpu10.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu10.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu10.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu10.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu10.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu10.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu10.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu10.l2cache-read\_bus\_width\_in\_bytes**

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: uint32\_t

Default value: 0x10

**subcluster0.cpu10.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu10.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**subcluster0.cpu10.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu10.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu10.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

**subcluster0.cpu10.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu10.l2cache-write\_bus\_width\_in\_bytes**

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: uint32\_t

Default value: 0x20

**subcluster0.cpu10.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu10.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster0.cpu10.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster0.cpu10.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu10.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu10.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster0.cpu10.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**subcluster0.cpu10.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: uint8\_t

Default value: 171

**subcluster0.cpu10.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: string

Default value: N/A

**subcluster0.cpu10.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster0.cpu10.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster0.cpu10.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu10.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu10.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster0.cpu10.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu10.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster0.cpu10.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu10.vfp-present`**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

### **`subcluster0.cpu11.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **`subcluster0.cpu11.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu11.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu11.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster0.cpu11.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu11.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu11.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu11.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu11.l2cache-read\_bus\_width\_in\_bytes**

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: uint32\_t

Default value: 0x10

**subcluster0.cpu11.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster0.cpu11.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

#### **subcluster0.cpu11.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster0.cpu11.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster0.cpu11.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

#### **subcluster0.cpu11.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster0.cpu11.l2cache-write\_bus\_width\_in\_bytes**

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: uint32\_t

Default value: 0x20

**subcluster0.cpu11.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu11.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster0.cpu11.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster0.cpu11.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu11.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu11.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster0.cpu11.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**`subcluster0.cpu11.semihosting-Thumb_SVC`**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**`subcluster0.cpu11.semihosting-cmd_line`**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**`subcluster0.cpu11.semihosting-cwd`**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**`subcluster0.cpu11.semihosting-enable`**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**`subcluster0.cpu11.semihosting-heap_base`**

Virtual address of heap base.

Type: `uint64_t`

Default value: 0x0

**`subcluster0.cpu11.semihosting-heap_limit`**

Virtual address of top of heap.

Type: `uint64_t`

Default value: 0xf000000

**`subcluster0.cpu11.semihosting-stack_base`**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

### **`subcluster0.cpu11.semihosting-stack_limit`**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster0.cpu11.trace_special_hlt_imm16`**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster0.cpu11.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu11.vfp-present`**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

### **`subcluster0.cpu2.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **`subcluster0.cpu2.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster0.cpu2.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu2.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster0.cpu2.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu2.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu2.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu2.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

**subcluster0.cpu2.l2cache-read\_bus\_width\_in\_bytes**

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: uint32\_t

Default value: 0x10

**subcluster0.cpu2.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu2.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**subcluster0.cpu2.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu2.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu2.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

**subcluster0.cpu2.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu2.l2cache-write\_bus\_width\_in\_bytes**

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: uint32\_t

Default value: 0x20

**subcluster0.cpu2.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu2.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster0.cpu2.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster0.cpu2.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu2.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu2.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster0.cpu2.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**subcluster0.cpu2.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

**subcluster0.cpu2.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster0.cpu2.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster0.cpu2.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster0.cpu2.semihosting-heap\_base**

Virtual address of heap base.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu2.semihosting-heap\_limit**

Virtual address of top of heap.

Type: uint64\_t

Default value: 0xf000000

**subcluster0.cpu2.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: uint64\_t

Default value: 0x10000000

**subcluster0.cpu2.semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint64\_t

Default value: 0xf000000

**subcluster0.cpu2.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu2.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: bool

Default value: false

**subcluster0.cpu2.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

### **`subcluster0.cpu3.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **`subcluster0.cpu3.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu3.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu3.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu3.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu3.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu3.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu3.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu3.l2cache-read\_bus\_width\_in\_bytes**

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: uint32\_t

Default value: 0x10

**subcluster0.cpu3.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu3.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**subcluster0.cpu3.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu3.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu3.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

**subcluster0.cpu3.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu3.l2cache-write\_bus\_width\_in\_bytes**

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: uint32\_t

Default value: 0x20

**subcluster0.cpu3.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu3.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster0.cpu3.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster0.cpu3.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu3.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu3.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster0.cpu3.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**subcluster0.cpu3.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: uint8\_t

Default value: 171

**subcluster0.cpu3.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: string

Default value: N/A

**subcluster0.cpu3.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster0.cpu3.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster0.cpu3.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu3.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu3.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster0.cpu3.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu3.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

#### **`subcluster0.cpu3.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu3.vfp-present`**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

#### **`subcluster0.cpu4.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu4.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu4.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu4.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster0.cpu4.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu4.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu4.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu4.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu4.l2cache-read\_bus\_width\_in\_bytes**

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: uint32\_t

Default value: 0x10

**subcluster0.cpu4.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu4.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**subcluster0.cpu4.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu4.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu4.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

**subcluster0.cpu4.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu4.l2cache-write\_bus\_width\_in\_bytes**

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: uint32\_t

Default value: 0x20

**subcluster0.cpu4.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu4.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster0.cpu4.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster0.cpu4.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu4.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu4.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster0.cpu4.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**`subcluster0.cpu4.semihosting-Thumb_SVC`**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**`subcluster0.cpu4.semihosting-cmd_line`**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**`subcluster0.cpu4.semihosting-cwd`**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**`subcluster0.cpu4.semihosting-enable`**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**`subcluster0.cpu4.semihosting-heap_base`**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**`subcluster0.cpu4.semihosting-heap_limit`**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**`subcluster0.cpu4.semihosting-stack_base`**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

#### **`subcluster0.cpu4.semihosting-stack_limit`**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

#### **`subcluster0.cpu4.trace_special_hlt_imm16`**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

#### **`subcluster0.cpu4.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu4.vfp-present`**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

#### **`subcluster0.cpu5.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu5.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu5.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu5.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu5.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu5.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu5.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu5.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

**subcluster0.cpu5.l2cache-read\_bus\_width\_in\_bytes**

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: uint32\_t

Default value: 0x10

**subcluster0.cpu5.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu5.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**subcluster0.cpu5.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu5.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu5.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

**subcluster0.cpu5.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu5.l2cache-write\_bus\_width\_in\_bytes**

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: uint32\_t

Default value: 0x20

**subcluster0.cpu5.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu5.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster0.cpu5.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster0.cpu5.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu5.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu5.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster0.cpu5.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**subcluster0.cpu5.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

**subcluster0.cpu5.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster0.cpu5.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster0.cpu5.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster0.cpu5.semihosting-heap\_base**

Virtual address of heap base.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu5.semihosting-heap\_limit**

Virtual address of top of heap.

Type: uint64\_t

Default value: 0xf000000

**subcluster0.cpu5.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: uint64\_t

Default value: 0x10000000

**subcluster0.cpu5.semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint64\_t

Default value: 0xf000000

**subcluster0.cpu5.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu5.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: bool

Default value: false

**subcluster0.cpu5.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

### **`subcluster0.cpu6.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **`subcluster0.cpu6.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu6.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu6.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu6.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu6.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu6.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu6.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu6.l2cache-read\_bus\_width\_in\_bytes**

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: uint32\_t

Default value: 0x10

**subcluster0.cpu6.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu6.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**subcluster0.cpu6.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu6.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu6.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

**subcluster0.cpu6.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu6.l2cache-write\_bus\_width\_in\_bytes**

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: uint32\_t

Default value: 0x20

**subcluster0.cpu6.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu6.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster0.cpu6.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster0.cpu6.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu6.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu6.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster0.cpu6.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**subcluster0.cpu6.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: uint8\_t

Default value: 171

**subcluster0.cpu6.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: string

Default value: N/A

**subcluster0.cpu6.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster0.cpu6.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster0.cpu6.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu6.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu6.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster0.cpu6.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu6.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

#### **`subcluster0.cpu6.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu6.vfp-present`**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

#### **`subcluster0.cpu7.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu7.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu7.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu7.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster0.cpu7.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu7.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu7.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu7.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu7.l2cache-read\_bus\_width\_in\_bytes**

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: uint32\_t

Default value: 0x10

**subcluster0.cpu7.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu7.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**subcluster0.cpu7.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu7.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu7.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

**subcluster0.cpu7.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu7.l2cache-write\_bus\_width\_in\_bytes**

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: uint32\_t

Default value: 0x20

**subcluster0.cpu7.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu7.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster0.cpu7.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster0.cpu7.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu7.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu7.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster0.cpu7.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**`subcluster0.cpu7.semihosting-Thumb_SVC`**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**`subcluster0.cpu7.semihosting-cmd_line`**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**`subcluster0.cpu7.semihosting-cwd`**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**`subcluster0.cpu7.semihosting-enable`**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**`subcluster0.cpu7.semihosting-heap_base`**

Virtual address of heap base.

Type: `uint64_t`

Default value: 0x0

**`subcluster0.cpu7.semihosting-heap_limit`**

Virtual address of top of heap.

Type: `uint64_t`

Default value: 0xf000000

**`subcluster0.cpu7.semihosting-stack_base`**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

### **`subcluster0.cpu7.semihosting-stack_limit`**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster0.cpu7.trace_special_hlt_imm16`**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster0.cpu7.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu7.vfp-present`**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

### **`subcluster0.cpu8.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **`subcluster0.cpu8.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu8.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu8.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu8.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu8.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu8.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu8.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

**subcluster0.cpu8.l2cache-read\_bus\_width\_in\_bytes**

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: uint32\_t

Default value: 0x10

**subcluster0.cpu8.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu8.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**subcluster0.cpu8.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu8.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu8.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

**subcluster0.cpu8.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu8.l2cache-write\_bus\_width\_in\_bytes**

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: uint32\_t

Default value: 0x20

**subcluster0.cpu8.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu8.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster0.cpu8.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster0.cpu8.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu8.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu8.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster0.cpu8.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**subcluster0.cpu8.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

**subcluster0.cpu8.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster0.cpu8.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster0.cpu8.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster0.cpu8.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu8.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu8.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster0.cpu8.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu8.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu8.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster0.cpu8.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

### **subcluster0.cpu9.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **subcluster0.cpu9.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **subcluster0.cpu9.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **subcluster0.cpu9.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **subcluster0.cpu9.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **subcluster0.cpu9.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu9.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu9.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu9.l2cache-read\_bus\_width\_in\_bytes**

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

Type: uint32\_t

Default value: 0x10

**subcluster0.cpu9.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu9.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**subcluster0.cpu9.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu9.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu9.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

**subcluster0.cpu9.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu9.l2cache-write\_bus\_width\_in\_bytes**

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

Type: uint32\_t

Default value: 0x20

**subcluster0.cpu9.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu9.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster0.cpu9.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster0.cpu9.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu9.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu9.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster0.cpu9.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**subcluster0.cpu9.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: uint8\_t

Default value: 171

**subcluster0.cpu9.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: string

Default value: N/A

**subcluster0.cpu9.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster0.cpu9.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster0.cpu9.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu9.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu9.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster0.cpu9.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu9.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

#### **`subcluster0.cpu9.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu9.vfp-present`**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

#### **`subcluster0.dcache-hit_latency`**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.dcache-maintenance_latency`**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.dcache-miss_latency`**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.dcache-prefetch_enabled`**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

Type: `bool`

Default value: `false`

### **`subcluster0.dcache-read_access_latency`**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.dcache-read_latency`**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.dcache-size`**

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

### **`subcluster0.dcache-snoop_data_transfer_latency`**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.dcache-write_access_latency`**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.dcache-write\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.ete.CLAIMTAGS**

Number of claim tags.

Type: uint8\_t

Default value: 4

**subcluster0.ete.MAX\_INST\_PER\_Q**

Maximum limit for the number of instructions implied by a Q element.

Type: uint16\_t

Default value: 0x1

**subcluster0.ete.PIDR\_CM0D**

TRCPIDR CM0D value.

Type: uint8\_t

Default value: 0

**subcluster0.ete.PIDR\_REVAND**

TRCPIDR REVAND value.

Type: uint8\_t

Default value: 0

**subcluster0.ete.PIDR\_REVISION**

TRCPIDR REVISION value.

Type: uint8\_t

Default value: 0

**subcluster0.ete.Q\_CADENCE**

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

#### **`subcluster0.ete.RES0_STATEFUL`**

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: `false`

#### **`subcluster0.ete.RETSTACK`**

Return stack depth.

Type: `uint8_t`

Default value: `3`

#### **`subcluster0.ete.REVISION`**

TRCIDR1 revision value.

Type: `uint8_t`

Default value: `0`

#### **`subcluster0.ete.SIM_OVERFLOW_GRANULARITY`**

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

#### **`subcluster0.ete.SIM_OVERFLOW_PERCENTAGE`**

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: `0`

#### **`subcluster0.ete.SOURCE_ADDRESS`**

Allow generation of source address elements.

Type: `bool`

Default value: `false`

#### **`subcluster0.ete.TRACE_OUTPUT`**

File to which to write trace byte stream.

Type: `string`

Default value: `N/A`

#### **`subcluster0.ete.TRCRSRTA_FORCED_EXCEP`**

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: `false`

#### **`subcluster0.force_mte_tag_access_razwi_and_ignore_tag_checks`**

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: `false`

#### **`subcluster0.force_zero_PSTATE_PAN`**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: `false`

#### **`subcluster0.force_zero_mpam_partid_and_pmg`**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

Type: `uint8_t`

Default value: `0`

#### **`subcluster0.has_actlr2`**

If true ACLTR2 exists and ACTLR2(NS) is aliased to ACTLR\_EL1[63:32].

Type: `bool`

Default value: `true`

#### **`subcluster0.has_delayed_dbgreg`**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

### **`subcluster0.has_delayed_sysreg`**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `true`

### **`subcluster0.has_dot_product`**

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

### **`subcluster0.has_ete`**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (-plugin or -P).

Type: `bool`

Default value: `false`

### **`subcluster0.icache-hit_latency`**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.icache-maintenance_latency`**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.icache-miss_latency`**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

### **subcluster0.icache-prefetch\_enabled**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

Type: bool

Default value: false

### **subcluster0.icache-read\_access\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **subcluster0.icache-read\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. icache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **subcluster0.icache-size**

L1 I-Cache size in bytes.

Type: uint32\_t

Default value: 0x8000

### **subcluster0.invalidate\_code\_cache\_on\_icache\_cmo**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: uint8\_t

Default value: 0

**subcluster0.memory\_tagging\_support\_level**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

Type: uint8\_t

Default value: 3

**subcluster0.pmu-num\_counters**

Number of PMU counters implemented.

Type: uint8\_t

Default value: 6

**subcluster0.ptw\_latency**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

**subcluster0.ras\_extra\_configurations**

Miscellaneous configurations for error records. An array of JSON objects. Note for ERXCTLR\_EL1 register it only allows to define the mask value for the IMPDEF fields, ie bits [63:32] and bit 1, but its reset value applies on all fields. Note for ERXMISCN masks - these are 64 bit masks covering the 64 bit registers ERXMISCN\_EL1. E.g. [{"Index": 0, "ERXMISCO\_mask": 0x0, "ERXMISCO\_reset": 0x0, "ERXMISC1\_mask": 0x0, "ERXMISC1\_reset": 0x0, "ERXMISC2\_mask": 0x0, "ERXMISC2\_reset": 0x0, "ERXMISC3\_mask": 0x0, "ERXMISC3\_reset": 0x0, "ERXCTLR\_EL1\_mask": 0x0, "ERXCTLR\_EL1\_reset": 0x0}, {"Index": 1, "ERXMISCO\_mask": 0x0, "ERXMISCO\_reset": 0x0, "ERXSTATUS\_IERR\_mask": 0x300}].

Type: string

Default value: "[ { \"Index\": 1, \"ERXMISCO\_mask\": 0xFFFFc0003fc3, \"ERXMISC1\_mask\": 0x03F870003FF30f07, \"ERXPFGCTL\_reset\": 0x1000 }, { \"Index\": 2, \"ERXMISCO\_mask\": 0xFFFFFe007ffc0, \"ERXMISCO\_reset\": 0x2, \"ERXSTATUS\_IERR\_mask\": 0x300 , \"ERXMISC1\_mask\": 0x0FF8700ffff31f0f, \"ERXPFGCTL\_reset\": 0x1000 } ]"

**subcluster0.ras\_pfg\_clock\_mhz**

RAS Pseudo-Fault generation clock rate in MHz.

Type: uint8\_t

Default value: 12

**subcluster0.revision\_number**

Revision number of TRM implemented by the model. Changing the value can change the model behaviour. Visible as the Variant field in MIDR/MIDR\_EL1. Corresponds to the revision number X in rXpY.

Type: `uint8_t`

Default value: 0

**subcluster0.tlb\_latency**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

**subcluster0.tlbi\_stall\_enabled**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: `false`

**subcluster0.treat\_PAC\_as\_NOP**

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are **NOP**. Branch, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

Type: `bool`

Default value: `false`

**subcluster0.walk\_cache\_latency**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

**subcluster1.CPUCFR**

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: 0x0

**subcluster1.NUM\_CORES**

Number of cores in the subcluster. Total number of cores in cluster may not exceed 14.

Type: `uint8_t`

Default value: 1

**subcluster1.cpi\_div**

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 0x1

**subcluster1.cpi\_mul**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 0x1

**subcluster1.cpu0.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster1.cpu0.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster1.cpu0.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster1.cpu0.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: 0x0

**subcluster1.cpu0.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter trace\_special\_hlt\_imm16.

Type: bool

Default value: false

**subcluster1.cpu0.force-fpsid**

Override the FPSID value.

Type: bool

Default value: true

**subcluster1.cpu0.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu0.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu0.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu0.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster1.cpu0.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster1.cpu0.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x100000

#### **subcluster1.cpu0.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster1.cpu0.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster1.cpu0.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster1.cpu0.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu0.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

### **`subcluster1.cpu0.min_sync_level`**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: `0`

### **`subcluster1.cpu0.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster1.cpu0.semihosting-A64_HLT`**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster1.cpu0.semihosting-ARM_SVC`**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

### **`subcluster1.cpu0.semihosting-T32_HLT`**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**subcluster1.cpu0.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**subcluster1.cpu0.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**subcluster1.cpu0.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster1.cpu0.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster1.cpu0.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu0.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu0.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster1.cpu0.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu0.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster1.cpu0.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster1.cpu0.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster1.cpu1.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster1.cpu1.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster1.cpu1.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster1.cpu1.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu1.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster1.cpu1.force-fpsid**

Override the FPSID value.

Type: `bool`

Default value: `true`

**subcluster1.cpu1.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu1.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu1.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu1.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu1.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu1.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

#### **`subcluster1.cpu1.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu1.l2cache-snoop_issue_latency`**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu1.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu1.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu1.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster1.cpu1.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu1.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu1.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu1.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster1.cpu1.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**subcluster1.cpu1.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

**subcluster1.cpu1.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster1.cpu1.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster1.cpu1.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster1.cpu1.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu1.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu1.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster1.cpu1.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu1.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster1.cpu1.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster1.cpu1.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster1.cpu10.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster1.cpu10.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster1.cpu10.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster1.cpu10.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu10.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster1.cpu10.force-fpsid**

Override the FPSID value.

Type: `bool`

Default value: `true`

**subcluster1.cpu10.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu10.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu10.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu10.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu10.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu10.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

**subcluster1.cpu10.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu10.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu10.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu10.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu10.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster1.cpu10.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu10.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**subcluster1.cpu10.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**subcluster1.cpu10.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster1.cpu10.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**subcluster1.cpu10.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

**subcluster1.cpu10.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster1.cpu10.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster1.cpu10.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: bool

Default value: true

**subcluster1.cpu10.semihosting-heap\_base**

Virtual address of heap base.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu10.semihosting-heap\_limit**

Virtual address of top of heap.

Type: uint64\_t

Default value: 0xf000000

**subcluster1.cpu10.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: uint64\_t

Default value: 0x10000000

**subcluster1.cpu10.semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint64\_t

Default value: 0xf000000

**subcluster1.cpu10.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu10.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu10.vfp-present`**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

### **`subcluster1.cpu11.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **`subcluster1.cpu11.CFGTE`**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu11.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu11.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu11.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster1.cpu11.force-fpsid**

Override the FPSID value.

Type: `bool`

Default value: `true`

**subcluster1.cpu11.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu11.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu11.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu11.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu11.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

#### **subcluster1.cpu11.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x100000

#### **subcluster1.cpu11.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster1.cpu11.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster1.cpu11.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster1.cpu11.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster1.cpu11.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster1.cpu11.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu11.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu11.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu11.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster1.cpu11.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**subcluster1.cpu11.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: uint8\_t

Default value: 171

**subcluster1.cpu11.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: string

Default value: N/A

**subcluster1.cpu11.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster1.cpu11.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster1.cpu11.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu11.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu11.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster1.cpu11.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu11.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster1.cpu11.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu11.vfp-present`**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

### **`subcluster1.cpu2.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **`subcluster1.cpu2.CFGTE`**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu2.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu2.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu2.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter trace\_special\_hlt\_imm16.

Type: `bool`

Default value: `false`

**subcluster1.cpu2.force-fpsid**

Override the FPSID value.

Type: `bool`

Default value: `true`

**subcluster1.cpu2.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu2.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu2.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu2.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu2.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu2.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x100000

**subcluster1.cpu2.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu2.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu2.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu2.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu2.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster1.cpu2.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu2.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu2.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu2.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster1.cpu2.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**subcluster1.cpu2.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

### **`subcluster1.cpu2.semihosting-cmd_line`**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

### **`subcluster1.cpu2.semihosting-cwd`**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

### **`subcluster1.cpu2.semihosting-enable`**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

### **`subcluster1.cpu2.semihosting-heap_base`**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu2.semihosting-heap_limit`**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster1.cpu2.semihosting-stack_base`**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

### **`subcluster1.cpu2.semihosting-stack_limit`**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

#### **`subcluster1.cpu2.trace_special_hlt_imm16`**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

#### **`subcluster1.cpu2.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

#### **`subcluster1.cpu2.vfp-present`**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

#### **`subcluster1.cpu3.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

#### **`subcluster1.cpu3.CFGTE`**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

#### **`subcluster1.cpu3.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster1.cpu3.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu3.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster1.cpu3.force-fpsid**

Override the FPSID value.

Type: `bool`

Default value: `true`

**subcluster1.cpu3.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu3.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu3.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu3.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu3.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu3.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x100000

**subcluster1.cpu3.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu3.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu3.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu3.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu3.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

### **`subcluster1.cpu3.min_sync_level`**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: `0`

### **`subcluster1.cpu3.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster1.cpu3.semihosting-A64_HLT`**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster1.cpu3.semihosting-ARM_SVC`**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster1.cpu3.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**subcluster1.cpu3.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**subcluster1.cpu3.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**subcluster1.cpu3.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster1.cpu3.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster1.cpu3.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu3.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu3.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster1.cpu3.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu3.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster1.cpu3.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster1.cpu3.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster1.cpu4.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster1.cpu4.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster1.cpu4.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster1.cpu4.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu4.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster1.cpu4.force-fpsid**

Override the FPSID value.

Type: `bool`

Default value: `true`

**subcluster1.cpu4.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu4.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu4.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu4.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu4.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu4.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

### **`subcluster1.cpu4.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu4.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu4.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu4.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu4.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster1.cpu4.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu4.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu4.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**subcluster1.cpu4.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster1.cpu4.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**subcluster1.cpu4.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

**subcluster1.cpu4.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster1.cpu4.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster1.cpu4.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster1.cpu4.semihosting-heap\_base**

Virtual address of heap base.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu4.semihosting-heap\_limit**

Virtual address of top of heap.

Type: uint64\_t

Default value: 0xf000000

**subcluster1.cpu4.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: uint64\_t

Default value: 0x10000000

**subcluster1.cpu4.semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint64\_t

Default value: 0xf000000

**subcluster1.cpu4.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu4.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: bool

Default value: false

**subcluster1.cpu4.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

#### **`subcluster1.cpu5.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

#### **`subcluster1.cpu5.CFGTE`**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

#### **`subcluster1.cpu5.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

#### **`subcluster1.cpu5.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu5.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

#### **`subcluster1.cpu5.force-fpsid`**

Override the FPSID value.

Type: `bool`

Default value: `true`

**subcluster1.cpu5.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu5.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu5.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu5.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu5.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu5.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x100000

**subcluster1.cpu5.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu5.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu5.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu5.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu5.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster1.cpu5.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu5.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

**subcluster1.cpu5.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

**subcluster1.cpu5.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: 0x123456

**subcluster1.cpu5.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**subcluster1.cpu5.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**subcluster1.cpu5.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**subcluster1.cpu5.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster1.cpu5.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: bool

Default value: true

**subcluster1.cpu5.semihosting-heap\_base**

Virtual address of heap base.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu5.semihosting-heap\_limit**

Virtual address of top of heap.

Type: uint64\_t

Default value: 0xf000000

**subcluster1.cpu5.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: uint64\_t

Default value: 0x10000000

**subcluster1.cpu5.semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint64\_t

Default value: 0xf000000

**subcluster1.cpu5.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu5.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster1.cpu5.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster1.cpu6.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster1.cpu6.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster1.cpu6.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster1.cpu6.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu6.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu6.force-fpsid`**

Override the FPSID value.

Type: `bool`

Default value: `true`

### **`subcluster1.cpu6.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu6.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu6.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu6.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu6.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu6.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

#### **`subcluster1.cpu6.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu6.l2cache-snoop_issue_latency`**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu6.l2cache-write_access_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu6.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu6.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster1.cpu6.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu6.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu6.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu6.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster1.cpu6.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**subcluster1.cpu6.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: uint8\_t

Default value: 171

**subcluster1.cpu6.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster1.cpu6.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster1.cpu6.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster1.cpu6.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu6.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu6.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster1.cpu6.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: 0xf000000

**subcluster1.cpu6.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu6.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: bool

Default value: false

**subcluster1.cpu6.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: bool

Default value: true

**subcluster1.cpu7.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: bool

Default value: false

**subcluster1.cpu7.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: bool

Default value: false

**subcluster1.cpu7.CRYPTODISABLE**

Disable cryptographic features.

Type: bool

Default value: false

**subcluster1.cpu7.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu7.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster1.cpu7.force-fpsid**

Override the FPSID value.

Type: `bool`

Default value: `true`

**subcluster1.cpu7.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu7.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu7.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu7.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu7.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu7.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x100000

**subcluster1.cpu7.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu7.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu7.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu7.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu7.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

### **`subcluster1.cpu7.min_sync_level`**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: `0`

### **`subcluster1.cpu7.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster1.cpu7.semihosting-A64_HLT`**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster1.cpu7.semihosting-ARM_SVC`**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster1.cpu7.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**subcluster1.cpu7.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**subcluster1.cpu7.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**subcluster1.cpu7.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster1.cpu7.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster1.cpu7.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu7.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu7.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster1.cpu7.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu7.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster1.cpu7.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster1.cpu7.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster1.cpu8.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster1.cpu8.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster1.cpu8.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster1.cpu8.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu8.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster1.cpu8.force-fpsid**

Override the FPSID value.

Type: `bool`

Default value: `true`

**subcluster1.cpu8.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu8.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu8.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu8.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu8.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu8.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

### **`subcluster1.cpu8.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu8.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu8.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu8.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu8.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster1.cpu8.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu8.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu8.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**subcluster1.cpu8.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster1.cpu8.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**subcluster1.cpu8.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

**subcluster1.cpu8.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster1.cpu8.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster1.cpu8.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster1.cpu8.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu8.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu8.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster1.cpu8.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu8.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster1.cpu8.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster1.cpu8.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

### **`subcluster1.cpu9.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **`subcluster1.cpu9.CFGTE`**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu9.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu9.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu9.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu9.force-fpsid`**

Override the FPSID value.

Type: `bool`

Default value: `true`

**subcluster1.cpu9.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu9.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu9.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu9.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu9.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu9.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x100000

#### **subcluster1.cpu9.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster1.cpu9.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster1.cpu9.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster1.cpu9.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster1.cpu9.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

#### **subcluster1.cpu9.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu9.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

**subcluster1.cpu9.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

**subcluster1.cpu9.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: 0x123456

**subcluster1.cpu9.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**subcluster1.cpu9.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**subcluster1.cpu9.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**subcluster1.cpu9.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster1.cpu9.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: bool

Default value: true

**subcluster1.cpu9.semihosting-heap\_base**

Virtual address of heap base.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu9.semihosting-heap\_limit**

Virtual address of top of heap.

Type: uint64\_t

Default value: 0xf000000

**subcluster1.cpu9.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: uint64\_t

Default value: 0x10000000

**subcluster1.cpu9.semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint64\_t

Default value: 0xf000000

**subcluster1.cpu9.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu9.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster1.cpu9.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster1.dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.dcache-maintenance\_latency**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.dcache-miss\_latency**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.dcache-prefetch\_enabled**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

Type: `bool`

Default value: `false`

**subcluster1.dcache-read\_access\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.dcache-read\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.dcache-size**

L1 D-Cache size in bytes.

Type: uint32\_t

Default value: 0x10000

**subcluster1.dcache-snoop\_data\_transfer\_latency**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.dcache-write\_access\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.dcache-write\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.ete.CLAIMTAGS**

Number of claim tags.

Type: uint8\_t

Default value: 4

**subcluster1.ete.ETE\_REVISION**

ETE revision: 0=ETEv1.0, 1=ETEv1.1, 2=ETEv1.2, 3=ETEv1.3.

Type: uint8\_t

Default value: 1

**subcluster1.ete.MAX\_INST\_PER\_Q**

Maximum limit for the number of instructions implied by a Q element.

Type: uint16\_t

Default value: 0x1

**subcluster1.ete.NumberOfRSPairs**

Number of resource selector pairs.

Type: uint8\_t

Default value: 8

**subcluster1.ete.PIDR\_CM0D**

TRCPIDR CM0D value.

Type: uint8\_t

Default value: 0

**subcluster1.ete.PIDR\_REVAND**

TRCPIDR REVAND value.

Type: `uint8_t`

Default value: 0

#### **`subcluster1.ete.PIDR_REVISION`**

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

#### **`subcluster1.ete.Q_CADENCE`**

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: 0x1

#### **`subcluster1.ete.RES0_STATEFUL`**

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: `false`

#### **`subcluster1.ete.RETSTACK`**

Return stack depth.

Type: `uint8_t`

Default value: 1

#### **`subcluster1.ete.REVISION`**

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 0

#### **`subcluster1.ete.SIM_OVERFLOW_GRANULARITY`**

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: 0x64

#### **`subcluster1.ete.SIM_OVERFLOW_PERCENTAGE`**

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

#### **`subcluster1.ete.SOURCE_ADDRESS`**

Allow generation of source address elements.

Type: `bool`

Default value: `false`

#### **`subcluster1.ete.TRACE_OUTPUT`**

File to which to write trace byte stream.

Type: `string`

Default value: N/A

#### **`subcluster1.ete.TRCRSRTA_FORCED_EXCEP`**

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: `false`

#### **`subcluster1.ete.TSMARK`**

Whether timestamp markers are supported.

Type: `bool`

Default value: `true`

#### **`subcluster1.force_mte_tag_access_razwi_and_ignore_tag_checks`**

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: `false`

#### **`subcluster1.force_zero_PSTATE_PAN`**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: `false`

### **`subcluster1.force_zero_mpam_partid_and_pmg`**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAMO\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

Type: `uint8_t`

Default value: `0`

### **`subcluster1.has_delayed_dbgreg`**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `true`

### **`subcluster1.has_delayed_sysreg`**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `true`

### **`subcluster1.has_enhanced_pan`**

Implements Armv8.7 Enhanced PAN feature (FEAT\_PAN3) values of this parameter are:- 1, feature is implemented if ARMv8.7 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: `2`

### **`subcluster1.has_ete`**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (`-plugin` or `-P`).

Type: `bool`

Default value: `false`

### **`subcluster1.has_large_va`**

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT\_LVA). values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.2 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 0

**subcluster1.has\_statistical\_profiling**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

Type: bool

Default value: false

**subcluster1.icache-hit\_latency**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.icache-maintenance\_latency**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.icache-miss\_latency**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.icache-prefetch\_enabled**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

Type: bool

Default value: false

**subcluster1.icache-read\_access\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.icache-read_latency`**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.icache-size`**

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

### **`subcluster1.instruction_tlb_size`**

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

Type: `uint32_t`

Default value: `0x0`

### **`subcluster1.invalidate_code_cache_on_icache_cmo`**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: `0`

### **`subcluster1.memory_tagging_support_level`**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

Type: `uint8_t`

Default value: `3`

### **`subcluster1.pmu-num_counters`**

Number of PMU counters implemented.

Type: `uint8_t`

Default value: 6

### **`subcluster1.ptw_latency`**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

### **`subcluster1.stage12_tlb_size`**

Number of stage1+2 tlb entries. Valid values are 0 or  $\geq 4$ .

Type: `uint32_t`

Default value: 0x80

### **`subcluster1.tlb_latency`**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

### **`subcluster1.tlbi_stall_enabled`**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: `false`

### **`subcluster1.treat_PAC_as_NOP`**

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are **NOP**. Branch, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

Type: `bool`

Default value: `false`

### **`subcluster1.walk_cache_latency`**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

**subcluster2.CPUCFR**

Value of CPU Configuration Register.

Type: uint64\_t

Default value: 0x0

**subcluster2.NUM\_CORES**

Number of cores in the subcluster. Total number of cores in cluster may not exceed 14.

Type: uint8\_t

Default value: 1

**subcluster2.cpi\_div**

Divider for calculating CPI (Cycles Per Instruction).

Type: uint32\_t

Default value: 0x1

**subcluster2.cpi\_mul**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: uint32\_t

Default value: 0x1

**subcluster2.cpu0.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: bool

Default value: false

**subcluster2.cpu0.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: bool

Default value: false

**subcluster2.cpu0.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **`subcluster2.cpu0.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu0.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster2.cpu0.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu0.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu0.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu0.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu0.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu0.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

### **`subcluster2.cpu0.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu0.l2cache-snoop_issue_latency`**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu0.l2cache-ways`**

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: `8`

### **`subcluster2.cpu0.l2cache-write_access_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu0.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu0.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

### **`subcluster2.cpu0.min_sync_level`**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: `0`

### **`subcluster2.cpu0.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster2.cpu0.semihosting-A64_HLT`**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster2.cpu0.semihosting-ARM_SVC`**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster2.cpu0.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**subcluster2.cpu0.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**subcluster2.cpu0.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**subcluster2.cpu0.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster2.cpu0.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster2.cpu0.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu0.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster2.cpu0.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster2.cpu0.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster2.cpu0.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster2.cpu0.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster2.cpu0.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster2.cpu1.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster2.cpu1.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster2.cpu1.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster2.cpu1.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu1.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster2.cpu1.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu1.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu1.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu1.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu1.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu1.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

### **`subcluster2.cpu1.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu1.l2cache-snoop_issue_latency`**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu1.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

**subcluster2.cpu1.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

**subcluster2.cpu1.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

**subcluster2.cpu1.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: 0x100

**subcluster2.cpu1.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

**subcluster2.cpu1.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

**subcluster2.cpu1.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**subcluster2.cpu1.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster2.cpu1.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**subcluster2.cpu1.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

**subcluster2.cpu1.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster2.cpu1.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster2.cpu1.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster2.cpu1.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu1.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster2.cpu1.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster2.cpu1.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster2.cpu1.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster2.cpu1.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster2.cpu1.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

#### **`subcluster2.cpu10.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

#### **`subcluster2.cpu10.CFGTE`**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

#### **`subcluster2.cpu10.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

#### **`subcluster2.cpu10.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster2.cpu10.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

#### **`subcluster2.cpu10.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu10.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu10.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu10.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu10.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu10.l2cache-size**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

**subcluster2.cpu10.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

**subcluster2.cpu10.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu10.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

**subcluster2.cpu10.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu10.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu10.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster2.cpu10.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster2.cpu10.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

**subcluster2.cpu10.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

**subcluster2.cpu10.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: 0x123456

**subcluster2.cpu10.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**subcluster2.cpu10.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**subcluster2.cpu10.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**subcluster2.cpu10.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster2.cpu10.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: bool

Default value: true

**subcluster2.cpu10.semihosting-heap\_base**

Virtual address of heap base.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu10.semihosting-heap\_limit**

Virtual address of top of heap.

Type: uint64\_t

Default value: 0xf000000

**subcluster2.cpu10.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: uint64\_t

Default value: 0x10000000

**subcluster2.cpu10.semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint64\_t

Default value: 0xf000000

**subcluster2.cpu10.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster2.cpu10.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster2.cpu10.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster2.cpu11.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster2.cpu11.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster2.cpu11.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster2.cpu11.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu11.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster2.cpu11.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu11.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu11.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu11.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu11.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu11.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**subcluster2.cpu11.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu11.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu11.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

**subcluster2.cpu11.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu11.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu11.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster2.cpu11.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster2.cpu11.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster2.cpu11.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster2.cpu11.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster2.cpu11.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**subcluster2.cpu11.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: uint8\_t

Default value: 171

**subcluster2.cpu11.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster2.cpu11.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster2.cpu11.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster2.cpu11.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu11.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster2.cpu11.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster2.cpu11.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: 0xf000000

**subcluster2.cpu11.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster2.cpu11.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: bool

Default value: false

**subcluster2.cpu11.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: bool

Default value: true

**subcluster2.cpu2.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: bool

Default value: false

**subcluster2.cpu2.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: bool

Default value: false

**subcluster2.cpu2.CRYPTODISABLE**

Disable cryptographic features.

Type: bool

Default value: false

**subcluster2.cpu2.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu2.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster2.cpu2.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu2.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu2.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu2.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu2.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu2.l2cache-size**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

**subcluster2.cpu2.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu2.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu2.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: `8`

**subcluster2.cpu2.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu2.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu2.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster2.cpu2.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster2.cpu2.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster2.cpu2.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster2.cpu2.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster2.cpu2.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

### **`subcluster2.cpu2.semihosting-Thumb_SVC`**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

### **`subcluster2.cpu2.semihosting-cmd_line`**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

### **`subcluster2.cpu2.semihosting-cwd`**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

### **`subcluster2.cpu2.semihosting-enable`**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

### **`subcluster2.cpu2.semihosting-heap_base`**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu2.semihosting-heap_limit`**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster2.cpu2.semihosting-stack_base`**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

### **`subcluster2.cpu2.semihosting-stack_limit`**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster2.cpu2.trace_special_hlt_imm16`**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster2.cpu2.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

### **`subcluster2.cpu2.vfp-present`**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

### **`subcluster2.cpu3.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **`subcluster2.cpu3.CFGTE`**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### **`subcluster2.cpu3.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **`subcluster2.cpu3.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu3.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster2.cpu3.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu3.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu3.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu3.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu3.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu3.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**subcluster2.cpu3.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu3.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu3.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

**subcluster2.cpu3.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu3.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu3.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster2.cpu3.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster2.cpu3.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster2.cpu3.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster2.cpu3.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster2.cpu3.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**subcluster2.cpu3.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

**subcluster2.cpu3.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster2.cpu3.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster2.cpu3.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster2.cpu3.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu3.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster2.cpu3.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster2.cpu3.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster2.cpu3.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster2.cpu3.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster2.cpu3.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster2.cpu4.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster2.cpu4.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster2.cpu4.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster2.cpu4.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu4.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster2.cpu4.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu4.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu4.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu4.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu4.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu4.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

### **`subcluster2.cpu4.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu4.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu4.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

**subcluster2.cpu4.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu4.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu4.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster2.cpu4.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster2.cpu4.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**subcluster2.cpu4.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**subcluster2.cpu4.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster2.cpu4.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**subcluster2.cpu4.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

**subcluster2.cpu4.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster2.cpu4.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster2.cpu4.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster2.cpu4.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu4.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster2.cpu4.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster2.cpu4.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster2.cpu4.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster2.cpu4.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

### **`subcluster2.cpu4.vfp-present`**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

### **`subcluster2.cpu5.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **`subcluster2.cpu5.CFGTE`**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### **`subcluster2.cpu5.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **`subcluster2.cpu5.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu5.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster2.cpu5.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu5.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu5.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu5.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu5.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu5.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

#### **subcluster2.cpu5.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster2.cpu5.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster2.cpu5.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

#### **subcluster2.cpu5.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster2.cpu5.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster2.cpu5.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster2.cpu5.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster2.cpu5.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster2.cpu5.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster2.cpu5.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster2.cpu5.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**subcluster2.cpu5.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: uint8\_t

Default value: 171

**subcluster2.cpu5.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: string

Default value: N/A

**subcluster2.cpu5.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster2.cpu5.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster2.cpu5.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu5.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster2.cpu5.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster2.cpu5.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster2.cpu5.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

#### **`subcluster2.cpu5.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

#### **`subcluster2.cpu5.vfp-present`**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

#### **`subcluster2.cpu6.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

#### **`subcluster2.cpu6.CFGTE`**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

#### **`subcluster2.cpu6.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

#### **`subcluster2.cpu6.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu6.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter trace\_special\_hlt\_imm16.

Type: bool

Default value: false

**subcluster2.cpu6.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu6.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu6.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu6.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu6.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **subcluster2.cpu6.l2cache-size**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: 0x80000

### **subcluster2.cpu6.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

### **subcluster2.cpu6.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

### **subcluster2.cpu6.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: 8

### **subcluster2.cpu6.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

### **subcluster2.cpu6.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

**subcluster2.cpu6.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster2.cpu6.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster2.cpu6.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster2.cpu6.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster2.cpu6.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster2.cpu6.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**subcluster2.cpu6.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

### **subcluster2.cpu6.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

### **subcluster2.cpu6.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

### **subcluster2.cpu6.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

### **subcluster2.cpu6.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

### **subcluster2.cpu6.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

### **subcluster2.cpu6.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

### **subcluster2.cpu6.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster2.cpu6.trace_special_hlt_imm16`**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster2.cpu6.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

### **`subcluster2.cpu6.vfp-present`**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

### **`subcluster2.cpu7.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **`subcluster2.cpu7.CFGTE`**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### **`subcluster2.cpu7.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **`subcluster2.cpu7.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu7.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster2.cpu7.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu7.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu7.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu7.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

#### **subcluster2.cpu7.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster2.cpu7.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

#### **subcluster2.cpu7.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster2.cpu7.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster2.cpu7.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

#### **subcluster2.cpu7.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **subcluster2.cpu7.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **subcluster2.cpu7.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

### **subcluster2.cpu7.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

### **subcluster2.cpu7.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

### **subcluster2.cpu7.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

### **subcluster2.cpu7.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster2.cpu7.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**subcluster2.cpu7.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**subcluster2.cpu7.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**subcluster2.cpu7.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster2.cpu7.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster2.cpu7.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: 0x0

**subcluster2.cpu7.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: 0xf000000

**subcluster2.cpu7.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster2.cpu7.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster2.cpu7.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster2.cpu7.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster2.cpu7.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster2.cpu8.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster2.cpu8.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster2.cpu8.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster2.cpu8.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu8.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster2.cpu8.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu8.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu8.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu8.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu8.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu8.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

### **`subcluster2.cpu8.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu8.l2cache-snoop_issue_latency`**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu8.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

**subcluster2.cpu8.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu8.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu8.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster2.cpu8.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster2.cpu8.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster2.cpu8.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**subcluster2.cpu8.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster2.cpu8.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**subcluster2.cpu8.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

**subcluster2.cpu8.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster2.cpu8.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster2.cpu8.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster2.cpu8.semihosting-heap\_base**

Virtual address of heap base.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu8.semihosting-heap\_limit**

Virtual address of top of heap.

Type: uint64\_t

Default value: 0xf000000

**subcluster2.cpu8.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: uint64\_t

Default value: 0x10000000

**subcluster2.cpu8.semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint64\_t

Default value: 0xf000000

**subcluster2.cpu8.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster2.cpu8.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: bool

Default value: false

**subcluster2.cpu8.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

### **`subcluster2.cpu9.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **`subcluster2.cpu9.CFGTE`**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### **`subcluster2.cpu9.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **`subcluster2.cpu9.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.cpu9.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster2.cpu9.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu9.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu9.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu9.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu9.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.cpu9.l2cache-size**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

**subcluster2.cpu9.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

**subcluster2.cpu9.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu9.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

**subcluster2.cpu9.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu9.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu9.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster2.cpu9.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster2.cpu9.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

**subcluster2.cpu9.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

**subcluster2.cpu9.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: 0x123456

**subcluster2.cpu9.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**subcluster2.cpu9.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**subcluster2.cpu9.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**subcluster2.cpu9.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster2.cpu9.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: bool

Default value: true

**subcluster2.cpu9.semihosting-heap\_base**

Virtual address of heap base.

Type: uint64\_t

Default value: 0x0

**subcluster2.cpu9.semihosting-heap\_limit**

Virtual address of top of heap.

Type: uint64\_t

Default value: 0xf000000

**subcluster2.cpu9.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: uint64\_t

Default value: 0x10000000

**subcluster2.cpu9.semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint64\_t

Default value: 0xf000000

**subcluster2.cpu9.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster2.cpu9.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster2.cpu9.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster2.dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.dcache-maintenance\_latency**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.dcache-miss\_latency**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.dcache-prefetch\_enabled**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

Type: `bool`

Default value: `false`

**subcluster2.dcache-read\_access\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.dcache-read\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.dcache-size**

L1 D-Cache size in bytes.

Type: uint32\_t

Default value: 0x10000

**subcluster2.dcache-snoop\_data\_transfer\_latency**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.dcache-write\_access\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.dcache-write\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster2.ecv\_support\_level**

Implement Enhanced Counter Virtualization feature from ARMv8.6. 0, Not supported. 1, fully supported without CNTPOFF. 2, fully supported with CNTPOFF (FEAT\_ECV).

Type: uint8\_t

Default value: 2

**subcluster2.ete.CLAIMTAGS**

Number of claim tags.

Type: uint8\_t

Default value: 4

**subcluster2.ete.MAX\_INST\_PER\_Q**

Maximum limit for the number of instructions implied by a Q element.

Type: uint16\_t

Default value: 0x1

**subcluster2.ete.NumberOfRSPairs**

Number of resource selector pairs.

Type: uint8\_t

Default value: 8

**subcluster2.ete.PIDR\_CM0D**

TRCPIDR CM0D value.

Type: uint8\_t

Default value: 0

**subcluster2.ete.Q\_CADENCE**

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

#### **`subcluster2.ete.RES0_STATEFUL`**

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: `false`

#### **`subcluster2.ete.RETSTACK`**

Return stack depth.

Type: `uint8_t`

Default value: `3`

#### **`subcluster2.ete.SIM_OVERFLOW_GRANULARITY`**

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

#### **`subcluster2.ete.SIM_OVERFLOW_PERCENTAGE`**

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: `0`

#### **`subcluster2.ete.SOURCE_ADDRESS`**

Allow generation of source address elements.

Type: `bool`

Default value: `false`

#### **`subcluster2.ete.TRACE_OUTPUT`**

File to which to write trace byte stream.

Type: `string`

Default value: `N/A`

#### **`subcluster2.ete.TRCRSRTA_FORCED_EXCEP`**

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: `false`

### **`subcluster2.ext_abort_so_write_ras_type`**

External Aborts are reported as RAS error type specified in this param. Values: 0 = NONE, 1 = UC, 2 = UEU, 3 = UEO, 4 = UER, 5 = CE.

Type: `uint8_t`

Default value: 2

### **`subcluster2.force_mte_tag_access_razwi_and_ignore_tag_checks`**

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: `false`

### **`subcluster2.force_zero_PSTATE_PAN`**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: `false`

### **`subcluster2.force_zero_mpam_partid_and_pmg`**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

Type: `uint8_t`

Default value: 0

### **`subcluster2.has_delayed_dbgreg`**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

### **`subcluster2.has_delayed_sysreg`**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `true`

### **subcluster2.has\_enhanced\_pan**

Implements Armv8.7 Enhanced PAN feature (FEAT\_PAN3) values of this parameter are:- 1, feature is implemented if ARMv8.7 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

### **subcluster2.has\_ete**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (-plugin or -P).

Type: `bool`

Default value: `false`

### **subcluster2.has\_mt\_pmu\_disable\_feature**

Implements Multi-threading PMU disable extension from ARMv8.6 (FEAT\_MTPMU). 0: FEAT\_MTPMU is disabled, 1: FEAT\_MTPMU is enabled if ARMv8.6 is implemented, 2: FEAT\_MTPMU is cherry-picked, 0xF: The feature is disabled and is represented by value 0xF in ID\_AA64DFR0\_EL1.MTPMU.

Type: `uint8_t`

Default value: 0

### **subcluster2.has\_statistical\_profiling**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

Type: `bool`

Default value: `true`

### **subcluster2.has\_v8\_7\_spe\_inverted\_filtering**

Where FEAT\_SPEv1p2 is implemented, whether inverted filtering by events is implemented (represented by PMISDR.FnE).

Type: `bool`

Default value: `false`

### **subcluster2.has\_v8\_7\_spe\_previous\_branch\_target**

Where FEAT\_SPEv1p2 is implemented, whether the optional branch target feature is implemented (FEAT\_SPE\_PBT).

Type: `bool`

Default value: `false`

### **`subcluster2.icache-hit_latency`**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.icache-maintenance_latency`**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.icache-miss_latency`**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster2.icache-prefetch_enabled`**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

Type: `bool`

Default value: `false`

### **`subcluster2.icache-read_access_latency`**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.icache-read\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.icache-size**

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

**subcluster2.instruction\_tlb\_size**

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

Type: `uint32_t`

Default value: `0x0`

**subcluster2.invalidate\_code\_cache\_on\_icache\_cmo**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: `0`

**subcluster2.memory\_tagging\_support\_level**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

Type: `uint8_t`

Default value: `3`

**subcluster2.mpam\_has\_altsp**

DEPRECATED: MPAMIDR\_EL1.HAS\_ALTSP is required when FEAT\_RME is implemented.

Type: `bool`

Default value: `false`

**subcluster2.mpamidr\_has\_force\_ns**

Whether MPAMIDR\_EL1.HAS\_FORCE\_NS bit is set or clear.values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.6 is enabled.- 2, feature is implemented.

Type: uint8\_t

Default value: 0

**subcluster2.mpamidr\_has\_sdeflt**

Whether MPAMIDR\_EL1.HAS\_SDEFLT bit is set or clear.values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.6 is enabled.- 2, feature is implemented.

Type: uint8\_t

Default value: 1

**subcluster2.mpamidr\_has\_tidr**

Whether MPAMIDR\_EL1.HAS\_TIDR bit is set or clear.values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.6 is enabled.- 2, feature is implemented.

Type: uint8\_t

Default value: 1

**subcluster2.pmu-num\_counters**

Number of PMU counters implemented.

Type: uint8\_t

Default value: 31

**subcluster2.ptw\_latency**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

**subcluster2.stage12\_tlb\_size**

Number of stage1+2 tlb entries. Valid values are 0 or >= 4.

Type: uint32\_t

Default value: 0x80

**subcluster2.tcr\_txsz\_undersize\_should\_fault**

If large VA is not supported, Whether undersized TxSZ value should generate translation fault.

Type: `bool`

Default value: `false`

**subcluster2.tlb\_latency**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

**subcluster2.tlbi\_stall\_enabled**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: `false`

**subcluster2.treat\_PAC\_as\_NOP**

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are **NOP**. Branch, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

Type: `bool`

Default value: `false`

**subcluster2.walk\_cache\_latency**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

## 3.55 ARMCortexA53CT

Defined in `LISA/ARMCortexA53CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p1	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

## Changes in 11.31.15

The following parameters were added:

- `has_delayed_dbgreg`
- `has_delayed_sysreg`

## About ARM Cortex A53CT

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (crypto.dll or crypto.so) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

The system designer decides whether a debug APB ties the external debug view with other system views. In the model, use a PVBUSDecoder to direct traffic to the correct port, `dev_debug_s` or `memorymapped_debug_s`.

## Differences between the CT model and RTL implementations

This component has the following differences from the corresponding revision of the RTL implementation:

- The value of the AArch64 `PMCEID0_ELO` register, and the AArch32 alias of this register, differs in the model from the TRM value. The model value reflects the model counters.
- The mechanisms for setting the affinity fields of the `MPIDR`. The RTL has two ports:
  - `CLUSTERIDAFF1[7:0]`.
  - `CLUSTERIDAFF2[7:0]`. `AFF1` sets the value of `MPIDR` bits[15:8] and `AFF2` sets the value of `MPIDR` bits[23:16]. In contrast, the model has a single `CLUSTER_ID` port. This difference allows the setting of bits[23:8] of the `MPIDR` using bits[15:0] of the `CLUSTER_ID` value.
- The memory mapped debug registers have a view for cores and a view for external debug agents. In the model, these views require two PVBUS ports. In hardware, the system designer decides how the implementation differentiates the views.
- In the model, a single peer event port combines the functionality of the `eventi` and `evento` signals in the RTL.
- The Generic Timers are Programmer's View (PV) level abstractions: a model-specific protocol connects the `cntvalueb` port to the MemoryMappedCounterModule.
- The GIC CPU Interface is a PV level abstraction: a model-specific protocol connects the GIC CPU Interface to the GIC Distributor.
- The CoreSight Cross Trigger Interface (CTI) is a PV level abstraction: the interface is a model specific one.
- The model has no mechanism to read the internal memory that the Cache and TLB structures use, through the implementation defined region of the system coprocessor interface. This

memory includes the RAM Index Register, `IL1DATA` Registers, `DL1DATA` Registers, and associated functionality.

- The model does not implement:
  - ETM registers.
  - The `PMUEVENT` bus.
  - The `WARMRESETREQ` signal. However, the warm reset code sequence (see the section [Code sequence to request a Warm reset as a result of `RMR\_ELx.RR` in the \[Arm Architecture Reference Manual for A-profile architecture\]\(#\)](#) ) makes the model simulate a warm reset of the core.
  - The `PMUSNAPSHOTREQ` and `PMUSNAPSHOTACK` signals.
  - The `EXTERRIRQ` and `INTERRIRQ` signals.
  - Processor dynamic-retention signals.
  - The `SYSBARDISABLE` signal.
  - This model has a variable number of cores per cluster, specified using the `NUM_CORES` parameter.
  - The `DBGPWRDUP`, `DBGPWRUPREQ`, `DBGNOPWRDWN`, and `DBGIRSTREQ` debug power management signals.
  - The RTL synthesis option to remove FP and ASE.
  - The RTL synthesis option for a Cortex-A15 style debug memory map.
  - Although Neon support is optional for the Cortex-A53 processor, this model does not implement the `ase-present` parameter. This means it is not possible to configure the model to not support Neon.
  - ECC and parity schemes are hardware-specific so are not supported.

## Iris and MTI instances for ARMCortexA53CT

This model has the following Iris instances:

Name	Instance type
ARMCortexA53CT	<a href="#">Cluster_ARM_Cortex-A53</a>
ARMCortexA53CT.AMU	<a href="#">PVBUSLogger</a>
ARMCortexA53CT.AMU.mapper	<a href="#">PVBUSMapper</a>
ARMCortexA53CT.DAP	<a href="#">PVBUSLogger</a>
ARMCortexA53CT.DAP.mapper	<a href="#">PVBUSMapper</a>
ARMCortexA53CT.DSU	<a href="#">DSU</a>
ARMCortexA53CT.DSU.mpam_busslave	<a href="#">PVBUSSlave</a>
ARMCortexA53CT.MMAP	<a href="#">PVBUSLogger</a>
ARMCortexA53CT.MMAP.mapper	<a href="#">PVBUSMapper</a>
ARMCortexA53CT.RAS	<a href="#">PVBUSLogger</a>
ARMCortexA53CT.RAS.mapper	<a href="#">PVBUSMapper</a>
ARMCortexA53CT.acp_mapper	<a href="#">PVBUSMapper</a>
ARMCortexA53CT.cpu0	<a href="#">ARM_Cortex-A53</a>

Name	Instance type
ARMCortexA53CT.cpu0.UTLB	TLB
ARMCortexA53CT.cpu0.dtlb	TLB
ARMCortexA53CT.cpu0.l1dcache	PVCache
ARMCortexA53CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA53CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA53CT.cpu0.l1icache	PVCache
ARMCortexA53CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA53CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA53CT.ext_bus	PVBusLogger
ARMCortexA53CT.ext_bus.mapper	PVBusMapper
ARMCortexA53CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA53CT.global_debug_rom	debug_rom
ARMCortexA53CT.l2_cache	PVCache
ARMCortexA53CT.l2_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA53CT.l2_cache.upstream[Z] (where Z = 0-16)	PVBusSlave
ARMCortexA53CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
ARMCortexA53CT.AMU	PVBusLogger
ARMCortexA53CT.AMU.mapper	PVBusMapper
ARMCortexA53CT.DAP	PVBusLogger
ARMCortexA53CT.DAP.mapper	PVBusMapper
ARMCortexA53CT.DSU	DSU
ARMCortexA53CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA53CT.MMAP	PVBusLogger
ARMCortexA53CT.MMAP.mapper	PVBusMapper
ARMCortexA53CT.RAS	PVBusLogger
ARMCortexA53CT.RAS.mapper	PVBusMapper
ARMCortexA53CT.acp_mapper	PVBusMapper
ARMCortexA53CT.cpu0	ARM_Cortex-A53
ARMCortexA53CT.cpu0.UTLB	TLB
ARMCortexA53CT.cpu0.l1dcache	PVCache
ARMCortexA53CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA53CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA53CT.cpu0.l1icache	PVCache
ARMCortexA53CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA53CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA53CT.ext_bus	PVBusLogger
ARMCortexA53CT.ext_bus.mapper	PVBusMapper

Name	Component type
ARMCortexA53CT.gic_cpuif_decoder_cluster	<a href="#">GICv3CPUInterfaceDecoder</a>
ARMCortexA53CT.l2_cache	<a href="#">PVCache</a>
ARMCortexA53CT.l2_cache.downstream[0].pvbusmaster	<a href="#">PVBusMaster</a>
ARMCortexA53CT.l2_cache.upstream[Z] (where Z = 0-16)	<a href="#">PVBusSlave</a>
ARMCortexA53CT.l2_flusher	<a href="#">AsyncCacheFlushUnit</a>

## Ports for ARMCortexA53CT

Port	Direction	Protocol	Description
aa64naa32	slave	<a href="#">Signal</a>	Register width after reset.
acp_s	slave	<a href="#">PVBus</a>	AXI ACP slave port.
broadcastcachemaint	slave	<a href="#">Signal</a>	Enable broadcasting of cache maintenance operations to downstream caches.
broadcastinner	slave	<a href="#">Signal</a>	Enable broadcasting of Inner Shareable transactions.
broadcastouter	slave	<a href="#">Signal</a>	Enable broadcasting of Outer Shareable transactions.
cfgend	slave	<a href="#">Signal</a>	This signal if for EE bit initialisation.
cfgsdisable	slave	<a href="#">Signal</a>	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	<a href="#">Signal</a>	This signal provides default exception handling state.
clk_in	slave	<a href="#">ClockSignal</a>	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
clrexmonack	master	<a href="#">Signal</a>	Acknowledge handshake signal for the clrexmonreq signal
clrexmonreq	slave	<a href="#">Signal</a>	Signals the clearing of an external global exclusive monitor
clusterid	slave	<a href="#">Value</a>	The port sets the value of the affinity levels 1 and 2; bits [23:16] and [15:8] of the MPIDR.
CNTHPIRQ	master	<a href="#">Signal</a>	Timer signals to SoC.
CNTPNSIRQ	master	<a href="#">Signal</a>	Timer signals to SoC.
CNTPSIRQ	master	<a href="#">Signal</a>	Timer signals to SoC.
cntvalueb	slave	<a href="#">CounterInterface</a>	Interface to SoC level counter module.
CNTVIRQ	master	<a href="#">Signal</a>	Timer signals to SoC.
commirq	master	<a href="#">Signal</a>	Interrupt signal from debug communications channel.
commr_x	master	<a href="#">Signal</a>	Receive portion of Data Transfer Register full.
commtx	master	<a href="#">Signal</a>	Transmit portion of Data Transfer Register empty.
cp15sdisable	slave	<a href="#">Signal</a>	This signal disables write access to some system control processor registers.
cpuporeset	slave	<a href="#">Signal</a>	Power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	<a href="#">Signal</a>	Disable cryptography extensions after reset.
cti	master	<a href="#">v8EmbeddedCrossTrigger_controlprotocol</a>	Cross trigger matrix port.
ctidbgirq	master	<a href="#">Signal</a>	Cross Trigger Interface (CTI) interrupt trigger output.
dbgack	master	<a href="#">Signal</a>	External debug interface.

Port	Direction	Protocol	Description
dbgen	slave	Signal	External debug interface.
dbgllrstdisable	slave	Signal	Control ram clear on reset
dbgnopwrdown	master	Signal	This signals relate to core power down.
dbgpwrupreq	master	Signal	This signals relate to core power down.
dev_debug_s	slave	PVBus	External debug interface.
edbgrq	slave	Signal	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
l2flushdone	master	Signal	Flush of L2 memory system complete.
l2flushreq	slave	Signal	Request flush of L2 memory system.
l2reset	slave	Signal	Reset the shared L2 memory system controller.
l2rstdisable	slave	Signal	-
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
periphbase	slave	Value_64	This port sets the base address of private peripheral region.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
rei	slave	Signal	Individual processor RAM Error Interrupt signal input.
reset	slave	Signal	Raising this signal will put the core into reset mode.
romaddr	slave	Value_64	Debug ROM base address.
romaddrv	slave	Signal	Debug ROM base address valid.
rvbaraddr	slave	Value_64	Reset vector base address.
sei	slave	Signal	Per core System Error physical pins.
smpen	master	Signal	This signals AMP or SMP mode for each core.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
standbywfe	master	Signal	This signal indicates if a core is in WFE state.
standbywfi	master	Signal	This signal indicates if a core is in WFI state.
standbywfil2	master	Signal	Indicate that all the individual processors and the L2 systems are in a WFI state.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtual FIQ.

Port	Direction	Protocol	Description
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtual IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Processor Virtual System Error Interrupt request.

## Parameters for ARMCortexA53CT

### **cpuX.AA64nAA32**

Type: `bool`

Default value: `true`

### **cpuX.CFGEND**

Type: `bool`

Default value: `false`

### **cpuX.CFGTE**

Type: `bool`

Default value: `false`

### **cpuX.CP15SDISABLE**

Type: `bool`

Default value: `false`

### **cpuX.CRYPTODISABLE**

Type: `bool`

Default value: `false`

### **cpuX.RVBARADDR**

Type: `uint64_t`

Default value: `0`

### **cpuX.VINITHI**

Type: `bool`

Default value: `false`

**cpuX.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter trace\_special\_hlt\_imm16.

Type: `bool`

Default value: `false`

**cpuX.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint64_t`

Default value: `256`

**cpuX.min\_sync\_level**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint32_t`

Default value: `0`

**cpuX.semihosting-A32\_HLT**

Type: `uint32_t`

Default value: `0xF000`

**cpuX.semihosting-A64\_HLT**

Type: `uint32_t`

Default value: `0xF000`

**cpuX.semihosting-ARM\_SVC**

Type: `uint32_t`

Default value: `0x123456`

**cpuX.semihosting-T32\_HLT**

Type: `uint32_t`

Default value: `0x3c`

**cpuX.semihosting-Thumb\_SVC**

Type: `uint32_t`

Default value: `0xAB`

**cpuX.semihosting-cmd\_line**

Type: string

Default value: ""

**cpuX.semihosting-cwd**

Type: string

Default value: ""

**cpuX.semihosting-enable**

Type: bool

Default value: true

**cpuX.semihosting-heap\_base**

Type: uint32\_t

Default value: 0x0

**cpuX.semihosting-heap\_limit**

Type: uint32\_t

Default value: 0x0F000000

**cpuX.semihosting-stack\_base**

Type: uint32\_t

Default value: 0x10000000

**cpuX.semihosting-stack\_limit**

Type: uint32\_t

Default value: 0x0F000000

**cpuX.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**cpuX.vfp-enable\_at\_reset**

Type: bool

Default value: false

**cpuX.vfp-present**

Set whether the model has VFP support.

Type: `bool`

Default value: `true`

**BROADCASTCACHEMAINT**

Enable broadcasting of cache maintenance operations to downstream caches. The `broadcastcachemaint` signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTINNER**

Enable broadcasting of Inner Shareable transactions. The `broadcastinner` signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTOUTER**

Enable broadcasting of Outer Shareable transactions. The `broadcastouter` signal will override this value if used.

Type: `bool`

Default value: `true`

**CLUSTER\_ID**

Type: `uint32_t`

Default value: `0`

**DBGROMADDR**

Type: `uint64_t`

Default value: `0x0`

**DBGROMADDRV**

Type: `bool`

Default value: `true`

**GICDISABLE**

Type: `bool`

Default value: `true`

**NUM\_CORES**

Number of cores in cluster.

Type: `uint8_t`

Default value: `1`

**PERIPHBASE**

Type: `uint64_t`

Default value: `0x13080000`

**bus\_type**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint32_t`

Default value: `0`

**cpi\_div**

divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `1`

**cpi\_mul**

multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `1`

**dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit.

Type: `uint64_t`

Default value: `0`

**dcache-maintenance\_latency**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

**dcache-miss\_latency**

L1 D-Cache timing annotation latency for miss.

Type: `uint64_t`

Default value: 0

**dcache-prefetch\_enabled**

Enable simulation of data cache prefetching. This is only used when `dcache-dcache_state_modelled=true`.

Type: `bool`

Default value: `false`

**dcache-read\_access\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (based on the size of `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

**dcache-read\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

**dcache-size**

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

**dcache-snoop\_data\_transfer\_latency**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0`

**dcache-state\_modelled**

Type: `bool`

Default value: `false`

**dcache-write\_access\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (based on the size of `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0`

**dcache-write\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0`

**has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

**has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

**icache-hit\_latency**

L1 I-Cache timing annotation latency for hit.

Type: `uint64_t`

Default value: 0

### **icache-maintenance\_latency**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

### **icache-miss\_latency**

L1 I-Cache timing annotation latency for miss.

Type: `uint64_t`

Default value: 0

### **icache-prefetch\_enabled**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

Type: `bool`

Default value: `false`

### **icache-read\_access\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (based on the size of `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

### **icache-read\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

### **icache-size**

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

### **`icache-state_modelled`**

Type: `bool`

Default value: `false`

### **`l2cache-hit_latency`**

L2 Cache timing annotation latency for hit.

Type: `uint64_t`

Default value: `0`

### **`l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0`

### **`l2cache-miss_latency`**

L2 Cache timing annotation latency for miss.

Type: `uint64_t`

Default value: `0`

### **`l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access (based on the size of `l2cache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0`

### **`l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0`

**l2cache-size**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

**l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0`

**l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0`

**l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access (based on the size of `l2cache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0`

**l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0`

**patch\_level**

Cosmetic change to Revision field in MIDR/MIDR\_EL1. Corresponds to the patch number Y in rXpY.

Type: `uint32_t`

Default value: `0x1`

**ptw\_latency**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint32_t`

Default value: 0

**revision\_number**

Cosmetic change to Variant field in MIDR/MIDR\_EL1. Corresponds to the revision number X in rXpY.

Type: `uint32_t`

Default value: 0x0

**tlb\_latency**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint32_t`

Default value: 0

**walk\_cache\_latency**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint32_t`

Default value: 0

## 3.56 ARMCortexA55CT

Defined in `LISA/ARMCortexA55CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r1p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Changes in 11.31.15

The following parameters were added:

- `has_delayed_dbgreg`
- `has_delayed_sysreg`

## About ARMCortexA55CT

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- BROADCASTPERSIST pin.

The model does not support the following features:

- BROADCASTCACHEMAINTPOU pin.
- COREINSTRRET, COREINSTRRUN, or nPMBIRQ signals.
- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Debug power management signals DBGPWRDUP and DBGIRSTREQ are not implemented, but DBGPWRUPREQ and DBGNOFWRDWN are implemented.
- Cache stashing capability.
- Dual ACE masters.

This model has a variable number of cores per cluster, specified using the `NUM_CORES` parameter.

The per-core parameters are preceded by `cpuN.`, where N identifies the core (0-7).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

## Iris and MTI instances for ARMCortexA55CT

This model has the following Iris instances:

Name	Instance type
ARMCortexA55CT	Cluster_ARM_Cortex-A55

Name	Instance type
ARMCortexA55CT.AMU	PVBusLogger
ARMCortexA55CT.AMU.mapper	PVBusMapper
ARMCortexA55CT.DAP	PVBusLogger
ARMCortexA55CT.DAP.mapper	PVBusMapper
ARMCortexA55CT.DSU	DSU
ARMCortexA55CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA55CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA55CT.DSU.shared_cache	PVCache
ARMCortexA55CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA55CT.DSU.shared_cache.upstream[Y] (where Y = 0-3)	PVBusSlave
ARMCortexA55CT.MMAP	PVBusLogger
ARMCortexA55CT.MMAP.mapper	PVBusMapper
ARMCortexA55CT.RAS	PVBusLogger
ARMCortexA55CT.RAS.mapper	PVBusMapper
ARMCortexA55CT.cpu0	ARM_Cortex-A55
ARMCortexA55CT.cpu0.UTLB	TLB
ARMCortexA55CT.cpu0.dtlb	TLB
ARMCortexA55CT.cpu0.l1dcache	PVCache
ARMCortexA55CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA55CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA55CT.cpu0.l1licache	PVCache
ARMCortexA55CT.cpu0.l1licache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA55CT.cpu0.l1licache.upstream[0]	PVBusSlave
ARMCortexA55CT.cpu0.l2cache	PVCache
ARMCortexA55CT.cpu0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA55CT.cpu0.l2cache.upstream[U] (where U = 0-1)	PVBusSlave
ARMCortexA55CT.ext_bus	PVBusLogger
ARMCortexA55CT.ext_bus.mapper	PVBusMapper
ARMCortexA55CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA55CT.global_debug_rom	debug_rom

This model has the following MTI trace components:

Name	Component type
ARMCortexA55CT.AMU	PVBusLogger
ARMCortexA55CT.AMU.mapper	PVBusMapper
ARMCortexA55CT.DAP	PVBusLogger
ARMCortexA55CT.DAP.mapper	PVBusMapper
ARMCortexA55CT.DSU	DSU
ARMCortexA55CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA55CT.DSU.mpam_busslave	PVBusSlave

Name	Component type
ARMCortexA55CT.DSU.shared_cache	PVCache
ARMCortexA55CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA55CT.DSU.shared_cache.upstream[Y] (where Y = 0–3)	PVBusSlave
ARMCortexA55CT.MMAP	PVBusLogger
ARMCortexA55CT.MMAP.mapper	PVBusMapper
ARMCortexA55CT.RAS	PVBusLogger
ARMCortexA55CT.RAS.mapper	PVBusMapper
ARMCortexA55CT.cpu0	ARM_Cortex-A55
ARMCortexA55CT.cpu0.UTLB	TLB
ARMCortexA55CT.cpu0.l1dcache	PVCache
ARMCortexA55CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA55CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA55CT.cpu0.l1icache	PVCache
ARMCortexA55CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA55CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA55CT.cpu0.l2cache	PVCache
ARMCortexA55CT.cpu0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA55CT.cpu0.l2cache.upstream[U] (where U = 0–1)	PVBusSlave
ARMCortexA55CT.ext_bus	PVBusLogger
ARMCortexA55CT.ext_bus.mapper	PVBusMapper
ARMCortexA55CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

## Ports for ARMCortexA55CT

Port	Direction	Protocol	Description
aa64naa32	slave	Signal	Register width after reset.
acp_s	slave	PVBus	AXI ACP slave port.
AENDMP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.

Port	Direction	Protocol	Description
clusterid	slave	Value	The port sets the value of the affinity levels 2 and 3; bits [39:32] and [23:16] of the MPIDR.
clusterpmuirq	master	Signal	DynalQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cp15sdisable	slave	Signal	This signal disables write access to some system control processor registers.
cpuporeset	slave	Signal	CPU power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdown	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
pchannel_cluster	slave	PChannel	PChannel for cluster.
pchannel_core	slave	PChannel	PChannels for cores
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.

Port	Direction	Protocol	Description
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
sporeset	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

## Parameters for ARM Cortex A55CT

### **cpuX.AA64nAA32**

Type: `bool`

Default value: `true`

### **cpuX.CFGEND**

Type: `bool`

Default value: `false`

### **cpuX.CFGTE**

Type: `bool`

Default value: `false`

### **cpuX.CP15SDISABLE**

Type: `bool`

Default value: `false`

### **cpuX.CRYPTODISABLE**

Type: `bool`

Default value: `false`

**cpuX.RVBARADDR**

Type: `uint64_t`

Default value: 0

**cpuX.VINITHI**

Type: `bool`

Default value: `false`

**cpuX.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit.

Type: `uint64_t`

Default value: 0

**cpuX.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss.

Type: `uint64_t`

Default value: 0

**cpuX.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access (based on the size of `l2cache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x40000

**cpuX.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access (based on the size of l2cache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint64\_t

Default value: 256

**cpuX.min\_sync\_level**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint32\_t

Default value: 0

**cpuX.semihosting-A32\_HLT**

Type: uint32\_t

Default value: 0xF000

**cpuX.semihosting-A64\_HLT**

Type: uint32\_t

Default value: 0xF000

**cpuX.semihosting-ARM\_SVC**

Type: uint32\_t

Default value: 0x123456

**cpuX.semihosting-T32\_HLT**

Type: uint32\_t

Default value: 0x3c

**cpuX.semihosting-Thumb\_SVC**

Type: uint32\_t

Default value: 0xAB

**cpuX.semihosting-cmd\_line**

Type: string

Default value: ""

**cpuX.semihosting-cwd**

Type: string

Default value: ""

**cpuX.semihosting-enable**

Type: bool

Default value: true

**cpuX.semihosting-heap\_base**

Type: uint32\_t

Default value: 0x0

**cpuX.semihosting-heap\_limit**

Type: uint32\_t

Default value: 0x0F000000

**cpuX.semihosting-stack\_base**

Type: uint32\_t

Default value: 0x10000000

**cpuX.semihosting-stack\_limit**

Type: uint32\_t

Default value: 0x0F000000

**cpuX.vfp-enable\_at\_reset**

Type: bool

Default value: false

**cpuX.vfp-present**

Set whether the model has VFP support.

Type: bool

Default value: true

**BROADCASTATOMIC**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: bool

Default value: `true`

### **BROADCASTCACHEMAINT**

Enable broadcasting of cache maintenance operations to downstream caches. The `broadcastcachemaint` signal will override this value if used.

Type: `bool`

Default value: `true`

### **BROADCASTOUTER**

Enable broadcasting of Outer Shareable transactions. The `broadcastouter` signal will override this value if used.

Type: `bool`

Default value: `true`

### **BROADCASTPERSIST**

Enable broadcasting of cache clean to the point of persistence operations. The `broadcastpersist` signal will override this value if used.

Type: `bool`

Default value: `true`

### **CLUSTER\_ID**

Type: `uint32_t`

Default value: 0

### **CMO\_broadcast\_when\_cache\_state\_modelling\_disabled**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. This value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain events even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

### **GICDISABLE**

Type: `bool`

Default value: `true`

**NUM\_CORES**

Number of cores in cluster.

Type: uint8\_t

Default value: 1

**bus\_type**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: uint32\_t

Default value: 0

**cpi\_div**

divider for calculating CPI (Cycles Per Instruction).

Type: uint32\_t

Default value: 1

**cpi\_mul**

multiplier for calculating CPI (Cycles Per Instruction).

Type: uint32\_t

Default value: 1

**dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit.

Type: uint64\_t

Default value: 0

**dcache-maintenance\_latency**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0

**dcache-miss\_latency**

L1 D-Cache timing annotation latency for miss.

Type: uint64\_t

Default value: 0

**dcache-prefetch\_enabled**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

Type: bool

Default value: false

**dcache-read\_access\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (based on the size of dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0

**dcache-read\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0

**dcache-size**

L1 D-Cache size in bytes.

Type: uint32\_t

Default value: 0x8000

**dcache-snoop\_data\_transfer\_latency**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0

**dcache-state\_modelled**

Type: bool

Default value: false

**dcache-write\_access\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (based on the size of `dcache-write_bus_width_in_bytes`. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

**dcache-write\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

**enable\_simulation\_performance\_optimizations**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of `stage12_tlb_size` parameter to 1024).

Type: `bool`

Default value: `true`

**force\_zero\_PSTATE\_PAN**

Non-architecture parameter to force `PSTATE.PAN` to be 0. 0: No effect, 1: `PSTATE.PAN` is always treated as 0. The parameter optimizes the performance of updating `PSTATE.PAN`.

Type: `bool`

Default value: `false`

**has\_acp**

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: `false`

**has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

**has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `true`

**has\_dot\_product**

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

**has\_peripheral\_port**

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: `false`

**icache-hit\_latency**

L1 I-Cache timing annotation latency for hit.

Type: `uint64_t`

Default value: 0

**icache-maintenance\_latency**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

**icache-miss\_latency**

L1 I-Cache timing annotation latency for miss.

Type: `uint64_t`

Default value: 0

**icache-prefetch\_enabled**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

Type: `bool`

Default value: `false`

**icache-read\_access\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (based on the size of icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is only used when icache-state\_modelled=true.

Type: `uint64_t`

Default value: 0

**icache-read\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when icache-state\_modelled=true.

Type: `uint64_t`

Default value: 0

**icache-size**

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

**icache-state\_modelled**

Type: `bool`

Default value: `false`

**l3cache-hit\_latency**

L3 Cache timing annotation latency for hit.

Type: `uint64_t`

Default value: 0

**l3cache-maintenance\_latency**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks.

Type: `uint64_t`

Default value: 0

### **l3cache-miss\_latency**

L3 Cache timing annotation latency for miss.

Type: `uint64_t`

Default value: 0

### **l3cache-read\_access\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-read_latency` is set.

Type: `uint64_t`

Default value: 0

### **l3cache-read\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed.

Type: `uint64_t`

Default value: 0

### **l3cache-size**

L3 Cache size in bytes.

Type: `uint32_t`

Default value: 0x80000

### **l3cache-snoop\_data\_transfer\_latency**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed.

Type: `uint64_t`

Default value: 0

### **l3cache-snoop\_issue\_latency**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks.

Type: `uint64_t`

Default value: 0

**l3cache-write\_access\_latency**

L3 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if 32cache-write\_latency is set.

Type: `uint64_t`

Default value: 0

**l3cache-write\_latency**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed.

Type: `uint64_t`

Default value: 0

**pchannel\_treat\_simreset\_as\_poreset**

Register core as ON state to cluster with simulation reset.

Type: `bool`

Default value: `false`

**periph\_address\_end**

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: 0x0

**periph\_address\_start**

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: 0x0

**ptw\_latency**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint32_t`

Default value: 0

**tlb\_latency**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint32_t`

Default value: 0

**walk\_cache\_latency**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

3.57 ARMCortexA55CT\_CortexA75CT

Defined in LISA/ARMCortexA55CT\_CortexA75CT.lisa.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
CortexA55 r1p0	Full support
CortexA75 r3p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

Changes in 11.31.15

The following parameters were added:

- subcluster0.has\_delayed\_dbgreg
- subcluster0.has\_delayed\_sysreg
- subcluster1.has\_delayed\_dbgreg
- subcluster1.has\_delayed\_sysreg

About ARMCortexA55CT\_CortexA75CT

The number of cores in each subcluster is configurable using the following parameters:

**subcluster0.NUM\_CORES**  
Possible values are 1-7 (ARMCortexA55CT).

**subcluster1.NUM\_CORES**  
Possible values are 1-4 (ARMCortexA75CT).

The total number of cores in the cluster cannot exceed 8.

Port arrays are expanded to the width needed for the maximum number of cores in each subcluster. Use the following port array indexes:

- port\_name[0-6] for cores in subcluster0.
- port\_name[7-10] for cores in subcluster1.

All instances in the Master cross trigger matrix port array, `cti[11]` must be connected, regardless of the `num_cores` value used.

Core-specific parameters have the following prefixes:

- `subcluster0.cpu0` to `subcluster0.cpu6` identify cores in `subcluster0`.
- `subcluster1.cpu0` to `subcluster1.cpu3` identify cores in `subcluster1`.

For information about the cores in this model, see:

- [ARMCortexA55CT](#)
- [ARMCortexA75CT](#)

See also [Arm DynamIQ Shared Unit Technical Reference Manual](#).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

## Iris and MTI instances for ARMCortexA55CT\_CortexA75CT

This model has the following Iris instances:

Name	Instance type
ARMCortexA55CT_CortexA75CT	Cluster_ARM_Cortex-A55_Cortex-A75
ARMCortexA55CT_CortexA75CT.AMU	PVBusLogger
ARMCortexA55CT_CortexA75CT.AMU.mapper	PVBusMapper
ARMCortexA55CT_CortexA75CT.DAP	PVBusLogger
ARMCortexA55CT_CortexA75CT.DAP.mapper	PVBusMapper
ARMCortexA55CT_CortexA75CT.DSU	DSU
ARMCortexA55CT_CortexA75CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA55CT_CortexA75CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA55CT_CortexA75CT.DSU.shared_cache	PVCache
ARMCortexA55CT_CortexA75CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA55CT_CortexA75CT.DSU.shared_cache.upstream[Z] (where Z = 0-5)	PVBusSlave
ARMCortexA55CT_CortexA75CT.MMAP	PVBusLogger
ARMCortexA55CT_CortexA75CT.MMAP.mapper	PVBusMapper
ARMCortexA55CT_CortexA75CT.RAS	PVBusLogger
ARMCortexA55CT_CortexA75CT.RAS.mapper	PVBusMapper
ARMCortexA55CT_CortexA75CT.ext_bus	PVBusLogger
ARMCortexA55CT_CortexA75CT.ext_bus.mapper	PVBusMapper
ARMCortexA55CT_CortexA75CT.gic_cpuif_decoder_cluster	GLCv3CPUInterfaceDecoder
ARMCortexA55CT_CortexA75CT.global_debug_rom	debug_rom

Name	Instance type
ARMCortexA55CT_CortexA75CT.subcluster0	Subcluster_ARM_Cortex-A55
ARMCortexA55CT_CortexA75CT.subcluster0.cpu0	ARM_Cortex-A55
ARMCortexA55CT_CortexA75CT.subclusterZ.cpu0.UTLB (where Z = 0-1)	TLB
ARMCortexA55CT_CortexA75CT.subclusterZ.cpuU.dtlb (where Z = 0-1; U = 0-1)	TLB
ARMCortexA55CT_CortexA75CT.subclusterZ.cpu0.l1dcache (where Z = 0-1)	PVCache
ARMCortexA55CT_CortexA75CT.subclusterZ.cpu0.l1dcache.downstream[0].pvbusmaster (where Z = 0-1)	PVBusMaster
ARMCortexA55CT_CortexA75CT.subclusterZ.cpu0.l1dcache.upstream[0] (where Z = 0-1)	PVBusSlave
ARMCortexA55CT_CortexA75CT.subclusterZ.cpu0.l1icache (where Z = 0-1)	PVCache
ARMCortexA55CT_CortexA75CT.subclusterZ.cpu0.l1icache.downstream[0].pvbusmaster (where Z = 0-1)	PVBusMaster
ARMCortexA55CT_CortexA75CT.subclusterZ.cpu0.l1icache.upstream[0] (where Z = 0-1)	PVBusSlave
ARMCortexA55CT_CortexA75CT.subclusterZ.cpu0.l2cache (where Z = 0-1)	PVCache
ARMCortexA55CT_CortexA75CT.subclusterZ.cpu0.l2cache.downstream[0].pvbusmaster (where Z = 0-1)	PVBusMaster
ARMCortexA55CT_CortexA75CT.subclusterZ.cpu0.l2cache.upstream[W] (where Z = 0-1; W = 0-1)	PVBusSlave
ARMCortexA55CT_CortexA75CT.subcluster1	Subcluster_ARM_Cortex-A75
ARMCortexA55CT_CortexA75CT.subcluster1.cpu0	ARM_Cortex-A75

This model has the following MTI trace components:

Name	Component type
ARMCortexA55CT_CortexA75CT.AMU	PVBusLogger
ARMCortexA55CT_CortexA75CT.AMU.mapper	PVBusMapper
ARMCortexA55CT_CortexA75CT.DAP	PVBusLogger
ARMCortexA55CT_CortexA75CT.DAP.mapper	PVBusMapper
ARMCortexA55CT_CortexA75CT.DSU	DSU
ARMCortexA55CT_CortexA75CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA55CT_CortexA75CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA55CT_CortexA75CT.DSU.shared_cache	PVCache
ARMCortexA55CT_CortexA75CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA55CT_CortexA75CT.DSU.shared_cache.upstream[Z] (where Z = 0-5)	PVBusSlave
ARMCortexA55CT_CortexA75CT.MMAP	PVBusLogger
ARMCortexA55CT_CortexA75CT.MMAP.mapper	PVBusMapper
ARMCortexA55CT_CortexA75CT.RAS	PVBusLogger
ARMCortexA55CT_CortexA75CT.RAS.mapper	PVBusMapper
ARMCortexA55CT_CortexA75CT.ext_bus	PVBusLogger
ARMCortexA55CT_CortexA75CT.ext_bus.mapper	PVBusMapper

ARMCortexA55CT_CortexA75CT.subclusterZ.cpu0.l2cache.upstream[W] (where Z = 0-1; W = 0-1)	PVBusSlave
ARMCortexA55CT_CortexA75CT.subcluster1.cpu0	ARM_Cortex-A75

### Ports for ARMCortexA55CT\_CortexA75CT

Port	Direction	Protocol	Description
aa64naa32	slave	Signal	Register width after reset.
acp_s	slave	PVBus	AXI ACP slave port
AENDMP	slave	Value_64	DynamiQ port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	DynamiQ port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.

Port	Direction	Protocol	Description
clusterpmuirq	master	Signal	DynamiQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cp15sdisable	slave	Signal	This signal disables write access to some system control processor registers.
cpuporeset	slave	Signal	CPU power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdown	master	Signal	No power-down request.
dbgppwrupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
pchannel_cluster	slave	PChannel	PChannel for cluster.
pchannel_core	slave	PChannel	PChannels for cores
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain

Port	Direction	Protocol	Description
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
sporeset	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L3 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

## Parameters for ARM CortexA55CT\_CortexA75CT

### BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: `true`

### BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: `true`

### BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTPERSIST**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: `true`

**CLUSTER\_ID**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. This value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: `1`

**GICDISABLE**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: `true`

**bus\_type**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: `0`

**dcache-state\_modelled**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

**default\_opmode**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

**diagnostics**

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: `false`

**enable\_simulation\_performance\_optimizations**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of `stage12_tlb_size` parameter to 1024).

Type: `bool`

Default value: `true`

**has\_acp**

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: `false`

**has\_peripheral\_port**

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: `false`

**icache-state\_modelled**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

**l3cache-hit\_latency**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-maintenance\_latency**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-miss\_latency**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-read\_access\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size `l3cache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-read\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l3cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-size`**

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

### **`l3cache-snoop_data_transfer_latency`**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-snoop_issue_latency`**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-write_access_latency`**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size `l3cache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-write_latency`**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l3cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`pchannel_treat_simreset_as_poreset`**

Register core as ON state to cluster with simulation reset.

Type: `bool`

Default value: `false`

### **`periph_address_end`**

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: `0x0`

### **`periph_address_start`**

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.NUM_CORES`**

Number of cores per cluster.

Type: `uint8_t`

Default value: `1`

### **`subcluster0.cpi_div`**

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

### **`subcluster0.cpi_mul`**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

### **`subcluster0.cpu0.AA64nAA32`**

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: `true`

**subcluster0.cpu0.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster0.cpu0.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster0.cpu0.CP15SDISABLE**

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: `false`

**subcluster0.cpu0.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster0.cpu0.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu0.VINITHI**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

**subcluster0.cpu0.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu0.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu0.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu0.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu0.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu0.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu0.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

#### **`subcluster0.cpu0.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu0.l2cache-snoop_issue_latency`**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu0.l2cache-write_access_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu0.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu0.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

#### **`subcluster0.cpu0.min_sync_level`**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

**`subcluster0.cpu0.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

**`subcluster0.cpu0.semihosting-A64_HLT`**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

**`subcluster0.cpu0.semihosting-ARM_SVC`**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: 0x123456

**`subcluster0.cpu0.semihosting-T32_HLT`**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**`subcluster0.cpu0.semihosting-Thumb_SVC`**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**`subcluster0.cpu0.semihosting-cmd_line`**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**`subcluster0.cpu0.semihosting-cwd`**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

### **`subcluster0.cpu0.semihosting-enable`**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

### **`subcluster0.cpu0.semihosting-heap_base`**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu0.semihosting-heap_limit`**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster0.cpu0.semihosting-stack_base`**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

### **`subcluster0.cpu0.semihosting-stack_limit`**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster0.cpu0.trace_special_hlt_imm16`**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu0.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster0.cpu0.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster0.cpu1.AA64nAA32**

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: `true`

**subcluster0.cpu1.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster0.cpu1.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster0.cpu1.CP15SDISABLE**

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: `false`

**subcluster0.cpu1.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu1.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu1.VINITHI`**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu1.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu1.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu1.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu1.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu1.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu1.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu1.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x40000

**subcluster0.cpu1.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu1.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu1.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu1.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu1.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

### **`subcluster0.cpu1.min_sync_level`**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: `0`

### **`subcluster0.cpu1.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster0.cpu1.semihosting-A64_HLT`**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster0.cpu1.semihosting-ARM_SVC`**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster0.cpu1.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**subcluster0.cpu1.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**subcluster0.cpu1.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**subcluster0.cpu1.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster0.cpu1.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster0.cpu1.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: 0x0

**subcluster0.cpu1.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: 0xf000000

**subcluster0.cpu1.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster0.cpu1.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu1.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu1.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster0.cpu1.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster0.cpu2.AA64nAA32**

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: `true`

**subcluster0.cpu2.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster0.cpu2.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster0.cpu2.CP15SDISABLE**

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: `false`

**subcluster0.cpu2.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster0.cpu2.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu2.VINITHI**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

**subcluster0.cpu2.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu2.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu2.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu2.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu2.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu2.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu2.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

### **`subcluster0.cpu2.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu2.l2cache-snoop_issue_latency`**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu2.l2cache-write_access_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu2.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu2.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

### **`subcluster0.cpu2.min_sync_level`**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

### **`subcluster0.cpu2.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

### **`subcluster0.cpu2.semihosting-A64_HLT`**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

### **`subcluster0.cpu2.semihosting-ARM_SVC`**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: 0x123456

### **`subcluster0.cpu2.semihosting-T32_HLT`**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

### **`subcluster0.cpu2.semihosting-Thumb_SVC`**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

### **`subcluster0.cpu2.semihosting-cmd_line`**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

### **`subcluster0.cpu2.semihosting-cwd`**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

### **`subcluster0.cpu2.semihosting-enable`**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

### **`subcluster0.cpu2.semihosting-heap_base`**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu2.semihosting-heap_limit`**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster0.cpu2.semihosting-stack_base`**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

### **`subcluster0.cpu2.semihosting-stack_limit`**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster0.cpu2.trace_special_hlt_imm16`**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu2.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster0.cpu2.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster0.cpu3.AA64nAA32**

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: `true`

**subcluster0.cpu3.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster0.cpu3.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster0.cpu3.CP15SDISABLE**

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: `false`

**subcluster0.cpu3.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu3.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu3.VINITHI`**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu3.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu3.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu3.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu3.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu3.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu3.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu3.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x40000

**subcluster0.cpu3.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu3.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu3.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu3.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu3.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

### **`subcluster0.cpu3.min_sync_level`**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: `0`

### **`subcluster0.cpu3.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster0.cpu3.semihosting-A64_HLT`**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster0.cpu3.semihosting-ARM_SVC`**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster0.cpu3.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**subcluster0.cpu3.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**subcluster0.cpu3.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**subcluster0.cpu3.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster0.cpu3.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster0.cpu3.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: 0x0

**subcluster0.cpu3.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: 0xf000000

**subcluster0.cpu3.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster0.cpu3.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu3.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu3.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster0.cpu3.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster0.cpu4.AA64nAA32**

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: `true`

**subcluster0.cpu4.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster0.cpu4.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster0.cpu4.CP15SDISABLE**

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: `false`

**subcluster0.cpu4.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster0.cpu4.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu4.VINITHI**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

**subcluster0.cpu4.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu4.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu4.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu4.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu4.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu4.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu4.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

#### **`subcluster0.cpu4.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu4.l2cache-snoop_issue_latency`**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu4.l2cache-write_access_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu4.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu4.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

#### **`subcluster0.cpu4.min_sync_level`**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

**`subcluster0.cpu4.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

**`subcluster0.cpu4.semihosting-A64_HLT`**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

**`subcluster0.cpu4.semihosting-ARM_SVC`**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: 0x123456

**`subcluster0.cpu4.semihosting-T32_HLT`**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**`subcluster0.cpu4.semihosting-Thumb_SVC`**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**`subcluster0.cpu4.semihosting-cmd_line`**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**`subcluster0.cpu4.semihosting-cwd`**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

### **`subcluster0.cpu4.semihosting-enable`**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

### **`subcluster0.cpu4.semihosting-heap_base`**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu4.semihosting-heap_limit`**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster0.cpu4.semihosting-stack_base`**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

### **`subcluster0.cpu4.semihosting-stack_limit`**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster0.cpu4.trace_special_hlt_imm16`**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu4.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster0.cpu4.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster0.cpu5.AA64nAA32**

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: `true`

**subcluster0.cpu5.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster0.cpu5.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster0.cpu5.CP15SDISABLE**

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: `false`

**subcluster0.cpu5.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu5.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu5.VINITHI`**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu5.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu5.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu5.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu5.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu5.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu5.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu5.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x40000

**subcluster0.cpu5.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu5.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu5.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu5.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu5.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

### **`subcluster0.cpu5.min_sync_level`**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: `0`

### **`subcluster0.cpu5.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster0.cpu5.semihosting-A64_HLT`**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster0.cpu5.semihosting-ARM_SVC`**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster0.cpu5.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**subcluster0.cpu5.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**subcluster0.cpu5.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**subcluster0.cpu5.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster0.cpu5.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster0.cpu5.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: 0x0

**subcluster0.cpu5.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: 0xf000000

**subcluster0.cpu5.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster0.cpu5.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu5.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu5.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster0.cpu5.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster0.cpu6.AA64nAA32**

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: `true`

**subcluster0.cpu6.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster0.cpu6.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster0.cpu6.CP15SDISABLE**

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: `false`

**subcluster0.cpu6.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster0.cpu6.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu6.VINITHI**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

**subcluster0.cpu6.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu6.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu6.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu6.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu6.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu6.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu6.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

### **`subcluster0.cpu6.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu6.l2cache-snoop_issue_latency`**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu6.l2cache-write_access_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu6.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu6.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

### **`subcluster0.cpu6.min_sync_level`**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

#### **`subcluster0.cpu6.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

#### **`subcluster0.cpu6.semihosting-A64_HLT`**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

#### **`subcluster0.cpu6.semihosting-ARM_SVC`**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: 0x123456

#### **`subcluster0.cpu6.semihosting-T32_HLT`**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

#### **`subcluster0.cpu6.semihosting-Thumb_SVC`**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

#### **`subcluster0.cpu6.semihosting-cmd_line`**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

#### **`subcluster0.cpu6.semihosting-cwd`**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

### **`subcluster0.cpu6.semihosting-enable`**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

### **`subcluster0.cpu6.semihosting-heap_base`**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu6.semihosting-heap_limit`**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster0.cpu6.semihosting-stack_base`**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

### **`subcluster0.cpu6.semihosting-stack_limit`**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster0.cpu6.trace_special_hlt_imm16`**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu6.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster0.cpu6.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster0.dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.dcache-maintenance\_latency**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.dcache-miss\_latency**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.dcache-prefetch\_enabled**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

Type: `bool`

Default value: `false`

**subcluster0.dcache-read\_access\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.dcache-read\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.dcache-size**

L1 D-Cache size in bytes.

Type: uint32\_t

Default value: 0x8000

**subcluster0.dcache-snoop\_data\_transfer\_latency**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.dcache-write\_access\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.dcache-write\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.force\_zero\_PSTATE\_PAN**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: bool

Default value: false

**subcluster0.has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: bool

Default value: false

**subcluster0.has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: bool

Default value: true

**subcluster0.has\_dot\_product**

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: uint8\_t

Default value: 2

**subcluster0.icache-hit\_latency**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.icache-maintenance\_latency**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.icache-miss\_latency**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.icache-prefetch\_enabled**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

Type: `bool`

Default value: `false`

**subcluster0.icache-read\_access\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.icache-read\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.icache-size**

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

#### **`subcluster0.invalidate_code_cache_on_icache_cmo`**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: `0`

#### **`subcluster0.ptw_latency`**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.tlb_latency`**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.tlbi_stall_enabled`**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: `false`

#### **`subcluster0.walk_cache_latency`**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.CCSIDR-L1D_override`**

If nonzero, override the value presented in CCSIDR for L1D (this is cosmetic and does not affect cache behaviour).

Type: `uint64_t`

Default value: `0x0`

**subcluster1.CCSIDR-L1I\_override**

If nonzero, override the value presented in CCSIDR for L1I (this is cosmetic and does not affect cache behaviour).

Type: `uint64_t`

Default value: `0x0`

**subcluster1.CCSIDR-L2\_override**

If nonzero, override the value presented in CCSIDR for L2 (this is cosmetic and does not affect cache behaviour).

Type: `uint64_t`

Default value: `0x0`

**subcluster1.NUM\_CORES**

Number of cores per cluster.

Type: `uint8_t`

Default value: `1`

**subcluster1.cpi\_div**

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

**subcluster1.cpi\_mul**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

**subcluster1.cpu0.AA64nAA32**

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: `true`

**subcluster1.cpu0.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **`subcluster1.cpu0.CFGTE`**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu0.CP15SDISABLE`**

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu0.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu0.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu0.VINITHI`**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu0.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster1.cpu0.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu0.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu0.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu0.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu0.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu0.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**subcluster1.cpu0.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu0.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu0.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu0.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu0.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster1.cpu0.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu0.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

**subcluster1.cpu0.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

**subcluster1.cpu0.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: 0x123456

**subcluster1.cpu0.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**subcluster1.cpu0.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**subcluster1.cpu0.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**subcluster1.cpu0.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster1.cpu0.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: bool

Default value: true

**subcluster1.cpu0.semihosting-heap\_base**

Virtual address of heap base.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu0.semihosting-heap\_limit**

Virtual address of top of heap.

Type: uint64\_t

Default value: 0xf000000

**subcluster1.cpu0.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: uint64\_t

Default value: 0x10000000

**subcluster1.cpu0.semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint64\_t

Default value: 0xf000000

**subcluster1.cpu0.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu0.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster1.cpu1.AA64nAA32**

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: `true`

**subcluster1.cpu1.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster1.cpu1.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster1.cpu1.CP15SDISABLE**

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: `false`

**subcluster1.cpu1.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster1.cpu1.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu1.VINITHI`**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu1.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu1.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu1.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu1.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu1.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu1.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu1.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

### **`subcluster1.cpu1.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu1.l2cache-snoop_issue_latency`**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu1.l2cache-write_access_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu1.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu1.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster1.cpu1.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu1.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu1.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu1.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster1.cpu1.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

### **`subcluster1.cpu1.semihosting-Thumb_SVC`**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

### **`subcluster1.cpu1.semihosting-cmd_line`**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

### **`subcluster1.cpu1.semihosting-cwd`**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

### **`subcluster1.cpu1.semihosting-enable`**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

### **`subcluster1.cpu1.semihosting-heap_base`**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu1.semihosting-heap_limit`**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster1.cpu1.semihosting-stack_base`**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

### **`subcluster1.cpu1.semihosting-stack_limit`**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster1.cpu1.trace_special_hlt_imm16`**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster1.cpu1.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu2.AA64nAA32`**

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: `true`

### **`subcluster1.cpu2.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **`subcluster1.cpu2.CFGTE`**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster1.cpu2.CP15SDISABLE**

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: `false`

**subcluster1.cpu2.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster1.cpu2.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu2.VINITHI**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

**subcluster1.cpu2.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster1.cpu2.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu2.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu2.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu2.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu2.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu2.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

### **`subcluster1.cpu2.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu2.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu2.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu2.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu2.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster1.cpu2.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu2.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu2.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**subcluster1.cpu2.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster1.cpu2.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**subcluster1.cpu2.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

**subcluster1.cpu2.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster1.cpu2.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster1.cpu2.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster1.cpu2.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu2.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu2.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster1.cpu2.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu2.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster1.cpu2.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster1.cpu3.AA64nAA32**

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: `true`

### **`subcluster1.cpu3.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **`subcluster1.cpu3.CFGTE`**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu3.CP15SDISABLE`**

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu3.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu3.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu3.VINITHI`**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

**subcluster1.cpu3.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter trace\_special\_hlt\_imm16.

Type: `bool`

Default value: `false`

**subcluster1.cpu3.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu3.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu3.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu3.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu3.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: 0x0

### **subcluster1.cpu3.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

### **subcluster1.cpu3.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **subcluster1.cpu3.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **subcluster1.cpu3.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **subcluster1.cpu3.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **subcluster1.cpu3.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster1.cpu3.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu3.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu3.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu3.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster1.cpu3.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**subcluster1.cpu3.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: uint8\_t

Default value: 171

**subcluster1.cpu3.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: string

Default value: N/A

**subcluster1.cpu3.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster1.cpu3.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster1.cpu3.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu3.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu3.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster1.cpu3.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu3.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

#### **`subcluster1.cpu3.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

#### **`subcluster1.dcache-hit_latency`**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.dcache-maintenance_latency`**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.dcache-miss_latency`**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.dcache-prefetch_enabled`**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

Type: `bool`

Default value: `false`

#### **`subcluster1.dcache-read_access_latency`**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit or miss latency, and

intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.dcache-read_latency`**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.dcache-snoop_data_transfer_latency`**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.dcache-write_access_latency`**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.dcache-write_latency`**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. `dcache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.force_zero_PSTATE_PAN`**

Non-architecture parameter to force `PSTATE.PAN` to be 0.0: No effect. 1: `PSTATE.PAN` is always treated as 0. The parameter optimizes the performance of updating `PSTATE.PAN`.

Type: `bool`

Default value: `false`

### **`subcluster1.has_delayed_dbgreg`**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `true`

### **`subcluster1.has_delayed_sysreg`**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

### **`subcluster1.icache-hit_latency`**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.icache-maintenance_latency`**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.icache-miss_latency`**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.icache-prefetch_enabled`**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

Type: `bool`

Default value: `false`

### **`subcluster1.icache-read_access_latency`**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.icache-read_latency`**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.invalidate_code_cache_on_icache_cmo`**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: `0`

### **`subcluster1.ptw_latency`**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.tlb_latency`**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.tlbi_stall_enabled`**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: `false`

**subcluster1.walk\_cache\_latency**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.58 ARMCortexA55CT\_CortexA76CT

Defined in `LISA/ARMCortexA55CT_CortexA76CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
CortexA55 r1p0	Full support
CortexA76 r0p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

Changes in 11.31.15

The following parameters were added:

- `subcluster0.has_delayed_dbgreg`
- `subcluster0.has_delayed_sysreg`
- `subcluster1.has_delayed_dbgreg`
- `subcluster1.has_delayed_sysreg`

About ARMCortexA55CT\_CortexA76CT

The number of cores in each subcluster is configurable using the following parameters:

**subcluster0.NUM\_CORES**

Possible values are 1-7 (ARMCortexA55CT).

**subcluster1.NUM\_CORES**

Possible values are 1-4 (ARMCortexA76CT).

The total number of cores in the cluster cannot exceed 8.

Port arrays are expanded to the width needed for the maximum number of cores in each subcluster. Use the following port array indexes:

- `port_name[0-6]` for cores in subcluster0.

- `port_name[7-10]` for cores in subcluster1.

**Note**

All instances in the Master cross trigger matrix port array, `cti[11]` must be connected, regardless of the `NUM_CORES` value used.

Core-specific parameters have the following prefixes:

- `subcluster0.cpu0` to `subcluster0.cpu6` identify cores in `subcluster0`.
- `subcluster1.cpu0` to `subcluster1.cpu3` identify cores in `subcluster1`.

For information about the cores in this model, see:

- [ARMCortexA55CT](#)
- [ARMCortexA76CT](#)

### Iris and MTI instances for ARMCortexA55CT\_CortexA76CT

This model has the following Iris instances:

Name	Instance type
ARMCortexA55CT_CortexA76CT	Cluster_ARM_Cortex-A55_Cortex-A76
ARMCortexA55CT_CortexA76CT.AMU	PVBusLogger
ARMCortexA55CT_CortexA76CT.AMU.mapper	PVBusMapper
ARMCortexA55CT_CortexA76CT.DAP	PVBusLogger
ARMCortexA55CT_CortexA76CT.DAP.mapper	PVBusMapper
ARMCortexA55CT_CortexA76CT.DSU	DSU
ARMCortexA55CT_CortexA76CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA55CT_CortexA76CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA55CT_CortexA76CT.DSU.shared_cache	PVCache
ARMCortexA55CT_CortexA76CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA55CT_CortexA76CT.DSU.shared_cache.upstream[Z] (where Z = 0-5)	PVBusSlave
ARMCortexA55CT_CortexA76CT.MMAP	PVBusLogger
ARMCortexA55CT_CortexA76CT.MMAP.mapper	PVBusMapper
ARMCortexA55CT_CortexA76CT.RAS	PVBusLogger
ARMCortexA55CT_CortexA76CT.RAS.mapper	PVBusMapper
ARMCortexA55CT_CortexA76CT.ext_bus	PVBusLogger
ARMCortexA55CT_CortexA76CT.ext_bus.mapper	PVBusMapper
ARMCortexA55CT_CortexA76CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA55CT_CortexA76CT.global_debug_rom	debug_rom
ARMCortexA55CT_CortexA76CT.subcluster0	Subcluster_ARM_Cortex-A55
ARMCortexA55CT_CortexA76CT.subcluster0.cpu0	ARM_Cortex-A55
ARMCortexA55CT_CortexA76CT.subclusterZ.cpu0.UTLB (where Z = 0-1)	TLB

Name	Instance type
ARMCortexA55CT_CortexA76CT.subclusterZ.cpuU.dtlb (where Z = 0-1; U = 0-1)	TLB
ARMCortexA55CT_CortexA76CT.subclusterZ.cpu0.l1dcache (where Z = 0-1)	PVCache
ARMCortexA55CT_CortexA76CT.subclusterZ.cpu0.l1dcache.downstream[0].pvbusmaster (where Z = 0-1)	PVBusMaster
ARMCortexA55CT_CortexA76CT.subclusterZ.cpu0.l1dcache.upstream[0] (where Z = 0-1)	PVBusSlave
ARMCortexA55CT_CortexA76CT.subclusterZ.cpu0.l1icache (where Z = 0-1)	PVCache
ARMCortexA55CT_CortexA76CT.subclusterZ.cpu0.l1icache.downstream[0].pvbusmaster (where Z = 0-1)	PVBusMaster
ARMCortexA55CT_CortexA76CT.subclusterZ.cpu0.l1icache.upstream[0] (where Z = 0-1)	PVBusSlave
ARMCortexA55CT_CortexA76CT.subclusterZ.cpu0.l2cache (where Z = 0-1)	PVCache
ARMCortexA55CT_CortexA76CT.subclusterZ.cpu0.l2cache.downstream[0].pvbusmaster (where Z = 0-1)	PVBusMaster
ARMCortexA55CT_CortexA76CT.subclusterZ.cpu0.l2cache.upstream[W] (where Z = 0-1; W = 0-1)	PVBusSlave
ARMCortexA55CT_CortexA76CT.subcluster1	Subcluster_ARM_Cortex-A76
ARMCortexA55CT_CortexA76CT.subcluster1.cpu0	ARM_Cortex-A76

This model has the following MTI trace components:

Name	Component type
ARMCortexA55CT_CortexA76CT.AMU	PVBusLogger
ARMCortexA55CT_CortexA76CT.AMU.mapper	PVBusMapper
ARMCortexA55CT_CortexA76CT.DAP	PVBusLogger
ARMCortexA55CT_CortexA76CT.DAP.mapper	PVBusMapper
ARMCortexA55CT_CortexA76CT.DSU	DSU
ARMCortexA55CT_CortexA76CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA55CT_CortexA76CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA55CT_CortexA76CT.DSU.shared_cache	PVCache
ARMCortexA55CT_CortexA76CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA55CT_CortexA76CT.DSU.shared_cache.upstream[Z] (where Z = 0-5)	PVBusSlave
ARMCortexA55CT_CortexA76CT.MMAP	PVBusLogger
ARMCortexA55CT_CortexA76CT.MMAP.mapper	PVBusMapper
ARMCortexA55CT_CortexA76CT.RAS	PVBusLogger
ARMCortexA55CT_CortexA76CT.RAS.mapper	PVBusMapper
ARMCortexA55CT_CortexA76CT.ext_bus	PVBusLogger
ARMCortexA55CT_CortexA76CT.ext_bus.mapper	PVBusMapper
ARMCortexA55CT_CortexA76CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA55CT_CortexA76CT.subcluster0.cpu0	ARM_Cortex-A55
ARMCortexA55CT_CortexA76CT.subclusterZ.cpu0.UTLB (where Z = 0-1)	TLB
ARMCortexA55CT_CortexA76CT.subclusterZ.cpu0.l1dcache (where Z = 0-1)	PVCache

Name	Component type
ARMCortexA55CT_CortexA76CT.subclusterZ.cpu0.l1dcache.downstream[0].pvbusmaster (where Z = 0-1)	PVBusMaster
ARMCortexA55CT_CortexA76CT.subclusterZ.cpu0.l1dcache.upstream[0] (where Z = 0-1)	PVBusSlave
ARMCortexA55CT_CortexA76CT.subclusterZ.cpu0.l1icache (where Z = 0-1)	PVCache
ARMCortexA55CT_CortexA76CT.subclusterZ.cpu0.l1icache.downstream[0].pvbusmaster (where Z = 0-1)	PVBusMaster
ARMCortexA55CT_CortexA76CT.subclusterZ.cpu0.l1icache.upstream[0] (where Z = 0-1)	PVBusSlave
ARMCortexA55CT_CortexA76CT.subclusterZ.cpu0.l2cache (where Z = 0-1)	PVCache
ARMCortexA55CT_CortexA76CT.subclusterZ.cpu0.l2cache.downstream[0].pvbusmaster (where Z = 0-1)	PVBusMaster
ARMCortexA55CT_CortexA76CT.subclusterZ.cpu0.l2cache.upstream[W] (where Z = 0-1; W = 0-1)	PVBusSlave
ARMCortexA55CT_CortexA76CT.subcluster1.cpu0	ARM_Cortex-A76

### Ports for ARMCortexA55CT\_CortexA76CT

Port	Direction	Protocol	Description
aa64naa32	slave	Signal	Register width after reset.
acp_s	slave	PVBus	AXI ACP slave port
AENDMP	slave	Value_64	DynamiQ port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	DynamiQ port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamiQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.

Port	Direction	Protocol	Description
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cp15sdisable	slave	Signal	This signal disables write access to some system control processor registers.
cpuporeset	slave	Signal	CPU power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdown	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
pchannel_cluster	slave	PChannel	PChannel for cluster.
pchannel_core	slave	PChannel	PChannels for cores
pmbirq	master	Signal	Interrupt signal from statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.

Port	Direction	Protocol	Description
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
sporeset	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L3 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

## Parameters for ARM CortexA55CT\_CortexA76CT

### BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: `true`

### BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: `true`

### BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: `true`

### BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: `true`

### **CLUSTER\_ID**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

### **CMO\_broadcast\_when\_cache\_state\_modelling\_disabled**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. This value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: `1`

### **GICDISABLE**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: `true`

### **bus\_type**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: `0`

### **dcache-state\_modelled**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **default\_opmode**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

### **diagnostics**

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: `false`

### **enable\_simulation\_performance\_optimizations**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of `stage12_tlb_size` parameter to 1024).

Type: `bool`

Default value: `true`

### **has\_acp**

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: `false`

### **has\_peripheral\_port**

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: `false`

### **icache-state\_modelled**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

**l3cache-hit\_latency**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-maintenance\_latency**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-miss\_latency**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-read\_access\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size `l3cache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-read\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l3cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-size**

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

### **`l3cache-snoop_data_transfer_latency`**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-snoop_issue_latency`**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-write_access_latency`**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size `l3cache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-write_latency`**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l3cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`pchannel_treat_simreset_as_poreset`**

Register core as ON state to cluster with simulation reset.

Type: `bool`

Default value: `false`

### **`periph_address_end`**

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: `0x0`

### **`periph_address_start`**

Start address for peripheral port address range inclusive (corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.NUM_CORES`**

Number of cores per cluster.

Type: `uint8_t`

Default value: `1`

### **`subcluster0.cpi_div`**

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

### **`subcluster0.cpi_mul`**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

### **`subcluster0.cpu0.AA64nAA32`**

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: `true`

### **`subcluster0.cpu0.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster0.cpu0.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster0.cpu0.CP15SDISABLE**

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: `false`

**subcluster0.cpu0.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster0.cpu0.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu0.VINITHI**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

**subcluster0.cpu0.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster0.cpu0.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

#### **subcluster0.cpu0.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster0.cpu0.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster0.cpu0.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster0.cpu0.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster0.cpu0.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x40000

#### **subcluster0.cpu0.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu0.l2cache-snoop_issue_latency`**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu0.l2cache-write_access_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu0.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu0.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

#### **`subcluster0.cpu0.min_sync_level`**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: `0`

#### **`subcluster0.cpu0.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**`subcluster0.cpu0.semihosting-A64_HLT`**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**`subcluster0.cpu0.semihosting-ARM_SVC`**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**`subcluster0.cpu0.semihosting-T32_HLT`**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**`subcluster0.cpu0.semihosting-Thumb_SVC`**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

**`subcluster0.cpu0.semihosting-cmd_line`**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**`subcluster0.cpu0.semihosting-cwd`**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**`subcluster0.cpu0.semihosting-enable`**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

### **`subcluster0.cpu0.semihosting-heap_base`**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu0.semihosting-heap_limit`**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster0.cpu0.semihosting-stack_base`**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

### **`subcluster0.cpu0.semihosting-stack_limit`**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster0.cpu0.trace_special_hlt_imm16`**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster0.cpu0.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster0.cpu0.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster0.cpu1.AA64nAA32**

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: `true`

**subcluster0.cpu1.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster0.cpu1.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster0.cpu1.CP15SDISABLE**

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: `false`

**subcluster0.cpu1.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster0.cpu1.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu1.VINITHI`**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu1.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu1.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu1.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu1.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu1.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu1.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu1.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

### **`subcluster0.cpu1.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu1.l2cache-snoop_issue_latency`**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu1.l2cache-write_access_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu1.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu1.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster0.cpu1.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster0.cpu1.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu1.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu1.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster0.cpu1.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

### **`subcluster0.cpu1.semihosting-Thumb_SVC`**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

### **`subcluster0.cpu1.semihosting-cmd_line`**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

### **`subcluster0.cpu1.semihosting-cwd`**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

### **`subcluster0.cpu1.semihosting-enable`**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

### **`subcluster0.cpu1.semihosting-heap_base`**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu1.semihosting-heap_limit`**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster0.cpu1.semihosting-stack_base`**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

### **`subcluster0.cpu1.semihosting-stack_limit`**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster0.cpu1.trace_special_hlt_imm16`**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster0.cpu1.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu1.vfp-present`**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

### **`subcluster0.cpu2.AA64nAA32`**

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: `true`

### **`subcluster0.cpu2.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster0.cpu2.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster0.cpu2.CP15SDISABLE**

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: `false`

**subcluster0.cpu2.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster0.cpu2.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu2.VINITHI**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

**subcluster0.cpu2.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster0.cpu2.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu2.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu2.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu2.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu2.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu2.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

**subcluster0.cpu2.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu2.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu2.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu2.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu2.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster0.cpu2.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster0.cpu2.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu2.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu2.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster0.cpu2.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**subcluster0.cpu2.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

**subcluster0.cpu2.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster0.cpu2.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster0.cpu2.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster0.cpu2.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu2.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu2.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster0.cpu2.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu2.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu2.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu2.vfp-present`**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

### **`subcluster0.cpu3.AA64nAA32`**

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: `true`

### **`subcluster0.cpu3.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **`subcluster0.cpu3.CFGTE`**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu3.CP15SDISABLE`**

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu3.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster0.cpu3.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu3.VINITHI**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

**subcluster0.cpu3.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster0.cpu3.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu3.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu3.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu3.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu3.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu3.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x40000

**subcluster0.cpu3.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu3.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu3.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu3.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu3.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

### **`subcluster0.cpu3.min_sync_level`**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: `0`

### **`subcluster0.cpu3.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster0.cpu3.semihosting-A64_HLT`**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster0.cpu3.semihosting-ARM_SVC`**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster0.cpu3.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**subcluster0.cpu3.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**subcluster0.cpu3.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**subcluster0.cpu3.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster0.cpu3.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster0.cpu3.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu3.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu3.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster0.cpu3.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu3.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu3.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster0.cpu3.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster0.cpu4.AA64nAA32**

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: `true`

**subcluster0.cpu4.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster0.cpu4.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster0.cpu4.CP15SDISABLE**

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: `false`

**subcluster0.cpu4.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster0.cpu4.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu4.VINITHI**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

**subcluster0.cpu4.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu4.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu4.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu4.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu4.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu4.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu4.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

#### **`subcluster0.cpu4.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu4.l2cache-snoop_issue_latency`**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu4.l2cache-write_access_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu4.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu4.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

#### **`subcluster0.cpu4.min_sync_level`**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

#### **`subcluster0.cpu4.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

#### **`subcluster0.cpu4.semihosting-A64_HLT`**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

#### **`subcluster0.cpu4.semihosting-ARM_SVC`**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: 0x123456

#### **`subcluster0.cpu4.semihosting-T32_HLT`**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

#### **`subcluster0.cpu4.semihosting-Thumb_SVC`**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

#### **`subcluster0.cpu4.semihosting-cmd_line`**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

#### **`subcluster0.cpu4.semihosting-cwd`**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

### **`subcluster0.cpu4.semihosting-enable`**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

### **`subcluster0.cpu4.semihosting-heap_base`**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu4.semihosting-heap_limit`**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster0.cpu4.semihosting-stack_base`**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

### **`subcluster0.cpu4.semihosting-stack_limit`**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster0.cpu4.trace_special_hlt_imm16`**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu4.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster0.cpu4.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster0.cpu5.AA64nAA32**

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: `true`

**subcluster0.cpu5.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster0.cpu5.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster0.cpu5.CP15SDISABLE**

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: `false`

**subcluster0.cpu5.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu5.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu5.VINITHI`**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu5.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu5.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu5.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu5.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu5.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu5.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu5.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x40000

**subcluster0.cpu5.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu5.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu5.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu5.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu5.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

### **`subcluster0.cpu5.min_sync_level`**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: `0`

### **`subcluster0.cpu5.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster0.cpu5.semihosting-A64_HLT`**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster0.cpu5.semihosting-ARM_SVC`**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster0.cpu5.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**subcluster0.cpu5.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**subcluster0.cpu5.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**subcluster0.cpu5.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster0.cpu5.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster0.cpu5.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: 0x0

**subcluster0.cpu5.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: 0xf000000

**subcluster0.cpu5.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster0.cpu5.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu5.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu5.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster0.cpu5.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster0.cpu6.AA64nAA32**

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: `true`

**subcluster0.cpu6.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster0.cpu6.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster0.cpu6.CP15SDISABLE**

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: `false`

**subcluster0.cpu6.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster0.cpu6.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu6.VINITHI**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

**subcluster0.cpu6.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu6.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu6.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu6.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu6.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu6.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu6.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

### **`subcluster0.cpu6.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu6.l2cache-snoop_issue_latency`**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu6.l2cache-write_access_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu6.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu6.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

### **`subcluster0.cpu6.min_sync_level`**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

#### **`subcluster0.cpu6.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

#### **`subcluster0.cpu6.semihosting-A64_HLT`**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

#### **`subcluster0.cpu6.semihosting-ARM_SVC`**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: 0x123456

#### **`subcluster0.cpu6.semihosting-T32_HLT`**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

#### **`subcluster0.cpu6.semihosting-Thumb_SVC`**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

#### **`subcluster0.cpu6.semihosting-cmd_line`**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

#### **`subcluster0.cpu6.semihosting-cwd`**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

### **`subcluster0.cpu6.semihosting-enable`**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

### **`subcluster0.cpu6.semihosting-heap_base`**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu6.semihosting-heap_limit`**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster0.cpu6.semihosting-stack_base`**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

### **`subcluster0.cpu6.semihosting-stack_limit`**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster0.cpu6.trace_special_hlt_imm16`**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu6.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster0.cpu6.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster0.dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.dcache-maintenance\_latency**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.dcache-miss\_latency**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.dcache-prefetch\_enabled**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

Type: `bool`

Default value: `false`

**subcluster0.dcache-read\_access\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.dcache-read\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.dcache-size**

L1 D-Cache size in bytes.

Type: uint32\_t

Default value: 0x8000

**subcluster0.dcache-snoop\_data\_transfer\_latency**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.dcache-write\_access\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.dcache-write\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.force\_zero\_PSTATE\_PAN**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: bool

Default value: false

**subcluster0.has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: bool

Default value: false

**subcluster0.has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: bool

Default value: true

**subcluster0.has\_dot\_product**

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: uint8\_t

Default value: 2

**subcluster0.icache-hit\_latency**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.icache-maintenance\_latency**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.icache-miss\_latency**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.icache-prefetch\_enabled**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

Type: `bool`

Default value: `false`

**subcluster0.icache-read\_access\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.icache-read\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.icache-size**

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

#### **`subcluster0.invalidate_code_cache_on_icache_cmo`**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: `0`

#### **`subcluster0.ptw_latency`**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.tlb_latency`**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.tlbi_stall_enabled`**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: `false`

#### **`subcluster0.walk_cache_latency`**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.NUM_CORES`**

Number of cores per cluster.

Type: `uint8_t`

Default value: `1`

**subcluster1.cpi\_div**

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

**subcluster1.cpi\_mul**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

**subcluster1.cpu0.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster1.cpu0.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster1.cpu0.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster1.cpu0.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu0.VINITHI**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu0.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu0.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu0.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu0.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu0.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu0.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu0.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

### **`subcluster1.cpu0.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu0.l2cache-snoop_issue_latency`**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu0.l2cache-write_access_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu0.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu0.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

#### **`subcluster1.cpu0.min_sync_level`**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: `0`

#### **`subcluster1.cpu0.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

#### **`subcluster1.cpu0.semihosting-A64_HLT`**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

#### **`subcluster1.cpu0.semihosting-ARM_SVC`**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

#### **`subcluster1.cpu0.semihosting-T32_HLT`**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

#### **`subcluster1.cpu0.semihosting-Thumb_SVC`**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

#### **`subcluster1.cpu0.semihosting-cmd_line`**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**`subcluster1.cpu0.semihosting-cwd`**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**`subcluster1.cpu0.semihosting-enable`**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**`subcluster1.cpu0.semihosting-heap_base`**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**`subcluster1.cpu0.semihosting-heap_limit`**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**`subcluster1.cpu0.semihosting-stack_base`**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**`subcluster1.cpu0.semihosting-stack_limit`**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu0.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu0.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: bool

Default value: false

**subcluster1.cpu1.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: bool

Default value: false

**subcluster1.cpu1.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: bool

Default value: false

**subcluster1.cpu1.CRYPTODISABLE**

Disable cryptographic features.

Type: bool

Default value: false

**subcluster1.cpu1.RVBARADDR**

Value of RVBAR\_ELx register.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu1.VINITHI**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu1.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu1.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu1.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu1.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu1.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu1.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu1.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

#### **`subcluster1.cpu1.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu1.l2cache-snoop_issue_latency`**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu1.l2cache-write_access_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu1.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu1.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster1.cpu1.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu1.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu1.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu1.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster1.cpu1.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**subcluster1.cpu1.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: uint8\_t

Default value: 171

**subcluster1.cpu1.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster1.cpu1.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster1.cpu1.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster1.cpu1.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu1.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu1.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster1.cpu1.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: 0xf000000

**subcluster1.cpu1.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu1.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: bool

Default value: false

**subcluster1.cpu2.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: bool

Default value: false

**subcluster1.cpu2.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: bool

Default value: false

**subcluster1.cpu2.CRYPTODISABLE**

Disable cryptographic features.

Type: bool

Default value: false

**subcluster1.cpu2.RVBARADDR**

Value of RVBAR\_ELx register.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu2.VINITHI**

Reset value of SCTL.R.V.

Type: `bool`

Default value: `false`

**subcluster1.cpu2.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster1.cpu2.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu2.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu2.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu2.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu2.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu2.l2cache-size**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

**subcluster1.cpu2.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu2.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu2.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu2.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

**subcluster1.cpu2.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster1.cpu2.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu2.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu2.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu2.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster1.cpu2.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**subcluster1.cpu2.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

### **`subcluster1.cpu2.semihosting-cmd_line`**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

### **`subcluster1.cpu2.semihosting-cwd`**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

### **`subcluster1.cpu2.semihosting-enable`**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

### **`subcluster1.cpu2.semihosting-heap_base`**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu2.semihosting-heap_limit`**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster1.cpu2.semihosting-stack_base`**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

### **`subcluster1.cpu2.semihosting-stack_limit`**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

#### **`subcluster1.cpu2.trace_special_hlt_imm16`**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

#### **`subcluster1.cpu2.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

#### **`subcluster1.cpu3.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

#### **`subcluster1.cpu3.CFGTE`**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

#### **`subcluster1.cpu3.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

#### **`subcluster1.cpu3.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu3.VINITHI**

Reset value of SCTL.R.V.

Type: `bool`

Default value: `false`

**subcluster1.cpu3.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster1.cpu3.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu3.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu3.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu3.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu3.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu3.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**subcluster1.cpu3.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu3.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu3.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu3.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu3.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster1.cpu3.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu3.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu3.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu3.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster1.cpu3.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**subcluster1.cpu3.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

### **`subcluster1.cpu3.semihosting-cmd_line`**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

### **`subcluster1.cpu3.semihosting-cwd`**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

### **`subcluster1.cpu3.semihosting-enable`**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

### **`subcluster1.cpu3.semihosting-heap_base`**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu3.semihosting-heap_limit`**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster1.cpu3.semihosting-stack_base`**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

### **`subcluster1.cpu3.semihosting-stack_limit`**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster1.cpu3.trace_special_hlt_imm16`**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster1.cpu3.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

### **`subcluster1.dcache-hit_latency`**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.dcache-maintenance_latency`**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.dcache-miss_latency`**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.dcache-prefetch_enabled`**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

Type: `bool`

Default value: `false`

### **`subcluster1.dcache-read_access_latency`**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.dcache-read_latency`**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.dcache-snoop_data_transfer_latency`**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.dcache-write_access_latency`**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.dcache-write_latency`**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. `dcache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

**subcluster1.ext\_abort\_device\_read\_is\_sync**

Synchronous reporting of device-nGnRE read external aborts.

Type: bool

Default value: false

**subcluster1.ext\_abort\_device\_write\_is\_sync**

Synchronous reporting of device-nGnRE write external aborts.

Type: bool

Default value: false

**subcluster1.ext\_abort\_so\_read\_is\_sync**

Synchronous reporting of device-nGnRnE read external aborts.

Type: bool

Default value: false

**subcluster1.ext\_abort\_so\_write\_is\_sync**

Synchronous reporting of device-nGnRnE write external aborts.

Type: bool

Default value: false

**subcluster1.force\_zero\_PSTATE\_PAN**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: bool

Default value: false

**subcluster1.has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: bool

Default value: false

**subcluster1.has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

### **`subcluster1.has_statistical_profiling`**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

Type: `bool`

Default value: `true`

### **`subcluster1.icache-hit_latency`**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.icache-maintenance_latency`**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.icache-miss_latency`**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.icache-prefetch_enabled`**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

Type: `bool`

Default value: `false`

### **`subcluster1.icache-read_access_latency`**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and

intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.icache-read_latency`**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.invalidate_code_cache_on_icache_cmo`**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: `0`

#### **`subcluster1.ptw_latency`**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.tlb_latency`**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.tlbi_stall_enabled`**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: `false`

**subcluster1.treat-dcache-cmos-to-pou-as-nop**

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

Type: uint8\_t

Default value: 0

**subcluster1.walk\_cache\_latency**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

### 3.59 ARMCortexA55CT\_CortexA78CT

Defined in LISA/ARMCortexA55CT\_CortexA78CT.lisa.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
CortexA55 r1p0	Full support
CortexA78 r0p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

**Changes in 11.31.15**

The following parameters were added:

- subcluster0.has\_delayed\_dbgreg
- subcluster0.has\_delayed\_sysreg
- subcluster1.has\_delayed\_dbgreg
- subcluster1.has\_delayed\_sysreg

**About ARMCortexA55CT\_CortexA78CT**

The number of cores in each subcluster is configurable using the following parameters:

**subcluster0.NUM\_CORES**

Possible values are 1-7 (ARMCortexA55CT).

**subcluster1.NUM\_CORES**

Possible values are 1-4 (ARMCortexA78CT).

The total number of cores in the cluster cannot exceed 8.

Port arrays are expanded to the width needed for the maximum number of cores in each subcluster. Use the following port array indexes:

- port\_name[0-6] for cores in subcluster0.
- port\_name[7-10] for cores in subcluster1.

All instances in the Master cross trigger matrix port array, `cti[11]` must be connected, regardless of the `NUM_CORES` value used.

Core-specific parameters have the following prefixes:

- subcluster0.cpu0 to subcluster0.cpu6 identify cores in subcluster0.
- subcluster1.cpu0 to subcluster1.cpu3 identify cores in subcluster1.

For information about the cores in this model, see:

- [ARMCortexA55CT](#)
- [ARMCortexA78CT](#)

## Iris and MTI instances for ARMCortexA55CT\_CortexA78CT

This model has the following Iris instances:

Name	Instance type
ARMCortexA55CT_CortexA78CT	Cluster_ARM_Cortex-A55_Cortex-A78
ARMCortexA55CT_CortexA78CT.AMU	PVBusLogger
ARMCortexA55CT_CortexA78CT.AMU.mapper	PVBusMapper
ARMCortexA55CT_CortexA78CT.DAP	PVBusLogger
ARMCortexA55CT_CortexA78CT.DAP.mapper	PVBusMapper
ARMCortexA55CT_CortexA78CT.DSU	DSU
ARMCortexA55CT_CortexA78CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA55CT_CortexA78CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA55CT_CortexA78CT.DSU.shared_cache	PVCache
ARMCortexA55CT_CortexA78CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA55CT_CortexA78CT.DSU.shared_cache.upstream[Z] (where Z = 0-5)	PVBusSlave
ARMCortexA55CT_CortexA78CT.MMAP	PVBusLogger
ARMCortexA55CT_CortexA78CT.MMAP.mapper	PVBusMapper
ARMCortexA55CT_CortexA78CT.RAS	PVBusLogger
ARMCortexA55CT_CortexA78CT.RAS.mapper	PVBusMapper
ARMCortexA55CT_CortexA78CT.ext_bus	PVBusLogger
ARMCortexA55CT_CortexA78CT.ext_bus.mapper	PVBusMapper
ARMCortexA55CT_CortexA78CT.gic_cpuif_decoder_cluster	GLCv3CPUInterfaceDecoder
ARMCortexA55CT_CortexA78CT.global_debug_rom	debug_rom

Name	Instance type
ARMCortexA55CT_CortexA78CT.subcluster0	Subcluster_ARM_Cortex-A55
ARMCortexA55CT_CortexA78CT.subcluster0.cpu0	ARM_Cortex-A55
ARMCortexA55CT_CortexA78CT.subclusterZ.cpu0.UTLB (where Z = 0-1)	TLB
ARMCortexA55CT_CortexA78CT.subclusterZ.cpuU.dtlb (where Z = 0-1; U = 0-1)	TLB
ARMCortexA55CT_CortexA78CT.subclusterZ.cpu0.l1dcache (where Z = 0-1)	PVCache
ARMCortexA55CT_CortexA78CT.subclusterZ.cpu0.l1dcache.downstream[0].pvbusmaster (where Z = 0-1)	PVBusMaster
ARMCortexA55CT_CortexA78CT.subclusterZ.cpu0.l1dcache.upstream[0] (where Z = 0-1)	PVBusSlave
ARMCortexA55CT_CortexA78CT.subclusterZ.cpu0.l1icache (where Z = 0-1)	PVCache
ARMCortexA55CT_CortexA78CT.subclusterZ.cpu0.l1icache.downstream[0].pvbusmaster (where Z = 0-1)	PVBusMaster
ARMCortexA55CT_CortexA78CT.subclusterZ.cpu0.l1icache.upstream[0] (where Z = 0-1)	PVBusSlave
ARMCortexA55CT_CortexA78CT.subclusterZ.cpu0.l2cache (where Z = 0-1)	PVCache
ARMCortexA55CT_CortexA78CT.subclusterZ.cpu0.l2cache.downstream[0].pvbusmaster (where Z = 0-1)	PVBusMaster
ARMCortexA55CT_CortexA78CT.subclusterZ.cpu0.l2cache.upstream[W] (where Z = 0-1; W = 0-1)	PVBusSlave
ARMCortexA55CT_CortexA78CT.subcluster1	Subcluster_ARM_Cortex-A78
ARMCortexA55CT_CortexA78CT.subcluster1.cpu0	ARM_Cortex-A78

This model has the following MTI trace components:

Name	Component type
ARMCortexA55CT_CortexA78CT.AMU	PVBusLogger
ARMCortexA55CT_CortexA78CT.AMU.mapper	PVBusMapper
ARMCortexA55CT_CortexA78CT.DAP	PVBusLogger
ARMCortexA55CT_CortexA78CT.DAP.mapper	PVBusMapper
ARMCortexA55CT_CortexA78CT.DSU	DSU
ARMCortexA55CT_CortexA78CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA55CT_CortexA78CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA55CT_CortexA78CT.DSU.shared_cache	PVCache
ARMCortexA55CT_CortexA78CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA55CT_CortexA78CT.DSU.shared_cache.upstream[Z] (where Z = 0-5)	PVBusSlave
ARMCortexA55CT_CortexA78CT.MMAP	PVBusLogger
ARMCortexA55CT_CortexA78CT.MMAP.mapper	PVBusMapper
ARMCortexA55CT_CortexA78CT.RAS	PVBusLogger
ARMCortexA55CT_CortexA78CT.RAS.mapper	PVBusMapper
ARMCortexA55CT_CortexA78CT.ext_bus	PVBusLogger
ARMCortexA55CT_CortexA78CT.ext_bus.mapper	PVBusMapper
ARMCortexA55CT_CortexA78CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA55CT_CortexA78CT.subcluster0.cpu0	ARM_Cortex-A55

Name	Component type
ARMCortexA55CT_CortexA78CT.subclusterZ.cpu0.UTLB (where Z = 0-1)	TLB
ARMCortexA55CT_CortexA78CT.subclusterZ.cpu0.l1dcache (where Z = 0-1)	PVCache
ARMCortexA55CT_CortexA78CT.subclusterZ.cpu0.l1dcache.downstream[0].pvbusmaster (where Z = 0-1)	PVBusMaster
ARMCortexA55CT_CortexA78CT.subclusterZ.cpu0.l1dcache.upstream[0] (where Z = 0-1)	PVBusSlave
ARMCortexA55CT_CortexA78CT.subclusterZ.cpu0.l1icache (where Z = 0-1)	PVCache
ARMCortexA55CT_CortexA78CT.subclusterZ.cpu0.l1icache.downstream[0].pvbusmaster (where Z = 0-1)	PVBusMaster
ARMCortexA55CT_CortexA78CT.subclusterZ.cpu0.l1icache.upstream[0] (where Z = 0-1)	PVBusSlave
ARMCortexA55CT_CortexA78CT.subclusterZ.cpu0.l2cache (where Z = 0-1)	PVCache
ARMCortexA55CT_CortexA78CT.subclusterZ.cpu0.l2cache.downstream[0].pvbusmaster (where Z = 0-1)	PVBusMaster
ARMCortexA55CT_CortexA78CT.subclusterZ.cpu0.l2cache.upstream[W] (where Z = 0-1; W = 0-1)	PVBusSlave
ARMCortexA55CT_CortexA78CT.subcluster1.cpu0	ARM_Cortex-A78

### Ports for ARMCortexA55CT\_CortexA78CT

Port	Direction	Protocol	Description
aa64naa32	slave	Signal	Register width after reset.
acp_s	slave	PVBus	AXI ACP slave port
AENDMP	slave	Value_64	DynamiQ port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	DynamiQ port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
clusterid	slave	Value	The port reads the value in CPU ID register field, bits[11:14] of the MPIDR.
clusterpmuirq	master	Signal	DynamiQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.

Port	Direction	Protocol	Description
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cp15sdisable	slave	Signal	This signal disables write access to some system control processor registers.
cpuporeset	slave	Signal	CPU power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdown	master	Signal	No power-down request.
dbgprupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
pchannel_cluster	slave	PChannel	PChannel for cluster.
pchannel_core	slave	PChannel	PChannels for cores
pmbirq	master	Signal	Interrupt signal from statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.

Port	Direction	Protocol	Description
sporeset	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L3 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

## Parameters for ARM CortexA55CT\_CortexA78CT

### BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: `true`

### BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: `true`

### BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: `true`

### BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: `true`

### **CLUSTER\_ID**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

### **CMO\_broadcast\_when\_cache\_state\_modelling\_disabled**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. This value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: `1`

### **GICDISABLE**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: `true`

### **bus\_type**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: `0`

### **dcache-state\_modelled**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

**default\_opmode**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

**diagnostics**

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: `false`

**enable\_simulation\_performance\_optimizations**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of `stage12_tlb_size` parameter to 1024).

Type: `bool`

Default value: `true`

**has\_acp**

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: `false`

**has\_peripheral\_port**

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: `false`

**icache-state\_modelled**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

**l3cache-hit\_latency**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-maintenance\_latency**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-miss\_latency**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-read\_access\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size `l3cache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-read\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l3cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-size**

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

### **`l3cache-snoop_data_transfer_latency`**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-snoop_issue_latency`**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-write_access_latency`**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size `l3cache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-write_latency`**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l3cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`pchannel_treat_simreset_as_poreset`**

Register core as ON state to cluster with simulation reset.

Type: `bool`

Default value: `false`

### **`periph_address_end`**

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: `0x0`

### **`periph_address_start`**

Start address for peripheral port address range inclusive (corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.NUM_CORES`**

Number of cores per cluster.

Type: `uint8_t`

Default value: `1`

### **`subcluster0.cpi_div`**

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

### **`subcluster0.cpi_mul`**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

### **`subcluster0.cpu0.AA64nAA32`**

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: `true`

### **`subcluster0.cpu0.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster0.cpu0.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster0.cpu0.CP15SDISABLE**

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: `false`

**subcluster0.cpu0.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster0.cpu0.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu0.VINITHI**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

**subcluster0.cpu0.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster0.cpu0.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

#### **subcluster0.cpu0.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster0.cpu0.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster0.cpu0.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster0.cpu0.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster0.cpu0.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x40000

#### **subcluster0.cpu0.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu0.l2cache-snoop_issue_latency`**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu0.l2cache-write_access_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu0.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu0.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

#### **`subcluster0.cpu0.min_sync_level`**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: `0`

#### **`subcluster0.cpu0.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**`subcluster0.cpu0.semihosting-A64_HLT`**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**`subcluster0.cpu0.semihosting-ARM_SVC`**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**`subcluster0.cpu0.semihosting-T32_HLT`**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**`subcluster0.cpu0.semihosting-Thumb_SVC`**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

**`subcluster0.cpu0.semihosting-cmd_line`**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**`subcluster0.cpu0.semihosting-cwd`**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**`subcluster0.cpu0.semihosting-enable`**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

### **`subcluster0.cpu0.semihosting-heap_base`**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu0.semihosting-heap_limit`**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster0.cpu0.semihosting-stack_base`**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

### **`subcluster0.cpu0.semihosting-stack_limit`**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster0.cpu0.trace_special_hlt_imm16`**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster0.cpu0.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster0.cpu0.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster0.cpu1.AA64nAA32**

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: `true`

**subcluster0.cpu1.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster0.cpu1.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster0.cpu1.CP15SDISABLE**

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: `false`

**subcluster0.cpu1.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster0.cpu1.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu1.VINITHI`**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu1.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu1.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu1.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu1.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu1.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu1.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu1.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

### **`subcluster0.cpu1.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu1.l2cache-snoop_issue_latency`**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu1.l2cache-write_access_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu1.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu1.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster0.cpu1.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster0.cpu1.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu1.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu1.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster0.cpu1.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**`subcluster0.cpu1.semihosting-Thumb_SVC`**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**`subcluster0.cpu1.semihosting-cmd_line`**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**`subcluster0.cpu1.semihosting-cwd`**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**`subcluster0.cpu1.semihosting-enable`**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**`subcluster0.cpu1.semihosting-heap_base`**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**`subcluster0.cpu1.semihosting-heap_limit`**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**`subcluster0.cpu1.semihosting-stack_base`**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

### **`subcluster0.cpu1.semihosting-stack_limit`**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster0.cpu1.trace_special_hlt_imm16`**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster0.cpu1.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu1.vfp-present`**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

### **`subcluster0.cpu2.AA64nAA32`**

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: `true`

### **`subcluster0.cpu2.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu2.CFGTE`**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu2.CP15SDISABLE`**

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu2.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu2.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu2.VINITHI`**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu2.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu2.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu2.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu2.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu2.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu2.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu2.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

**subcluster0.cpu2.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu2.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu2.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu2.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu2.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster0.cpu2.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster0.cpu2.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu2.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu2.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster0.cpu2.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**subcluster0.cpu2.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

**subcluster0.cpu2.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster0.cpu2.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster0.cpu2.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster0.cpu2.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu2.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu2.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster0.cpu2.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu2.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu2.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu2.vfp-present`**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

### **`subcluster0.cpu3.AA64nAA32`**

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: `true`

### **`subcluster0.cpu3.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **`subcluster0.cpu3.CFGTE`**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu3.CP15SDISABLE`**

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu3.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster0.cpu3.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu3.VINITHI**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

**subcluster0.cpu3.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster0.cpu3.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu3.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu3.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu3.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu3.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu3.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x40000

**subcluster0.cpu3.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu3.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu3.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu3.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu3.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

### **`subcluster0.cpu3.min_sync_level`**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: `0`

### **`subcluster0.cpu3.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster0.cpu3.semihosting-A64_HLT`**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster0.cpu3.semihosting-ARM_SVC`**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster0.cpu3.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**subcluster0.cpu3.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**subcluster0.cpu3.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**subcluster0.cpu3.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster0.cpu3.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster0.cpu3.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu3.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu3.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster0.cpu3.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu3.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu3.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster0.cpu3.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster0.cpu4.AA64nAA32**

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: `true`

**subcluster0.cpu4.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster0.cpu4.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster0.cpu4.CP15SDISABLE**

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: `false`

**subcluster0.cpu4.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster0.cpu4.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu4.VINITHI**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

**subcluster0.cpu4.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu4.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu4.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu4.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu4.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu4.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu4.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

#### **`subcluster0.cpu4.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu4.l2cache-snoop_issue_latency`**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu4.l2cache-write_access_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu4.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu4.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

#### **`subcluster0.cpu4.min_sync_level`**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

**`subcluster0.cpu4.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

**`subcluster0.cpu4.semihosting-A64_HLT`**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

**`subcluster0.cpu4.semihosting-ARM_SVC`**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: 0x123456

**`subcluster0.cpu4.semihosting-T32_HLT`**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**`subcluster0.cpu4.semihosting-Thumb_SVC`**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**`subcluster0.cpu4.semihosting-cmd_line`**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**`subcluster0.cpu4.semihosting-cwd`**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

### **`subcluster0.cpu4.semihosting-enable`**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

### **`subcluster0.cpu4.semihosting-heap_base`**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu4.semihosting-heap_limit`**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster0.cpu4.semihosting-stack_base`**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

### **`subcluster0.cpu4.semihosting-stack_limit`**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster0.cpu4.trace_special_hlt_imm16`**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu4.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster0.cpu4.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster0.cpu5.AA64nAA32**

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: `true`

**subcluster0.cpu5.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster0.cpu5.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster0.cpu5.CP15SDISABLE**

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: `false`

**subcluster0.cpu5.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu5.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu5.VINITHI`**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu5.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu5.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu5.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu5.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu5.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu5.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu5.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x40000

**subcluster0.cpu5.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu5.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu5.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu5.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu5.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

### **`subcluster0.cpu5.min_sync_level`**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: `0`

### **`subcluster0.cpu5.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster0.cpu5.semihosting-A64_HLT`**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster0.cpu5.semihosting-ARM_SVC`**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster0.cpu5.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**subcluster0.cpu5.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**subcluster0.cpu5.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**subcluster0.cpu5.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster0.cpu5.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster0.cpu5.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu5.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu5.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster0.cpu5.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu5.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu5.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster0.cpu5.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster0.cpu6.AA64nAA32**

Register width configuration at reset. 0, AArch32. 1, AArch64.

Type: `bool`

Default value: `true`

**subcluster0.cpu6.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster0.cpu6.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster0.cpu6.CP15SDISABLE**

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: `false`

**subcluster0.cpu6.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster0.cpu6.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu6.VINITHI**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

**subcluster0.cpu6.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu6.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu6.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu6.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu6.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu6.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu6.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

### **`subcluster0.cpu6.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu6.l2cache-snoop_issue_latency`**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu6.l2cache-write_access_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu6.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu6.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

### **`subcluster0.cpu6.min_sync_level`**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

#### **`subcluster0.cpu6.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

#### **`subcluster0.cpu6.semihosting-A64_HLT`**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

#### **`subcluster0.cpu6.semihosting-ARM_SVC`**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: 0x123456

#### **`subcluster0.cpu6.semihosting-T32_HLT`**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

#### **`subcluster0.cpu6.semihosting-Thumb_SVC`**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

#### **`subcluster0.cpu6.semihosting-cmd_line`**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

#### **`subcluster0.cpu6.semihosting-cwd`**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

### **`subcluster0.cpu6.semihosting-enable`**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

### **`subcluster0.cpu6.semihosting-heap_base`**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu6.semihosting-heap_limit`**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster0.cpu6.semihosting-stack_base`**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

### **`subcluster0.cpu6.semihosting-stack_limit`**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster0.cpu6.trace_special_hlt_imm16`**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu6.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster0.cpu6.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster0.dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.dcache-maintenance\_latency**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.dcache-miss\_latency**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.dcache-prefetch\_enabled**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

Type: `bool`

Default value: `false`

**subcluster0.dcache-read\_access\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.dcache-read\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.dcache-size**

L1 D-Cache size in bytes.

Type: uint32\_t

Default value: 0x8000

**subcluster0.dcache-snoop\_data\_transfer\_latency**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.dcache-write\_access\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.dcache-write\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.force\_zero\_PSTATE\_PAN**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: bool

Default value: false

**subcluster0.has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: bool

Default value: false

**subcluster0.has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: bool

Default value: true

**subcluster0.has\_dot\_product**

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: uint8\_t

Default value: 2

**subcluster0.icache-hit\_latency**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.icache-maintenance\_latency**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.icache-miss\_latency**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.icache-prefetch\_enabled**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

Type: `bool`

Default value: `false`

**subcluster0.icache-read\_access\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.icache-read\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.icache-size**

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

#### **`subcluster0.invalidate_code_cache_on_icache_cmo`**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: `0`

#### **`subcluster0.ptw_latency`**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.tlb_latency`**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.tlbi_stall_enabled`**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: `false`

#### **`subcluster0.walk_cache_latency`**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.NUM_CORES`**

Number of cores per cluster.

Type: `uint8_t`

Default value: `1`

**subcluster1.cpi\_div**

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

**subcluster1.cpi\_mul**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

**subcluster1.cpu0.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster1.cpu0.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster1.cpu0.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster1.cpu0.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu0.VINITHI**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu0.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu0.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu0.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu0.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu0.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu0.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu0.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

### **`subcluster1.cpu0.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu0.l2cache-snoop_issue_latency`**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu0.l2cache-write_access_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu0.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu0.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

### **`subcluster1.cpu0.min_sync_level`**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: `0`

### **`subcluster1.cpu0.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster1.cpu0.semihosting-A64_HLT`**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster1.cpu0.semihosting-ARM_SVC`**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

### **`subcluster1.cpu0.semihosting-T32_HLT`**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

### **`subcluster1.cpu0.semihosting-Thumb_SVC`**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

### **`subcluster1.cpu0.semihosting-cmd_line`**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**`subcluster1.cpu0.semihosting-cwd`**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**`subcluster1.cpu0.semihosting-enable`**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**`subcluster1.cpu0.semihosting-heap_base`**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**`subcluster1.cpu0.semihosting-heap_limit`**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**`subcluster1.cpu0.semihosting-stack_base`**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**`subcluster1.cpu0.semihosting-stack_limit`**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu0.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu0.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: bool

Default value: false

**subcluster1.cpu1.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: bool

Default value: false

**subcluster1.cpu1.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: bool

Default value: false

**subcluster1.cpu1.CRYPTODISABLE**

Disable cryptographic features.

Type: bool

Default value: false

**subcluster1.cpu1.RVBARADDR**

Value of RVBAR\_ELx register.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu1.VINITHI**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu1.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu1.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu1.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu1.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu1.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu1.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu1.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

#### **`subcluster1.cpu1.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu1.l2cache-snoop_issue_latency`**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu1.l2cache-write_access_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu1.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu1.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster1.cpu1.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu1.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu1.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu1.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster1.cpu1.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**subcluster1.cpu1.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: uint8\_t

Default value: 171

**subcluster1.cpu1.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster1.cpu1.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster1.cpu1.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster1.cpu1.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu1.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu1.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster1.cpu1.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: 0xf000000

**subcluster1.cpu1.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu1.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: bool

Default value: false

**subcluster1.cpu2.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: bool

Default value: false

**subcluster1.cpu2.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: bool

Default value: false

**subcluster1.cpu2.CRYPTODISABLE**

Disable cryptographic features.

Type: bool

Default value: false

**subcluster1.cpu2.RVBARADDR**

Value of RVBAR\_ELx register.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu2.VINITHI**

Reset value of SCTL.R.V.

Type: `bool`

Default value: `false`

**subcluster1.cpu2.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster1.cpu2.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu2.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu2.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu2.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu2.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu2.l2cache-size**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

**subcluster1.cpu2.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu2.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu2.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu2.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

**subcluster1.cpu2.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster1.cpu2.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu2.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu2.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu2.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster1.cpu2.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**subcluster1.cpu2.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

### **`subcluster1.cpu2.semihosting-cmd_line`**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

### **`subcluster1.cpu2.semihosting-cwd`**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

### **`subcluster1.cpu2.semihosting-enable`**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

### **`subcluster1.cpu2.semihosting-heap_base`**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu2.semihosting-heap_limit`**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster1.cpu2.semihosting-stack_base`**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

### **`subcluster1.cpu2.semihosting-stack_limit`**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster1.cpu2.trace_special_hlt_imm16`**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster1.cpu2.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu3.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **`subcluster1.cpu3.CFGTE`**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu3.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu3.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu3.VINITHI**

Reset value of SCTL.R.V.

Type: `bool`

Default value: `false`

**subcluster1.cpu3.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster1.cpu3.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu3.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu3.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu3.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu3.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu3.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**subcluster1.cpu3.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu3.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu3.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu3.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu3.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster1.cpu3.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu3.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu3.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu3.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster1.cpu3.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**subcluster1.cpu3.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

### **`subcluster1.cpu3.semihosting-cmd_line`**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

### **`subcluster1.cpu3.semihosting-cwd`**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

### **`subcluster1.cpu3.semihosting-enable`**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

### **`subcluster1.cpu3.semihosting-heap_base`**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu3.semihosting-heap_limit`**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster1.cpu3.semihosting-stack_base`**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

### **`subcluster1.cpu3.semihosting-stack_limit`**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster1.cpu3.trace_special_hlt_imm16`**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster1.cpu3.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

### **`subcluster1.dcache-hit_latency`**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.dcache-maintenance_latency`**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.dcache-miss_latency`**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.dcache-prefetch_enabled`**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

Type: `bool`

Default value: `false`

#### **`subcluster1.dcache-read_access_latency`**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.dcache-read_latency`**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.dcache-size`**

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

#### **`subcluster1.dcache-snoop_data_transfer_latency`**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.dcache-write_access_latency`**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.dcache-write\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.ext\_abort\_device\_read\_is\_sync**

Synchronous reporting of device-nGnRE read external aborts.

Type: bool

Default value: false

**subcluster1.ext\_abort\_device\_write\_is\_sync**

Synchronous reporting of device-nGnRE write external aborts.

Type: bool

Default value: false

**subcluster1.ext\_abort\_so\_read\_is\_sync**

Synchronous reporting of device-nGnRnE read external aborts.

Type: bool

Default value: false

**subcluster1.ext\_abort\_so\_write\_is\_sync**

Synchronous reporting of device-nGnRnE write external aborts.

Type: bool

Default value: false

**subcluster1.force\_zero\_PSTATE\_PAN**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: bool

Default value: false

**subcluster1.has\_coherent\_icache**

Whether icache invalidation to the point of unification is required for instruction to data coherence.  
true - Invalidate operations not required.

Type: bool

Default value: false

**subcluster1.has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: bool

Default value: false

**subcluster1.has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: bool

Default value: false

**subcluster1.has\_dot\_product**

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: uint8\_t

Default value: 2

**subcluster1.icache-hit\_latency**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.icache-maintenance\_latency**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.icache-miss\_latency**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.icache-prefetch\_enabled**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

Type: `bool`

Default value: `false`

**subcluster1.icache-read\_access\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.icache-read\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.icache-size**

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

**subcluster1.invalidate\_code\_cache\_on\_icache\_cmo**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

### **`subcluster1.ptw_latency`**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

### **`subcluster1.tlb_latency`**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

### **`subcluster1.tlbi_stall_enabled`**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: `false`

### **`subcluster1.treat-dcache-cmos-to-pou-as-nop`**

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

Type: `uint8_t`

Default value: 0

### **`subcluster1.walk_cache_latency`**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

## 3.60 ARMCortexA57CT

Defined in `LISA/ARMCortexA57CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r1p1	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Changes in 11.31.15

The following parameters were added:

- `has_delayed_dbgreg`
- `has_delayed_sysreg`

### About ARMCortexA57CT

The per-core parameters are preceded by `cpun.`, where `n` identifies the core (0-3).

The cache latency parameters are only effective when you enable cache-state modeling. Timing annotation for transactions downstream of the cache and TLB models propagates through the models. This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

The system designer decides whether a debug APB ties the external debug view with other system views. In the model, use a `PVBusDecoder` to direct traffic to the correct port, `dev_debug_s` or `memorymapped_debug_s`.

### Differences between the model and the RTL

This component has the following differences from the corresponding revision of the RTL implementation:

- The value of the AArch64 `PMCEID0_ELO` register, and the AArch32 alias of this register, differs in the model from the TRM value. The model value reflects the model counters.
- The mechanisms for setting the affinity fields of the MPIDR. The RTL has two ports:
  - `CLUSTERIDAFF1[7:0]`.
  - `CLUSTERIDAFF2[7:0]`. `AFF1` sets the value of MPIDR bits[15:8] and `AFF2` sets the value of MPIDR bits[23:16]. In contrast, the model has a single `CLUSTER_ID` port. This difference allows the setting of bits[23:8] of the MPIDR using bits[15:0] of the `CLUSTER_ID` value.
- The memory mapped debug registers have a view for cores and a view for external debug agents. In the model, these views require two `PVBus` ports. In hardware, the system designer decides how the implementation differentiates the views.
- In the model, a single peer event port combines the functionality of the `eventi` and `evento` signals in the RTL.

- The Generic Timers are Programmer's View (PV) level abstractions: a model-specific protocol connects the cntvalueb port to the MemoryMappedCounterModule.
- The GIC CPU Interface is a PV level abstraction: a model-specific protocol connects the GIC CPU Interface to the GIC Distributor.
- The CoreSight Cross Trigger Interface (CTI) is a PV level abstraction: the interface is a model-specific one.
- The model has no mechanism to read the internal memory that the Cache and TLB structures use, through the implementation defined region of the system coprocessor interface. This memory includes the RAM Index Register, IL1DATA Registers, DL1DATA Registers, and associated functionality.
- The model does not implement:
  - ETM registers.
  - The PMUEVENT bus.
  - The WARMRESETREQ signal. However, the warm reset code sequence (see the section Code sequence to request a Warm reset as a result of RMR\_ELx.RR in the Arm Architecture Reference Manual for A-profile architecture) makes the model simulate a warm reset of the core.
  - The PMUSNAPSHOTREQ and PMUSNAPSHOTACK signals.
  - The EXTERRIRQ and INTERRIRQ signals.
  - Processor dynamic-retention signals.
  - The SYSBARDISABLE signal.
  - This model has a variable number of cores per cluster, specified using the `NUM_CORES` parameter.
  - The DBGPWRDUP, DBGPWRUPREQ, DBGNOPWRDWN, and DBGRSTREQ debug power management signals.
  - ECC and parity schemes are hardware-specific so are not supported.

## Iris and MTI instances for ARM CortexA57CT

This model has the following Iris instances:

Name	Instance type
ARM CortexA57CT	Cluster_ARM_Cortex-A57
ARM CortexA57CT.AMU	PVBusLogger
ARM CortexA57CT.AMU.mapper	PVBusMapper
ARM CortexA57CT.DAP	PVBusLogger
ARM CortexA57CT.DAP.mapper	PVBusMapper
ARM CortexA57CT.DSU	DSU
ARM CortexA57CT.DSU.mpam_busslave	PVBusSlave
ARM CortexA57CT.MMAP	PVBusLogger
ARM CortexA57CT.MMAP.mapper	PVBusMapper
ARM CortexA57CT.RAS	PVBusLogger

Name	Instance type
ARMCortexA57CT.RAS.mapper	PVBusMapper
ARMCortexA57CT.acp_mapper	PVBusMapper
ARMCortexA57CT.cpu0	ARM_Cortex-A57
ARMCortexA57CT.cpu0.UTLB	TLB
ARMCortexA57CT.cpu0.dtlb	TLB
ARMCortexA57CT.cpu0.l1dcache	PVCache
ARMCortexA57CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA57CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA57CT.cpu0.l1icache	PVCache
ARMCortexA57CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA57CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA57CT.ext_bus	PVBusLogger
ARMCortexA57CT.ext_bus.mapper	PVBusMapper
ARMCortexA57CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA57CT.global_debug_rom	debug_rom
ARMCortexA57CT.l2_cache	PVCache
ARMCortexA57CT.l2_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA57CT.l2_cache.upstream[Z] (where Z = 0-16)	PVBusSlave
ARMCortexA57CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
ARMCortexA57CT.AMU	PVBusLogger
ARMCortexA57CT.AMU.mapper	PVBusMapper
ARMCortexA57CT.DAP	PVBusLogger
ARMCortexA57CT.DAP.mapper	PVBusMapper
ARMCortexA57CT.DSU	DSU
ARMCortexA57CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA57CT.MMAP	PVBusLogger
ARMCortexA57CT.MMAP.mapper	PVBusMapper
ARMCortexA57CT.RAS	PVBusLogger
ARMCortexA57CT.RAS.mapper	PVBusMapper
ARMCortexA57CT.acp_mapper	PVBusMapper
ARMCortexA57CT.cpu0	ARM_Cortex-A57
ARMCortexA57CT.cpu0.UTLB	TLB
ARMCortexA57CT.cpu0.l1dcache	PVCache
ARMCortexA57CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA57CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA57CT.cpu0.l1icache	PVCache
ARMCortexA57CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster

Name	Component type
ARMCortexA57CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA57CT.ext_bus	PVBusLogger
ARMCortexA57CT.ext_bus.mapper	PVBusMapper
ARMCortexA57CT.gic_cpuif_decoder_cluster	GCv3CPUInterfaceDecoder
ARMCortexA57CT.l2_cache	PVCache
ARMCortexA57CT.l2_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA57CT.l2_cache.upstream[Z] (where Z = 0-16)	PVBusSlave
ARMCortexA57CT.l2_flusher	AsyncCacheFlushUnit

## Ports for ARMCortexA57CT

Port	Direction	Protocol	Description
aa64naa32	slave	Signal	Register width after reset.
acp_s	slave	PVBus	AXI ACP slave port.
broadcastcachemaint	slave	Signal	Enable broadcasting of cache maintenance operations to downstream caches.
broadcastinner	slave	Signal	Enable broadcasting of Inner Shareable transactions.
broadcastouter	slave	Signal	Enable broadcasting of Outer Shareable transactions.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
clrexmonack	master	Signal	Acknowledge handshake signal for the clrexmonreq signal
clrexmonreq	slave	Signal	Signals the clearing of an external global exclusive monitor
clusterid	slave	Value	The port sets the value of the affinity levels 1 and 2; bits [23:16] and [15:8] of the MPIDR.
CNTHPIRQ	master	Signal	The per-EL counter signal.
CNTPNSIRQ	master	Signal	The per-EL counter signal.
CNTPSIRQ	master	Signal	The per-EL counter signal.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	The per-EL counter signal.
commirq	master	Signal	Interrupt signal from debug communications channel.
commrxd	master	Signal	Receive portion of Data Transfer Register full.
commtxd	master	Signal	Transmit portion of Data Transfer Register empty.
cp15sdisable	slave	Signal	This signal disables write access to some system control processor registers.
cpuporeset	slave	Signal	Power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.

Port	Direction	Protocol	Description
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgack	master	Signal	External debug interface.
dbgen	slave	Signal	External debug interface.
dbgnopwrdown	master	Signal	These signals relate to core power down.
dbgpwrupreq	master	Signal	These signals relate to core power down.
dev_debug_s	slave	PVBus	External debug interface.
edbgrq	slave	Signal	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
l2flushdone	master	Signal	Flush of L2 memory system complete
l2flushreq	slave	Signal	Request flush of L2 memory system.
l2reset	slave	Signal	Reset the shared L2 memory system controller.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
periphbase	slave	Value_64	This port sets the base address of private peripheral region.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
rei	slave	Signal	Individual processor RAM Error Interrupt signal input.
reset	slave	Signal	Raising this signal will put the core into reset mode.
romaddr	slave	Value_64	Debug ROM base address.
romaddrv	slave	Signal	Debug ROM base address valid.
rvbaraddr	slave	Value_64	Reset vector base address.
sei	slave	Signal	Per core System Error physical pins.
smpen	master	Signal	This signals AMP or SMP mode for each core.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
standbywfe	master	Signal	This signal indicates if a core is in WFE state.
standbywfi	master	Signal	This signal indicates if a core is in WFI state.
standbywfil2	master	Signal	Indicate that all the individual processors and the L2 systems are in a WFI state.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.

Port	Direction	Protocol	Description
vfiq	slave	Signal	Virtual FIQ.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtual IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Processor Virtual System Error Interrupt request.

## Parameters for ARMCortexA57CT

### **cpuX.AA64nAA32**

Type: `bool`

Default value: `true`

### **cpuX.CFGEND**

Type: `bool`

Default value: `false`

### **cpuX.CFGTE**

Type: `bool`

Default value: `false`

### **cpuX.CP15SDISABLE**

Type: `bool`

Default value: `false`

### **cpuX.CRYPTODISABLE**

Type: `bool`

Default value: `false`

### **cpuX.RVBARADDR**

Type: `uint64_t`

Default value: `0`

### **cpuX.VINITHI**

Type: `bool`

Default value: `false`

**cpuX.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter trace\_special\_hlt\_imm16.

Type: `bool`

Default value: `false`

**cpuX.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint64_t`

Default value: `256`

**cpuX.min\_sync\_level**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint32_t`

Default value: `0`

**cpuX.semihosting-A32\_HLT**

Type: `uint32_t`

Default value: `0xF000`

**cpuX.semihosting-A64\_HLT**

Type: `uint32_t`

Default value: `0xF000`

**cpuX.semihosting-ARM\_SVC**

Type: `uint32_t`

Default value: `0x123456`

**cpuX.semihosting-T32\_HLT**

Type: `uint32_t`

Default value: `0x3c`

**cpuX.semihosting-Thumb\_SVC**

Type: `uint32_t`

Default value: `0xAB`

**cpuX.semihosting-cmd\_line**

Type: string

Default value: ""

**cpuX.semihosting-cwd**

Type: string

Default value: ""

**cpuX.semihosting-enable**

Type: bool

Default value: true

**cpuX.semihosting-heap\_base**

Type: uint32\_t

Default value: 0x0

**cpuX.semihosting-heap\_limit**

Type: uint32\_t

Default value: 0x0F000000

**cpuX.semihosting-stack\_base**

Type: uint32\_t

Default value: 0x10000000

**cpuX.semihosting-stack\_limit**

Type: uint32\_t

Default value: 0x0F000000

**cpuX.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**cpuX.vfp-enable\_at\_reset**

Type: bool

Default value: false

**BROADCASTCACHEMAINT**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTINNER**

Enable broadcasting of Inner Shareable transactions. The broadcastinner signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTOUTER**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: `true`

**CLUSTER\_ID**

Type: `uint32_t`

Default value: `0`

**DBGROMADDR**

Type: `uint64_t`

Default value: `0x22000000`

**DBGROMADDRV**

Type: `bool`

Default value: `true`

**GICDISABLE**

Type: `bool`

Default value: `true`

**NUM\_CORES**

Number of cores in cluster.

Type: `uint8_t`

Default value: 1

### **PERIPHBASE**

Type: `uint64_t`

Default value: 0x13080000

### **bus\_type**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint32_t`

Default value: 0

### **cpi\_div**

divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 1

### **cpi\_mul**

multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 1

### **dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit.

Type: `uint64_t`

Default value: 0

### **dcache-maintenance\_latency**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

### **dcache-miss\_latency**

L1 D-Cache timing annotation latency for miss.

Type: `uint64_t`

Default value: 0

### **`dcache-read_access_latency`**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (based on the size of `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

### **`dcache-read_latency`**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

### **`dcache-snoop_data_transfer_latency`**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

### **`dcache-state_modelled`**

Type: `bool`

Default value: `false`

### **`dcache-write_access_latency`**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (based on the size of `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

### **`dcache-write_latency`**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

### **has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

### **has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

### **icache-hit\_latency**

L1 I-Cache timing annotation latency for hit.

Type: `uint64_t`

Default value: 0

### **icache-maintenance\_latency**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

### **icache-miss\_latency**

L1 I-Cache timing annotation latency for miss.

Type: `uint64_t`

Default value: 0

### **icache-prefetch\_enabled**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

Type: `bool`

Default value: `false`

**icache-read\_access\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (based on the size of icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is only used when icache-state\_modelled=true.

Type: uint64\_t

Default value: 0

**icache-read\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when icache-state\_modelled=true.

Type: uint64\_t

Default value: 0

**icache-state\_modelled**

Type: bool

Default value: false

**l2cache-hit\_latency**

L2 Cache timing annotation latency for hit.

Type: uint64\_t

Default value: 0

**l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0

**l2cache-miss\_latency**

L2 Cache timing annotation latency for miss.

Type: uint64\_t

Default value: 0

**l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access (based on the size of l2cache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0

**l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0

**l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0

**l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0

**l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access (based on the size of l2cache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0

### **l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0

### **ptw\_latency**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint32\_t

Default value: 0

### **tlb\_latency**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint32\_t

Default value: 0

## 3.61 ARMCortexA65AECT

Defined in LISA/ARMCortexA65AECT.lisa.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Changes in 11.31.15

The following parameters were added:

- has\_delayed\_dbgreg
- has\_delayed\_sysreg

### About ARMCortexA65AECT

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.

- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- `BROADCASTPERSIST` pin.

The model does not support the following features:

- `BROADCASTCACHEMAINTPOU` pin.
- `COREINSTRRET`, `COREINSTRRUN`, or `nPMBIRQ` signals.
- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Debug power management signals `DBGPWRDUP` and `DBGIRSTREQ` are not implemented, but `DBGPWRUPREQ` and `DBGNOPWRDWN` are implemented.
- Cache stashing capability.
- Each thread has its own L1Cache and L2Cache instead of a common cache that is shared by all threads of the core.
- Per-thread parameters are not yet supported but signals are implemented.
- Split/Lock is supported but with the limitations described in the AE-specific features implemented section.

This model has a variable number of cores per cluster, specified using the `NUM_CORES` parameter.

The per-core parameters are preceded by `cpun.`, where `n` identifies the core (0-7).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

### AE-specific features implemented

The only AE-specific features implemented in the model are Split-Lock and Lock-Step, with the following limitations:

- The implementation of Split-Lock and Lock-Step in the model is simply a halving of the number of cores available.

- Lock-step is implemented by a parameter that can be true or false for the entire execution only, rather than by a signal that can be enabled during execution.

As the model does not implement true Split-Lock functionality, the ports and parameters are contiguous. For example, for a 4-core CPU with Split-Lock enabled, `cpu0` and `cpu1` identify the available cores and associated ports, not `cpu0` and `cpu2`.

- Hybrid mode is not modeled in the DSU.

## Iris and MTI instances for ARMCortexA65AECT

This model has the following Iris instances:

Name	Instance type
ARMCortexA65AECT	Cluster_ARM_Cortex-A65AE
ARMCortexA65AECT.AMU	PVBusLogger
ARMCortexA65AECT.AMU.mapper	PVBusMapper
ARMCortexA65AECT.DAP	PVBusLogger
ARMCortexA65AECT.DAP.mapper	PVBusMapper
ARMCortexA65AECT.DSU	DSU
ARMCortexA65AECT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA65AECT.DSU.mpam_busslave	PVBusSlave
ARMCortexA65AECT.DSU.shared_cache	PVCache
ARMCortexA65AECT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA65AECT.DSU.shared_cache.upstream[Y] (where Y = 0-5)	PVBusSlave
ARMCortexA65AECT.MMAP	PVBusLogger
ARMCortexA65AECT.MMAP.mapper	PVBusMapper
ARMCortexA65AECT.RAS	PVBusLogger
ARMCortexA65AECT.RAS.mapper	PVBusMapper
ARMCortexA65AECT.cpuY.dtlb (where Y = 0-1)	TLB
ARMCortexA65AECT.cpuY.threadZ (where Y = 0-1; Z = 0-1)	ARM_Cortex-A65AE
ARMCortexA65AECT.cpuY.threadZ.UTLB (where Y = 0-1; Z = 0-1)	TLB
ARMCortexA65AECT.cpuY.thread0.l1dcache (where Y = 0-1)	PVCache
ARMCortexA65AECT.cpuY.thread0.l1dcache.downstream[0].pvbusmaster (where Y = 0-1)	PVBusMaster
ARMCortexA65AECT.cpuY.thread0.l1dcache.upstream[0] (where Y = 0-1)	PVBusSlave
ARMCortexA65AECT.cpuY.thread0.l1icache (where Y = 0-1)	PVCache
ARMCortexA65AECT.cpuY.thread0.l1icache.downstream[0].pvbusmaster (where Y = 0-1)	PVBusMaster
ARMCortexA65AECT.cpuY.thread0.l1icache.upstream[0] (where Y = 0-1)	PVBusSlave
ARMCortexA65AECT.cpuY.thread0.l2cache (where Y = 0-1)	PVCache
ARMCortexA65AECT.cpuY.thread0.l2cache.downstream[0].pvbusmaster (where Y = 0-1)	PVBusMaster
ARMCortexA65AECT.cpuY.thread0.l2cache.upstream[V] (where Y = 0-1; V = 0-1)	PVBusSlave
ARMCortexA65AECT.ext_bus	PVBusLogger
ARMCortexA65AECT.ext_bus.mapper	PVBusMapper
ARMCortexA65AECT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA65AECT.global_debug_rom	debug_rom

This model has the following MTI trace components:

Name	Component type
ARMCortexA65AECT.AMU	PVBusLogger
ARMCortexA65AECT.AMU.mapper	PVBusMapper
ARMCortexA65AECT.DAP	PVBusLogger
ARMCortexA65AECT.DAP.mapper	PVBusMapper
ARMCortexA65AECT.DSU	DSU
ARMCortexA65AECT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA65AECT.DSU.mpam_busslave	PVBusSlave
ARMCortexA65AECT.DSU.shared_cache	PVCache
ARMCortexA65AECT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA65AECT.DSU.shared_cache.upstream[Y] (where Y = 0–5)	PVBusSlave
ARMCortexA65AECT.MMAP	PVBusLogger
ARMCortexA65AECT.MMAP.mapper	PVBusMapper
ARMCortexA65AECT.RAS	PVBusLogger
ARMCortexA65AECT.RAS.mapper	PVBusMapper
ARMCortexA65AECT.cpuY.threadZ (where Y = 0–1; Z = 0–1)	ARM_Cortex-A65AE
ARMCortexA65AECT.cpuY.threadZ.UTLB (where Y = 0–1; Z = 0–1)	TLB
ARMCortexA65AECT.cpuY.thread0.l1dcache (where Y = 0–1)	PVCache
ARMCortexA65AECT.cpuY.thread0.l1dcache.downstream[0].pvbusmaster (where Y = 0–1)	PVBusMaster
ARMCortexA65AECT.cpuY.thread0.l1dcache.upstream[0] (where Y = 0–1)	PVBusSlave
ARMCortexA65AECT.cpuY.thread0.l1icache (where Y = 0–1)	PVCache
ARMCortexA65AECT.cpuY.thread0.l1icache.downstream[0].pvbusmaster (where Y = 0–1)	PVBusMaster
ARMCortexA65AECT.cpuY.thread0.l1icache.upstream[0] (where Y = 0–1)	PVBusSlave
ARMCortexA65AECT.cpuY.thread0.l2cache (where Y = 0–1)	PVCache
ARMCortexA65AECT.cpuY.thread0.l2cache.downstream[0].pvbusmaster (where Y = 0–1)	PVBusMaster
ARMCortexA65AECT.cpuY.thread0.l2cache.upstream[V] (where Y = 0–1; V = 0–1)	PVBusSlave
ARMCortexA65AECT.ext_bus	PVBusLogger
ARMCortexA65AECT.ext_bus.mapper	PVBusMapper
ARMCortexA65AECT.gic_cpuif_decoder_cluster	GIcV3CPUInterfaceDecoder

## Ports for ARMCortexA65AECT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port
AENDMP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.

Port	Direction	Protocol	Description
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamiQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cpuporeset	slave	Signal	Power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdown	master	Signal	These signals relate to core power down.
dbgprupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port per thread.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
pchannel_cluster	slave	PChannel	PChannel for cluster.

Port	Direction	Protocol	Description
pchannel_core	slave	PChannel	PChannels for cores
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core virtual System Error physical pins.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
sporeset	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

## Parameters for ARM Cortex A65AECT

### **cpuX.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **cpuX.enable\_single\_thread\_at\_reset**

Enable single thread after reset and keep other thread in reset.

Type: `bool`

Default value: `false`

**cpuX.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter trace\_special\_hlt\_imm16.

Type: bool

Default value: false

**cpuX.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **cpuX.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x40000

### **cpuX.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **cpuX.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **cpuX.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **cpuX.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **cpuX.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**cpuX.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**cpuX.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**cpuX.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**cpuX.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**cpuX.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**cpuX.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: uint8\_t

Default value: 171

**cpuX.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: string

Default value: N/A

**cpuX.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**cpuX.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**cpuX.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**cpuX.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**cpuX.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**cpuX.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**cpuX.thread0.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: `bool`

Default value: `false`

**cpuX.thread0.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**cpuX.thread0.MPIDR-override**

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: `uint64_t`

Default value: `0x0`

**cpuX.thread0.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**cpuX.thread0.VINITHI**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

**cpuX.thread1.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: `bool`

Default value: `false`

**cpuX.thread1.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**cpuX.thread1.MPIDR-override**

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: `uint64_t`

Default value: `0x0`

**cpuX.thread1.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**cpuX.thread1.VINITHI**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

**cpuX.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**cpuX.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**cpuX.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**BROADCASTATOMIC**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTCACHEMAINT**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTOUTER**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTPERSIST**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: `true`

**CLUSTER\_ID**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain even when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: `1`

**GICDISABLE**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: `true`

**NUM\_CORES**

Number of cores per cluster.

Type: `uint8_t`

Default value: 2

**cluster\_patch\_level**

Cosmetic change to patch number in CLUSTERIDR. Corresponds to the Y in rXpY.

Type: `uint8_t`

Default value: 0

**cluster\_revision\_number**

Cosmetic change to revision number in CLUSTERIDR, Corresponds to the X in rXpY.

Type: `uint8_t`

Default value: 0

**cpi\_div**

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 0x1

**cpi\_mul**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 0x1

**dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-maintenance_latency`**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-miss_latency`**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-prefetch_enabled`**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

Type: `bool`

Default value: `false`

### **`dcache-read_access_latency`**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-read_latency`**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-size**

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

**dcache-snoop\_data\_transfer\_latency**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-state\_modelled**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

**dcache-write\_access\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-write\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. `dcache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**default\_opmode**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

**diagnostics**

Enable DynaMIQ diagnostic messages.

Type: `bool`

Default value: `false`

**enable\_lock\_step**

Whether the core is configured in Dual Core Lock Step mode (FEAT\_DCLS).

Type: `bool`

Default value: `false`

**enable\_simulation\_performance\_optimizations**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of `stage12_tlb_size` parameter to 1024).

Type: `bool`

Default value: `true`

**force\_zero\_PSTATE\_PAN**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: `false`

**has\_acp**

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: `false`

**has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

**has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `true`

**has\_dot\_product**

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

**has\_peripheral\_port**

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: `false`

**icache-hit\_latency**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-maintenance\_latency**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-miss\_latency**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-prefetch\_enabled**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

Type: `bool`

Default value: `false`

**icache-read\_access\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**icache-read\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. icache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**icache-size**

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

**icache-state\_modelled**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

**invalidate\_code\_cache\_on\_icache\_cmo**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

### **l3cache-hit\_latency**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **l3cache-maintenance\_latency**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **l3cache-miss\_latency**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **l3cache-read\_access\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **l3cache-read\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. l3cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**l3cache-size**

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x400000`

**l3cache-snoop\_data\_transfer\_latency**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-snoop\_issue\_latency**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-write\_access\_latency**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size `l3cache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-write\_latency**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l3cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**pchannel\_treat\_simreset\_as\_poreset**

Register core as ON state to cluster with simulation reset.

Type: `bool`

Default value: `false`

**periph\_address\_end**

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: uint64\_t

Default value: 0x0

**periph\_address\_start**

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: uint64\_t

Default value: 0x0

**ptw\_latency**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

**reported\_patch\_level**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: int8\_t

Default value: -1

**reported\_revision\_number**

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: int8\_t

Default value: -1

**tlb\_latency**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

**tlbi\_stall\_enabled**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: `false`

**walk\_cache\_latency**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

3.62 **ARMCortexA65AECT\_CortexA76AECT**

Defined in `LISA/ARMCortexA65AECT_CortexA76AECT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
CortexA65AE r0p0	Full support
CortexA76AE r0p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

**Changes in 11.31.15**

The following parameters were added:

- `subcluster0.has_delayed_dbgreg`
- `subcluster0.has_delayed_sysreg`
- `subcluster1.has_delayed_dbgreg`
- `subcluster1.has_delayed_sysreg`

**About ARMCortexA65AECT\_CortexA76AECT**

The number of cores in each subcluster is configurable using the following parameters:

**subcluster0.NUM\_CORES**

Possible values are 2-6 (ARMCortexA65AECT).

**subcluster1.NUM\_CORES**

Possible values are 2-4 (ARMCortexA76AECT).

The total number of cores in the cluster cannot exceed 8.

Port arrays are expanded to the width needed for the maximum number of cores in each subcluster. Use the following port array indexes:

- `port_name[0-11]` for cores in subcluster0.

- port\_name[0] is a port for subcluster0.cpu0.thread0
- port\_name[1] is a port for subcluster0.cpu0.thread1
- port\_name[2] is a port for subcluster0.cpu1.thread0
- port\_name[12-15] for cores in subcluster1.

All instances in the Master cross trigger matrix port array, `cti[16]` must be connected, regardless of the `NUM_CORES` value used.

Core-specific parameters have the following prefixes:

- subcluster0.cpu0 to subcluster0.cpu5 identify cores in subcluster0.
- subcluster1.cpu0 to subcluster1.cpu3 identify cores in subcluster1.

For information about the cores in this model, see:

## Iris and MTI instances for ARMCortexA65AECT\_CortexA76AECT

This model has the following Iris instances:

Name	Instance type
ARMCortexA65AECT_CortexA76AECT	Cluster_ARM_Cortex-A65AE_Cortex-A76AE
ARMCortexA65AECT_CortexA76AECT.AMU	PVBusLogger
ARMCortexA65AECT_CortexA76AECT.AMU.mapper	PVBusMapper
ARMCortexA65AECT_CortexA76AECT.DAP	PVBusLogger
ARMCortexA65AECT_CortexA76AECT.DAP.mapper	PVBusMapper
ARMCortexA65AECT_CortexA76AECT.DSU	DSU
ARMCortexA65AECT_CortexA76AECT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA65AECT_CortexA76AECT.DSU.mpam_busslave	PVBusSlave
ARMCortexA65AECT_CortexA76AECT.DSU.shared_cache	PVCache
ARMCortexA65AECT_CortexA76AECT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA65AECT_CortexA76AECT.DSU.shared_cache.upstream[Z] (where Z = 0-9)	PVBusSlave
ARMCortexA65AECT_CortexA76AECT.MMAP	PVBusLogger
ARMCortexA65AECT_CortexA76AECT.MMAP.mapper	PVBusMapper
ARMCortexA65AECT_CortexA76AECT.RAS	PVBusLogger
ARMCortexA65AECT_CortexA76AECT.RAS.mapper	PVBusMapper
ARMCortexA65AECT_CortexA76AECT.ext_bus	PVBusLogger
ARMCortexA65AECT_CortexA76AECT.ext_bus.mapper	PVBusMapper
ARMCortexA65AECT_CortexA76AECT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

Name	Instance type
ARMCortexA65AECT_CortexA76AECT.global_debug_rom	debug_rom
ARMCortexA65AECT_CortexA76AECT.subcluster0	Subcluster_ARM_Cortex-A65AE
ARMCortexA65AECT_CortexA76AECT.subclusterZ.cpuU.dtlb (where $Z = 0-1$ ; $U = 0-3$ )	TLB
ARMCortexA65AECT_CortexA76AECT.subcluster0.cpuU.threadV (where $U = 0-1$ ; $V = 0-1$ )	ARM_Cortex-A65AE
ARMCortexA65AECT_CortexA76AECT.subcluster0.cpuU.threadV.UTLB (where $U = 0-1$ ; $V = 0-1$ )	TLB
ARMCortexA65AECT_CortexA76AECT.subcluster0.cpuU.thread0.l1dcache (where $U = 0-1$ )	PVCache
ARMCortexA65AECT_CortexA76AECT.subcluster0.cpuU.thread0.l1dcache.downstream[0].pvbusmaster (where $U = 0-1$ )	PVBusMaster
ARMCortexA65AECT_CortexA76AECT.subcluster0.cpuU.thread0.l1dcache.upstream[0] (where $U = 0-1$ )	PVBusSlave
ARMCortexA65AECT_CortexA76AECT.subcluster0.cpuU.thread0.l1licache (where $U = 0-1$ )	PVCache
ARMCortexA65AECT_CortexA76AECT.subcluster0.cpuU.thread0.l1licache.downstream[0].pvbusmaster (where $U = 0-1$ )	PVBusMaster
ARMCortexA65AECT_CortexA76AECT.subcluster0.cpuU.thread0.l1licache.upstream[0] (where $U = 0-1$ )	PVBusSlave
ARMCortexA65AECT_CortexA76AECT.subcluster0.cpuU.thread0.l2cache (where $U = 0-1$ )	PVCache
ARMCortexA65AECT_CortexA76AECT.subcluster0.cpuU.thread0.l2cache.downstream[0].pvbusmaster (where $U = 0-1$ )	PVBusMaster
ARMCortexA65AECT_CortexA76AECT.subcluster0.cpuU.thread0.l2cache.upstream[A] (where $U = 0-1$ ; $A = 0-1$ )	PVBusSlave
ARMCortexA65AECT_CortexA76AECT.subcluster1	Subcluster_ARM_Cortex-A76AE
ARMCortexA65AECT_CortexA76AECT.subcluster1.cpuU (where $U = 0-1$ )	ARM_Cortex-A76AE
ARMCortexA65AECT_CortexA76AECT.subcluster1.cpuU.UTLB (where $U = 0-1$ )	TLB
ARMCortexA65AECT_CortexA76AECT.subcluster1.cpuU.l1dcache (where $U = 0-1$ )	PVCache
ARMCortexA65AECT_CortexA76AECT.subcluster1.cpuU.l1dcache.downstream[0].pvbusmaster (where $U = 0-1$ )	PVBusMaster
ARMCortexA65AECT_CortexA76AECT.subcluster1.cpuU.l1dcache.upstream[0] (where $U = 0-1$ )	PVBusSlave
ARMCortexA65AECT_CortexA76AECT.subcluster1.cpuU.l1licache (where $U = 0-1$ )	PVCache
ARMCortexA65AECT_CortexA76AECT.subcluster1.cpuU.l1licache.downstream[0].pvbusmaster (where $U = 0-1$ )	PVBusMaster
ARMCortexA65AECT_CortexA76AECT.subcluster1.cpuU.l1licache.upstream[0] (where $U = 0-1$ )	PVBusSlave
ARMCortexA65AECT_CortexA76AECT.subcluster1.cpuU.l2cache (where $U = 0-1$ )	PVCache
ARMCortexA65AECT_CortexA76AECT.subcluster1.cpuU.l2cache.downstream[0].pvbusmaster (where $U = 0-1$ )	PVBusMaster
ARMCortexA65AECT_CortexA76AECT.subcluster1.cpuU.l2cache.upstream[W] (where $U = 0-1$ ; $W = 0-1$ )	PVBusSlave

This model has the following MTI trace components:

Name	Component type
ARMCortexA65AECT_CortexA76AECT.AMU	PVBusLogger
ARMCortexA65AECT_CortexA76AECT.AMU.mapper	PVBusMapper
ARMCortexA65AECT_CortexA76AECT.DAP	PVBusLogger
ARMCortexA65AECT_CortexA76AECT.DAP.mapper	PVBusMapper
ARMCortexA65AECT_CortexA76AECT.DSU	DSU
ARMCortexA65AECT_CortexA76AECT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA65AECT_CortexA76AECT.DSU.mpam_busslave	PVBusSlave
ARMCortexA65AECT_CortexA76AECT.DSU.shared_cache	PVCache
ARMCortexA65AECT_CortexA76AECT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA65AECT_CortexA76AECT.DSU.shared_cache.upstream[Z] (where Z = 0-9)	PVBusSlave
ARMCortexA65AECT_CortexA76AECT.MMAP	PVBusLogger
ARMCortexA65AECT_CortexA76AECT.MMAP.mapper	PVBusMapper
ARMCortexA65AECT_CortexA76AECT.RAS	PVBusLogger
ARMCortexA65AECT_CortexA76AECT.RAS.mapper	PVBusMapper
ARMCortexA65AECT_CortexA76AECT.ext_bus	PVBusLogger
ARMCortexA65AECT_CortexA76AECT.ext_bus.mapper	PVBusMapper
ARMCortexA65AECT_CortexA76AECT.gic_cpuif_decoder_cluster	GIcV3CPUInterfaceDecoder
ARMCortexA65AECT_CortexA76AECT.subcluster0.cpuU.threadV (where U = 0-1; V = 0-1)	ARM_Cortex-A65AE
ARMCortexA65AECT_CortexA76AECT.subcluster0.cpuU.threadV.UTLB (where U = 0-1; V = 0-1)	TLB
ARMCortexA65AECT_CortexA76AECT.subcluster0.cpuU.thread0.l1dcache (where U = 0-1)	PVCache
ARMCortexA65AECT_CortexA76AECT.subcluster0.cpuU.thread0.l1dcache.downstream[0].pvbusmaster (where U = 0-1)	PVBusMaster
ARMCortexA65AECT_CortexA76AECT.subcluster0.cpuU.thread0.l1dcache.upstream[0] (where U = 0-1)	PVBusSlave
ARMCortexA65AECT_CortexA76AECT.subcluster0.cpuU.thread0.l1licache (where U = 0-1)	PVCache
ARMCortexA65AECT_CortexA76AECT.subcluster0.cpuU.thread0.l1licache.downstream[0].pvbusmaster (where U = 0-1)	PVBusMaster
ARMCortexA65AECT_CortexA76AECT.subcluster0.cpuU.thread0.l1licache.upstream[0] (where U = 0-1)	PVBusSlave
ARMCortexA65AECT_CortexA76AECT.subcluster0.cpuU.thread0.l2cache (where U = 0-1)	PVCache
ARMCortexA65AECT_CortexA76AECT.subcluster0.cpuU.thread0.l2cache.downstream[0].pvbusmaster (where U = 0-1)	PVBusMaster
ARMCortexA65AECT_CortexA76AECT.subcluster0.cpuU.thread0.l2cache.upstream[A] (where U = 0-1; A = 0-1)	PVBusSlave
ARMCortexA65AECT_CortexA76AECT.subcluster1.cpuU (where U = 0-1)	ARM_Cortex-A76AE
ARMCortexA65AECT_CortexA76AECT.subcluster1.cpuU.UTLB (where U = 0-1)	TLB
ARMCortexA65AECT_CortexA76AECT.subcluster1.cpuU.l1dcache (where U = 0-1)	PVCache
ARMCortexA65AECT_CortexA76AECT.subcluster1.cpuU.l1dcache.downstream[0].pvbusmaster (where U = 0-1)	PVBusMaster
ARMCortexA65AECT_CortexA76AECT.subcluster1.cpuU.l1dcache.upstream[0] (where U = 0-1)	PVBusSlave
ARMCortexA65AECT_CortexA76AECT.subcluster1.cpuU.l1licache (where U = 0-1)	PVCache

Name	Component type
ARMCortexA65AECT_CortexA76AECT.subcluster1.cpuU.l1icache.downstream[0].pvbusmaster (where $U = 0-1$ )	PVBusMaster
ARMCortexA65AECT_CortexA76AECT.subcluster1.cpuU.l1icache.upstream[0] (where $U = 0-1$ )	PVBusSlave
ARMCortexA65AECT_CortexA76AECT.subcluster1.cpuU.l2cache (where $U = 0-1$ )	PVCache
ARMCortexA65AECT_CortexA76AECT.subcluster1.cpuU.l2cache.downstream[0].pvbusmaster (where $U = 0-1$ )	PVBusMaster
ARMCortexA65AECT_CortexA76AECT.subcluster1.cpuU.l2cache.upstream[W] (where $U = 0-1$ ; $W = 0-1$ )	PVBusSlave

### Ports for ARMCortexA65AECT\_CortexA76AECT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port
AENDMP	slave	Value_64	DynamiQ port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	DynamiQ port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamiQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.

Port	Direction	Protocol	Description
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cpuporeset	slave	Signal	CPU power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdown	master	Signal	No power-down request.
dbgppwrupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
pchannel_cluster	slave	PChannel	PChannel for cluster.
pchannel_core	slave	PChannel	PChannels for cores
pmbirq	master	Signal	Interrupt signal from statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
sporeset	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.

Port	Direction	Protocol	Description
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L3 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

## Parameters for ARMCortexA65AECT\_CortexA76AECT

### BROADCASTATOMIC

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: `true`

### BROADCASTCACHEMAINT

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: `true`

### BROADCASTOUTER

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: `true`

### BROADCASTPERSIST

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: `true`

### CLUSTER\_ID

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels,

the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

### **CMO\_broadcast\_when\_cache\_state\_modelling\_disabled**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. This value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: `1`

### **GICDISABLE**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: `true`

### **dcache-state\_modelled**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **default\_opmode**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: `4`

### **diagnostics**

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: `false`

### **`enable_lock_step`**

Whether the core is configured in Dual Core Lock Step mode (FEAT\_DCLS).

Type: `bool`

Default value: `false`

### **`enable_simulation_performance_optimizations`**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of `stage12_tlb_size` parameter to 1024).

Type: `bool`

Default value: `true`

### **`has_acp`**

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: `false`

### **`has_peripheral_port`**

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: `false`

### **`icache-state_modelled`**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **`l3cache-hit_latency`**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-maintenance\_latency**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-miss\_latency**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-read\_access\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size `l3cache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-read\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l3cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-size**

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

**l3cache-snoop\_data\_transfer\_latency**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-snoop_issue_latency`**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-write_access_latency`**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size `l3cache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-write_latency`**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l3cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`pchannel_treat_simreset_as_poreset`**

Register core as ON state to cluster with simulation reset.

Type: `bool`

Default value: `false`

### **`periph_address_end`**

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: `0x0`

### **`periph_address_start`**

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.NUM_CORES`**

Number of cores per cluster.

Type: `uint8_t`

Default value: `2`

### **`subcluster0.cpi_div`**

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

### **`subcluster0.cpi_mul`**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

### **`subcluster0.cpu0.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu0.enable_single_thread_at_reset`**

Enable single thread after reset and keep other thread in reset.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu0.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster0.cpu0.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu0.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu0.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu0.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu0.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu0.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x40000

**subcluster0.cpu0.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu0.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu0.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu0.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu0.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster0.cpu0.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster0.cpu0.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

**subcluster0.cpu0.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

**subcluster0.cpu0.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: 0x123456

**subcluster0.cpu0.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**subcluster0.cpu0.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**subcluster0.cpu0.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**subcluster0.cpu0.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster0.cpu0.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster0.cpu0.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu0.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu0.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster0.cpu0.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu0.thread0.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: `bool`

Default value: `false`

**subcluster0.cpu0.thread0.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster0.cpu0.thread0.MPIDR-override**

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu0.thread0.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu0.thread0.VINITHI**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

**subcluster0.cpu0.thread1.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: `bool`

Default value: `false`

**subcluster0.cpu0.thread1.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster0.cpu0.thread1.MPIDR-override**

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu0.thread1.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: 0x0

**subcluster0.cpu0.thread1.VINITHI**

Reset value of SCTLR.V.

Type: bool

Default value: false

**subcluster0.cpu0.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu0.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: bool

Default value: false

**subcluster0.cpu0.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: bool

Default value: true

**subcluster0.cpu1.CRYPTODISABLE**

Disable cryptographic features.

Type: bool

Default value: false

**subcluster0.cpu1.enable\_single\_thread\_at\_reset**

Enable single thread after reset and keep other thread in reset.

Type: bool

Default value: false

**subcluster0.cpu1.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter trace\_special\_hlt\_imm16.

Type: bool

Default value: false

**subcluster0.cpu1.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu1.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu1.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu1.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu1.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster0.cpu1.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x40000

#### **subcluster0.cpu1.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster0.cpu1.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster0.cpu1.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster0.cpu1.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster0.cpu1.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster0.cpu1.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster0.cpu1.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu1.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu1.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster0.cpu1.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**subcluster0.cpu1.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: uint8\_t

Default value: 171

**subcluster0.cpu1.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: string

Default value: `N/A`

**subcluster0.cpu1.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster0.cpu1.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster0.cpu1.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu1.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu1.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster0.cpu1.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu1.thread0.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: `bool`

Default value: `false`

**subcluster0.cpu1.thread0.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster0.cpu1.thread0.MPIDR-override**

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu1.thread0.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu1.thread0.VINITHI**

Reset value of SCTL.R.V.

Type: `bool`

Default value: `false`

**subcluster0.cpu1.thread1.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: `bool`

Default value: `false`

**subcluster0.cpu1.thread1.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster0.cpu1.thread1.MPIDR-override**

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: `uint64_t`

Default value: 0x0

**subcluster0.cpu1.thread1.RVBARADDR**

Value of RVBAR\_ELx register.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu1.thread1.VINITHI**

Reset value of SCTLR.V.

Type: bool

Default value: false

**subcluster0.cpu1.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu1.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: bool

Default value: false

**subcluster0.cpu1.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: bool

Default value: true

**subcluster0.cpu2.CRYPTODISABLE**

Disable cryptographic features.

Type: bool

Default value: false

**subcluster0.cpu2.enable\_single\_thread\_at\_reset**

Enable single thread after reset and keep other thread in reset.

Type: `bool`

Default value: `false`

**subcluster0.cpu2.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster0.cpu2.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu2.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu2.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu2.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu2.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu2.l2cache-size**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

**subcluster0.cpu2.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu2.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu2.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu2.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

**subcluster0.cpu2.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster0.cpu2.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster0.cpu2.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu2.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu2.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster0.cpu2.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**subcluster0.cpu2.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

### **`subcluster0.cpu2.semihosting-cmd_line`**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

### **`subcluster0.cpu2.semihosting-cwd`**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

### **`subcluster0.cpu2.semihosting-enable`**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

### **`subcluster0.cpu2.semihosting-heap_base`**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu2.semihosting-heap_limit`**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster0.cpu2.semihosting-stack_base`**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

### **`subcluster0.cpu2.semihosting-stack_limit`**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

#### **`subcluster0.cpu2.thread0.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu2.thread0.CFGTE`**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu2.thread0.MPIDR-override`**

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu2.thread0.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu2.thread0.VINITHI`**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu2.thread1.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu2.thread1.CFGTE`**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu2.thread1.MPIDR-override`**

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu2.thread1.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu2.thread1.VINITHI`**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu2.trace_special_hlt_imm16`**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

#### **`subcluster0.cpu2.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu2.vfp-present`**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster0.cpu3.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster0.cpu3.enable\_single\_thread\_at\_reset**

Enable single thread after reset and keep other thread in reset.

Type: `bool`

Default value: `false`

**subcluster0.cpu3.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster0.cpu3.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu3.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu3.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu3.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu3.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu3.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x40000

**subcluster0.cpu3.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu3.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu3.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu3.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu3.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

### **`subcluster0.cpu3.min_sync_level`**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: `0`

### **`subcluster0.cpu3.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster0.cpu3.semihosting-A64_HLT`**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster0.cpu3.semihosting-ARM_SVC`**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster0.cpu3.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**subcluster0.cpu3.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**subcluster0.cpu3.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**subcluster0.cpu3.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster0.cpu3.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster0.cpu3.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: 0x0

**subcluster0.cpu3.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: 0xf000000

**subcluster0.cpu3.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster0.cpu3.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu3.thread0.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: `bool`

Default value: `false`

**subcluster0.cpu3.thread0.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster0.cpu3.thread0.MPIDR-override**

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu3.thread0.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu3.thread0.VINITHI**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

**subcluster0.cpu3.thread1.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: `bool`

Default value: `false`

**subcluster0.cpu3.thread1.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster0.cpu3.thread1.MPIDR-override**

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu3.thread1.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu3.thread1.VINITHI**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

**subcluster0.cpu3.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu3.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu3.vfp-present`**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

### **`subcluster0.cpu4.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu4.enable_single_thread_at_reset`**

Enable single thread after reset and keep other thread in reset.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu4.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu4.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu4.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu4.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu4.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu4.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu4.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x40000

**subcluster0.cpu4.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu4.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu4.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu4.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu4.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster0.cpu4.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster0.cpu4.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu4.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu4.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster0.cpu4.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**subcluster0.cpu4.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

**subcluster0.cpu4.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster0.cpu4.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster0.cpu4.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster0.cpu4.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu4.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu4.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster0.cpu4.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu4.thread0.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: `bool`

Default value: `false`

**subcluster0.cpu4.thread0.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster0.cpu4.thread0.MPIDR-override**

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu4.thread0.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu4.thread0.VINITHI**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

**subcluster0.cpu4.thread1.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: `bool`

Default value: `false`

**subcluster0.cpu4.thread1.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster0.cpu4.thread1.MPIDR-override**

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu4.thread1.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu4.thread1.VINITHI**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

**subcluster0.cpu4.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

#### **`subcluster0.cpu4.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu4.vfp-present`**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

#### **`subcluster0.cpu5.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu5.enable_single_thread_at_reset`**

Enable single thread after reset and keep other thread in reset.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu5.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu5.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu5.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu5.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu5.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu5.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu5.l2cache-size**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

**subcluster0.cpu5.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

**subcluster0.cpu5.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu5.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu5.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu5.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster0.cpu5.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster0.cpu5.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu5.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu5.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster0.cpu5.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**subcluster0.cpu5.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: uint8\_t

Default value: 171

**subcluster0.cpu5.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: string

Default value: N/A

**subcluster0.cpu5.semihosting-cwd**

Base directory for semihosting file access.

Type: string

Default value: N/A

**subcluster0.cpu5.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: bool

Default value: `true`

**subcluster0.cpu5.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu5.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu5.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster0.cpu5.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu5.thread0.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: `bool`

Default value: `false`

**subcluster0.cpu5.thread0.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster0.cpu5.thread0.MPIDR-override**

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: `uint64_t`

Default value: 0x0

**subcluster0.cpu5.thread0.RVBARADDR**

Value of RVBAR\_ELx register.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu5.thread0.VINITHI**

Reset value of SCTLR.V.

Type: bool

Default value: false

**subcluster0.cpu5.thread1.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: bool

Default value: false

**subcluster0.cpu5.thread1.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: bool

Default value: false

**subcluster0.cpu5.thread1.MPIDR-override**

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu5.thread1.RVBARADDR**

Value of RVBAR\_ELx register.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu5.thread1.VINITHI**

Reset value of SCTLR.V.

Type: bool

Default value: `false`

#### **`subcluster0.cpu5.trace_special_hlt_imm16`**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

#### **`subcluster0.cpu5.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu5.vfp-present`**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

#### **`subcluster0.dcache-hit_latency`**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.dcache-maintenance_latency`**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.dcache-miss_latency`**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

### **subcluster0.dcache-prefetch\_enabled**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

Type: bool

Default value: false

### **subcluster0.dcache-read\_access\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **subcluster0.dcache-read\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **subcluster0.dcache-size**

L1 D-Cache size in bytes.

Type: uint32\_t

Default value: 0x10000

### **subcluster0.dcache-snoop\_data\_transfer\_latency**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **subcluster0.dcache-write\_access\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be

used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.dcache-write_latency`**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. `dcache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.force_zero_PSTATE_PAN`**

Non-architecture parameter to force `PSTATE.PAN` to be 0.0: No effect. 1: `PSTATE.PAN` is always treated as 0. The parameter optimizes the performance of updating `PSTATE.PAN`.

Type: `bool`

Default value: `false`

#### **`subcluster0.has_delayed_dbgreg`**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

#### **`subcluster0.has_delayed_sysreg`**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `true`

#### **`subcluster0.has_dot_product`**

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: `2`

#### **`subcluster0.icache-hit_latency`**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.icache-maintenance_latency`**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.icache-miss_latency`**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.icache-prefetch_enabled`**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

Type: `bool`

Default value: `false`

### **`subcluster0.icache-read_access_latency`**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.icache-read_latency`**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.icache-size**

L1 I-Cache size in bytes.

Type: uint32\_t

Default value: 0x10000

**subcluster0.invalidate\_code\_cache\_on\_icache\_cmo**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: uint8\_t

Default value: 0

**subcluster0.ptw\_latency**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

**subcluster0.reported\_patch\_level**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: int8\_t

Default value: -1

**subcluster0.reported\_revision\_number**

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: int8\_t

Default value: -1

**subcluster0.tlb\_latency**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

**subcluster0.tlbi\_stall\_enabled**

If true, tlbi invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: `false`

**subcluster0.walk\_cache\_latency**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.NUM\_CORES**

Number of cores per cluster.

Type: `uint8_t`

Default value: `2`

**subcluster1.cpi\_div**

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

**subcluster1.cpi\_mul**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

**subcluster1.cpu0.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster1.cpu0.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

#### **`subcluster1.cpu0.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

#### **`subcluster1.cpu0.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu0.VINITHI`**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

#### **`subcluster1.cpu0.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

#### **`subcluster1.cpu0.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu0.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu0.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu0.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu0.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu0.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**subcluster1.cpu0.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu0.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu0.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu0.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu0.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster1.cpu0.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu0.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu0.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu0.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster1.cpu0.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**subcluster1.cpu0.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

**subcluster1.cpu0.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster1.cpu0.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster1.cpu0.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster1.cpu0.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu0.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu0.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster1.cpu0.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu0.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster1.cpu0.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster1.cpu1.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster1.cpu1.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu1.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu1.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu1.VINITHI`**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu1.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu1.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu1.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu1.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu1.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu1.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu1.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**subcluster1.cpu1.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu1.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu1.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu1.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu1.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster1.cpu1.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu1.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu1.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu1.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster1.cpu1.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**subcluster1.cpu1.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

**subcluster1.cpu1.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster1.cpu1.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster1.cpu1.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster1.cpu1.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu1.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu1.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster1.cpu1.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu1.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster1.cpu1.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster1.cpu2.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster1.cpu2.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu2.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu2.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu2.VINITHI`**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu2.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu2.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu2.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu2.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu2.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu2.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu2.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**subcluster1.cpu2.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu2.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu2.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu2.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu2.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster1.cpu2.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu2.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu2.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu2.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster1.cpu2.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**subcluster1.cpu2.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

**subcluster1.cpu2.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster1.cpu2.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster1.cpu2.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster1.cpu2.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu2.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu2.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster1.cpu2.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu2.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster1.cpu2.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster1.cpu3.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster1.cpu3.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu3.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu3.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu3.VINITHI`**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu3.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu3.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu3.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu3.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu3.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu3.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu3.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**subcluster1.cpu3.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu3.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu3.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu3.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu3.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster1.cpu3.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu3.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu3.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu3.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster1.cpu3.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**subcluster1.cpu3.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

**subcluster1.cpu3.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster1.cpu3.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster1.cpu3.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster1.cpu3.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu3.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu3.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster1.cpu3.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu3.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster1.cpu3.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster1.dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.dcache-maintenance\_latency**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.dcache-miss\_latency**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.dcache-prefetch\_enabled**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

Type: bool

Default value: false

**subcluster1.dcache-read\_access\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.dcache-read\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.dcache-snoop\_data\_transfer\_latency**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.dcache-write_access_latency`**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.dcache-write_latency`**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. `dcache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.ext_abort_device_read_is_sync`**

Synchronous reporting of device-nGnRE read external aborts.

Type: `bool`

Default value: `false`

#### **`subcluster1.ext_abort_device_write_is_sync`**

Synchronous reporting of device-nGnRE write external aborts.

Type: `bool`

Default value: `false`

#### **`subcluster1.ext_abort_so_read_is_sync`**

Synchronous reporting of device-nGnRnE read external aborts.

Type: `bool`

Default value: `false`

#### **`subcluster1.ext_abort_so_write_is_sync`**

Synchronous reporting of device-nGnRnE write external aborts.

Type: `bool`

Default value: `false`

#### **`subcluster1.force_zero_PSTATE_PAN`**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: `false`

#### **`subcluster1.has_delayed_dbgreg`**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

#### **`subcluster1.has_delayed_sysreg`**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

#### **`subcluster1.has_dot_product`**

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

#### **`subcluster1.has_statistical_profiling`**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

Type: `bool`

Default value: `true`

#### **`subcluster1.icache-hit_latency`**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.icache-maintenance\_latency**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.icache-miss\_latency**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.icache-prefetch\_enabled**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

Type: `bool`

Default value: `false`

**subcluster1.icache-read\_access\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.icache-read\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.invalidate\_code\_cache\_on\_icache\_cmo**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

**subcluster1.ptw\_latency**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

**subcluster1.reported\_patch\_level**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

**subcluster1.reported\_revision\_number**

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

**subcluster1.tlb\_latency**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

**subcluster1.tlbi\_stall\_enabled**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: `false`

**subcluster1.treat-dcache-cmos-to-pou-as-nop**

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

Type: uint8\_t

Default value: 0

**subcluster1.walk\_cache\_latency**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

## 3.63 ARMCortexA65CT

Defined in `LISA/ARMCortexA65CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Changes in 11.31.15

The following parameters were added:

- `has_delayed_dbgreg`
- `has_delayed_sysreg`

### About ARMCortexA65CT

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- `BROADCASTPERSIST` pin.

The model does not support the following features:

- BROADCASTCACHEMAINTPOU pin.
- COREINSTRRET, COREINSTRRUN, or nPMBIRQ signals.
- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Debug power management signals DBGWRDUP and DBGRSTREQ are not implemented, but DBGWRUPREQ and DBGNOPWRDWN are implemented.
- Cache stashing capability.
- Each thread has its own L1Cache and L2Cache instead of a common cache that is shared by all threads of the core.
- Per-thread parameters are not yet supported but signals are implemented.

This model has a variable number of cores per cluster, specified using the NUM\_CORES parameter.

The per-core parameters are preceded by `cpun.`, where n identifies the core (0-3).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

## Iris and MTI instances for ARMCortexA65CT

This model has the following Iris instances:

Name	Instance type
ARMCortexA65CT	Cluster_ARM_Cortex-A65
ARMCortexA65CT.AMU	PVBusLogger
ARMCortexA65CT.AMU.mapper	PVBusMapper
ARMCortexA65CT.DAP	PVBusLogger
ARMCortexA65CT.DAP.mapper	PVBusMapper
ARMCortexA65CT.DSU	DSU
ARMCortexA65CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA65CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA65CT.DSU.shared_cache	PVCache
ARMCortexA65CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA65CT.DSU.shared_cache.upstream[Y] (where Y = 0-3)	PVBusSlave

Name	Instance type
ARMCortexA65CT.MMAP	PVBusLogger
ARMCortexA65CT.MMAP.mapper	PVBusMapper
ARMCortexA65CT.RAS	PVBusLogger
ARMCortexA65CT.RAS.mapper	PVBusMapper
ARMCortexA65CT.cpu0.dtlb	TLB
ARMCortexA65CT.cpu0.threadZ (where Z = 0-1)	ARM_Cortex-A65
ARMCortexA65CT.cpu0.threadZ.UTLB (where Z = 0-1)	TLB
ARMCortexA65CT.cpu0.thread0.l1dcache	PVCache
ARMCortexA65CT.cpu0.thread0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA65CT.cpu0.thread0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA65CT.cpu0.thread0.l1icache	PVCache
ARMCortexA65CT.cpu0.thread0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA65CT.cpu0.thread0.l1icache.upstream[0]	PVBusSlave
ARMCortexA65CT.cpu0.thread0.l2cache	PVCache
ARMCortexA65CT.cpu0.thread0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA65CT.cpu0.thread0.l2cache.upstream[V] (where V = 0-1)	PVBusSlave
ARMCortexA65CT.ext_bus	PVBusLogger
ARMCortexA65CT.ext_bus.mapper	PVBusMapper
ARMCortexA65CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA65CT.global_debug_rom	debug_rom

This model has the following MTI trace components:

Name	Component type
ARMCortexA65CT.AMU	PVBusLogger
ARMCortexA65CT.AMU.mapper	PVBusMapper
ARMCortexA65CT.DAP	PVBusLogger
ARMCortexA65CT.DAP.mapper	PVBusMapper
ARMCortexA65CT.DSU	DSU
ARMCortexA65CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA65CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA65CT.DSU.shared_cache	PVCache
ARMCortexA65CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA65CT.DSU.shared_cache.upstream[Y] (where Y = 0-3)	PVBusSlave
ARMCortexA65CT.MMAP	PVBusLogger
ARMCortexA65CT.MMAP.mapper	PVBusMapper
ARMCortexA65CT.RAS	PVBusLogger
ARMCortexA65CT.RAS.mapper	PVBusMapper
ARMCortexA65CT.cpu0.threadZ (where Z = 0-1)	ARM_Cortex-A65
ARMCortexA65CT.cpu0.threadZ.UTLB (where Z = 0-1)	TLB
ARMCortexA65CT.cpu0.thread0.l1dcache	PVCache

Name	Component type
ARMCortexA65CT.cpu0.thread0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA65CT.cpu0.thread0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA65CT.cpu0.thread0.l1licache	PVCache
ARMCortexA65CT.cpu0.thread0.l1licache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA65CT.cpu0.thread0.l1licache.upstream[0]	PVBusSlave
ARMCortexA65CT.cpu0.thread0.l2cache	PVCache
ARMCortexA65CT.cpu0.thread0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA65CT.cpu0.thread0.l2cache.upstream[V] (where V = 0-1)	PVBusSlave
ARMCortexA65CT.ext_bus	PVBusLogger
ARMCortexA65CT.ext_bus.mapper	PVBusMapper
ARMCortexA65CT.gic_cpuif_decoder_cluster	GLCv3CPUInterfaceDecoder

## Ports for ARMCortexA65CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AENDMP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamiQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.

Port	Direction	Protocol	Description
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cpuporeset	slave	Signal	Power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdown	master	Signal	These signals relate to core power down.
dbgprupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
pchannel_cluster	slave	PChannel	PChannel for cluster.
pchannel_core	slave	PChannel	PChannels for cores
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core virtual System Error physical pins.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
sporeset	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.

Port	Direction	Protocol	Description
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

## Parameters for ARM Cortex A65CT

### **cpuX.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **cpuX.enable\_single\_thread\_at\_reset**

Enable single thread after reset and keep other thread in reset.

Type: `bool`

Default value: `false`

### **cpuX.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **cpuX.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **cpuX.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

### **cpuX.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **cpuX.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **cpuX.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **cpuX.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x40000

### **cpuX.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **cpuX.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

### **`cpuX.l2cache-write_access_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`cpuX.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`cpuX.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

### **`cpuX.min_sync_level`**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: `0`

### **`cpuX.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`cpuX.semihosting-A64_HLT`**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

**cpuX.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**cpuX.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**cpuX.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: uint8\_t

Default value: 171

**cpuX.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: string

Default value: N/A

**cpuX.semihosting-cwd**

Base directory for semihosting file access.

Type: string

Default value: N/A

**cpuX.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: bool

Default value: true

**cpuX.semihosting-heap\_base**

Virtual address of heap base.

Type: uint64\_t

Default value: 0x0

**cpuX.semihosting-heap\_limit**

Virtual address of top of heap.

Type: uint64\_t

Default value: 0xf000000

**cpuX.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: uint64\_t

Default value: 0x10000000

**cpuX.semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint64\_t

Default value: 0xf000000

**cpuX.thread0.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: bool

Default value: false

**cpuX.thread0.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: bool

Default value: false

**cpuX.thread0.MPIDR-override**

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: uint64\_t

Default value: 0x0

**cpuX.thread0.RVBARADDR**

Value of RVBAR\_ELx register.

Type: uint64\_t

Default value: 0x0

**cpuX.thread0.VINITHI**

Reset value of SCTLR.V.

Type: bool

Default value: false

**cpuX.thread1.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: bool

Default value: false

**cpuX.thread1.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: bool

Default value: false

**cpuX.thread1.MPIDR-override**

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: uint64\_t

Default value: 0x0

**cpuX.thread1.RVBARADDR**

Value of RVBAR\_ELx register.

Type: uint64\_t

Default value: 0x0

**cpuX.thread1.VINITHI**

Reset value of SCTLR.V.

Type: bool

Default value: false

**cpuX.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

### **`cpuX.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

### **`cpuX.vfp-present`**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

### **BROADCASTATOMIC**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: `true`

### **BROADCASTCACHEMAINT**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: `true`

### **BROADCASTOUTER**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: `true`

### **BROADCASTPERSIST**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: `true`

### **CLUSTER\_ID**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

### **CMO\_broadcast\_when\_cache\_state\_modelling\_disabled**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. This value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain even when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: `1`

### **GICDISABLE**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: `true`

### **NUM\_CORES**

Number of cores per cluster.

Type: `uint8_t`

Default value: `1`

### **cluster\_patch\_level**

Cosmetic change to patch number in CLUSTERIDR. Corresponds to the Y in rXpY.

Type: `uint8_t`

Default value: 0

**cluster\_revision\_number**

Cosmetic change to revision number in CLUSTERIDR, Corresponds to the X in rXpY.

Type: uint8\_t

Default value: 0

**cpi\_div**

Divider for calculating CPI (Cycles Per Instruction).

Type: uint32\_t

Default value: 0x1

**cpi\_mul**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: uint32\_t

Default value: 0x1

**dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**dcache-maintenance\_latency**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**dcache-miss\_latency**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**dcache-prefetch\_enabled**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

Type: `bool`

Default value: `false`

**dcache-read\_access\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**dcache-read\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**dcache-size**

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

**dcache-snoop\_data\_transfer\_latency**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**dcache-state\_modelled**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **`dcache-write_access_latency`**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-write_latency`**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. `dcache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`default_opmode`**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

### **`diagnostics`**

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: `false`

### **`enable_simulation_performance_optimizations`**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of `stage12_tlb_size` parameter to 1024).

Type: `bool`

Default value: `true`

**force\_zero\_PSTATE\_PAN**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: `false`

**has\_acp**

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: `false`

**has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

**has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `true`

**has\_dot\_product**

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

**has\_peripheral\_port**

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: `false`

**icache-hit\_latency**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`icache-maintenance_latency`**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`icache-miss_latency`**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`icache-prefetch_enabled`**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

Type: `bool`

Default value: `false`

### **`icache-read_access_latency`**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`icache-read_latency`**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-size**

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

**icache-state\_modelled**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

**invalidate\_code\_cache\_on\_icache\_cmo**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: `0`

**l3cache-hit\_latency**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-maintenance\_latency**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-miss\_latency**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-read\_access\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**l3cache-read\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. l3cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**l3cache-size**

L3 Cache size in bytes.

Type: uint32\_t

Default value: 0x400000

**l3cache-snoop\_data\_transfer\_latency**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**l3cache-snoop\_issue\_latency**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**l3cache-write\_access\_latency**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used

instead of per-byte even if l3cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **l3cache-write\_latency**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **pchannel\_treat\_simreset\_as\_poreset**

Register core as ON state to cluster with simulation reset.

Type: bool

Default value: false

### **periph\_address\_end**

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: uint64\_t

Default value: 0x0

### **periph\_address\_start**

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: uint64\_t

Default value: 0x0

### **ptw\_latency**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

### **tlb\_latency**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

### **tlbi\_stall\_enabled**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: bool

Default value: false

### **walk\_cache\_latency**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

## 3.64 ARMCortexA710CT

Defined in `LISA/ARMCortexA710CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r2p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Changes in 11.31.15

The following parameters were added:

- `has_delayed_dbgreg`
- `has_delayed_sysreg`
- `num_acp`

### About ARMCortexA710CT

The model supports the following features:

- DynamIQ Shared Unit-110 (DSU-110) system registers.
- L2 cache is supported at the per-core level only and there is no implementation of Core-Complex with shared L2 cache yet.
- PChannel for the cluster and for each core.
- `BROADCASTPERSIST` pin.
- Optional peripheral port.

- L3Cache partition.
- Per-core clock.
- Utility bus.
- AArch32 at ELO.

Support for the following features is planned for a future release:

- BROADCASTCACHEMAINTPOU pin.
- COREINSTRRET, COREINSTRRUN, and nPMBIRQ signals.

The following features will not be implemented:

- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- Error correction or detection features.
- Self-test features (MBIST).
- Snoop filtering.

This model supports the Arm(R)v8-A Cryptographic Extensions, which requires the crypto plug-in (crypto.dll or crypto.so) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

## Iris and MTI instances for ARM Cortex-A710CT

This model has the following Iris instances:

Name	Instance type
ARM Cortex-A710CT	Cluster_ARM_Cortex-A710
ARM Cortex-A710CT.AMU	PVBusLogger
ARM Cortex-A710CT.AMU.mapper	PVBusMapper
ARM Cortex-A710CT.DAP	PVBusLogger
ARM Cortex-A710CT.DAP.mapper	PVBusMapper
ARM Cortex-A710CT.DSU	DSU-110
ARM Cortex-A710CT.DSU.PPU_cluster	PPUv1
ARM Cortex-A710CT.DSU.PPU_cluster.busslave	PVBusSlave
ARM Cortex-A710CT.DSU.PPU_core0	PPUv1
ARM Cortex-A710CT.DSU.PPU_core0.busslave	PVBusSlave
ARM Cortex-A710CT.DSU.mpam_busslave	PVBusSlave
ARM Cortex-A710CT.DSU.shared_cache	PVCache
ARM Cortex-A710CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARM Cortex-A710CT.DSU.shared_cache.upstream[Y] (where Y = 0-3)	PVBusSlave
ARM Cortex-A710CT.DSU.utility_slave[0]	PVBusSlave

Name	Instance type
ARMCortexA710CT.MMAP	PVBusLogger
ARMCortexA710CT.MMAP.mapper	PVBusMapper
ARMCortexA710CT.RAS	PVBusLogger
ARMCortexA710CT.RAS.mapper	PVBusMapper
ARMCortexA710CT.cpu0	ARM_Cortex-A710
ARMCortexA710CT.cpu0.UTLB	TLB
ARMCortexA710CT.cpu0.debug_rom	debug_rom
ARMCortexA710CT.cpu0.dtlb	TLB
ARMCortexA710CT.cpu0.l1dcache	PVCache
ARMCortexA710CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA710CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA710CT.cpu0.l1icache	PVCache
ARMCortexA710CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA710CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA710CT.cpu0.l2cache	PVCache
ARMCortexA710CT.cpu0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA710CT.cpu0.l2cache.upstream[U] (where U = 0-1)	PVBusSlave
ARMCortexA710CT.ext_bus	PVBusLogger
ARMCortexA710CT.ext_bus.mapper	PVBusMapper
ARMCortexA710CT.gic_cpuif_decoder_cluster	GLICv3CPUInterfaceDecoder
ARMCortexA710CT.global_debug_rom	debug_rom
ARMCortexA710CT.secondary_debug_rom	debug_rom
ARMCortexA710CT.sve	ScalableVectorExtension

This model has the following MTI trace components:

Name	Component type
ARMCortexA710CT.AMU	PVBusLogger
ARMCortexA710CT.AMU.mapper	PVBusMapper
ARMCortexA710CT.DAP	PVBusLogger
ARMCortexA710CT.DAP.mapper	PVBusMapper
ARMCortexA710CT.DSU	DSU-110
ARMCortexA710CT.DSU.PPU_cluster	PPUv1
ARMCortexA710CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexA710CT.DSU.PPU_core0	PPUv1
ARMCortexA710CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexA710CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA710CT.DSU.shared_cache	PVCache
ARMCortexA710CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA710CT.DSU.shared_cache.upstream[Y] (where Y = 0-3)	PVBusSlave
ARMCortexA710CT.DSU.utility_slave[0]	PVBusSlave

Name	Component type
ARMCortexA710CT.MMAP	PVBusLogger
ARMCortexA710CT.MMAP.mapper	PVBusMapper
ARMCortexA710CT.RAS	PVBusLogger
ARMCortexA710CT.RAS.mapper	PVBusMapper
ARMCortexA710CT.cpu0	ARM_Cortex-A710
ARMCortexA710CT.cpu0.UTLB	TLB
ARMCortexA710CT.cpu0.l1dcache	PVCache
ARMCortexA710CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA710CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA710CT.cpu0.l1icache	PVCache
ARMCortexA710CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA710CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA710CT.cpu0.l2cache	PVCache
ARMCortexA710CT.cpu0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA710CT.cpu0.l2cache.upstream[U] (where U = 0-1)	PVBusSlave
ARMCortexA710CT.ext_bus	PVBusLogger
ARMCortexA710CT.ext_bus.mapper	PVBusMapper
ARMCortexA710CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

## Ports for ARMCortexA710CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AEND0MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.

Port	Direction	Protocol	Description
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcs_m_pchannel	master	PChannel	Cluster PCSM signal
cluster_powerdown_out	master	Signal	DEPRECATED - An output from PPU that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamiQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIRQ	master	Signal	Timer signals to SOC
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcs_m_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPU that informs thermal controller of the core power info
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error
coreinstrrun	master	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.

Port	Direction	Protocol	Description
dbgnopwrdown	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicreset	master	Signal	An output from PPU that can be used to reset GICCLK domain components
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_cluster_wakerequest	slave	Signal	PPU cluster wake request signal.
ppu_core_irq	master	Signal	PPU core interrupt.
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU Core wake request signals.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Reset signal to cluster.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq	master	Signal	Interrupt signal from the trace buffer unit.
utility_bus_s	slave	PVBus	Utility bus slave
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
virq	slave	Signal	Virtualised IRQ.

Port	Direction	Protocol	Description
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

## Parameters for ARM Cortex A710CT

### **cpuX.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **cpuX.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **cpuX.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **cpuX.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **cpuX.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-size**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

**cpuX.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

**cpuX.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**cpuX.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**cpuX.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**cpuX.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**cpuX.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**cpuX.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**cpuX.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: uint8\_t

Default value: 171

**cpuX.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: string

Default value: N/A

**cpuX.semihosting-cwd**

Base directory for semihosting file access.

Type: string

Default value: N/A

**cpuX.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: bool

Default value: `true`

**cpuX.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**cpuX.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**cpuX.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**cpuX.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**cpuX.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**cpuX.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**AEND0\_DEFAULT**

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

**AEND1\_DEFAULT**

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

**AEND2\_DEFAULT**

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

**AEND3\_DEFAULT**

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

**ASTART0\_DEFAULT**

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

**ASTART1\_DEFAULT**

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

**ASTART2\_DEFAULT**

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

**ASTART3\_DEFAULT**

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

**BROADCASTATOMIC**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTCACHEMAINT**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTOUTER**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTPERSIST**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: `true`

**CLUSTER\_ID**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. This value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: `1`

**GICDISABLE**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: `true`

**NUM\_CORES**

Number of cores per cluster.

Type: `uint8_t`

Default value: `1`

**core\_power\_on\_by\_default**

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: `false`

**cpi\_div**

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

**cpi\_mul**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

**dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-maintenance\_latency**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-miss\_latency**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-prefetch\_enabled**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

Type: `bool`

Default value: `false`

**dcache-read\_access\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**dcache-read\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**dcache-size**

L1 D-Cache size in bytes.

Type: uint32\_t

Default value: 0x8000

**dcache-snoop\_data\_transfer\_latency**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**dcache-state\_modelled**

Set whether D-cache has stateful implementation.

Type: bool

Default value: false

**dcache-write\_access\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be

used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-write_latency`**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. `dcache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`default_opmode`**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

### **`diagnostics`**

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: `false`

### **`enable_simulation_performance_optimizations`**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of `stage12_tlb_size` parameter to 1024).

Type: `bool`

Default value: `true`

### **`ete.CLAIMTAGS`**

Number of claim tags.

Type: `uint8_t`

Default value: 32

**ete.MAX\_INST\_PER\_Q**

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

**ete.NumberOfRSPairs**

Number of resource selector pairs.

Type: `uint8_t`

Default value: `8`

**ete.PIDR\_CM0D**

TRCPIDR CM0D value.

Type: `uint8_t`

Default value: `0`

**ete.PIDR\_REVAND**

TRCPIDR REVAND value.

Type: `uint8_t`

Default value: `1`

**ete.PIDR\_REVISION**

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: `0`

**ete.Q\_CADENCE**

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

**ete.RES0\_STATEFUL**

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: `false`

**ete.RETSTACK**

Return stack depth.

Type: `uint8_t`

Default value: 3

**ete.REVISION**

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 2

**ete.SIM\_OVERFLOW\_GRANULARITY**

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: 0x64

**ete.SIM\_OVERFLOW\_PERCENTAGE**

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

**ete.SOURCE\_ADDRESS**

Allow generation of source address elements.

Type: `bool`

Default value: `false`

**ete.TRACE\_OUTPUT**

File to which to write trace byte stream.

Type: `string`

Default value: `N/A`

**ete.TRCSRSTA\_FORCED\_EXCEP**

TRCSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: `false`

**ext\_abort\_device\_read\_is\_sync**

Synchronous reporting of device-nGnRE read external aborts.

Type: `bool`

Default value: `false`

**ext\_abort\_device\_write\_is\_sync**

Synchronous reporting of device-nGnRE write external aborts.

Type: `bool`

Default value: `false`

**ext\_abort\_so\_read\_is\_sync**

Synchronous reporting of device-nGnRnE read external aborts.

Type: `bool`

Default value: `false`

**ext\_abort\_so\_write\_is\_sync**

Synchronous reporting of device-nGnRnE write external aborts.

Type: `bool`

Default value: `false`

**force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks**

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: `false`

**force\_zero\_PSTATE\_PAN**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: `false`

**force\_zero\_mpam\_partid\_and\_pmg**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

Type: `uint8_t`

Default value: `0`

**has\_acp**

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: `false`

**has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

**has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

**has\_ete**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (`-plugin` or `-P`).

Type: `bool`

Default value: `false`

**has\_peripheral\_port**

If true, an additional AXI peripheral port is configured.

Type: `bool`

Default value: `false`

**icache-hit\_latency**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-maintenance\_latency**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-miss\_latency**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-prefetch\_enabled**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

Type: `bool`

Default value: `false`

**icache-read\_access\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-read\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`icache-size`**

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

### **`icache-state_modelled`**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **`invalidate_code_cache_on_icache_cmo`**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: `0`

### **`l3cache-hit_latency`**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-maintenance_latency`**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-miss_latency`**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-read_access_latency`**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size `l3cache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-read_latency`**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l3cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-size`**

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x0`

### **`l3cache-snoop_data_transfer_latency`**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-snoop_issue_latency`**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-write\_access\_latency**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**l3cache-write\_latency**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**memory\_tagging\_support\_level**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).

Type: uint8\_t

Default value: 2

**mpmm\_accumulator\_multiplier**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of n means the accumulator will use (n \* accumulator value) to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantums in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: uint8\_t

Default value: 1

**num\_acp**

Number of ACP ports.

Type: uint8\_t

Default value: 0

**num\_nodes**

Number of transport nodes. Zero implies direct-connect configuration.

Type: `uint8_t`

Default value: 1

### **`periph_address_end`**

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: 0x0

### **`periph_address_start`**

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: 0x0

### **`ptw_latency`**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

### **`tlb_latency`**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

### **`tlbi_stall_enabled`**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: `false`

### **`treat-dcache-cmos-to-pou-as-nop`**

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

Type: `uint8_t`

Default value: 0

**walk\_cache\_latency**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

3.65 ARMCortexA715CT

Defined in LISA/ARMCortexA715CT.lisa.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r1p2	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

Changes in 11.31.15

The following parameters were added:

- has\_delayed\_dbgreg
- has\_delayed\_sysreg
- num\_acp

About ARMCortexA715CT

The model supports the following features:

- DynamIQ (DSU) system registers.
- DynamIQ r3p0.
- L2 cache is supported at the per-core level only and there is no implementation of Core-Complex with shared L2 cache yet.
- P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- BROADCASTPERSIST pin.
- Utility bus.
- Support for Interrupt signals from SPE is added as pmbirq[8].

Support for the following features is planned for a future release:

- TRBE.

- Core-Complex.
- BROADCASTCACHEMAINTPOU pin.
- COREINSTRRET, COREINSTRRUN, or nPMBIRQ signals.
- Each thread has its own L1Cache and L2Cache instead of a common cache that is shared by all threads of the core.
- Per-thread parameters are not yet supported but signals are implemented.

**Note**

The `cfgsdisable` signal will be removed in a future release.

The following features will not be implemented:

- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Cache stashing capability.
- Embedded Logic Analyzer (ELA).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

## Limitations

- Some of the SVE instructions do not raise undefined exceptions when SP is used as a source register.

## Iris and MTI instances for ARM Cortex-A715CT

This model has the following Iris instances:

Name	Instance type
ARMCortexA715CT	Cluster_ARM_Cortex-A715

ARMCortexA715CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA715CT.global_debug_rom	debug_rom
ARMCortexA715CT.secondary_debug_rom	debug_rom
ARMCortexA715CT.sve	ScalableVectorExtension

This model has the following MTI trace components:

Name	Component type
ARMCortexA715CT.AMU	PVBusLogger
ARMCortexA715CT.AMU.mapper	PVBusMapper

Name	Component type
ARMCortexA715CT.DAP	PVBusLogger
ARMCortexA715CT.DAP.mapper	PVBusMapper
ARMCortexA715CT.DSU	DSU-110
ARMCortexA715CT.DSU.PPU_cluster	PPUv1
ARMCortexA715CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexA715CT.DSU.PPU_core0	PPUv1
ARMCortexA715CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexA715CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA715CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA715CT.DSU.shared_cache	PVCache
ARMCortexA715CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA715CT.DSU.shared_cache.upstream[Y] (where Y = 0-3)	PVBusSlave
ARMCortexA715CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexA715CT.MMAP	PVBusLogger
ARMCortexA715CT.MMAP.mapper	PVBusMapper
ARMCortexA715CT.RAS	PVBusLogger
ARMCortexA715CT.RAS.mapper	PVBusMapper
ARMCortexA715CT.cpu0	ARM_Cortex-A715
ARMCortexA715CT.cpu0.UTLB	TLB
ARMCortexA715CT.cpu0.l1dcache	PVCache
ARMCortexA715CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA715CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA715CT.cpu0.l1licache	PVCache
ARMCortexA715CT.cpu0.l1licache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA715CT.cpu0.l1licache.upstream[0]	PVBusSlave
ARMCortexA715CT.cpu0.l2cache	PVCache
ARMCortexA715CT.cpu0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA715CT.cpu0.l2cache.upstream[U] (where U = 0-1)	PVBusSlave
ARMCortexA715CT.ext_bus	PVBusLogger
ARMCortexA715CT.ext_bus.mapper	PVBusMapper
ARMCortexA715CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

## Ports for ARMCortexA715CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AEND0MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).

Port	Direction	Protocol	Description
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsn_pchannel	master	PChannel	Cluster PCSM signal
cluster_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamiQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIQ	master	Signal	Timer signals to SOC
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.

Port	Direction	Protocol	Description
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsn_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPU that informs thermal controller of the core power info
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error
coreinstrrun	master	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdown	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicreset	master	Signal	An output from PPU that can be used to reset GICCLK domain components
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_cluster_wakerequest	slave	Signal	PPU cluster wake request signal.
ppu_core_irq	master	Signal	PPU core interrupt.
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU Core wake request signals.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.

Port	Direction	Protocol	Description
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Reset signal to cluster.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq	master	Signal	Interrupt signal from the trace buffer unit.
utility_bus_s	slave	PVBus	Utility bus slave
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

## Parameters for ARM Cortex A715CT

### cpuX.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### cpuX.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### cpuX.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: `false`

**cpuX.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**cpuX.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**cpuX.force-fpsid**

Override the FPSID value.

Type: `bool`

Default value: `true`

**cpuX.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**cpuX.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

### **`cpuX.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`cpuX.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

### **`cpuX.min_sync_level`**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: `0`

### **`cpuX.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`cpuX.semihosting-A64_HLT`**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`cpuX.semihosting-ARM_SVC`**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**cpuX.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**cpuX.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**cpuX.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**cpuX.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**cpuX.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**cpuX.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: 0x0

**cpuX.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: 0xf000000

**cpuX.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**cpuX.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**cpuX.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**cpuX.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**cpuX.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**AEND0\_DEFAULT**

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMPO input signal).

Type: `uint64_t`

Default value: `0x0`

**AEND1\_DEFAULT**

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

**AEND2\_DEFAULT**

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

**AEND3\_DEFAULT**

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

**ASTART0\_DEFAULT**

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

**ASTART1\_DEFAULT**

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

**ASTART2\_DEFAULT**

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

**ASTART3\_DEFAULT**

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

**BROADCASTATOMIC**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTCACHEMAINT**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: `false`

**BROADCASTOUTER**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: `false`

**BROADCASTPERSIST**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: `true`

**CLUSTER\_ID**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

### **CMO\_broadcast\_when\_cache\_state\_modelling\_disabled**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. This value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: `1`

### **CPUCFR**

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x0`

### **GICDISABLE**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: `true`

### **NUM\_CORES**

Number of cores per cluster.

Type: `uint8_t`

Default value: `1`

### **bus\_type**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: `0`

**core\_power\_on\_by\_default**

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: `false`

**cpi\_div**

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

**cpi\_mul**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

**dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-maintenance\_latency**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-miss\_latency**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-prefetch\_enabled**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

Type: `bool`

Default value: `false`

**dcache-read\_access\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**dcache-read\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**dcache-size**

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

**dcache-snoop\_data\_transfer\_latency**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**dcache-state\_modelled**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **`dcache-write_access_latency`**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-write_latency`**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. `dcache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`default_opmode`**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

### **`diagnostics`**

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: `false`

### **`enable_simulation_performance_optimizations`**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of `stage12_tlb_size` parameter to 1024).

Type: `bool`

Default value: `true`

**error\_record\_feature\_register**

RAS feature register values. An array of JSON objects. The JSON schema for the array is:

```
[{"ED":0x0, "IMPDEF_3_2":0x0, "UI":0x0, "FI":0x0, "UE":0x0, "CFI":0x0, "CEC":0x0, "RP":0x0, "DUI":0x0, "CEO":0x0, "CI":0x0, "TS":0x0, "INJ":0x0, "FRX":0x0, "UC":0x0, "UEU":0x0, "UER":0x0, "UEO":0x0, "DE":0x0, "CE":0x0, "Visibility":"Core"}, other_feature_register_values].
```

Where ED, UI, FI, CE and UE have valid values between 0x0 - 0x3. CFI and DUI have valid values 0x0, 0x2 and 0x3. CEC has valid values 0x0, 0x2 or 0x4. RP, CEO, INJ, FRX, UC, UEU, UER, UEO, DE has valid values 0x0 or 0x1. CI and TS has valid values of 0x0, 0x1 and 0x2. Visibility has valid values "Core" or "Cluster".

Type: string

Default value: "[{"ED":0x2, "IMPDEF\_3\_2":0x1, "UI":0x2, "FI":0x2, "UE":0x1, "CFI":0x2, "CEC":0x2, "RP":0x1, "DUI":0x0, "CEO":0x0, "INJ":0x1, "CI":0x2, "TS":0x0, "Visibility":"Cluster"}, {"ED":0x2, "UI":0x2, "FI":0x2, "UE":0x1, "CFI":0x2, "CEC":0x2, "RP":0x1, "DUI":0x0, "CEO":0x0, "INJ":0x1, "CI":0x0, "TS":0x0}]",

**ete.CLAIMTAGS**

Number of claim tags.

Type: uint8\_t

Default value: 4

**ete.MAX\_INST\_PER\_Q**

Maximum limit for the number of instructions implied by a Q element.

Type: uint16\_t

Default value: 0x1

**ete.NumberOfRSPairs**

Number of resource selector pairs.

Type: uint8\_t

Default value: 8

**ete.PIDR\_CM0D**

TRCPIDR CM0D value.

Type: uint8\_t

Default value: 0

**ete.PIDR\_REVAND**

TRCPIDR REVAND value.

Type: `uint8_t`

Default value: 0

**ete.PIDR\_REVISION**

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

**ete.Q\_CADENCE**

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: 0x1

**ete.RES0\_STATEFUL**

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: `false`

**ete.RETSTACK**

Return stack depth.

Type: `uint8_t`

Default value: 3

**ete.REVISION**

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 1

**ete.SIM\_OVERFLOW\_GRANULARITY**

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: 0x64

**ete.SIM\_OVERFLOW\_PERCENTAGE**

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

**ete.SOURCE\_ADDRESS**

Allow generation of source address elements.

Type: `bool`

Default value: `false`

**ete.TRACE\_OUTPUT**

File to which to write trace byte stream.

Type: `string`

Default value: N/A

**ete.TRCSRSTA\_FORCED\_EXCEP**

TRCSRSTA value for a forcibly traced exception.

Type: `bool`

Default value: `false`

**force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks**

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: `false`

**force\_zero\_PSTATE\_PAN**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: `false`

**force\_zero\_mpam\_partid\_and\_pmg**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

Type: `uint8_t`

Default value: 0

**has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `true`

**has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `true`

**has\_enhanced\_pan**

Implements Armv8.7 Enhanced PAN feature (FEAT\_PAN3) values of this parameter are:- 1, feature is implemented if ARMv8.7 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

**has\_ete**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (-plugin or -P).

Type: `bool`

Default value: `false`

**has\_large\_va**

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT\_LVA) values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.2 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 0

**has\_peripheral\_port**

If true, an additional AXI peripheral port is configured.

Type: `bool`

Default value: `false`

**has\_statistical\_profiling**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

Type: `bool`

Default value: `false`

**icache-hit\_latency**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-maintenance\_latency**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-miss\_latency**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-prefetch\_enabled**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

Type: `bool`

Default value: `false`

**icache-read\_access\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-read\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-size**

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

**icache-state\_modelled**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

**instruction\_tlb\_size**

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

Type: `uint32_t`

Default value: `0x0`

**invalidate\_code\_cache\_on\_icache\_cmo**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: 0

### **l3cache-has\_mpam**

L3 Cache has MPAM support.

Type: `bool`

Default value: `true`

### **l3cache-hit\_latency**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **l3cache-maintenance\_latency**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **l3cache-miss\_latency**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **l3cache-read\_access\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size `l3cache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **l3cache-read\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l3cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-size`**

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

### **`l3cache-snoop_data_transfer_latency`**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-snoop_issue_latency`**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-ways`**

L3 Cache number of ways (sets are implicit from size).

Type: `uint16_t`

Default value: `16`

### **`l3cache-write_access_latency`**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size `l3cache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-write\_latency**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**memory\_tagging\_support\_level**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

Type: uint8\_t

Default value: 3

**mpmm\_accumulator\_multiplier**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of n means the accumulator will use (n \* accumulator value) to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantums in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: uint8\_t

Default value: 1

**num\_acp**

Number of ACP ports.

Type: uint8\_t

Default value: 0

**num\_nodes**

Number of transport nodes. Zero implies direct-connect configuration.

Type: uint8\_t

Default value: 1

**pmu-num\_counters**

Number of PMU counters implemented.

Type: uint8\_t

Default value: 6

### **pseudo\_fault\_generation\_feature\_register**

ARMv8.4 Standard Pseudo-fault generation feature register values. JSON schema for the parameter value is: [{"OF":false, "UC":false, "UEU":false, "UER":false, "UEO":false, "DE":false, "CE":0x0, "CI":false, "ER":false, "PN":false, "AV":false, "MV":false, "SYN":false, "R":false, "NA":false}, other\_pseudo-fault\_generating\_features\_register\_values]. Where OF, UC, UEU, UER, UEO, DE, CI, ER, PN, AV, MV, SYN, and R have valid false(NOT\_SUPPORTED) and true(FEATURE\_CONTROLLABLE), where CE can have 0(NOT\_SUPPORTED), 1(NONSPECIFIC\_CE\_SUPPORTED) and 3(TRANSIENT\_OR\_PERSISTENT\_CE\_SUPPORTED) and NA can have false(component fakes detection on next access) or true(component fakes detection spontaneously). Effective only when ERXFR's INJ field allows it or has\_ras\_fault\_injection is true.

Type: string

Default value: "[{"OF":true, "UC":true, "UEU":false, "UER":false, "UEO":false, "DE":0x1, "CE":0x1, "CI":true, "ER":false, "PN":true, "AV":false, "MV":true, "SYN":true, "R":true}, {"OF":false, "UC":true, "UEU":false, "UER":false, "UEO":false, "DE":0x1, "CE":0x1, "CI":false, "ER":false, "PN":false, "AV":false, "MV":false, "SYN":false, "R":true}]"

### **ptw\_latency**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

### **stage12\_tlb\_size**

Number of stage1+2 tlb entries. Valid values are 0 or >= 4.

Type: uint32\_t

Default value: 0x80

### **tlb\_latency**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

### **tlbi\_stall\_enabled**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: bool

Default value: `false`

### **`treat_PAC_as_NOP`**

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

Type: `bool`

Default value: `false`

### **`walk_cache_latency`**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

## 3.66 ARMCortexA720AECT

Defined in `LISA/ARMCortexA720AECT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Changes in 11.31.15

The following parameters were added:

- `has_delayed_dbgreg`
- `has_delayed_sysreg`
- `num_acp`

### AE-specific features implemented

The only AE-specific features implemented in the model are Split-Lock and Lock-Step, with the following limitations:

- The implementation of Split-Lock and Lock-Step in the model is simply a halving of the number of cores available.
- Lock-step is implemented by a parameter that can be true or false for the entire execution only, rather than by a signal that can be enabled during execution.

As the model does not implement true Split-Lock functionality, the ports and parameters are contiguous. For example, for a 4-core CPU with Split-Lock enabled, `cpu0` and `cpu1` identify the available cores and associated ports, not `cpu0` and `cpu2`.

- Hybrid mode is not modeled in the DSU.

## Iris and MTI instances for ARMCortexA720AECT

This model has the following Iris instances:

Name	Instance type
ARMCortexA720AECT	Cluster_ARM_Cortex-A720AE
ARMCortexA720AECT.AMU	PVBusLogger
ARMCortexA720AECT.AMU.mapper	PVBusMapper
ARMCortexA720AECT.DAP	PVBusLogger
ARMCortexA720AECT.DAP.mapper	PVBusMapper
ARMCortexA720AECT.DSU	DSU-120
ARMCortexA720AECT.DSU.PPU_cluster	PPUv1
ARMCortexA720AECT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexA720AECT.DSU.PPU_core0	PPUv1
ARMCortexA720AECT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexA720AECT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA720AECT.DSU.mpam_busslave	PVBusSlave
ARMCortexA720AECT.DSU.shared_cache	PVCache
ARMCortexA720AECT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA720AECT.DSU.shared_cache.upstream[Y] (where Y = 0-4)	PVBusSlave
ARMCortexA720AECT.DSU.utility_slave[0]	PVBusSlave
ARMCortexA720AECT.MMAP	PVBusLogger
ARMCortexA720AECT.MMAP.mapper	PVBusMapper
ARMCortexA720AECT.RAS	PVBusLogger
ARMCortexA720AECT.RAS.mapper	PVBusMapper
ARMCortexA720AECT.cpu0	ARM_Cortex-A720AE
ARMCortexA720AECT.cpu0.UTLB	TLB
ARMCortexA720AECT.cpu0.debug_rom	debug_rom
ARMCortexA720AECT.cpu0.dtlb	TLB
ARMCortexA720AECT.cpu0.l1dcache	PVCache
ARMCortexA720AECT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA720AECT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA720AECT.cpu0.l1licache	PVCache
ARMCortexA720AECT.cpu0.l1licache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA720AECT.cpu0.l1licache.upstream[0]	PVBusSlave
ARMCortexA720AECT.cpu0.l2cache	PVCache
ARMCortexA720AECT.cpu0.l2cache.downstream[0].pvbusmaster	PVBusMaster

Name	Instance type
ARMCortexA720AECT.cpu0.l2cache.upstream[U] (where U = 0-1)	PVBusSlave
ARMCortexA720AECT.ext_bus	PVBusLogger
ARMCortexA720AECT.ext_bus.mapper	PVBusMapper
ARMCortexA720AECT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA720AECT.global_debug_rom	debug_rom
ARMCortexA720AECT.secondary_debug_rom	debug_rom
ARMCortexA720AECT.sve	ScalableVectorExtension

This model has the following MTI trace components:

Name	Component type
ARMCortexA720AECT.AMU	PVBusLogger
ARMCortexA720AECT.AMU.mapper	PVBusMapper
ARMCortexA720AECT.DAP	PVBusLogger
ARMCortexA720AECT.DAP.mapper	PVBusMapper
ARMCortexA720AECT.DSU	DSU-120
ARMCortexA720AECT.DSU.PPU_cluster	PPUV1
ARMCortexA720AECT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexA720AECT.DSU.PPU_core0	PPUV1
ARMCortexA720AECT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexA720AECT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA720AECT.DSU.mpam_busslave	PVBusSlave
ARMCortexA720AECT.DSU.shared_cache	PVCache
ARMCortexA720AECT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA720AECT.DSU.shared_cache.upstream[Y] (where Y = 0-4)	PVBusSlave
ARMCortexA720AECT.DSU.utility_slave[0]	PVBusSlave
ARMCortexA720AECT.MMAP	PVBusLogger
ARMCortexA720AECT.MMAP.mapper	PVBusMapper
ARMCortexA720AECT.RAS	PVBusLogger
ARMCortexA720AECT.RAS.mapper	PVBusMapper
ARMCortexA720AECT.cpu0	ARM_Cortex-A720AE
ARMCortexA720AECT.cpu0.UTLB	TLB
ARMCortexA720AECT.cpu0.l1dcache	PVCache
ARMCortexA720AECT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA720AECT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA720AECT.cpu0.l1icache	PVCache
ARMCortexA720AECT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA720AECT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA720AECT.cpu0.l2cache	PVCache
ARMCortexA720AECT.cpu0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA720AECT.cpu0.l2cache.upstream[U] (where U = 0-1)	PVBusSlave

Name	Component type
ARMCortexA720AECT.ext_bus	PVBusLogger
ARMCortexA720AECT.ext_bus.mapper	PVBusMapper
ARMCortexA720AECT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

## Ports for ARMCortexA720AECT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AEND0MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsn_pchannel	master	PChannel	Cluster PCSM signal
cluster_powerdown_out	master	Signal	DEPRECATED - An output from PPU that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clustercriticalirq	master	Signal	Cluster Critical Irq
clustererrirq	master	Signal	Cluster Error Irq
clusterfaultirq	master	Signal	Cluster Fault Irq

Port	Direction	Protocol	Description
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamiQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIQ	master	Signal	Timer signals to SOC
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsn_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error
coreinstrrun	master	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdown	master	Signal	No power-down request.
dbgprupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.

Port	Direction	Protocol	Description
gicreset	master	Signal	An output from PPUs that can be used to reset GICCLK domain components
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
mpam_err_irq_ns	master	Signal	-
mpam_err_irq_s	master	Signal	MPAM Error signals
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_cluster_wakerequest	slave	Signal	PPU cluster wake request signal.
ppu_core_irq	master	Signal	PPU core interrupt.
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU core wake request signal.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Reset signal to cluster.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq	master	Signal	Interrupt signal from the trace buffer unit.
utility_bus_s	slave	PVBus	Utility bus slave
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

## Parameters for ARMCortexA720AECT

### **cpuX.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **cpuX.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### **cpuX.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **cpuX.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **cpuX.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **cpuX.force-fpsid**

Override the FPSID value.

Type: `bool`

Default value: `true`

**cpuX.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**cpuX.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**cpuX.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**cpuX.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**cpuX.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**cpuX.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**cpuX.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**cpuX.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**cpuX.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**cpuX.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**cpuX.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: bool

Default value: true

**cpuX.semihosting-heap\_base**

Virtual address of heap base.

Type: uint64\_t

Default value: 0x0

**cpuX.semihosting-heap\_limit**

Virtual address of top of heap.

Type: uint64\_t

Default value: 0xf000000

**cpuX.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: uint64\_t

Default value: 0x10000000

**cpuX.semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint64\_t

Default value: 0xf000000

**cpuX.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**cpuX.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**cpuX.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**AEND0\_DEFAULT**

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

**AEND1\_DEFAULT**

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

**AEND2\_DEFAULT**

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

**AEND3\_DEFAULT**

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

**ASTART0\_DEFAULT**

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

**ASTART1\_DEFAULT**

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

**ASTART2\_DEFAULT**

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

**ASTART3\_DEFAULT**

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

**BROADCASTATOMIC**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTCACHEMAINT**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: `false`

**BROADCASTOUTER**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: `false`

**BROADCASTPERSIST**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: `true`

**CLUSTER\_ID**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. This value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: `1`

**CPUCFR**

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x0`

**GICDISABLE**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: `true`

**NUM\_CORES**

Number of cores per cluster.

Type: `uint8_t`

Default value: `1`

**bus\_type**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: `0`

**cluster\_split\_lock\_config**

Default SPLIT/LOCKED config. The valid values are: 1 - Only LOCKED mode support, 4 - Only SPLIT mode support, 5 - SPLIT or MIXED mode support. Valid only when `enable_ae_features` is `true`.

Type: `uint8_t`

Default value: `1`

**core\_power\_on\_by\_default**

If `true`, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: `false`

**cpi\_div**

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

**cpi\_mul**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

**dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-maintenance\_latency**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-miss\_latency**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-prefetch\_enabled**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

Type: `bool`

Default value: `false`

**dcache-read\_access\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-read\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-size**

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

**dcache-snoop\_data\_transfer\_latency**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-state\_modelled**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

**dcache-write\_access\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-write\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. `dcache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

### **default\_opmode**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

### **diagnostics**

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: `false`

### **enable\_lock\_step**

Whether the core is configured in Dual Core Lock Step mode (FEAT\_DCLS).

Type: `bool`

Default value: `false`

### **enable\_simulation\_performance\_optimizations**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of `stage12_tlb_size` parameter to 1024).

Type: `bool`

Default value: `true`

### **ete.CLAIMTAGS**

Number of claim tags.

Type: `uint8_t`

Default value: 4

### **ete.ETE\_REVISION**

ETE revision: 0=ETEv1.0, 1=ETEv1.1, 2=ETEv1.2, 3=ETEv1.3.

Type: `uint8_t`

Default value: 1

**ete.MAX\_INST\_PER\_Q**

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

**ete.NumberOfRSPairs**

Number of resource selector pairs.

Type: `uint8_t`

Default value: `8`

**ete.PIDR\_CMOD**

TRCPIDR CMOD value.

Type: `uint8_t`

Default value: `0`

**ete.PIDR\_REVAND**

TRCPIDR REVAND value.

Type: `uint8_t`

Default value: `0`

**ete.PIDR\_REVISION**

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: `0`

**ete.Q\_CADENCE**

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

**ete.RES0\_STATEFUL**

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: `false`

**ete.RETSTACK**

Return stack depth.

Type: `uint8_t`

Default value: 3

**ete.REVISION**

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 0

**ete.SIM\_OVERFLOW\_GRANULARITY**

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: 0x64

**ete.SIM\_OVERFLOW\_PERCENTAGE**

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

**ete.SOURCE\_ADDRESS**

Allow generation of source address elements.

Type: `bool`

Default value: `false`

**ete.TRACE\_OUTPUT**

File to which to write trace byte stream.

Type: `string`

Default value: `N/A`

**ete.TRCSRSTA\_FORCED\_EXCEP**

TRCSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: `false`

**ete.TSMARK**

Whether timestamp markers are supported.

Type: `bool`

Default value: `true`

**force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks**

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: `false`

**force\_zero\_PSTATE\_PAN**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: `false`

**force\_zero\_mpam\_partid\_and\_pmg**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAMO\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

Type: `uint8_t`

Default value: `0`

**has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `true`

**has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `true`

**has\_enhanced\_pan**

Implements Armv8.7 Enhanced PAN feature (FEAT\_PAN3) values of this parameter are:- 1, feature is implemented if ARMv8.7 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

**has\_ete**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (-plugin or -P).

Type: `bool`

Default value: `false`

**has\_impdef\_transient\_fault\_protection**

Support the Transient Fault Protection (TFP) flop parity errors through RAS registers (FEAT\_TFP).

Type: `bool`

Default value: `true`

**has\_large\_va**

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT\_LVA) values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.2 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 0

**has\_peripheral\_port**

If true, an additional AXI peripheral port is configured.

Type: `bool`

Default value: `false`

**has\_statistical\_profiling**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

Type: `bool`

Default value: `false`

**icache-hit\_latency**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-maintenance\_latency**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-miss\_latency**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-prefetch\_enabled**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

Type: `bool`

Default value: `false`

**icache-read\_access\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-read\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`icache-size`**

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

### **`icache-state_modelled`**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **`instruction_tlb_size`**

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

Type: `uint32_t`

Default value: `0x0`

### **`invalidate_code_cache_on_icache_cmo`**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: `0`

### **`l3cache-has_mpam`**

L3 Cache has MPAM support.

Type: `bool`

Default value: `true`

### **`l3cache-hit_latency`**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

### **l3cache-maintenance\_latency**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

### **l3cache-miss\_latency**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

### **l3cache-read\_access\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size `l3cache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

### **l3cache-read\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l3cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

### **l3cache-size**

L3 Cache size in bytes.

Type: `uint32_t`

Default value: 0x80000

**l3cache-snoop\_data\_transfer\_latency**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-snoop\_issue\_latency**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-ways**

L3 Cache number of ways (sets are implicit from size).

Type: `uint16_t`

Default value: `16`

**l3cache-write\_access\_latency**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size `l3cache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-write\_latency**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l3cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**memory\_tagging\_support\_level**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

Type: `uint8_t`

Default value: 3

**mpmm\_accumulator\_multiplier**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of n means the accumulator will use (n \* accumulator value) to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantum in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: uint8\_t

Default value: 1

**num\_acp**

Number of ACP ports.

Type: uint8\_t

Default value: 0

**num\_nodes**

Number of transport nodes. Zero implies direct-connect configuration.

Type: uint8\_t

Default value: 1

**pmu-num\_counters**

Number of PMU counters implemented.

Type: uint8\_t

Default value: 6

**ptw\_latency**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

**reported\_patch\_level**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: int8\_t

Default value: -1

**reported\_revision\_number**

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

**stage12\_tlb\_size**

Number of stage1+2 tlb entries. Valid values are 0 or  $\geq 4$ .

Type: `uint32_t`

Default value: 0x80

**tlb\_latency**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

**tlbi\_stall\_enabled**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: `false`

**treat\_PAC\_as\_NOP**

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are **NOP**. Branch, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

Type: `bool`

Default value: `false`

**walk\_cache\_latency**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

## 3.67 ARMCortexA720CT

Defined in `LISA/ARMCortexA720CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p1	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Changes in 11.31.15

The following parameters were added:

- `has_delayed_dbgreg`
- `has_delayed_sysreg`

### About ARMCortexA720CT

The model supports the following features:

- L2 cache is supported at the per-core level only and there is no implementation of Core-Complex with shared L2 cache yet.
- Internal PPU support is present.
- A P-Channel for the cluster and for each core.
- `BROADCASTPERSIST` pin.
- Optional peripheral port.
- Memory-mapped register access to MPAM.
- Per-core clock.
- Utility bus.

Support for the following features is planned for a future release:

- DSU-120 system features are not fully implemented.
- Core-Complex.
- `BROADCASTCACHEMAINTPOU` pin
- `COREINSTRRET` and `COREINSTRRUN` signals.
- Each thread has its own L1Cache and L2Cache instead of a common cache that is shared by all threads of the core.
- Per-thread parameters are not supported but signals are implemented.

The following features will not be implemented:

- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.

- Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Cache stashing capability.

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (crypto.dll or crypto.so) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

### Iris and MTI instances for ARM Cortex A720CT

This model has the following Iris instances:

Name	Instance type
ARM Cortex A720CT	Cluster_ARM_Cortex-A720
ARM Cortex A720CT.AMU	PVBusLogger
ARM Cortex A720CT.AMU.mapper	PVBusMapper
ARM Cortex A720CT.DAP	PVBusLogger
ARM Cortex A720CT.DAP.mapper	PVBusMapper
ARM Cortex A720CT.DSU	DSU-120
ARM Cortex A720CT.DSU.PPU_cluster	PPUv1
ARM Cortex A720CT.DSU.PPU_cluster.busslave	PVBusSlave
ARM Cortex A720CT.DSU.PPU_core0	PPUv1
ARM Cortex A720CT.DSU.PPU_core0.busslave	PVBusSlave
ARM Cortex A720CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARM Cortex A720CT.DSU.mpam_busslave	PVBusSlave
ARM Cortex A720CT.DSU.shared_cache	PVCache
ARM Cortex A720CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARM Cortex A720CT.DSU.shared_cache.upstream[Y] (where Y = 0-4)	PVBusSlave
ARM Cortex A720CT.DSU.utility_slave[0]	PVBusSlave
ARM Cortex A720CT.MMAP	PVBusLogger
ARM Cortex A720CT.MMAP.mapper	PVBusMapper
ARM Cortex A720CT.RAS	PVBusLogger
ARM Cortex A720CT.RAS.mapper	PVBusMapper
ARM Cortex A720CT.cpu0	ARM_Cortex-A720
ARM Cortex A720CT.cpu0.UTLB	TLB
ARM Cortex A720CT.cpu0.debug_rom	debug_rom
ARM Cortex A720CT.cpu0.dtlb	TLB
ARM Cortex A720CT.cpu0.l1dcache	PVCache

Name	Instance type
ARMCortexA720CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA720CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA720CT.cpu0.l1licache	PVCache
ARMCortexA720CT.cpu0.l1licache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA720CT.cpu0.l1licache.upstream[0]	PVBusSlave
ARMCortexA720CT.cpu0.l2cache	PVCache
ARMCortexA720CT.cpu0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA720CT.cpu0.l2cache.upstream[U] (where U = 0-1)	PVBusSlave
ARMCortexA720CT.ext_bus	PVBusLogger
ARMCortexA720CT.ext_bus.mapper	PVBusMapper
ARMCortexA720CT.gic_cpuif_decoder_cluster	GLCv3CPUInterfaceDecoder
ARMCortexA720CT.global_debug_rom	debug_rom
ARMCortexA720CT.secondary_debug_rom	debug_rom
ARMCortexA720CT.sve	ScalableVectorExtension

This model has the following MTI trace components:

Name	Component type
ARMCortexA720CT.AMU	PVBusLogger
ARMCortexA720CT.AMU.mapper	PVBusMapper
ARMCortexA720CT.DAP	PVBusLogger
ARMCortexA720CT.DAP.mapper	PVBusMapper
ARMCortexA720CT.DSU	DSU-120
ARMCortexA720CT.DSU.PPU_cluster	PPUv1
ARMCortexA720CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexA720CT.DSU.PPU_core0	PPUv1
ARMCortexA720CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexA720CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA720CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA720CT.DSU.shared_cache	PVCache
ARMCortexA720CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA720CT.DSU.shared_cache.upstream[Y] (where Y = 0-4)	PVBusSlave
ARMCortexA720CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexA720CT.MMAP	PVBusLogger
ARMCortexA720CT.MMAP.mapper	PVBusMapper
ARMCortexA720CT.RAS	PVBusLogger
ARMCortexA720CT.RAS.mapper	PVBusMapper
ARMCortexA720CT.cpu0	ARM_Cortex-A720
ARMCortexA720CT.cpu0.UTLB	TLB
ARMCortexA720CT.cpu0.l1dcache	PVCache
ARMCortexA720CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster

Name	Component type
ARMCortexA720CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA720CT.cpu0.l1icache	PVCache
ARMCortexA720CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA720CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA720CT.cpu0.l2cache	PVCache
ARMCortexA720CT.cpu0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA720CT.cpu0.l2cache.upstream[U] (where U = 0-1)	PVBusSlave
ARMCortexA720CT.ext_bus	PVBusLogger
ARMCortexA720CT.ext_bus.mapper	PVBusMapper
ARMCortexA720CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

### Ports for ARMCortexA720CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AEND0MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsn_pchannel	master	PChannel	Cluster PCSM signal

Port	Direction	Protocol	Description
cluster_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamiQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIRQ	master	Signal	Timer signals to SOC
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsn_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error
coreinstrrun	master	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdown	master	Signal	No power-down request.
dbgprupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.

Port	Direction	Protocol	Description
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicreset	master	Signal	An output from PPU that can be used to reset GICCLK domain components
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_cluster_wakerequest	slave	Signal	PPU cluster wake request signal.
ppu_core_irq	master	Signal	PPU core interrupt.
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU core wake request signal.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Reset signal to cluster.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq	master	Signal	Interrupt signal from the trace buffer unit.
utility_bus_s	slave	PVBus	Utility bus slave
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

## Parameters for ARMCortexA720CT

### **cpuX.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **cpuX.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### **cpuX.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **cpuX.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **cpuX.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **cpuX.force-fpsid**

Override the FPSID value.

Type: `bool`

Default value: `true`

**cpuX.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**cpuX.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**cpuX.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**cpuX.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**cpuX.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**cpuX.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**cpuX.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**cpuX.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**cpuX.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**cpuX.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**cpuX.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: bool

Default value: true

**cpuX.semihosting-heap\_base**

Virtual address of heap base.

Type: uint64\_t

Default value: 0x0

**cpuX.semihosting-heap\_limit**

Virtual address of top of heap.

Type: uint64\_t

Default value: 0xf000000

**cpuX.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: uint64\_t

Default value: 0x10000000

**cpuX.semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint64\_t

Default value: 0xf000000

**cpuX.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**cpuX.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**cpuX.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**AEND0\_DEFAULT**

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

**AEND1\_DEFAULT**

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

**AEND2\_DEFAULT**

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

**AEND3\_DEFAULT**

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

**ASTART0\_DEFAULT**

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

**ASTART1\_DEFAULT**

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

**ASTART2\_DEFAULT**

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

**ASTART3\_DEFAULT**

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

**BROADCASTATOMIC**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTCACHEMAINT**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: `false`

**BROADCASTOUTER**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: `false`

**BROADCASTPERSIST**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: `true`

**CLUSTER\_ID**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. This value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: `1`

**CPUCFR**

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x0`

**GICDISABLE**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: `true`

**NUM\_CORES**

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

**bus\_type**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: 0

**core\_power\_on\_by\_default**

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: `false`

**cpi\_div**

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 0x1

**cpi\_mul**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 0x1

**dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-maintenance\_latency**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-miss\_latency**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-prefetch\_enabled**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

Type: `bool`

Default value: `false`

**dcache-read\_access\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-read\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-size`**

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

### **`dcache-snoop_data_transfer_latency`**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-state_modelled`**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **`dcache-write_access_latency`**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-write_latency`**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. `dcache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`default_opmode`**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

### **diagnostics**

Enable DynamlQ diagnostic messages.

Type: `bool`

Default value: `false`

### **enable\_simulation\_performance\_optimizations**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of `stage12_tlb_size` parameter to 1024).

Type: `bool`

Default value: `true`

### **ete.CLAIMTAGS**

Number of claim tags.

Type: `uint8_t`

Default value: 4

### **ete.ETE\_REVISION**

ETE revision: 0=ETEv1.0, 1=ETEv1.1, 2=ETEv1.2, 3=ETEv1.3.

Type: `uint8_t`

Default value: 1

### **ete.MAX\_INST\_PER\_Q**

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: 0x1

### **ete.NumberOfRSPairs**

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

**ete.PIDR\_CM0D**

TRCPIDR CM0D value.

Type: `uint8_t`

Default value: 0

**ete.PIDR\_REVAND**

TRCPIDR REVAND value.

Type: `uint8_t`

Default value: 0

**ete.PIDR\_REVISION**

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

**ete.Q\_CADENCE**

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: 0x1

**ete.RES0\_STATEFUL**

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: `false`

**ete.RETSTACK**

Return stack depth.

Type: `uint8_t`

Default value: 3

**ete.REVISION**

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 0

**ete.SIM\_OVERFLOW\_GRANULARITY**

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: `0x64`

**ete.SIM\_OVERFLOW\_PERCENTAGE**

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: `0`

**ete.SOURCE\_ADDRESS**

Allow generation of source address elements.

Type: `bool`

Default value: `false`

**ete.TRACE\_OUTPUT**

File to which to write trace byte stream.

Type: `string`

Default value: `N/A`

**ete.TRCRSRTA\_FORCED\_EXCEP**

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: `false`

**ete.TSMARK**

Whether timestamp markers are supported.

Type: `bool`

Default value: `true`

**force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks**

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: `false`

### **`force_zero_PSTATE_PAN`**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: `false`

### **`force_zero_mpam_partid_and_pmg`**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAMO\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

Type: `uint8_t`

Default value: `0`

### **`has_delayed_dbgreg`**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `true`

### **`has_delayed_sysreg`**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `true`

### **`has_enhanced_pan`**

Implements Armv8.7 Enhanced PAN feature (FEAT\_PAN3) values of this parameter are:- 1, feature is implemented if ARMv8.7 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: `2`

### **`has_ete`**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (-plugin or -P).

Type: `bool`

Default value: `false`

### **has\_large\_va**

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT\_LVA). values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.2 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 0

### **has\_peripheral\_port**

If true, an additional AXI peripheral port is configured.

Type: `bool`

Default value: `false`

### **has\_statistical\_profiling**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

Type: `bool`

Default value: `false`

### **icache-hit\_latency**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

### **icache-maintenance\_latency**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

### **icache-miss\_latency**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

**icache-prefetch\_enabled**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

Type: `bool`

Default value: `false`

**icache-read\_access\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**icache-read\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. icache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**icache-size**

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

**icache-state\_modelled**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

**instruction\_tlb\_size**

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

Type: `uint32_t`

Default value: 0x0

### **invalidate\_code\_cache\_on\_icache\_cmo**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: uint8\_t

Default value: 0

### **l3cache-has\_mpam**

L3 Cache has MPAM support.

Type: bool

Default value: true

### **l3cache-hit\_latency**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **l3cache-maintenance\_latency**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **l3cache-miss\_latency**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **l3cache-read\_access\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

### **l3cache-read\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l3cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **l3cache-size**

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

### **l3cache-snoop\_data\_transfer\_latency**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **l3cache-snoop\_issue\_latency**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **l3cache-ways**

L3 Cache number of ways (sets are implicit from size).

Type: `uint16_t`

Default value: `16`

### **l3cache-write\_access\_latency**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size `l3cache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used

instead of per-byte even if l3cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **l3cache-write\_latency**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **memory\_tagging\_support\_level**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

Type: uint8\_t

Default value: 3

### **mpmm\_accumulator\_multiplier**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of n means the accumulator will use (n \* accumulator value) to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantum in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: uint8\_t

Default value: 1

### **num\_acp**

Number of ACP ports.

Type: uint8\_t

Default value: 0

### **num\_nodes**

Number of transport nodes. Zero implies direct-connect configuration.

Type: uint8\_t

Default value: 1

**pmu-num\_counters**

Number of PMU counters implemented.

Type: `uint8_t`

Default value: 6

**ptw\_latency**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

**stage12\_tlb\_size**

Number of stage1+2 tlb entries. Valid values are 0 or >= 4.

Type: `uint32_t`

Default value: 0x80

**tlb\_latency**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

**tlbi\_stall\_enabled**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: `false`

**treat\_PAC\_as\_NOP**

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are **NOP**. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

Type: `bool`

Default value: `false`

**walk\_cache\_latency**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

3.68 ARMCortexA725CT

Defined in LISA/ARMCortexA725CT.lisa.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

Changes in 11.31.15

The following parameters were added:

- has\_delayed\_dbgreg
- has\_delayed\_sysreg
- num\_acp

About ARMCortexA725CT

A DSU-120 DynamIQ cluster containing a configurable number of Cortex-A725 cores.

The number of cores in the cluster is configurable using the following parameter:

**NUM\_CORES**

Possible values are 1-14

The following DSU/CPU features will not be implemented:

- DynamIQ features that are irrelevant to the programmers' view simulation.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Snoop filtering.
- Cache stashing capability.
- Embedded Logic Analyzer (ELA).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (crypto.dll or crypto.so) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

## Iris and MTI instances for ARMCortexA725CT

This model has the following Iris instances:

Name	Instance type
ARMCortexA725CT	Cluster_ARM_Cortex-A725
ARMCortexA725CT.AMU	PVBusLogger
ARMCortexA725CT.AMU.mapper	PVBusMapper
ARMCortexA725CT.DAP	PVBusLogger
ARMCortexA725CT.DAP.mapper	PVBusMapper
ARMCortexA725CT.DSU	DSU-120
ARMCortexA725CT.DSU.PPU_cluster	PPUv1
ARMCortexA725CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexA725CT.DSU.PPU_core0	PPUv1
ARMCortexA725CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexA725CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA725CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA725CT.DSU.shared_cache	PVCache
ARMCortexA725CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA725CT.DSU.shared_cache.upstream[Y] (where Y = 0-4)	PVBusSlave
ARMCortexA725CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexA725CT.MMAP	PVBusLogger
ARMCortexA725CT.MMAP.mapper	PVBusMapper
ARMCortexA725CT.RAS	PVBusLogger
ARMCortexA725CT.RAS.mapper	PVBusMapper
ARMCortexA725CT.cpu0	ARM_Cortex-A725
ARMCortexA725CT.cpu0.UTLB	TLB
ARMCortexA725CT.cpu0.debug_rom	debug_rom
ARMCortexA725CT.cpu0.dtlb	TLB
ARMCortexA725CT.cpu0.l1dcache	PVCache
ARMCortexA725CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA725CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA725CT.cpu0.l1icache	PVCache
ARMCortexA725CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA725CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA725CT.cpu0.l2cache	PVCache
ARMCortexA725CT.cpu0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA725CT.cpu0.l2cache.upstream[U] (where U = 0-1)	PVBusSlave
ARMCortexA725CT.ext_bus	PVBusLogger

Name	Instance type
ARMCortexA725CT.ext_bus.mapper	PVBusMapper
ARMCortexA725CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA725CT.global_debug_rom	debug_rom
ARMCortexA725CT.secondary_debug_rom	debug_rom
ARMCortexA725CT.sve	ScalableVectorExtension

This model has the following MTI trace components:

Name	Component type
ARMCortexA725CT.AMU	PVBusLogger
ARMCortexA725CT.AMU.mapper	PVBusMapper
ARMCortexA725CT.DAP	PVBusLogger
ARMCortexA725CT.DAP.mapper	PVBusMapper
ARMCortexA725CT.DSU	DSU-120
ARMCortexA725CT.DSU.PPU_cluster	PPUv1
ARMCortexA725CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexA725CT.DSU.PPU_core0	PPUv1
ARMCortexA725CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexA725CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA725CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA725CT.DSU.shared_cache	PVCache
ARMCortexA725CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA725CT.DSU.shared_cache.upstream[Y] (where Y = 0-4)	PVBusSlave
ARMCortexA725CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexA725CT.MMAP	PVBusLogger
ARMCortexA725CT.MMAP.mapper	PVBusMapper
ARMCortexA725CT.RAS	PVBusLogger
ARMCortexA725CT.RAS.mapper	PVBusMapper
ARMCortexA725CT.cpu0	ARM_Cortex-A725
ARMCortexA725CT.cpu0.UTLB	TLB
ARMCortexA725CT.cpu0.l1dcache	PVCache
ARMCortexA725CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA725CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA725CT.cpu0.l1icache	PVCache
ARMCortexA725CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA725CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA725CT.cpu0.l2cache	PVCache
ARMCortexA725CT.cpu0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA725CT.cpu0.l2cache.upstream[U] (where U = 0-1)	PVBusSlave
ARMCortexA725CT.ext_bus	PVBusLogger
ARMCortexA725CT.ext_bus.mapper	PVBusMapper

Name	Component type
ARMCortexA725CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

## Ports for ARMCortexA725CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AEND0MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsn_pchannel	master	PChannel	Cluster PCSM signal
cluster_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.

Port	Direction	Protocol	Description
clusterpmuirq	master	Signal	DynamiQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIRQ	master	Signal	Timer signals to SOC
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsmpchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error
coreinstrrun	master	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdown	master	Signal	No power-down request.
dbgprupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicreset	master	Signal	An output from PPUs that can be used to reset GICCLK domain components
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.

Port	Direction	Protocol	Description
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_cluster_wakerequest	slave	Signal	PPU cluster wake request signal.
ppu_core_irq	master	Signal	PPU core interrupt.
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU core wake request signal.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Reset signal to cluster.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq	master	Signal	Interrupt signal from the trace buffer unit.
utility_bus_s	slave	PVBus	Utility bus slave
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

## Parameters for ARM Cortex A725CT

### cpuX.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: bool

Default value: false

### cpuX.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### **`cpuX.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **`cpuX.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **`cpuX.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`cpuX.force-fpsid`**

Override the FPSID value.

Type: `bool`

Default value: `true`

### **`cpuX.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`cpuX.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x100000

**cpuX.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **cpuX.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **cpuX.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **cpuX.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

### **cpuX.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

### **cpuX.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

### **cpuX.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**cpuX.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**cpuX.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**cpuX.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

**cpuX.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**cpuX.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**cpuX.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**cpuX.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**cpuX.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**cpuX.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**cpuX.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**cpuX.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**cpuX.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**cpuX.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**AEND0\_DEFAULT**

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

**AEND1\_DEFAULT**

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

**AEND2\_DEFAULT**

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

**AEND3\_DEFAULT**

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

**ASTART0\_DEFAULT**

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

**ASTART1\_DEFAULT**

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

**ASTART2\_DEFAULT**

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

**ASTART3\_DEFAULT**

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

**BROADCASTATOMIC**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTCACHEMAINT**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: `false`

**BROADCASTOUTER**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: `false`

**BROADCASTPERSIST**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: `true`

**CLUSTER\_ID**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. This value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain events even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: `1`

**CPUCFR**

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x0`

**GICDISABLE**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: `true`

**NUM\_CORES**

Number of cores per cluster.

Type: `uint8_t`

Default value: `1`

**bus\_type**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: 0

**core\_power\_on\_by\_default**

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: `false`

**cpi\_div**

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 0x1

**cpi\_mul**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 0x1

**dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

**dcache-maintenance\_latency**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

**dcache-miss\_latency**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**dcache-prefetch\_enabled**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

Type: `bool`

Default value: `false`

**dcache-read\_access\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**dcache-read\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**dcache-size**

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

**dcache-snoop\_data\_transfer\_latency**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: 0x0

### **dcache-state\_modelled**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **dcache-write\_access\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

### **dcache-write\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. `dcache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

### **default\_opmode**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

### **diagnostics**

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: `false`

### **enable\_simulation\_performance\_optimizations**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of `stage12_tlb_size` parameter to 1024).

Type: `bool`

Default value: `true`

### **ete.CLAIMTAGS**

Number of claim tags.

Type: `uint8_t`

Default value: 4

### **ete.ETE\_REVISION**

ETE revision: 0=ETEv1.0, 1=ETEv1.1, 2=ETEv1.2, 3=ETEv1.3.

Type: `uint8_t`

Default value: 1

### **ete.MAX\_INST\_PER\_Q**

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

### **ete.NumberOfRSPairs**

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

### **ete.PIDR\_CM0D**

TRCPIDR CM0D value.

Type: `uint8_t`

Default value: 0

### **ete.PIDR\_REVAND**

TRCPIDR REVAND value.

Type: `uint8_t`

Default value: 0

### **ete.PIDR\_REVISION**

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

### **`ete.Q_CADENCE`**

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: 0x1

### **`ete.RES0_STATEFUL`**

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: `false`

### **`ete.RETSTACK`**

Return stack depth.

Type: `uint8_t`

Default value: 1

### **`ete.REVISION`**

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 0

### **`ete.SIM_OVERFLOW_GRANULARITY`**

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: 0x64

### **`ete.SIM_OVERFLOW_PERCENTAGE`**

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

### **`ete.SOURCE_ADDRESS`**

Allow generation of source address elements.

Type: `bool`

Default value: `false`

### **`ete.TRACE_OUTPUT`**

File to which to write trace byte stream.

Type: `string`

Default value: `N/A`

### **`ete.TRCSRSTA_FORCED_EXCEP`**

TRCSRSTA value for a forcibly traced exception.

Type: `bool`

Default value: `false`

### **`ete.TSMARK`**

Whether timestamp markers are supported.

Type: `bool`

Default value: `true`

### **`force_mte_tag_access_razwi_and_ignore_tag_checks`**

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: `false`

### **`force_zero_PSTATE_PAN`**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: `false`

### **`force_zero_mpam_partid_and_pmg`**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAMO\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

Type: `uint8_t`

Default value: 0

### **has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `true`

### **has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `true`

### **has\_enhanced\_pan**

Implements Armv8.7 Enhanced PAN feature (FEAT\_PAN3) values of this parameter are:- 1, feature is implemented if ARMv8.7 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

### **has\_ete**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (-plugin or -P).

Type: `bool`

Default value: `false`

### **has\_large\_va**

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT\_LVA). values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.2 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 0

### **has\_peripheral\_port**

If true, an additional AXI peripheral port is configured.

Type: `bool`

Default value: `false`

### **has\_statistical\_profiling**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

Type: `bool`

Default value: `false`

### **icache-hit\_latency**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **icache-maintenance\_latency**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **icache-miss\_latency**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **icache-prefetch\_enabled**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

Type: `bool`

Default value: `false`

### **icache-read\_access\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **icache-read\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **icache-size**

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

### **icache-state\_modelled**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **instruction\_tlb\_size**

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

Type: `uint32_t`

Default value: `0x0`

### **invalidate\_code\_cache\_on\_icache\_cmo**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: `0`

### **l3cache-has\_mpam**

L3 Cache has MPAM support.

Type: `bool`

Default value: `true`

### **`l3cache-hit_latency`**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-maintenance_latency`**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-miss_latency`**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-read_access_latency`**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size `l3cache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-read_latency`**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l3cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-size**

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

**l3cache-snoop\_data\_transfer\_latency**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-snoop\_issue\_latency**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-ways**

L3 Cache number of ways (sets are implicit from size).

Type: `uint16_t`

Default value: `16`

**l3cache-write\_access\_latency**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size `l3cache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-write\_latency**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l3cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**memory\_tagging\_support\_level**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

Type: `uint8_t`

Default value: 3

**mpmm\_accumulator\_multiplier**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of n means the accumulator will use (n \* accumulator value) to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantum in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: `uint8_t`

Default value: 1

**num\_acp**

Number of ACP ports.

Type: `uint8_t`

Default value: 0

**pmu-num\_counters**

Number of PMU counters implemented.

Type: `uint8_t`

Default value: 6

**ptw\_latency**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

**stage12\_tlb\_size**

Number of stage1+2 tlb entries. Valid values are 0 or >= 4.

Type: `uint32_t`

Default value: 0x80

**tlb\_latency**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

**tlbi\_stall\_enabled**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: `false`

**treat\_PAC\_as\_NOP**

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are **NOP**. Branch, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

Type: `bool`

Default value: `false`

**walk\_cache\_latency**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

## 3.69 ARMCortexA725CT\_CortexX925CT

Defined in `LISA/ARMCortexA725CT_CortexX925CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
CortexA725 r0p0	Full support
CortexX925 r0p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Changes in 11.31.15

The following parameters were added:

- `num_acp`
- `subcluster0.has_delayed_dbgreg`
- `subcluster0.has_delayed_sysreg`
- `subcluster1.has_delayed_dbgreg`
- `subcluster1.has_delayed_sysreg`

## About ARMCortexA720CT\_CortexX925CT

The number of cores in each subcluster is configurable using the following parameters:

### **subcluster0.NUM\_CORES**

Possible values are 1-13 (ARMCortexA720CT).

### **subcluster1.NUM\_CORES**

Possible values are 1-13 (ARMCortexX925CT).

The total number of cores in the cluster cannot exceed 14.

Port arrays are expanded to the width needed for the maximum number of cores in each subcluster. Use the following port array indexes:

- `<port_name>[0-12]` for cores in `subcluster0`.
- `<port_name>[13-25]` for cores in `subcluster1`.

All instances in the Master cross trigger matrix port array, `cti[26]` must be connected, regardless of the `num_cores` value used.

Core-specific parameters have the following prefixes:

- `subcluster0.cpu0` to `subcluster0.cpu12` identify cores in `subcluster0`.
- `subcluster1.cpu0` to `subcluster1.cpu12` identify cores in `subcluster1`.

For information about the cores in this model, see:

- [ARMCortexA720CT](#).
- [ARMCortexX925CT](#).

## Iris and MTI instances for ARMCortexA725CT\_CortexX925CT

This model has the following Iris instances:

Name	Instance type
ARMCortexA725CT_CortexX925CT	Cluster_ARM_CortexA725_CortexX925_Heterogeneous
ARMCortexA725CT_CortexX925CT.AMU	PVBusLogger
ARMCortexA725CT_CortexX925CT.AMU.mapper	PVBusMapper
ARMCortexA725CT_CortexX925CT.DAP	PVBusLogger

Name	Instance type
ARMCortexA725CT_CortexX925CT.DAP.mapper	PVBusMapper
ARMCortexA725CT_CortexX925CT.DSU	DSU-120
ARMCortexA725CT_CortexX925CT.DSU.PPU_cluster	PPUv1
ARMCortexA725CT_CortexX925CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexA725CT_CortexX925CT.DSU.PPU_coreZ (where Z = 0-1)	PPUv1
ARMCortexA725CT_CortexX925CT.DSU.PPU_coreZ.busslave (where Z = 0-1)	PVBusSlave
ARMCortexA725CT_CortexX925CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA725CT_CortexX925CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA725CT_CortexX925CT.DSU.shared_cache	PVCache
ARMCortexA725CT_CortexX925CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA725CT_CortexX925CT.DSU.shared_cache.upstream[Z] (where Z = 0-6)	PVBusSlave
ARMCortexA725CT_CortexX925CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexA725CT_CortexX925CT.MMAP	PVBusLogger
ARMCortexA725CT_CortexX925CT.MMAP.mapper	PVBusMapper
ARMCortexA725CT_CortexX925CT.RAS	PVBusLogger
ARMCortexA725CT_CortexX925CT.RAS.mapper	PVBusMapper
ARMCortexA725CT_CortexX925CT.cpuZ.debug_rom (where Z = 0-1)	debug_rom
ARMCortexA725CT_CortexX925CT.ext_bus	PVBusLogger
ARMCortexA725CT_CortexX925CT.ext_bus.mapper	PVBusMapper
ARMCortexA725CT_CortexX925CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA725CT_CortexX925CT.global_debug_rom	debug_rom
ARMCortexA725CT_CortexX925CT.secondary_debug_rom	debug_rom
ARMCortexA725CT_CortexX925CT.subcluster0	Subcluster_ARM_Cortex-A725
ARMCortexA725CT_CortexX925CT.subcluster0.cpu0	ARM_Cortex-A725
ARMCortexA725CT_CortexX925CT.subclusterZ.cpu0.UTLB (where Z = 0-1)	TLB
ARMCortexA725CT_CortexX925CT.subclusterZ.cpuU.dtlb (where Z = 0-1; U = 0-1)	TLB
ARMCortexA725CT_CortexX925CT.subclusterZ.cpu0.l1dcache (where Z = 0-1)	PVCache
ARMCortexA725CT_CortexX925CT.subclusterZ.cpu0.l1dcache.downstream[0].pvbusmaster (where Z = 0-1)	PVBusMaster
ARMCortexA725CT_CortexX925CT.subclusterZ.cpu0.l1dcache.upstream[0] (where Z = 0-1)	PVBusSlave
ARMCortexA725CT_CortexX925CT.subclusterZ.cpu0.l1licache (where Z = 0-1)	PVCache
ARMCortexA725CT_CortexX925CT.subclusterZ.cpu0.l1licache.downstream[0].pvbusmaster (where Z = 0-1)	PVBusMaster
ARMCortexA725CT_CortexX925CT.subclusterZ.cpu0.l1licache.upstream[0] (where Z = 0-1)	PVBusSlave

Name	Instance type
ARMCortexA725CT_CortexX925CT.subclusterZ.cpu0.l2cache (where Z = 0-1)	PVCache
ARMCortexA725CT_CortexX925CT.subclusterZ.cpu0.l2cache.downstream[0].pvbusmaster (where Z = 0-1)	PVBusMaster
ARMCortexA725CT_CortexX925CT.subclusterZ.cpu0.l2cache.upstream[W] (where Z = 0-1; W = 0-1)	PVBusSlave
ARMCortexA725CT_CortexX925CT.subclusterZ.sve (where Z = 0-1)	ScalableVectorExtension
ARMCortexA725CT_CortexX925CT.subcluster1	Subcluster_ARM_Cortex-X925
ARMCortexA725CT_CortexX925CT.subcluster1.cpu0	ARM_Cortex-X925

This model has the following MTI trace components:

Name	Component type
ARMCortexA725CT_CortexX925CT.AMU	PVBusLogger
ARMCortexA725CT_CortexX925CT.AMU.mapper	PVBusMapper
ARMCortexA725CT_CortexX925CT.DAP	PVBusLogger
ARMCortexA725CT_CortexX925CT.DAP.mapper	PVBusMapper
ARMCortexA725CT_CortexX925CT.DSU	DSU-120
ARMCortexA725CT_CortexX925CT.DSU.PPU_cluster	PPUv1
ARMCortexA725CT_CortexX925CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexA725CT_CortexX925CT.DSU.PPU_coreZ (where Z = 0-1)	PPUv1
ARMCortexA725CT_CortexX925CT.DSU.PPU_coreZ.busslave (where Z = 0-1)	PVBusSlave
ARMCortexA725CT_CortexX925CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA725CT_CortexX925CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA725CT_CortexX925CT.DSU.shared_cache	PVCache
ARMCortexA725CT_CortexX925CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA725CT_CortexX925CT.DSU.shared_cache.upstream[Z] (where Z = 0-6)	PVBusSlave
ARMCortexA725CT_CortexX925CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexA725CT_CortexX925CT.MMAP	PVBusLogger
ARMCortexA725CT_CortexX925CT.MMAP.mapper	PVBusMapper
ARMCortexA725CT_CortexX925CT.RAS	PVBusLogger
ARMCortexA725CT_CortexX925CT.RAS.mapper	PVBusMapper
ARMCortexA725CT_CortexX925CT.ext_bus	PVBusLogger
ARMCortexA725CT_CortexX925CT.ext_bus.mapper	PVBusMapper
ARMCortexA725CT_CortexX925CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA725CT_CortexX925CT.subcluster0.cpu0	ARM_Cortex-A725
ARMCortexA725CT_CortexX925CT.subclusterZ.cpu0.UTLB (where Z = 0-1)	TLB
ARMCortexA725CT_CortexX925CT.subclusterZ.cpu0.l1dcache (where Z = 0-1)	PVCache
ARMCortexA725CT_CortexX925CT.subclusterZ.cpu0.l1dcache.downstream[0].pvbusmaster (where Z = 0-1)	PVBusMaster
ARMCortexA725CT_CortexX925CT.subclusterZ.cpu0.l1dcache.upstream[0] (where Z = 0-1)	PVBusSlave

Name	Component type
ARMCortexA725CT_CortexX925CT.subclusterZ.cpu0.l1icache (where Z = 0-1)	PVCache
ARMCortexA725CT_CortexX925CT.subclusterZ.cpu0.l1icache.downstream[0].pvbusmaster (where Z = 0-1)	PVBusMaster
ARMCortexA725CT_CortexX925CT.subclusterZ.cpu0.l1icache.upstream[0] (where Z = 0-1)	PVBusSlave
ARMCortexA725CT_CortexX925CT.subclusterZ.cpu0.l2cache (where Z = 0-1)	PVCache
ARMCortexA725CT_CortexX925CT.subclusterZ.cpu0.l2cache.downstream[0].pvbusmaster (where Z = 0-1)	PVBusMaster
ARMCortexA725CT_CortexX925CT.subclusterZ.cpu0.l2cache.upstream[W] (where Z = 0-1; W = 0-1)	PVBusSlave
ARMCortexA725CT_CortexX925CT.subcluster1.cpu0	ARM_Cortex-X925

### Ports for ARMCortexA725CT\_CortexX925CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AEND0MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcs_m_pchannel	master	PChannel	Cluster PCSM signal

Port	Direction	Protocol	Description
cluster_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamiQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIRQ	master	Signal	Timer signals to SOC
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsn_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error
coreinstrrun	master	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdown	master	Signal	No power-down request.
dbgprupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.

Port	Direction	Protocol	Description
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicreset	master	Signal	An output from PPU that can be used to reset GICCLK domain components
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_cluster_wakerequest	slave	Signal	PPU cluster wake request signal.
ppu_core_irq	master	Signal	PPU core interrupt.
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU core wake request signal.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Reset signal to cluster.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq	master	Signal	Interrupt signal from the trace buffer unit.
utility_bus_s	slave	PVBus	Utility bus slave
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

## Parameters for ARMCortexA725CT\_CortexX925CT

### **AEND0\_DEFAULT**

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

### **AEND1\_DEFAULT**

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

### **AEND2\_DEFAULT**

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

### **AEND3\_DEFAULT**

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

### **ASTART0\_DEFAULT**

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

### **ASTART1\_DEFAULT**

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

Type: `uint64_t`

Default value: 0x0

### **ASTART2\_DEFAULT**

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

Type: `uint64_t`

Default value: 0x0

### **ASTART3\_DEFAULT**

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

Type: `uint64_t`

Default value: 0x0

### **BROADCASTATOMIC**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: `true`

### **BROADCASTCACHEMAINT**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: `false`

### **BROADCASTOUTER**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: `false`

### **BROADCASTPERSIST**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: `true`

### **CLUSTER\_ID**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

### **CMO\_broadcast\_when\_cache\_state\_modelling\_disabled**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. This value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: `1`

### **GICDISABLE**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: `true`

### **bus\_type**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: `0`

### **core\_power\_on\_by\_default**

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: `false`

### **`dcache-state_modelled`**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **`default_opmode`**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

### **`diagnostics`**

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: `false`

### **`enable_simulation_performance_optimizations`**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of `stage12_tlb_size` parameter to 1024).

Type: `bool`

Default value: `true`

### **`has_peripheral_port`**

If true, an additional AXI peripheral port is configured.

Type: `bool`

Default value: `false`

### **`icache-state_modelled`**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

**l3cache-has\_mpam**

L3 Cache has MPAM support.

Type: `bool`

Default value: `true`

**l3cache-hit\_latency**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-maintenance\_latency**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-miss\_latency**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-read\_access\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size `l3cache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-read\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l3cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **l3cache-size**

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

### **l3cache-snoop\_data\_transfer\_latency**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **l3cache-snoop\_issue\_latency**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **l3cache-ways**

L3 Cache number of ways (sets are implicit from size).

Type: `uint16_t`

Default value: `16`

### **l3cache-write\_access\_latency**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size `l3cache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **l3cache-write\_latency**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l3cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`mpmm_accumulator_multiplier`**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator. value of `n` means the accumulator will use (`n * accumulator value`) to calculate the mpmm threshold (MPMM). is provided as a fast model workaround to handle cases where execution of quantum in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: `uint8_t`

Default value: `1`

### **`num_acp`**

Number of ACP ports.

Type: `uint8_t`

Default value: `0`

### **`subcluster0.CPUCFR`**

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.NUM_CORES`**

Number of cores in the subcluster. Total number of cores in cluster may not exceed 14.

Type: `uint8_t`

Default value: `1`

### **`subcluster0.cpi_div`**

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

### **`subcluster0.cpi_mul`**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 0x1

#### **subcluster0.cpu0.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: bool

Default value: false

#### **subcluster0.cpu0.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: bool

Default value: false

#### **subcluster0.cpu0.CRYPTODISABLE**

Disable cryptographic features.

Type: bool

Default value: false

#### **subcluster0.cpu0.RVBARADDR**

Value of RVBAR\_ELx register.

Type: uint64\_t

Default value: 0x0

#### **subcluster0.cpu0.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter trace\_special\_hlt\_imm16.

Type: bool

Default value: false

#### **subcluster0.cpu0.force-fpsid**

Override the FPSID value.

Type: bool

Default value: true

**subcluster0.cpu0.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu0.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu0.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu0.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu0.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu0.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x100000

**subcluster0.cpu0.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu0.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu0.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu0.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu0.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster0.cpu0.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster0.cpu0.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

**subcluster0.cpu0.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

**subcluster0.cpu0.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: 0x123456

**subcluster0.cpu0.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**subcluster0.cpu0.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**subcluster0.cpu0.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**subcluster0.cpu0.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster0.cpu0.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: bool

Default value: true

**subcluster0.cpu0.semihosting-heap\_base**

Virtual address of heap base.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu0.semihosting-heap\_limit**

Virtual address of top of heap.

Type: uint64\_t

Default value: 0xf000000

**subcluster0.cpu0.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: uint64\_t

Default value: 0x10000000

**subcluster0.cpu0.semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint64\_t

Default value: 0xf000000

**subcluster0.cpu0.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu0.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster0.cpu0.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster0.cpu1.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster0.cpu1.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster0.cpu1.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster0.cpu1.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu1.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu1.force-fpsid`**

Override the FPSID value.

Type: `bool`

Default value: `true`

### **`subcluster0.cpu1.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu1.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu1.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu1.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu1.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu1.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

#### **`subcluster0.cpu1.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu1.l2cache-snoop_issue_latency`**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu1.l2cache-write_access_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu1.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu1.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

**subcluster0.cpu1.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: `0`

**subcluster0.cpu1.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu1.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu1.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster0.cpu1.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**subcluster0.cpu1.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**subcluster0.cpu1.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster0.cpu1.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster0.cpu1.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster0.cpu1.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu1.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu1.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster0.cpu1.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: 0xf000000

**subcluster0.cpu1.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu1.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: bool

Default value: false

**subcluster0.cpu1.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: bool

Default value: true

**subcluster0.cpu10.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: bool

Default value: false

**subcluster0.cpu10.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: bool

Default value: false

**subcluster0.cpu10.CRYPTODISABLE**

Disable cryptographic features.

Type: bool

Default value: false

**subcluster0.cpu10.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu10.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster0.cpu10.force-fpsid**

Override the FPSID value.

Type: `bool`

Default value: `true`

**subcluster0.cpu10.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu10.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu10.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu10.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu10.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu10.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x100000

**subcluster0.cpu10.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu10.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu10.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu10.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu10.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

### **`subcluster0.cpu10.min_sync_level`**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: `0`

### **`subcluster0.cpu10.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster0.cpu10.semihosting-A64_HLT`**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster0.cpu10.semihosting-ARM_SVC`**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster0.cpu10.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**subcluster0.cpu10.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**subcluster0.cpu10.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**subcluster0.cpu10.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster0.cpu10.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster0.cpu10.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu10.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu10.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster0.cpu10.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu10.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu10.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster0.cpu10.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster0.cpu11.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster0.cpu11.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster0.cpu11.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster0.cpu11.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu11.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster0.cpu11.force-fpsid**

Override the FPSID value.

Type: `bool`

Default value: `true`

**subcluster0.cpu11.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu11.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu11.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu11.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu11.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu11.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

### **`subcluster0.cpu11.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu11.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu11.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu11.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu11.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster0.cpu11.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster0.cpu11.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu11.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu11.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster0.cpu11.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**subcluster0.cpu11.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

**subcluster0.cpu11.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster0.cpu11.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster0.cpu11.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster0.cpu11.semihosting-heap\_base**

Virtual address of heap base.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu11.semihosting-heap\_limit**

Virtual address of top of heap.

Type: uint64\_t

Default value: 0xf000000

**subcluster0.cpu11.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: uint64\_t

Default value: 0x10000000

**subcluster0.cpu11.semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint64\_t

Default value: 0xf000000

**subcluster0.cpu11.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu11.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: bool

Default value: false

**subcluster0.cpu11.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

#### **`subcluster0.cpu12.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu12.CFGTE`**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu12.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu12.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu12.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu12.force-fpsid`**

Override the FPSID value.

Type: `bool`

Default value: `true`

**subcluster0.cpu12.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu12.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu12.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu12.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu12.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu12.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x100000

#### **subcluster0.cpu12.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster0.cpu12.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster0.cpu12.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster0.cpu12.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster0.cpu12.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

#### **subcluster0.cpu12.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster0.cpu12.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

**subcluster0.cpu12.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

**subcluster0.cpu12.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: 0x123456

**subcluster0.cpu12.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**subcluster0.cpu12.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**subcluster0.cpu12.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**subcluster0.cpu12.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster0.cpu12.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: bool

Default value: true

**subcluster0.cpu12.semihosting-heap\_base**

Virtual address of heap base.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu12.semihosting-heap\_limit**

Virtual address of top of heap.

Type: uint64\_t

Default value: 0xf000000

**subcluster0.cpu12.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: uint64\_t

Default value: 0x10000000

**subcluster0.cpu12.semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint64\_t

Default value: 0xf000000

**subcluster0.cpu12.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu12.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster0.cpu12.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster0.cpu2.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster0.cpu2.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster0.cpu2.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster0.cpu2.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu2.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu2.force-fpsid`**

Override the FPSID value.

Type: `bool`

Default value: `true`

### **`subcluster0.cpu2.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu2.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu2.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu2.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu2.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu2.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

#### **`subcluster0.cpu2.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu2.l2cache-snoop_issue_latency`**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu2.l2cache-write_access_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu2.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu2.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster0.cpu2.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster0.cpu2.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu2.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu2.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster0.cpu2.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**subcluster0.cpu2.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: uint8\_t

Default value: 171

**subcluster0.cpu2.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster0.cpu2.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster0.cpu2.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster0.cpu2.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu2.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu2.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster0.cpu2.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: 0xf000000

**subcluster0.cpu2.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu2.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: bool

Default value: false

**subcluster0.cpu2.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: bool

Default value: true

**subcluster0.cpu3.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: bool

Default value: false

**subcluster0.cpu3.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: bool

Default value: false

**subcluster0.cpu3.CRYPTODISABLE**

Disable cryptographic features.

Type: bool

Default value: false

**subcluster0.cpu3.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu3.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster0.cpu3.force-fpsid**

Override the FPSID value.

Type: `bool`

Default value: `true`

**subcluster0.cpu3.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu3.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu3.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu3.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu3.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu3.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x100000

**subcluster0.cpu3.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu3.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu3.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu3.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu3.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

### **`subcluster0.cpu3.min_sync_level`**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: `0`

### **`subcluster0.cpu3.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster0.cpu3.semihosting-A64_HLT`**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster0.cpu3.semihosting-ARM_SVC`**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster0.cpu3.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**subcluster0.cpu3.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**subcluster0.cpu3.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**subcluster0.cpu3.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster0.cpu3.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster0.cpu3.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu3.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu3.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster0.cpu3.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu3.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu3.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster0.cpu3.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster0.cpu4.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster0.cpu4.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster0.cpu4.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster0.cpu4.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu4.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster0.cpu4.force-fpsid**

Override the FPSID value.

Type: `bool`

Default value: `true`

**subcluster0.cpu4.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu4.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu4.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu4.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu4.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu4.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

### **`subcluster0.cpu4.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu4.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu4.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu4.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu4.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster0.cpu4.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster0.cpu4.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu4.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu4.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster0.cpu4.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**subcluster0.cpu4.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

**subcluster0.cpu4.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster0.cpu4.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster0.cpu4.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster0.cpu4.semihosting-heap\_base**

Virtual address of heap base.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu4.semihosting-heap\_limit**

Virtual address of top of heap.

Type: uint64\_t

Default value: 0xf000000

**subcluster0.cpu4.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: uint64\_t

Default value: 0x10000000

**subcluster0.cpu4.semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint64\_t

Default value: 0xf000000

**subcluster0.cpu4.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu4.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: bool

Default value: false

**subcluster0.cpu4.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

#### **`subcluster0.cpu5.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu5.CFGTE`**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu5.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu5.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu5.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

#### **`subcluster0.cpu5.force-fpsid`**

Override the FPSID value.

Type: `bool`

Default value: `true`

**subcluster0.cpu5.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu5.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu5.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu5.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu5.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu5.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x100000

#### **subcluster0.cpu5.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster0.cpu5.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster0.cpu5.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster0.cpu5.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster0.cpu5.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

#### **subcluster0.cpu5.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster0.cpu5.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu5.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu5.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster0.cpu5.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**subcluster0.cpu5.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**subcluster0.cpu5.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**subcluster0.cpu5.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster0.cpu5.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: bool

Default value: true

**subcluster0.cpu5.semihosting-heap\_base**

Virtual address of heap base.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu5.semihosting-heap\_limit**

Virtual address of top of heap.

Type: uint64\_t

Default value: 0xf000000

**subcluster0.cpu5.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: uint64\_t

Default value: 0x10000000

**subcluster0.cpu5.semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint64\_t

Default value: 0xf000000

**subcluster0.cpu5.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu5.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster0.cpu5.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster0.cpu6.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster0.cpu6.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster0.cpu6.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster0.cpu6.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu6.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu6.force-fpsid`**

Override the FPSID value.

Type: `bool`

Default value: `true`

### **`subcluster0.cpu6.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu6.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu6.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu6.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu6.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu6.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

#### **`subcluster0.cpu6.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu6.l2cache-snoop_issue_latency`**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu6.l2cache-write_access_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster0.cpu6.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu6.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster0.cpu6.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster0.cpu6.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu6.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu6.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster0.cpu6.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**subcluster0.cpu6.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: uint8\_t

Default value: 171

**subcluster0.cpu6.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster0.cpu6.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster0.cpu6.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster0.cpu6.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu6.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu6.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster0.cpu6.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: 0xf000000

**subcluster0.cpu6.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu6.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: bool

Default value: false

**subcluster0.cpu6.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: bool

Default value: true

**subcluster0.cpu7.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: bool

Default value: false

**subcluster0.cpu7.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: bool

Default value: false

**subcluster0.cpu7.CRYPTODISABLE**

Disable cryptographic features.

Type: bool

Default value: false

**subcluster0.cpu7.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu7.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster0.cpu7.force-fpsid**

Override the FPSID value.

Type: `bool`

Default value: `true`

**subcluster0.cpu7.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu7.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu7.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu7.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu7.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu7.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x100000

**subcluster0.cpu7.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu7.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu7.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu7.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu7.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

### **`subcluster0.cpu7.min_sync_level`**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: `0`

### **`subcluster0.cpu7.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster0.cpu7.semihosting-A64_HLT`**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster0.cpu7.semihosting-ARM_SVC`**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster0.cpu7.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**subcluster0.cpu7.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**subcluster0.cpu7.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**subcluster0.cpu7.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster0.cpu7.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster0.cpu7.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: 0x0

**subcluster0.cpu7.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: 0xf000000

**subcluster0.cpu7.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster0.cpu7.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster0.cpu7.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu7.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster0.cpu7.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster0.cpu8.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster0.cpu8.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster0.cpu8.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster0.cpu8.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu8.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster0.cpu8.force-fpsid**

Override the FPSID value.

Type: `bool`

Default value: `true`

**subcluster0.cpu8.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu8.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu8.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu8.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu8.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu8.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

### **`subcluster0.cpu8.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu8.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu8.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu8.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu8.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster0.cpu8.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster0.cpu8.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu8.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu8.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster0.cpu8.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**subcluster0.cpu8.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

**subcluster0.cpu8.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster0.cpu8.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster0.cpu8.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster0.cpu8.semihosting-heap\_base**

Virtual address of heap base.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu8.semihosting-heap\_limit**

Virtual address of top of heap.

Type: uint64\_t

Default value: 0xf000000

**subcluster0.cpu8.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: uint64\_t

Default value: 0x10000000

**subcluster0.cpu8.semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint64\_t

Default value: 0xf000000

**subcluster0.cpu8.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu8.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: bool

Default value: false

**subcluster0.cpu8.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

### **`subcluster0.cpu9.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **`subcluster0.cpu9.CFGTE`**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu9.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu9.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.cpu9.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster0.cpu9.force-fpsid`**

Override the FPSID value.

Type: `bool`

Default value: `true`

**subcluster0.cpu9.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu9.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu9.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu9.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu9.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.cpu9.l2cache-size**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: 0x100000

**subcluster0.cpu9.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu9.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu9.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu9.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu9.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster0.cpu9.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster0.cpu9.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu9.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**subcluster0.cpu9.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster0.cpu9.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**subcluster0.cpu9.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**subcluster0.cpu9.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**subcluster0.cpu9.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster0.cpu9.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: bool

Default value: true

**subcluster0.cpu9.semihosting-heap\_base**

Virtual address of heap base.

Type: uint64\_t

Default value: 0x0

**subcluster0.cpu9.semihosting-heap\_limit**

Virtual address of top of heap.

Type: uint64\_t

Default value: 0xf000000

**subcluster0.cpu9.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: uint64\_t

Default value: 0x10000000

**subcluster0.cpu9.semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint64\_t

Default value: 0xf000000

**subcluster0.cpu9.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster0.cpu9.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster0.cpu9.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster0.dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.dcache-maintenance\_latency**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.dcache-miss\_latency**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster0.dcache-prefetch\_enabled**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

Type: `bool`

Default value: `false`

**subcluster0.dcache-read\_access\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.dcache-read\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.dcache-size**

L1 D-Cache size in bytes.

Type: uint32\_t

Default value: 0x10000

**subcluster0.dcache-snoop\_data\_transfer\_latency**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.dcache-write\_access\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.dcache-write\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.ete.CLAIMTAGS**

Number of claim tags.

Type: uint8\_t

Default value: 4

**subcluster0.ete.ETE\_REVISION**

ETE revision: 0=ETEv1.0, 1=ETEv1.1, 2=ETEv1.2, 3=ETEv1.3.

Type: uint8\_t

Default value: 1

**subcluster0.ete.MAX\_INST\_PER\_Q**

Maximum limit for the number of instructions implied by a Q element.

Type: uint16\_t

Default value: 0x1

**subcluster0.ete.NumberOfRSPairs**

Number of resource selector pairs.

Type: uint8\_t

Default value: 8

**subcluster0.ete.PIDR\_CM0D**

TRCPIDR CM0D value.

Type: uint8\_t

Default value: 0

**subcluster0.ete.PIDR\_REVAND**

TRCPIDR REVAND value.

Type: `uint8_t`

Default value: 0

#### **`subcluster0.ete.PIDR_REVISION`**

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

#### **`subcluster0.ete.Q_CADENCE`**

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: 0x1

#### **`subcluster0.ete.RES0_STATEFUL`**

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: `false`

#### **`subcluster0.ete.RETSTACK`**

Return stack depth.

Type: `uint8_t`

Default value: 1

#### **`subcluster0.ete.REVISION`**

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 0

#### **`subcluster0.ete.SIM_OVERFLOW_GRANULARITY`**

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: 0x64

#### **`subcluster0.ete.SIM_OVERFLOW_PERCENTAGE`**

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

### **`subcluster0.ete.SOURCE_ADDRESS`**

Allow generation of source address elements.

Type: `bool`

Default value: `false`

### **`subcluster0.ete.TRACE_OUTPUT`**

File to which to write trace byte stream.

Type: `string`

Default value: N/A

### **`subcluster0.ete.TRCRSRTA_FORCED_EXCEP`**

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: `false`

### **`subcluster0.ete.TSMARK`**

Whether timestamp markers are supported.

Type: `bool`

Default value: `true`

### **`subcluster0.force_mte_tag_access_razwi_and_ignore_tag_checks`**

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: `false`

### **`subcluster0.force_zero_PSTATE_PAN`**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: `false`

### **subcluster0.force\_zero\_mpam\_partid\_and\_pmg**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAMO\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

Type: `uint8_t`

Default value: `0`

### **subcluster0.has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `true`

### **subcluster0.has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `true`

### **subcluster0.has\_enhanced\_pan**

Implements Armv8.7 Enhanced PAN feature (FEAT\_PAN3) values of this parameter are:- 1, feature is implemented if ARMv8.7 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: `2`

### **subcluster0.has\_ete**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (-plugin or -P).

Type: `bool`

Default value: `false`

### **subcluster0.has\_large\_va**

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT\_LVA). values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.2 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 0

**subcluster0.has\_statistical\_profiling**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

Type: bool

Default value: false

**subcluster0.icache-hit\_latency**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.icache-maintenance\_latency**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.icache-miss\_latency**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster0.icache-prefetch\_enabled**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

Type: bool

Default value: false

**subcluster0.icache-read\_access\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.icache-read_latency`**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster0.icache-size`**

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

### **`subcluster0.instruction_tlb_size`**

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

Type: `uint32_t`

Default value: `0x0`

### **`subcluster0.invalidate_code_cache_on_icache_cmo`**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: `0`

### **`subcluster0.memory_tagging_support_level`**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

Type: `uint8_t`

Default value: `3`

### **`subcluster0.pmu-num_counters`**

Number of PMU counters implemented.

Type: `uint8_t`

Default value: 6

### **`subcluster0.ptw_latency`**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

### **`subcluster0.stage12_tlb_size`**

Number of stage1+2 tlb entries. Valid values are 0 or  $\geq 4$ .

Type: `uint32_t`

Default value: 0x80

### **`subcluster0.tlb_latency`**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

### **`subcluster0.tlbi_stall_enabled`**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: `false`

### **`subcluster0.treat_PAC_as_NOP`**

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are **NOP**. Branch, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

Type: `bool`

Default value: `false`

### **`subcluster0.walk_cache_latency`**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

**subcluster1.CPUCFR**

Value of CPU Configuration Register.

Type: uint64\_t

Default value: 0x0

**subcluster1.NUM\_CORES**

Number of cores in the subcluster. Total number of cores in cluster may not exceed 14.

Type: uint8\_t

Default value: 1

**subcluster1.cpi\_div**

Divider for calculating CPI (Cycles Per Instruction).

Type: uint32\_t

Default value: 0x1

**subcluster1.cpi\_mul**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: uint32\_t

Default value: 0x1

**subcluster1.cpu0.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: bool

Default value: false

**subcluster1.cpu0.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: bool

Default value: false

**subcluster1.cpu0.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu0.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu0.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu0.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu0.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu0.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu0.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu0.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu0.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

### **`subcluster1.cpu0.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu0.l2cache-snoop_issue_latency`**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu0.l2cache-ways`**

L2 Cache number of ways (sets are implicit from size).

Type: `uint8_t`

Default value: `8`

### **`subcluster1.cpu0.l2cache-write_access_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu0.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu0.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

### **`subcluster1.cpu0.min_sync_level`**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: `0`

### **`subcluster1.cpu0.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster1.cpu0.semihosting-A64_HLT`**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster1.cpu0.semihosting-ARM_SVC`**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster1.cpu0.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**subcluster1.cpu0.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**subcluster1.cpu0.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**subcluster1.cpu0.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster1.cpu0.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster1.cpu0.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu0.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu0.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster1.cpu0.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu0.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster1.cpu0.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster1.cpu0.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster1.cpu1.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster1.cpu1.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster1.cpu1.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster1.cpu1.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu1.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster1.cpu1.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu1.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu1.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu1.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu1.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu1.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

#### **`subcluster1.cpu1.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu1.l2cache-snoop_issue_latency`**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu1.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

**subcluster1.cpu1.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu1.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu1.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster1.cpu1.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu1.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu1.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**subcluster1.cpu1.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster1.cpu1.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**subcluster1.cpu1.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

**subcluster1.cpu1.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster1.cpu1.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster1.cpu1.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster1.cpu1.semihosting-heap\_base**

Virtual address of heap base.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu1.semihosting-heap\_limit**

Virtual address of top of heap.

Type: uint64\_t

Default value: 0xf000000

**subcluster1.cpu1.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: uint64\_t

Default value: 0x10000000

**subcluster1.cpu1.semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint64\_t

Default value: 0xf000000

**subcluster1.cpu1.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu1.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: bool

Default value: false

**subcluster1.cpu1.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

#### **`subcluster1.cpu10.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

#### **`subcluster1.cpu10.CFGTE`**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

#### **`subcluster1.cpu10.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

#### **`subcluster1.cpu10.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu10.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

#### **`subcluster1.cpu10.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu10.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu10.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu10.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu10.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu10.l2cache-size**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

**subcluster1.cpu10.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

**subcluster1.cpu10.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu10.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

**subcluster1.cpu10.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu10.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu10.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster1.cpu10.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu10.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

**subcluster1.cpu10.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

**subcluster1.cpu10.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: 0x123456

**subcluster1.cpu10.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**subcluster1.cpu10.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**subcluster1.cpu10.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**subcluster1.cpu10.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster1.cpu10.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: bool

Default value: true

**subcluster1.cpu10.semihosting-heap\_base**

Virtual address of heap base.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu10.semihosting-heap\_limit**

Virtual address of top of heap.

Type: uint64\_t

Default value: 0xf000000

**subcluster1.cpu10.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: uint64\_t

Default value: 0x10000000

**subcluster1.cpu10.semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint64\_t

Default value: 0xf000000

**subcluster1.cpu10.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu10.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster1.cpu10.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster1.cpu11.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster1.cpu11.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster1.cpu11.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster1.cpu11.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu11.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu11.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu11.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu11.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu11.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu11.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu11.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**subcluster1.cpu11.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu11.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu11.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

**subcluster1.cpu11.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu11.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu11.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster1.cpu11.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu11.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu11.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu11.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster1.cpu11.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**subcluster1.cpu11.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: uint8\_t

Default value: 171

**subcluster1.cpu11.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster1.cpu11.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster1.cpu11.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster1.cpu11.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu11.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu11.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster1.cpu11.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: 0xf000000

**subcluster1.cpu11.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu11.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: bool

Default value: false

**subcluster1.cpu11.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: bool

Default value: true

**subcluster1.cpu12.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: bool

Default value: false

**subcluster1.cpu12.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: bool

Default value: false

**subcluster1.cpu12.CRYPTODISABLE**

Disable cryptographic features.

Type: bool

Default value: false

**subcluster1.cpu12.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu12.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster1.cpu12.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu12.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu12.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu12.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu12.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu12.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**subcluster1.cpu12.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu12.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu12.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

**subcluster1.cpu12.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu12.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu12.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster1.cpu12.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu12.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu12.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu12.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster1.cpu12.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

### **`subcluster1.cpu12.semihosting-Thumb_SVC`**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

### **`subcluster1.cpu12.semihosting-cmd_line`**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

### **`subcluster1.cpu12.semihosting-cwd`**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

### **`subcluster1.cpu12.semihosting-enable`**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

### **`subcluster1.cpu12.semihosting-heap_base`**

Virtual address of heap base.

Type: `uint64_t`

Default value: 0x0

### **`subcluster1.cpu12.semihosting-heap_limit`**

Virtual address of top of heap.

Type: `uint64_t`

Default value: 0xf000000

### **`subcluster1.cpu12.semihosting-stack_base`**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

### **`subcluster1.cpu12.semihosting-stack_limit`**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster1.cpu12.trace_special_hlt_imm16`**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

### **`subcluster1.cpu12.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu12.vfp-present`**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

### **`subcluster1.cpu2.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **`subcluster1.cpu2.CFGTE`**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

#### **`subcluster1.cpu2.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

#### **`subcluster1.cpu2.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu2.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

#### **`subcluster1.cpu2.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu2.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu2.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu2.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu2.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu2.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**subcluster1.cpu2.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu2.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu2.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

**subcluster1.cpu2.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu2.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu2.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster1.cpu2.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu2.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu2.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu2.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster1.cpu2.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**subcluster1.cpu2.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

**subcluster1.cpu2.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster1.cpu2.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster1.cpu2.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster1.cpu2.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu2.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu2.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster1.cpu2.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu2.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster1.cpu2.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster1.cpu2.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster1.cpu3.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster1.cpu3.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster1.cpu3.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster1.cpu3.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu3.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster1.cpu3.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu3.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu3.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu3.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu3.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu3.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

### **`subcluster1.cpu3.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu3.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu3.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

**subcluster1.cpu3.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu3.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu3.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster1.cpu3.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu3.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**subcluster1.cpu3.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**subcluster1.cpu3.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster1.cpu3.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**subcluster1.cpu3.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

**subcluster1.cpu3.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster1.cpu3.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster1.cpu3.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster1.cpu3.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu3.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu3.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster1.cpu3.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu3.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster1.cpu3.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu3.vfp-present`**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

### **`subcluster1.cpu4.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **`subcluster1.cpu4.CFGTE`**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu4.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu4.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu4.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster1.cpu4.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu4.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu4.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu4.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu4.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu4.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**subcluster1.cpu4.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu4.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu4.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

**subcluster1.cpu4.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu4.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu4.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster1.cpu4.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu4.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu4.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu4.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster1.cpu4.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**subcluster1.cpu4.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: uint8\_t

Default value: 171

**subcluster1.cpu4.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: string

Default value: N/A

**subcluster1.cpu4.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster1.cpu4.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster1.cpu4.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu4.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu4.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster1.cpu4.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu4.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

#### **`subcluster1.cpu4.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

#### **`subcluster1.cpu4.vfp-present`**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

#### **`subcluster1.cpu5.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

#### **`subcluster1.cpu5.CFGTE`**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

#### **`subcluster1.cpu5.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

#### **`subcluster1.cpu5.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu5.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter trace\_special\_hlt\_imm16.

Type: `bool`

Default value: `false`

**subcluster1.cpu5.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu5.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu5.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu5.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu5.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: 0x0

### **subcluster1.cpu5.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

### **subcluster1.cpu5.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **subcluster1.cpu5.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **subcluster1.cpu5.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

### **subcluster1.cpu5.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **subcluster1.cpu5.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu5.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster1.cpu5.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu5.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu5.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu5.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster1.cpu5.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**subcluster1.cpu5.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

### **`subcluster1.cpu5.semihosting-cmd_line`**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

### **`subcluster1.cpu5.semihosting-cwd`**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

### **`subcluster1.cpu5.semihosting-enable`**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

### **`subcluster1.cpu5.semihosting-heap_base`**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu5.semihosting-heap_limit`**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

### **`subcluster1.cpu5.semihosting-stack_base`**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

### **`subcluster1.cpu5.semihosting-stack_limit`**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

#### **`subcluster1.cpu5.trace_special_hlt_imm16`**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

#### **`subcluster1.cpu5.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

#### **`subcluster1.cpu5.vfp-present`**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

#### **`subcluster1.cpu6.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

#### **`subcluster1.cpu6.CFGTE`**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

#### **`subcluster1.cpu6.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster1.cpu6.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu6.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster1.cpu6.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu6.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu6.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu6.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

#### **subcluster1.cpu6.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster1.cpu6.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

#### **subcluster1.cpu6.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster1.cpu6.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster1.cpu6.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

#### **subcluster1.cpu6.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **subcluster1.cpu6.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **subcluster1.cpu6.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

### **subcluster1.cpu6.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

### **subcluster1.cpu6.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

### **subcluster1.cpu6.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

### **subcluster1.cpu6.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster1.cpu6.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**subcluster1.cpu6.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**subcluster1.cpu6.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**subcluster1.cpu6.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster1.cpu6.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster1.cpu6.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: 0x0

**subcluster1.cpu6.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: 0xf000000

**subcluster1.cpu6.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster1.cpu6.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu6.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**subcluster1.cpu6.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster1.cpu6.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster1.cpu7.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster1.cpu7.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster1.cpu7.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster1.cpu7.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu7.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**subcluster1.cpu7.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu7.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu7.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu7.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu7.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu7.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

#### **`subcluster1.cpu7.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.cpu7.l2cache-snoop_issue_latency`**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu7.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

**subcluster1.cpu7.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu7.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu7.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster1.cpu7.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu7.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu7.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**subcluster1.cpu7.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**subcluster1.cpu7.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**subcluster1.cpu7.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

**subcluster1.cpu7.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster1.cpu7.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster1.cpu7.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster1.cpu7.semihosting-heap\_base**

Virtual address of heap base.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu7.semihosting-heap\_limit**

Virtual address of top of heap.

Type: uint64\_t

Default value: 0xf000000

**subcluster1.cpu7.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: uint64\_t

Default value: 0x10000000

**subcluster1.cpu7.semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint64\_t

Default value: 0xf000000

**subcluster1.cpu7.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu7.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: bool

Default value: false

**subcluster1.cpu7.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

### **`subcluster1.cpu8.CFGEND`**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **`subcluster1.cpu8.CFGTE`**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu8.CRYPTODISABLE`**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu8.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu8.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu8.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu8.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu8.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu8.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu8.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu8.l2cache-size**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

**subcluster1.cpu8.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

**subcluster1.cpu8.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu8.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

**subcluster1.cpu8.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu8.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu8.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster1.cpu8.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu8.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

**subcluster1.cpu8.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

**subcluster1.cpu8.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: 0x123456

**subcluster1.cpu8.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**subcluster1.cpu8.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**subcluster1.cpu8.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**subcluster1.cpu8.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**subcluster1.cpu8.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: bool

Default value: true

**subcluster1.cpu8.semihosting-heap\_base**

Virtual address of heap base.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu8.semihosting-heap\_limit**

Virtual address of top of heap.

Type: uint64\_t

Default value: 0xf000000

**subcluster1.cpu8.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: uint64\_t

Default value: 0x10000000

**subcluster1.cpu8.semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint64\_t

Default value: 0xf000000

**subcluster1.cpu8.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu8.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**subcluster1.cpu8.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**subcluster1.cpu9.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

**subcluster1.cpu9.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**subcluster1.cpu9.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

**subcluster1.cpu9.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu9.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`subcluster1.cpu9.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu9.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu9.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu9.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`subcluster1.cpu9.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu9.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**subcluster1.cpu9.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu9.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu9.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

**subcluster1.cpu9.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu9.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**subcluster1.cpu9.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**subcluster1.cpu9.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**subcluster1.cpu9.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu9.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**subcluster1.cpu9.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**subcluster1.cpu9.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**subcluster1.cpu9.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: uint8\_t

Default value: 171

**subcluster1.cpu9.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**subcluster1.cpu9.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**subcluster1.cpu9.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**subcluster1.cpu9.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.cpu9.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**subcluster1.cpu9.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**subcluster1.cpu9.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: 0xf000000

#### **subcluster1.cpu9.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

#### **subcluster1.cpu9.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: bool

Default value: false

#### **subcluster1.cpu9.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: bool

Default value: true

#### **subcluster1.dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster1.dcache-maintenance\_latency**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

#### **subcluster1.dcache-miss\_latency**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **subcluster1.dcache-prefetch\_enabled**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

Type: bool

Default value: false

### **subcluster1.dcache-read\_access\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **subcluster1.dcache-read\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **subcluster1.dcache-size**

L1 D-Cache size in bytes.

Type: uint32\_t

Default value: 0x10000

### **subcluster1.dcache-snoop\_data\_transfer\_latency**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **subcluster1.dcache-write\_access\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be

used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.dcache-write_latency`**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. `dcache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.ecv_support_level`**

Implement Enhanced Counter Virtualization feature from ARMv8.6. 0, Not supported. 1, fully supported without CNTPOFF. 2, fully supported with CNTPOFF (FEAT\_ECV).

Type: `uint8_t`

Default value: 2

#### **`subcluster1.ete.CLAIMTAGS`**

Number of claim tags.

Type: `uint8_t`

Default value: 4

#### **`subcluster1.ete.MAX_INST_PER_Q`**

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

#### **`subcluster1.ete.NumberOfRSPairs`**

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

#### **`subcluster1.ete.PIDR_CM0D`**

TRCPIDR CM0D value.

Type: `uint8_t`

Default value: 0

#### **`subcluster1.ete.Q_CADENCE`**

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: 0x1

#### **`subcluster1.ete.RES0_STATEFUL`**

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: `false`

#### **`subcluster1.ete.RETSTACK`**

Return stack depth.

Type: `uint8_t`

Default value: 3

#### **`subcluster1.ete.SIM_OVERFLOW_GRANULARITY`**

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: 0x64

#### **`subcluster1.ete.SIM_OVERFLOW_PERCENTAGE`**

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

#### **`subcluster1.ete.SOURCE_ADDRESS`**

Allow generation of source address elements.

Type: `bool`

Default value: `false`

#### **`subcluster1.ete.TRACE_OUTPUT`**

File to which to write trace byte stream.

Type: `string`

Default value: `N/A`

#### **`subcluster1.ete.TRCRSRTA_FORCED_EXCEP`**

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: `false`

#### **`subcluster1.ext_abort_so_write_ras_type`**

External Aborts are reported as RAS error type specified in this param. Values: 0 = NONE, 1 = UC, 2 = UEU, 3 = UEO , 4 = UER, 5 = CE.

Type: `uint8_t`

Default value: `2`

#### **`subcluster1.force_mte_tag_access_razwi_and_ignore_tag_checks`**

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: `false`

#### **`subcluster1.force_zero_PSTATE_PAN`**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: `false`

#### **`subcluster1.force_zero_mpam_partid_and_pmg`**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAMO\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

Type: `uint8_t`

Default value: `0`

#### **`subcluster1.has_delayed_dbgreg`**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

### **`subcluster1.has_delayed_sysreg`**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `true`

### **`subcluster1.has_enhanced_pan`**

Implements Armv8.7 Enhanced PAN feature (FEAT\_PAN3) values of this parameter are:- 1, feature is implemented if ARMv8.7 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

### **`subcluster1.has_ete`**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (-plugin or -P).

Type: `bool`

Default value: `false`

### **`subcluster1.has_mt_pmu_disable_feature`**

Implements Multi-threading PMU disable extension from ARMv8.6 (FEAT\_MTPMU). 0: FEAT\_MTPMU is disabled, 1: FEAT\_MTPMU is enabled if ARMv8.6 is implemented, 2: FEAT\_MTPMU is cherry-picked, 0xF: The feature is disabled and is represented by value 0xF in ID\_AA64DFR0\_EL1.MTPMU.

Type: `uint8_t`

Default value: 0

### **`subcluster1.has_statistical_profiling`**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

Type: `bool`

Default value: `true`

### **`subcluster1.has_v8_7_spe_inverted_filtering`**

Where FEAT\_SPEv1p2 is implemented, whether inverted filtering by events is implemented (represented by PMISDR.FnE).

Type: `bool`

Default value: `false`

### **subcluster1.has\_v8\_7\_spe\_previous\_branch\_target**

Where FEAT\_SPEv1p2 is implemented, whether the optional branch target feature is implemented (FEAT\_SPE\_PBT).

Type: `bool`

Default value: `false`

### **subcluster1.icache-hit\_latency**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **subcluster1.icache-maintenance\_latency**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **subcluster1.icache-miss\_latency**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **subcluster1.icache-prefetch\_enabled**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

Type: `bool`

Default value: `false`

### **subcluster1.icache-read\_access\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and

intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.icache-read_latency`**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

#### **`subcluster1.icache-size`**

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

#### **`subcluster1.instruction_tlb_size`**

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

Type: `uint32_t`

Default value: `0x0`

#### **`subcluster1.invalidate_code_cache_on_icache_cmo`**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: `0`

#### **`subcluster1.memory_tagging_support_level`**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

Type: `uint8_t`

Default value: `3`

**subcluster1.mpam\_has\_altsp**

DEPRECATED: MPAMIDR\_EL1.HAS\_ALTSP is required when FEAT\_RME is implemented.

Type: `bool`

Default value: `false`

**subcluster1.mpamidr\_has\_force\_ns**

Whether MPAMIDR\_EL1.HAS\_FORCE\_NS bit is set or clear. values of this parameter are:-  
0, feature is not enabled.- 1, feature is implemented if ARMv8.6 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 0

**subcluster1.mpamidr\_has\_sdeflt**

Whether MPAMIDR\_EL1.HAS\_SDEFLT bit is set or clear. values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.6 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 1

**subcluster1.mpamidr\_has\_tidr**

Whether MPAMIDR\_EL1.HAS\_TIDR bit is set or clear. values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.6 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 1

**subcluster1.pmu-num\_counters**

Number of PMU counters implemented.

Type: `uint8_t`

Default value: 31

**subcluster1.ptw\_latency**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

**subcluster1.stage12\_tlb\_size**

Number of stage1+2 tlb entries. Valid values are 0 or  $\geq 4$ .

Type: `uint32_t`

Default value: `0x80`

**subcluster1.tcr\_txsz\_undersize\_should\_fault**

If large VA is not supported, Whether undersized TxSZ value should generate translation fault.

Type: `bool`

Default value: `false`

**subcluster1.tlb\_latency**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

**subcluster1.tlbi\_stall\_enabled**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: `false`

**subcluster1.treat\_PAC\_as\_NOP**

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are **NOP**. Branch, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

Type: `bool`

Default value: `false`

**subcluster1.walk\_cache\_latency**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

## 3.70 ARMCortexA72CT

Defined in `LISA/ARMCortexA72CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Changes in 11.31.15

The following parameters were added:

- `has_delayed_dbgreg`
- `has_delayed_sysreg`

### About ARMCortexA72CT

The per-core parameters are preceded by `cpun.`, where `n` identifies the core (0-3).

- The cache latency cluster parameters are only effective when you enable cache-state modeling.
- Timing annotation for transactions downstream of the cache and TLB models propagates through the cache and TLB models.
- ECC and parity schemes are hardware-specific so are not supported.
- This model has a variable number of cores per cluster, specified using the `NUM_CORES` parameter.
- This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

### Iris and MTI instances for ARMCortexA72CT

This model has the following Iris instances:

Name	Instance type
ARMCortexA72CT	Cluster_ARM_Cortex-A72
ARMCortexA72CT.AMU	PVBusLogger
ARMCortexA72CT.AMU.mapper	PVBusMapper
ARMCortexA72CT.DAP	PVBusLogger
ARMCortexA72CT.DAP.mapper	PVBusMapper
ARMCortexA72CT.DSU	DSU
ARMCortexA72CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA72CT.MMAP	PVBusLogger
ARMCortexA72CT.MMAP.mapper	PVBusMapper
ARMCortexA72CT.RAS	PVBusLogger
ARMCortexA72CT.RAS.mapper	PVBusMapper

Name	Instance type
ARMCortexA72CT.acp_mapper	PVBusMapper
ARMCortexA72CT.cpu0	ARM_Cortex-A72
ARMCortexA72CT.cpu0.UTLB	TLB
ARMCortexA72CT.cpu0.dtlb	TLB
ARMCortexA72CT.cpu0.l1dcache	PVCache
ARMCortexA72CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA72CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA72CT.cpu0.l1licache	PVCache
ARMCortexA72CT.cpu0.l1licache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA72CT.cpu0.l1licache.upstream[0]	PVBusSlave
ARMCortexA72CT.ext_bus	PVBusLogger
ARMCortexA72CT.ext_bus.mapper	PVBusMapper
ARMCortexA72CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA72CT.global_debug_rom	debug_rom
ARMCortexA72CT.l2_cache	PVCache
ARMCortexA72CT.l2_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA72CT.l2_cache.upstream[Z] (where Z = 0-16)	PVBusSlave
ARMCortexA72CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
ARMCortexA72CT.AMU	PVBusLogger
ARMCortexA72CT.AMU.mapper	PVBusMapper
ARMCortexA72CT.DAP	PVBusLogger
ARMCortexA72CT.DAP.mapper	PVBusMapper
ARMCortexA72CT.DSU	DSU
ARMCortexA72CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA72CT.MMAP	PVBusLogger
ARMCortexA72CT.MMAP.mapper	PVBusMapper
ARMCortexA72CT.RAS	PVBusLogger
ARMCortexA72CT.RAS.mapper	PVBusMapper
ARMCortexA72CT.acp_mapper	PVBusMapper
ARMCortexA72CT.cpu0	ARM_Cortex-A72
ARMCortexA72CT.cpu0.UTLB	TLB
ARMCortexA72CT.cpu0.l1dcache	PVCache
ARMCortexA72CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA72CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA72CT.cpu0.l1licache	PVCache
ARMCortexA72CT.cpu0.l1licache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA72CT.cpu0.l1licache.upstream[0]	PVBusSlave

Name	Component type
ARMCortexA72CT.ext_bus	PVBusLogger
ARMCortexA72CT.ext_bus.mapper	PVBusMapper
ARMCortexA72CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA72CT.l2_cache	PVCache
ARMCortexA72CT.l2_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA72CT.l2_cache.upstream[Z] (where Z = 0-16)	PVBusSlave
ARMCortexA72CT.l2_flusher	AsyncCacheFlushUnit

## Ports for ARMCortexA72CT

Port	Direction	Protocol	Description
aa64naa32	slave	Signal	Register width after reset.
acp_s	slave	PVBus	AXI ACP slave port.
broadcastcachemaint	slave	Signal	Enable broadcasting of cache maintenance operations to downstream caches.
broadcastinner	slave	Signal	Enable broadcasting of Inner Shareable transactions.
broadcastouter	slave	Signal	Enable broadcasting of Outer Shareable transactions.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
clrexmonack	master	Signal	Acknowledge handshake signal for the clrexmonreq signal
clrexmonreq	slave	Signal	Signals the clearing of an external global exclusive monitor
clusterid	slave	Value	The port sets the value of the affinity levels 1 and 2; bits [23:16] and [15:8] of the MPIDR.
CNTHPIRQ	master	Signal	The per-EL counter signal.
CNTPNSIRQ	master	Signal	The per-EL counter signal.
CNTPSIRQ	master	Signal	The per-EL counter signal.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module
CNTVIRQ	master	Signal	The per-EL counter signal.
commirq	master	Signal	Interrupt signal from debug communications channel.
commr_x	master	Signal	Receive portion of Data Transfer Register full.
commt_x	master	Signal	Transmit portion of Data Transfer Register empty.
cp15sdisable	slave	Signal	This signal disables write access to some system control processor registers.
cpuporeset	slave	Signal	Power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.

Port	Direction	Protocol	Description
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgack	master	Signal	External debug interface.
dbgen	slave	Signal	External debug interface.
dbgnopwrdown	master	Signal	These signals relate to core power down.
dbgpwrupreq	master	Signal	These signals relate to core power down.
dev_debug_s	slave	PVBus	External debug interface.
edbgrq	slave	Signal	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
l2flushdone	master	Signal	Flush of L2 memory system complete.
l2flushreq	slave	Signal	Request flush of L2 memory system.
l2reset	slave	Signal	Reset the shared L2 memory system controller.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
periphbase	slave	Value_64	This port sets the base address of private peripheral region.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
rei	slave	Signal	Individual processor RAM Error Interrupt signal input.
reset	slave	Signal	Raising this signal will put the core into reset mode.
romaddr	slave	Value_64	Debug ROM base address.
romaddrv	slave	Signal	Debug ROM base address valid.
rvbaraddr	slave	Value_64	Reset vector base address.
sei	slave	Signal	Per core System Error physical pins.
smpen	master	Signal	This signals AMP or SMP mode for each core.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
standbywfe	master	Signal	This signal indicates if a core is in WFE state.
standbywfi	master	Signal	This signal indicates if a core is in WFI state.
standbywfi12	master	Signal	Indicate that all the individual processors and the L2 systems are in a WFI state.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtual FIQ

Port	Direction	Protocol	Description
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtual IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Processor Virtual System Error Interrupt request.

## Parameters for ARMCortexA72CT

### **cpuX.AA64nAA32**

Type: `bool`

Default value: `true`

### **cpuX.CFGEND**

Type: `bool`

Default value: `false`

### **cpuX.CFGTE**

Type: `bool`

Default value: `false`

### **cpuX.CP15SDISABLE**

Type: `bool`

Default value: `false`

### **cpuX.CRYPTODISABLE**

Type: `bool`

Default value: `false`

### **cpuX.RVBARADDR**

Type: `uint64_t`

Default value: `0`

### **cpuX.VINITHI**

Type: `bool`

Default value: `false`

**cpuX.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter trace\_special\_hlt\_imm16.

Type: bool

Default value: false

**cpuX.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint64\_t

Default value: 256

**cpuX.min\_sync\_level**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint32\_t

Default value: 0

**cpuX.semihosting-A32\_HLT**

Type: uint32\_t

Default value: 0xF000

**cpuX.semihosting-A64\_HLT**

Type: uint32\_t

Default value: 0xF000

**cpuX.semihosting-ARM\_SVC**

Type: uint32\_t

Default value: 0x123456

**cpuX.semihosting-T32\_HLT**

Type: uint32\_t

Default value: 0x3c

**cpuX.semihosting-Thumb\_SVC**

Type: uint32\_t

Default value: 0xAB

**cpuX.semihosting-cmd\_line**

Type: string

Default value: ""

**cpuX.semihosting-cwd**

Type: string

Default value: ""

**cpuX.semihosting-enable**

Type: bool

Default value: true

**cpuX.semihosting-heap\_base**

Type: uint32\_t

Default value: 0x0

**cpuX.semihosting-heap\_limit**

Type: uint32\_t

Default value: 0x0F000000

**cpuX.semihosting-stack\_base**

Type: uint32\_t

Default value: 0x10000000

**cpuX.semihosting-stack\_limit**

Type: uint32\_t

Default value: 0x0F000000

**cpuX.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**cpuX.vfp-enable\_at\_reset**

Type: bool

Default value: false

**BROADCASTCACHEMAINT**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTINNER**

Enable broadcasting of Inner Shareable transactions. The broadcastinner signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTOUTER**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: `true`

**CLUSTER\_ID**

Type: `uint32_t`

Default value: 0

**DBGROMADDR**

Type: `uint64_t`

Default value: `0x22000000`

**DBGROMADDRV**

Type: `bool`

Default value: `true`

**GICDISABLE**

Type: `bool`

Default value: `true`

**NUM\_CORES**

Number of cores in cluster.

Type: `uint8_t`

Default value: 1

### **PERIPHBASE**

Type: `uint64_t`

Default value: 0x13080000

### **bus\_type**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint32_t`

Default value: 0

### **cpi\_div**

divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 1

### **cpi\_mul**

multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 1

### **dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit.

Type: `uint64_t`

Default value: 0

### **dcache-maintenance\_latency**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

### **dcache-miss\_latency**

L1 D-Cache timing annotation latency for miss.

Type: `uint64_t`

Default value: 0

### **`dcache-read_access_latency`**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (based on the size of `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

### **`dcache-read_latency`**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

### **`dcache-snoop_data_transfer_latency`**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

### **`dcache-state_modelled`**

Type: `bool`

Default value: `false`

### **`dcache-write_access_latency`**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (based on the size of `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

### **`dcache-write_latency`**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

### **has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

### **has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

### **icache-hit\_latency**

L1 I-Cache timing annotation latency for hit.

Type: `uint64_t`

Default value: 0

### **icache-maintenance\_latency**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

### **icache-miss\_latency**

L1 I-Cache timing annotation latency for miss.

Type: `uint64_t`

Default value: 0

### **icache-prefetch\_enabled**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

Type: `bool`

Default value: `false`

**icache-read\_access\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (based on the size of icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is only used when icache-state\_modelled=true.

Type: uint64\_t

Default value: 0

**icache-read\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when icache-state\_modelled=true.

Type: uint64\_t

Default value: 0

**icache-state\_modelled**

Type: bool

Default value: false

**l2cache-hit\_latency**

L2 Cache timing annotation latency for hit.

Type: uint64\_t

Default value: 0

**l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0

**l2cache-miss\_latency**

L2 Cache timing annotation latency for miss.

Type: uint64\_t

Default value: 0

**l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access (based on the size of l2cache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0

**l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0

**l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0

**l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0

**l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access (based on the size of l2cache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0

### **l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

### **ptw\_latency**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint32_t`

Default value: 0

### **tlb\_latency**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint32_t`

Default value: 0

## 3.71 ARMCortexA73CT

Defined in `LISA/ARMCortexA73CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Changes in 11.31.15

The following parameters were added:

- `has_delayed_dbgreg`
- `has_delayed_sysreg`

### About ARMCortexA73CT

- The per-core parameters are preceded by `cpun.`, where `n` identifies the core (0-3).

- This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).
- If either L1 cache is stateful, then the L2 cache is stateful. This is controlled by the `dcache-state_modelled` and `icache-state_modelled` parameters.
- The `semihosting-cwd` parameter sets the CWD that is used for semihosting. The host operating system limits the maximum path length. The `semihosting-cwd` parameter does not provide any security. Software running on the model can access files outside this directory using relative paths containing `..` or using absolute paths.

This model has a variable number of cores per cluster, specified using the `NUM_CORES` parameter.

- The system designer decides whether a debug APB ties the external debug view with other system views. In the model, use a `PVBusDecoder` to direct traffic to the correct port, `dev_debug_s` or `memorymapped_debug_s`.
- ECC support is hardware-specific so is not modeled.

## Iris and MTI instances for ARM Cortex A73CT

This model has the following Iris instances:

Name	Instance type
ARMCortexA73CT	Cluster_ARM_Cortex-A73
ARMCortexA73CT.AMU	PVBusLogger
ARMCortexA73CT.AMU.mapper	PVBusMapper
ARMCortexA73CT.DAP	PVBusLogger
ARMCortexA73CT.DAP.mapper	PVBusMapper
ARMCortexA73CT.DSU	DSU
ARMCortexA73CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA73CT.MMAP	PVBusLogger
ARMCortexA73CT.MMAP.mapper	PVBusMapper
ARMCortexA73CT.RAS	PVBusLogger
ARMCortexA73CT.RAS.mapper	PVBusMapper
ARMCortexA73CT.acp_mapper	PVBusMapper
ARMCortexA73CT.cpu0	ARM_Cortex-A73
ARMCortexA73CT.cpu0.UTLB	TLB
ARMCortexA73CT.cpu0.dtlb	TLB
ARMCortexA73CT.cpu0.l1dcache	PVCache
ARMCortexA73CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA73CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA73CT.cpu0.l1icache	PVCache
ARMCortexA73CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA73CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA73CT.ext_bus	PVBusLogger
ARMCortexA73CT.ext_bus.mapper	PVBusMapper

Name	Instance type
ARMCortexA73CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA73CT.global_debug_rom	debug_rom
ARMCortexA73CT.l2_cache	PVCache
ARMCortexA73CT.l2_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA73CT.l2_cache.upstream[Z] (where Z = 0-16)	PVBusSlave
ARMCortexA73CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
ARMCortexA73CT.AMU	PVBusLogger
ARMCortexA73CT.AMU.mapper	PVBusMapper
ARMCortexA73CT.DAP	PVBusLogger
ARMCortexA73CT.DAP.mapper	PVBusMapper
ARMCortexA73CT.DSU	DSU
ARMCortexA73CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA73CT.MMAP	PVBusLogger
ARMCortexA73CT.MMAP.mapper	PVBusMapper
ARMCortexA73CT.RAS	PVBusLogger
ARMCortexA73CT.RAS.mapper	PVBusMapper
ARMCortexA73CT.acp_mapper	PVBusMapper
ARMCortexA73CT.cpu0	ARM_Cortex-A73
ARMCortexA73CT.cpu0.UTLB	TLB
ARMCortexA73CT.cpu0.l1dcache	PVCache
ARMCortexA73CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA73CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA73CT.cpu0.l1icache	PVCache
ARMCortexA73CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA73CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA73CT.ext_bus	PVBusLogger
ARMCortexA73CT.ext_bus.mapper	PVBusMapper
ARMCortexA73CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA73CT.l2_cache	PVCache
ARMCortexA73CT.l2_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA73CT.l2_cache.upstream[Z] (where Z = 0-16)	PVBusSlave
ARMCortexA73CT.l2_flusher	AsyncCacheFlushUnit

## Ports for ARMCortexA73CT

Port	Direction	Protocol	Description
aa64naa32	slave	Signal	Register width after reset.
acp_s	slave	PVBus	AXI ACP slave port.

Port	Direction	Protocol	Description
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastinner	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
clrexmonack	master	Signal	Acknowledge handshake signal for the clrexmonreq signal
clrexmonreq	slave	Signal	Signals the clearing of an external global exclusive monitor
clusterid	slave	Value	The port sets the value of the affinity levels 1 and 2; bits [23:16] and [15:8] of the MPIDR.
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
commr	master	Signal	Receive portion of Data Transfer Register full.
commtx	master	Signal	Transmit portion of Data Transfer Register empty.
cp15sdisable	slave	Signal	This signal disables write access to some system control processor registers.
cpuporeset	slave	Signal	CPU power on reset.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross trigger matrix port.
dbgack	master	Signal	External debug interface.
dbgen	slave	Signal	External debug interface.
dbgnopwrdown	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Processor powerup request.
dev_debug_s	slave	PVBus	External debug interface.
edbgrq	slave	Signal	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
l2flushdone	master	Signal	Flush of L2 memory system complete.

Port	Direction	Protocol	Description
l2flushreq	slave	Signal	Request flush of L2 memory system.
l2reset	slave	Signal	Level2 reset.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
periphbase	slave	Value_64	This port sets the base address of private peripheral region.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Debug reset.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
rei	slave	Signal	Per core RAM Error Interrupt
reset	slave	Signal	Reset.
romaddr	slave	Value_64	Debug ROM base address.
romaddrv	slave	Signal	Debug ROM base address valid.
rvbaraddr	slave	Value_64	Reset vector base address.
sei	slave	Signal	Per core System Error physical pins.
smpen	master	Signal	This signals AMP or SMP mode for each core.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
standbywfe	master	Signal	This signal indicates if a core is in WFE state.
standbywfi	master	Signal	This signal indicates if a core is in WFI state
standbywfil2	master	Signal	This signal indicated all cores and L2 are idles and in low power state.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfirq	slave	Signal	Virtualised FIQ.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

## Parameters for ARMCortexA73CT

### cpuX.AA64nAA32

Type: bool

Default value: true

**cpuX.CFGEND**Type: `bool`Default value: `false`**cpuX.CFGTE**Type: `bool`Default value: `false`**cpuX.CP15SDISABLE**Type: `bool`Default value: `false`**cpuX.CRYPTODISABLE**Type: `bool`Default value: `false`**cpuX.RVBARADDR**Type: `uint64_t`Default value: `0`**cpuX.VINITHI**Type: `bool`Default value: `false`**cpuX.enable\_trace\_special\_hlt\_imm16**Enable usage of parameter `trace_special_hlt_imm16`.Type: `bool`Default value: `false`**cpuX.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint64_t`Default value: `256`**cpuX.min\_sync\_level**force minimum `syncLevel` (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint32_t`

Default value: 0

**`cpuX.semihosting-A32_HLT`**

Type: `uint32_t`

Default value: 0xF000

**`cpuX.semihosting-A64_HLT`**

Type: `uint32_t`

Default value: 0xF000

**`cpuX.semihosting-ARM_SVC`**

Type: `uint32_t`

Default value: 0x123456

**`cpuX.semihosting-T32_HLT`**

Type: `uint32_t`

Default value: 0x3c

**`cpuX.semihosting-Thumb_SVC`**

Type: `uint32_t`

Default value: 0xAB

**`cpuX.semihosting-cmd_line`**

Type: `string`

Default value: ""

**`cpuX.semihosting-cwd`**

Type: `string`

Default value: ""

**`cpuX.semihosting-enable`**

Type: `bool`

Default value: `true`

**`cpuX.semihosting-heap_base`**

Type: `uint32_t`

Default value: 0x0

**cpuX.semihosting-heap\_limit**

Type: uint32\_t

Default value: 0x0F000000

**cpuX.semihosting-stack\_base**

Type: uint32\_t

Default value: 0x10000000

**cpuX.semihosting-stack\_limit**

Type: uint32\_t

Default value: 0x0F000000

**cpuX.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**cpuX.vfp-enable\_at\_reset**

Type: bool

Default value: false

**BROADCASTCACHEMAINT**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: bool

Default value: true

**BROADCASTINNER**

Enable broadcasting of Inner Shareable transactions. The broadcastinner signal will override this value if used.

Type: bool

Default value: true

**BROADCASTOUTER**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: `true`

**CCSIDR-L1D\_override**

If nonzero, override the value presented in CCSIDR for L1D (this is cosmetic and does not affect cache behaviour).

Type: `uint64_t`

Default value: 0

**CCSIDR-L1I\_override**

If nonzero, override the value presented in CCSIDR for L1I (this is cosmetic and does not affect cache behaviour).

Type: `uint64_t`

Default value: 0

**CCSIDR-L2\_override**

If nonzero, override the value presented in CCSIDR for L2 (this is cosmetic and does not affect cache behaviour).

Type: `uint64_t`

Default value: 0

**CLUSTER\_ID**

Type: `uint32_t`

Default value: 0

**DBGROMADDR**

Type: `uint64_t`

Default value: `0x0`

**DBGROMADDRV**

Type: `bool`

Default value: `true`

**GICDISABLE**

Type: `bool`

Default value: `true`

**NUM\_CORES**

Number of cores in cluster.

Type: `uint8_t`

Default value: `1`

**PERIPHBASE**

Type: `uint64_t`

Default value: `0x13080000`

**cpi\_div**

divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `1`

**cpi\_mul**

multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `1`

**dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit.

Type: `uint64_t`

Default value: `0`

**dcache-maintenance\_latency**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0`

**dcache-miss\_latency**

L1 D-Cache timing annotation latency for miss.

Type: `uint64_t`

Default value: 0

**dcache-read\_access\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (based on the size of `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

**dcache-read\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

**dcache-size**

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: 0x8000

**dcache-snoop\_data\_transfer\_latency**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

**dcache-state\_modelled**

Type: `bool`

Default value: `false`

**dcache-write\_access\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (based on the size of dcache-write\_bus\_width\_in\_bytes. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0

**dcache-write\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0

**has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: bool

Default value: false

**has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: bool

Default value: false

**icache-hit\_latency**

L1 I-Cache timing annotation latency for hit.

Type: uint64\_t

Default value: 0

**icache-maintenance\_latency**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

Type: uint64\_t

Default value: 0

**icache-miss\_latency**

L1 I-Cache timing annotation latency for miss.

Type: `uint64_t`

Default value: 0

**icache-prefetch\_enabled**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

Type: `bool`

Default value: `false`

**icache-read\_access\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (based on the size of `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

**icache-read\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

**icache-state\_modelled**

Type: `bool`

Default value: `false`

**l2cache-hit\_latency**

L2 Cache timing annotation latency for hit.

Type: `uint64_t`

Default value: 0

**l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

**l2cache-miss\_latency**

L2 Cache timing annotation latency for miss.

Type: `uint64_t`

Default value: 0

**l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access (based on the size of `l2cache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

**l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

**l2cache-size**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: 0x80000

**l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

**l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

**l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access (based on the size of `l2cache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

**l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

**ptw\_latency**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint32_t`

Default value: 0

**tlb\_latency**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint32_t`

Default value: 0

## 3.72 ARMCortexA75CT

Defined in `LISA/ARMCortexA75CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r3p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Changes in 11.31.15

The following parameters were added:

- `has_delayed_dbgreg`
- `has_delayed_sysreg`

### About ARMCortexA75CT

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.

The model does not support the following features:

- `BROADCASTCACHEMAINTPOU` pin.
- `COREINSTRRET`, `COREINSTRRUN`, or `nPMBIRQ` signals.
- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Debug power management signals `DBGPWRDUP` and `DBGIRSTREQ` are not implemented, but `DBGPWRUPREQ` and `DBGNOPWRDWN` are implemented.
- Cache stashing capability.
- Dual ACE masters.
- This model has a variable number of cores per cluster, specified using the `NUM_CORES` parameter. The per-core parameters are preceded by `cpun.`, where `n` identifies the core (0-3).

- This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (crypto.dll or crypto.so) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

## Iris and MTI instances for ARM Cortex-A75CT

This model has the following Iris instances:

Name	Instance type
ARM Cortex-A75CT	Cluster_ARM_Cortex-A75
ARM Cortex-A75CT.AMU	PVBusLogger
ARM Cortex-A75CT.AMU.mapper	PVBusMapper
ARM Cortex-A75CT.DAP	PVBusLogger
ARM Cortex-A75CT.DAP.mapper	PVBusMapper
ARM Cortex-A75CT.DSU	DSU
ARM Cortex-A75CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARM Cortex-A75CT.DSU.mpam_busslave	PVBusSlave
ARM Cortex-A75CT.DSU.shared_cache	PVCache
ARM Cortex-A75CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARM Cortex-A75CT.DSU.shared_cache.upstream[Y] (where Y = 0-3)	PVBusSlave
ARM Cortex-A75CT.MMAP	PVBusLogger
ARM Cortex-A75CT.MMAP.mapper	PVBusMapper
ARM Cortex-A75CT.RAS	PVBusLogger
ARM Cortex-A75CT.RAS.mapper	PVBusMapper
ARM Cortex-A75CT.cpu0	ARM_Cortex-A75
ARM Cortex-A75CT.cpu0.UTLB	TLB
ARM Cortex-A75CT.cpu0.dtlb	TLB
ARM Cortex-A75CT.cpu0.l1dcache	PVCache
ARM Cortex-A75CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARM Cortex-A75CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARM Cortex-A75CT.cpu0.l1licache	PVCache
ARM Cortex-A75CT.cpu0.l1licache.downstream[0].pvbusmaster	PVBusMaster
ARM Cortex-A75CT.cpu0.l1licache.upstream[0]	PVBusSlave
ARM Cortex-A75CT.cpu0.l2cache	PVCache
ARM Cortex-A75CT.cpu0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARM Cortex-A75CT.cpu0.l2cache.upstream[U] (where U = 0-1)	PVBusSlave
ARM Cortex-A75CT.ext_bus	PVBusLogger
ARM Cortex-A75CT.ext_bus.mapper	PVBusMapper
ARM Cortex-A75CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARM Cortex-A75CT.global_debug_rom	debug_rom

This model has the following MTI trace components:

Name	Component type
ARMCortexA75CT.AMU	PVBusLogger
ARMCortexA75CT.AMU.mapper	PVBusMapper
ARMCortexA75CT.DAP	PVBusLogger
ARMCortexA75CT.DAP.mapper	PVBusMapper
ARMCortexA75CT.DSU	DSU
ARMCortexA75CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA75CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA75CT.DSU.shared_cache	PVCache
ARMCortexA75CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA75CT.DSU.shared_cache.upstream[Y] (where Y = 0-3)	PVBusSlave
ARMCortexA75CT.MMAP	PVBusLogger
ARMCortexA75CT.MMAP.mapper	PVBusMapper
ARMCortexA75CT.RAS	PVBusLogger
ARMCortexA75CT.RAS.mapper	PVBusMapper
ARMCortexA75CT.cpu0	ARM_Cortex-A75
ARMCortexA75CT.cpu0.UTLB	TLB
ARMCortexA75CT.cpu0.l1dcache	PVCache
ARMCortexA75CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA75CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA75CT.cpu0.l1icache	PVCache
ARMCortexA75CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA75CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA75CT.cpu0.l2cache	PVCache
ARMCortexA75CT.cpu0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA75CT.cpu0.l2cache.upstream[U] (where U = 0-1)	PVBusSlave
ARMCortexA75CT.ext_bus	PVBusLogger
ARMCortexA75CT.ext_bus.mapper	PVBusMapper
ARMCortexA75CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

## Ports for ARMCortexA75CT

Port	Direction	Protocol	Description
aa64naa32	slave	Signal	Register width after reset.
acp_s	slave	PVBus	AXI ACP slave port
AENDMP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.

Port	Direction	Protocol	Description
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
clusterid	slave	Value	The port sets the value of the affinity levels 2 and 3; bits [39:32] and [23:16] of the MPIDR.
clusterpmuirq	master	Signal	DynamlQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cp15sdisable	slave	Signal	This signal disables write access to some system control processor registers.
cpuporeset	slave	Signal	Power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdown	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.
edbgrq	slave	Signal	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
pchannel_cluster	slave	PChannel	PChannel for cluster.
pchannel_core	slave	PChannel	PChannels for cores
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.

Port	Direction	Protocol	Description
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Individual processor RAM Error Interrupt signal input.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core virtual System Error physical pins.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
sporeset	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtual FIQ.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtual IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

## Parameters for ARMCortexA75CT

### **cpuX.AA64nAA32**

Type: `bool`

Default value: `true`

### **cpuX.CFGEND**

Type: `bool`

Default value: `false`

### **cpuX.CFGTE**

Type: `bool`

Default value: `false`

**cpuX.CP15SDISABLE**Type: `bool`Default value: `false`**cpuX.CRYPTODISABLE**Type: `bool`Default value: `false`**cpuX.RVBARADDR**Type: `uint64_t`Default value: `0`**cpuX.VINITHI**Type: `bool`Default value: `false`**cpuX.enable\_trace\_special\_hlt\_imm16**Enable usage of parameter `trace_special_hlt_imm16`.Type: `bool`Default value: `false`**cpuX.l2cache-hit\_latency**L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.Type: `uint64_t`Default value: `0x0`**cpuX.l2cache-maintenance\_latency**L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.Type: `uint64_t`Default value: `0x0`**cpuX.l2cache-miss\_latency**L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`cpuX.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`cpuX.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`cpuX.l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

### **`cpuX.l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`cpuX.l2cache-snoop_issue_latency`**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint64\_t

Default value: 256

**cpuX.min\_sync\_level**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint32\_t

Default value: 0

**cpuX.semihosting-A32\_HLT**

Type: uint32\_t

Default value: 0xF000

**cpuX.semihosting-A64\_HLT**

Type: uint32\_t

Default value: 0xF000

**cpuX.semihosting-ARM\_SVC**

Type: uint32\_t

Default value: 0x123456

**cpuX.semihosting-T32\_HLT**

Type: uint32\_t

Default value: 0x3c

**cpuX.semihosting-Thumb\_SVC**

Type: uint32\_t

Default value: 0xAB

**cpuX.semihosting-cmd\_line**

Type: string

Default value: ""

**cpuX.semihosting-cwd**

Type: string

Default value: ""

**cpuX.semihosting-enable**

Type: bool

Default value: true

**cpuX.semihosting-heap\_base**

Type: uint32\_t

Default value: 0x0

**cpuX.semihosting-heap\_limit**

Type: uint32\_t

Default value: 0x0F000000

**cpuX.semihosting-stack\_base**

Type: uint32\_t

Default value: 0x10000000

**cpuX.semihosting-stack\_limit**

Type: uint32\_t

Default value: 0x0F000000

**cpuX.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**cpuX.vfp-enable\_at\_reset**

Type: bool

Default value: false

**BROADCASTATOMIC**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: bool

Default value: true

**BROADCASTCACHEMAINT**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: bool

Default value: true

**BROADCASTOUTER**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: bool

Default value: true

**BROADCASTPERSIST**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: bool

Default value: true

**CLUSTER\_ID**

Type: uint32\_t

Default value: 0

**GICDISABLE**

Type: bool

Default value: true

**NUM\_CORES**

Number of cores in cluster.

Type: uint8\_t

Default value: 1

**cpi\_div**

divider for calculating CPI (Cycles Per Instruction).

Type: uint32\_t

Default value: 1

**cpi\_mul**

multiplier for calculating CPI (Cycles Per Instruction).

Type: uint32\_t

Default value: 1

**dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit.

Type: uint64\_t

Default value: 0

**dcache-maintenance\_latency**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0

**dcache-miss\_latency**

L1 D-Cache timing annotation latency for miss.

Type: uint64\_t

Default value: 0

#### **dcache-read\_access\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (based on the size of dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0

#### **dcache-read\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0

#### **dcache-snoop\_data\_transfer\_latency**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0

#### **dcache-state\_modelled**

Type: bool

Default value: false

#### **dcache-write\_access\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (based on the size of dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0

#### **dcache-write\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0

**force\_zero\_PSTATE\_PAN**

Non-architecture parameter to force PSTATE.PAN to be 0. 0: No effect, 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: `false`

**has\_acp**

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: `false`

**has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `true`

**has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

**has\_peripheral\_port**

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: `false`

**icache-hit\_latency**

L1 I-Cache timing annotation latency for hit.

Type: `uint64_t`

Default value: 0

**icache-maintenance\_latency**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

**icache-miss\_latency**

L1 I-Cache timing annotation latency for miss.

Type: `uint64_t`

Default value: 0

**icache-prefetch\_enabled**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

Type: `bool`

Default value: `false`

**icache-read\_access\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (based on the size of `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

**icache-read\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: 0

**icache-state\_modelled**

Type: `bool`

Default value: `false`

**l3cache-hit\_latency**

L3 Cache timing annotation latency for hit.

Type: uint64\_t

Default value: 0

**l3cache-maintenance\_latency**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0

**l3cache-miss\_latency**

L3 Cache timing annotation latency for miss.

Type: uint64\_t

Default value: 0

**l3cache-read\_access\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per access (based on the size of l3cache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0

**l3cache-read\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0

**l3cache-size**

L3 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**l3cache-snoop\_data\_transfer\_latency**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0

**l3cache-snoop\_issue\_latency**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0

**l3cache-write\_access\_latency**

L3 Cache timing annotation latency for write accesses given in ticks per access (based on the size of l3cache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0

**l3cache-write\_latency**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0

**periph\_address\_end**

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: uint64\_t

Default value: 0x0

**periph\_address\_start**

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: uint64\_t

Default value: 0x0

**ptw\_latency**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint32\_t

Default value: 0

**tlb\_latency**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint32\_t

Default value: 0

## 3.73 ARMCortexA76AECT

Defined in `LISA/ARMCortexA76AECT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Changes in 11.31.15

The following parameters were added:

- `has_delayed_dbgreg`
- `has_delayed_sysreg`

### About ARMCortexA76AECT

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- `BROADCASTPERSIST` pin.

The model does not support the following features:

- `BROADCASTCACHEMAINTPOU` pin.

- `COREINSTRET`, `COREINSTRUN`, or `nPMBIRQ` signals.
- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Debug power management signals `DBGPWRDUP` and `DBGIRSTREQ` are not implemented, but `DBGPWRUPREQ` and `DBGNOPWRDWN` are implemented.
- Cache stashing capability.
- Split/Lock is supported but with the limitations described in the AE-specific features implemented section.

This model has a variable number of cores per cluster, specified using the `NUM_CORES` parameter.

The per-core parameters are preceded by `cpun.`, where `n` identifies the core (0-3).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

### AE-specific features implemented

The only AE-specific features implemented in the model are Split-Lock and Lock-Step, with the following limitations:

- The implementation of Split-Lock and Lock-Step in the model is simply a halving of the number of cores available.
- Lock-step is implemented by a parameter that can be true or false for the entire execution only, rather than by a signal that can be enabled during execution.

As the model does not implement true Split-Lock functionality, the ports and parameters are contiguous. For example, for a 4-core CPU with Split-Lock enabled, `cpu0` and `cpu1` identify the available cores and associated ports, not `cpu0` and `cpu2`.

- Hybrid mode is not modeled in the DSU.

### Iris and MTI instances for ARM CortexA76AECT

This model has the following Iris instances:

Name	Instance type
ARM CortexA76AECT	Cluster_ARM_Cortex-A76AE
ARM CortexA76AECT.AMU	PVBusLogger

Name	Instance type
ARMCortexA76AECT.AMU.mapper	PVBusMapper
ARMCortexA76AECT.DAP	PVBusLogger
ARMCortexA76AECT.DAP.mapper	PVBusMapper
ARMCortexA76AECT.DSU	DSU
ARMCortexA76AECT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA76AECT.DSU.mpam_busslave	PVBusSlave
ARMCortexA76AECT.DSU.shared_cache	PVCache
ARMCortexA76AECT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA76AECT.DSU.shared_cache.upstream[Y] (where Y = 0–5)	PVBusSlave
ARMCortexA76AECT.MMAP	PVBusLogger
ARMCortexA76AECT.MMAP.mapper	PVBusMapper
ARMCortexA76AECT.RAS	PVBusLogger
ARMCortexA76AECT.RAS.mapper	PVBusMapper
ARMCortexA76AECT.cpuY (where Y = 0–1)	ARM_Cortex-A76AE
ARMCortexA76AECT.cpuY.UTLB (where Y = 0–1)	TLB
ARMCortexA76AECT.cpuY.debug_rom (where Y = 0–1)	debug_rom
ARMCortexA76AECT.cpuY.dtlb (where Y = 0–1)	TLB
ARMCortexA76AECT.cpuY.l1dcache (where Y = 0–1)	PVCache
ARMCortexA76AECT.cpuY.l1dcache.downstream[0].pvbusmaster (where Y = 0–1)	PVBusMaster
ARMCortexA76AECT.cpuY.l1dcache.upstream[0] (where Y = 0–1)	PVBusSlave
ARMCortexA76AECT.cpuY.l1licache (where Y = 0–1)	PVCache
ARMCortexA76AECT.cpuY.l1licache.downstream[0].pvbusmaster (where Y = 0–1)	PVBusMaster
ARMCortexA76AECT.cpuY.l1licache.upstream[0] (where Y = 0–1)	PVBusSlave
ARMCortexA76AECT.cpuY.l2cache (where Y = 0–1)	PVCache
ARMCortexA76AECT.cpuY.l2cache.downstream[0].pvbusmaster (where Y = 0–1)	PVBusMaster
ARMCortexA76AECT.cpuY.l2cache.upstream[U] (where Y = 0–1; U = 0–1)	PVBusSlave
ARMCortexA76AECT.ext_bus	PVBusLogger
ARMCortexA76AECT.ext_bus.mapper	PVBusMapper
ARMCortexA76AECT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA76AECT.global_debug_rom	debug_rom
ARMCortexA76AECT.secondary_debug_rom	debug_rom

This model has the following MTI trace components:

Name	Component type
ARMCortexA76AECT.AMU	PVBusLogger
ARMCortexA76AECT.AMU.mapper	PVBusMapper
ARMCortexA76AECT.DAP	PVBusLogger
ARMCortexA76AECT.DAP.mapper	PVBusMapper
ARMCortexA76AECT.DSU	DSU
ARMCortexA76AECT.DSU.l3_flusher	AsyncCacheFlushUnit

Name	Component type
ARMCortexA76AECT.DSU.mpam_busslave	PVBusSlave
ARMCortexA76AECT.DSU.shared_cache	PVCache
ARMCortexA76AECT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA76AECT.DSU.shared_cache.upstream[Y] (where Y = 0-5)	PVBusSlave
ARMCortexA76AECT.MMAP	PVBusLogger
ARMCortexA76AECT.MMAP.mapper	PVBusMapper
ARMCortexA76AECT.RAS	PVBusLogger
ARMCortexA76AECT.RAS.mapper	PVBusMapper
ARMCortexA76AECT.cpuY (where Y = 0-1)	ARM_Cortex-A76AE
ARMCortexA76AECT.cpuY.UTLB (where Y = 0-1)	TLB
ARMCortexA76AECT.cpuY.l1dcache (where Y = 0-1)	PVCache
ARMCortexA76AECT.cpuY.l1dcache.downstream[0].pvbusmaster (where Y = 0-1)	PVBusMaster
ARMCortexA76AECT.cpuY.l1dcache.upstream[0] (where Y = 0-1)	PVBusSlave
ARMCortexA76AECT.cpuY.l1licache (where Y = 0-1)	PVCache
ARMCortexA76AECT.cpuY.l1licache.downstream[0].pvbusmaster (where Y = 0-1)	PVBusMaster
ARMCortexA76AECT.cpuY.l1licache.upstream[0] (where Y = 0-1)	PVBusSlave
ARMCortexA76AECT.cpuY.l2cache (where Y = 0-1)	PVCache
ARMCortexA76AECT.cpuY.l2cache.downstream[0].pvbusmaster (where Y = 0-1)	PVBusMaster
ARMCortexA76AECT.cpuY.l2cache.upstream[U] (where Y = 0-1; U = 0-1)	PVBusSlave
ARMCortexA76AECT.ext_bus	PVBusLogger
ARMCortexA76AECT.ext_bus.mapper	PVBusMapper
ARMCortexA76AECT.gic_cpuif_decoder_cluster	GIcV3CPUInterfaceDecoder

## Ports for ARMCortexA76AECT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AENDMP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.

Port	Direction	Protocol	Description
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamiQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cpuporeset	slave	Signal	Power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdown	master	Signal	These signals relate to core power down.
dbgpwrupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
pchannel_cluster	slave	PChannel	PChannel for cluster.
pchannel_core	slave	PChannel	PChannels for cores
pmbirq	master	Signal	Interrupt signal from statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.

Port	Direction	Protocol	Description
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core virtual System Error physical pins.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
sporeset	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

## Parameters for ARM Cortex A76 AECT

### cpuX.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### cpuX.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### cpuX.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **`cpuX.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **`cpuX.VINITHI`**

Reset value of SCTL.R.V.

Type: `bool`

Default value: `false`

### **`cpuX.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`cpuX.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`cpuX.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`cpuX.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**cpuX.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

### **`cpuX.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`cpuX.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

### **`cpuX.min_sync_level`**

Force minimum `syncLevel` (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: `0`

### **`cpuX.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`cpuX.semihosting-A64_HLT`**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`cpuX.semihosting-ARM_SVC`**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**cpuX.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**cpuX.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**cpuX.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**cpuX.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**cpuX.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**cpuX.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: 0x0

**cpuX.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: 0xf000000

**cpuX.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**cpuX.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**cpuX.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**cpuX.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**BROADCASTATOMIC**

Enable broadcasting of atomic operation. The `broadcastatomic` signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTACHEMAINT**

Enable broadcasting of cache maintenance operations to downstream caches. The `broadcastcachemaint` signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTOUTER**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTPERSIST**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: `true`

**CLUSTER\_ID**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. This value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: `1`

**GICDISABLE**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: `true`

**NUM\_CORES**

Number of cores per cluster.

Type: `uint8_t`

Default value: 2

**cpi\_div**

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 0x1

**cpi\_mul**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 0x1

**dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

**dcache-maintenance\_latency**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

**dcache-miss\_latency**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

**dcache-prefetch\_enabled**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

Type: `bool`

Default value: `false`

### **`dcache-read_access_latency`**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-read_latency`**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-snoop_data_transfer_latency`**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-state_modelled`**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **`dcache-write_access_latency`**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

### **dcache-write\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **default\_opmode**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: uint8\_t

Default value: 4

### **diagnostics**

Enable DynamIQ diagnostic messages.

Type: bool

Default value: false

### **enable\_lock\_step**

Whether the core is configured in Dual Core Lock Step mode (FEAT\_DCLS).

Type: bool

Default value: false

### **enable\_simulation\_performance\_optimizations**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

Type: bool

Default value: true

### **ext\_abort\_device\_read\_is\_sync**

Synchronous reporting of device-nGnRE read external aborts.

Type: bool

Default value: `false`

**ext\_abort\_device\_write\_is\_sync**

Synchronous reporting of device-nGnRE write external aborts.

Type: `bool`

Default value: `false`

**ext\_abort\_so\_read\_is\_sync**

Synchronous reporting of device-nGnRnE read external aborts.

Type: `bool`

Default value: `false`

**ext\_abort\_so\_write\_is\_sync**

Synchronous reporting of device-nGnRnE write external aborts.

Type: `bool`

Default value: `false`

**force\_zero\_PSTATE\_PAN**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: `false`

**has\_acp**

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: `false`

**has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

**has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

### **has\_dot\_product**

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

### **has\_peripheral\_port**

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: `false`

### **has\_statistical\_profiling**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

Type: `bool`

Default value: `true`

### **icache-hit\_latency**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **icache-maintenance\_latency**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **icache-miss\_latency**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-prefetch\_enabled**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

Type: `bool`

Default value: `false`

**icache-read\_access\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**icache-read\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. icache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**icache-state\_modelled**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

**invalidate\_code\_cache\_on\_icache\_cmo**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: `0`

**l3cache-hit\_latency**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

### **l3cache-maintenance\_latency**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **l3cache-miss\_latency**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **l3cache-read\_access\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size `l3cache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **l3cache-read\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l3cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **l3cache-size**

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

**l3cache-snoop\_data\_transfer\_latency**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-snoop\_issue\_latency**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-write\_access\_latency**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size `l3cache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-write\_latency**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l3cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**pchannel\_treat\_simreset\_as\_poreset**

Register core as ON state to cluster with simulation reset.

Type: `bool`

Default value: `false`

**periph\_address\_end**

End address for peripheral port address range exclusive (corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: `0x0`

**periph\_address\_start**

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: uint64\_t

Default value: 0x0

**ptw\_latency**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

**reported\_patch\_level**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: int8\_t

Default value: -1

**reported\_revision\_number**

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: int8\_t

Default value: -1

**tlb\_latency**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

**tlbi\_stall\_enabled**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: bool

Default value: false

**treat-dcache-cmos-to-pou-as-nop**

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

Type: `uint8_t`

Default value: 0

**walk\_cache\_latency**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

## 3.74 ARMCortexA76CT

Defined in `LISA/ARMCortexA76CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

**Changes in 11.31.15**

The following parameters were added:

- `has_delayed_dbgreg`
- `has_delayed_sysreg`

**About ARMCortexA76CT**

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- `BROADCASTPERSIST` pin.

The model does not support the following features:

- BROADCASTCACHEMAINTPOU pin.
- COREINSTRRET, COREINSTRRUN, or nPMBIRQ signals.
- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Debug power management signals DBGWRUP and DBGRSTREQ are not implemented, but DBGWRUPREQ and DBGNOFWRDWN are implemented.
- Cache stashing capability.

This model has a variable number of cores per cluster, specified using the `NUM_CORES` parameter.

The per-core parameters are preceded by `cpun.`, where `n` identifies the core (0-3).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

## Iris and MTI instances for ARM Cortex-A76CT

This model has the following Iris instances:

Name	Instance type
ARM Cortex-A76CT	Cluster_ARM_Cortex-A76
ARM Cortex-A76CT.AMU	PVBusLogger
ARM Cortex-A76CT.AMU.mapper	PVBusMapper
ARM Cortex-A76CT.DAP	PVBusLogger
ARM Cortex-A76CT.DAP.mapper	PVBusMapper
ARM Cortex-A76CT.DSU	DSU
ARM Cortex-A76CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARM Cortex-A76CT.DSU.mpam_busslave	PVBusSlave
ARM Cortex-A76CT.DSU.shared_cache	PVCache
ARM Cortex-A76CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARM Cortex-A76CT.DSU.shared_cache.upstream[Y] (where Y = 0-3)	PVBusSlave
ARM Cortex-A76CT.MMAP	PVBusLogger
ARM Cortex-A76CT.MMAP.mapper	PVBusMapper
ARM Cortex-A76CT.RAS	PVBusLogger

Name	Instance type
ARMCortexA76CT.RAS.mapper	PVBusMapper
ARMCortexA76CT.cpu0	ARM_Cortex-A76
ARMCortexA76CT.cpu0.UTLB	TLB
ARMCortexA76CT.cpu0.debug_rom	debug_rom
ARMCortexA76CT.cpu0.dtlb	TLB
ARMCortexA76CT.cpu0.l1dcache	PVCache
ARMCortexA76CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA76CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA76CT.cpu0.l1icache	PVCache
ARMCortexA76CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA76CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA76CT.cpu0.l2cache	PVCache
ARMCortexA76CT.cpu0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA76CT.cpu0.l2cache.upstream[U] (where $U = 0-1$ )	PVBusSlave
ARMCortexA76CT.ext_bus	PVBusLogger
ARMCortexA76CT.ext_bus.mapper	PVBusMapper
ARMCortexA76CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA76CT.global_debug_rom	debug_rom
ARMCortexA76CT.secondary_debug_rom	debug_rom

This model has the following MTI trace components:

Name	Component type
ARMCortexA76CT.AMU	PVBusLogger
ARMCortexA76CT.AMU.mapper	PVBusMapper
ARMCortexA76CT.DAP	PVBusLogger
ARMCortexA76CT.DAP.mapper	PVBusMapper
ARMCortexA76CT.DSU	DSU
ARMCortexA76CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA76CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA76CT.DSU.shared_cache	PVCache
ARMCortexA76CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA76CT.DSU.shared_cache.upstream[Y] (where $Y = 0-3$ )	PVBusSlave
ARMCortexA76CT.MMAP	PVBusLogger
ARMCortexA76CT.MMAP.mapper	PVBusMapper
ARMCortexA76CT.RAS	PVBusLogger
ARMCortexA76CT.RAS.mapper	PVBusMapper
ARMCortexA76CT.cpu0	ARM_Cortex-A76
ARMCortexA76CT.cpu0.UTLB	TLB
ARMCortexA76CT.cpu0.l1dcache	PVCache
ARMCortexA76CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster

Name	Component type
ARMCortexA76CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA76CT.cpu0.l1icache	PVCache
ARMCortexA76CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA76CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA76CT.cpu0.l2cache	PVCache
ARMCortexA76CT.cpu0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA76CT.cpu0.l2cache.upstream[U] (where U = 0-1)	PVBusSlave
ARMCortexA76CT.ext_bus	PVBusLogger
ARMCortexA76CT.ext_bus.mapper	PVBusMapper
ARMCortexA76CT.gic_cpuif_decoder_cluster	GLCv3CPUInterfaceDecoder

## Ports for ARMCortexA76CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AENDMP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamiQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.

Port	Direction	Protocol	Description
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cp15sdisable	slave	Signal	This signal disables write access to some system control processor registers.
cpuporeset	slave	Signal	Power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdown	master	Signal	These signals relate to core power down.
dbgpwrupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
pchannel_cluster	slave	PChannel	PChannel for cluster.
pchannel_core	slave	PChannel	PChannels for cores
pmbirq	master	Signal	Interrupt signal from statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core virtual System Error physical pins.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.

Port	Direction	Protocol	Description
sporeset	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfirq	slave	Signal	Virtualised FIQ.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

## Parameters for ARM Cortex A76CT

### **cpuX.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **cpuX.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### **cpuX.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **cpuX.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**cpuX.VINITHI**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

**cpuX.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**cpuX.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**cpuX.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**cpuX.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**cpuX.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**cpuX.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**cpuX.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**cpuX.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**cpuX.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

### **`cpuX.semihosting-cmd_line`**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

### **`cpuX.semihosting-cwd`**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

### **`cpuX.semihosting-enable`**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

### **`cpuX.semihosting-heap_base`**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

### **`cpuX.semihosting-heap_limit`**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

### **`cpuX.semihosting-stack_base`**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

### **`cpuX.semihosting-stack_limit`**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

#### **`cpuX.trace_special_hlt_imm16`**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

#### **`cpuX.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

#### **BROADCASTATOMIC**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: `true`

#### **BROADCASTCACHEMAINT**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: `true`

#### **BROADCASTOUTER**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: `true`

#### **BROADCASTPERSIST**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: `true`

### **CLUSTER\_ID**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

### **CMO\_broadcast\_when\_cache\_state\_modelling\_disabled**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. This value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: `1`

### **GICDISABLE**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: `true`

### **NUM\_CORES**

Number of cores per cluster.

Type: `uint8_t`

Default value: `1`

### **cpi\_div**

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 0x1

**cpi\_mul**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: uint32\_t

Default value: 0x1

**dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**dcache-maintenance\_latency**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**dcache-miss\_latency**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**dcache-prefetch\_enabled**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

Type: bool

Default value: false

**dcache-read\_access\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **dcache-read\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

### **dcache-snoop\_data\_transfer\_latency**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

### **dcache-state\_modelled**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **dcache-write\_access\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

### **dcache-write\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. `dcache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

**default\_opmode**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

**diagnostics**

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: `false`

**enable\_simulation\_performance\_optimizations**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of `stage12_tlb_size` parameter to 1024).

Type: `bool`

Default value: `true`

**ext\_abort\_device\_read\_is\_sync**

Synchronous reporting of device-nGnRE read external aborts.

Type: `bool`

Default value: `false`

**ext\_abort\_device\_write\_is\_sync**

Synchronous reporting of device-nGnRE write external aborts.

Type: `bool`

Default value: `false`

**ext\_abort\_so\_read\_is\_sync**

Synchronous reporting of device-nGnRnE read external aborts.

Type: `bool`

Default value: `false`

**ext\_abort\_so\_write\_is\_sync**

Synchronous reporting of device-nGnRnE write external aborts.

Type: `bool`

Default value: `false`

**force\_zero\_PSTATE\_PAN**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: `false`

**has\_acp**

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: `false`

**has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

**has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

**has\_peripheral\_port**

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: `false`

**has\_statistical\_profiling**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

Type: `bool`

Default value: `true`

### **`icache-hit_latency`**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`icache-maintenance_latency`**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`icache-miss_latency`**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`icache-prefetch_enabled`**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

Type: `bool`

Default value: `false`

### **`icache-read_access_latency`**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`icache-read_latency`**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`icache-state_modelled`**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **`invalidate_code_cache_on_icache_cmo`**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: `0`

### **`l3cache-hit_latency`**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-maintenance_latency`**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-miss_latency`**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-read\_access\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**l3cache-read\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. l3cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**l3cache-size**

L3 Cache size in bytes.

Type: uint32\_t

Default value: 0x100000

**l3cache-snoop\_data\_transfer\_latency**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**l3cache-snoop\_issue\_latency**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**l3cache-write\_access\_latency**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used

instead of per-byte even if l3cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **l3cache-write\_latency**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **pchannel\_treat\_simreset\_as\_poreset**

Register core as ON state to cluster with simulation reset.

Type: bool

Default value: false

### **periph\_address\_end**

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: uint64\_t

Default value: 0x0

### **periph\_address\_start**

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: uint64\_t

Default value: 0x0

### **ptw\_latency**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

### **tlb\_latency**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

### **tlbi\_stall\_enabled**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: bool

Default value: false

### **treat-dcache-cmos-to-pou-as-nop**

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

Type: uint8\_t

Default value: 0

### **walk\_cache\_latency**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

## 3.75 ARMCortexA77CT

Defined in LISA/ARMCortexA77CT.lisa.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Changes in 11.31.15

The following parameters were added:

- has\_delayed\_dbgreg
- has\_delayed\_sysreg

### About ARMCortexA77CT

The model supports the following features:

- DynamIQ (DSU) system registers.

- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- `BROADCASTPERSIST` pin.

The model does not support the following features:

- `BROADCASTCACHEMAINTPOU` pin.
- `COREINSTRRET`, `COREINSTRRUN`, or `nPMBIRQ` signals.
- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Debug power management signals `DBGPWRDUP` and `DBGIRSTREQ` are not implemented, but `DBGPWRUPREQ` and `DBGNOPWRDWN` are implemented.
- Cache stashing capability.

This model has a variable number of cores per cluster, specified using the `NUM_CORES` parameter. The per-core parameters are preceded by `cpun.`, where `n` identifies the core (0-3).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

## Iris and MTI instances for ARM Cortex A77CT

This model has the following Iris instances:

Name	Instance type
ARM Cortex A77CT	Cluster_ARM_Cortex-A77
ARM Cortex A77CT.AMU	PVBusLogger
ARM Cortex A77CT.AMU.mapper	PVBusMapper
ARM Cortex A77CT.DAP	PVBusLogger
ARM Cortex A77CT.DAP.mapper	PVBusMapper
ARM Cortex A77CT.DSU	DSU
ARM Cortex A77CT.DSU.l3_flusher	AsyncCacheFlushUnit

Name	Instance type
ARMCortexA77CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA77CT.DSU.shared_cache	PVCache
ARMCortexA77CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA77CT.DSU.shared_cache.upstream[Y] (where Y = 0–3)	PVBusSlave
ARMCortexA77CT.MMAP	PVBusLogger
ARMCortexA77CT.MMAP.mapper	PVBusMapper
ARMCortexA77CT.RAS	PVBusLogger
ARMCortexA77CT.RAS.mapper	PVBusMapper
ARMCortexA77CT.cpu0	ARM_Cortex-A77
ARMCortexA77CT.cpu0.UTLB	TLB
ARMCortexA77CT.cpu0.debug_rom	debug_rom
ARMCortexA77CT.cpu0.dtlb	TLB
ARMCortexA77CT.cpu0.l1dcache	PVCache
ARMCortexA77CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA77CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA77CT.cpu0.l1icache	PVCache
ARMCortexA77CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA77CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA77CT.cpu0.l2cache	PVCache
ARMCortexA77CT.cpu0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA77CT.cpu0.l2cache.upstream[U] (where U = 0–1)	PVBusSlave
ARMCortexA77CT.ext_bus	PVBusLogger
ARMCortexA77CT.ext_bus.mapper	PVBusMapper
ARMCortexA77CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA77CT.global_debug_rom	debug_rom
ARMCortexA77CT.secondary_debug_rom	debug_rom

This model has the following MTI trace components:

Name	Component type
ARMCortexA77CT.AMU	PVBusLogger
ARMCortexA77CT.AMU.mapper	PVBusMapper
ARMCortexA77CT.DAP	PVBusLogger
ARMCortexA77CT.DAP.mapper	PVBusMapper
ARMCortexA77CT.DSU	DSU
ARMCortexA77CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA77CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA77CT.DSU.shared_cache	PVCache
ARMCortexA77CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA77CT.DSU.shared_cache.upstream[Y] (where Y = 0–3)	PVBusSlave
ARMCortexA77CT.MMAP	PVBusLogger

Name	Component type
ARMCortexA77CT.MMAP.mapper	PVBusMapper
ARMCortexA77CT.RAS	PVBusLogger
ARMCortexA77CT.RAS.mapper	PVBusMapper
ARMCortexA77CT.cpu0	ARM_Cortex-A77
ARMCortexA77CT.cpu0.UTLB	TLB
ARMCortexA77CT.cpu0.l1dcache	PVCache
ARMCortexA77CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA77CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA77CT.cpu0.l1icache	PVCache
ARMCortexA77CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA77CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA77CT.cpu0.l2cache	PVCache
ARMCortexA77CT.cpu0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA77CT.cpu0.l2cache.upstream[U] (where $U = 0-1$ )	PVBusSlave
ARMCortexA77CT.ext_bus	PVBusLogger
ARMCortexA77CT.ext_bus.mapper	PVBusMapper
ARMCortexA77CT.gic_cpuif_decoder_cluster	GLCv3CPUInterfaceDecoder

### Ports for ARMCortexA77CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AENDMP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.

Port	Direction	Protocol	Description
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamiQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cpuporeset	slave	Signal	CPU power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdown	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
pchannel_cluster	slave	PChannel	PChannel for cluster.
pchannel_core	slave	PChannel	PChannels for cores
pmbirq	master	Signal	Interrupt signal from statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.

Port	Direction	Protocol	Description
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
sporeset	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

## Parameters for ARM Cortex A77CT

### cpuX.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### cpuX.CFGTE

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### cpuX.CRYPTODISABLE

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **`cpuX.RVBARADDR`**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **`cpuX.VINITHI`**

Reset value of SCTL.R.V.

Type: `bool`

Default value: `false`

### **`cpuX.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`cpuX.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`cpuX.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`cpuX.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**cpuX.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

### **`cpuX.l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`cpuX.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

### **`cpuX.min_sync_level`**

Force minimum `syncLevel` (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: `0`

### **`cpuX.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`cpuX.semihosting-A64_HLT`**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`cpuX.semihosting-ARM_SVC`**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**cpuX.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**cpuX.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**cpuX.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**cpuX.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**cpuX.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**cpuX.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: 0x0

**cpuX.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: 0xf000000

**cpuX.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**cpuX.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**cpuX.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**cpuX.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**BROADCASTATOMIC**

Enable broadcasting of atomic operation. The `broadcastatomic` signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTACHEMAINT**

Enable broadcasting of cache maintenance operations to downstream caches. The `broadcastcachemaint` signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTOUTER**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTPERSIST**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: `true`

**CLUSTER\_ID**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. This value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: `1`

**GICDISABLE**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: `true`

**NUM\_CORES**

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

**cpi\_div**

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 0x1

**cpi\_mul**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 0x1

**dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

**dcache-maintenance\_latency**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

**dcache-miss\_latency**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

**dcache-prefetch\_enabled**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

Type: `bool`

Default value: `false`

### **`dcache-read_access_latency`**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-read_latency`**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-snoop_data_transfer_latency`**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-state_modelled`**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **`dcache-write_access_latency`**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

### **dcache-write\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **default\_opmode**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: uint8\_t

Default value: 4

### **diagnostics**

Enable DynamIQ diagnostic messages.

Type: bool

Default value: false

### **enable\_simulation\_performance\_optimizations**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

Type: bool

Default value: true

### **ext\_abort\_device\_read\_is\_sync**

Synchronous reporting of device-nGnRE read external aborts.

Type: bool

Default value: false

### **ext\_abort\_device\_write\_is\_sync**

Synchronous reporting of device-nGnRE write external aborts.

Type: bool

Default value: `false`

**ext\_abort\_so\_read\_is\_sync**

Synchronous reporting of device-nGnRnE read external aborts.

Type: `bool`

Default value: `false`

**ext\_abort\_so\_write\_is\_sync**

Synchronous reporting of device-nGnRnE write external aborts.

Type: `bool`

Default value: `false`

**force\_zero\_PSTATE\_PAN**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: `false`

**has\_acp**

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: `false`

**has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

**has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

**has\_peripheral\_port**

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: `false`

### **has\_statistical\_profiling**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

Type: `bool`

Default value: `true`

### **icache-hit\_latency**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **icache-maintenance\_latency**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **icache-miss\_latency**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **icache-prefetch\_enabled**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

Type: `bool`

Default value: `false`

### **icache-read\_access\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and

intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`icache-read_latency`**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`icache-state_modelled`**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **`invalidate_code_cache_on_icache_cmo`**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: `0`

### **`l3cache-hit_latency`**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-maintenance_latency`**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-miss\_latency**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-read\_access\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size `l3cache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-read\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l3cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-size**

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

**l3cache-snoop\_data\_transfer\_latency**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-snoop\_issue\_latency**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-write_access_latency`**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size `l3cache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-write_latency`**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l3cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`pchannel_treat_simreset_as_poreset`**

Register core as ON state to cluster with simulation reset.

Type: `bool`

Default value: `false`

### **`periph_address_end`**

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: `0x0`

### **`periph_address_start`**

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: `0x0`

### **`ptw_latency`**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

### **tlb\_latency**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

### **tlbi\_stall\_enabled**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: bool

Default value: false

### **treat-dcache-cmos-to-pou-as-nop**

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

Type: uint8\_t

Default value: 0

### **walk\_cache\_latency**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

## 3.76 ARMCortexA78AECT

Defined in LISA/ARMCortexA78AECT.lisa.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Changes in 11.31.15

The following parameters were added:

- `has_delayed_dbgreg`
- `has_delayed_sysreg`

## About ARMCortexA78AECT

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- `BROADCASTPERSIST` pin.

The model does not support the following features:

- `BROADCASTCACHEMAINTPOU` pin.
- `COREINSTRRET`, `COREINSTRRUN`, or `NPMBIRQ` signals.
- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Debug power management signals `DBGPWRDUP` and `DBGIRSTREQ` are not implemented, but `DBGPWRUPREQ` and `DBGNOPWRDWN` are implemented.
- Cache stashing capability.
- Split/Lock is supported but with the limitations described in the AE-specific features implemented section.

This model has a variable number of cores per cluster, specified using the `NUM_CORES` parameter.

The per-core parameters are preceded by `cpun.`, where `n` identifies the core (0-3).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

## AE-specific features implemented

The only AE-specific features implemented in the model are Split-Lock and Lock-Step, with the following limitations:

- The implementation of Split-Lock and Lock-Step in the model is simply a halving of the number of cores available.
- Lock-step is implemented by a parameter that can be true or false for the entire execution only, rather than by a signal that can be enabled during execution.

As the model does not implement true Split-Lock functionality, the ports and parameters are contiguous. For example, for a 4-core CPU with Split-Lock enabled, `cpu0` and `cpu1` identify the available cores and associated ports, not `cpu0` and `cpu2`.

- Hybrid mode is not modeled in the DSU.

## Iris and MTI instances for ARMCortexA78AECT

This model has the following Iris instances:

Name	Instance type
ARMCortexA78AECT	Cluster_ARM_Cortex-A78AE
ARMCortexA78AECT.AMU	PVBusLogger
ARMCortexA78AECT.AMU.mapper	PVBusMapper
ARMCortexA78AECT.DAP	PVBusLogger
ARMCortexA78AECT.DAP.mapper	PVBusMapper
ARMCortexA78AECT.DSU	DSU
ARMCortexA78AECT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA78AECT.DSU.mpam_busslave	PVBusSlave
ARMCortexA78AECT.DSU.shared_cache	PVCache
ARMCortexA78AECT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA78AECT.DSU.shared_cache.upstream[Y] (where Y = 0-5)	PVBusSlave
ARMCortexA78AECT.MMAP	PVBusLogger
ARMCortexA78AECT.MMAP.mapper	PVBusMapper
ARMCortexA78AECT.RAS	PVBusLogger
ARMCortexA78AECT.RAS.mapper	PVBusMapper
ARMCortexA78AECT.cpuY (where Y = 0-1)	ARM_Cortex-A78AE
ARMCortexA78AECT.cpuY.UTLB (where Y = 0-1)	TLB
ARMCortexA78AECT.cpuY.debug_rom (where Y = 0-1)	debug_rom
ARMCortexA78AECT.cpuY.dtlb (where Y = 0-1)	TLB
ARMCortexA78AECT.cpuY.l1dcache (where Y = 0-1)	PVCache
ARMCortexA78AECT.cpuY.l1dcache.downstream[0].pvbusmaster (where Y = 0-1)	PVBusMaster
ARMCortexA78AECT.cpuY.l1dcache.upstream[0] (where Y = 0-1)	PVBusSlave
ARMCortexA78AECT.cpuY.l1licache (where Y = 0-1)	PVCache
ARMCortexA78AECT.cpuY.l1licache.downstream[0].pvbusmaster (where Y = 0-1)	PVBusMaster
ARMCortexA78AECT.cpuY.l1licache.upstream[0] (where Y = 0-1)	PVBusSlave

Name	Instance type
ARMCortexA78AECT.cpuY.l2cache (where Y = 0-1)	PVCache
ARMCortexA78AECT.cpuY.l2cache.downstream[0].pvbusmaster (where Y = 0-1)	PVBusMaster
ARMCortexA78AECT.cpuY.l2cache.upstream[U] (where Y = 0-1; U = 0-1)	PVBusSlave
ARMCortexA78AECT.ext_bus	PVBusLogger
ARMCortexA78AECT.ext_bus.mapper	PVBusMapper
ARMCortexA78AECT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA78AECT.global_debug_rom	debug_rom
ARMCortexA78AECT.secondary_debug_rom	debug_rom

This model has the following MTI trace components:

Name	Component type
ARMCortexA78AECT.AMU	PVBusLogger
ARMCortexA78AECT.AMU.mapper	PVBusMapper
ARMCortexA78AECT.DAP	PVBusLogger
ARMCortexA78AECT.DAP.mapper	PVBusMapper
ARMCortexA78AECT.DSU	DSU
ARMCortexA78AECT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA78AECT.DSU.mpam_busslave	PVBusSlave
ARMCortexA78AECT.DSU.shared_cache	PVCache
ARMCortexA78AECT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA78AECT.DSU.shared_cache.upstream[Y] (where Y = 0-5)	PVBusSlave
ARMCortexA78AECT.MMAP	PVBusLogger
ARMCortexA78AECT.MMAP.mapper	PVBusMapper
ARMCortexA78AECT.RAS	PVBusLogger
ARMCortexA78AECT.RAS.mapper	PVBusMapper
ARMCortexA78AECT.cpuY (where Y = 0-1)	ARM_Cortex-A78AE
ARMCortexA78AECT.cpuY.UTLB (where Y = 0-1)	TLB
ARMCortexA78AECT.cpuY.l1dcache (where Y = 0-1)	PVCache
ARMCortexA78AECT.cpuY.l1dcache.downstream[0].pvbusmaster (where Y = 0-1)	PVBusMaster
ARMCortexA78AECT.cpuY.l1dcache.upstream[0] (where Y = 0-1)	PVBusSlave
ARMCortexA78AECT.cpuY.l1icache (where Y = 0-1)	PVCache
ARMCortexA78AECT.cpuY.l1icache.downstream[0].pvbusmaster (where Y = 0-1)	PVBusMaster
ARMCortexA78AECT.cpuY.l1icache.upstream[0] (where Y = 0-1)	PVBusSlave
ARMCortexA78AECT.cpuY.l2cache (where Y = 0-1)	PVCache
ARMCortexA78AECT.cpuY.l2cache.downstream[0].pvbusmaster (where Y = 0-1)	PVBusMaster
ARMCortexA78AECT.cpuY.l2cache.upstream[U] (where Y = 0-1; U = 0-1)	PVBusSlave
ARMCortexA78AECT.ext_bus	PVBusLogger
ARMCortexA78AECT.ext_bus.mapper	PVBusMapper
ARMCortexA78AECT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

## Ports for ARMCortexA78AECT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AENDMP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamiQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cpuporeset	slave	Signal	CPU power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.

Port	Direction	Protocol	Description
dbgnopwrdown	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_redistributor_s	slave	GLCv3Comms	GLCv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
pchannel_cluster	slave	PChannel	PChannel for cluster.
pchannel_core	slave	PChannel	PChannels for cores
pmbirq	master	Signal	Interrupt signal from statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
sporeset	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

## Parameters for ARMCortexA78AECT

### **cpuX.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **cpuX.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### **cpuX.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **cpuX.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **cpuX.VINITHI**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

### **cpuX.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**cpuX.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**cpuX.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**cpuX.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**cpuX.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

**cpuX.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: 0xf000

**cpuX.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: 0x123456

**cpuX.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**cpuX.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**cpuX.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**cpuX.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**cpuX.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: bool

Default value: true

**cpuX.semihosting-heap\_base**

Virtual address of heap base.

Type: uint64\_t

Default value: 0x0

**cpuX.semihosting-heap\_limit**

Virtual address of top of heap.

Type: uint64\_t

Default value: 0xf000000

**cpuX.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: uint64\_t

Default value: 0x10000000

**cpuX.semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint64\_t

Default value: 0xf000000

**cpuX.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**cpuX.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**BROADCASTATOMIC**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTCACHEMAINT**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTOUTER**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTPERSIST**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: `true`

**CLUSTER\_ID**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

### **CMO\_broadcast\_when\_cache\_state\_modelling\_disabled**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. This value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: `1`

### **GICDISABLE**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: `true`

### **NUM\_CORES**

Number of cores per cluster.

Type: `uint8_t`

Default value: `2`

### **cpi\_div**

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

### **cpi\_mul**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

### **dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-maintenance_latency`**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-miss_latency`**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-prefetch_enabled`**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

Type: `bool`

Default value: `false`

### **`dcache-read_access_latency`**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-read_latency`**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-snoop\_data\_transfer\_latency**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-state\_modelled**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

**dcache-write\_access\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-write\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. `dcache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**default\_opmode**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

**diagnostics**

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: `false`

**enable\_lock\_step**

Whether the core is configured in Dual Core Lock Step mode (FEAT\_DCLS).

Type: `bool`

Default value: `false`

**enable\_simulation\_performance\_optimizations**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of `stage12_tlb_size` parameter to 1024).

Type: `bool`

Default value: `true`

**ext\_abort\_device\_read\_is\_sync**

Synchronous reporting of device-nGnRE read external aborts.

Type: `bool`

Default value: `false`

**ext\_abort\_device\_write\_is\_sync**

Synchronous reporting of device-nGnRE write external aborts.

Type: `bool`

Default value: `false`

**ext\_abort\_so\_read\_is\_sync**

Synchronous reporting of device-nGnRnE read external aborts.

Type: `bool`

Default value: `false`

**ext\_abort\_so\_write\_is\_sync**

Synchronous reporting of device-nGnRnE write external aborts.

Type: `bool`

Default value: `false`

**force\_zero\_PSTATE\_PAN**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: `false`

**has\_acp**

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: `false`

**has\_coherent\_icache**

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

Type: `bool`

Default value: `false`

**has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

**has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

**has\_peripheral\_port**

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: `false`

**has\_statistical\_profiling**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

Type: `bool`

Default value: `true`

### **`icache-hit_latency`**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`icache-maintenance_latency`**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`icache-miss_latency`**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`icache-prefetch_enabled`**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

Type: `bool`

Default value: `false`

### **`icache-read_access_latency`**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-read\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-state\_modelled**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

**invalidate\_code\_cache\_on\_icache\_cmo**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: `0`

**l3cache-hit\_latency**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-maintenance\_latency**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-miss\_latency**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-read\_access\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**l3cache-read\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. l3cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**l3cache-size**

L3 Cache size in bytes.

Type: uint32\_t

Default value: 0x100000

**l3cache-snoop\_data\_transfer\_latency**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**l3cache-snoop\_issue\_latency**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**l3cache-write\_access\_latency**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used

instead of per-byte even if l3cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **l3cache-write\_latency**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **pchannel\_treat\_simreset\_as\_poreset**

Register core as ON state to cluster with simulation reset.

Type: bool

Default value: false

### **periph\_address\_end**

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: uint64\_t

Default value: 0x0

### **periph\_address\_start**

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: uint64\_t

Default value: 0x0

### **ptw\_latency**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

### **reported\_patch\_level**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: `-1`

### **reported\_revision\_number**

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (`-1`) will see this parameter ignored.

Type: `int8_t`

Default value: `-1`

### **tlb\_latency**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

### **tlbi\_stall\_enabled**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: `false`

### **treat-dcache-cmos-to-pou-as-nop**

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

Type: `uint8_t`

Default value: `0`

### **treat\_PAC\_as\_NOP**

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are **NOP**. Branch, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

Type: `bool`

Default value: `false`

### **walk\_cache\_latency**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

## 3.77 ARMCortexA78CCT

Defined in `LISA/ARMCortexA78CCT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Changes in 11.31.15

The following parameters were added:

- `has_delayed_dbgreg`
- `has_delayed_sysreg`

### About ARMCortexA78CCT

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- `BROADCASTPERSIST` pin.

The model does not support the following features:

- `BROADCASTCACHEMAINTPOU` pin.
- `COREINSTRRET`, `COREINSTRRUN`, or `nPMBIRQ` signals.
- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).

- Latency configuration.
- Snoop filtering.
- Debug power management signals `DBGPWRDUP` and `DBGIRSTREQ` are not implemented, but `DBGPWRUPREQ` and `DBGNOPWRDWN` are implemented.
- Cache stashing capability.

This model has a variable number of cores per cluster, specified using the `NUM_CORES` parameter.

The per-core parameters are preceded by `cpun.`, where `n` identifies the core (0-7).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

### Iris and MTI instances for ARMCortexA78CCT

This model has the following Iris instances:

Name	Instance type
ARMCortexA78CCT	Cluster_ARM_Cortex-A78C
ARMCortexA78CCT.AMU	PVBusLogger
ARMCortexA78CCT.AMU.mapper	PVBusMapper
ARMCortexA78CCT.DAP	PVBusLogger
ARMCortexA78CCT.DAP.mapper	PVBusMapper
ARMCortexA78CCT.DSU	DSU
ARMCortexA78CCT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA78CCT.DSU.mpam_busslave	PVBusSlave
ARMCortexA78CCT.DSU.shared_cache	PVCache
ARMCortexA78CCT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA78CCT.DSU.shared_cache.upstream[Y] (where Y = 0-3)	PVBusSlave
ARMCortexA78CCT.MMAP	PVBusLogger
ARMCortexA78CCT.MMAP.mapper	PVBusMapper
ARMCortexA78CCT.RAS	PVBusLogger
ARMCortexA78CCT.RAS.mapper	PVBusMapper
ARMCortexA78CCT.cpu0	ARM_Cortex-A78C
ARMCortexA78CCT.cpu0.UTLB	TLB
ARMCortexA78CCT.cpu0.debug_rom	debug_rom
ARMCortexA78CCT.cpu0.dtlb	TLB
ARMCortexA78CCT.cpu0.l1dcache	PVCache
ARMCortexA78CCT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA78CCT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA78CCT.cpu0.l1icache	PVCache
ARMCortexA78CCT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA78CCT.cpu0.l1icache.upstream[0]	PVBusSlave

Name	Instance type
ARMCortexA78CCT.cpu0.l2cache	PVCache
ARMCortexA78CCT.cpu0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA78CCT.cpu0.l2cache.upstream[U] (where U = 0-1)	PVBusSlave
ARMCortexA78CCT.ext_bus	PVBusLogger
ARMCortexA78CCT.ext_bus.mapper	PVBusMapper
ARMCortexA78CCT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA78CCT.global_debug_rom	debug_rom
ARMCortexA78CCT.secondary_debug_rom	debug_rom

This model has the following MTI trace components:

Name	Component type
ARMCortexA78CCT.AMU	PVBusLogger
ARMCortexA78CCT.AMU.mapper	PVBusMapper
ARMCortexA78CCT.DAP	PVBusLogger
ARMCortexA78CCT.DAP.mapper	PVBusMapper
ARMCortexA78CCT.DSU	DSU
ARMCortexA78CCT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA78CCT.DSU.mpam_busslave	PVBusSlave
ARMCortexA78CCT.DSU.shared_cache	PVCache
ARMCortexA78CCT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA78CCT.DSU.shared_cache.upstream[Y] (where Y = 0-3)	PVBusSlave
ARMCortexA78CCT.MMAP	PVBusLogger
ARMCortexA78CCT.MMAP.mapper	PVBusMapper
ARMCortexA78CCT.RAS	PVBusLogger
ARMCortexA78CCT.RAS.mapper	PVBusMapper
ARMCortexA78CCT.cpu0	ARM_Cortex-A78C
ARMCortexA78CCT.cpu0.UTLB	TLB
ARMCortexA78CCT.cpu0.l1dcache	PVCache
ARMCortexA78CCT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA78CCT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA78CCT.cpu0.l1icache	PVCache
ARMCortexA78CCT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA78CCT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA78CCT.cpu0.l2cache	PVCache
ARMCortexA78CCT.cpu0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA78CCT.cpu0.l2cache.upstream[U] (where U = 0-1)	PVBusSlave
ARMCortexA78CCT.ext_bus	PVBusLogger
ARMCortexA78CCT.ext_bus.mapper	PVBusMapper
ARMCortexA78CCT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

## Ports for ARMCortexA78CCT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AENDMP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamiQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cpuporeset	slave	Signal	CPU power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.

Port	Direction	Protocol	Description
dbgnopwrdown	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
pchannel_cluster	slave	PChannel	PChannel for cluster.
pchannel_core	slave	PChannel	PChannels for cores
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
sporeset	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamiQ.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

## Parameters for ARMCortexA78CCT

### **cpuX.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **cpuX.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### **cpuX.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **cpuX.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **cpuX.VINITHI**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

### **cpuX.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**cpuX.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-size**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: 0x80000

**cpuX.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**cpuX.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**cpuX.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**cpuX.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**cpuX.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**cpuX.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**cpuX.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**cpuX.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**cpuX.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**cpuX.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: bool

Default value: true

**cpuX.semihosting-heap\_base**

Virtual address of heap base.

Type: uint64\_t

Default value: 0x0

**cpuX.semihosting-heap\_limit**

Virtual address of top of heap.

Type: uint64\_t

Default value: 0xf000000

**cpuX.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: uint64\_t

Default value: 0x10000000

**cpuX.semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint64\_t

Default value: 0xf000000

**cpuX.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**cpuX.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**BROADCASTATOMIC**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTCACHEMAINT**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTOUTER**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTPERSIST**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: `true`

**CLUSTER\_ID**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

### **CMO\_broadcast\_when\_cache\_state\_modelling\_disabled**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. This value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: `1`

### **GICDISABLE**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: `true`

### **NUM\_CORES**

Number of cores per cluster.

Type: `uint8_t`

Default value: `1`

### **cpi\_div**

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

### **cpi\_mul**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

### **dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-maintenance_latency`**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-miss_latency`**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-prefetch_enabled`**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

Type: `bool`

Default value: `false`

### **`dcache-read_access_latency`**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-read_latency`**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-size**

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

**dcache-snoop\_data\_transfer\_latency**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-state\_modelled**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

**dcache-write\_access\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-write\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. `dcache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**default\_opmode**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

**diagnostics**

Enable DynaMIQ diagnostic messages.

Type: `bool`

Default value: `false`

**enable\_simulation\_performance\_optimizations**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of `stage12_tlb_size` parameter to 1024).

Type: `bool`

Default value: `true`

**ext\_abort\_device\_read\_is\_sync**

Synchronous reporting of device-nGnRE read external aborts.

Type: `bool`

Default value: `false`

**ext\_abort\_device\_write\_is\_sync**

Synchronous reporting of device-nGnRE write external aborts.

Type: `bool`

Default value: `false`

**ext\_abort\_so\_read\_is\_sync**

Synchronous reporting of device-nGnRnE read external aborts.

Type: `bool`

Default value: `false`

**ext\_abort\_so\_write\_is\_sync**

Synchronous reporting of device-nGnRnE write external aborts.

Type: `bool`

Default value: `false`

**force\_zero\_PSTATE\_PAN**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: `false`

**has\_acp**

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: `false`

**has\_coherent\_icache**

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

Type: `bool`

Default value: `false`

**has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

**has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

**has\_dot\_product**

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

**has\_peripheral\_port**

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: `false`

### **`icache-hit_latency`**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`icache-maintenance_latency`**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`icache-miss_latency`**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`icache-prefetch_enabled`**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

Type: `bool`

Default value: `false`

### **`icache-read_access_latency`**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-read\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-size**

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

**icache-state\_modelled**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

**invalidate\_code\_cache\_on\_icache\_cmo**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: `0`

**l3cache-hit\_latency**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-maintenance\_latency**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-miss\_latency**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-read\_access\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size `l3cache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-read\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l3cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-size**

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

**l3cache-snoop\_data\_transfer\_latency**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-snoop\_issue\_latency**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-write_access_latency`**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size `l3cache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-write_latency`**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l3cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`pchannel_treat_simreset_as_poreset`**

Register core as ON state to cluster with simulation reset.

Type: `bool`

Default value: `false`

### **`periph_address_end`**

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: `0x0`

### **`periph_address_start`**

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: `0x0`

### **`ptw_latency`**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

### **tlb\_latency**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

### **tlbi\_stall\_enabled**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: bool

Default value: false

### **treat-dcache-cmos-to-pou-as-nop**

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

Type: uint8\_t

Default value: 0

### **treat\_PAC\_as\_NOP**

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are **NOP**. Branch, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

Type: bool

Default value: false

### **walk\_cache\_latency**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

## 3.78 ARMCortexA78CT

Defined in `LISA/ARMCortexA78CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Changes in 11.31.15

The following parameters were added:

- `has_delayed_dbgreg`
- `has_delayed_sysreg`

### About ARMCortexA78CT

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- `BROADCASTPERSIST` pin.

The model does not support the following features:

- `BROADCASTCACHEMAINTPOU` pin.
- `COREINSTRRET`, `COREINSTRRUN`, or `nPMBIRQ` signals.
- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Debug power management signals `DBGPWRDUP` and `DBGIRSTREQ` are not implemented, but `DBGPWRUPREQ` and `DBGNOPWRDWN` are implemented.

- Cache stashing capability.

This model has a variable number of cores per cluster, specified using the `NUM_CORES` parameter.

The per-core parameters are preceded by `cpun.`, where `n` identifies the core (0-3).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

## Iris and MTI instances for ARM Cortex A78CT

This model has the following Iris instances:

Name	Instance type
ARMCortexA78CT	Cluster_ARM_Cortex-A78
ARMCortexA78CT.AMU	PVBusLogger
ARMCortexA78CT.AMU.mapper	PVBusMapper
ARMCortexA78CT.DAP	PVBusLogger
ARMCortexA78CT.DAP.mapper	PVBusMapper
ARMCortexA78CT.DSU	DSU
ARMCortexA78CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA78CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA78CT.DSU.shared_cache	PVCache
ARMCortexA78CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA78CT.DSU.shared_cache.upstream[Y] (where Y = 0-3)	PVBusSlave
ARMCortexA78CT.MMAP	PVBusLogger
ARMCortexA78CT.MMAP.mapper	PVBusMapper
ARMCortexA78CT.RAS	PVBusLogger
ARMCortexA78CT.RAS.mapper	PVBusMapper
ARMCortexA78CT.cpu0	ARM_Cortex-A78
ARMCortexA78CT.cpu0.UTLB	TLB
ARMCortexA78CT.cpu0.debug_rom	debug_rom
ARMCortexA78CT.cpu0.dtlb	TLB
ARMCortexA78CT.cpu0.l1dcache	PVCache
ARMCortexA78CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA78CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA78CT.cpu0.l1icache	PVCache
ARMCortexA78CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA78CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA78CT.cpu0.l2cache	PVCache
ARMCortexA78CT.cpu0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA78CT.cpu0.l2cache.upstream[U] (where U = 0-1)	PVBusSlave
ARMCortexA78CT.ext_bus	PVBusLogger

Name	Instance type
ARMCortexA78CT.ext_bus.mapper	PVBusMapper
ARMCortexA78CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA78CT.global_debug_rom	debug_rom
ARMCortexA78CT.secondary_debug_rom	debug_rom

This model has the following MTI trace components:

Name	Component type
ARMCortexA78CT.AMU	PVBusLogger
ARMCortexA78CT.AMU.mapper	PVBusMapper
ARMCortexA78CT.DAP	PVBusLogger
ARMCortexA78CT.DAP.mapper	PVBusMapper
ARMCortexA78CT.DSU	DSU
ARMCortexA78CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA78CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA78CT.DSU.shared_cache	PVCache
ARMCortexA78CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA78CT.DSU.shared_cache.upstream[Y] (where Y = 0–3)	PVBusSlave
ARMCortexA78CT.MMAP	PVBusLogger
ARMCortexA78CT.MMAP.mapper	PVBusMapper
ARMCortexA78CT.RAS	PVBusLogger
ARMCortexA78CT.RAS.mapper	PVBusMapper
ARMCortexA78CT.cpu0	ARM_Cortex-A78
ARMCortexA78CT.cpu0.UTLB	TLB
ARMCortexA78CT.cpu0.l1dcache	PVCache
ARMCortexA78CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA78CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA78CT.cpu0.l1icache	PVCache
ARMCortexA78CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA78CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA78CT.cpu0.l2cache	PVCache
ARMCortexA78CT.cpu0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexA78CT.cpu0.l2cache.upstream[U] (where U = 0–1)	PVBusSlave
ARMCortexA78CT.ext_bus	PVBusLogger
ARMCortexA78CT.ext_bus.mapper	PVBusMapper
ARMCortexA78CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

## Ports for ARMCortexA78CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.

Port	Direction	Protocol	Description
AENDMP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamiQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cpuporeset	slave	Signal	CPU power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdown	master	Signal	No power-down request.
dbgprupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.

Port	Direction	Protocol	Description
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
pchannel_cluster	slave	PChannel	PChannel for cluster.
pchannel_core	slave	PChannel	PChannels for cores
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
sporeset	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

## Parameters for ARMCortexA78CT

### **cpuX.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **cpuX.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### **cpuX.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **cpuX.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **cpuX.VINITHI**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

### **cpuX.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**cpuX.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-size**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: 0x80000

**cpuX.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**cpuX.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**cpuX.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**cpuX.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**cpuX.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**cpuX.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**cpuX.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**cpuX.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**cpuX.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**cpuX.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: bool

Default value: true

**cpuX.semihosting-heap\_base**

Virtual address of heap base.

Type: uint64\_t

Default value: 0x0

**cpuX.semihosting-heap\_limit**

Virtual address of top of heap.

Type: uint64\_t

Default value: 0xf000000

**cpuX.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: uint64\_t

Default value: 0x10000000

**cpuX.semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint64\_t

Default value: 0xf000000

**cpuX.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**cpuX.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**BROADCASTATOMIC**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTCACHEMAINT**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTOUTER**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTPERSIST**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: `true`

**CLUSTER\_ID**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

### **CMO\_broadcast\_when\_cache\_state\_modelling\_disabled**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. This value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: `1`

### **GICDISABLE**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: `true`

### **NUM\_CORES**

Number of cores per cluster.

Type: `uint8_t`

Default value: `1`

### **cpi\_div**

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

### **cpi\_mul**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

### **dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-maintenance_latency`**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-miss_latency`**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-prefetch_enabled`**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

Type: `bool`

Default value: `false`

### **`dcache-read_access_latency`**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-read_latency`**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-size**

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

**dcache-snoop\_data\_transfer\_latency**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-state\_modelled**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

**dcache-write\_access\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-write\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. `dcache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**default\_opmode**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

**diagnostics**

Enable DynaMiq diagnostic messages.

Type: `bool`

Default value: `false`

**enable\_simulation\_performance\_optimizations**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of `stage12_tlb_size` parameter to 1024).

Type: `bool`

Default value: `true`

**ext\_abort\_device\_read\_is\_sync**

Synchronous reporting of device-nGnRE read external aborts.

Type: `bool`

Default value: `false`

**ext\_abort\_device\_write\_is\_sync**

Synchronous reporting of device-nGnRE write external aborts.

Type: `bool`

Default value: `false`

**ext\_abort\_so\_read\_is\_sync**

Synchronous reporting of device-nGnRnE read external aborts.

Type: `bool`

Default value: `false`

**ext\_abort\_so\_write\_is\_sync**

Synchronous reporting of device-nGnRnE write external aborts.

Type: `bool`

Default value: `false`

**force\_zero\_PSTATE\_PAN**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: `false`

**has\_acp**

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: `false`

**has\_coherent\_icache**

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

Type: `bool`

Default value: `false`

**has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

**has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

**has\_dot\_product**

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

**has\_peripheral\_port**

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: `false`

### **`icache-hit_latency`**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`icache-maintenance_latency`**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`icache-miss_latency`**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`icache-prefetch_enabled`**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

Type: `bool`

Default value: `false`

### **`icache-read_access_latency`**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-read\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-size**

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

**icache-state\_modelled**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

**invalidate\_code\_cache\_on\_icache\_cmo**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: `0`

**l3cache-hit\_latency**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-maintenance\_latency**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-miss\_latency**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-read\_access\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size `l3cache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-read\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l3cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-size**

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

**l3cache-snoop\_data\_transfer\_latency**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-snoop\_issue\_latency**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-write_access_latency`**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size `l3cache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-write_latency`**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l3cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`pchannel_treat_simreset_as_poreset`**

Register core as ON state to cluster with simulation reset.

Type: `bool`

Default value: `false`

### **`periph_address_end`**

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: `0x0`

### **`periph_address_start`**

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: `0x0`

### **`ptw_latency`**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

### **tlb\_latency**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

### **tlbi\_stall\_enabled**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: bool

Default value: false

### **treat-dcache-cmos-to-pou-as-nop**

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

Type: uint8\_t

Default value: 0

### **walk\_cache\_latency**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

## 3.79 ARMCortexM0CT

Defined in LISA/ARMCortexM0CT.lisa.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Changes in 11.31.15

The following ports were removed:

- `currpri`

## Differences between the model and the RTL

This model does not have a parameter that is equivalent to the RAR integration option. The architecturally-required register state is reset.

This model exposes a VTOR register through Iris but this register does not exist in the IP.

Armv6-M is a subset of Armv7-M. Arm does not guarantee that all Armv7-M-specific behavior is absent from Armv6-M Fast Models cores. Therefore, Arm does not guarantee that code that runs on Armv7-M cores but fails on Armv6-M cores will also fail on Armv6-M Fast Models cores.

## Iris and MTI instances for ARMCortexM0CT

This model has the following Iris instances:

Name	Instance type
ARMCortexM0CT	ARM_Cortex-M0
ARMCortexM0CT.acp_mapper	PVBusMapper
ARMCortexM0CT.ext_bus	PVBusLogger
ARMCortexM0CT.ext_bus.mapper	PVBusMapper
ARMCortexM0CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
ARMCortexM0CT	ARM_Cortex-M0
ARMCortexM0CT.acp_mapper	PVBusMapper
ARMCortexM0CT.ext_bus	PVBusLogger
ARMCortexM0CT.ext_bus.mapper	PVBusMapper
ARMCortexM0CT.l2_flusher	AsyncCacheFlushUnit

## Ports for ARMCortexM0CT

Port	Direction	Protocol	Description
ahbd	slave	PVBus	Debug AHB - core bus slave driven by the DAP.
bigend	slave	Signal	Configure big endian data format.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
edbgrq	slave	Signal	External debug request.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
intisr	slave	Signal	This signal array delivers signals to the NVIC.
intnmi	slave	Signal	Configure non maskable interrupt.
lockup	master	Signal	Asserted when the processor is in lockup state.
poreset	slave	Signal	Raising this signal will do a power-on reset of the core.

Port	Direction	Protocol	Description
pv_ppbus_m	master	PVBus	The core will generate External Private Peripheral Bus requests on this port.
pvbus_m	master	PVBus	The core will generate bus requests on this port.
sleepdeep	master	Signal	Asserted when the processor is in deep sleep.
sleeping	master	Signal	Asserted when the processor is in sleep.
stcalib	slave	Value	This is the calibration value for the SysTick timer The following bit flag is modelled stcalib[25] - NOREF - Indicates no reference clock integrated. If stclk is not in use, set to 1
stclk	slave	ClockSignal	This is the reference clock for the SysTick timer, called STCLKEN in the specification
sysreset	slave	Signal	Raising this signal will put the core into reset mode (but does not reset the debug logic).
sysresetreq	master	Signal	Asserted to indicate that a reset is required.
ticks	master	InstructionCount	Port allowing the number of instructions since startup to be read from the CPU.

## Parameters for ARM Cortex M0CT

### **BIGENDINIT**

Initialize processor to big endian mode.

Type: `bool`

Default value: `false`

### **BKPT**

Number of breakpoint unit comparators implemented.

Type: `uint8_t`

Default value: 4

### **DBG**

Set whether debug extensions are implemented.

Type: `bool`

Default value: `true`

### **NUM\_IRQ**

Number of user interrupts.

Type: `uint8_t`

Default value: 32

### **SYST**

Enable support for SysTick timer functionality.

Type: `bool`

Default value: `true`

### **WIC**

Include support for WIC-mode deep sleep.

Type: `bool`

Default value: `true`

### **WPT**

Number of watchpoint unit comparators implemented.

Type: `uint8_t`

Default value: 2

### **cpi\_div**

divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

### **cpi\_mul**

multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

### **manager\_id**

Manager ID presented in bus transactions.

Type: `uint64_t`

Default value: `0x0`

### **min\_sync\_level**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

### **reported\_patch\_level**

Purely cosmetic patch level value to be displayed from the CUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

### **reported\_revision\_number**

Purely cosmetic revision number value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

### **semihosting-Thumb\_SVC**

T32 SVC number for semihosting.

Type: `uint8_t`

Default value: 171

### **semihosting-cmd\_line**

Command line available to semihosting SVC calls.

Type: `string`

Default value: N/A

### **semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

### **semihosting-enable**

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

Type: `bool`

Default value: `true`

### **semihosting-heap\_base**

Virtual address of heap base.

Type: `uint32_t`

Default value: 0x0

**semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint32_t`

Default value: `0x20700000`

**semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint32_t`

Default value: `0x20800000`

**semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint32_t`

Default value: `0x20700000`

## 3.80 ARMCortexM0PlusCT

Defined in `LISA/ARMCortexM0PlusCT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p1	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Changes in 11.31.15

The following ports were removed:

- `currpri`

### Differences between the model and the RTL

This model does not have a parameter that is equivalent to the RAR integration option. The architecturally-required register state is reset.

This model exposes a VTOR register through Iris but this register does not exist in the IP.

Armv6-M is a subset of Armv7-M. Arm does not guarantee that all Armv7-M-specific behavior is absent from Armv6-M Fast Models cores. Therefore, Arm does not guarantee that code that runs on Armv7-M cores but fails on Armv6-M cores will also fail on Armv6-M Fast Models cores.

## Iris and MTI instances for ARMCortexM0PlusCT

This model has the following Iris instances:

Name	Instance type
ARMCortexM0PlusCT	ARM_Cortex-M0+
ARMCortexM0PlusCT.acp_mapper	PVBusMapper
ARMCortexM0PlusCT.ext_bus	PVBusLogger
ARMCortexM0PlusCT.ext_bus.mapper	PVBusMapper
ARMCortexM0PlusCT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
ARMCortexM0PlusCT	ARM_Cortex-M0+
ARMCortexM0PlusCT.acp_mapper	PVBusMapper
ARMCortexM0PlusCT.ext_bus	PVBusLogger
ARMCortexM0PlusCT.ext_bus.mapper	PVBusMapper
ARMCortexM0PlusCT.l2_flusher	AsyncCacheFlushUnit

## Ports for ARMCortexM0PlusCT

Port	Direction	Protocol	Description
ahbd	slave	PVBus	Debug AHB - core bus slave driven by the DAP.
bigend	slave	Signal	Configure big endian data format.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
cpuwait	slave	Signal	CPUWAIT extends effect of reset when true
edbgrq	slave	Signal	External debug request.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
intisr	slave	Signal	This signal array delivers signals to the NVIC.
intnmi	slave	Signal	Configure non maskable interrupt.
io_port_in	slave	PVBus	I/O port pair. See the documentation for the io_port_out port.
io_port_out	master	PVBus	I/O port pair. Used if IOP is true. Transactions from io_port_out which do not “match” should be returned via io_port_in. For performance reasons, the I/O port interface is not modelled directly. Instead, a simple PVBus gasket is inserted at the point in the memory system where the I/O port would be. In hardware, a device would be attached to the port which would tell the CPU whether it would like to intercept each transaction, given its address. This can be modelled in a performant manner by connecting a PVBusMapper-based device to io_port_out which intercepts transactions of interest and passes other transactions back to the CPU via io_port_in. Your I/O port device model is also responsible for aborting transactions which would be aborted on hardware (e.g. exclusives) if necessary.
lockup	master	Signal	Asserted when the processor is in lockup state.
poreset	slave	Signal	Raising this signal will do a power-on reset of the core.
pv_ppbus_m	master	PVBus	The core will generate External Private Peripheral Bus requests on this port.
pdbus_m	master	PVBus	The core will generate bus requests on this port.

Port	Direction	Protocol	Description
sleepdeep	master	Signal	Asserted when the processor is in deep sleep.
sleeping	master	Signal	Asserted when the processor is in sleep.
stcalib	slave	Value	This is the calibration value for the SysTick timer. The following bit flag is modelled: stcalib[25] - NOREF - Indicates no reference clock integrated. If stclk is not in use, set to 1.
stclk	slave	ClockSignal	This is the reference clock for the SysTick timer, called STCLKEN in the specification.
sysreset	slave	Signal	Raising this signal will put the core into reset mode (but does not reset the debug logic).
sysresetreq	master	Signal	Asserted to indicate that a reset is required.
ticks	master	InstructionCount	Port allowing the number of instructions since startup to be read from the CPU.

## Parameters for ARMCortexM0PlusCT

### **BIGENDINIT**

Initialize processor to big endian mode.

Type: `bool`

Default value: `false`

### **BKPT**

Number of breakpoint unit comparators implemented.

Type: `uint8_t`

Default value: `4`

### **DBG**

Set whether debug extensions are implemented.

Type: `bool`

Default value: `true`

### **IOP**

Send all d-side transactions to the port, `io_port_out`. Transactions which do not match should be returned to the port, `io_port_in`.

Type: `bool`

Default value: `false`

### **IRQDIS**

IRQ line disable mask. Bit `n` of this 32-bit parameter disables `IRQ[n]`.

Type: `uint32_t`

Default value: `0x0`

**NUM\_IRQ**

Number of user interrupts.

Type: `uint8_t`

Default value: 32

**NUM\_MPU\_REGION**

Number of MPU regions.

Type: `uint8_t`

Default value: 0

**SYST**

Enable support for SysTick timer functionality.

Type: `bool`

Default value: `true`

**USER**

Enable support for Unprivileged/Privileged Extension.

Type: `bool`

Default value: `false`

**VTOR**

Include Vector Table Offset Register.

Type: `bool`

Default value: `false`

**WIC**

Include support for WIC-mode deep sleep.

Type: `bool`

Default value: `true`

**WPT**

Number of watchpoint unit comparators implemented.

Type: `uint8_t`

Default value: 2

**cpi\_div**

divider for calculating CPI (Cycles Per Instruction).

Type: uint32\_t

Default value: 0x1

**cpi\_mul**

multiplier for calculating CPI (Cycles Per Instruction).

Type: uint32\_t

Default value: 0x1

**manager\_id**

Manager ID presented in bus transactions.

Type: uint64\_t

Default value: 0x0

**min\_sync\_level**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**reported\_patch\_level**

Purely cosmetic patch level value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: int8\_t

Default value: -1

**reported\_revision\_number**

Purely cosmetic revision number value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: int8\_t

Default value: -1

**semihosting-Thumb\_SVC**

T32 SVC number for semihosting.

Type: `uint8_t`

Default value: 171

### **semihosting-cmd\_line**

Command line available to semihosting SVC calls.

Type: `string`

Default value: N/A

### **semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

### **semihosting-enable**

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

Type: `bool`

Default value: `true`

### **semihosting-heap\_base**

Virtual address of heap base.

Type: `uint32_t`

Default value: `0x0`

### **semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint32_t`

Default value: `0x20700000`

### **semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint32_t`

Default value: `0x20800000`

**semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint32_t`

Default value: `0x20700000`

## 3.81 ARMCortexM23CT

Defined in `LISA/ARMCortexM23CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r1p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Changes in 11.31.15

The following ports were removed:

- `currpri`

### Differences between the CT model and RTL implementations

The model does not support MTB, ETM, or TPIU. MTB RAM is absent on the model.

### Iris and MTI instances for ARMCortexM23CT

This model has the following Iris instances:

Name	Instance type
ARMCortexM23CT	ARM_Cortex-M23
ARMCortexM23CT.acp_mapper	PVBusMapper
ARMCortexM23CT.ext_bus	PVBusLogger
ARMCortexM23CT.ext_bus.mapper	PVBusMapper
ARMCortexM23CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
ARMCortexM23CT	ARM_Cortex-M23
ARMCortexM23CT.acp_mapper	PVBusMapper
ARMCortexM23CT.ext_bus	PVBusLogger
ARMCortexM23CT.ext_bus.mapper	PVBusMapper
ARMCortexM23CT.l2_flusher	AsyncCacheFlushUnit

## Ports for ARMCortexM23CT

Port	Direction	Protocol	Description
ahbd	slave	PVBus	Debug AHB - core bus slave driven by the DAP.
bigend	slave	Signal	Configure big endian data format.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
core_dside_bus_gasket_in	slave	PVBus	Inbound D-side PVBus link is used when the external gasket is enabled. This allows externally processed D-side traffic to be fed back into the core path.
core_dside_bus_gasket_out	master	PVBus	Outbound D-side PVBus is exposed when has_core_dside_bus_gasket is true. This lets an external gasket observe or alter core data traffic before it re-enters on the inbound port.
cpuwait	slave	Signal	Clear = Core goes through reset sequence as normal, Set = Core waits out of reset.
dap_s	slave	PVBus	Debug Access Port (DAP).
dbgen	slave	Signal	Invasive debug control signals. Debug enable, Set=enabled, Clear=disabled
dbgrestart	slave	Signal	External request to leave debug state
dbgrestarted	master	Signal	Acknowledge for DBGRESTART
edbgrq	slave	Signal	External debug request.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
halted	master	Signal	Core is in halt mode debug state
hreset	slave	Signal	Raising this signal will put the core into reset mode (but does not reset the debug logic).
idau_invalidate_region	slave	Value_64	64 bit number to invalid IDAU memory range (start_address<<32 end_address)
idau	master	PVBus	The core will generate IDAU requests on this port.
initvtor	slave	Value	Reset configuration port - Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset This port remains functional no matter ARMv8-M Security Extensions are included or not When ARMv8-M Security Extensions are not included, all exceptions will use NS vector base address given by this port.
initvtorns	slave	Value	Reset configuration port - Non-Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset It becomes functional when ARMv8-M Security Extensions are included When ARMv8-M Security Extensions are not included, this port will be ignored.
io_port_in	slave	PVBus	I/O port pair. See the documentation for the io_port_out port.
io_port_out	master	PVBus	I/O port pair. Used if IOP is true. Transactions from io_port_out which do not "match" should be returned via io_port_in. For performance reasons, the I/O port interface is not modelled directly. Instead, a simple PVBus gasket is inserted at the point in the memory system where the I/O port would be. In hardware, a device would be attached to the port which would tell the CPU whether it would like to intercept each transaction, given its address. This can be modelled in a performant manner by connecting a PVBusMapper-based device to io_port_out which intercepts transactions of interest and passes other transactions back to the CPU via io_port_in. Your I/O port device model is also responsible for aborting transactions which would be aborted on hardware (e.g. exclusives) if necessary.
irq	slave	Signal	This signal array delivers signals to the NVIC.
lockup	master	Signal	Asserted when the processor is in lockup state.

Port	Direction	Protocol	Description
niden	slave	Signal	Non-invasive debug enable, Set=enabled, Clear=disabled
nmi	slave	Signal	Configure non maskable interrupt.
poreset	slave	Signal	Raising this signal will do a power-on reset of the core.
pv_ppbus_m	master	PVBus	The core will generate External Private Peripheral Bus requests on this port.
pvbus_m	master	PVBus	The core will generate bus requests on this port.
sleepdeep	master	Signal	Asserted when the processor is in deep sleep.
sleeping	master	Signal	Asserted when the processor is in sleep.
spiden	slave	Signal	Secure Debug enable , Set=enabled, Clear=disabled
spniden	slave	Signal	Secure Non-invasive debug enable, Set=enabled, Clear=disabled
stcalib	slave	Value	This is the calibration value for the Secure (or only, when ARMv8-M Security Extensions are not included) SysTick timer. It is referred to as CFGSTCALIB in the M23 specification. The following bit flag is modelled stcalib[25] - NOREF - Indicates no reference clock integrated. If stclk is not in use, set to 1
stcalibns	slave	Value	This is the calibration value for the Non-Secure SysTick timer. When ARMv8-M Security Extensions are not included, this port will be ignored. It is referred to as CFGSTCALIBNS in the M23 specification. The following bit flag is modelled stcalibns[25] - NOREF - Indicates no reference clock integrated. If stclk is not in use, set to 1
stclk	slave	ClockSignal	This is the reference clock for the SysTick timer, called STCLKEN/STCLKENNS in the specification. This clock is provided for both secure and non secure inputs, even where ARMv8-M Security Extensions are included.
sysresetreq	master	Signal	Asserted to indicate that a reset is required.
ticks	master	InstructionCount	Port allowing the number of instructions since startup to be read from the CPU.
wicenack	master	Signal	Acknowledge signal for WICENREQ
wicenreq	slave	Signal	Request for deep sleep to be WIC-based deep sleep.
wicsense	master	Signal	Indicates which input events can cause the WIC to generate the WAKEUP signal.

## Parameters for ARM CortexM23CT

### SAU\_REGIONX.BADDR

Base address of SAU region0 at reset.

Type: `uint32_t`

Default value: `0x0`

### SAU\_REGIONX.ENABLE

Enable SAU region0 at reset.

Type: `bool`

Default value: `false`

**SAU\_REGIONX.LADDR**

Limit address of SAU region0 at reset.

Type: `uint32_t`

Default value: `0x0`

**SAU\_REGIONX.NSC**

Set NSC for SAU region0 at reset.

Type: `bool`

Default value: `false`

**BE**

Initialize processor to big endian mode.

Type: `bool`

Default value: `false`

**BKPT**

Number of breakpoint unit comparators implemented.

Type: `uint8_t`

Default value: `4`

**CTI**

CTI (Cross Trigger Interface) included.

Type: `bool`

Default value: `false`

**CTI\_irq0\_pin**

CTI interrupt request 0 pin.

Type: `uint8_t`

Default value: `4`

**CTI\_irq1\_pin**

CTI interrupt request 1 pin.

Type: `uint8_t`

Default value: `5`

**DBG**

Set whether debug extensions are implemented.

Type: `bool`

Default value: `true`

**INITVTOR**

Secure vector-table offset at reset.

Type: `uint32_t`

Default value: `0x0`

**INITVTORNS**

Non-Secure vector-table offset at reset.

Type: `uint32_t`

Default value: `0x0`

**IOP**

Send all d-side transactions to the port, `io_port_out`. Transactions which do not match should be returned to the port, `io_port_in`.

Type: `bool`

Default value: `false`

**IRQDIS0**

IRQ line disable mask. Bit `n` of this 32-bit parameter disables `IRQ[n+0]`.

Type: `uint32_t`

Default value: `0x0`

**IRQDIS1**

IRQ line disable mask. Bit `n` of this 32-bit parameter disables `IRQ[n+32]`.

Type: `uint32_t`

Default value: `0x0`

**IRQDIS2**

IRQ line disable mask. Bit `n` of this 32-bit parameter disables `IRQ[n+64]`.

Type: `uint32_t`

Default value: 0x0

**IRQDIS3**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+96].

Type: uint32\_t

Default value: 0x0

**IRQDIS4**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+128].

Type: uint32\_t

Default value: 0x0

**IRQDIS5**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+160].

Type: uint32\_t

Default value: 0x0

**IRQDIS6**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+192].

Type: uint32\_t

Default value: 0x0

**IRQDIS7**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+224].

Type: uint32\_t

Default value: 0x0

**MPU\_NS**

Number of regions in the Non-Secure MPU. If Security Extensions are absent, this is the total number of MPU regions.

Type: uint8\_t

Default value: 8

**MPU\_S**

Number of regions in the Secure MPU. If Security Extensions are absent, this is ignored.

Type: `uint8_t`

Default value: 8

### **NUMIRQ**

Number of user interrupts.

Type: `uint8_t`

Default value: 16

### **SAU**

Number of SAU regions (0 => no SAU).

Type: `uint8_t`

Default value: 4

### **SAU\_CTRL.ALLNS**

At reset, the SAU treats entire memory space as NS when the SAU is disabled if this is set.

Type: `bool`

Default value: `false`

### **SAU\_CTRL.ENABLE**

Enable SAU at reset.

Type: `bool`

Default value: `false`

### **SECEXT**

Whether the ARMv8-M Security Extensions are included.

Type: `bool`

Default value: `true`

### **SYST**

Include SysTick timer functionality (0=Absent, 1=Secure only, 2=Secure and NS).

Type: `uint8_t`

Default value: 2

### **VTOR**

Include Vector Table Offset Register.

Type: `bool`

Default value: `true`

### **WIC**

Include support for WIC-mode deep sleep.

Type: `bool`

Default value: `true`

### **WICLINES**

Number of lines supported by the WIC interface.

Type: `uint8_t`

Default value: 18

### **WPT**

Number of watchpoint unit comparators implemented.

Type: `uint8_t`

Default value: 4

### **cpi\_div**

divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 0x1

### **cpi\_mul**

multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 0x1

### **has\_core\_dside\_bus\_gasket**

STL gasket enabled.

Type: `bool`

Default value: `false`

### **manager\_id**

Manager ID presented in bus transactions.

Type: `uint64_t`

Default value: `0x0`

### **min\_sync\_level**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: `0`

### **reported\_patch\_level**

Purely cosmetic patch level value to be displayed from the CUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: `-1`

### **reported\_revision\_number**

Purely cosmetic revision number value to be displayed from the CUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: `-1`

### **semihosting-Thumb\_SVC**

T32 SVC number for semihosting.

Type: `uint8_t`

Default value: `171`

### **semihosting-cmd\_line**

Command line available to semihosting SVC calls.

Type: `string`

Default value: `N/A`

### **semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**semihosting-enable**

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

Type: bool  
Default value: true

**semihosting-heap\_base**

Virtual address of heap base.

Type: uint32\_t  
Default value: 0x0

**semihosting-heap\_limit**

Virtual address of top of heap.

Type: uint32\_t  
Default value: 0x20700000

**semihosting-stack\_base**

Virtual address of base of descending stack.

Type: uint32\_t  
Default value: 0x20800000

**semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint32\_t  
Default value: 0x20700000

3.82 ARMCortexM33CT

Defined in LISA/ARMCortexM33CT.lisa.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r1p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

## Changes in 11.31.15

The following ports were removed:

- `auxfault`
- `currpri`

## Differences between the model and the RTL

The model does not support the following:

- ETM, MTB, or TPIU. MTB RAM is absent on the model.
- The power control (Q-Channel) interface.

## Implementation of ITM in M-class models

This model has a parameter that enables partial support for Instrumentation Trace Macrocell (ITM). In hardware or RTL, trace data from ITM is sent in packets to the trace block serially using a single pin or wire. In the model, if it is enabled, the ITM trace data is output using an MTI trace source called ITM. The ITM trace source has an `ITM_PACKET_TYPE` field. The following table shows which packet types the model supports:

Field value	Description	Supported by model
ITM_SYNC	Synchronization packet	Not supported.
ITM_P_OVERFLOW	Protocol: Overflow packet	Not supported.
ITM_P_LOCAL_TIMESTAMP	Protocol: Local timestamp packets	Not supported.
ITM_P_GLOBAL_TIMESTAMP	Protocol: Global timestamp packets	Not supported.
ITM_P_EXTEN	Protocol: Extension packet	Not supported.
ITM_S_INSTRUMENTATION	Source: Instrumentation packet	Supported.
ITM_S_DWT_EVENT_COUNTER	Hardware source: Event counter wrapping	Not supported.
ITM_S_DWT_EXCEPTION	Hardware source: Exception tracing	Supported.
ITM_S_DWT_PC_SAMPLING	Hardware source: PC sampling	Not supported.
ITM_S_DWT_DATA_PC_TRACE	Hardware source: DWT Data trace PC value	Supported.
ITM_S_DWT_DATA_ADDRESS_TRACE	Hardware source: DWT Data trace address value	Supported.
ITM_S_DWT_DATA_DATA_TRACE	Hardware source: DWT Data trace DATA value	Supported.

## Iris and MTI instances for ARM CortexM33CT

This model has the following Iris instances:

Name	Instance type
ARM CortexM33CT	<a href="#">ARM_Cortex-M33</a>
ARM CortexM33CT.acp_mapper	<a href="#">PVBUSMapper</a>
ARM CortexM33CT.ext_bus	<a href="#">PVBUSLogger</a>
ARM CortexM33CT.ext_bus.mapper	<a href="#">PVBUSMapper</a>
ARM CortexM33CT.l2_flusher	<a href="#">AsyncCacheFlushUnit</a>

This model has the following MTI trace components:

Name	Component type
ARMCortexM33CT	ARM_Cortex-M33
ARMCortexM33CT.acp_mapper	PVBusMapper
ARMCortexM33CT.ext_bus	PVBusLogger
ARMCortexM33CT.ext_bus.mapper	PVBusMapper
ARMCortexM33CT.l2_flusher	AsyncCacheFlushUnit

## Ports for ARMCortexM33CT

Port	Direction	Protocol	Description
ahbd	slave	PVBus	Debug AHB - core bus slave driven by the DAP.
bigend	slave	Signal	Configure big endian data format.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions. Referred to in some documents as 'CLKIN'.
coproc_bus	slave	CoprocBusProtocol	Co-Processor Interface
cpuwait	slave	Signal	Stall the CPU out of reset
currns	master	Signal	Current Security state of the processor
dbgen	slave	Signal	Invasive debug enable
dbgrestart	slave	Signal	Request for synchronised exit from halt mode
dbgrestarted	master	Signal	Handshakes with DBGRESTART
edbgrq	slave	Signal	External request to enter halt mode
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
fpxxc	master	Value	Port that sends the value of the FPxxC exception flags (FPIX, FPIDC, FPOFC, FPUFC, FPDZC, FPIOC). Each flag is present in the same position as in the FPSCR register (e.g. fpxxc[0] = FPIOC).
halted	master	Signal	Indicates that the processor is in halt mode
idau_invalidate_region	slave	Value_64	64 bit number to invalid IDAU memory range (start_address<<32 end_address)
idau	master	PVBus	The core will generate IDAU requests on this port.
initnsvtor	slave	Value	Reset configuration port - Non-Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset This port remains functional no matter ARMv8-M Security Extensions are included or not When ARMv8-M Security Extensions are not included, all exceptions will use NS vector base address given by this port.
initsvtor	slave	Value	Reset configuration port - Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset It becomes functional when ARMv8-M Security Extensions are included When ARMv8-M Security Extensions are not included, this port will be ignored.
intnum	master	Value	Exception number of the current execution context (from IPSR[8:0]) When the processor is in Thread mode, INTNUM is 0 When the processor is in Handler mode, INTNUM is the exception number of the currently-executing exception.
irq	slave	Signal	This signal array delivers signals to the NVIC.
locknsmpu	slave	Signal	Disable writes to the Non-Secure MPU_*_NS registers
locknsvtor	slave	Signal	Cortex-M33-specific LOCKNSVTOR, LOCKSVTAIRCR, LOCKSMPU, LOCKNSMPU, LOCKSAU. Disable writes to VTOR_NS
locksau	slave	Signal	Disable writes to the SAU_* registers
locksmpu	slave	Signal	Disable writes to the Secure MPU_* registers

Port	Direction	Protocol	Description
locksvtaircr	slave	Signal	Disable writes to VTOR_S, AIRCR.PRIS, AIRCR.BFHFNMINS
lockup	master	Signal	Asserted when the processor is in lockup state.
niden	slave	Signal	Non-invasive debug enable
nmi	slave	Signal	Configure non maskable interrupt.
poreset	slave	Signal	Raising this signal will do a power-on reset of the core.
pv_ppbus_m	master	PVBus	The core will generate External Private Peripheral Bus requests on this port.
pvbus_m	master	PVBus	The core will generate bus requests on this port.
sleepdeep	master	Signal	Asserted when the processor is in deep sleep.
sleeping	master	Signal	Asserted when the processor is in sleep.
spiden	slave	Signal	Secure invasive debug enable
spniden	slave	Signal	Secure non-invasive debug enable
stcalib	slave	Value	These are the secure and non-secure calibration values for the SysTick timer, called CFGSSTCALIB/CFGNSSTCALIB in the M33 specification. stcalib[0] is the secure timer calibration, stcalib[1] is the non-secure timer calibration. In the case where the Security Extension is not present, stcalib[0] should be used. The following bit flag is modelled for each stcalib[*][25] - NOREF - Indicates no reference clock integrated. If stclk is not in use, set to 1
stclk	slave	ClockSignal	This is the reference clock for the SysTick timer, called SSTCLKEN/NSSTCLKEN in the M33 specification. This clock is provided for both secure and non secure inputs, even where ARMv8-M Security Extensions are included.
sysreset	slave	Signal	Raising this signal will put the core into reset mode (but does not reset the debug logic).
sysresetreq	master	Signal	Asserted to indicate that a reset is required.
ticks	master	InstructionCount	Port allowing the number of instructions since startup to be read from the CPU.
wicenack	master	Signal	Acknowledge signal for WICENREQ
wicenreq	slave	Signal	Request for deep sleep to be WIC-based deep sleep.
wicsense	master	Signal	Indicates which input events can cause the WIC to generate the WAKEUP signal.

## Parameters for ARM CortexM33CT

### SAU\_REGIONX.BADDR

Base address of SAU region0 at reset.

Type: `uint32_t`

Default value: `0x0`

### SAU\_REGIONX.ENABLE

Enable SAU region0 at reset.

Type: `bool`

Default value: `false`

**SAU\_REGIONX.LADDR**

Limit address of SAU region0 at reset.

Type: `uint32_t`

Default value: `0x0`

**SAU\_REGIONX.NSC**

Set NSC for SAU region0 at reset.

Type: `bool`

Default value: `false`

**BIGENDINIT**

Initialize processor to big endian mode.

Type: `bool`

Default value: `false`

**CDEMAPPEDONCP**

Bit N specifies whether the instruction for coprocessor N (CP7:CP0) is redirected to the CDE module.

Type: `uint8_t`

Default value: `255`

**CDERTLID**

Value of ID\_AFR0.CDERTLID.

Type: `uint8_t`

Default value: `32`

**CFGNOCDECP**

Bit N means external coprocessor N (CP7:CP0) disable for CDE coprocessor.

Type: `uint8_t`

Default value: `0`

**CPIF**

Specifies whether the external coprocessor interface is included.

Type: `bool`

Default value: `true`

**CPNSPRESENT**

Bit N means external coprocessor N (CP7:CP0) is accessible in Non-Secure state.

Type: `uint8_t`

Default value: 255

**CPSPPRESENT**

Bit N means external coprocessor N (CP7:CP0) is accessible in Secure state.

Type: `uint8_t`

Default value: 255

**CTI**

CTI (Cross Trigger Interface) included.

Type: `bool`

Default value: `false`

**CTI\_irq0\_pin**

CTI interrupt request 0 pin.

Type: `uint16_t`

Default value: 4

**CTI\_irq1\_pin**

CTI interrupt request 1 pin.

Type: `uint16_t`

Default value: 5

**DBGLVL**

0: Minimal debug; 1: 2 Watchpoints, 4 Breakpoint comparators; 2: 4 Watchpoints, 8 Breakpoint comparators.

Type: `uint8_t`

Default value: 2

**DSP**

Set whether the model has the DSP extension.

Type: `bool`

Default value: `true`

### **FPU**

Set whether the model has VFP support.

Type: `bool`

Default value: `true`

### **INITNSVTOR**

Non-Secure vector-table offset at reset.

Type: `uint32_t`

Default value: `0x0`

### **INITSVTOR**

Secure vector-table offset at reset.

Type: `uint32_t`

Default value: `0x0`

### **IRQDIS0**

IRQ line disable mask. Bit *n* of this 32-bit parameter disables IRQ[*n*+0].

Type: `uint32_t`

Default value: `0x0`

### **IRQDIS1**

IRQ line disable mask. Bit *n* of this 32-bit parameter disables IRQ[*n*+32].

Type: `uint32_t`

Default value: `0x0`

### **IRQDIS10**

IRQ line disable mask. Bit *n* of this 32-bit parameter disables IRQ[*n*+320].

Type: `uint32_t`

Default value: `0x0`

### **IRQDIS11**

IRQ line disable mask. Bit *n* of this 32-bit parameter disables IRQ[*n*+352].

Type: `uint32_t`

Default value: `0x0`

### **IRQDIS12**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+384].

Type: `uint32_t`

Default value: `0x0`

### **IRQDIS13**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+416].

Type: `uint32_t`

Default value: `0x0`

### **IRQDIS14**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+448].

Type: `uint32_t`

Default value: `0x0`

### **IRQDIS2**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+64].

Type: `uint32_t`

Default value: `0x0`

### **IRQDIS3**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+96].

Type: `uint32_t`

Default value: `0x0`

### **IRQDIS4**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+128].

Type: `uint32_t`

Default value: `0x0`

### **IRQDIS5**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+160].

Type: `uint32_t`

Default value: `0x0`

### **IRQDIS6**

IRQ line disable mask. Bit *n* of this 32-bit parameter disables IRQ[*n*+192].

Type: `uint32_t`

Default value: `0x0`

### **IRQDIS7**

IRQ line disable mask. Bit *n* of this 32-bit parameter disables IRQ[*n*+224].

Type: `uint32_t`

Default value: `0x0`

### **IRQDIS8**

IRQ line disable mask. Bit *n* of this 32-bit parameter disables IRQ[*n*+256].

Type: `uint32_t`

Default value: `0x0`

### **IRQDIS9**

IRQ line disable mask. Bit *n* of this 32-bit parameter disables IRQ[*n*+288].

Type: `uint32_t`

Default value: `0x0`

### **IRQLVL**

Number of bits of interrupt priority.

Type: `uint8_t`

Default value: `3`

### **ITM**

Level of instrumentation trace supported. `false` : No ITM trace included, `true`: ITM trace included.

Type: `bool`

Default value: `true`

### **LOCK\_NS\_MPU**

Lock down of Non-Secure MPU registers write.

Type: `bool`

Default value: `false`

### **LOCK\_SAU**

Lock down of SAU registers write.

Type: `bool`

Default value: `false`

### **LOCK\_S\_MPU**

Lock down of Secure MPU registers write.

Type: `bool`

Default value: `false`

### **MPU\_NS**

Number of regions in the Non-Secure MPU. If Security Extensions are absent, this is the total number of MPU regions.

Type: `uint8_t`

Default value: 8

### **MPU\_S**

Number of regions in the Secure MPU. If Security Extensions are absent, this is ignored.

Type: `uint8_t`

Default value: 8

### **NUMIRQ**

Number of user interrupts.

Type: `uint16_t`

Default value: 32

### **SAU**

Number of SAU regions (0 => no SAU).

Type: `uint8_t`

Default value: 4

**SAU\_CTRL.ALLNS**

At reset, the SAU treats entire memory space as NS when the SAU is disabled if this is set.

Type: `bool`

Default value: `false`

**SAU\_CTRL.ENABLE**

Enable SAU at reset.

Type: `bool`

Default value: `false`

**SECEXT**

Whether the ARMv8-M Security Extensions are included.

Type: `bool`

Default value: `true`

**WIC**

Include support for WIC-mode deep sleep.

Type: `bool`

Default value: `true`

**WICLINES**

Number of lines supported by the WIC interface.

Type: `uint16_t`

Default value: 35

**cde\_impl\_name**

Name of the CDE implementation for this core (implementation contributed by MTI plugin).

Type: `string`

Default value: N/A

**cpi\_div**

divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 0x1

**cpi\_mul**

multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

**has\_cde**

Enables Custom Datapath Extensions.

Type: `bool`

Default value: `false`

**manager\_id**

Manager ID presented in bus transactions.

Type: `uint64_t`

Default value: `0x0`

**min\_sync\_level**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: `0`

**reported\_patch\_level**

Purely cosmetic patch level value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: `-1`

**reported\_revision\_number**

Purely cosmetic revision number value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: `-1`

**semihosting-Thumb\_SVC**

T32 SVC number for semihosting.

Type: `uint8_t`

Default value: 171

### **semihosting-cmd\_line**

Command line available to semihosting SVC calls.

Type: `string`

Default value: N/A

### **semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

### **semihosting-enable**

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

Type: `bool`

Default value: `true`

### **semihosting-heap\_base**

Virtual address of heap base.

Type: `uint32_t`

Default value: 0x0

### **semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint32_t`

Default value: 0x20700000

### **semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint32_t`

Default value: 0x20800000

**semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint32_t`

Default value: `0x20700000`

**vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

## 3.83 ARMCortexM35PCT

Defined in `LISA/ARMCortexM35PCT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r1p2	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Changes in 11.31.15

The following ports were removed:

- `auxfault`
- `currpri`

### Differences between the model and the RTL

- The model does not support the following:
  - ETM, MTB, or TPIU. MTB RAM is absent on the model.
  - Caches.
  - The co-processor interface.
  - The power control (Q-Channel) interface.
- The model does not implement any physical security features.
- Bits[3:0] of the Anti-tampering Features Control Register are supported for read/write. No functionality is implemented.
- Read/write access to the Anti-tampering Features Control Register is supported using SECKEY. No functionality is implemented.

## Implementation of ITM in M-class models

This model has a parameter that enables partial support for Instrumentation Trace Macrocell (ITM). In hardware or RTL, trace data from ITM is sent in packets to the trace block serially using a single pin or wire. In the model, if it is enabled, the ITM trace data is output using an MTI trace source called ITM. The ITM trace source has an `ITM_PACKET_TYPE` field. The following table shows which packet types the model supports:

Field value	Description	Supported by model
ITM_SYNC	Synchronization packet	Not supported.
ITM_P_OVERFLOW	Protocol: Overflow packet	Not supported.
ITM_P_LOCAL_TIMESTAMP	Protocol: Local timestamp packets	Not supported.
ITM_P_GLOBAL_TIMESTAMP	Protocol: Global timestamp packets	Not supported.
ITM_P_EXTEN	Protocol: Extension packet	Not supported.
ITM_S_INSTRUMENTATION	Source: Instrumentation packet	Supported.
ITM_S_DWT_EVENT_COUNTER	Hardware source: Event counter wrapping	Not supported.
ITM_S_DWT_EXCEPTION	Hardware source: Exception tracing	Supported.
ITM_S_DWT_PC_SAMPLING	Hardware source: PC sampling	Not supported.
ITM_S_DWT_DATA_PC_TRACE	Hardware source: DWT Data trace PC value	Supported.
ITM_S_DWT_DATA_ADDRESS_TRACE	Hardware source: DWT Data trace address value	Supported.
ITM_S_DWT_DATA_DATA_TRACE	Hardware source: DWT Data trace DATA value	Supported.

## Iris and MTI instances for ARM CortexM35PCT

This model has the following Iris instances:

Name	Instance type
ARM CortexM35PCT	ARM_Cortex-M35P
ARM CortexM35PCT.acp_mapper	PVBusMapper
ARM CortexM35PCT.ext_bus	PVBusLogger
ARM CortexM35PCT.ext_bus.mapper	PVBusMapper
ARM CortexM35PCT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
ARM CortexM35PCT	ARM_Cortex-M35P
ARM CortexM35PCT.acp_mapper	PVBusMapper
ARM CortexM35PCT.ext_bus	PVBusLogger
ARM CortexM35PCT.ext_bus.mapper	PVBusMapper
ARM CortexM35PCT.l2_flusher	AsyncCacheFlushUnit

## Ports for ARM CortexM35PCT

Port	Direction	Protocol	Description
bigend	slave	Signal	Configure big endian data format.

Port	Direction	Protocol	Description
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions. Referred to in some documents as 'CLKIN'.
coproc_bus	slave	CoprocBusProtocol	Co-Processor Interface
cpuwait	slave	Signal	Stall the CPU out of reset
currns	master	Signal	Current Security state of the processor
dbgen	slave	Signal	Invasive debug enable
dbgrestart	slave	Signal	Request for synchronised exit from halt mode
dbgrestarted	master	Signal	Handshakes with DBGRESTART
edbgrq	slave	Signal	External request to enter halt mode
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
fpxxc	master	Value	Port that sends the value of the FPxxC exception flags (FPIX, FPIDC, FPOFC, FPUFC, FPDZC, FPIOC). Each flag is present in the same position as in the FPSCR register (e.g. fpxxc[0] = FPIOC).
halted	master	Signal	Indicates that the processor is in halt mode
idau_invalidate_region	slave	Value_64	64 bit number to invalid IDAU memory range (start_address<<32 end_address)
idau	master	PVBus	The core will generate IDAU requests on this port.
initnsvtor	slave	Value	Reset configuration port - Non-Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset This port remains functional no matter ARMv8-M Security Extensions are included or not When ARMv8-M Security Extensions are not included, all exceptions will use NS vector base address given by this port.
initsvtor	slave	Value	Reset configuration port - Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset It becomes functional when ARMv8-M Security Extensions are included When ARMv8-M Security Extensions are not included, this port will be ignored.
intnum	master	Value	Exception number of the current execution context (from IPSR[8:0]) When the processor is in Thread mode, INTNUM is 0 When the processor is in Handler mode, INTNUM is the exception number of the currently-executing exception.
irq	slave	Signal	This signal array delivers signals to the NVIC.
LOCKATFCR	slave	Signal	Port Lock ATFCR register
locknsmpu	slave	Signal	Disable writes to the Non-Secure MPU_*_NS registers
locknsvtor	slave	Signal	Disable writes to VTOR_NS
locksau	slave	Signal	Disable writes to the SAU_* registers
locksmmu	slave	Signal	Disable writes to the Secure MPU_* registers
locksvtaircr	slave	Signal	Disable writes to VTOR_S, AIRCR.PRIS, AIRCR.BFHFNMINS
lockup	master	Signal	Asserted when the processor is in lockup state.
niden	slave	Signal	Non-invasive debug enable
nmi	slave	Signal	Configure non maskable interrupt.
poreset	slave	Signal	Raising this signal will do a power-on reset of the core.
pv_ppbus_m	master	PVBus	The core will generate External Private Peripheral Bus requests on this port.
pdbus_m	master	PVBus	The core will generate bus requests on this port.
sleepdeep	master	Signal	Asserted when the processor is in deep sleep.
sleeping	master	Signal	Asserted when the processor is in sleep.
spiden	slave	Signal	Secure invasive debug enable

Port	Direction	Protocol	Description
spniden	slave	Signal	Secure non-invasive debug enable
stcalib	slave	Value	These are the secure and non-secure calibration values for the SysTick timer. stcalib[0] is the secure timer calibration, stcalib[1] is the non-secure timer calibration. In the case where the Security Extension is not present, stcalib[0] should be used. The following bit flag is modelled for each stcalib[*][25] - NOREF - Indicates no reference clock integrated. If stclk is not in use, set to 1
stclk	slave	ClockSignal	This is the reference clock for the SysTick timer, called SSTCLKEN/NSSTCLKEN in the M33 specification. This clock is provided for both secure and non secure inputs, even where ARMv8-M Security Extensions are included.
sysreset	slave	Signal	Raising this signal will put the core into reset mode (but does not reset the debug logic).
sysresetreq	master	Signal	Asserted to indicate that a reset is required.
ticks	master	InstructionCount	Port allowing the number of instructions since startup to be read from the CPU.
wicenack	master	Signal	Acknowledge signal for WICENREQ
wicenreq	slave	Signal	Request for deep sleep to be WIC-based deep sleep.
wicsense	master	Signal	Indicates which input events can cause the WIC to generate the WAKEUP signal.

## Parameters for ARM Cortex M35PCT

### SAU\_REGIONX.BADDR

Base address of SAU region0 at reset.

Type: `uint32_t`

Default value: `0x0`

### SAU\_REGIONX.ENABLE

Enable SAU region0 at reset.

Type: `bool`

Default value: `false`

### SAU\_REGIONX.LADDR

Limit address of SAU region0 at reset.

Type: `uint32_t`

Default value: `0x0`

### SAU\_REGIONX.NSC

Set NSC for SAU region0 at reset.

Type: `bool`

Default value: `false`

**ATFINITEN**

ATFCR is enabled when the core goes out of reset.

Type: `bool`

Default value: `false`

**BIGENDINIT**

Initialize processor to big endian mode.

Type: `bool`

Default value: `false`

**CPIF**

Specifies whether the external coprocessor interface is included.

Type: `bool`

Default value: `true`

**CPNSPRESENT**

Bit N means external coprocessor N (CP7:CP0) is accessible in Non-Secure state.

Type: `uint8_t`

Default value: 255

**CPSPRESENT**

Bit N means external coprocessor N (CP7:CP0) is accessible in Secure state.

Type: `uint8_t`

Default value: 255

**CTI**

CTI (Cross Trigger Interface) included.

Type: `bool`

Default value: `false`

**CTI\_irq0\_pin**

CTI interrupt request 0 pin.

Type: `uint16_t`

Default value: 4

**CTI\_irq1\_pin**

CTI interrupt request 1 pin.

Type: `uint16_t`

Default value: 5

**DBGLVL**

0: Minimal debug; 1: 2 Watchpoints, 4 Breakpoint comparators; 2: 4 Watchpoints, 8 Breakpoint comparators.

Type: `uint8_t`

Default value: 2

**DSP**

Set whether the model has the DSP extension.

Type: `bool`

Default value: `true`

**FPU**

Set whether the model has VFP support.

Type: `bool`

Default value: `true`

**INITNSVTOR**

Non-Secure vector-table offset at reset.

Type: `uint32_t`

Default value: `0x0`

**INITSVTOR**

Secure vector-table offset at reset.

Type: `uint32_t`

Default value: `0x0`

**IRQDIS0**

IRQ line disable mask. Bit *n* of this 32-bit parameter disables `IRQ[n+0]`.

Type: `uint32_t`

Default value: 0x0

**IRQDIS1**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+32].

Type: uint32\_t

Default value: 0x0

**IRQDIS10**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+320].

Type: uint32\_t

Default value: 0x0

**IRQDIS11**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+352].

Type: uint32\_t

Default value: 0x0

**IRQDIS12**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+384].

Type: uint32\_t

Default value: 0x0

**IRQDIS13**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+416].

Type: uint32\_t

Default value: 0x0

**IRQDIS14**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+448].

Type: uint32\_t

Default value: 0x0

**IRQDIS2**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+64].

Type: uint32\_t

Default value: 0x0

**IRQDIS3**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+96].

Type: uint32\_t

Default value: 0x0

**IRQDIS4**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+128].

Type: uint32\_t

Default value: 0x0

**IRQDIS5**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+160].

Type: uint32\_t

Default value: 0x0

**IRQDIS6**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+192].

Type: uint32\_t

Default value: 0x0

**IRQDIS7**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+224].

Type: uint32\_t

Default value: 0x0

**IRQDIS8**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+256].

Type: uint32\_t

Default value: 0x0

**IRQDIS9**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+288].

Type: uint32\_t

Default value: 0x0

**IRQLVL**

Number of bits of interrupt priority.

Type: `uint8_t`

Default value: 3

**ITM**

Level of instrumentation trace supported. `false` : No ITM trace included, `true`: ITM trace included.

Type: `bool`

Default value: `true`

**LOCK\_NS\_MPU**

Lock down of Non-Secure MPU registers write.

Type: `bool`

Default value: `false`

**LOCK\_SAU**

Lock down of SAU registers write.

Type: `bool`

Default value: `false`

**LOCK\_S\_MPU**

Lock down of Secure MPU registers write.

Type: `bool`

Default value: `false`

**MPU\_NS**

Number of regions in the Non-Secure MPU. If Security Extensions are absent, this is the total number of MPU regions.

Type: `uint8_t`

Default value: 8

**MPU\_S**

Number of regions in the Secure MPU. If Security Extensions are absent, this is ignored.

Type: `uint8_t`

Default value: 8

### **NUMIRQ**

Number of user interrupts.

Type: `uint16_t`

Default value: 32

### **SAU**

Number of SAU regions (0 => no SAU).

Type: `uint8_t`

Default value: 4

### **SAU\_CTRL.ALLNS**

At reset, the SAU treats entire memory space as NS when the SAU is disabled if this is set.

Type: `bool`

Default value: `false`

### **SAU\_CTRL.ENABLE**

Enable SAU at reset.

Type: `bool`

Default value: `false`

### **SECEXT**

Whether the ARMv8-M Security Extensions are included.

Type: `bool`

Default value: `true`

### **WIC**

Include support for WIC-mode deep sleep.

Type: `bool`

Default value: `true`

### **WICLINES**

Number of lines supported by the WIC interface.

Type: `uint16_t`

Default value: 35

### **`cpi_div`**

divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 0x1

### **`cpi_mul`**

multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 0x1

### **`manager_id`**

Manager ID presented in bus transactions.

Type: `uint64_t`

Default value: 0x0

### **`min_sync_level`**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

### **`reported_patch_level`**

Purely cosmetic patch level value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

### **`reported_revision_number`**

Purely cosmetic revision number value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

**semihosting-Thumb\_SVC**

T32 SVC number for semihosting.

Type: `uint8_t`

Default value: 171

**semihosting-cmd\_line**

Command line available to semihosting SVC calls.

Type: `string`

Default value: N/A

**semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**semihosting-enable**

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

Type: `bool`

Default value: `true`

**semihosting-heap\_base**

Virtual address of heap base.

Type: `uint32_t`

Default value: `0x0`

**semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint32_t`

Default value: `0x20700000`

**semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint32_t`

Default value: 0x20800000

### **semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint32\_t

Default value: 0x20700000

### **vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: bool

Default value: false

## 3.84 ARMCortexM3CT

Defined in LISA/ARMCortexM3CT.lisa.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r2p1	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Differences between the model and the RTL

This component has the following differences from the corresponding revision of the RTL implementation:

- The WIC is not currently implemented.
- Power control is not implemented, so the processor does not set the SLEEPING or SLEEPDEEP signals. It does not support powering down of the processor.
- Only the minimal level of debug support is provided (no DAP, FPB, DWT, or halting debug capability).
- Debug-related components are not implemented.
- The unimplemented registers are the processor debug registers, system debug registers, debug interface port registers, TPIU registers, and ETM registers.
- The processor must still be clocked even if it has asserted the sleeping or sleepdeep signals.
- Disabling processor features using the Auxiliary Control Register is not supported.
- Only a single pvbus\_m master port is provided. This combines the ICode, DCode, and System bus interfaces of the RTL. The external PPB bus is provided by the pv\_ppbus\_m master port.

- In privileged mode, STRT and LDRT to the PPB region are not forbidden access.
- No support for ETM, TPIU, or HTM.
- There is no supported equivalent of the RESET\_ALL\_REGS configuration setting in RTL (that forces all registers to have a well-defined value on reset).
- The RTL implements the ROM table as an external component on the External Private Peripheral Bus. In the CT model, the ROM table is implemented internally as a fallback if an external PPB access in the ROM table address region aborts. This permits the default ROM table to be overridden (by implementing an external component connected to the external PPB to handle accesses to these addresses) without requiring every user of the processor to implement and connect a ROM table component.

### Implementation of ITM in M-class models

This model has a parameter that enables partial support for Instrumentation Trace Macrocell (ITM). In hardware or RTL, trace data from ITM is sent in packets to the trace block serially using a single pin or wire. In the model, if it is enabled, the ITM trace data is output using an MTI trace source called ITM. The ITM trace source has an `ITM_PACKET_TYPE` field. The following table shows which packet types the model supports:

Field value	Description	Supported by model
ITM_SYNC	Synchronization packet	Not supported.
ITM_P_OVERFLOW	Protocol: Overflow packet	Not supported.
ITM_P_LOCAL_TIMESTAMP	Protocol: Local timestamp packets	Not supported.
ITM_P_GLOBAL_TIMESTAMP	Protocol: Global timestamp packets	Not supported.
ITM_P_EXTEN	Protocol: Extension packet	Not supported.
ITM_S_INSTRUMENTATION	Source: Instrumentation packet	Supported.
ITM_S_DWT_EVENT_COUNTER	Hardware source: Event counter wrapping	Not supported.
ITM_S_DWT_EXCEPTION	Hardware source: Exception tracing	Supported.
ITM_S_DWT_PC_SAMPLING	Hardware source: PC sampling	Not supported.
ITM_S_DWT_DATA_PC_TRACE	Hardware source: DWT Data trace PC value	Supported.
ITM_S_DWT_DATA_ADDRESS_TRACE	Hardware source: DWT Data trace address value	Supported.
ITM_S_DWT_DATA_DATA_TRACE	Hardware source: DWT Data trace DATA value	Supported.

### Iris and MTI instances for ARM CortexM3CT

This model has the following Iris instances:

Name	Instance type
ARM CortexM3CT	ARM_Cortex-M3
ARM CortexM3CT.acp_mapper	PVBusMapper
ARM CortexM3CT.ext_bus	PVBusLogger
ARM CortexM3CT.ext_bus.mapper	PVBusMapper
ARM CortexM3CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
ARMCortexM3CT	ARM_Cortex-M3
ARMCortexM3CT.acp_mapper	PVBusMapper
ARMCortexM3CT.ext_bus	PVBusLogger
ARMCortexM3CT.ext_bus.mapper	PVBusMapper
ARMCortexM3CT.l2_flusher	AsyncCacheFlushUnit

## Ports for ARMCortexM3CT

Port	Direction	Protocol	Description
ahb_ap	slave	PVBus	Debug AHB - core bus slave driven by the DAP.
auxfault	slave	Value	This is wired to the Auxiliary Fault Status Register.
bigend	slave	Signal	Configure big endian data format.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
currpri	master	Value	Current execution priority.
edbgrq	slave	Signal	External debug request.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
intisr	slave	Signal	This signal array delivers signals to the NVIC.
intnmi	slave	Signal	Configure non maskable interrupt.
lockup	master	Signal	Asserted when the processor is in lockup state.
poreset	slave	Signal	Raising this signal will do a power-on reset of the core.
pv_ppbus_m	master	PVBus	The core will generate External Private Peripheral Bus requests on this port.
pvbush_m	master	PVBus	The core will generate bus requests on this port.
sleepdeep	master	Signal	Asserted when the processor is in deep sleep.
sleeping	master	Signal	Asserted when the processor is in sleep.
stcalib	slave	Value	This is the calibration value for the SysTick timer The following bit flag is modelled stcalib[25] - NOREF - Indicates no reference clock integrated. If stclk is not in use, set to 1
stclk	slave	ClockSignal	This is the reference clock for the SysTick timer.
sysreset	slave	Signal	Raising this signal will put the core into reset mode (but does not reset the debug logic).
sysresetreq	master	Signal	Asserted to indicate that a reset is required.
ticks	master	InstructionCount	Port allowing the number of instructions since startup to be read from the CPU.

## Parameters for ARMCortexM3CT

### BB\_PRESENT

Enable bitbanding.

Type: bool

Default value: true

**BIGENDINIT**

Initialize processor to big endian mode.

Type: `bool`

Default value: `false`

**DBGLVL**

0: No debug; 1: Minimal debug; 2: Full debug without DWT address matching; 3: Full debug support with DWT data-comparators.

Type: `uint8_t`

Default value: 3

**LVL\_WIDTH**

Number of bits of interrupt priority.

Type: `uint8_t`

Default value: 3

**NUM\_IRQ**

Number of user interrupts.

Type: `uint8_t`

Default value: 16

**NUM\_MPU\_REGION**

Number of MPU regions.

Type: `uint8_t`

Default value: 8

**TRACE\_LVL**

Level of instrumentation trace supported. 0: No trace, 1: Standard trace. ITM, TPIU and DWT triggers and counters present, 2: Full trace. ITM, TPIU, ETM and DWT triggers and counters present.

Type: `uint8_t`

Default value: 1

**WIC**

Include support for WIC-mode deep sleep.

Type: `bool`

Default value: `true`

### **`cpi_div`**

divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

### **`cpi_mul`**

multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

### **`manager_id`**

Manager ID presented in bus transactions.

Type: `uint64_t`

Default value: `0x0`

### **`min_sync_level`**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: `0`

### **`reported_patch_level`**

Purely cosmetic patch level value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: `-1`

### **`reported_revision_number`**

Purely cosmetic revision number value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: `-1`

**semihosting-Thumb\_SVC**

T32 SVC number for semihosting.

Type: `uint8_t`

Default value: 171

**semihosting-cmd\_line**

Command line available to semihosting SVC calls.

Type: `string`

Default value: N/A

**semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**semihosting-enable**

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

Type: `bool`

Default value: `true`

**semihosting-heap\_base**

Virtual address of heap base.

Type: `uint32_t`

Default value: `0x0`

**semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint32_t`

Default value: `0x20700000`

**semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint32_t`

Default value: 0x20800000

### **semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint32\_t

Default value: 0x20700000

## 3.85 ARMCortexM4CT

Defined in `LISA/ARMCortexM4CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p1	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Differences between the model and the RTL

This component has the following differences from the corresponding revision of the RTL implementation:

- The Wakeup Interrupt Controller (WIC) is not implemented.
- Power control is not implemented. Powering down of the processor is not supported. The processor must still be clocked even if it has asserted the sleeping or sleepdeep signals.
- Only the minimal level of debug support is provided (no DAP, FPB, DWT, or halting debug capability).
- No debug-related components are implemented.
- The unimplemented registers are the processor debug registers, system debug registers, debug interface port registers, TPIU registers, and ETM registers.
- No support for ETM, TPIU, or HTM.
- There is no supported equivalent of the RESET\_ALL\_REGS configuration setting in RTL (that forces all registers to have a well-defined value on reset).
- Disabling processor features using the Auxiliary Control Register is not supported.
- Only a single pvbus\_m master port is provided. This combines the ICode, DCode, and System bus interfaces of the RTL. The external PPB bus is provided by the pv\_ppbus\_m master port.
- In privileged mode, STRT and LDRT to the PPB region are not forbidden access.
- The RTL implements the ROM table as an external component on the External Private Peripheral Bus. In the CT model, the ROM table is implemented internally as a fallback if an external PPB access in the ROM table address region aborts. This permits the default ROM table to be overridden (by implementing an external component connected to the external

PPB to handle accesses to these addresses) without requiring every user of the processor to implement and connect a ROM table component.

- Because the CT model does not provide a DAP port or halting debug capability, the dbgen signal is ignored.

### Implementation of ITM in M-class models

This model has a parameter that enables partial support for Instrumentation Trace Macrocell (ITM). In hardware or RTL, trace data from ITM is sent in packets to the trace block serially using a single pin or wire. In the model, if it is enabled, the ITM trace data is output using an MTI trace source called ITM. The ITM trace source has an `ITM_PACKET_TYPE` field. The following table shows which packet types the model supports:

Field value	Description	Supported by model
ITM_SYNC	Synchronization packet	Not supported.
ITM_P_OVERFLOW	Protocol: Overflow packet	Not supported.
ITM_P_LOCAL_TIMESTAMP	Protocol: Local timestamp packets	Not supported.
ITM_P_GLOBAL_TIMESTAMP	Protocol: Global timestamp packets	Not supported.
ITM_P_EXTEN	Protocol: Extension packet	Not supported.
ITM_S_INSTRUMENTATION	Source: Instrumentation packet	Supported.
ITM_S_DWT_EVENT_COUNTER	Hardware source: Event counter wrapping	Not supported.
ITM_S_DWT_EXCEPTION	Hardware source: Exception tracing	Supported.
ITM_S_DWT_PC_SAMPLING	Hardware source: PC sampling	Not supported.
ITM_S_DWT_DATA_PC_TRACE	Hardware source: DWT Data trace PC value	Supported.
ITM_S_DWT_DATA_ADDRESS_TRACE	Hardware source: DWT Data trace address value	Supported.
ITM_S_DWT_DATA_DATA_TRACE	Hardware source: DWT Data trace DATA value	Supported.

### Iris and MTI instances for ARM CortexM4CT

This model has the following Iris instances:

Name	Instance type
ARM CortexM4CT	<a href="#">ARM_Cortex-M4</a>
ARM CortexM4CT.acp_mapper	<a href="#">PVBUSMapper</a>
ARM CortexM4CT.ext_bus	<a href="#">PVBUSLogger</a>
ARM CortexM4CT.ext_bus.mapper	<a href="#">PVBUSMapper</a>
ARM CortexM4CT.l2_flusher	<a href="#">AsyncCacheFlushUnit</a>

This model has the following MTI trace components:

Name	Component type
ARM CortexM4CT	<a href="#">ARM_Cortex-M4</a>
ARM CortexM4CT.acp_mapper	<a href="#">PVBUSMapper</a>
ARM CortexM4CT.ext_bus	<a href="#">PVBUSLogger</a>
ARM CortexM4CT.ext_bus.mapper	<a href="#">PVBUSMapper</a>
ARM CortexM4CT.l2_flusher	<a href="#">AsyncCacheFlushUnit</a>

## Ports for ARMCortexM4CT

Port	Direction	Protocol	Description
ahb_ap	slave	PVBus	Debug AHB - core bus slave driven by the DAP.
auxfault	slave	Value	This is wired to the Auxiliary Fault Status Register.
bigend	slave	Signal	Configure big endian data format.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
currpri	master	Value	Current execution priority.
dbgen	slave	Signal	Disallow (DAP) debugger access.
edbgrq	slave	Signal	External debug request.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
fpudisable	slave	Signal	Configure core with no FPU on reset.
fpxxc	master	Value	Port that sends the value of the FPxxC exception flags (FPIXC, FPIDC, FPOFC, FPUFC, FPDZC, FPIOC). Each flag is present in the same position as in the FPSCR register (e.g. fpxxc[0] = FPIOC).
intisr	slave	Signal	This signal array delivers signals to the NVIC.
intnmi	slave	Signal	Configure non maskable interrupt.
lockup	master	Signal	Asserted when the processor is in lockup state.
mpudisable	slave	Signal	Configure core with no MPU on reset.
poreset	slave	Signal	Raising this signal will do a power-on reset of the core.
pv_ppbus_m	master	PVBus	The core will generate External Private Peripheral Bus requests on this port.
pvbus_m	master	PVBus	The core will generate bus requests on this port.
sleepdeep	master	Signal	Asserted when the processor is in deep sleep.
sleeping	master	Signal	Asserted when the processor is in sleep.
stcalib	slave	Value	This is the calibration value for the SysTick timer The following bit flag is modelled stcalib[25] - NOREF - Indicates no reference clock integrated. If stclk is not in use, set to 1
stclk	slave	ClockSignal	This is the reference clock for the SysTick timer.
sysreset	slave	Signal	Raising this signal will put the core into reset mode (but does not reset the debug logic).
sysresetreq	master	Signal	Asserted to indicate that a reset is required.
ticks	master	InstructionCount	Port allowing the number of instructions since startup to be read from the CPU.

## Parameters for ARMCortexM4CT

### BB\_PRESENT

Enable bitbanding.

Type: `bool`

Default value: `true`

### BIGENDINIT

Initialize processor to big endian mode.

Type: `bool`

Default value: `false`

### **DBGLVL**

0: No debug; 1: Minimal debug; 2: Full debug without DWT address matching; 3: Full debug support with, DWT can compare data as well as address.

Type: `uint8_t`

Default value: 3

### **LVL\_WIDTH**

Number of bits of interrupt priority.

Type: `uint8_t`

Default value: 3

### **NUM\_IRQ**

Number of user interrupts.

Type: `uint8_t`

Default value: 16

### **NUM\_MPU\_REGION**

Number of MPU regions.

Type: `uint8_t`

Default value: 8

### **TRACE\_LVL**

Level of instrumentation trace supported. 0: No trace, 1: Standard trace. ITM, TPIU and DWT triggers and counters present, 2: Full trace. ITM, TPIU, ETM and DWT triggers and counters present.

Type: `uint8_t`

Default value: 1

### **WIC**

Include support for WIC-mode deep sleep.

Type: `bool`

Default value: `true`

**cpi\_div**

divider for calculating CPI (Cycles Per Instruction).

Type: uint32\_t

Default value: 0x1

**cpi\_mul**

multiplier for calculating CPI (Cycles Per Instruction).

Type: uint32\_t

Default value: 0x1

**manager\_id**

Manager ID presented in bus transactions.

Type: uint64\_t

Default value: 0x0

**min\_sync\_level**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**reported\_patch\_level**

Purely cosmetic patch level value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: int8\_t

Default value: -1

**reported\_revision\_number**

Purely cosmetic revision number value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: int8\_t

Default value: -1

**semihosting-Thumb\_SVC**

T32 SVC number for semihosting.

Type: `uint8_t`

Default value: 171

### **semihosting-cmd\_line**

Command line available to semihosting SVC calls.

Type: `string`

Default value: N/A

### **semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

### **semihosting-enable**

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

Type: `bool`

Default value: `true`

### **semihosting-heap\_base**

Virtual address of heap base.

Type: `uint32_t`

Default value: 0x0

### **semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint32_t`

Default value: 0x20700000

### **semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint32_t`

Default value: 0x20800000

**semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint32_t`

Default value: `0x20700000`

**vfp-present**

Set whether the model has VFP support.

Type: `bool`

Default value: `true`

3.86 **ARMCortexM52CT**

Defined in `LISA/ARMCortexM52CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Preliminary support

For an explanation of the quality levels, see [Quality level definitions](#).

**Changes in 11.31.15**

The following ports were removed:

- `auxfault`
- `currpri`

**About ARMCortexM52CT**

This model supports the M-Profile Vector Extension (MVE) and the Custom Datapath Extension (CDE). For more information, see [CDE](#).

**Iris and MTI instances for ARMCortexM52CT**

This model has the following Iris instances:

Name	Instance type
ARMCortexM52CT	ARM_Cortex-M52
ARMCortexM52CT.acp_mapper	PVBusMapper
ARMCortexM52CT.ext_bus	PVBusLogger
ARMCortexM52CT.ext_bus.mapper	PVBusMapper
ARMCortexM52CT.l1_incoherent_interconnect	PVCache
ARMCortexM52CT.l1_incoherent_interconnect.downstream[0].pvbusmaster	PVBusMaster

Name	Instance type
ARMCortexM52CT.11_incoherent_interconnect.upstream[Z] (where Z = 0-17)	PVBusSlave
ARMCortexM52CT.11dcache	PVCache
ARMCortexM52CT.11dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexM52CT.11dcache.upstream[0]	PVBusSlave
ARMCortexM52CT.11licache	PVCache
ARMCortexM52CT.11licache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexM52CT.11licache.upstream[0]	PVBusSlave
ARMCortexM52CT.12_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
ARMCortexM52CT	ARM_Cortex-M52
ARMCortexM52CT.acp_mapper	PVBusMapper
ARMCortexM52CT.ext_bus	PVBusLogger
ARMCortexM52CT.ext_bus.mapper	PVBusMapper
ARMCortexM52CT.11_incoherent_interconnect	PVCache
ARMCortexM52CT.11_incoherent_interconnect.downstream[0].pvbusmaster	PVBusMaster
ARMCortexM52CT.11_incoherent_interconnect.upstream[Z] (where Z = 0-17)	PVBusSlave
ARMCortexM52CT.11dcache	PVCache
ARMCortexM52CT.11dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexM52CT.11dcache.upstream[0]	PVBusSlave
ARMCortexM52CT.11licache	PVCache
ARMCortexM52CT.11licache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexM52CT.11licache.upstream[0]	PVBusSlave
ARMCortexM52CT.12_flusher	AsyncCacheFlushUnit

### Ports for ARMCortexM52CT

Port	Direction	Protocol	Description
ahbd	slave	PVBus	Debug AHB - core bus slave driven by the DAP.
ahbp_m	master	PVBus	The core will generate Vendor System data accesses on this port.
ahbs	slave	PVBus	Slave AHB - External master (e.g. DMA) can write to TCMs (whether or not enabled in xTCMCR)
bigend	slave	Signal	Configure big endian data format.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions. Referred to in some documents as 'CLKIN'.
coproc_bus	slave	CoprocBusProtocol	Co-Processor Interface
core_dside_bus_gasket_in	slave	PVBus	Inbound D-side PVBus link is used when the external gasket is enabled. This allows externally processed D-side traffic to be fed back into the core path.
core_dside_bus_gasket_out	master	PVBus	Outbound D-side PVBus is exposed when has_core_dside_bus_gasket is true. This lets an external gasket observe or alter core data traffic before it re-enters on the inbound port.

Port	Direction	Protocol	Description
cpuwait	slave	Signal	Stall the CPU out of reset
currns	master	Signal	Current Security state of the processor
dbgen	slave	Signal	Invasive debug enable
dbgrestart	slave	Signal	Request for synchronised exit from halt mode
dbgrestorted	master	Signal	Handshakes with DBGRESTART
edbgrq	slave	Signal	External request to enter halt mode
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
fpxxc	master	Value	Port that sends the value of the FPxxC exception flags (FPIX, FPID, FPOF, FPUF, FPDZ, FPIO). Each flag is present in the same position as in the FPSCR register (e.g. fpxxc[0] = FPIO).
halted	master	Signal	Indicates that the processor is in halt mode
idau_invalidate_region	slave	Value_64	64 bit number to invalid IDAU memory range (start_address<<32 end_address)
idau	master	PVBus	The core will generate IDAU requests on this port.
initnsvtor	slave	Value	Reset configuration port - Non-Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset This port remains functional no matter ARMv8-M Security Extensions are included or not When ARMv8-M Security Extensions are not included, all exceptions will use NS vector base address given by this port.
initpahben	slave	Signal	Enable P-AHB on the next reset
initsvtor	slave	Value	Reset configuration port - Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset It becomes functional when ARMv8-M Security Extensions are included When ARMv8-M Security Extensions are not included, this port will be ignored.
inittcmen	slave	Signal	Reset configuration port - TCM enable initialisation out of reset Bit[0] HIGH = ITCM is enabled Bit[1] HIGH = DTCM is enabled
intnum	master	Value	Exception number of the current execution context (from IPSR[8:0]) When the processor is in Thread mode, INTNUM is 0 When the processor is in Handler mode, INTNUM is the exception number of the currently-executing exception.
irq	slave	Signal	This signal array delivers signals to the NVIC.
lockdcaic	slave	Signal	Disable access to instruction cache direct cache access registers
lockdtgu	slave	Signal	Disable writes to registers associated with the DTGU
lockitgu	slave	Signal	Disable writes to registers associated with the ITGU
locknsmpu	slave	Signal	Disable writes to the Non-Secure MPU_*_NS registers
locknsvtor	slave	Signal	Cortex-M52-specific LOCKNSVTOR, LOCKSVTAIRCR, LOCKSMPU, LOCKNSMPU, LOCKSAU. Disable writes to VTOR_NS
lockpahb	slave	Signal	P-AHB related ports Disable writes to PAHBCR
locksau	slave	Signal	Disable writes to the SAU_* registers
locksmpu	slave	Signal	Disable writes to the Secure MPU_* registers
locksvtaircr	slave	Signal	Disable writes to VTOR_S, AIRCR.PRIS, AIRCR.BFHFNMINS
locktcm	slave	Signal	Disable writes to registers associated with the TCM
lockup	master	Signal	Asserted when the processor is in lockup state.
niden	slave	Signal	Non-invasive debug enable

Port	Direction	Protocol	Description
nmi	slave	Signal	Configure non maskable interrupt.
poreset	slave	Signal	Raising this signal will do a power-on reset of the core.
prequest	slave	PChannel	Low Power Interface
pv_ppbus_m	master	PVBus	The core will generate External Private Peripheral Bus requests on this port.
pvbus_m	master	PVBus	The core will generate bus requests on this port.
qrequest	slave	PChannel	Low Power Transition handshake interface
sleepdeep	master	Signal	Asserted when the processor is in deep sleep.
sleeping	master	Signal	Asserted when the processor is in sleep.
spiden	slave	Signal	Secure invasive debug enable
spniden	slave	Signal	Secure non-invasive debug enable
stcalib	slave	Value	These are the secure and non-secure calibration values for the SysTick timer, called CFGSSTCALIB/CFGNSSTCALIB in the M52 specification. stcalib[0] is the secure timer calibration, stcalib[1] is the non-secure timer calibration. In the case where the Security Extension is not present, stcalib[0] should be used. The following bit flag is modelled for each stcalib[*][25] - NOREF - Indicates no reference clock integrated. If stclk is not in use, set to 1
stclk	slave	ClockSignal	This is the reference clock for the SysTick timer, called SSTCLKEN/NSSTCLKEN in the M52 specification. This clock is provided for both secure and non secure inputs, even where ARMv8-M Security Extensions are included.
sysreset	slave	Signal	Raising this signal will put the core into reset mode (but does not reset the debug logic).
sysresetreq	master	Signal	Asserted to indicate that a reset is required.
ticks	master	InstructionCount	Port allowing the number of instructions since startup to be read from the CPU.
wicenack	master	Signal	Acknowledge signal for WICENREQ
wicenreq	slave	Signal	Request for deep sleep to be WIC-based deep sleep.
wicsense	master	Signal	Indicates which input events can cause the WIC to generate the WAKEUP signal.

## Parameters for ARMCortexM52CT

### CDEMAPPEDONCP

Bit N specifies whether the instruction for coprocessor N (CP7:CP0) is redirected to the CDE module.

Type: uint8\_t

Default value: 255

### CDERTLID

Value of ID\_AFR0.CDERTLID.

Type: uint8\_t

Default value: 32

**CFGBIGEND**

Initialize processor to big endian mode.

Type: `bool`

Default value: `false`

**CFGCPUINST**

CPU instance number. This is part of the TCM base address, in bits 25:24.

Type: `uint8_t`

Default value: 0

**CFGDTCMSZ**

Size of the data TCM. 0=No DTCM implemented. Otherwise=Size of DTCM= $\text{pow}(2, \text{CFGDTCMSZ} - 1)$  KB. Minimum size is 4KB.

Type: `uint8_t`

Default value: 9

**CFGITCMSZ**

Size of the instruction TCM. 0=No ITCM implemented. Otherwise=Size of ITCM= $\text{pow}(2, \text{CFGITCMSZ} - 1)$  KB. Minimum size is 4KB.

Type: `uint8_t`

Default value: 9

**CFGMEMALIAS**

Memory address alias bit for the ITCM, DTCM and P-AHB regions. 0=No alias, 1=Alias bit 26, 2=Alias bit 27, 4=Alias bit 28.

Type: `uint8_t`

Default value: 0

**CFGNOCDECP**

Bit N means external coprocessor N (CP7:CP0) disable for CDE coprocessor.

Type: `uint8_t`

Default value: 0

**CFGPAACBTI**

Enables support for the Pointer Authentication and Branch Target Identification (PACBTI) Extension. FALSE: Disabled, TRUE: PAC implemented using the QARMA3 algorithm with BTI.

Type: `bool`

Default value: `false`

**CFGPAHBSZ**

Size of the P-AHB peripheral port memory region. 0=P-AHB disabled, 1=64MB, 2=128MB, 3=256MB, 4=512MB.

Type: `uint8_t`

Default value: 0

**CPIF**

Specifies whether the external coprocessor interface is included.

Type: `bool`

Default value: `true`

**CPNSPRESENT**

Bit N means external coprocessor N (CP7:CP0) is accessible in Non-Secure state.

Type: `uint8_t`

Default value: 255

**CPSPPRESENT**

Bit N means external coprocessor N (CP7:CP0) is accessible in Secure state.

Type: `uint8_t`

Default value: 255

**CTI**

CTI (Cross Trigger Interface) included.

Type: `bool`

Default value: `false`

**CTI\_irq0\_pin**

CTI interrupt request 0 pin.

Type: `uint16_t`

Default value: 4

### **CTI\_irq1\_pin**

CTI interrupt request 1 pin.

Type: `uint16_t`

Default value: 5

### **DBG\_LVL**

0: Minimal debug; 1: 2 Watchpoints, 4 Breakpoint comparators; 2: 4 Watchpoints, 8 Breakpoint comparators; 3: 8 Watchpoints, 8 Breakpoint comparators.

Type: `uint8_t`

Default value: 2

### **DCACHESZ**

Whether the D-cache is included and, if included, the size of it. Bit 0: 0=No D-cache included, 1=D-cache included. Bits [4:1]: 0x0=4KB D-cache, 0x1=8KB D-cache, 0x3=16KB D-cache, 0x7=32KB D-cache, 0xF=64KB D-cache.

Type: `uint8_t`

Default value: 15

### **DTGU**

DTCM Security Gate Unit included.

Type: `bool`

Default value: `false`

### **DTGUBLKSZ**

DTCM gate unit block size. Size= $\text{pow}(2, \text{DTGUBLKSZ} + 5)$  bytes.

Type: `uint8_t`

Default value: 3

### **DTGUMAXBLKS**

Maximum number of DTCM gate unit blocks. Number of blocks= $\text{pow}(2, \text{DTGUMAXBLKS})$ .

Type: `uint8_t`

Default value: 0

**ECOREVNUM**

ECO Revision number.

Type: `uint64_t`

Default value: `0x0`

**ERRDEVID.NUM**

RAS: Number of implemented error record indexes, 0 to 1.

Type: `uint8_t`

Default value: `1`

**ETM**

Support for ETM trace. `false` : No ETM trace included, `true`: ETM trace included.

Type: `bool`

Default value: `true`

**FPMVE**

Set whether the model has FP and / or MVE support. 0: No FP and MVE support. 1: FP half and single precision. 2: FP half, single and double precision. 3: MVE integer. 4: FP half and single precision and MVE integer. 5: FP half, single and double precision and MVE floating point.

Type: `uint8_t`

Default value: `5`

**ICACHESZ**

Whether the I-cache is included and, if included, the size of it. Bit 0: 0=No I-cache included, 1=I-cache included. Bits [6:1]: `0x0`=1KB I-cache (only with unified cache), `0x1`=2KB I-cache (only with unified cache), `0x3`=4KB I-cache, `0x7`=8KB I-cache, `0xF`=16KB I-cache, `0x1F`=32KB I-cache, `0x3F`=64KB I-cache.

Type: `uint8_t`

Default value: `63`

**INITNSVTOR**

Non-Secure vector-table offset at reset.

Type: `uint32_t`

Default value: `0x0`

**INITPAHBEN**

The P-AHB enable state at reset.

Type: `bool`

Default value: `false`

**INITSVTOR**

Secure vector-table offset at reset.

Type: `uint32_t`

Default value: `0x0`

**INITTCMEN**

The TCM enable state at reset. Bit 0 corresponds to ITCM enable state, bit 1 corresponds to DTCM enable state.

Type: `uint8_t`

Default value: `3`

**IRQDIS0**

IRQ line disable mask. Bit *n* of this 32-bit parameter disables IRQ[*n*+0].

Type: `uint32_t`

Default value: `0x0`

**IRQDIS1**

IRQ line disable mask. Bit *n* of this 32-bit parameter disables IRQ[*n*+32].

Type: `uint32_t`

Default value: `0x0`

**IRQDIS10**

IRQ line disable mask. Bit *n* of this 32-bit parameter disables IRQ[*n*+320].

Type: `uint32_t`

Default value: `0x0`

**IRQDIS11**

IRQ line disable mask. Bit *n* of this 32-bit parameter disables IRQ[*n*+352].

Type: `uint32_t`

Default value: 0x0

**IRQDIS12**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+384].

Type: uint32\_t

Default value: 0x0

**IRQDIS13**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+416].

Type: uint32\_t

Default value: 0x0

**IRQDIS14**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+448].

Type: uint32\_t

Default value: 0x0

**IRQDIS2**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+64].

Type: uint32\_t

Default value: 0x0

**IRQDIS3**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+96].

Type: uint32\_t

Default value: 0x0

**IRQDIS4**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+128].

Type: uint32\_t

Default value: 0x0

**IRQDIS5**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+160].

Type: uint32\_t

Default value: 0x0

**IRQDIS6**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+192].

Type: uint32\_t

Default value: 0x0

**IRQDIS7**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+224].

Type: uint32\_t

Default value: 0x0

**IRQDIS8**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+256].

Type: uint32\_t

Default value: 0x0

**IRQDIS9**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+288].

Type: uint32\_t

Default value: 0x0

**IRQLVL**

Number of bits of interrupt priority.

Type: uint8\_t

Default value: 3

**ITGU**

ITCM Security Gate Unit included.

Type: bool

Default value: false

**ITGUBLKSZ**

ITCM gate unit block size. Size=pow(2, ITGUBLKSZ + 5) bytes.

Type: uint8\_t

Default value: 3

**ITGUMAXBLKS**

Maximum number of ITCM gate unit blocks. Number of blocks= $\text{pow}(2, \text{ITGUMAXBLKS})$ .

Type: `uint8_t`

Default value: 0

**ITM**

Level of instrumentation trace supported. `false` : No ITM trace included, `true`: ITM trace included.

Type: `bool`

Default value: `true`

**IWIC**

Include support for Internal Wake-up Interrupt Controller.

Type: `bool`

Default value: `true`

**LOCKDTGU**

Lock down of Data TGU registers write.

Type: `bool`

Default value: `false`

**LOCKITGU**

Lock down of Instruction TGU registers write.

Type: `bool`

Default value: `false`

**LOCKTCM**

Lock down of TCM registers write.

Type: `bool`

Default value: `false`

**LOCK\_NS\_MPU**

Lock down of Non-Secure MPU registers write.

Type: `bool`

Default value: `false`

### **LOCK\_SAU**

Lock down of SAU registers write.

Type: `bool`

Default value: `false`

### **LOCK\_S\_MPU**

Lock down of Secure MPU registers write.

Type: `bool`

Default value: `false`

### **MPU\_NS**

Number of regions in the Non-Secure MPU. If Security Extensions are absent, this is the total number of MPU regions.

Type: `uint8_t`

Default value: 8

### **MPU\_S**

Number of regions in the Secure MPU. If Security Extensions are absent, this is ignored.

Type: `uint8_t`

Default value: 8

### **NUMIRQ**

Number of user interrupts.

Type: `uint16_t`

Default value: 32

### **SAU**

Number of SAU regions (0 => no SAU).

Type: `uint8_t`

Default value: 4

### **SECEXT**

Whether the ARMv8-M Security Extensions are included.

Type: `bool`

Default value: `true`

### **UCACHE**

Whether the I-cache acts as a unified cache (ICACHESZ is used for the size).

Type: `bool`

Default value: `false`

### **WICLINES**

Number of lines supported by the WIC interface.

Type: `uint16_t`

Default value: `35`

### **cde\_impl\_name**

Name of the CDE implementation for this core (implementation contributed by MTI plugin).

Type: `string`

Default value: `N/A`

### **cpi\_div**

divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

### **cpi\_mul**

multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

### **dcache-state\_modelled**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **delay\_faultmask\_update**

Delay FAULTMASK update to context sync.

Type: `bool`

Default value: `false`

### **delay\_sysreg\_update**

Delay some system register updates (e.g. SHCSR) to context sync.

Type: `bool`

Default value: `false`

### **ecc\_on**

Enable Error Correcting Code.

Type: `bool`

Default value: `false`

### **has\_cde**

Enables Custom Datapath Extensions.

Type: `bool`

Default value: `false`

### **has\_core\_dside\_bus\_gasket**

STL gasket enabled.

Type: `bool`

Default value: `false`

### **icache-state\_modelled**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **manager\_id**

Manager ID presented in bus transactions.

Type: `uint64_t`

Default value: `0x0`

### **min\_sync\_level**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: 0

### **reported\_patch\_level**

Purely cosmetic patch level value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

### **reported\_revision\_number**

Purely cosmetic revision number value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

### **semihosting-Thumb\_SVC**

T32 SVC number for semihosting.

Type: `uint8_t`

Default value: 171

### **semihosting-cmd\_line**

Command line available to semihosting SVC calls.

Type: `string`

Default value: N/A

### **semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

### **semihosting-enable**

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

Type: `bool`

Default value: `true`

**semihosting-heap\_base**

Virtual address of heap base.

Type: `uint32_t`

Default value: `0x0`

**semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint32_t`

Default value: `0x20700000`

**semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint32_t`

Default value: `0x20800000`

**semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint32_t`

Default value: `0x20700000`

**trace\_style**

MVE instruction trace style: Add 16 for `[*-]` beat trace. Add 32 for tracing IMPLIED LOB instructions. Add 64 to change opcode of implied BF to `0xBF00`.

Type: `uint8_t`

Default value: `2`

**vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

## 3.87 ARMCortexM55CT

Defined in `LISA/ARMCortexM55CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r1p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Changes in 11.31.15

The following ports were added:

- `invalidate_rse_ecc`

The following ports were removed:

- `auxfault`
- `currpri`
- `tramdueeca`
- `tramsceeca`

### About ARMCortexM55CT

The model supports Custom Datapath Extension (CDE). For more information, see [CDE](#).

The model does not support the following functionality:

- Programmable MBIST controller (PMC-100).
- Error Correcting Code (ECC).
- Q-Channel.

The following interfaces and registers are not modeled:

- ITM and ETM trace and trace synchronization and trigger interface signals.
- Dual-core lock-step operation.
- Interrupt latencies.
- Prefetcher Control Register (PFCR).
- Direct cache access registers.

In the Memory System Control Register (MSCR), only the cache-related bits are supported:

- `FORCEWT`
- `DCACTIVE`
- `ICACTIVE`

- IDCCLEAN

## Differences between the model and the RTL

In hardware, `PMU_CCNTR` is an alias of the `DWT_CYCCNT` register, so they contain the same values. In the model, `PMU_CCNTR` is implemented differently to `DWT_CYCCNT`, so they contain different values. The value held in `DWT_CYCCNT` is not representative of hardware.

## Implementation of ITM in M-class models

This model has a parameter that enables partial support for Instrumentation Trace Macrocell (ITM). In hardware or RTL, trace data from ITM is sent in packets to the trace block serially using a single pin or wire. In the model, if it is enabled, the ITM trace data is output using an MTI trace source called ITM. The ITM trace source has an `ITM_PACKET_TYPE` field. The following table shows which packet types the model supports:

Field value	Description	Supported by model
ITM_SYNC	Synchronization packet	Not supported.
ITM_P_OVERFLOW	Protocol: Overflow packet	Not supported.
ITM_P_LOCAL_TIMESTAMP	Protocol: Local timestamp packets	Not supported.
ITM_P_GLOBAL_TIMESTAMP	Protocol: Global timestamp packets	Not supported.
ITM_P_EXTEN	Protocol: Extension packet	Not supported.
ITM_S_INSTRUMENTATION	Source: Instrumentation packet	Supported.
ITM_S_DWT_EVENT_COUNTER	Hardware source: Event counter wrapping	Not supported.
ITM_S_DWT_EXCEPTION	Hardware source: Exception tracing	Supported.
ITM_S_DWT_PC_SAMPLING	Hardware source: PC sampling	Not supported.
ITM_S_DWT_DATA_PC_TRACE	Hardware source: DWT Data trace PC value	Supported.
ITM_S_DWT_DATA_ADDRESS_TRACE	Hardware source: DWT Data trace address value	Supported.
ITM_S_DWT_DATA_DATA_TRACE	Hardware source: DWT Data trace DATA value	Supported.

## Iris and MTI instances for ARMCortexM55CT

This model has the following Iris instances:

Name	Instance type
ARMCortexM55CT	ARM_Cortex-M55
ARMCortexM55CT.acp_mapper	PVBusMapper
ARMCortexM55CT.ext_bus	PVBusLogger
ARMCortexM55CT.ext_bus.mapper	PVBusMapper
ARMCortexM55CT.l1_incoherent_interconnect	PVCache
ARMCortexM55CT.l1_incoherent_interconnect.downstream[0].pvbusmaster	PVBusMaster
ARMCortexM55CT.l1_incoherent_interconnect.upstream[Z] (where Z = 0-17)	PVBusSlave
ARMCortexM55CT.l1dcache	PVCache
ARMCortexM55CT.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexM55CT.l1dcache.upstream[0]	PVBusSlave
ARMCortexM55CT.l1icache	PVCache

Name	Instance type
ARMCortexM55CT.l1licache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexM55CT.l1licache.upstream[0]	PVBusSlave
ARMCortexM55CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
ARMCortexM55CT	ARM_Cortex-M55
ARMCortexM55CT.acp_mapper	PVBusMapper
ARMCortexM55CT.ext_bus	PVBusLogger
ARMCortexM55CT.ext_bus.mapper	PVBusMapper
ARMCortexM55CT.l1_incoherent_interconnect	PVCache
ARMCortexM55CT.l1_incoherent_interconnect.downstream[0].pvbusmaster	PVBusMaster
ARMCortexM55CT.l1_incoherent_interconnect.upstream[Z] (where Z = 0–17)	PVBusSlave
ARMCortexM55CT.l1dcache	PVCache
ARMCortexM55CT.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexM55CT.l1dcache.upstream[0]	PVBusSlave
ARMCortexM55CT.l1licache	PVCache
ARMCortexM55CT.l1licache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexM55CT.l1licache.upstream[0]	PVBusSlave
ARMCortexM55CT.l2_flusher	AsyncCacheFlushUnit

## Ports for ARMCortexM55CT

Port	Direction	Protocol	Description
ahbd	slave	PVBus	Debug AHB - core bus slave driven by the DAP.
ahbp_m	master	PVBus	The core will generate Vendor System data accesses on this port.
ahbs	slave	PVBus	Slave AHB - External master (e.g. DMA) can write to TCMs (whether or not enabled in xTCMCR)
bigend	slave	Signal	Configure big endian data format.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions. Referred to in some documents as 'CLKIN'.
coproc_bus	slave	CoprocBusProtocol	Co-Processor Interface
core_dside_bus_gasket_in	slave	PVBus	Inbound D-side PVBus link is used when the external gasket is enabled. This allows externally processed D-side traffic to be fed back into the core path.
core_dside_bus_gasket_out	master	PVBus	Outbound D-side PVBus is exposed when has_core_dside_bus_gasket is true. This lets an external gasket observe or alter core data traffic before it re-enters on the inbound port.
cpuwait	slave	Signal	Stall the CPU out of reset
currns	master	Signal	Current Security state of the processor
dbgen	slave	Signal	Invasive debug enable
dbgrestart	slave	Signal	Request for synchronised exit from halt mode
dbgrestarted	master	Signal	Handshakes with DBGRESTART

Port	Direction	Protocol	Description
edbgrq	slave	Signal	External request to enter halt mode
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
fpxxc	master	Value	Port that sends the value of the FPxxC exception flags (FPIXIC, FPIDC, FPOFC, FPUFC, FPDZC, FPIOC). Each flag is present in the same position as in the FPSCR register (e.g. fpxxc[0] = FPIOC).
halted	master	Signal	Indicates that the processor is in halt mode
idau_invalidate_region	slave	Value_64	64 bit number to invalid IDAU memory range (start_address<<32 end_address)
idau	master	PVBus	The core will generate IDAU requests on this port.
initnsvtor	slave	Value	Reset configuration port - Non-Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset This port remains functional no matter ARMv8-M Security Extensions are included or not When ARMv8-M Security Extensions are not included, all exceptions will use NS vector base address given by this port.
initpahben	slave	Signal	Enable P-AHB on the next reset
initsvtor	slave	Value	Reset configuration port - Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset It becomes functional when ARMv8-M Security Extensions are included When ARMv8-M Security Extensions are not included, this port will be ignored.
inittcm	slave	Signal	Reset configuration port - TCM enable initialisation out of reset Bit[0] HIGH = ITCM is enabled Bit[1] HIGH = DTCM is enabled
intnum	master	Value	Exception number of the current execution context (from IPSR[8:0]) When the processor is in Thread mode, INTNUM is 0 When the processor is in Handler mode, INTNUM is the exception number of the currently-executing exception.
invalidate_rse_ecc	slave	Signal	Invalidate DTCM ECC tags because TrustedRAM keys changed
irq	slave	Signal	This signal array delivers signals to the NVIC.
lockdcaic	slave	Signal	Disable access to instruction cache direct cache access registers
lockdtgu	slave	Signal	Disable writes to registers associated with the DTGU
lockitgu	slave	Signal	Disable writes to registers associated with the ITGU
locknsmpu	slave	Signal	Disable writes to the Non-Secure MPU_*_NS registers
locknsvtor	slave	Signal	Cortex-M55-specific LOCKNSVTOR, LOCKSVTAIRCR, LOCKSMPU, LOCKNSMPU, LOCKSAU. Disable writes to VTOR_NS
lockpahb	slave	Signal	P-AHB related ports Disable writes to PAHBSCR
locksau	slave	Signal	Disable writes to the SAU_* registers
locksmpu	slave	Signal	Disable writes to the Secure MPU_* registers
locksvtaircr	slave	Signal	Disable writes to VTOR_S, AIRCR.PRIS, AIRCR.BFHFNMINS
locktcm	slave	Signal	Disable writes to registers associated with the TCM
lockup	master	Signal	Asserted when the processor is in lockup state.
niden	slave	Signal	Non-invasive debug enable
nmi	slave	Signal	Configure non maskable interrupt.
poreset	slave	Signal	Raising this signal will do a power-on reset of the core.
prequest	slave	PChannel	Low Power Interface
pv_ppbus_m	master	PVBus	The core will generate External Private Peripheral Bus requests on this port.

Port	Direction	Protocol	Description
pvbus_m	master	PVBus	The core will generate bus requests on this port.
qrequest	slave	PChannel	Low Power Transition handshake interface
sleepdeep	master	Signal	Asserted when the processor is in deep sleep.
sleeping	master	Signal	Asserted when the processor is in sleep.
spiden	slave	Signal	Secure invasive debug enable
spniden	slave	Signal	Secure non-invasive debug enable
stcalib	slave	Value	These are the secure and non-secure calibration values for the SysTick timer, called CFGSSTCALIB/CFGNSSTCALIB in the M55 specification. stcalib[0] is the secure timer calibration, stcalib[1] is the non-secure timer calibration. In the case where the Security Extension is not present, stcalib[0] should be used. The following bit flag is modelled for each stcalib[*][25] - NOREF - Indicates no reference clock integrated. If stclk is not in use, set to 1
stclk	slave	ClockSignal	This is the reference clock for the SysTick timer, called SSTCLKEN/NSSTCLKEN in the M55 specification. This clock is provided for both secure and non secure inputs, even where ARMv8-M Security Extensions are included.
sysreset	slave	Signal	Raising this signal will put the core into reset mode (but does not reset the debug logic).
sysresetreq	master	Signal	Asserted to indicate that a reset is required.
ticks	master	InstructionCount	Port allowing the number of instructions since startup to be read from the CPU.
wicenack	master	Signal	Acknowledge signal for WICENREQ
wicenreq	slave	Signal	Request for deep sleep to be WIC-based deep sleep.
wicsense	master	Signal	Indicates which input events can cause the WIC to generate the WAKEUP signal.

## Parameters for ARM CortexM55CT

### CDEMAPPEDONCP

Bit N specifies whether the instruction for coprocessor N (CP7:CP0) is redirected to the CDE module.

Type: uint8\_t

Default value: 255

### CDERTLID

Value of ID\_AFR0.CDERTLID.

Type: uint8\_t

Default value: 32

### CFGBIGEND

Initialize processor to big endian mode.

Type: `bool`

Default value: `false`

### **CFGDTCMSZ**

Size of the data TCM. 0=No DTCM implemented. Otherwise=Size of DTCM= $\text{pow}(2, \text{CFGDTCMSZ} - 1)$  KB. Minimum size is 4KB.

Type: `uint8_t`

Default value: 9

### **CFGITCMSZ**

Size of the instruction TCM. 0=No ITCM implemented. Otherwise=Size of ITCM= $\text{pow}(2, \text{CFGITCMSZ} - 1)$  KB. Minimum size is 4KB.

Type: `uint8_t`

Default value: 9

### **CFGMEMALIAS**

Memory address alias bit for the ITCM, DTCM and P-AHB regions. 0=No alias, 1=Alias bit 24, 2=Alias bit 25, 4=Alias bit 26, 8=Alias bit 27, 16=Alias bit 28.

Type: `uint8_t`

Default value: 0

### **CFGNOCDECP**

Bit N means external coprocessor N (CP7:CP0) disable for CDE coprocessor.

Type: `uint8_t`

Default value: 0

### **CFGPAHBSZ**

Size of the P-AHB peripheral port memory region. 0=P-AHB disabled, 1=64MB, 2=128MB, 3=256MB, 4=512MB.

Type: `uint8_t`

Default value: 0

### **CPIF**

Specifies whether the external coprocessor interface is included.

Type: `bool`

Default value: `true`

**CPNSPRESENT**

Bit N means external coprocessor N (CP7:CP0) is accessible in Non-Secure state.

Type: `uint8_t`

Default value: 255

**CPSPPRESENT**

Bit N means external coprocessor N (CP7:CP0) is accessible in Secure state.

Type: `uint8_t`

Default value: 255

**CTI**

CTI (Cross Trigger Interface) included.

Type: `bool`

Default value: `false`

**CTI\_irq0\_pin**

CTI interrupt request 0 pin.

Type: `uint16_t`

Default value: 4

**CTI\_irq1\_pin**

CTI interrupt request 1 pin.

Type: `uint16_t`

Default value: 5

**DBGLVL**

0: Minimal debug; 1: 2 Watchpoints, 4 Breakpoint comparators; 2: 4 Watchpoints, 8 Breakpoint comparators; 3: 8 Watchpoints, 8 Breakpoint comparators.

Type: `uint8_t`

Default value: 2

**DCACHESZ**

Whether the D-cache is included and, if included, the size of it. Bit 0: 0=No D-cache included, 1=D-cache included. Bits [4:1]: 0x0=4KB D-cache, 0x1=8KB D-cache, 0x3=16KB D-cache, 0x7=32KB D-cache, 0xF=64KB D-cache.

Type: `uint8_t`

Default value: 15

**DTGU**

DTCM Security Gate Unit included.

Type: `bool`

Default value: `false`

**DTGUBLKSZ**

DTCM gate unit block size. Size= $\text{pow}(2, \text{DTGUBLKSZ} + 5)$  bytes.

Type: `uint8_t`

Default value: 3

**DTGUMAXBLKS**

Maximum number of DTCM gate unit blocks. Number of blocks= $\text{pow}(2, \text{DTGUMAXBLKS})$ .

Type: `uint8_t`

Default value: 0

**ECOREVNUM**

ECO Revision number.

Type: `uint64_t`

Default value: 0x0

**ERRDEVID.NUM**

RAS: Number of implemented error record indexes, 0 to 1.

Type: `uint8_t`

Default value: 1

**ETM**

Support for ETM trace. `false` : No ETM trace included, `true`: ETM trace included.

Type: `bool`

Default value: `true`

### **FPU**

Set whether the model has VFP support.

Type: `bool`

Default value: `true`

### **ICACHESZ**

Whether the I-cache is included and, if included, the size of it. Bit 0: 0=No I-cache included, 1=I-cache included. Bits [4:1]: 0x0=4KB I-cache, 0x1=8KB I-cache, 0x3=16KB I-cache, 0x7=32KB I-cache, 0xF=64KB I-cache.

Type: `uint8_t`

Default value: 15

### **INITNSVTOR**

Non-Secure vector-table offset at reset.

Type: `uint32_t`

Default value: 0x0

### **INITPAHBEN**

The P-AHB enable state at reset.

Type: `bool`

Default value: `false`

### **INITSVTOR**

Secure vector-table offset at reset.

Type: `uint32_t`

Default value: 0x0

### **INITTCMEN**

The TCM enable state at reset. Bit 0 corresponds to ITCM enable state, bit 1 corresponds to DTCM enable state.

Type: `uint8_t`

Default value: 3

**IRQDIS0**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+0].

Type: `uint32_t`

Default value: 0x0

**IRQDIS1**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+32].

Type: `uint32_t`

Default value: 0x0

**IRQDIS10**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+320].

Type: `uint32_t`

Default value: 0x0

**IRQDIS11**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+352].

Type: `uint32_t`

Default value: 0x0

**IRQDIS12**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+384].

Type: `uint32_t`

Default value: 0x0

**IRQDIS13**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+416].

Type: `uint32_t`

Default value: 0x0

**IRQDIS14**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+448].

Type: `uint32_t`

Default value: 0x0

**IRQDIS2**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+64].

Type: `uint32_t`

Default value: `0x0`

**IRQDIS3**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+96].

Type: `uint32_t`

Default value: `0x0`

**IRQDIS4**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+128].

Type: `uint32_t`

Default value: `0x0`

**IRQDIS5**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+160].

Type: `uint32_t`

Default value: `0x0`

**IRQDIS6**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+192].

Type: `uint32_t`

Default value: `0x0`

**IRQDIS7**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+224].

Type: `uint32_t`

Default value: `0x0`

**IRQDIS8**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+256].

Type: `uint32_t`

Default value: `0x0`

**IRQDIS9**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+288].

Type: `uint32_t`

Default value: `0x0`

**IRQLVL**

Number of bits of interrupt priority.

Type: `uint8_t`

Default value: `3`

**ITGU**

ITCM Security Gate Unit included.

Type: `bool`

Default value: `false`

**ITGUBLKSZ**

ITCM gate unit block size. Size= $\text{pow}(2, \text{ITGUBLKSZ} + 5)$  bytes.

Type: `uint8_t`

Default value: `3`

**ITGUMAXBLKS**

Maximum number of ITCM gate unit blocks. Number of blocks= $\text{pow}(2, \text{ITGUMAXBLKS})$ .

Type: `uint8_t`

Default value: `0`

**ITM**

Level of instrumentation trace supported. `false` : No ITM trace included, `true`: ITM trace included.

Type: `bool`

Default value: `true`

**IWIC**

Include support for Internal Wake-up Interrupt Controller.

Type: `bool`

Default value: `true`

**LOCKDTGU**

Lock down of Data TGU registers write.

Type: `bool`

Default value: `false`

**LOCKITGU**

Lock down of Instruction TGU registers write.

Type: `bool`

Default value: `false`

**LOCKTCM**

Lock down of TCM registers write.

Type: `bool`

Default value: `false`

**LOCK\_NS\_MPU**

Lock down of Non-Secure MPU registers write.

Type: `bool`

Default value: `false`

**LOCK\_SAU**

Lock down of SAU registers write.

Type: `bool`

Default value: `false`

**LOCK\_S\_MPU**

Lock down of Secure MPU registers write.

Type: `bool`

Default value: `false`

**MPU\_NS**

Number of regions in the Non-Secure MPU. If Security Extensions are absent, this is the total number of MPU regions.

Type: `uint8_t`

Default value: 8

**MPU\_S**

Number of regions in the Secure MPU. If Security Extensions are absent, this is ignored.

Type: `uint8_t`

Default value: 8

**MVE**

Set whether the model has MVE support. If FPU = 0: 0=MVE not included, 1=Integer subset of MVE included. If FPU = 1: 0=MVE not included, 1=Integer subset of MVE included, 2=Integer and half and single precision floating point MVE included.

Type: `uint8_t`

Default value: 1

**NUMIRQ**

Number of user interrupts.

Type: `uint16_t`

Default value: 32

**SAU**

Number of SAU regions (0 => no SAU).

Type: `uint8_t`

Default value: 4

**SECEXT**

Whether the ARMv8-M Security Extensions are included.

Type: `bool`

Default value: `true`

**WICLINES**

Number of lines supported by the WIC interface.

Type: `uint16_t`

Default value: 35

**cde\_impl\_name**

Name of the CDE implementation for this core (implementation contributed by MTI plugin).

Type: `string`

Default value: `N/A`

**cpi\_div**

divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

**cpi\_mul**

multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

**dcache-state\_modelled**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

**delay\_faultmask\_update**

Delay FAULTMASK update to context sync.

Type: `bool`

Default value: `false`

**delay\_sysreg\_update**

Delay some system register updates (e.g. SHCSR) to context sync.

Type: `bool`

Default value: `false`

**ecc\_on**

Enable Error Correcting Code.

Type: `bool`

Default value: `false`

**has\_cde**

Enables Custom Datapath Extensions.

Type: `bool`

Default value: `false`

**has\_core\_dside\_bus\_gasket**

STL gasket enabled.

Type: `bool`

Default value: `false`

**icache-state\_modelled**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

**manager\_id**

Manager ID presented in bus transactions.

Type: `uint64_t`

Default value: `0x0`

**min\_sync\_level**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: `0`

**reported\_patch\_level**

Purely cosmetic patch level value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: `-1`

**reported\_revision\_number**

Purely cosmetic revision number value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

### **`rse_ecc_support`**

Support for ECC initialization in TCM, following RSE spec. 0=No support, 1=Supported, faults are reported as uncorrected errors.

Type: `uint8_t`

Default value: 0

### **`semihosting-Thumb_SVC`**

T32 SVC number for semihosting.

Type: `uint8_t`

Default value: 171

### **`semihosting-cmd_line`**

Command line available to semihosting SVC calls.

Type: `string`

Default value: N/A

### **`semihosting-cwd`**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

### **`semihosting-enable`**

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

Type: `bool`

Default value: `true`

### **`semihosting-heap_base`**

Virtual address of heap base.

Type: `uint32_t`

Default value: 0x0

**semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint32_t`

Default value: `0x20700000`

**semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint32_t`

Default value: `0x20800000`

**semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint32_t`

Default value: `0x20700000`

**trace\_style**

MVE instruction trace style: Add 16 for `[*-]` beat trace. Add 32 for tracing IMPLIED LOB instructions. Add 64 to change opcode of implied BF to `0xBF00`.

Type: `uint8_t`

Default value: `2`

**vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

3.88 ARMCortexM7CT

Defined in `LISA/ARMCortexM7CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r1p2	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

## Changes in 11.31.15

The following ports were removed:

- `auxfault`
- `currpri`

## Differences between the model and the RTL

- TCMs are modeled internally and the model does not support external TCMs or the ports associated with them.
- ECC support is hardware-specific so is not modeled.

## Implementation of ITM in M-class models

This model has a parameter that enables partial support for Instrumentation Trace Macrocell (ITM). In hardware or RTL, trace data from ITM is sent in packets to the trace block serially using a single pin or wire. In the model, if it is enabled, the ITM trace data is output using an MTI trace source called ITM. The ITM trace source has an `ITM_PACKET_TYPE` field. The following table shows which packet types the model supports:

Field value	Description	Supported by model
ITM_SYNC	Synchronization packet	Not supported.
ITM_P_OVERFLOW	Protocol: Overflow packet	Not supported.
ITM_P_LOCAL_TIMESTAMP	Protocol: Local timestamp packets	Not supported.
ITM_P_GLOBAL_TIMESTAMP	Protocol: Global timestamp packets	Not supported.
ITM_P_EXTEN	Protocol: Extension packet	Not supported.
ITM_S_INSTRUMENTATION	Source: Instrumentation packet	Supported.
ITM_S_DWT_EVENT_COUNTER	Hardware source: Event counter wrapping	Not supported.
ITM_S_DWT_EXCEPTION	Hardware source: Exception tracing	Supported.
ITM_S_DWT_PC_SAMPLING	Hardware source: PC sampling	Not supported.
ITM_S_DWT_DATA_PC_TRACE	Hardware source: DWT Data trace PC value	Supported.
ITM_S_DWT_DATA_ADDRESS_TRACE	Hardware source: DWT Data trace address value	Supported.
ITM_S_DWT_DATA_DATA_TRACE	Hardware source: DWT Data trace DATA value	Supported.

## Iris and MTI instances for ARM CortexM7CT

This model has the following Iris instances:

Name	Instance type
ARM CortexM7CT	ARM_Cortex-M7
ARM CortexM7CT.acp_mapper	PVBusMapper
ARM CortexM7CT.ext_bus	PVBusLogger
ARM CortexM7CT.ext_bus.mapper	PVBusMapper
ARM CortexM7CT.l1_incoherent_interconnect	PVCache
ARM CortexM7CT.l1_incoherent_interconnect.downstream[0].pvbusmaster	PVBusMaster

Name	Instance type
ARMCortexM7CT.l1_incoherent_interconnect.upstream[Z] (where Z = 0-17)	PVBusSlave
ARMCortexM7CT.l1dcache	PVCache
ARMCortexM7CT.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexM7CT.l1dcache.upstream[0]	PVBusSlave
ARMCortexM7CT.l1icache	PVCache
ARMCortexM7CT.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexM7CT.l1icache.upstream[0]	PVBusSlave
ARMCortexM7CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
ARMCortexM7CT	ARM_Cortex-M7
ARMCortexM7CT.acp_mapper	PVBusMapper
ARMCortexM7CT.ext_bus	PVBusLogger
ARMCortexM7CT.ext_bus.mapper	PVBusMapper
ARMCortexM7CT.l1_incoherent_interconnect	PVCache
ARMCortexM7CT.l1_incoherent_interconnect.downstream[0].pvbusmaster	PVBusMaster
ARMCortexM7CT.l1_incoherent_interconnect.upstream[Z] (where Z = 0-17)	PVBusSlave
ARMCortexM7CT.l1dcache	PVCache
ARMCortexM7CT.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexM7CT.l1dcache.upstream[0]	PVBusSlave
ARMCortexM7CT.l1icache	PVCache
ARMCortexM7CT.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexM7CT.l1icache.upstream[0]	PVBusSlave
ARMCortexM7CT.l2_flusher	AsyncCacheFlushUnit

## Ports for ARMCortexM7CT

Port	Direction	Protocol	Description
ahbd	slave	PVBus	Debug AHB - core bus slave driven by the DAP.
ahbp_m	master	PVBus	The core will generate Vendor System data accesses on this port.
ahbs	slave	PVBus	External master (e.g. DMA) can write TCMs (whether or not enabled in xTCMCR).
bigend	slave	Signal	Configure big endian data format.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
cpuwait	slave	Signal	When this signal is HIGH out of reset, it forces the processor into a quiescent state that delays its boot-up sequence and instruction execution until this signal is driven LOW
dap_s	slave	PVBus	Debug Access Port (DAP).
dbgen	slave	Signal	Invasive debug enable.
dbgrestart	slave	Signal	External debug request.
dbgrestarted	master	Signal	External debug request.

Port	Direction	Protocol	Description
edbgrq	slave	Signal	External debug request.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
fpudisable	slave	Signal	Configure core with no FPU on reset.
fpxxc	master	Value	Port that sends the value of the FPxxC exception flags (FPIXC, FPIDC, FPOFC, FPUFC, FPDZC, FPIOC). Each flag is present in the same position as in the FPSCR register (e.g. fpxxc[0] = FPIOC).
halted	master	Signal	External debug request.
initahbpen	slave	Signal	Enable AHBP on the next reset
initvtor	slave	Value	Initial value of the Vector Table Offset Register (VTOR)
intisr	slave	Signal	This signal array delivers signals to the NVIC.
intnmi	slave	Signal	Configure non maskable interrupt.
lockup	master	Signal	Asserted when the processor is in lockup state.
mpudisable	slave	Signal	Configure core with no MPU on reset.
niden	slave	Signal	Non-invasive debug enable.
poreset	slave	Signal	Raising this signal will do a power-on reset of the core.
pv_ppbus_m	master	PVBus	The core will generate External Private Peripheral Bus requests on this port.
pvbus_m	master	PVBus	The core will generate bus requests on this port.
sleepdeep	master	Signal	Asserted when the processor is in deep sleep.
sleeping	master	Signal	Asserted when the processor is in sleep.
stcalib	slave	Value	This is the calibration value for the SysTick timer The following bit flag is modelled stcalib[25] - NOREF - Indicates no reference clock integrated. If stclk is not in use, set to 1
stclk	slave	ClockSignal	This is the reference clock for the SysTick timer, called STCLKEN in the specification
sysreset	slave	Signal	Raising this signal will put the core into reset mode (but does not reset the debug logic).
sysresetreq	master	Signal	Asserted to indicate that a reset is required.
ticks	master	InstructionCount	Port allowing the number of instructions since startup to be read from the CPU.

## Parameters for ARM CortexM7CT

### BIGENDINIT

Initialize processor to big endian mode.

Type: `bool`

Default value: `false`

### CFGAHBPSZ

Size of the AHBP port memory region. 0=AHBP disabled, 1=64MB, 2=128MB, 3=256MB, 4=512MB.

Type: `uint8_t`

Default value: 0

**CTI**

CTI (Cross Trigger Interface) included.

Type: `bool`

Default value: `false`

**CTI\_irq0\_pin**

CTI interrupt request 0 pin.

Type: `uint8_t`

Default value: 4

**CTI\_irq1\_pin**

CTI interrupt request 1 pin.

Type: `uint8_t`

Default value: 5

**DBG\_LVL**

0: 2 DWT, 4 FPB; 1: 4 DWT, 8 FPB comparators.

Type: `uint8_t`

Default value: 1

**DP\_FLOAT**

Support 8-byte floats.

Type: `bool`

Default value: `true`

**INIT\_AHBEN**

The AHB enable state at reset.

Type: `bool`

Default value: `false`

**INIT\_VTOR**

vector-table offset at reset.

Type: `uint32_t`

Default value: `0x0`

**LVL\_WIDTH**

Number of bits of interrupt priority.

Type: `uint8_t`

Default value: 3

**NUM\_IRQ**

Number of user interrupts.

Type: `uint8_t`

Default value: 32

**NUM\_MPU\_REGION**

Number of MPU regions.

Type: `uint8_t`

Default value: 16

**TRC**

Level of instrumentation trace supported. `false` : No ITM trace included, `true`: ITM trace included.

Type: `bool`

Default value: `true`

**WIC**

Include support for WIC-mode deep sleep.

Type: `bool`

Default value: `true`

**cpi\_div**

divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

**cpi\_mul**

multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

**dcache-size**

L1 D-cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

**dcache-state\_modelled**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

**dtcm\_enable**

Enable DTCM at reset.

Type: `bool`

Default value: `false`

**dtcm\_size**

DTCM size in KB.

Type: `uint16_t`

Default value: `0x100`

**icache-size**

L1 I-cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

**icache-state\_modelled**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

**itcm\_enable**

Enable ITCM at reset.

Type: `bool`

Default value: `false`

**itcm\_size**

ITCM size in KB.

Type: uint16\_t

Default value: 0x100

**manager\_id**

Manager ID presented in bus transactions.

Type: uint64\_t

Default value: 0x0

**min\_sync\_level**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**reported\_patch\_level**

Purely cosmetic patch level value to be displayed from the CUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: int8\_t

Default value: -1

**reported\_revision\_number**

Purely cosmetic revision number value to be displayed from the CUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: int8\_t

Default value: -1

**semihosting-Thumb\_SVC**

T32 SVC number for semihosting.

Type: uint8\_t

Default value: 171

**semihosting-cmd\_line**

Command line available to semihosting SVC calls.

Type: `string`

Default value: `N/A`

### **`semihosting-cwd`**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

### **`semihosting-enable`**

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

Type: `bool`

Default value: `true`

### **`semihosting-heap_base`**

Virtual address of heap base.

Type: `uint32_t`

Default value: `0x0`

### **`semihosting-heap_limit`**

Virtual address of top of heap.

Type: `uint32_t`

Default value: `0x20700000`

### **`semihosting-stack_base`**

Virtual address of base of descending stack.

Type: `uint32_t`

Default value: `0x20800000`

### **`semihosting-stack_limit`**

Virtual address of stack limit.

Type: `uint32_t`

Default value: `0x20700000`

**vfp-present**

Set whether the model has VFP support.

Type: `bool`

Default value: `true`

## 3.89 ARMCortexM85CT

Defined in `LISA/ARMCortexM85CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r1p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Changes in 11.31.15

The following ports were removed:

- `auxfault`
- `currpri`

### About ARMCortexM85CT

This model supports the M-Profile Vector Extension (MVE) and the Custom Datapath Extension (CDE). For more information about CDE support in Fast Models, see [CDE](#).

### Iris and MTI instances for ARMCortexM85CT

This model has the following Iris instances:

Name	Instance type
ARMCortexM85CT	ARM_Cortex-M85
ARMCortexM85CT.acp_mapper	PVBusMapper
ARMCortexM85CT.ext_bus	PVBusLogger
ARMCortexM85CT.ext_bus.mapper	PVBusMapper
ARMCortexM85CT.l1_incoherent_interconnect	PVCache
ARMCortexM85CT.l1_incoherent_interconnect.downstream[0].pvbusmaster	PVBusMaster
ARMCortexM85CT.l1_incoherent_interconnect.upstream[Z] (where Z = 0-17)	PVBusSlave
ARMCortexM85CT.l1dcache	PVCache
ARMCortexM85CT.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexM85CT.l1dcache.upstream[0]	PVBusSlave
ARMCortexM85CT.l1licache	PVCache
ARMCortexM85CT.l1licache.downstream[0].pvbusmaster	PVBusMaster

Name	Instance type
ARMCortexM85CT.l1icache.upstream[0]	PVBusSlave
ARMCortexM85CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
ARMCortexM85CT	ARM_Cortex-M85
ARMCortexM85CT.acp_mapper	PVBusMapper
ARMCortexM85CT.ext_bus	PVBusLogger
ARMCortexM85CT.ext_bus.mapper	PVBusMapper
ARMCortexM85CT.l1_incoherent_interconnect	PVCache
ARMCortexM85CT.l1_incoherent_interconnect.downstream[0].pvbusmaster	PVBusMaster
ARMCortexM85CT.l1_incoherent_interconnect.upstream[Z] (where Z = 0-17)	PVBusSlave
ARMCortexM85CT.l1dcache	PVCache
ARMCortexM85CT.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexM85CT.l1dcache.upstream[0]	PVBusSlave
ARMCortexM85CT.l1icache	PVCache
ARMCortexM85CT.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexM85CT.l1icache.upstream[0]	PVBusSlave
ARMCortexM85CT.l2_flusher	AsyncCacheFlushUnit

### Ports for ARMCortexM85CT

Port	Direction	Protocol	Description
ahbd	slave	PVBus	Debug AHB - core bus slave driven by the DAP.
ahbp_m	master	PVBus	The core will generate Vendor System data accesses on this port.
ahbs	slave	PVBus	Slave AHB - External master (e.g. DMA) can write to TCMs (whether or not enabled in xTCMCR)
bigend	slave	Signal	Configure big endian data format.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions. Referred to in some documents as 'CLKIN'.
coproc_bus	slave	CoprocBusProtocol	Co-Processor Interface
core_dside_bus_gasket_in	slave	PVBus	Inbound D-side PVBus link this used when the external gasket is enabled. This allows externally processed D-side traffic to be fed back into the core path.
core_dside_bus_gasket_out	master	PVBus	Outbound D-side PVBus this exposed when has_core_dside_bus_gasket is true. This lets an external gasket observe or alter core data traffic before it re-enters on the inbound port.
cpuwait	slave	Signal	Stall the CPU out of reset
currns	master	Signal	Current Security state of the processor
dbgen	slave	Signal	Invasive debug enable
dbgrestart	slave	Signal	Request for synchronised exit from halt mode
dbgrestart	master	Signal	Handshakes with DBGRESTART

Port	Direction	Protocol	Description
edbgrq	slave	Signal	External request to enter halt mode
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
fpxxc	master	Value	Port that sends the value of the FPxxC exception flags (FPIXC, FPIDC, FPOFC, FPUFC, FPDZC, FPIOC). Each flag is present in the same position as in the FPSCR register (e.g. fpxxc[0] = FPIOC).
halted	master	Signal	Indicates that the processor is in halt mode
idau_invalidate_region	slave	Value_64	64 bit number to invalid IDAU memory range (start_address<<32 end_address)
idau	master	PVBus	The core will generate IDAU requests on this port.
initnsvtor	slave	Value	Reset configuration port - Non-Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset This port remains functional no matter ARMv8-M Security Extensions are included or not When ARMv8-M Security Extensions are not included, all exceptions will use NS vector base address given by this port.
initpahben	slave	Signal	Enable P-AHB on the next reset
initsvtor	slave	Value	Reset configuration port - Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset It becomes functional when ARMv8-M Security Extensions are included When ARMv8-M Security Extensions are not included, this port will be ignored.
inittcm	slave	Signal	Reset configuration port - TCM enable initialisation out of reset Bit[0] HIGH = ITCM is enabled Bit[1] HIGH = DTCM is enabled
intnum	master	Value	Exception number of the current execution context (from IPSR[8:0]) When the processor is in Thread mode, INTNUM is 0 When the processor is in Handler mode, INTNUM is the exception number of the currently-executing exception.
irq	slave	Signal	This signal array delivers signals to the NVIC.
lockdcaic	slave	Signal	Disable access to instruction cache direct cache access registers
lockdtgu	slave	Signal	Disable writes to registers associated with the DTGU
lockitgu	slave	Signal	Disable writes to registers associated with the ITGU
locknsmpu	slave	Signal	Disable writes to the Non-Secure MPU_*_NS registers
locknsvtor	slave	Signal	Cortex-M85 specific LOCKNSVTOR, LOCKSVTAIRCR, LOCKSMPU, LOCKNSMPU, LOCKSAU. Disable writes to VTOR_NS
lockpahb	slave	Signal	P-AHB related ports Disable writes to PAHBCR
locksau	slave	Signal	Disable writes to the SAU_* registers
locksmpu	slave	Signal	Disable writes to the Secure MPU_* registers
locksvtaircr	slave	Signal	Disable writes to VTOR_S, AIRCR.PRIS, AIRCR.BFHFNMINS
locktcm	slave	Signal	Disable writes to registers associated with the TCM
lockup	master	Signal	Asserted when the processor is in lockup state.
niden	slave	Signal	Non-invasive debug enable
nmi	slave	Signal	Configure non maskable interrupt.
poreset	slave	Signal	Raising this signal will do a power-on reset of the core.
prequest	slave	PChannel	Low Power Interface
pv_ppbus_m	master	PVBus	The core will generate External Private Peripheral Bus requests on this port.
pdbus_m	master	PVBus	The core will generate bus requests on this port.

Port	Direction	Protocol	Description
grequest	slave	PChannel	Low Power Transition handshake interface
sleepdeep	master	Signal	Asserted when the processor is in deep sleep.
sleeping	master	Signal	Asserted when the processor is in sleep.
spiden	slave	Signal	Secure invasive debug enable
spniden	slave	Signal	Secure non-invasive debug enable
stcalib	slave	Value	These are the secure and non-secure calibration values for the SysTick timer, called CFGSSTCALIB/CFGNSSTCALIB in the M85 specification. stcalib[0] is the secure timer calibration, stcalib[1] is the non-secure timer calibration. In the case where the Security Extension is not present, stcalib[0] should be used. The following bit flag is modelled for each stcalib[*][25] - NOREF - Indicates no reference clock integrated. If stclk is not in use, set to 1
stclk	slave	ClockSignal	This is the reference clock for the SysTick timer, called SSTCLKEN/NSSTCLKEN in the M85 specification. This clock is provided for both secure and non secure inputs, even where ARMv8-M Security Extensions are included.
sysreset	slave	Signal	Raising this signal will put the core into reset mode (but does not reset the debug logic).
sysresetreq	master	Signal	Asserted to indicate that a reset is required.
ticks	master	InstructionCount	Port allowing the number of instructions since startup to be read from the CPU.
wicenack	master	Signal	Acknowledge signal for WICENREQ
wicenreq	slave	Signal	Request for deep sleep to be WIC-based deep sleep.
wicsense	master	Signal	Indicates which input events can cause the WIC to generate the WAKEUP signal.

## Parameters for ARM CortexM85CT

### CDEMAPPEDONCP

Bit N specifies whether the instruction for coprocessor N (CP7:CP0) is redirected to the CDE module.

Type: uint8\_t

Default value: 255

### CDERTLID

Value of ID\_AFR0.CDERTLID.

Type: uint8\_t

Default value: 32

### CFGBIGEND

Initialize processor to big endian mode.

Type: bool

Default value: `false`

### **CFGCPUINST**

CPU instance number. This is part of the TCM base address, in bits 25:24.

Type: `uint8_t`

Default value: 0

### **CFGDTCMSZ**

Size of the data TCM. 0=No DTCM implemented. Otherwise=Size of DTCM= $\text{pow}(2, \text{CFGDTCMSZ} - 1)$  KB. Minimum size is 4KB.

Type: `uint8_t`

Default value: 9

### **CFGITCMSZ**

Size of the instruction TCM. 0=No ITCM implemented. Otherwise=Size of ITCM= $\text{pow}(2, \text{CFGITCMSZ} - 1)$  KB. Minimum size is 4KB.

Type: `uint8_t`

Default value: 9

### **CFGMEMALIAS**

Memory address alias bit for the ITCM, DTCM and P-AHB regions. 0=No alias, 1=Alias bit 24, 2=Alias bit 25, 4=Alias bit 26, 8=Alias bit 27, 16=Alias bit 28.

Type: `uint8_t`

Default value: 0

### **CFGNOCDECP**

Bit N means external coprocessor N (CP7:CP0) disable for CDE coprocessor.

Type: `uint8_t`

Default value: 0

### **CFGPACBTI**

Enables support for the Pointer Authentication and Branch Target Identification (PACBTI) Extension. FALSE: Disabled, TRUE:PAC implemented using the QARMA3 algorithm with BTI.

Type: `bool`

Default value: `false`

**CFGPAHBSZ**

Size of the P-AHB peripheral port memory region. 0=P-AHB disabled, 1=64MB, 2=128MB, 3=256MB, 4=512MB.

Type: `uint8_t`

Default value: 0

**CPIF**

Specifies whether the external coprocessor interface is included.

Type: `bool`

Default value: `true`

**CPNSPRESENT**

Bit N means external coprocessor N (CP7:CP0) is accessible in Non-Secure state.

Type: `uint8_t`

Default value: 255

**CPSPPRESENT**

Bit N means external coprocessor N (CP7:CP0) is accessible in Secure state.

Type: `uint8_t`

Default value: 255

**CTI**

CTI (Cross Trigger Interface) included.

Type: `bool`

Default value: `false`

**CTI\_irq0\_pin**

CTI interrupt request 0 pin.

Type: `uint16_t`

Default value: 4

**CTI\_irq1\_pin**

CTI interrupt request 1 pin.

Type: `uint16_t`

Default value: 5

**DBGLVL**

1: 4 Watchpoints, 4 Breakpoint comparators; 2: 8 Watchpoints, 8 Breakpoint comparators.

Type: `uint8_t`

Default value: 2

**DCACHESZ**

Whether the D-cache is included and, if included, the size of it. Bit 0: 0=No D-cache included, 1=D-cache included. Bits [4:1]: 0x0=4KB D-cache, 0x1=8KB D-cache, 0x3=16KB D-cache, 0x7=32KB D-cache, 0xF=64KB D-cache.

Type: `uint8_t`

Default value: 15

**DTGU**

DTCM Security Gate Unit included.

Type: `bool`

Default value: `false`

**DTGUBLKSZ**

DTCM gate unit block size. Size= $\text{pow}(2, \text{DTGUBLKSZ} + 5)$  bytes.

Type: `uint8_t`

Default value: 3

**DTGUMAXBLKS**

Maximum number of DTCM gate unit blocks. Number of blocks= $\text{pow}(2, \text{DTGUMAXBLKS})$ .

Type: `uint8_t`

Default value: 0

**ECOREVNUM**

ECO Revision number.

Type: `uint64_t`

Default value: 0x0

**ERRDEVID.NUM**

RAS: Number of implemented error record indexes, 0 to 1.

Type: `uint8_t`

Default value: 1

**ETM**

Support for ETM trace. `false` : No ETM trace included, `true`: ETM trace included.

Type: `bool`

Default value: `true`

**FPU**

Set whether the model has VFP support.

Type: `bool`

Default value: `true`

**ICACHESZ**

Whether the I-cache is included and, if included, the size of it. Bit 0: 0=No I-cache included, 1=I-cache included. Bits [4:1]: `0x0`=4KB I-cache, `0x1`=8KB I-cache, `0x3`=16KB I-cache, `0x7`=32KB I-cache, `0xF`=64KB I-cache.

Type: `uint8_t`

Default value: 15

**INITNSVTOR**

Non-Secure vector-table offset at reset.

Type: `uint32_t`

Default value: `0x0`

**INITPAHBEN**

The P-AHB enable state at reset.

Type: `bool`

Default value: `false`

**INITSVTOR**

Secure vector-table offset at reset.

Type: `uint32_t`

Default value: `0x0`

### **INITTCMEN**

The TCM enable state at reset. Bit 0 corresponds to ITCM enable state, bit 1 corresponds to DTCM enable state.

Type: `uint8_t`

Default value: `3`

### **IRQDIS0**

IRQ line disable mask. Bit *n* of this 32-bit parameter disables `IRQ[n+0]`.

Type: `uint32_t`

Default value: `0x0`

### **IRQDIS1**

IRQ line disable mask. Bit *n* of this 32-bit parameter disables `IRQ[n+32]`.

Type: `uint32_t`

Default value: `0x0`

### **IRQDIS10**

IRQ line disable mask. Bit *n* of this 32-bit parameter disables `IRQ[n+320]`.

Type: `uint32_t`

Default value: `0x0`

### **IRQDIS11**

IRQ line disable mask. Bit *n* of this 32-bit parameter disables `IRQ[n+352]`.

Type: `uint32_t`

Default value: `0x0`

### **IRQDIS12**

IRQ line disable mask. Bit *n* of this 32-bit parameter disables `IRQ[n+384]`.

Type: `uint32_t`

Default value: `0x0`

**IRQDIS13**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+416].

Type: `uint32_t`

Default value: 0x0

**IRQDIS14**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+448].

Type: `uint32_t`

Default value: 0x0

**IRQDIS2**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+64].

Type: `uint32_t`

Default value: 0x0

**IRQDIS3**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+96].

Type: `uint32_t`

Default value: 0x0

**IRQDIS4**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+128].

Type: `uint32_t`

Default value: 0x0

**IRQDIS5**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+160].

Type: `uint32_t`

Default value: 0x0

**IRQDIS6**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+192].

Type: `uint32_t`

Default value: 0x0

**IRQDIS7**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+224].

Type: `uint32_t`

Default value: `0x0`

**IRQDIS8**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+256].

Type: `uint32_t`

Default value: `0x0`

**IRQDIS9**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+288].

Type: `uint32_t`

Default value: `0x0`

**IRQLVL**

Number of bits of interrupt priority.

Type: `uint8_t`

Default value: `3`

**ITGU**

ITCM Security Gate Unit included.

Type: `bool`

Default value: `false`

**ITGUBLKSZ**

ITCM gate unit block size. Size= $\text{pow}(2, \text{ITGUBLKSZ} + 5)$  bytes.

Type: `uint8_t`

Default value: `3`

**ITGUMAXBLKS**

Maximum number of ITCM gate unit blocks. Number of blocks= $\text{pow}(2, \text{ITGUMAXBLKS})$ .

Type: `uint8_t`

Default value: `0`

**ITM**

Level of instrumentation trace supported. `false` : No ITM trace included, `true`: ITM trace included.

Type: `bool`

Default value: `true`

**IWIC**

Include support for Internal Wake-up Interrupt Controller.

Type: `bool`

Default value: `true`

**LOCKDTGU**

Lock down of Data TGU registers write.

Type: `bool`

Default value: `false`

**LOCKITGU**

Lock down of Instruction TGU registers write.

Type: `bool`

Default value: `false`

**LOCKTCM**

Lock down of TCM registers write.

Type: `bool`

Default value: `false`

**LOCK\_NS\_MPU**

Lock down of Non-Secure MPU registers write.

Type: `bool`

Default value: `false`

**LOCK\_SAU**

Lock down of SAU registers write.

Type: `bool`

Default value: `false`

**LOCK\_S\_MPU**

Lock down of Secure MPU registers write.

Type: `bool`

Default value: `false`

**MPU\_NS**

Number of regions in the Non-Secure MPU. If Security Extensions are absent, this is the total number of MPU regions.

Type: `uint8_t`

Default value: 8

**MPU\_S**

Number of regions in the Secure MPU. If Security Extensions are absent, this is ignored.

Type: `uint8_t`

Default value: 8

**MVE**

Set whether the model has MVE support. If FPU = 0: 0=MVE not included, 1=Integer subset of MVE included. If FPU = 1: 0=MVE not included, 1=Integer subset of MVE included, 2=Integer and half and single precision floating point MVE included.

Type: `uint8_t`

Default value: 1

**NUMIRQ**

Number of user interrupts.

Type: `uint16_t`

Default value: 32

**SAU**

Number of SAU regions (0 => no SAU).

Type: `uint8_t`

Default value: 4

**SECEXT**

Whether the ARMv8-M Security Extensions are included.

Type: `bool`

Default value: `true`

### **WICLINES**

Number of lines supported by the WIC interface.

Type: `uint16_t`

Default value: `35`

### **cde\_impl\_name**

Name of the CDE implementation for this core (implementation contributed by MTI plugin).

Type: `string`

Default value: `N/A`

### **cpi\_div**

divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

### **cpi\_mul**

multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

### **dcache-state\_modelled**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **delay\_faultmask\_update**

Delay FAULTMASK update to context sync.

Type: `bool`

Default value: `false`

### **delay\_sysreg\_update**

Delay some system register updates (e.g. SHCSR) to context sync.

Type: `bool`

Default value: `false`

### **`ecc_on`**

Enable Error Correcting Code.

Type: `bool`

Default value: `false`

### **`has_cde`**

Enables Custom Datapath Extensions.

Type: `bool`

Default value: `false`

### **`has_core_dside_bus_gasket`**

STL gasket enabled.

Type: `bool`

Default value: `false`

### **`icache-state_modelled`**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **`manager_id`**

Manager ID presented in bus transactions.

Type: `uint64_t`

Default value: `0x0`

### **`min_sync_level`**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: `0`

**reported\_patch\_level**

Purely cosmetic patch level value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

**reported\_revision\_number**

Purely cosmetic revision number value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

**semihosting-Thumb\_SVC**

T32 SVC number for semihosting.

Type: `uint8_t`

Default value: 171

**semihosting-cmd\_line**

Command line available to semihosting SVC calls.

Type: `string`

Default value: N/A

**semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**semihosting-enable**

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

Type: `bool`

Default value: `true`

**semihosting-heap\_base**

Virtual address of heap base.

Type: `uint32_t`

Default value: `0x0`

### **semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint32_t`

Default value: `0x20700000`

### **semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint32_t`

Default value: `0x20800000`

### **semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint32_t`

Default value: `0x20700000`

### **trace\_style**

MVE instruction trace style: Add 16 for `[*-]` beat trace. Add 32 for tracing IMPLIED LOB instructions. Add 64 to change opcode of implied BF to `0xBF00`.

Type: `uint8_t`

Default value: `2`

### **vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

## **3.90 ARMCortexR4CT**

Defined in `LISA/ARMCortexR4CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r1p2	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

## About ARMCortexR4CT

- The model implements the `cfgie` port, although it is optional in hardware.
- `pvbuss` is the slave port to access the TCM RAM. Bits [3:0] of the user flags in the transaction are used to select the TCM:

**1**

selects the ATCM.

**2**

selects the BTCM.

Any other value is reserved.

- When you use the `semihosting-cmd_line` parameter to set the command line that is available to semihosting SVC calls, the value of `argv[0]` is set to the first command-line argument, not to the name of an image.

## Differences between the model and the RTL

This component has the following differences from the corresponding revision of the RTL implementation:

- There is a single memory port combining instruction, data, DMA and peripheral access.
- ECC and parity schemes are not supported (although the registers might be present).
- The dual core redundancy configuration is not supported.
- TCMs are modeled internally and the model does not support external TCMs or the ports associated with them.
- The hardware refers to the TCMs as “A” and “B”. The model refers to these as “i” and “d”.
- The RTL permits two data TCMs, B0 and B1, to be configured for extra bandwidth. These are not modeled.
- The `vfp-enable_at_reset` option is model-specific and has no hardware equivalent. Arm recommends that it is only used in test systems and tied off to false in production systems.

## Vectored Interrupt Controller (VIC) ports

The ARMCortexR4CT and ARMCortexR5xnCT models implement a simplified model of the Vectored Interrupt Controller (VIC) port.

The protocol consists of two ports:

- The `vic_addr` port signals the vectored interrupt address from the external VIC.
- The `vic_ack` port signals the VIC that an interrupt has been detected and is being serviced.

The expected interrupt sequence is:

1. The software enables the VIC interface by setting the VE bit in the CP15 control register and setting up suitable interrupt routines.
2. The VIC asserts IRQ.
3. Some time later, the processor detects and responds to the IRQ by asserting vic\_ack.
4. The VIC writes the vector address to the processor using vic\_addr.
5. The processor de-asserts vic\_ack.
6. The processor transfers control to the vectored address returned from the VIC.

The interaction between the processor and the VIC is untimed after the processor acknowledges the interrupt, so certain interrupt sequences cannot occur in the code translation processor models.

### Iris and MTI instances for ARM CortexR4CT

This model has the following Iris instances:

Name	Instance type
ARM CortexR4CT	ARM_Cortex-R4
ARM CortexR4CT.acp_mapper	PVBusMapper
ARM CortexR4CT.cpu0.l1dcache	PVCache
ARM CortexR4CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARM CortexR4CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARM CortexR4CT.cpu0.l1icache	PVCache
ARM CortexR4CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARM CortexR4CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARM CortexR4CT.ext_bus	PVBusLogger
ARM CortexR4CT.ext_bus.mapper	PVBusMapper
ARM CortexR4CT.l1_incoherent_interconnect	PVCache
ARM CortexR4CT.l1_incoherent_interconnect.downstream[0].pvbusmaster	PVBusMaster
ARM CortexR4CT.l1_incoherent_interconnect.upstream[Z] (where Z = 0-17)	PVBusSlave
ARM CortexR4CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
ARM CortexR4CT	ARM_Cortex-R4
ARM CortexR4CT.acp_mapper	PVBusMapper
ARM CortexR4CT.cpu0.l1dcache	PVCache
ARM CortexR4CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARM CortexR4CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARM CortexR4CT.cpu0.l1icache	PVCache
ARM CortexR4CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARM CortexR4CT.cpu0.l1icache.upstream[0]	PVBusSlave

Name	Component type
ARMCortexR4CT.ext_bus	PVBusLogger
ARMCortexR4CT.ext_bus.mapper	PVBusMapper
ARMCortexR4CT.l1_incoherent_interconnect	PVCache
ARMCortexR4CT.l1_incoherent_interconnect.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR4CT.l1_incoherent_interconnect.upstream[Z] (where Z = 0-17)	PVBusSlave
ARMCortexR4CT.l2_flusher	AsyncCacheFlushUnit

## Ports for ARMCortexR4CT

Port	Direction	Protocol	Description
cfgend0	slave	Signal	Configure BE8 mode after a reset.
cfgie	slave	Signal	Configure big endian instruction format after a reset.
cfgnmfi	slave	Signal	Configure FIQs as non-maskable after a reset.
cfgte	slave	Signal	Configure exceptions to be taken in thumb mode after a reset.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
cpuhalt	slave	Signal	Raising this signal will put the core into halt mode.
fiq	slave	Signal	This signal drives the CPU's fast-interrupt handling.
initramd	slave	Signal	Configure DTCM enabled after a reset.
initrami	slave	Signal	Configure ITCM enabled after a reset.
irq	slave	Signal	This signal drives the CPU's interrupt handling.
loczrama	slave	Signal	Location of ATCM at reset.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
pvbus_m	master	PVBus	The core will generate bus requests on this port.
pvbus_s	slave	PVBus	Slave access to TCMs.
reset	slave	Signal	Raising this signal will put the core into reset mode.
standbywfi	master	Signal	Signal from the core that it is waiting in standby for an interrupt.
ticks	master	InstructionCount	Port allowing the number of instructions since startup to be read from the CPU.
vic_ack	master	Signal	Vic acknowledge port to primary VIC.
vic_addr	slave	Value	Vic address port from primary VIC.
vinithi	slave	Signal	Configure high vectors after a reset.

## Parameters for ARMCortexR4CT

### CFGEND0

Initialize to BE8 endianness.

Type: bool

Default value: false

### CFGIE

Set the reset value of the instruction endian bit.

Type: `bool`

Default value: `false`

### **CFGNMF1**

Enable nonmaskable FIQ interrupts on startup.

Type: `bool`

Default value: `false`

### **CFGTE**

Initialize to take exceptions in T32 state. Model starts in T32 state.

Type: `bool`

Default value: `false`

### **INITRAMD**

Set or reset the INITRAMD signal.

Type: `bool`

Default value: `false`

### **INITRAMI**

Set or reset the INITRAMI signal.

Type: `bool`

Default value: `false`

### **LOCZRAMI**

Set or reset the LOCZRAMI signal.

Type: `bool`

Default value: `false`

### **NUM\_MPU\_REGION**

Number of MPU regions.

Type: `uint32_t`

Default value: `0x8`

### **VINITHI**

Initialize with high vectors enabled.

Type: `bool`

Default value: `false`

### **`cpi_div`**

divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 1

### **`cpi_mul`**

multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 1

### **`dcache-size`**

Set D-cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

### **`dcache-state_modelled`**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **`dcm0_base`**

Base address of DTCM at startup.

Type: `uint32_t`

Default value: `0x800000`

### **`dcm0_size`**

Size of DTCM in KB.

Type: `uint32_t`

Default value: `0x8`

### **`icache-size`**

Set I-cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

### **`icache-state_modelled`**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **`implements_vfp`**

Set whether the model has been built with VFP support.

Type: `bool`

Default value: `true`

### **`itcm0_base`**

Base address of ITCM at startup.

Type: `uint32_t`

Default value: `0x0`

### **`itcm0_size`**

Size of ITCM in KB.

Type: `uint32_t`

Default value: `0x8`

### **`manager_id`**

Manager ID presented in bus transactions.

Type: `uint64_t`

Default value: `0x0`

### **`min_sync_level`**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint32_t`

Default value: `0`

**reported\_fp\_revision**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored. Updates the FPSID.revision value.

Type: `int`

Default value: -1

**reported\_patch\_level**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int`

Default value: -1

**reported\_revision\_number**

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int`

Default value: -1

**semihosting-ARM\_HLT**

ARM HLT number for semihosting.

Type: `uint32_t`

Default value: 0xF000

**semihosting-ARM\_SVC**

ARM SVC number for semihosting.

Type: `uint32_t`

Default value: 0x123456

**semihosting-Thumb\_HLT**

Thumb HLT number for semihosting.

Type: `uint32_t`

Default value: 0x3c

**semihosting-Thumb\_SVC**

Thumb SVC number for semihosting.

Type: `uint32_t`

Default value: `0xAB`

**semihosting-cmd\_line**

Command line available to semihosting SVC calls.

Type: `string`

Default value: `""`

**semihosting-cwd**

virtual address of CWD.

Type: `string`

Default value: `""`

**semihosting-enable**

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

Type: `bool`

Default value: `true`

**semihosting-heap\_base**

Virtual address of heap base.

Type: `uint32_t`

Default value: `0x0`

**semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint32_t`

Default value: `0xF000000`

**semihosting-hlt-enable**

Enable semihosting HLT traps. Applications that use HLT semihosting must set this parameter to true and the semihosting-enable parameter to true.

Type: `bool`

Default value: `false`

**semihosting-prefix**

Prefix semihosting output with target instance name.

Type: `bool`

Default value: `false`

**semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint32_t`

Default value: `0x10000000`

**semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint32_t`

Default value: `0xF000000`

**vfp-enable\_at\_reset**

Enable coprocessor access and VFP at reset.

Type: `bool`

Default value: `false`

3.91 ARMCortexR52CT

Defined in `LISA/ARMCortexR52CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r1p4	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

Changes in 11.31.15

The following parameters were added:

- `has_delayed_dbgreg`

- `has_delayed_sysreg`

## About ARMCortexR52CT

The per-core parameters are preceded by `cpun.`, where `n` identifies the core (0-3).

- When you use the `semihosting-cmd_line` parameter to set the command line that is available to semihosting SVC calls, the value of `argv[0]` is set to the first command-line argument, not to the name of an image.
- The Cortex-R52 processor does not implement TrustZone technology, therefore the model does not support `S_*` or `NS_*` registers or exceptions.
- If flash memory is not enabled, to disable all routing to the flash port, set the `has_flash` parameter to `false`.

## Differences between the model and the RTL

- The model does not implement redundant cores for Dual-Core Lock-Step operations.
- The model does not implement the Low Power Interface to wake up the target core on receiving a `wake_request` signal from the GIC distributor.
- TCMs are modeled internally and the model does not support external TCMs or the ports associated with them.
- The model does not support running Software Test Libraries (STLs).
- The `vfp-enable_at_reset` parameter is a model-specific behavior with no hardware equivalent.
- ECC and parity schemes are hardware-specific so are not supported.

This model has a variable number of cores per cluster, specified using the `num_cores` parameter.

## Debug accesses

For debug accesses to succeed, they must have permissions that are compliant with the permission value in the `IMP_SLAVEPCTLR` register.

Note

The reset value of `IMP_SLAVEPCTLR` is `0x1` which means privileged access only.

## Iris and MTI instances for ARMCortexR52CT

This model has the following Iris instances:

Name	Instance type
ARMCortexR52CT	Cluster_ARM_Cortex-R52
ARMCortexR52CT.AMU	PVBusLogger
ARMCortexR52CT.AMU.mapper	PVBusMapper
ARMCortexR52CT.DAP	PVBusLogger
ARMCortexR52CT.DAP.mapper	PVBusMapper

Name	Instance type
ARMCortexR52CT.MMAP	PVBusLogger
ARMCortexR52CT.MMAP.mapper	PVBusMapper
ARMCortexR52CT.RAS	PVBusLogger
ARMCortexR52CT.RAS.mapper	PVBusMapper
ARMCortexR52CT.acp_mapper	PVBusMapper
ARMCortexR52CT.cpu0	ARM_CortexR52
ARMCortexR52CT.cpu0.UTLB	TLB
ARMCortexR52CT.cpu0.dtlb	TLB
ARMCortexR52CT.cpu0.gicv3_cpu_if	GICv3CPUInterface
ARMCortexR52CT.cpu0.l1dcache	PVCache
ARMCortexR52CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR52CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexR52CT.cpu0.l1licache	PVCache
ARMCortexR52CT.cpu0.l1licache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR52CT.cpu0.l1licache.upstream[0]	PVBusSlave
ARMCortexR52CT.ext_bus	PVBusLogger
ARMCortexR52CT.ext_bus.mapper	PVBusMapper
ARMCortexR52CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexR52CT.gic_iri	gic_iri
ARMCortexR52CT.gic_iri.rd_0	GICv3RedistributorInternal
ARMCortexR52CT.gic_iri.rd_0_0	GICv3RedistributorInternal
ARMCortexR52CT.gic_iri.rd_0_0_0	GICv3RedistributorInternal
ARMCortexR52CT.gic_iri.rd_0_0_0_v (where V = 0-1)	GICv3Redistributor
ARMCortexR52CT.gic_iri.rd_0_0_0_v.ExportTest.ARM_CortexR52CT.gic_iri.rd_0_0_0_D.pvbus_m[0].pvbusmaster (where V = 0-1; D = 0-1)	PVBusMaster
ARMCortexR52CT.gic_iri.rd_tl	GICv3Distributor
ARMCortexR52CT.global_debug_rom	debug_rom
ARMCortexR52CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
ARMCortexR52CT.AMU	PVBusLogger
ARMCortexR52CT.AMU.mapper	PVBusMapper
ARMCortexR52CT.DAP	PVBusLogger
ARMCortexR52CT.DAP.mapper	PVBusMapper
ARMCortexR52CT.MMAP	PVBusLogger
ARMCortexR52CT.MMAP.mapper	PVBusMapper
ARMCortexR52CT.RAS	PVBusLogger
ARMCortexR52CT.RAS.mapper	PVBusMapper
ARMCortexR52CT.acp_mapper	PVBusMapper

Name	Component type
ARMCortexR52CT.cpu0	ARM_CortexR52
ARMCortexR52CT.cpu0.UTLB	TLB
ARMCortexR52CT.cpu0.gicv3_cpu_if	GICv3CPUInterface
ARMCortexR52CT.cpu0.l1dcache	PVCache
ARMCortexR52CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR52CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexR52CT.cpu0.l1licache	PVCache
ARMCortexR52CT.cpu0.l1licache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR52CT.cpu0.l1licache.upstream[0]	PVBusSlave
ARMCortexR52CT.ext_bus	PVBusLogger
ARMCortexR52CT.ext_bus.mapper	PVBusMapper
ARMCortexR52CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexR52CT.gic_iri.rd_0	GICv3RedistributorInternal
ARMCortexR52CT.gic_iri.rd_0_0	GICv3RedistributorInternal
ARMCortexR52CT.gic_iri.rd_0_0_0	GICv3RedistributorInternal
ARMCortexR52CT.gic_iri.rd_0_0_0_V (where V = 0-1)	GICv3Redistributor
ARMCortexR52CT.gic_iri.rd_0_0_0_V.ExportTest.ARM_CortexR52CT.gic_iri.rd_0_0_0_D.pvbus_m[0].pvbusmaster (where V = 0-1; D = 0-1)	PVBusMaster
ARMCortexR52CT.gic_iri.rd_tl	GICv3Distributor
ARMCortexR52CT.l2_flusher	AsyncCacheFlushUnit

## Ports for ARMCortexR52CT

Port	Direction	Protocol	Description
cfgdbgromaddr	slave	Value_64	Debug ROM base address.
cfgdbgromaddrv	slave	Signal	Debug ROM base address valid.
cfgendianess	slave	Signal	This signal if for EE bit initialisation.
cfgperiphbase	slave	Value_64	This port sets the base address of private peripheral region.
cfgthumbexceptions	slave	Signal	This signal provides default exception handling state.
cfgvectable	slave	Value_64	Reset vector base address.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
clrexmonack	master	Signal	Acknowledge handshake signal for the clrexmonreq signal
clrexmonreq	slave	Signal	Signals the clearing of an external global exclusive monitor
clusterid	slave	Value	Configure Aff2 and Aff1 fields of MPIDR. Aff1 = value[7:0], Aff2 = value[15:8]
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
commr	master	Signal	Receive portion of Data Transfer Register full.
commtx	master	Signal	Transmit portion of Data Transfer Register empty.

Port	Direction	Protocol	Description
COREPACTIVEx1	master	Signal	These signals relate to core power down. Equivalent to COREPACTIVEx[1]
cpuhalt	slave	Signal	Raising this signal will put the core into halt mode.
cpuporeset	slave	Signal	Power on reset. Initializes all the processor logic, including debug logic.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
dbgack	master	Signal	External debug interface.
dbgen	slave	Signal	External debug interface.
dbgnopwrdown	master	Signal	There is no support for PChannel in CortexR52. These signals relate to core power down. Equivalent to COREPACTIVEx[0]
dbgpwrupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.
edbgrq	slave	Signal	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
ext_slave_s	slave	PVBus	External Slave port. Equivalent to AXIS port
extppi_in_0	slave	Signal	Core 0 external ppi signals.
extppi_in_1	slave	Signal	Core 1 external ppi signals.
extppi_in_2	slave	Signal	Core 2 external ppi signals.
extppi_in_3	slave	Signal	Core 3 external ppi signals.
flash_m	master	PVBus	Flash Port.
gdu_external_m	master	GICv3Comms	GDU external messaging port.
hiden	slave	Signal	External debug interface.
hniden	slave	Signal	External debug interface.
llpp_m	master	PVBus	LLPP (Low-Latency Peripheral Port).
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_core_m	master	PVBus	The core will generate bus requests on this port. Equivalent to AXIM port
reset	slave	Signal	Raising this signal will put the core into reset mode.
sei	slave	Signal	Per core virtual System Error physical pins.
spi_in	slave	Signal	Shared peripheral interrupts.
standbywfe	master	Signal	This signal indicates if a core is in WFE state.
standbywfi	master	Signal	This signal indicates if a core is in WFI state.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
topreset	slave	Signal	This signal resets timer and interrupt controller.
vsei	slave	Signal	Per core virtual System Error physical pins.
warmrstreq	master	Signal	Warm reset request from core.

## Parameters for ARMCortexR52CT

### **cpuX.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: `bool`

Default value: `false`

### **cpuX.CFGTE**

Equivalent to CFGTHUMBEXCEPTIONS.

Type: `bool`

Default value: `false`

### **cpuX.RVBARADDR**

Equivalent to CFGVECTABLE.

Type: `uint32_t`

Default value: `0x0`

### **cpuX.ase-present**

Set whether the model has been built with NEON support.

Type: `bool`

Default value: `true`

### **cpuX.dcache-size**

L1 D-Cache size in bytes.

Type: `uint16_t`

Default value: `0x8000`

### **cpuX.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **cpuX.flash.enable**

Equivalent to CFGFLASHEN.

Type: `bool`

Default value: `false`

### **`cpuX.icache-size`**

L1 I-Cache size in bytes.

Type: `uint16_t`

Default value: `0x8000`

### **`cpuX.llpp.base`**

Equivalent to `CFGLLPPBASEADDR`.

Type: `uint32_t`

Default value: `0x0`

### **`cpuX.llpp.size`**

Equivalent to `CFGLLPPSIZE`.

Type: `uint32_t`

Default value: `0x1000`

### **`cpuX.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint64_t`

Default value: `0x4000000`

### **`cpuX.min_sync_level`**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: `0`

### **`cpuX.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**cpuX.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**cpuX.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**cpuX.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

**cpuX.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**cpuX.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**cpuX.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**cpuX.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint32_t`

Default value: `0x0`

**cpuX.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint32_t`

Default value: `0xf000000`

**cpuX.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint32_t`

Default value: `0x10000000`

**cpuX.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint32_t`

Default value: `0xf000000`

**cpuX.tcm.a.enable**

Equivalent to CFGTCMBOOT.

Type: `bool`

Default value: `false`

**cpuX.tcm.a.size**

Sets the size of the ATCM(in bytes).

Type: `uint32_t`

Default value: `0x4000`

**cpuX.tcm.a.wait**

TCM Register A accesses wait states: 0-1 states.

Type: `uint32_t`

Default value: `0x0`

**cpuX.tcm.b.size**

Sets the size of the BTCM(in bytes).

Type: `uint32_t`

Default value: `0x4000`

**cpuX.tcm.b.wait**

TCM Register B accesses wait states: 0-1 states.

Type: uint32\_t

Default value: 0x0

**cpuX.tcm.c.size**

Sets the size of the CTCM(in bytes).

Type: uint32\_t

Default value: 0x2000

**cpuX.tcm.c.wait**

TCM Register C accesses wait states: 0-1 states.

Type: uint32\_t

Default value: 0x0

**cpuX.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**cpuX.vfp-dp-present**

Whether double-precision floating point feature is implemented.

Type: bool

Default value: true

**cpuX.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: bool

Default value: false

**CLUSTER\_ID**

CLUSTER\_ID[15:8] equivalent to CFGMPIDRAFF2, CLUSTER\_ID[7:0] equivalent to CFGMPIDRAFF1.

Type: `uint16_t`

Default value: `0x0`

### **CMO\_broadcast\_when\_cache\_state\_modelling\_disabled**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. This value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: `1`

### **DBGROMADDR**

Equivalent to `CFGDBGROMADDR`.

Type: `uint32_t`

Default value: `0x0`

### **DBGROMADDRV**

If true, set bits[1:0] of the CP15 `DBGDRAR` to indicate that the address is valid.

Type: `bool`

Default value: `false`

### **GICDISABLE**

Used internally. Please ignore.

Type: `bool`

Default value: `false`

### **NUM\_CORES**

Number of cores in cluster.

Type: `uint8_t`

Default value: `1`

### **PERIPHBASE**

Equivalent to `CFGPERIPHBASE`.

Type: `uint32_t`

Default value: 0x13080000

**cluster\_utid**

Equivalent to CFGCLUSTERUTID.

Type: uint8\_t

Default value: 0

**cpi\_div**

Divider for calculating CPI (Cycles Per Instruction).

Type: uint32\_t

Default value: 0x1

**cpi\_mul**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: uint32\_t

Default value: 0x1

**dcache-prefetch\_enabled**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

Type: bool

Default value: false

**dcache-read\_access\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**dcache-state\_modelled**

Set whether D-cache has stateful implementation.

Type: bool

Default value: false

**dcache-write\_access\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**enable\_lock\_step**

(equivalent to `CFGSLSPPLIT`).

Type: `bool`

Default value: `false`

**enable\_simulation\_performance\_optimizations**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of `stage12_tlb_size` parameter to 1024).

Type: `bool`

Default value: `true`

**flash\_protection\_enable\_at\_reset**

Equivalent to `CFGFLASHPROTEN`.

Type: `bool`

Default value: `false`

**has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

**has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

**has\_export\_m\_port**

The interrupt distributor has an optional interrupt export port for routing interrupts to an external device.

Type: `bool`

Default value: `true`

**has\_flash**

Equivalent to `CFGFLASHIMP`. `has_flash = false => CFGFLASHIMP = false`.

Type: `bool`

Default value: `false`

**has\_flash\_protection**

Equivalent to `CFGFLASHPROTIMP`.

Type: `bool`

Default value: `true`

**has\_llpp**

Equivalent to `CFGLLPPIMP`.

Type: `bool`

Default value: `false`

**icache-prefetch\_enabled**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

Type: `bool`

Default value: `false`

**icache-read\_access\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-state\_modelled**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

**memory.ext\_slave\_base**

Equivalent to `CFGAXISTCMBASEADDR`.

Type: `uint32_t`

Default value: `0x0`

**memory.flash\_base**

Equivalent to `CFGFLASHBASEADDR`.

Type: `uint32_t`

Default value: `0x0`

**num\_protection\_regions\_s1**

Number of v8-R stage1 protection regions.

Type: `uint8_t`

Default value: `24`

**num\_protection\_regions\_s2**

Number of v8-R hyp protection regions.

Type: `uint8_t`

Default value: `16`

**num\_spi**

Number of interrupts (SPI) into the internal GIC controller.

Type: `uint16_t`

Default value: `960`

**ram\_protection\_enable\_at\_reset**

Equivalent to `CFGGRAMPROTEN`.

Type: `bool`

Default value: `false`

**reported\_fp\_revision**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored. Updates the FPSID.revision value.

Type: `int`

Default value: -1

**reported\_patch\_level**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int`

Default value: -1

**reported\_revision\_number**

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int`

Default value: -1

## 3.92 ARMCortexR52PlusCT

Defined in `LISA/ARMCortexR52PlusCT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Changes in 11.31.15

The following parameters were added:

- `has_delayed_dbgreg`
- `has_delayed_sysreg`

### About ARMCortexR52PlusCT

The model does not implement the following:

- Redundant cores for Dual Core Lock Step operation.

- Low Power Interface to wake the target core on receiving a `wake_request` from the GIC Distributor.

## Debug accesses

For debug accesses to succeed, they must have permissions that are compliant with the permission value in the `IMP_SLAVEPCTLR` register.

The reset value of `IMP_SLAVEPCTLR` is `0x1` which means privileged access only.

## Iris and MTI instances for ARMCortexR52PlusCT

This model has the following Iris instances:

Name	Instance type
ARMCortexR52PlusCT	Cluster_ARM_Cortex-R52Plus
ARMCortexR52PlusCT.AMU	PVBusLogger
ARMCortexR52PlusCT.AMU.mapper	PVBusMapper
ARMCortexR52PlusCT.DAP	PVBusLogger
ARMCortexR52PlusCT.DAP.mapper	PVBusMapper
ARMCortexR52PlusCT.MMAP	PVBusLogger
ARMCortexR52PlusCT.MMAP.mapper	PVBusMapper
ARMCortexR52PlusCT.RAS	PVBusLogger
ARMCortexR52PlusCT.RAS.mapper	PVBusMapper
ARMCortexR52PlusCT.acp_mapper	PVBusMapper
ARMCortexR52PlusCT.cpu0	ARM_Cortex-R52Plus
ARMCortexR52PlusCT.cpu0.UTLB	TLB
ARMCortexR52PlusCT.cpu0.dtlb	TLB
ARMCortexR52PlusCT.cpu0.gicv3_cpu_if	GICv3CPUInterface
ARMCortexR52PlusCT.cpu0.l1dcache	PVCache
ARMCortexR52PlusCT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR52PlusCT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexR52PlusCT.cpu0.l1icache	PVCache
ARMCortexR52PlusCT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR52PlusCT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexR52PlusCT.ext_bus	PVBusLogger
ARMCortexR52PlusCT.ext_bus.mapper	PVBusMapper
ARMCortexR52PlusCT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexR52PlusCT.gic_iri	gic_iri
ARMCortexR52PlusCT.gic_iri.rd_0	GICv3RedistributorInternal
ARMCortexR52PlusCT.gic_iri.rd_0_0	GICv3RedistributorInternal

Name	Instance type
ARMCortexR52PlusCT.gic_iri.rd_0_0_0	GlCv3RedistributorInternal
ARMCortexR52PlusCT.gic_iri.rd_0_0_0_V (where V = 0-1)	GlCv3Redistributor
ARMCortexR52PlusCT.gic_iri.rd_0_0_0_V.ExportTest.ARM CortexR52PlusCT.gic_iri.rd_0_0_0_D.pvbus_m[0].pvbusmaster (where V = 0-1; D = 0-1)	PVBusMaster
ARMCortexR52PlusCT.gic_iri.rd_t1	GlCv3Distributor
ARMCortexR52PlusCT.global_debug_rom	debug_rom
ARMCortexR52PlusCT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
ARMCortexR52PlusCT.AMU	PVBusLogger
ARMCortexR52PlusCT.AMU.mapper	PVBusMapper
ARMCortexR52PlusCT.DAP	PVBusLogger
ARMCortexR52PlusCT.DAP.mapper	PVBusMapper
ARMCortexR52PlusCT.MMAP	PVBusLogger
ARMCortexR52PlusCT.MMAP.mapper	PVBusMapper
ARMCortexR52PlusCT.RAS	PVBusLogger
ARMCortexR52PlusCT.RAS.mapper	PVBusMapper
ARMCortexR52PlusCT.acp_mapper	PVBusMapper
ARMCortexR52PlusCT.cpu0	ARM_Cortex-R52Plus
ARMCortexR52PlusCT.cpu0.UTLB	TLB
ARMCortexR52PlusCT.cpu0.gicv3_cpu_if	GlCv3CPUInterface
ARMCortexR52PlusCT.cpu0.l1dcache	PVCache
ARMCortexR52PlusCT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR52PlusCT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexR52PlusCT.cpu0.l1icache	PVCache
ARMCortexR52PlusCT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR52PlusCT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexR52PlusCT.ext_bus	PVBusLogger
ARMCortexR52PlusCT.ext_bus.mapper	PVBusMapper
ARMCortexR52PlusCT.gic_cpuif_decoder_cluster	GlCv3CPUInterfaceDecoder
ARMCortexR52PlusCT.gic_iri.rd_0	GlCv3RedistributorInternal
ARMCortexR52PlusCT.gic_iri.rd_0_0	GlCv3RedistributorInternal
ARMCortexR52PlusCT.gic_iri.rd_0_0_0	GlCv3RedistributorInternal
ARMCortexR52PlusCT.gic_iri.rd_0_0_0_V (where V = 0-1)	GlCv3Redistributor
ARMCortexR52PlusCT.gic_iri.rd_0_0_0_V.ExportTest.ARM CortexR52PlusCT.gic_iri.rd_0_0_0_D.pvbus_m[0].pvbusmaster (where V = 0-1; D = 0-1)	PVBusMaster
ARMCortexR52PlusCT.gic_iri.rd_t1	GlCv3Distributor
ARMCortexR52PlusCT.l2_flusher	AsyncCacheFlushUnit

## Ports for ARMCortexR52PlusCT

Port	Direction	Protocol	Description
cfgdbgromaddr	slave	Value_64	Debug ROM base address.
cfgdbgromaddrv	slave	Signal	Debug ROM base address valid.
cfgendianess	slave	Signal	This signal if for EE bit initialisation.
cfgperiphbase	slave	Value_64	This port sets the base address of private peripheral region.
cfgthumbexceptions	slave	Signal	This signal provides default exception handling state.
cfgvectable	slave	Value_64	Reset vector base address.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
clusterid	slave	Value	Configure Aff2 and Aff1 fields of MPIDR. Aff1 = value[7:0], Aff2 = value[15:8]
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
commr	master	Signal	Receive portion of Data Transfer Register full.
commt	master	Signal	Transmit portion of Data Transfer Register empty.
cpuhalt	slave	Signal	Raising this signal will put the core into halt mode.
cpuporeset	slave	Signal	Power on reset. Initializes all the processor logic, including debug logic.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
dbgack	master	Signal	External debug interface.
dbgen	slave	Signal	External debug interface.
dbgnopwrdown	master	Signal	There is no support for PChannel in CortexR52Plus. These signals relate to core power down. Equivalent to COREPACTIVEx
dbgpwrupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.
edbgrq	slave	Signal	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
ext_slave_s	slave	PVBus	External Slave port. Equivalent to AXIS port
extppi_in_0	slave	Signal	Core 0 external ppi signals.
extppi_in_1	slave	Signal	Core 1 external ppi signals.
extppi_in_2	slave	Signal	Core 2 external ppi signals.
extppi_in_3	slave	Signal	Core 3 external ppi signals.
flash_m	master	PVBus	Flash Port.
gdu_external_m	master	GLCv3Comms	GDU external messaging port.
hiden	slave	Signal	External debug interface.
hniden	slave	Signal	External debug interface.
llpp_m	master	PVBus	LLPP (Low-Latency Peripheral Port).
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.

Port	Direction	Protocol	Description
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_core_m	master	PVBus	The core will generate bus requests on this port. Equivalent to AXIM port
reset	slave	Signal	Raising this signal will put the core into reset mode.
sei	slave	Signal	Per core virtual System Error physical pins.
spi_in	slave	Signal	Shared peripheral interrupts.
standbywfe	master	Signal	This signal indicates if a core is in WFE state.
standbywfi	master	Signal	This signal indicates if a core is in WFI state.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
topreset	slave	Signal	This signal resets timer and interrupt controller.
vsei	slave	Signal	Per core virtual System Error physical pins.
warmrstreq	master	Signal	Warm reset request from core.

## Parameters for ARM Cortex R52 Plus CT

### **cpuX.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **cpuX.CFGTE**

Equivalent to CFGTHUMBEXCEPTIONS.

Type: `bool`

Default value: `false`

### **cpuX.RVBARADDR**

Equivalent to CFGVECTABLE.

Type: `uint32_t`

Default value: `0x0`

### **cpuX.ase-present**

Set whether the model has been built with NEON support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**cpuX.dcache-size**

L1 D-Cache size in bytes.

Type: `uint16_t`

Default value: `0x8000`

**cpuX.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**cpuX.flash.enable**

Equivalent to `CFGFLASHEN`.

Type: `bool`

Default value: `false`

**cpuX.icache-size**

L1 I-Cache size in bytes.

Type: `uint16_t`

Default value: `0x8000`

**cpuX.llpp.base**

Equivalent to `CFGLLPPBASEADDR`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.llpp.size**

Equivalent to `CFGLLPPSIZE`.

Type: `uint32_t`

Default value: `0x8000000`

**cpuX.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

### **`cpuX.min_sync_level`**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: `0`

### **`cpuX.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

### **`cpuX.semihosting-ARM_SVC`**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

### **`cpuX.semihosting-T32_HLT`**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

### **`cpuX.semihosting-Thumb_SVC`**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

### **`cpuX.semihosting-cmd_line`**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

### **`cpuX.semihosting-cwd`**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**`cpuX.semihosting-enable`**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**`cpuX.semihosting-heap_base`**

Virtual address of heap base.

Type: `uint32_t`

Default value: `0x0`

**`cpuX.semihosting-heap_limit`**

Virtual address of top of heap.

Type: `uint32_t`

Default value: `0xf000000`

**`cpuX.semihosting-stack_base`**

Virtual address of base of descending stack.

Type: `uint32_t`

Default value: `0x10000000`

**`cpuX.semihosting-stack_limit`**

Virtual address of stack limit.

Type: `uint32_t`

Default value: `0xf000000`

**`cpuX.tcm.a.enable`**

Equivalent to CFGTCMBOOT.

Type: `bool`

Default value: `false`

**`cpuX.tcm.a.size`**

Sets the size of the ATCM(in bytes).

Type: `uint32_t`

Default value: `0x4000`

#### **`cpuX.tcm.a.wait`**

TCM Register A accesses wait states: 0-1 states.

Type: `uint8_t`

Default value: `0`

#### **`cpuX.tcm.b.size`**

Sets the size of the BTCM(in bytes).

Type: `uint32_t`

Default value: `0x4000`

#### **`cpuX.tcm.b.wait`**

TCM Register B accesses wait states: 0-1 states.

Type: `uint8_t`

Default value: `0`

#### **`cpuX.tcm.c.size`**

Sets the size of the CTCM(in bytes).

Type: `uint32_t`

Default value: `0x2000`

#### **`cpuX.tcm.c.wait`**

TCM Register C accesses wait states: 0-1 states.

Type: `uint8_t`

Default value: `0`

#### **`cpuX.trace_special_hlt_imm16`**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**cpuX.vfp-dp-present**

Whether double-precision floating point feature is implemented (FEAT\_F64MM).

Type: `bool`

Default value: `true`

**cpuX.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**CLUSTER\_ID**

CLUSTER\_ID[15:8] equivalent to CFGMPIDRAFF2, CLUSTER\_ID[7:0] equivalent to CFGMPIDRAFF1.

Type: `uint16_t`

Default value: `0x0`

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain even when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: `1`

**DBGROMADDR**

Equivalent to CFGDBGROMADDR.

Type: `uint32_t`

Default value: `0x0`

**DBGROMADDRV**

If true, set bits[1:0] of the CP15 DBGDRAR to indicate that the address is valid.

Type: `bool`

Default value: `false`

**GICDISABLE**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: `false`

**NUM\_CORES**

Number of cores in cluster.

Type: `uint8_t`

Default value: 1

**PERIPHBASE**

Equivalent to CFGPERIPHBASE.

Type: `uint32_t`

Default value: `0x13080000`

**cluster\_utid**

Equivalent to CFGCLUSTERUTID.

Type: `uint8_t`

Default value: 0

**cpi\_div**

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

**cpi\_mul**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

**dcache-prefetch\_enabled**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

Type: `bool`

Default value: `false`

### **`dcache-read_access_latency`**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-state_modelled`**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **`dcache-write_access_latency`**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`enable_lock_step`**

(equivalent to `CFGSLSPPLIT`).

Type: `bool`

Default value: `false`

### **`enable_simulation_performance_optimizations`**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of `stage12_tlb_size` parameter to 1024).

Type: `bool`

Default value: `true`

**flash\_protection\_enable\_at\_reset**

Equivalent to CFGFLASHPROTEN.

Type: `bool`

Default value: `false`

**has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

**has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

**has\_export\_m\_port**

The interrupt distributor has an optional interrupt export port for routing interrupts to an external device.

Type: `bool`

Default value: `true`

**has\_flash**

Equivalent to CFGFLASHIMP.

Type: `bool`

Default value: `false`

**has\_flash\_protection**

Equivalent to CFGFLASHPROTIMP.

Type: `bool`

Default value: `true`

**has\_llpp**

Equivalent to CFGLLPPIMP.

Type: `bool`

Default value: `false`

### **icache-prefetch\_enabled**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

Type: `bool`

Default value: `false`

### **icache-read\_access\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **icache-state\_modelled**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **memory.ext\_slave\_base**

Equivalent to `CFGAXISTCMBASEADDR`.

Type: `uint64_t`

Default value: `0x0`

### **memory.flash\_base**

Equivalent to `CFGFLASHBASEADDR`.

Type: `uint32_t`

Default value: `0x0`

### **num\_protection\_regions\_s1**

Number of v8-R protection regions.

Type: `uint8_t`

Default value: `24`

**num\_protection\_regions\_s2**

Number of v8-R hyp protection regions.

Type: `uint8_t`

Default value: 24

**num\_spi**

Number of interrupts (SPI) into the internal GIC controller.

Type: `uint16_t`

Default value: 960

**ram\_protection\_enable\_at\_reset**

Equivalent to CFGRAMPROTEN.

Type: `bool`

Default value: `false`

**reported\_fp\_revision**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored. Updates the FPSID.revision value.

Type: `int8_t`

Default value: -1

**reported\_patch\_level**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

**reported\_revision\_number**

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

## 3.93 ARMCortexR5x1CT

Defined in `LISA/ARMCortexR5x1CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r1p2	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### About ARMCortexR5x1CT

An ARMCortexR5x2CT component also exists.

The per-core parameters are preceded by `cpun.`, where `n` identifies the core (0 or 1).

The allowed values for the `LOCK_STEP` parameter are:

- 0**  
Disable. Set for two independent cores.
- 1**  
Lock Step. Appears to the system as two cores but is internally modeled as a single core.
- 3**  
Split Lock. Appears to the system as two cores but can be statically configured from reset either as two independent cores or two locked cores. For the model, these are equivalent to Disable and Lock Step, respectively, except for the value of build options registers. The model does not support dynamically splitting and locking the cluster.

`pvbus_s` is the slave port to access the TCM RAM of CPU `n`. Bits [3:0] of the user flags in the transaction are used to select the TCM:

- 1**  
Selects the ATCM of CPU 0
- 2**  
Selects the BTCM of CPU 0
- 3**  
Selects the ATCM of CPU 1
- 4**  
Selects the BTCM of CPU 1

Any other value is reserved.

### Differences between the model and the RTL

This component has the following differences from the corresponding revision of the RTL implementation:

- The RR bit in the SCTLR is ignored.
- The Low Latency Peripheral Port is not modeled.
- The model only has a single bus master port combining instruction, data, DMA and peripheral accesses. The CP15 control registers associated with peripheral buses preserve values but do not have any other effect.
- The model only supports static split lock and not dynamic split lock. Contact Arm for details.
- TCMs are modeled internally and the model does not support external TCMs or the ports associated with them.
- The model cannot experience an ECC error and does not support fault injection into the system, so Arm does not provide the ability to set error schemes for the caches or TCMs. Contact Arm if you require a particular value in the Build Options registers.

### Vectored Interrupt Controller (VIC) ports

The ARMCortexR4CT and ARMCortexR5xnCT models implement a simplified model of the Vectored Interrupt Controller (VIC) port.

The protocol consists of two ports:

- The `vic_addr` port signals the vectored interrupt address from the external VIC.
- The `vic_ack` port signals the VIC that an interrupt has been detected and is being serviced.

The expected interrupt sequence is:

1. The software enables the VIC interface by setting the VE bit in the CP15 control register and setting up suitable interrupt routines.
2. The VIC asserts IRQ.
3. Some time later, the processor detects and responds to the IRQ by asserting `vic_ack`.
4. The VIC writes the vector address to the processor using `vic_addr`.
5. The processor de-asserts `vic_ack`.
6. The processor transfers control to the vectored address returned from the VIC.

The interaction between the processor and the VIC is untimed after the processor acknowledges the interrupt, so certain interrupt sequences cannot occur in the code translation processor models.

### Iris and MTI instances for ARMCortexR5x1CT

This model has the following Iris instances:

Name	Instance type
ARMCortexR5x1CT	Cluster_ARM_Cortex-R5
ARMCortexR5x1CT.acp_mapper	PVBusMapper
ARMCortexR5x1CT.cpu0	ARM_Cortex-R5
ARMCortexR5x1CT.cpu0.l1dcache	PVCache
ARMCortexR5x1CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster

Name	Instance type
ARMCortexR5x1CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexR5x1CT.cpu0.l1icache	PVCache
ARMCortexR5x1CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR5x1CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexR5x1CT.ext_bus	PVBusLogger
ARMCortexR5x1CT.ext_bus.mapper	PVBusMapper
ARMCortexR5x1CT.l1_incoherent_interconnect	PVCache
ARMCortexR5x1CT.l1_incoherent_interconnect.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR5x1CT.l1_incoherent_interconnect.upstream[U] (where U = 0-17)	PVBusSlave
ARMCortexR5x1CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
ARMCortexR5x1CT.acp_mapper	PVBusMapper
ARMCortexR5x1CT.cpu0	ARM_Cortex-R5
ARMCortexR5x1CT.cpu0.l1dcache	PVCache
ARMCortexR5x1CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR5x1CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexR5x1CT.cpu0.l1icache	PVCache
ARMCortexR5x1CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR5x1CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexR5x1CT.ext_bus	PVBusLogger
ARMCortexR5x1CT.ext_bus.mapper	PVBusMapper
ARMCortexR5x1CT.l1_incoherent_interconnect	PVCache
ARMCortexR5x1CT.l1_incoherent_interconnect.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR5x1CT.l1_incoherent_interconnect.upstream[U] (where U = 0-17)	PVBusSlave
ARMCortexR5x1CT.l2_flusher	AsyncCacheFlushUnit

## Ports for ARMCortexR5x1CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	ACP slave port.
cfgatcmsz	slave	Value	ATCM size.
cfgbtcmsz	slave	Value	BTCM Size.
cfgend	slave	Signal	This signal is for EE bit initialisation. This is CFGEE in RTL but cfgend here fastsim consistency reasons.
cfgnmfi	slave	Signal	Controls non-maskable Fast Interrupts.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
cpuhalt	slave	Signal	Raising this signal will put the core into halt mode.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.

Port	Direction	Protocol	Description
fiq	slave	Signal	This signal drives the CPU's fast-interrupt handling.
groupid	slave	Value	Group ID used for MPIDR.
initrama	slave	Signal	If ATCM is enabled at reset.
initramb	slave	Signal	If BTCM is enabled at reset.
irq	slave	Signal	This signal drives the CPU's interrupt handling.
loczrama	slave	Signal	Location of ATCM at reset.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
pvbus_m	master	PVBus	The core will generate bus requests on this port.
pvbus_s	slave	PVBus	tcm slave port.
reset	slave	Signal	Raising this signal will put the core into reset mode.
standbywfe	master	Signal	This signal indicate if a core is in wfe state RTL calls this WFEPIPESTOPPED.
standbywfi	master	Signal	This signal indicates if a core is in WFI state RTL uses WFIPIPESTOPPED.
teinit	slave	Signal	Default exception handling state.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vic_ack	master	Signal	Vic acknowledge port to primary VIC.
vic_addr	slave	Value	Vic address port from primary VIC.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.

## Parameters for ARM Cortex R5x1CT

### **cpu0 . CFGATCMSZ**

Sets the size of the ATCM.

Type: `uint32_t`

Default value: `0xE`

### **cpu0 . CFGBTCMSZ**

Sets the size of the BTCM.

Type: `uint32_t`

Default value: `0xE`

### **cpu0 . CFGEND**

Initialize to BE8 endianness.

Type: `bool`

Default value: `false`

### **cpu0 . CFGIE**

Set the reset value of the instruction endian bit.

Type: `bool`

Default value: `false`

### **`cpu0.CFGNMFI`**

Enable nonmaskable FIQ interrupts on startup.

Type: `bool`

Default value: `false`

### **`cpu0.DP_FLOAT`**

Sets whether double-precision instructions are available.

Type: `bool`

Default value: `true`

### **`cpu0.LOCZRAMA`**

Initialize with LOCZRAMA set to 1.

Type: `bool`

Default value: `false`

### **`cpu0.TEINIT`**

T32 exception enable. The default has exceptions including reset handled in A32 state.

Type: `bool`

Default value: `false`

### **`cpu0.VINITHI`**

Initialize with high vectors enabled.

Type: `bool`

Default value: `false`

### **`cpu0.atcm_base`**

Model-specific. Sets the base address of the ATCM (forced to 0 if LOCZRAMA is 1).

Type: `uint32_t`

Default value: `0x00000000`

### **`cpu0.btcn_base`**

Model-specific. Sets the base address of the BTCN (forced to 0 if LOCZRAMA is 0).

Type: `uint32_t`

Default value: `0x00800000`

### **`cpu0.dcache-size`**

Set D-cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

### **`cpu0.icache-size`**

Set I-cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

### **`cpu0.min_sync_level`**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint32_t`

Default value: `0`

### **`cpu0.semihosting-ARM_HLT`**

ARM HLT number for semihosting.

Type: `uint32_t`

Default value: `0xF000`

### **`cpu0.semihosting-ARM_SVC`**

ARM SVC number for semihosting.

Type: `uint32_t`

Default value: `0x123456`

### **`cpu0.semihosting-Thumb_HLT`**

Thumb HLT number for semihosting.

Type: `uint32_t`

Default value: `0x3c`

### **`cpu0.semihosting-Thumb_SVC`**

Thumb SVC number for semihosting.

Type: `uint32_t`

Default value: `0xAB`

### **`cpu0.semihosting-cmd_line`**

Command line available to semihosting SVC calls.

Type: `string`

Default value: `""`

### **`cpu0.semihosting-cwd`**

Virtual address of CWD.

Type: `string`

Default value: `""`

### **`cpu0.semihosting-enable`**

Enable semihosting SVC Boolean true or false true/traps. Applications that do not use semihosting must set this parameter to False.

Type: `bool`

Default value: `true`

### **`cpu0.semihosting-heap_base`**

Virtual address of heap base.

Type: `uint32_t`

Default value: `0x0`

### **`cpu0.semihosting-heap_limit`**

Virtual address of top of heap.

Type: `uint32_t`

Default value: `0x0F000000`

### **`cpu0.semihosting-hlt-enable`**

Enable semihosting HLT traps. Applications that use HLT semihosting must set this parameter to true and the semihosting-enable parameter to true.

Type: `bool`

Default value: `false`

**cpu0.semihosting-prefix**

Prefix semihosting output with target instance name.

Type: `bool`

Default value: `false`

**cpu0.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint32_t`

Default value: `0x10000000`

**cpu0.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint32_t`

Default value: `0x0F000000`

**cpu0.vfp-enable\_at\_reset**

Enable coprocessor access and VFP at reset.

Type: `bool`

Default value: `false`

**cpu0.vfp-present**

Set whether model has VFP support.

Type: `bool`

Default value: `true`

**GROUP\_ID**

Value read in GROUP ID register field, bits[15:8] of the MPIDR.

Type: `uint32_t`

Default value: `0x0`

**INST\_ENDIAN**

Controls whether the model supports the instruction endianness bit.

Type: `bool`

Default value: `true`

**LOCK\_STEP**

Affects dual-processor configurations only, and ignored by single-processor configurations.

Type: `uint32_t`

Default value: `0`

**MICRO\_SCU**

Controls whether the effects of the MicroSCU are modeled.

Type: `bool`

Default value: `true`

**NUM\_BREAKPOINTS**

Controls with how many breakpoint pairs the model has been configured. This only affects the build options registers, because debug is not modeled.

Type: `uint32_t`

Default value: `0x7`

**NUM\_MPU\_REGION**

Sets the number of MPU regions.

Type: `uint32_t`

Default value: `12`

**NUM\_WATCHPOINTS**

Controls with how many watchpoint pairs the model has been configured. This only affects the build options registers, because debug is not modeled.

Type: `uint32_t`

Default value: `0x7`

**SLSPLIT**

Sets whether the model starts in split mode or locked mode.

Type: `bool`

Default value: `false`

**cpi\_div**

divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 1

### **`cpi_mul`**

multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 1

### **`dcache-state_modelled`**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **`icache-state_modelled`**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **`reported_fp_revision`**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored. Updates the FPSID.revision value.

Type: `int`

Default value: -1

### **`reported_patch_level`**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int`

Default value: -1

### **`reported_revision_number`**

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int`

Default value: -1

## 3.94 ARMCortexR7x1CT

Defined in `LISA/ARMCortexR7x1CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### About ARMCortexR7x1CT

An ARMCortexR7x2CT component also exists.

The per-core parameters are preceded by `cpun.`, where `n` identifies the core (0 or 1).

`pvbuss` is the slave port to access the TCM RAM of CPU `n`. Bits [3:0] of the user flags in the transaction are used to select the TCM:

**0**

Selects the ITCM of CPU 0

**1**

Selects the DTCM of CPU 0

**2**

Selects the ITCM of CPU 1

**3**

Selects the DTCM of CPU 1

Any other value is reserved.

When you use the `semihosting-cmd_line` parameter to set the command line that is available to semihosting SVC calls, the value of `argv[0]` is set to the first command-line argument, not to the name of an image.

### Differences between the model and the RTL

This component has the following differences from the corresponding revision of the RTL implementation:

- This component does not implement address filtering within the SCU. The enable bit for this feature is ignored.
- The GIC does not respect the `CFGSDISABLE` signal. This leads to some registers being accessible when they must not be.
- The SCU enable bit is ignored. The SCU is always enabled.

- The SCU ignores the invalidate all register.
- The Broadcast TLB or cache operations in this model do not cause other cores in the cluster that are asleep because of WFI to wake up.
- The RR bit in the SCTL is ignored.
- The Power Control Register in the system control coprocessor is implemented but writing to it does not change the behavior of the model.
- The model cannot be configured with a 128-entry TLB.
- When modeling the SCU, coherency operations are represented by a memory write followed by a read to refill from memory, rather than using cache-to-cache transfers.
- TCMs are modeled internally and the model does not support external TCMs or the ports associated with them.
- This component implements L1 cache as architecturally defined, but does not implement L2 cache. If you require an L2 cache you can add a PL310 Level 2 Cache Controller component.
- ECC and parity schemes are hardware-specific so are not supported.
- The `vfp-enable_at_reset` option is model-specific and has no hardware equivalent. Arm recommends that it is only used in test systems and tied off to false in production systems.

## Iris and MTI instances for ARM Cortex R7x1CT

This model has the following Iris instances:

Name	Instance type
ARMCortexR7x1CT	Cluster_ARM_Cortex-R7
ARMCortexR7x1CT.ARM_CortexR7x1CT.debug_rom	debug_rom
ARMCortexR7x1CT.acp_mapper	PVBusMapper
ARMCortexR7x1CT.cpu0	ARM_Cortex-R7
ARMCortexR7x1CT.cpu0.l1dcache	PVCache
ARMCortexR7x1CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR7x1CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexR7x1CT.cpu0.l1icache	PVCache
ARMCortexR7x1CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR7x1CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexR7x1CT.ext_bus	PVBusLogger
ARMCortexR7x1CT.ext_bus.mapper	PVBusMapper
ARMCortexR7x1CT.l1_incoherent_interconnect	PVCache
ARMCortexR7x1CT.l1_incoherent_interconnect.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[U] (where U = 0-17)	PVBusSlave
ARMCortexR7x1CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
ARMCortexR7x1CT.acp_mapper	PVBusMapper

Name	Component type
ARMCortexR7x1CT.cpu0	ARM_Cortex-R7
ARMCortexR7x1CT.cpu0.l1dcache	PVCache
ARMCortexR7x1CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR7x1CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexR7x1CT.cpu0.l1icache	PVCache
ARMCortexR7x1CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR7x1CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexR7x1CT.ext_bus	PVBusLogger
ARMCortexR7x1CT.ext_bus.mapper	PVBusMapper
ARMCortexR7x1CT.l1_incoherent_interconnect	PVCache
ARMCortexR7x1CT.l1_incoherent_interconnect.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[U] (where U = 0–17)	PVBusSlave
ARMCortexR7x1CT.l2_flusher	AsyncCacheFlushUnit

### Ports for ARMCortexR7x1CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgnmfi	slave	Signal	This signal disables FIQ mask in CPSR.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
clusterid	slave	Value	The port sets the value in CPU ID register field, bits[11:8] of the MPIDR.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	Legacy FIQ request input line.
fiqout	master	Signal	Output of individual processor nFIQ from the interrupt controller.
fpuflags	master	ValueState	Floating-Point Unit output flags.
halt	slave	Signal	Raising this signal will put the core into halt mode. Equivalent to the hardware nCPUHALT[N:0] signal.
initram	slave	Signal	This signal enables the processor to boot from the instruction TCM.
ints	slave	Signal	Interrupt distributor interrupt lines.
irq	slave	Signal	Legacy IRQ request input line.
irqout	master	Signal	Output of individual processor nIRQ from the interrupt controller.
mfilteren	slave	Signal	This signal enables filtering of address ranges between master bus ports.
mfilterend	slave	Value	This port sets end of region mapped to pvbus_m1.
mfilterstart	slave	Value	This port sets start of region mapped to pvbus_m1.
periphbase	slave	Value	This port sets the base address of private peripheral region.
periphclk_in	slave	ClockSignal	The timer and the watchdog take need a clk that is scaled down at least by factor of two.
periphreset	slave	Signal	This signal resets timer and interrupt controller.
pfilterend	slave	Value	This port sets end of region mapped to pvbus_mp.
pfilterstart	slave	Value	This port sets start of region mapped to pvbus_mp.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.

Port	Direction	Protocol	Description
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_m1	master	PVBus	The core will generate bus requests on this port.
pvbus_mp	master	PVBus	The core will generate bus requests on this port.
pvbus_s	slave	PVBus	tcm slave port
reset	slave	Signal	Raising this signal will put the core into reset mode.
scureset	slave	Signal	This signal resets SCU.
smpnamp	master	Signal	This signals AMP or SMP mode for each Cortex-R7 processor.
standbywfe	master	Signal	This signal indicates if a core is in WFE state.
standbywfi	master	Signal	This signal indicates if a core is in WFI state.
teinit	slave	Signal	This signal provides default exception handling state.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
wdreset	slave	Signal	This signal resets individual watchdog.
wdresetreq	master	Signal	CPU watchdog reset requests.

## Parameters for ARMCortexR7x1CT

### **cpu0 . CFGEND**

Initialize to BE8 endianness.

Type: `bool`

Default value: `false`

### **cpu0 . CFGNMFI**

Enable nonmaskable FIQ interrupts on startup.

Type: `bool`

Default value: `false`

### **cpu0 . DP\_FLOAT**

Sets whether double-precision instructions are available.

Type: `bool`

Default value: `true`

### **cpu0 . INITRAM**

Enable the processor to boot from the instruction TCM.

Type: `bool`

Default value: `false`

**cpu0 . POWERCTLI**

Default power control state for processor.

Type: `uint32_t`

Default value: 0

**cpu0 . SMPnAMP**

Set whether the processor is part of a coherent domain.

Type: `bool`

Default value: `false`

**cpu0 . TEINIT**

T32 exception enable. The default has exceptions including reset handled in A32 state.

Type: `bool`

Default value: `false`

**cpu0 . VINITHI**

Initialize with high vectors enabled.

Type: `bool`

Default value: `false`

**cpu0 . dcache-size**

Set D-cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

**cpu0 . dtcm\_size**

Size of DTCM in KB.

Type: `uint32_t`

Default value: `0x8`

**cpu0 . icache-size**

Set I-cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

**cpu0.itcm\_size**

Size of ITCM in KB.

Type: uint32\_t

Default value: 0x8

**cpu0.min\_sync\_level**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint32\_t

Default value: 0

**cpu0.semihosting-ARM\_HLT**

ARM HLT number for semihosting.

Type: uint32\_t

Default value: 0xF000

**cpu0.semihosting-ARM\_SVC**

ARM SVC number for semihosting.

Type: uint32\_t

Default value: 0x123456

**cpu0.semihosting-Thumb\_HLT**

Thumb HLT number for semihosting.

Type: uint32\_t

Default value: 0x3c

**cpu0.semihosting-Thumb\_SVC**

Thumb SVC number for semihosting.

Type: uint32\_t

Default value: 0xAB

**cpu0.semihosting-cmd\_line**

Command line available to semihosting SVC calls.

Type: string

Default value: ""

**cpu0.semihosting-cwd**

Virtual address of CWD.

Type: `string`

Default value: `""`

**cpu0.semihosting-enable**

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to `false`.

Type: `bool`

Default value: `true`

**cpu0.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint32_t`

Default value: `0x0`

**cpu0.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint32_t`

Default value: `0x0F000000`

**cpu0.semihosting-hlt-enable**

Enable semihosting HLT traps. Applications that use HLT semihosting must set this parameter to `true` and the `semihosting-enable` parameter to `true`.

Type: `bool`

Default value: `false`

**cpu0.semihosting-prefix**

Prefix semihosting output with target instance name.

Type: `bool`

Default value: `false`

**cpu0.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint32_t`

Default value: `0x10000000`

### **`cpu0.semihosting-stack_limit`**

Virtual address of stack limit.

Type: `uint32_t`

Default value: `0x0F000000`

### **`cpu0.tcm-present`**

Disables the DTCM and ITCM.

Type: `bool`

Default value: `true`

### **`cpu0.vfp-enable_at_reset`**

Enable coprocessor access and VFP at reset.

Type: `bool`

Default value: `false`

### **`cpu0.vfp-present`**

Set whether model has VFP support.

Type: `bool`

Default value: `true`

### **`CLUSTER_ID`**

Processor cluster ID value.

Type: `uint32_t`

Default value: `0x0`

### **`LOCK_STEP`**

Affects dual-processor configurations only, and ignored by single-processor configurations. 0 - Disable. Set for two independent processors. 1 - Lock Step. Appears to the system as two processors but is internally modeled as a single processor. 3 - Split Lock. Appears to the system as two processors but can be statically configured from reset either as two independent processors or two locked processors. For the model, these are equivalent to Disable and Lock Step, respectively, except for the value of build options registers. The model does not support dynamically splitting and locking the processor.

Type: `uint32_t`

Default value: 0

#### **MFILTEREN**

Enables filtering of address ranges.

Type: `bool`

Default value: `false`

#### **MFILTEREND**

Specifies the end address for address filtering.

Type: `uint32_t`

Default value: `0x0`

#### **MFILTERSTART**

Specifies the start address for address filtering.

Type: `uint32_t`

Default value: `0x0`

#### **NUM\_MPU\_REGION**

Sets the number of MPU regions.

Type: `uint32_t`

Default value: 12

#### **PERIPHBASE**

Base address of peripheral memory space.

Type: `uint32_t`

Default value: `0xAE000000`

#### **PFILTEREND**

Specifies the end address for peripheral port address filtering.

Type: `uint32_t`

Default value: `0x0`

#### **PFILTERSTART**

Specifies the start address for peripheral port address filtering.

Type: `uint32_t`

Default value: `0xFFFF0000`

### **`cpi_div`**

divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `1`

### **`cpi_mul`**

multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `1`

### **`dcache-state_modelled`**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **`dic-spi_count`**

Number of shared peripheral interrupts implemented.

Type: `uint32_t`

Default value: `0x40`

### **`ecc_on`**

Enable Error Correcting Code.

Type: `bool`

Default value: `false`

### **`icache-state_modelled`**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

**reported\_fp\_revision**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored. Updates the FPSID.revision value.

Type: `int`

Default value: -1

**reported\_patch\_level**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int`

Default value: -1

**reported\_revision\_number**

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int`

Default value: -1

## 3.95 ARMCortexR82AECT

Defined in `LISA/ARMCortexR82AECT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Changes in 11.31.15

The following parameters were added:

- `has_delayed_dbgreg`
- `has_delayed_sysreg`

### AE-specific features implemented

The only AE-specific features implemented in the model are Split-Lock and Lock-Step, with the following limitations:

- The implementation of Split-Lock and Lock-Step in the model is simply a halving of the number of cores available.
- Lock-step is implemented by a parameter that can be true or false for the entire execution only, rather than by a signal that can be enabled during execution.

As the model does not implement true Split-Lock functionality, the ports and parameters are contiguous. For example, for a 4-core CPU with Split-Lock enabled, `cpu0` and `cpu1` identify the available cores and associated ports, not `cpu0` and `cpu2`.

- Hybrid mode is not modeled in the DSU.

## Limitations

The model supports read and write access to the registers `IMP_MEMPROTCTLR_EL1` and `IMP_CLUSTERMEMPROTCTLR_EL1`, with no functional behavior implemented.

## Iris and MTI instances for ARM CortexR82AECT

This model has the following Iris instances:

Name	Instance type
ARMCortexR82AECT	Cluster_ARM_Cortex-R82AE
ARMCortexR82AECT.AMU	PVBusLogger
ARMCortexR82AECT.AMU.mapper	PVBusMapper
ARMCortexR82AECT.DAP	PVBusLogger
ARMCortexR82AECT.DAP.mapper	PVBusMapper
ARMCortexR82AECT.DSU	SharedR
ARMCortexR82AECT.DSU.PPU_cluster	PPUv1
ARMCortexR82AECT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexR82AECT.DSU.PPU_core0	PPUv1
ARMCortexR82AECT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexR82AECT.DSU.utility_slave[0]	PVBusSlave
ARMCortexR82AECT.MMAP	PVBusLogger
ARMCortexR82AECT.MMAP.mapper	PVBusMapper
ARMCortexR82AECT.RAS	PVBusLogger
ARMCortexR82AECT.RAS.mapper	PVBusMapper
ARMCortexR82AECT.cpu0	ARM_Cortex-R82AE
ARMCortexR82AECT.cpu0.UTLB	TLB
ARMCortexR82AECT.cpu0.debug_rom	debug_rom
ARMCortexR82AECT.cpu0.dtlb	TLB
ARMCortexR82AECT.cpu0.gicv3_cpu_if	GICv3CPUInterface
ARMCortexR82AECT.cpu0.l1dcache	PVCache
ARMCortexR82AECT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR82AECT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexR82AECT.cpu0.l1licache	PVCache
ARMCortexR82AECT.cpu0.l1licache.downstream[0].pvbusmaster	PVBusMaster

Name	Instance type
ARMCortexR82AECT.cpu0.l1licache.upstream[0]	PVBusSlave
ARMCortexR82AECT.ext_bus	PVBusLogger
ARMCortexR82AECT.ext_bus.mapper	PVBusMapper
ARMCortexR82AECT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexR82AECT.global_debug_rom	debug_rom
ARMCortexR82AECT.l2_cache	PVCache
ARMCortexR82AECT.l2_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR82AECT.l2_cache.upstream[Z] (where Z = 0-16)	PVBusSlave
ARMCortexR82AECT.llram_coherent_interconnect	PVCache
ARMCortexR82AECT.llram_coherent_interconnect.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR82AECT.llram_coherent_interconnect.upstream[Y] (where Y = 0-2)	PVBusSlave
ARMCortexR82AECT.sbist_controllerChunk0	SBISTC0
ARMCortexR82AECT.secondary_debug_rom	debug_rom

This model has the following MTI trace components:

Name	Component type
ARMCortexR82AECT.AMU	PVBusLogger
ARMCortexR82AECT.AMU.mapper	PVBusMapper
ARMCortexR82AECT.DAP	PVBusLogger
ARMCortexR82AECT.DAP.mapper	PVBusMapper
ARMCortexR82AECT.DSU	SharedR
ARMCortexR82AECT.DSU.PPU_cluster	PPUv1
ARMCortexR82AECT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexR82AECT.DSU.PPU_core0	PPUv1
ARMCortexR82AECT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexR82AECT.DSU.utility_slave[0]	PVBusSlave
ARMCortexR82AECT.MMAP	PVBusLogger
ARMCortexR82AECT.MMAP.mapper	PVBusMapper
ARMCortexR82AECT.RAS	PVBusLogger
ARMCortexR82AECT.RAS.mapper	PVBusMapper
ARMCortexR82AECT.cpu0	ARM_Cortex-R82AE
ARMCortexR82AECT.cpu0.UTLB	TLB
ARMCortexR82AECT.cpu0.gicv3_cpu_if	GICv3CPUInterface
ARMCortexR82AECT.cpu0.l1dcache	PVCache
ARMCortexR82AECT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR82AECT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexR82AECT.cpu0.l1licache	PVCache
ARMCortexR82AECT.cpu0.l1licache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR82AECT.cpu0.l1licache.upstream[0]	PVBusSlave
ARMCortexR82AECT.ext_bus	PVBusLogger

Name	Component type
ARMCortexR82AECT.ext_bus.mapper	PVBusMapper
ARMCortexR82AECT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexR82AECT.l2_cache	PVCache
ARMCortexR82AECT.l2_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR82AECT.l2_cache.upstream[Z] (where Z = 0-16)	PVBusSlave
ARMCortexR82AECT.llram_coherent_interconnect	PVCache
ARMCortexR82AECT.llram_coherent_interconnect.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR82AECT.llram_coherent_interconnect.upstream[Y] (where Y = 0-2)	PVBusSlave

## Ports for ARMCortexR82AECT

Port	Direction	Protocol	Description
acel_s	slave	PVBus	External Slave port. Equivalent to AXIS port.
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	Enable broadcasting of cache maintenance operations to downstream caches.
broadcastouter	slave	Signal	Enable broadcasting of Outer Shareable transactions.
cache_validation_control	slave	Value	This signal provides default exception handling state.
cfgendianess	slave	Signal	This signal if for EE bit initialisation
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
cluster_pcsn_pchannel	master	PChannel	Cluster PCSM signal
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clusterid	slave	Value	The port sets the value of the affinity levels 2 and 3; bits [39:32] and [23:16] of the MPIDR.
clusterpmuirq	master	Signal	DynamiQ pmu irq
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVSIRQ	master	Signal	Timer signals to SOC
CNTPSIRQ	master	Signal	Timer signals to SOC
cntvalueb	slave	CounterInterface	Interface to SoC level counter module
CNTVIRQ	master	Signal	Timer signals to SOC
commirq	master	Signal	Interrupt signal from debug communication channel.
complexcritirq	master	Signal	Complex RAS critical interrupt
complexerrirq	master	Signal	Complex RAS error interrupt
complexfaultirq	master	Signal	Complex RAS fault interrupt
core_pcsn_pchannel	master	PChannel	Core PCSM signals
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Core RAS error interrupt
corefaultirq	master	Signal	Core RAS fault interrupt
coreinstrrun	master	Signal	Core Running State

Port	Direction	Protocol	Description
cp15sdisable	slave	Signal	This signal disables write access to some system control processor registers
cpuhalt	slave	Signal	Raising this signal will put the core into halt mode.
cti0extin	slave	Signal	CTI trace inputs for core 0.
cti0extout	master	Signal	CTI trace outputs for core 0.
cti1extin	slave	Signal	CTI trace inputs for core 1.
cti1extout	master	Signal	CTI trace outputs for core 1.
cti2extin	slave	Signal	CTI trace inputs for core 2.
cti2extout	master	Signal	CTI trace outputs for core 2.
cti3extin	slave	Signal	CTI trace inputs for core 3.
cti3extout	master	Signal	CTI trace outputs for core 3.
cti4extin	slave	Signal	CTI trace inputs for core 4.
cti4extout	master	Signal	CTI trace outputs for core 4.
cti5extin	slave	Signal	CTI trace inputs for core 5.
cti5extout	master	Signal	CTI trace outputs for core 5.
cti6extin	slave	Signal	CTI trace inputs for core 6.
cti6extout	master	Signal	CTI trace outputs for core 6.
cti7extin	slave	Signal	CTI trace inputs for core 7.
cti7extout	master	Signal	CTI trace outputs for core 7.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	-
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	-
dbgnopwrdown	master	Signal	These signals relate to core power down.
dbgpwrdownack	master	Signal	Debug power down acknowledge.
dbgpwrdownreq	slave	Signal	Debug power down request.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
external_trace_reset	slave	Signal	ETMv4 External Trace Reset signal.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
l2reset	slave	Signal	This signal resets timer and interrupt controller and l2cache
llpp_m	master	PVBus	LLPP (Low-Latency Peripheral Port).
llram_m	master	PVBus	LLRAM Port
macp_s	slave	PVBus	MACP slave interface
memorymapped_debug_s	slave	PVBus	External debug interface.
periphbase	slave	Value_64	This port sets the base address of private peripheral region
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.

Port	Direction	Protocol	Description
ppu_cluster_irq	master	Signal	PPU cluster irq signal
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_cluster_wakerequest	slave	Signal	PPU cluster wakeup request
ppu_core_irq	master	Signal	PPU core irq signal
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU core wakeup request
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
reset	slave	Signal	-
romaddr	slave	Value_64	Debug ROM base address.
romaddrv	slave	Signal	Debug ROM base address valid.
rvbar	slave	Value_64	Reset vector base address.
sei	slave	Signal	Per core System Error physical pins
spiden	slave	Signal	Secure invasive debug enable.
spp_m	master	PVBus	SPP (Shared Peripheral Port).
standbywfe	master	Signal	This signal indicates if a core is in WFE state
standbywfi	master	Signal	This signal indicates if a core is in WFI state
stlfailed	master	Signal	Indicates the STL has failed, set in any condition in which FFMIR.FMID has a failure mode set.
stlrunning	master	Signal	Indicates the STL is running, set in any condition in which FCTLR.STATUS is non-idle.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trace_unit_reset	slave	Signal	ETMv4 Trace Unit Reset signal.
utility_bus_s	slave	PVBus	Utility bus slave
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	This signal drives the CPUs virtual fast-interrupt handling.
virq	slave	Signal	This signal drives the CPUs virtual interrupt handling.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).

## Parameters for ARM Cortex R82AECT

### cpuX.CFGEND

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: bool

Default value: `false`

**cpuX.CP15SDISABLE**

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: `false`

**cpuX.RVBAR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

**cpuX.TEINIT**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**cpuX.ase-present**

Set whether the model has been built with NEON support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**cpuX.dcache-size**

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

**cpuX.dtcn\_base**

Sets the 16K aligned base address of DTCM.

Type: `uint64_t`

Default value: `0x0`

**cpuX.dtcn\_size**

Sets the size of DTCM (in bytes).

Type: `uint32_t`

Default value: `0x0`

### **`cpuX.dtcn_stretch_clk`**

Whether DTCM clock stretched to occupy full cycle.

Type: `bool`

Default value: `false`

### **`cpuX.dtcn_wait`**

DTCM accesses wait states: 0-3 cycles.

Type: `uint32_t`

Default value: `0x0`

### **`cpuX.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`cpuX.icache-size`**

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

### **`cpuX.itcm_base`**

Sets the 16K aligned base address of ITCM.

Type: `uint64_t`

Default value: `0x0`

### **`cpuX.itcm_size`**

Sets the size of ITCM (in bytes).

Type: `uint32_t`

Default value: `0x0`

### **`cpuX.itcm_stretch_clk`**

Whether ITCM clock stretched to occupy full cycle.

Type: `bool`

Default value: `false`

### **`cpuX.itcm_wait`**

ITCM accesses wait states: 0-3 cycles.

Type: `uint32_t`

Default value: `0x0`

### **`cpuX.llpp.base`**

Equivalent to `CFGLLPPBASEADDR`.

Type: `uint64_t`

Default value: `0x0`

### **`cpuX.llpp.size`**

Equivalent to `CFGLLPPSIZE`.

Type: `uint32_t`

Default value: `0x8000000`

### **`cpuX.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

### **`cpuX.min_sync_level`**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint8_t`

Default value: `0`

### **`cpuX.semihosting-A32_HLT`**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**cpuX.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**cpuX.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**cpuX.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: `60`

**cpuX.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: `171`

**cpuX.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: `N/A`

**cpuX.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**cpuX.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**cpuX.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**cpuX.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**cpuX.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**cpuX.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**cpuX.tcm.a.enable**

Equivalent to `CFGITCMENm`.

Type: `bool`

Default value: `false`

**cpuX.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

**cpuX.vfp-dp-present**

Whether double-precision floating point feature is implemented (FEAT\_F64MM).

Type: `bool`

Default value: `true`

### **`cpuX.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

### **`cpuX.vfp-present`**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

### **`BROADCASTATOMIC`**

Enable broadcasting of atomic operation to NC/DEV memory. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: `true`

### **`BROADCASTATOMICL`**

Enable broadcasting of atomic operation to LLRAM memory. The broadcastatomicl signal will override this value and it will be functional for revision 2.

Type: `bool`

Default value: `true`

### **`BROADCASTCACHEMAINT`**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: `true`

### **`BROADCASTOUTER`**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: `true`

### **CCSIDR-L1D\_override**

If nonzero, override the value presented in CCSIDR for L1D (this is cosmetic and does not affect cache behaviour).

Type: `uint64_t`

Default value: `0x0`

### **CCSIDR-L1I\_override**

If nonzero, override the value presented in CCSIDR for L1I (this is cosmetic and does not affect cache behaviour).

Type: `uint64_t`

Default value: `0x0`

### **CCSIDR-L2\_override**

If nonzero, override the value presented in CCSIDR for L2 (this is cosmetic and does not affect cache behaviour).

Type: `uint64_t`

Default value: `0x0`

### **CCSIDR-L3\_override**

If nonzero, allow L3 selection in CSSELR and present this value in CCSIDR (this is cosmetic and does not affect cache behaviour).

Type: `uint64_t`

Default value: `0x0`

### **CFGTFPEN\_pin\_reset**

CFGTFPEN pin at reset.

Type: `bool`

Default value: `false`

### **CHI**

Selects the type of protocol the Main Manager(MM) interface implements. 0, MM port configured as AXI. 1, MM port configured as CHI.

Type: `bool`

Default value: `false`

**CLUSTER\_ID**

CLUSTER\_ID[15:8] equivalent to CFGMPIDRAFF3, CLUSTER\_ID[7:0] equivalent to CFGMPIDRAFF2.

Type: `uint16_t`

Default value: `0x0`

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. This value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain events even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: `1`

**DBGROMADDR**

Initialization value of DBGDRAR register. Bits[55:12] of this register specify the ROM table physical address.

Type: `uint64_t`

Default value: `0x0`

**DBGROMADDRV**

If true, set bits[1:0] of the CP15 DBGDRAR to indicate that the address is valid.

Type: `bool`

Default value: `false`

**GICDISABLE**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: `false`

**NUM\_CORES**

Number of cores in cluster.

Type: `uint8_t`

Default value: 1

**PA\_SIZE**

Physical address range supported (FEAT\_LPA).

Type: `uint8_t`

Default value: 40

**PERIPHBASE**

Base address of peripheral memory space.

Type: `uint64_t`

Default value: 0x13080000

**VMSA\_supported**

VMSA is supported at EL1.

Type: `bool`

Default value: `true`

**bus\_protection\_enable\_at\_reset**

Equivalent to CFGBUSPROTEN.

Type: `bool`

Default value: `false`

**core\_power\_on\_by\_default**

0 = Cluster PPU and all core PPUs reset to OFF, 1 = Cluster PPU and all core PPUs reset to ON.

Type: `bool`

Default value: `true`

**cpi\_div**

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 0x1

**cpi\_mul**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 0x1

### **dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **dcache-maintenance\_latency**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **dcache-miss\_latency**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **dcache-prefetch\_enabled**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

Type: bool

Default value: false

### **dcache-read\_access\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **dcache-read\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-snoop_data_transfer_latency`**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-state_modelled`**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **`dcache-write_access_latency`**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-write_latency`**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. `dcache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`enable_lock_step`**

Whether the core is configured in Dual Core Lock Step mode (FEAT\_DCLS).

Type: `bool`

Default value: `false`

**enable\_simulation\_performance\_optimizations**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

Type: `bool`

Default value: `true`

**gicv3.BPR-min**

The minimum value for the GICC\_BPR register (non-secure version will be 1 + this value).

Type: `uint8_t`

Default value: 2

**gicv3.VBPR-min**

The minimum value for the GICV\_BPR register (non-secure version will be 1 + this value).

Type: `uint8_t`

Default value: 2

**has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

**has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `true`

**has\_dense\_mem\_map**

If true, the cluster follows the dense memory map else it implements the sparse memory map.

Type: `bool`

Default value: `false`

**has\_impdef\_transient\_fault\_protection**

Support the Transient Fault Protection (TFP) flop parity errors through RAS registers (FEAT\_TFP).

Type: `bool`

Default value: `true`

### **has\_llpp**

Equivalent to CFGLLPPIMP.

Type: `bool`

Default value: `true`

### **has\_pmc**

Programmable MBIST controllers implemented.

Type: `bool`

Default value: `false`

### **has\_spp**

Equivalent to CFGSPPIMP.

Type: `bool`

Default value: `true`

### **icache-hit\_latency**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **icache-maintenance\_latency**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **icache-miss\_latency**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-prefetch\_enabled**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

Type: `bool`

Default value: `false`

**icache-read\_access\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**icache-read\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. icache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**icache-state\_modelled**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

**l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

### **`l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l2cache-size`**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x400000`

### **`l2cache-snoop_data_transfer_latency`**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**memory.ext\_slave\_base**

Equivalent to `CFGACELSTCMBASEADDR`.

Type: `uint64_t`

Default value: `0x0`

**memory.has\_llram**

Equivalent to `CFGLLRAMIMP`.

Type: `bool`

Default value: `true`

**memory.llram\_base**

Equivalent to `CFGLLRAMBASEADDR`.

Type: `uint64_t`

Default value: `0x20000000`

**memory.llram\_enable\_at\_reset**

Equivalent to CFGLLRAMEN.

Type: `bool`

Default value: `true`

**memory.llram\_shared**

Equivalent to CFGLLRAMSHARED and it is only functional for revision 2.

Type: `bool`

Default value: `false`

**memory.llram\_size**

Size of the LLRAM.

Type: `uint32_t`

Default value: `0x10000000`

**num\_protection\_regions\_s1**

Number of v8-R protection regions.

Type: `uint8_t`

Default value: `16`

**num\_protection\_regions\_s2**

Number of v8-R hyp protection regions.

Type: `uint8_t`

Default value: `16`

**ptw\_latency**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

**ram\_protection\_enable\_at\_reset**

Equivalent to CFGRAMPROTEN.

Type: `bool`

Default value: `false`

**reported\_patch\_level**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

**reported\_revision\_number**

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int8_t`

Default value: -1

**sbist\_controller.Chunk0.DL\_CYCLES**

DL\_CYCLES is the value that is loaded into FCTLR.FREQ out of reset.

Type: `uint8_t`

Default value: 160

**sbist\_controller.Chunk0.DL\_RESET**

DL\_RESET is used to initialize FCTLR.STATUS to INIT out of reset and load a value from the signal DL\_CYCLES into FCTLR.FREQ. This provides a method to enable deadlock checking out of reset, as it may be possible that a deadlock prevents initialization and setup of the SBIST controller.

Type: `uint8_t`

Default value: 0

**sbist\_controller.Chunk1.DL\_CYCLES**

DL\_CYCLES is the value that is loaded into FCTLR.FREQ out of reset.

Type: `uint8_t`

Default value: 160

**sbist\_controller.Chunk1.DL\_RESET**

DL\_RESET is used to initialize FCTLR.STATUS to INIT out of reset and load a value from the signal DL\_CYCLES into FCTLR.FREQ. This provides a method to enable deadlock checking out of reset, as it may be possible that a deadlock prevents initialization and setup of the SBIST controller.

Type: `uint8_t`

Default value: 0

**sbist\_controller.Chunk2.DL\_CYCLES**

DL\_CYCLES is the value that is loaded into FCTLR.FREQ out of reset.

Type: uint8\_t

Default value: 160

**sbist\_controller.Chunk2.DL\_RESET**

DL\_RESET is used to initialize FCTLR.STATUS to INIT out of reset and load a value from the signal DL\_CYCLES into FCTLR.FREQ. This provides a method to enable deadlock checking out of reset, as it may be possible that a deadlock prevents initialization and setup of the SBIST controller.

Type: uint8\_t

Default value: 0

**sbist\_controller.Chunk3.DL\_CYCLES**

DL\_CYCLES is the value that is loaded into FCTLR.FREQ out of reset.

Type: uint8\_t

Default value: 160

**sbist\_controller.Chunk3.DL\_RESET**

DL\_RESET is used to initialize FCTLR.STATUS to INIT out of reset and load a value from the signal DL\_CYCLES into FCTLR.FREQ. This provides a method to enable deadlock checking out of reset, as it may be possible that a deadlock prevents initialization and setup of the SBIST controller.

Type: uint8\_t

Default value: 0

**sbist\_controller.Chunk4.DL\_CYCLES**

DL\_CYCLES is the value that is loaded into FCTLR.FREQ out of reset.

Type: uint8\_t

Default value: 160

**sbist\_controller.Chunk4.DL\_RESET**

DL\_RESET is used to initialize FCTLR.STATUS to INIT out of reset and load a value from the signal DL\_CYCLES into FCTLR.FREQ. This provides a method to enable deadlock checking out of reset, as it may be possible that a deadlock prevents initialization and setup of the SBIST controller.

Type: uint8\_t

Default value: 0

**sbist\_controller.Chunk5.DL\_CYCLES**

DL\_CYCLES is the value that is loaded into FCTLR.FREQ out of reset.

Type: uint8\_t

Default value: 160

**sbist\_controller.Chunk5.DL\_RESET**

DL\_RESET is used to initialize FCTLR.STATUS to INIT out of reset and load a value from the signal DL\_CYCLES into FCTLR.FREQ. This provides a method to enable deadlock checking out of reset, as it may be possible that a deadlock prevents initialization and setup of the SBIST controller.

Type: uint8\_t

Default value: 0

**sbist\_controller.Chunk6.DL\_CYCLES**

DL\_CYCLES is the value that is loaded into FCTLR.FREQ out of reset.

Type: uint8\_t

Default value: 160

**sbist\_controller.Chunk6.DL\_RESET**

DL\_RESET is used to initialize FCTLR.STATUS to INIT out of reset and load a value from the signal DL\_CYCLES into FCTLR.FREQ. This provides a method to enable deadlock checking out of reset, as it may be possible that a deadlock prevents initialization and setup of the SBIST controller.

Type: uint8\_t

Default value: 0

**sbist\_controller.Chunk7.DL\_CYCLES**

DL\_CYCLES is the value that is loaded into FCTLR.FREQ out of reset.

Type: uint8\_t

Default value: 160

**sbist\_controller.Chunk7.DL\_RESET**

DL\_RESET is used to initialize FCTLR.STATUS to INIT out of reset and load a value from the signal DL\_CYCLES into FCTLR.FREQ. This provides a method to enable deadlock checking out of reset, as it may be possible that a deadlock prevents initialization and setup of the SBIST controller.

Type: uint8\_t

Default value: 0

**sbist\_controller.SBIST\_PAGE\_SIZE**

Size of the memory assigned to one Core in the SBIST Controller memory map.

Type: uint32\_t

Default value: 0x10000

**spp.base**

Equivalent to CFGSPPBASEADDR.

Type: uint64\_t

Default value: 0x0

**spp.size**

Sets the size of SPP(in bytes).

Type: uint32\_t

Default value: 0x8000000

**stage12\_tlb\_size**

If VMSA is supported at stage1, number of stage1+2 tlb entries. If instruction\_tlb\_size !=0, this is treated as dtlb size.

Type: uint32\_t

Default value: 0x0

**tlb\_latency**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

**walk\_cache\_latency**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

## 3.96 ARMCortexR82CT

Defined in `LISA/ARMCortexR82CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support
r1p1	Full support
r2p1	Full support
r3p1	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Changes in 11.31.15

The following parameters were added:

- `has_delayed_dbgreg`
- `has_delayed_sysreg`

### About ARMCortexR82CT

To simulate the r1p0 model, use the following parameters:

- `revision_number=1`
- `VMSA_supported=1`

### Limitations

The model supports read and write access to the registers `IMP_MEMPROTCTLR_EL1` and `IMP_CLUSTERMEMPROTCTLR_EL1`, with no functional behavior implemented.

Dense memory map support has been added for the Utility bus only.

### Iris and MTI instances for ARMCortexR82CT

This model has the following Iris instances:

Name	Instance type
<code>ARMCortexR82CT</code>	<code>Cluster_ARM_Cortex-R82</code>
<code>ARMCortexR82CT.AMU</code>	<code>PVBusLogger</code>
<code>ARMCortexR82CT.AMU.mapper</code>	<code>PVBusMapper</code>
<code>ARMCortexR82CT.DAP</code>	<code>PVBusLogger</code>
<code>ARMCortexR82CT.DAP.mapper</code>	<code>PVBusMapper</code>
<code>ARMCortexR82CT.DSU</code>	<code>SharedR</code>
<code>ARMCortexR82CT.DSU.PPU_cluster</code>	<code>PPUv1</code>
<code>ARMCortexR82CT.DSU.PPU_cluster.busslave</code>	<code>PVBusSlave</code>
<code>ARMCortexR82CT.DSU.PPU_core0</code>	<code>PPUv1</code>

Name	Instance type
ARMCortexR82CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexR82CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexR82CT.MMAP	PVBusLogger
ARMCortexR82CT.MMAP.mapper	PVBusMapper
ARMCortexR82CT.RAS	PVBusLogger
ARMCortexR82CT.RAS.mapper	PVBusMapper
ARMCortexR82CT.cpu0	ARM_Cortex-R82
ARMCortexR82CT.cpu0.UTLB	TLB
ARMCortexR82CT.cpu0.debug_rom	debug_rom
ARMCortexR82CT.cpu0.dtlb	TLB
ARMCortexR82CT.cpu0.gicv3_cpu_if	GICv3CPUInterface
ARMCortexR82CT.cpu0.l1dcache	PVCache
ARMCortexR82CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR82CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexR82CT.cpu0.l1icache	PVCache
ARMCortexR82CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR82CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexR82CT.ext_bus	PVBusLogger
ARMCortexR82CT.ext_bus.mapper	PVBusMapper
ARMCortexR82CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexR82CT.global_debug_rom	debug_rom
ARMCortexR82CT.l2_cache	PVCache
ARMCortexR82CT.l2_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR82CT.l2_cache.upstream[Z] (where Z = 0-16)	PVBusSlave
ARMCortexR82CT.l1ram_coherent_interconnect	PVCache
ARMCortexR82CT.l1ram_coherent_interconnect.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR82CT.l1ram_coherent_interconnect.upstream[Y] (where Y = 0-2)	PVBusSlave
ARMCortexR82CT.secondary_debug_rom	debug_rom

This model has the following MTI trace components:

Name	Component type
ARMCortexR82CT.AMU	PVBusLogger
ARMCortexR82CT.AMU.mapper	PVBusMapper
ARMCortexR82CT.DAP	PVBusLogger
ARMCortexR82CT.DAP.mapper	PVBusMapper
ARMCortexR82CT.DSU	SharedR
ARMCortexR82CT.DSU.PPU_cluster	PPUv1
ARMCortexR82CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexR82CT.DSU.PPU_core0	PPUv1
ARMCortexR82CT.DSU.PPU_core0.busslave	PVBusSlave

Name	Component type
ARMCortexR82CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexR82CT.MMAP	PVBusLogger
ARMCortexR82CT.MMAP.mapper	PVBusMapper
ARMCortexR82CT.RAS	PVBusLogger
ARMCortexR82CT.RAS.mapper	PVBusMapper
ARMCortexR82CT.cpu0	ARM_Cortex-R82
ARMCortexR82CT.cpu0.UTLB	TLB
ARMCortexR82CT.cpu0.gicv3_cpu_if	GICv3CPUInterface
ARMCortexR82CT.cpu0.l1dcache	PVCache
ARMCortexR82CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR82CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexR82CT.cpu0.l1licache	PVCache
ARMCortexR82CT.cpu0.l1licache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR82CT.cpu0.l1licache.upstream[0]	PVBusSlave
ARMCortexR82CT.ext_bus	PVBusLogger
ARMCortexR82CT.ext_bus.mapper	PVBusMapper
ARMCortexR82CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexR82CT.l2_cache	PVCache
ARMCortexR82CT.l2_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR82CT.l2_cache.upstream[Z] (where Z = 0–16)	PVBusSlave
ARMCortexR82CT.llram_coherent_interconnect	PVCache
ARMCortexR82CT.llram_coherent_interconnect.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR82CT.llram_coherent_interconnect.upstream[Y] (where Y = 0–2)	PVBusSlave

## Ports for ARMCortexR82CT

Port	Direction	Protocol	Description
acel_s	slave	PVBus	External Slave port. Equivalent to AXIS port.
broadcastatomic	slave	Signal	CHI defined pins.
broadcastatomicl	slave	Signal	BROADCASTATOMIC pin for LLRAM
broadcastcachemaint	slave	Signal	Enable broadcasting of cache maintenance operations to downstream caches.
broadcastouter	slave	Signal	Enable broadcasting of Outer Shareable transactions.
cache_validation_control	slave	Value	This signal provides default exception handling state.
cfgendianess	slave	Signal	This signal if for EE bit initialisation
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
cluster_pcsn_pchannel	master	PChannel	Cluster PCSM signal
cluster_ppu_hw_stat	master	Value	Cluster PPU power state

Port	Direction	Protocol	Description
clusterid	slave	Value	The port sets the value of the affinity levels 2 and 3; bits [39:32] and [23:16] of the MPIDR.
clusterpmuirq	master	Signal	DynamiQ pmu irq
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVSIRQ	master	Signal	Timer signals to SOC
CNTPSIRQ	master	Signal	Timer signals to SOC
cntvalueb	slave	CounterInterface	Interface to SoC level counter module
CNTVIRQ	master	Signal	Timer signals to SOC
commirq	master	Signal	Interrupt signal from debug communication channel.
core_pcsn_pchannel	master	PChannel	Core PCSM signals
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Core RAS error interrupt
corefaultirq	master	Signal	Core RAS fault interrupt
coreinstrrun	master	Signal	Core Running State
cp15sdisable	slave	Signal	This signal disables write access to some system control processor registers
cpuhalt	slave	Signal	Raising this signal will put the core into halt mode.
cti0extin	slave	Signal	CTI trace inputs for core 0.
cti0extout	master	Signal	CTI trace outputs for core 0.
cti1extin	slave	Signal	CTI trace inputs for core 1.
cti1extout	master	Signal	CTI trace outputs for core 1.
cti2extin	slave	Signal	CTI trace inputs for core 2.
cti2extout	master	Signal	CTI trace outputs for core 2.
cti3extin	slave	Signal	CTI trace inputs for core 3.
cti3extout	master	Signal	CTI trace outputs for core 3.
cti4extin	slave	Signal	CTI trace inputs for core 4.
cti4extout	master	Signal	CTI trace outputs for core 4.
cti5extin	slave	Signal	CTI trace inputs for core 5.
cti5extout	master	Signal	CTI trace outputs for core 5.
cti6extin	slave	Signal	CTI trace inputs for core 6.
cti6extout	master	Signal	CTI trace outputs for core 6.
cti7extin	slave	Signal	CTI trace inputs for core 7.
cti7extout	master	Signal	CTI trace outputs for core 7.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	-
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	-
dbgnopwrdown	master	Signal	These signals relate to core power down.
dbgprwrdownack	master	Signal	Debug power down acknowledge.
dbgprwrdownreq	slave	Signal	Debug power down request.
dev_debug_s	slave	PVBus	External debug interface.

Port	Direction	Protocol	Description
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
external_trace_reset	slave	Signal	ETMv4 External Trace Reset signal.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
l2reset	slave	Signal	This signal resets timer and interrupt controller and l2cache
llpp_m	master	PVBus	LLPP (Low-Latency Peripheral Port).
llram_m	master	PVBus	LLRAM Port
macp_s	slave	PVBus	MACP slave interface
memorymapped_debug_s	slave	PVBus	External debug interface.
periphbase	slave	Value_64	This port sets the base address of private peripheral region
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster irq signal
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_cluster_wakerequest	slave	Signal	PPU cluster wakeup request
ppu_core_irq	master	Signal	PPU core irq signal
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU core wakeup request
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
reset	slave	Signal	-
romaddr	slave	Value_64	Debug ROM base address.
romaddrv	slave	Signal	Debug ROM base address valid.
rvbar	slave	Value_64	Reset vector base address.
sei	slave	Signal	Per core System Error physical pins
spiden	slave	Signal	Secure invasive debug enable.
spp_m	master	PVBus	SPP (Shared Peripheral Port).
standbywfe	master	Signal	This signal indicates if a core is in WFE state
standbywfi	master	Signal	This signal indicates if a core is in WFI state
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trace_unit_reset	slave	Signal	ETMv4 Trace Unit Reset signal.
utility_bus_s	slave	PVBus	Utility bus slave
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	This signal drives the CPUs virtual fast-interrupt handling.

Port	Direction	Protocol	Description
virq	slave	Signal	This signal drives the CPUs virtual interrupt handling.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).

## Parameters for ARM CortexR82CT

### **cpuX.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **cpuX.CP15SDISABLE**

Initialize to disable access to some CP15 registers.

Type: `bool`

Default value: `false`

### **cpuX.RVBAR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **cpuX.TEINIT**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### **cpuX.ase-present**

Set whether the model has been built with NEON support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

### **cpuX.dcache-size**

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

### **`cpuX.dtcn_base`**

Sets the 16K aligned base address of DTCM.

Type: `uint64_t`

Default value: `0x0`

### **`cpuX.dtcn_size`**

Sets the size of DTCM (in bytes).

Type: `uint32_t`

Default value: `0x0`

### **`cpuX.dtcn_stretch_clk`**

Whether DTCM clock stretched to occupy full cycle.

Type: `bool`

Default value: `false`

### **`cpuX.dtcn_wait`**

DTCM accesses wait states: 0-3 cycles.

Type: `uint32_t`

Default value: `0x0`

### **`cpuX.enable_trace_special_hlt_imm16`**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`cpuX.icache-size`**

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

### **`cpuX.itcm_base`**

Sets the 16K aligned base address of ITCM.

Type: `uint64_t`

Default value: `0x0`

### **`cpuX.itcm_size`**

Sets the size of ITCM (in bytes).

Type: `uint32_t`

Default value: `0x0`

### **`cpuX.itcm_stretch_clk`**

Whether ITCM clock stretched to occupy full cycle.

Type: `bool`

Default value: `false`

### **`cpuX.itcm_wait`**

ITCM accesses wait states: 0-3 cycles.

Type: `uint32_t`

Default value: `0x0`

### **`cpuX.llpp.base`**

Equivalent to `CFGLLPPBASEADDR`.

Type: `uint64_t`

Default value: `0x0`

### **`cpuX.llpp.size`**

Equivalent to `CFGLLPPSIZE`.

Type: `uint32_t`

Default value: `0x8000000`

### **`cpuX.max_code_cache_mb`**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: `uint16_t`

Default value: `0x100`

**cpuX.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**cpuX.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**cpuX.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**cpuX.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**cpuX.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**cpuX.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: uint8\_t

Default value: 171

**cpuX.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: string

Default value: N/A

**cpuX.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: `N/A`

**cpuX.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**cpuX.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**cpuX.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**cpuX.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**cpuX.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**cpuX.tcm.a.enable**

Equivalent to CFGITCMENm.

Type: `bool`

Default value: `false`

**cpuX.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**cpuX.vfp-dp-present**

Whether double-precision floating point feature is implemented (FEAT\_F64MM).

Type: bool

Default value: true

**cpuX.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: bool

Default value: false

**cpuX.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: bool

Default value: true

**BROADCASTATOMIC**

Enable broadcasting of atomic operation to NC/DEV memory. The broadcastatomic signal will override this value if used.

Type: bool

Default value: true

**BROADCASTATOMICL**

Enable broadcasting of atomic operation to LLRAM memory. The broadcastatomicl signal will override this value and it will be functional for revision 2.

Type: bool

Default value: true

**BROADCASTCACHEMAINT**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTOUTER**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: `true`

**CCSIDR-L1D\_override**

If nonzero, override the value presented in CCSIDR for L1D (this is cosmetic and does not affect cache behaviour).

Type: `uint64_t`

Default value: `0x0`

**CCSIDR-L1I\_override**

If nonzero, override the value presented in CCSIDR for L1I (this is cosmetic and does not affect cache behaviour).

Type: `uint64_t`

Default value: `0x0`

**CCSIDR-L2\_override**

If nonzero, override the value presented in CCSIDR for L2 (this is cosmetic and does not affect cache behaviour).

Type: `uint64_t`

Default value: `0x0`

**CCSIDR-L3\_override**

If nonzero, allow L3 selection in CSSELR and present this value in CCSIDR (this is cosmetic and does not affect cache behaviour).

Type: `uint64_t`

Default value: `0x0`

**CHI**

Selects the type of protocol the Main Manager(MM) interface implements. 0, MM port configured as AXI. 1, MM port configured as CHI.

Type: `bool`

Default value: `false`

**CLUSTER\_ID**

CLUSTER\_ID[15:8] equivalent to CFGMPIDRAFF3, CLUSTER\_ID[7:0] equivalent to CFGMPIDRAFF2.

Type: `uint16_t`

Default value: `0x0`

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain even when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: `1`

**DBGROMADDR**

Initialization value of DBGDRAR register. Bits[55:12] of this register specify the ROM table physical address.

Type: `uint64_t`

Default value: `0x0`

**DBGROMADDRV**

If true, set bits[1:0] of the CP15 DBGDRAR to indicate that the address is valid.

Type: `bool`

Default value: `false`

**GICDISABLE**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: `false`

### **NUM\_CORES**

Number of cores in cluster.

Type: `uint8_t`

Default value: 1

### **PA\_SIZE**

Physical address range supported (FEAT\_LPA).

Type: `uint8_t`

Default value: 40

### **PERIPHBASE**

Base address of peripheral memory space.

Type: `uint64_t`

Default value: `0x13080000`

### **VMSA\_supported**

VMSA is supported at EL1.

Type: `bool`

Default value: `false`

### **core\_power\_on\_by\_default**

0 = Cluster PPU and all core PPUs reset to OFF, 1 = Cluster PPU and all core PPUs reset to ON.

Type: `bool`

Default value: `true`

### **cpi\_div**

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

### **cpi\_mul**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 0x1

### **dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **dcache-maintenance\_latency**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **dcache-miss\_latency**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **dcache-prefetch\_enabled**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

Type: bool

Default value: false

### **dcache-read\_access\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **dcache-read\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-snoop_data_transfer_latency`**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-state_modelled`**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **`dcache-write_access_latency`**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-write_latency`**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. `dcache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`enable_lock_step`**

Whether the core is configured in Dual Core Lock Step mode (FEAT\_DCLS).

Type: `bool`

Default value: `false`

**enable\_simulation\_performance\_optimizations**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

Type: `bool`

Default value: `true`

**gicv3.BPR-min**

The minimum value for the GICC\_BPR register (non-secure version will be 1 + this value).

Type: `uint8_t`

Default value: 2

**gicv3.VBPR-min**

The minimum value for the GICV\_BPR register (non-secure version will be 1 + this value).

Type: `uint8_t`

Default value: 2

**has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

**has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `true`

**has\_dense\_mem\_map**

If true, the cluster follows the dense memory map else it implements the sparse memory map.

Type: `bool`

Default value: `false`

**has\_llpp**

Equivalent to CFGLLPPIMP.

Type: `bool`

Default value: `true`

### **has\_spp**

Equivalent to CFGSPPIIMP.

Type: `bool`

Default value: `true`

### **icache-hit\_latency**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **icache-maintenance\_latency**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **icache-miss\_latency**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **icache-prefetch\_enabled**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

Type: `bool`

Default value: `false`

### **icache-read\_access\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and

intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`icache-read_latency`**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`icache-state_modelled`**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **`l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x400000

**l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

### **`l2cache-write_latency`**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`memory.ext_slave_base`**

Equivalent to `CFGACELSTCMBASEADDR`.

Type: `uint64_t`

Default value: `0x0`

### **`memory.has_llram`**

Equivalent to `CFGLLRAMIMP`.

Type: `bool`

Default value: `true`

### **`memory.llram_base`**

Equivalent to `CFGLLRAMBASEADDR`.

Type: `uint64_t`

Default value: `0x20000000`

### **`memory.llram_enable_at_reset`**

Equivalent to `CFGLLRAMEN`.

Type: `bool`

Default value: `true`

### **`memory.llram_shared`**

Equivalent to `CFGLLRAMSHARED` and it is only functional for revision 2.

Type: `bool`

Default value: `false`

**memory.llram\_size**

Size of the LLRAM.

Type: `uint32_t`

Default value: `0x10000000`

**num\_protection\_regions\_s1**

Number of v8-R protection regions.

Type: `uint8_t`

Default value: `16`

**num\_protection\_regions\_s2**

Number of v8-R hyp protection regions.

Type: `uint8_t`

Default value: `16`

**patch\_level**

Patch level of TRM implemented by the model. Changing the value can change the model behaviour. Visible as the Revision field in MIDR/MIDR\_EL1. Corresponds to the patch number Y in rXpY.

Type: `uint8_t`

Default value: `1`

**ptw\_latency**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

**ram\_protection\_enable\_at\_reset**

Equivalent to CFGRAMPROTEN.

Type: `bool`

Default value: `false`

**revision\_number**

Revision number of TRM implemented by the model. Changing the value can change the model behaviour. Visible as the Variant field in MIDR/MIDR\_EL1. Corresponds to the revision number X in rXpY.

Type: uint8\_t

Default value: 1

**spp.base**

Equivalent to CFGSPPBSEADDR.

Type: uint64\_t

Default value: 0x0

**spp.size**

Sets the size of SPP(in bytes).

Type: uint32\_t

Default value: 0x8000000

**stage12\_tlb\_size**

If VMSA is supported at stage1, number of stage1+2 tlb entries. If instruction\_tlb\_size !=0, this is treated as dtlb size.

Type: uint32\_t

Default value: 0x0

**tlb\_latency**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

**walk\_cache\_latency**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

## 3.97 ARMCortexR8x1CT

Defined in `LISA/ARMCortexR8x1CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### About ARMCortexR8x1CT

The following components also exist:

ARMCortexR8x2CT. ARMCortexR8x3CT. ARMCortexR8x4CT.

The per-core parameters are preceded by `cpun.`, where `n` identifies the core (0-3).

`pvbuss` is the slave port to access the TCM RAM of CPU `n`. Bits [3:0] of the user flags in the transaction are used to select the TCM:

- 0**  
Selects the ITCM of CPU 0.
- 1**  
Selects the DTCM of CPU 0.
- 2**  
Selects the ITCM of CPU 1.
- 3**  
Selects the DTCM of CPU 1.
- 4**  
Selects the ITCM of CPU 2.
- 5**  
Selects the DTCM of CPU 2.
- 6**  
Selects the ITCM of CPU 3.
- 7**  
Selects the DTCM of CPU 3.

Any other value is reserved.

The `semihosting-cwd` parameter sets the CWD that is used for semihosting. The host operating system limits the maximum path length. The `semihosting-cwd` parameter does not provide any security. Software running on the model can access files outside this directory using relative paths containing `..` or using absolute paths.

## Differences between the model and the RTL

This component has the following differences from the corresponding revision of the RTL implementation:

- This component does not implement address filtering within the SCU. The enable bit for this feature is ignored.
- The GIC does not respect the `CFGSDISABLE` signal. This leads to some registers being accessible when they must not be.
- The SCU enable bit is ignored. The SCU is always enabled.
- The SCU ignores the invalidate all register.
- The Broadcast TLB or cache operations in this model do not cause other cores in the cluster that are asleep because of WFI to wake up.
- The RR bit in the SCTLR is ignored.
- The Power Control Register in the system control coprocessor is implemented but writing to it does not change the behavior of the model.
- The model cannot be configured with a 128-entry TLB.
- When modeling the SCU, coherency operations are represented by a memory write followed by a read to refill from memory, rather than using cache-to-cache transfers.
- TCMs are modeled internally and the model does not support external TCMs or the ports associated with them.
- This component implements L1 cache as architecturally defined, but does not implement L2 cache. If you require an L2 cache you can add a PL310 Level 2 Cache Controller component.
- The `vfp-enable_at_reset` option is model-specific and has no hardware equivalent. Arm recommends that it is only used in test systems and tied off to false in production systems.
- ECC and parity schemes are hardware-specific so are not supported.

## Iris and MTI instances for ARMCortexR8x1CT

This model has the following Iris instances:

Name	Instance type
ARMCortexR8x1CT	Cluster_ARM_Cortex-R8
ARMCortexR8x1CT.ARM_CortexR8x1CT.debug_rom	debug_rom
ARMCortexR8x1CT.acp_mapper	PVBusMapper
ARMCortexR8x1CT.cpu0	ARM_Cortex-R8
ARMCortexR8x1CT.cpu0.l1dcache	PVCache
ARMCortexR8x1CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR8x1CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexR8x1CT.cpu0.l1icache	PVCache
ARMCortexR8x1CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR8x1CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexR8x1CT.ext_bus	PVBusLogger
ARMCortexR8x1CT.ext_bus.mapper	PVBusMapper

Name	Instance type
ARMCortexR8x1CT.l1_incoherent_interconnect	PVCache
ARMCortexR8x1CT.l1_incoherent_interconnect.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[U] (where U = 0-17)	PVBusSlave
ARMCortexR8x1CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

Name	Component type
ARMCortexR8x1CT.acp_mapper	PVBusMapper
ARMCortexR8x1CT.cpu0	ARM_Cortex-R8
ARMCortexR8x1CT.cpu0.l1dcache	PVCache
ARMCortexR8x1CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR8x1CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexR8x1CT.cpu0.l1icache	PVCache
ARMCortexR8x1CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR8x1CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexR8x1CT.ext_bus	PVBusLogger
ARMCortexR8x1CT.ext_bus.mapper	PVBusMapper
ARMCortexR8x1CT.l1_incoherent_interconnect	PVCache
ARMCortexR8x1CT.l1_incoherent_interconnect.downstream[0].pvbusmaster	PVBusMaster
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[U] (where U = 0-17)	PVBusSlave
ARMCortexR8x1CT.l2_flusher	AsyncCacheFlushUnit

## Ports for ARMCortexR8x1CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgnmfi	slave	Signal	This signal disables FIQ mask in CPSR.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
clusterid	slave	Value	The port sets the value in CPU ID register field, bits[11:8] of the MPIDR.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	Legacy FIQ request input line.
fiqout	master	Signal	Output of individual processor nFIQ from the interrupt controller.
fpfilterend0	slave	Value	This port sets end of region mapped to pvbus_mfp0.
fpfilterend1	slave	Value	This port sets end of region mapped to pvbus_mfp1.
fpfilterend2	slave	Value	This port sets end of region mapped to pvbus_mfp2.
fpfilterend3	slave	Value	This port sets end of region mapped to pvbus_mfp3.
fpfilterstart0	slave	Value	This port sets start of region mapped to pvbus_mfp0.
fpfilterstart1	slave	Value	This port sets start of region mapped to pvbus_mfp1.
fpfilterstart2	slave	Value	This port sets start of region mapped to pvbus_mfp2.

Port	Direction	Protocol	Description
fpfilterstart3	slave	Value	This port sets start of region mapped to pvbus_mfp3.
fpuflags	master	ValueState	Floating-Point Unit output flags.
halt	slave	Signal	Raising this signal will put the core into halt mode. Equivalent to the hardware nCPUHALT[N:0] signal.
initram	slave	Signal	This signal enables the processor to boot from the instruction TCM.
ints	slave	Signal	Interrupt distributor interrupt lines.
irq	slave	Signal	Legacy IRQ request input line.
irqout	master	Signal	Output of individual processor nIRQ from the interrupt controller.
mfilteren	slave	Signal	This signal enables filtering of address ranges between master bus ports.
mfilterend	slave	Value	This port sets end of region mapped to pvbus_m1.
mfilterstart	slave	Value	This port sets start of region mapped to pvbus_m1.
periphbase	slave	Value	This port sets the base address of private peripheral region.
periphclk_in	slave	ClockSignal	The timer and the watchdog take need a clk that is scaled down at least by factor of two.
periphreset	slave	Signal	This signal resets timer and interrupt controller.
pfilterend	slave	Value	This port sets end of region mapped to pvbus_mp.
pfilterstart	slave	Value	This port sets start of region mapped to pvbus_mp.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
pvbus_m0	master	PVBus	AXI master port 0.
pvbus_m1	master	PVBus	AXI master port 1.
pvbus_mfp0	master	PVBus	Fast peripheral port for core 0.
pvbus_mfp1	master	PVBus	Fast peripheral port for core 1.
pvbus_mfp2	master	PVBus	Fast peripheral port for core 2.
pvbus_mfp3	master	PVBus	Fast peripheral port for core 3.
pvbus_mp	master	PVBus	Shared peripheral port.
pvbus_s	slave	PVBus	tcm slave port.
reset	slave	Signal	Raising this signal will put the core into reset mode.
scureset	slave	Signal	This signal resets SCU.
smpnamp	master	Signal	This signals AMP or SMP mode for each Cortex-R8 processor.
standbywfe	master	Signal	This signal indicates if a core is in WFE state.
standbywfi	master	Signal	This signal indicates if a core is in WFI state.
teinit	slave	Signal	This signal provides default exception handling state.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
wdreset	slave	Signal	This signal resets individual watchdog.
wdresetreq	master	Signal	CPU watchdog reset requests.

## Parameters for ARMCortexR8x1CT

### cpu0 . CFGEND

Initialize to BE8 endianness.

Type: `bool`

Default value: `false`

### **`cpu0.CFGNMFI`**

Enable nonmaskable FIQ interrupts on startup.

Type: `bool`

Default value: `false`

### **`cpu0.DP_FLOAT`**

Sets whether double-precision instructions are available.

Type: `bool`

Default value: `true`

### **`cpu0.INITRAM`**

Enable the processor to boot from the instruction TCM.

Type: `bool`

Default value: `false`

### **`cpu0.POWERCTLI`**

Default power control state for processor.

Type: `uint32_t`

Default value: 0

### **`cpu0.SMPnAMP`**

Set whether the processor is part of a coherent domain.

Type: `bool`

Default value: `false`

### **`cpu0.TEINIT`**

T32 exception enable. The default has exceptions including reset handled in A32 state.

Type: `bool`

Default value: `false`

### **`cpu0.VINITHI`**

Initialize with high vectors enabled.

Type: `bool`

Default value: `false`

### **`cpu0.dcache-size`**

Set D-cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

### **`cpu0.dtcn_size`**

Size of DTCM in KB.

Type: `uint32_t`

Default value: `0x8`

### **`cpu0.icache-size`**

Set I-cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

### **`cpu0.itcn_size`**

Size of ITCM in KB.

Type: `uint32_t`

Default value: `0x8`

### **`cpu0.min_sync_level`**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: `uint32_t`

Default value: `0`

### **`cpu0.semihosting-ARM_HLT`**

ARM HLT number for semihosting.

Type: `uint32_t`

Default value: `0xF000`

### **`cpu0.semihosting-ARM_SVC`**

ARM SVC number for semihosting.

Type: `uint32_t`

Default value: `0x123456`

### **`cpu0.semihosting-Thumb_HLT`**

Thumb HLT number for semihosting.

Type: `uint32_t`

Default value: `0x3c`

### **`cpu0.semihosting-Thumb_SVC`**

Thumb SVC number for semihosting.

Type: `uint32_t`

Default value: `0xAB`

### **`cpu0.semihosting-cmd_line`**

Command line available to semihosting SVC calls.

Type: `string`

Default value: `""`

### **`cpu0.semihosting-cwd`**

Virtual address of CWD.

Type: `string`

Default value: `""`

### **`cpu0.semihosting-enable`**

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

Type: `bool`

Default value: `true`

### **`cpu0.semihosting-heap_base`**

Virtual address of heap base.

Type: `uint32_t`

Default value: `0x0`

**cpu0.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint32_t`

Default value: `0x0F000000`

**cpu0.semihosting-hlt-enable**

Enable semihosting HLT traps. Applications that use HLT semihosting must set this parameter to true and the semihosting-enable parameter to true.

Type: `bool`

Default value: `false`

**cpu0.semihosting-prefix**

Prefix semihosting output with target instance name.

Type: `bool`

Default value: `false`

**cpu0.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint32_t`

Default value: `0x10000000`

**cpu0.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint32_t`

Default value: `0x0F000000`

**cpu0.tcm-present**

Disables the DTCM and ITCM.

Type: `bool`

Default value: `true`

**cpu0.vfp-enable\_at\_reset**

Enable coprocessor access and VFP at reset.

Type: `bool`

Default value: `false`

### **`cpu0.vfp-present`**

Set whether model has VFP support.

Type: `bool`

Default value: `true`

### **`CLUSTER_ID`**

Processor cluster ID value.

Type: `uint32_t`

Default value: `0x0`

### **`FPFILTEREND0`**

Specifies the end address for fast peripheral port address filtering.

Type: `uint32_t`

Default value: `0x0`

### **`FPFILTEREND1`**

Specifies the end address for fast peripheral port address filtering.

Type: `uint32_t`

Default value: `0x0`

### **`FPFILTEREND2`**

Specifies the end address for fast peripheral port address filtering.

Type: `uint32_t`

Default value: `0x0`

### **`FPFILTEREND3`**

Specifies the end address for fast peripheral port address filtering.

Type: `uint32_t`

Default value: `0x0`

### **`FPFILTERSTART0`**

Specifies the start address for fast peripheral port address filtering.

Type: `uint32_t`

Default value: 0xFFFF0000

**FPFILTERSTART1**

Specifies the start address for fast peripheral port address filtering.

Type: uint32\_t

Default value: 0xFFFF0000

**FPFILTERSTART2**

Specifies the start address for fast peripheral port address filtering.

Type: uint32\_t

Default value: 0xFFFF0000

**FPFILTERSTART3**

Specifies the start address for fast peripheral port address filtering.

Type: uint32\_t

Default value: 0xFFFF0000

**LOCK\_STEP**

Affects dual-processor configurations only, and ignored by single-processor configurations. 0 - Disable. Set for two independent processors. 1 - Lock Step. Appears to the system as two processors but is internally modeled as a single processor. 3 - Split Lock. Appears to the system as two processors but can be statically configured from reset either as two independent processors or two locked processors. For the model, these are equivalent to Disable and Lock Step, respectively, except for the value of build options registers. The model does not support dynamically splitting and locking the processor.

Type: uint32\_t

Default value: 0

**MFILTEREN**

Enables filtering of address ranges.

Type: bool

Default value: false

**MFILTEREND**

Specifies the end address for address filtering.

Type: uint32\_t

Default value: 0x0

**MFILTERSTART**

Specifies the start address for address filtering.

Type: uint32\_t

Default value: 0x0

**NUM\_MPU\_REGION**

Sets the number of MPU regions.

Type: uint32\_t

Default value: 12

**PERIPHBASE**

Base address of peripheral memory space.

Type: uint32\_t

Default value: 0xAE000000

**PFILTEREND**

Specifies the end address for peripheral port address filtering.

Type: uint32\_t

Default value: 0x0

**PFILTERSTART**

Specifies the start address for peripheral port address filtering.

Type: uint32\_t

Default value: 0xFFF00000

**cpi\_div**

divider for calculating CPI (Cycles Per Instruction).

Type: uint32\_t

Default value: 1

**cpi\_mul**

multiplier for calculating CPI (Cycles Per Instruction).

Type: uint32\_t

Default value: 1

**dcache-state\_modelled**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

**dic-spi\_count**

Number of shared peripheral interrupts implemented.

Type: `uint32_t`

Default value: `0x40`

**ecc\_on**

Enable Error Correcting Code.

Type: `bool`

Default value: `false`

**icache-state\_modelled**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

**reported\_fp\_revision**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored. Updates the FPSID.revision value.

Type: `int`

Default value: -1

**reported\_patch\_level**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: `int`

Default value: -1

**reported\_revision\_number**

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

Type: int

Default value: -1

## 3.98 ARMCortexX1CCT

Defined in `LISA/ARMCortexX1CCT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Changes in 11.31.15

The following parameters were added:

- `has_delayed_dbgreg`
- `has_delayed_sysreg`

### About ARMCortexX1CCT

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- `BROADCASTPERSIST` pin.

The model does not support the following features:

- `BROADCASTCACHEMAINTPOU` pin.
- `COREINSTRRET`, `COREINSTRRUN`, or `nPMBIRQ` signals.
- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.

- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Cache stashing capability.
- Each thread has its own L1Cache and L2Cache instead of a common cache that is shared by all threads of the core.
- Per-thread parameters are not yet supported but signals are implemented.

**Note**

The `cfgsdisable` signal will be removed in a future release.

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

### Iris and MTI instances for ARMCortexX1CCT

This model has the following Iris instances:

Name	Instance type
ARMCortexX1CCT	Cluster_ARM_Cortex-X1C
ARMCortexX1CCT.AMU	PVBusLogger
ARMCortexX1CCT.AMU.mapper	PVBusMapper
ARMCortexX1CCT.DAP	PVBusLogger
ARMCortexX1CCT.DAP.mapper	PVBusMapper
ARMCortexX1CCT.DSU	DSU
ARMCortexX1CCT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexX1CCT.DSU.mpam_busslave	PVBusSlave
ARMCortexX1CCT.DSU.shared_cache	PVCache
ARMCortexX1CCT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX1CCT.DSU.shared_cache.upstream[Y] (where Y = 0-3)	PVBusSlave
ARMCortexX1CCT.MMAP	PVBusLogger
ARMCortexX1CCT.MMAP.mapper	PVBusMapper
ARMCortexX1CCT.RAS	PVBusLogger
ARMCortexX1CCT.RAS.mapper	PVBusMapper
ARMCortexX1CCT.cpu0	ARM_Cortex-X1C
ARMCortexX1CCT.cpu0.UTLB	TLB
ARMCortexX1CCT.cpu0.debug_rom	debug_rom

Name	Instance type
ARMCortexX1CCT.cpu0.dtlb	TLB
ARMCortexX1CCT.cpu0.l1dcache	PVCache
ARMCortexX1CCT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX1CCT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexX1CCT.cpu0.l1icache	PVCache
ARMCortexX1CCT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX1CCT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexX1CCT.cpu0.l2cache	PVCache
ARMCortexX1CCT.cpu0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX1CCT.cpu0.l2cache.upstream[U] (where U = 0-1)	PVBusSlave
ARMCortexX1CCT.ext_bus	PVBusLogger
ARMCortexX1CCT.ext_bus.mapper	PVBusMapper
ARMCortexX1CCT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexX1CCT.global_debug_rom	debug_rom
ARMCortexX1CCT.secondary_debug_rom	debug_rom

This model has the following MTI trace components:

Name	Component type
ARMCortexX1CCT.AMU	PVBusLogger
ARMCortexX1CCT.AMU.mapper	PVBusMapper
ARMCortexX1CCT.DAP	PVBusLogger
ARMCortexX1CCT.DAP.mapper	PVBusMapper
ARMCortexX1CCT.DSU	DSU
ARMCortexX1CCT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexX1CCT.DSU.mpam_busslave	PVBusSlave
ARMCortexX1CCT.DSU.shared_cache	PVCache
ARMCortexX1CCT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX1CCT.DSU.shared_cache.upstream[Y] (where Y = 0-3)	PVBusSlave
ARMCortexX1CCT.MMAP	PVBusLogger
ARMCortexX1CCT.MMAP.mapper	PVBusMapper
ARMCortexX1CCT.RAS	PVBusLogger
ARMCortexX1CCT.RAS.mapper	PVBusMapper
ARMCortexX1CCT.cpu0	ARM_Cortex-X1C
ARMCortexX1CCT.cpu0.UTLB	TLB
ARMCortexX1CCT.cpu0.l1dcache	PVCache
ARMCortexX1CCT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX1CCT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexX1CCT.cpu0.l1icache	PVCache
ARMCortexX1CCT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX1CCT.cpu0.l1icache.upstream[0]	PVBusSlave

Name	Component type
ARMCortexX1CCT.cpu0.l2cache	PVCache
ARMCortexX1CCT.cpu0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX1CCT.cpu0.l2cache.upstream[U] (where $U = 0-1$ )	PVBusSlave
ARMCortexX1CCT.ext_bus	PVBusLogger
ARMCortexX1CCT.ext_bus.mapper	PVBusMapper
ARMCortexX1CCT.gic_cpuif_decoder_cluster	GLCv3CPUInterfaceDecoder

## Ports for ARMCortexX1CCT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AENDMP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamlQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.

Port	Direction	Protocol	Description
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cpuporeset	slave	Signal	CPU power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdown	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
pchannel_cluster	slave	PChannel	PChannel for cluster.
pchannel_core	slave	PChannel	PChannels for cores
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
sporeset	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.

Port	Direction	Protocol	Description
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

## Parameters for ARMCortexX1CCT

### **cpuX.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **cpuX.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### **cpuX.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **cpuX.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **cpuX.VINITHI**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

**cpuX.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter trace\_special\_hlt\_imm16.

Type: bool

Default value: false

**cpuX.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **cpuX.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

### **cpuX.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **cpuX.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **cpuX.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **cpuX.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **cpuX.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**cpuX.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**cpuX.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**cpuX.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**cpuX.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**cpuX.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**cpuX.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: uint8\_t

Default value: 171

**cpuX.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: string

Default value: N/A

**cpuX.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**cpuX.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**cpuX.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**cpuX.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**cpuX.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**cpuX.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**cpuX.trace\_special\_hlt\_imm16**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

### **`cpuX.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

### **BROADCASTATOMIC**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: `true`

### **BROADCASTCACHEMAINT**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: `true`

### **BROADCASTOUTER**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: `true`

### **BROADCASTPERSIST**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: `true`

### **CLUSTER\_ID**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels,

the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

### **CMO\_broadcast\_when\_cache\_state\_modelling\_disabled**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. This value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: `1`

### **GICDISABLE**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: `true`

### **NUM\_CORES**

Number of cores per cluster.

Type: `uint8_t`

Default value: `1`

### **cpi\_div**

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

### **cpi\_mul**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

**dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-maintenance\_latency**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-miss\_latency**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-prefetch\_enabled**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

Type: `bool`

Default value: `false`

**dcache-read\_access\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-read\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **dcache-size**

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

### **dcache-snoop\_data\_transfer\_latency**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **dcache-state\_modelled**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **dcache-write\_access\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **dcache-write\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. `dcache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **default\_opmode**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

### **diagnostics**

Enable DynamlQ diagnostic messages.

Type: `bool`

Default value: `false`

### **enable\_simulation\_performance\_optimizations**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of `stage12_tlb_size` parameter to 1024).

Type: `bool`

Default value: `true`

### **ext\_abort\_device\_read\_is\_sync**

Synchronous reporting of device-nGnRE read external aborts.

Type: `bool`

Default value: `false`

### **ext\_abort\_device\_write\_is\_sync**

Synchronous reporting of device-nGnRE write external aborts.

Type: `bool`

Default value: `false`

### **ext\_abort\_so\_read\_is\_sync**

Synchronous reporting of device-nGnRnE read external aborts.

Type: `bool`

Default value: `false`

### **ext\_abort\_so\_write\_is\_sync**

Synchronous reporting of device-nGnRnE write external aborts.

Type: `bool`

Default value: `false`

**force\_zero\_PSTATE\_PAN**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: `false`

**has\_acp**

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: `false`

**has\_coherent\_icache**

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

Type: `bool`

Default value: `false`

**has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

**has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

**has\_dot\_product**

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

**has\_peripheral\_port**

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: `false`

### **`icache-hit_latency`**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`icache-maintenance_latency`**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`icache-miss_latency`**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`icache-prefetch_enabled`**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

Type: `bool`

Default value: `false`

### **`icache-read_access_latency`**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-read\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-size**

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

**icache-state\_modelled**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

**invalidate\_code\_cache\_on\_icache\_cmo**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: `0`

**l3cache-hit\_latency**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-maintenance\_latency**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-miss\_latency**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-read\_access\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size `l3cache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-read\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l3cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-size**

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

**l3cache-snoop\_data\_transfer\_latency**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-snoop\_issue\_latency**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-write_access_latency`**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size `l3cache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-write_latency`**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l3cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`pchannel_treat_simreset_as_poreset`**

Register core as ON state to cluster with simulation reset.

Type: `bool`

Default value: `false`

### **`periph_address_end`**

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: `0x0`

### **`periph_address_start`**

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: `0x0`

### **`ptw_latency`**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

### **tlb\_latency**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

### **tlbi\_stall\_enabled**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: bool

Default value: false

### **treat-dcache-cmos-to-pou-as-nop**

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

Type: uint8\_t

Default value: 0

### **treat\_PAC\_as\_NOP**

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are **NOP**. Branch, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

Type: bool

Default value: false

### **walk\_cache\_latency**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

## 3.99 ARMCortexX1CT

Defined in `LISA/ARMCortexX1CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Changes in 11.31.15

The following parameters were added:

- `has_delayed_dbgreg`
- `has_delayed_sysreg`

### About ARMCortexX1CT

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- `BROADCASTPERSIST` pin.

The model does not support the following features:

- `BROADCASTCACHEMAINTPOU` pin.
- `COREINSTRRET`, `COREINSTRRUN`, or `nPMBIRQ` signals.
- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Debug power management signals `DBGPWRDUP` and `DBGIRSTREQ` are not implemented, but `DBGPWRUPREQ` and `DBGNOPWRDWN` are implemented.

- Cache stashing capability.
- Each thread has its own L1Cache and L2Cache instead of a common cache that is shared by all threads of the core.
- Per-thread parameters are not yet supported but signals are implemented.

This model has a variable number of cores per cluster, specified using the `NUM_CORES` parameter.

The per-core parameters are preceded by `cpu0.`, where `n` identifies the core (0-3).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

### Iris and MTI instances for ARM CortexX1CT

This model has the following Iris instances:

Name	Instance type
ARM CortexX1CT	Cluster_ARM_Cortex-X1
ARM CortexX1CT.AMU	PVBusLogger
ARM CortexX1CT.AMU.mapper	PVBusMapper
ARM CortexX1CT.DAP	PVBusLogger
ARM CortexX1CT.DAP.mapper	PVBusMapper
ARM CortexX1CT.DSU	DSU
ARM CortexX1CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARM CortexX1CT.DSU.mpam_busslave	PVBusSlave
ARM CortexX1CT.DSU.shared_cache	PVCache
ARM CortexX1CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARM CortexX1CT.DSU.shared_cache.upstream[Y] (where Y = 0-3)	PVBusSlave
ARM CortexX1CT.MMAP	PVBusLogger
ARM CortexX1CT.MMAP.mapper	PVBusMapper
ARM CortexX1CT.RAS	PVBusLogger
ARM CortexX1CT.RAS.mapper	PVBusMapper
ARM CortexX1CT.cpu0	ARM_Cortex-X1
ARM CortexX1CT.cpu0.UTLB	TLB
ARM CortexX1CT.cpu0.debug_rom	debug_rom
ARM CortexX1CT.cpu0.dtlb	TLB
ARM CortexX1CT.cpu0.l1dcache	PVCache
ARM CortexX1CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARM CortexX1CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARM CortexX1CT.cpu0.l1icache	PVCache
ARM CortexX1CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARM CortexX1CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARM CortexX1CT.cpu0.l2cache	PVCache

Name	Instance type
ARMCortexX1CT.cpu0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX1CT.cpu0.l2cache.upstream[U] (where U = 0-1)	PVBusSlave
ARMCortexX1CT.ext_bus	PVBusLogger
ARMCortexX1CT.ext_bus.mapper	PVBusMapper
ARMCortexX1CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexX1CT.global_debug_rom	debug_rom
ARMCortexX1CT.secondary_debug_rom	debug_rom

This model has the following MTI trace components:

Name	Component type
ARMCortexX1CT.AMU	PVBusLogger
ARMCortexX1CT.AMU.mapper	PVBusMapper
ARMCortexX1CT.DAP	PVBusLogger
ARMCortexX1CT.DAP.mapper	PVBusMapper
ARMCortexX1CT.DSU	DSU
ARMCortexX1CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexX1CT.DSU.mpam_busslave	PVBusSlave
ARMCortexX1CT.DSU.shared_cache	PVCache
ARMCortexX1CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX1CT.DSU.shared_cache.upstream[Y] (where Y = 0-3)	PVBusSlave
ARMCortexX1CT.MMAP	PVBusLogger
ARMCortexX1CT.MMAP.mapper	PVBusMapper
ARMCortexX1CT.RAS	PVBusLogger
ARMCortexX1CT.RAS.mapper	PVBusMapper
ARMCortexX1CT.cpu0	ARM_Cortex-X1
ARMCortexX1CT.cpu0.UTLB	TLB
ARMCortexX1CT.cpu0.l1dcache	PVCache
ARMCortexX1CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX1CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexX1CT.cpu0.l1licache	PVCache
ARMCortexX1CT.cpu0.l1licache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX1CT.cpu0.l1licache.upstream[0]	PVBusSlave
ARMCortexX1CT.cpu0.l2cache	PVCache
ARMCortexX1CT.cpu0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX1CT.cpu0.l2cache.upstream[U] (where U = 0-1)	PVBusSlave
ARMCortexX1CT.ext_bus	PVBusLogger
ARMCortexX1CT.ext_bus.mapper	PVBusMapper
ARMCortexX1CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

## Ports for ARMCortexX1CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AENDMP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamiQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cpuporeset	slave	Signal	CPU power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.

Port	Direction	Protocol	Description
dbgnopwrdown	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
pchannel_cluster	slave	PChannel	PChannel for cluster.
pchannel_core	slave	PChannel	PChannels for cores
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.
sporeset	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

## Parameters for ARMCortexX1CT

### **cpuX.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **cpuX.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### **cpuX.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **cpuX.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **cpuX.VINITHI**

Reset value of SCTLR.V.

Type: `bool`

Default value: `false`

### **cpuX.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**cpuX.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**cpuX.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**cpuX.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**cpuX.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**cpuX.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**cpuX.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**cpuX.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**cpuX.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**cpuX.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**cpuX.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**cpuX.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: bool

Default value: true

**cpuX.semihosting-heap\_base**

Virtual address of heap base.

Type: uint64\_t

Default value: 0x0

**cpuX.semihosting-heap\_limit**

Virtual address of top of heap.

Type: uint64\_t

Default value: 0xf000000

**cpuX.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: uint64\_t

Default value: 0x10000000

**cpuX.semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint64\_t

Default value: 0xf000000

**cpuX.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**cpuX.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**BROADCASTATOMIC**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTCACHEMAINT**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTOUTER**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTPERSIST**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: `true`

**CLUSTER\_ID**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

### **CMO\_broadcast\_when\_cache\_state\_modelling\_disabled**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. This value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: `1`

### **GICDISABLE**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: `true`

### **NUM\_CORES**

Number of cores per cluster.

Type: `uint8_t`

Default value: `1`

### **cpi\_div**

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

### **cpi\_mul**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

### **dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-maintenance_latency`**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-miss_latency`**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-prefetch_enabled`**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

Type: `bool`

Default value: `false`

### **`dcache-read_access_latency`**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-read_latency`**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-size**

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

**dcache-snoop\_data\_transfer\_latency**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-state\_modelled**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

**dcache-write\_access\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-write\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. `dcache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**default\_opmode**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

**diagnostics**

Enable DynaMiq diagnostic messages.

Type: `bool`

Default value: `false`

**enable\_simulation\_performance\_optimizations**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of `stage12_tlb_size` parameter to 1024).

Type: `bool`

Default value: `true`

**ext\_abort\_device\_read\_is\_sync**

Synchronous reporting of device-nGnRE read external aborts.

Type: `bool`

Default value: `false`

**ext\_abort\_device\_write\_is\_sync**

Synchronous reporting of device-nGnRE write external aborts.

Type: `bool`

Default value: `false`

**ext\_abort\_so\_read\_is\_sync**

Synchronous reporting of device-nGnRnE read external aborts.

Type: `bool`

Default value: `false`

**ext\_abort\_so\_write\_is\_sync**

Synchronous reporting of device-nGnRnE write external aborts.

Type: `bool`

Default value: `false`

**force\_zero\_PSTATE\_PAN**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: `false`

**has\_acp**

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: `false`

**has\_coherent\_icache**

Whether icache invalidation to the point of unification is required for instruction to data coherence.  
`true` - Invalidate operations not required.

Type: `bool`

Default value: `false`

**has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

**has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

**has\_dot\_product**

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

**has\_peripheral\_port**

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: `false`

### **`icache-hit_latency`**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`icache-maintenance_latency`**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`icache-miss_latency`**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`icache-prefetch_enabled`**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

Type: `bool`

Default value: `false`

### **`icache-read_access_latency`**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-read\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-size**

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

**icache-state\_modelled**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

**invalidate\_code\_cache\_on\_icache\_cmo**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: `0`

**l3cache-hit\_latency**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-maintenance\_latency**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-miss\_latency**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-read\_access\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size `l3cache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-read\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l3cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-size**

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x100000`

**l3cache-snoop\_data\_transfer\_latency**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-snoop\_issue\_latency**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-write_access_latency`**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size `l3cache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-write_latency`**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l3cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`pchannel_treat_simreset_as_poreset`**

Register core as ON state to cluster with simulation reset.

Type: `bool`

Default value: `false`

### **`periph_address_end`**

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: `0x0`

### **`periph_address_start`**

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: `0x0`

### **`ptw_latency`**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

### **tlb\_latency**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

### **tlbi\_stall\_enabled**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: bool

Default value: false

### **treat-dcache-cmos-to-pou-as-nop**

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

Type: uint8\_t

Default value: 0

### **walk\_cache\_latency**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

## 3.100 ARMCortexX2CT

Defined in LISA/ARMCortexX2CT.lisa.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r2p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Changes in 11.31.15

The following parameters were added:

- `has_delayed_dbgreg`
- `has_delayed_sysreg`
- `num_acp`

## About ARMCortexX2CT

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- `BROADCASTPERSIST` pin.

Support for the following features is planned for a future release:

- `BROADCASTCACHEMAINTPOU` pin.
- `COREINSTRRET`, `COREINSTRRUN`, and `nPMBIRQ` signals.

The following features will not be implemented:

- 256-bit wide output transactions.
- Error correction/detection features.
- Self-test features (MBIST).
- Snoop filtering.

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

## Iris and MTI instances for ARMCortexX2CT

This model has the following Iris instances:

Name	Instance type
ARMCortexX2CT	Cluster_ARM_Cortex-X2
ARMCortexX2CT.AMU	PVBusLogger
ARMCortexX2CT.AMU.mapper	PVBusMapper
ARMCortexX2CT.DAP	PVBusLogger
ARMCortexX2CT.DAP.mapper	PVBusMapper
ARMCortexX2CT.DSU	DSU-110
ARMCortexX2CT.DSU.PPU_cluster	PPUv1
ARMCortexX2CT.DSU.PPU_cluster.busslave	PVBusSlave

Name	Instance type
ARMCortexX2CT.DSU.PPU_core0	PPUv1
ARMCortexX2CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexX2CT.DSU.mpam_busslave	PVBusSlave
ARMCortexX2CT.DSU.shared_cache	PVCache
ARMCortexX2CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX2CT.DSU.shared_cache.upstream[Y] (where Y = 0-3)	PVBusSlave
ARMCortexX2CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexX2CT.MMAP	PVBusLogger
ARMCortexX2CT.MMAP.mapper	PVBusMapper
ARMCortexX2CT.RAS	PVBusLogger
ARMCortexX2CT.RAS.mapper	PVBusMapper
ARMCortexX2CT.cpu0	ARM_Cortex-X2
ARMCortexX2CT.cpu0.UTLB	TLB
ARMCortexX2CT.cpu0.debug_rom	debug_rom
ARMCortexX2CT.cpu0.dtlb	TLB
ARMCortexX2CT.cpu0.l1dcache	PVCache
ARMCortexX2CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX2CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexX2CT.cpu0.l1icache	PVCache
ARMCortexX2CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX2CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexX2CT.cpu0.l2cache	PVCache
ARMCortexX2CT.cpu0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX2CT.cpu0.l2cache.upstream[U] (where U = 0-1)	PVBusSlave
ARMCortexX2CT.ext_bus	PVBusLogger
ARMCortexX2CT.ext_bus.mapper	PVBusMapper
ARMCortexX2CT.gic_cpuif_decoder_cluster	GIcV3CPUInterfaceDecoder
ARMCortexX2CT.global_debug_rom	debug_rom
ARMCortexX2CT.secondary_debug_rom	debug_rom
ARMCortexX2CT.sve	ScalableVectorExtension

This model has the following MTI trace components:

Name	Component type
ARMCortexX2CT.AMU	PVBusLogger
ARMCortexX2CT.AMU.mapper	PVBusMapper
ARMCortexX2CT.DAP	PVBusLogger
ARMCortexX2CT.DAP.mapper	PVBusMapper
ARMCortexX2CT.DSU	DSU-110
ARMCortexX2CT.DSU.PPU_cluster	PPUv1
ARMCortexX2CT.DSU.PPU_cluster.busslave	PVBusSlave

Name	Component type
ARMCortexX2CT.DSU.PPU_core0	PPUv1
ARMCortexX2CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexX2CT.DSU.mpam_busslave	PVBusSlave
ARMCortexX2CT.DSU.shared_cache	PVCache
ARMCortexX2CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX2CT.DSU.shared_cache.upstream[Y] (where Y = 0-3)	PVBusSlave
ARMCortexX2CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexX2CT.MMAP	PVBusLogger
ARMCortexX2CT.MMAP.mapper	PVBusMapper
ARMCortexX2CT.RAS	PVBusLogger
ARMCortexX2CT.RAS.mapper	PVBusMapper
ARMCortexX2CT.cpu0	ARM_Cortex-X2
ARMCortexX2CT.cpu0.UTLB	TLB
ARMCortexX2CT.cpu0.l1dcache	PVCache
ARMCortexX2CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX2CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexX2CT.cpu0.l1icache	PVCache
ARMCortexX2CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX2CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexX2CT.cpu0.l2cache	PVCache
ARMCortexX2CT.cpu0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX2CT.cpu0.l2cache.upstream[U] (where U = 0-1)	PVBusSlave
ARMCortexX2CT.ext_bus	PVBusLogger
ARMCortexX2CT.ext_bus.mapper	PVBusMapper
ARMCortexX2CT.gic_cpuif_decoder_cluster	GLCv3CPUInterfaceDecoder

## Ports for ARMCortexX2CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AEND0MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).

Port	Direction	Protocol	Description
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcs_m_pchannel	master	PChannel	Cluster PCSM signal
cluster_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamlQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIRQ	master	Signal	Timer signals to SOC
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcs_m_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the core power info

Port	Direction	Protocol	Description
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error
coreinstrrun	master	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdown	master	Signal	No power-down request.
dbgprupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicreset	master	Signal	An output from PPU that can be used to reset GICCLK domain components
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_cluster_wakerequest	slave	Signal	PPU cluster wake request signal.
ppu_core_irq	master	Signal	PPU core interrupt.
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU Core wake request signals.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Reset signal to cluster.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.

Port	Direction	Protocol	Description
spiden	slave	Signal	External debug interface.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq	master	Signal	Interrupt signal from the trace buffer unit.
utility_bus_s	slave	PVBus	Utility bus slave
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

## Parameters for ARMCortexX2CT

### **cpuX.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **cpuX.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **cpuX.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **cpuX.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

**cpuX.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

### **cpuX.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **cpuX.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **cpuX.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **cpuX.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **cpuX.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

### **cpuX.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**cpuX.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**cpuX.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**cpuX.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**cpuX.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**cpuX.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**cpuX.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**cpuX.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**cpuX.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: bool

Default value: true

**cpuX.semihosting-heap\_base**

Virtual address of heap base.

Type: uint64\_t

Default value: 0x0

**cpuX.semihosting-heap\_limit**

Virtual address of top of heap.

Type: uint64\_t

Default value: 0xf000000

**cpuX.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: uint64\_t

Default value: 0x10000000

**cpuX.semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint64\_t

Default value: 0xf000000

**cpuX.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**cpuX.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**BROADCASTATOMIC**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTCACHEMAINT**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTOUTER**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTPERSIST**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: `true`

**CLUSTER\_ID**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

### **CMO\_broadcast\_when\_cache\_state\_modelling\_disabled**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. This value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: `1`

### **GICDISABLE**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: `true`

### **NUM\_CORES**

Number of cores per cluster.

Type: `uint8_t`

Default value: `1`

### **core\_power\_on\_by\_default**

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPU which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: `false`

### **cpi\_div**

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

**`cpi_mul`**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

**`dcache-hit_latency`**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**`dcache-maintenance_latency`**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**`dcache-miss_latency`**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**`dcache-prefetch_enabled`**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

Type: `bool`

Default value: `false`

**`dcache-read_access_latency`**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-read\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-snoop\_data\_transfer\_latency**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-state\_modelled**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

**dcache-write\_access\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-write\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. `dcache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**default\_opmode**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

### **diagnostics**

Enable DynamlQ diagnostic messages.

Type: `bool`

Default value: `false`

### **enable\_simulation\_performance\_optimizations**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of `stage12_tlb_size` parameter to 1024).

Type: `bool`

Default value: `true`

### **ete.CLAIMTAGS**

Number of claim tags.

Type: `uint8_t`

Default value: 32

### **ete.MAX\_INST\_PER\_Q**

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

### **ete.NumberOfRSPairs**

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

### **ete.PIDR\_CM0D**

TRCPIDR CM0D value.

Type: `uint8_t`

Default value: 0

**ete.PIDR\_REVAND**

TRCPIDR REVAND value.

Type: `uint8_t`

Default value: 0

**ete.PIDR\_REVISION**

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: 0

**ete.Q\_CADENCE**

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: 0x1

**ete.RES0\_STATEFUL**

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: `false`

**ete.RETSTACK**

Return stack depth.

Type: `uint8_t`

Default value: 3

**ete.REVISION**

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 2

**ete.SIM\_OVERFLOW\_GRANULARITY**

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: 0x64

**ete.SIM\_OVERFLOW\_PERCENTAGE**

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: `0`

**ete.SOURCE\_ADDRESS**

Allow generation of source address elements.

Type: `bool`

Default value: `false`

**ete.TRACE\_OUTPUT**

File to which to write trace byte stream.

Type: `string`

Default value: `N/A`

**ete.TRCSRSTA\_FORCED\_EXCEP**

TRCSRSTA value for a forcibly traced exception.

Type: `bool`

Default value: `false`

**ext\_abort\_device\_read\_is\_sync**

Synchronous reporting of device-nGnRE read external aborts.

Type: `bool`

Default value: `false`

**ext\_abort\_device\_write\_is\_sync**

Synchronous reporting of device-nGnRE write external aborts.

Type: `bool`

Default value: `false`

**ext\_abort\_so\_read\_is\_sync**

Synchronous reporting of device-nGnRnE read external aborts.

Type: `bool`

Default value: `false`

**ext\_abort\_so\_write\_is\_sync**

Synchronous reporting of device-nGnRnE write external aborts.

Type: `bool`

Default value: `false`

**force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks**

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: `false`

**force\_zero\_PSTATE\_PAN**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: `false`

**force\_zero\_mpam\_partid\_and\_pmg**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAMO\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

Type: `uint8_t`

Default value: 0

**has\_acp**

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: `false`

**has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

**has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

**has\_ete**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (-plugin or -P).

Type: `bool`

Default value: `false`

**has\_peripheral\_port**

If true, an additional AXI peripheral port is configured.

Type: `bool`

Default value: `false`

**icache-hit\_latency**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-maintenance\_latency**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-miss\_latency**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-prefetch\_enabled**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

Type: `bool`

Default value: `false`

**icache-read\_access\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**icache-read\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. icache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**icache-state\_modelled**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

**invalidate\_code\_cache\_on\_icache\_cmo**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: `0`

**l3cache-hit\_latency**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

### **l3cache-maintenance\_latency**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **l3cache-miss\_latency**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **l3cache-read\_access\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size `l3cache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **l3cache-read\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l3cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **l3cache-size**

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x0`

**l3cache-snoop\_data\_transfer\_latency**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-snoop\_issue\_latency**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-write\_access\_latency**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size `l3cache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-write\_latency**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l3cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**memory\_tagging\_support\_level**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).

Type: `uint8_t`

Default value: 2

**mpmm\_accumulator\_multiplier**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of `n` means the accumulator will use  $(n * \text{accumulator value})$  to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantums

in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: `uint8_t`

Default value: 1

### **num\_acp**

Number of ACP ports.

Type: `uint8_t`

Default value: 0

### **num\_nodes**

Number of transport nodes. Zero implies direct-connect configuration.

Type: `uint8_t`

Default value: 1

### **periph\_address\_end**

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: `uint64_t`

Default value: 0x0

### **periph\_address\_start**

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: `uint64_t`

Default value: 0x0

### **ptw\_latency**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

### **tlb\_latency**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

**tlbi\_stall\_enabled**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: `false`

**treat-dcache-cmos-to-pou-as-nop**

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

Type: `uint8_t`

Default value: 0

**walk\_cache\_latency**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

## 3.101 ARMCortexX3CT

Defined in `LISA/ARMCortexX3CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Changes in 11.31.15

The following parameters were added:

- `has_delayed_dbgreg`
- `has_delayed_sysreg`
- `num_acp`

### About ARMCortexX3CT

The model supports the following features:

- DynamIQ (DSU) system registers.

- DynamIQ r3p0.
- L2 cache is supported at the per-core level only and there is no implementation of Core-Complex with shared L2 cache yet.
- P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- BROADCASTPERSIST pin.
- Utility bus.
- Support for Interrupt signals from SPE is added as pmbirq[8].

Support for the following features is planned for a future release:

- TRBE.
- Core-Complex.
- BROADCASTCACHEMAINTPOU pin.
- COREINSTRRET, COREINSTRRUN, or nPMBIRQ signals.
- Each thread has its own L1Cache and L2Cache instead of a common cache that is shared by all threads of the core.
- Per-thread parameters are not yet supported but signals are implemented.

The `cfgsdisable` signal will be removed in a future release.

---

The following features will not be implemented:

- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Cache stashing capability.
- Embedded Logic Analyzer (ELA).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (crypto.dll or crypto.so) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

## Limitations

Some of the SVE instructions do not raise undefined exceptions when SP is used as a source register.

## Iris and MTI instances for ARMCortexX3CT

This model has the following Iris instances:

Name	Instance type
ARMCortexX3CT	Cluster_ARM_Cortex-X3
ARMCortexX3CT.AMU	PVBusLogger
ARMCortexX3CT.AMU.mapper	PVBusMapper
ARMCortexX3CT.DAP	PVBusLogger
ARMCortexX3CT.DAP.mapper	PVBusMapper
ARMCortexX3CT.DSU	DSU-110
ARMCortexX3CT.DSU.PPU_cluster	PPUv1
ARMCortexX3CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexX3CT.DSU.PPU_core0	PPUv1
ARMCortexX3CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexX3CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexX3CT.DSU.mpam_busslave	PVBusSlave
ARMCortexX3CT.DSU.shared_cache	PVCache
ARMCortexX3CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX3CT.DSU.shared_cache.upstream[Y] (where Y = 0-3)	PVBusSlave
ARMCortexX3CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexX3CT.MMAP	PVBusLogger
ARMCortexX3CT.MMAP.mapper	PVBusMapper
ARMCortexX3CT.RAS	PVBusLogger
ARMCortexX3CT.RAS.mapper	PVBusMapper
ARMCortexX3CT.cpu0	ARM_Cortex-X3
ARMCortexX3CT.cpu0.UTLB	TLB
ARMCortexX3CT.cpu0.debug_rom	debug_rom
ARMCortexX3CT.cpu0.dtlb	TLB
ARMCortexX3CT.cpu0.l1dcache	PVCache
ARMCortexX3CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX3CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexX3CT.cpu0.l1icache	PVCache
ARMCortexX3CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX3CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexX3CT.cpu0.l2cache	PVCache

Name	Instance type
ARMCortexX3CT.cpu0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX3CT.cpu0.l2cache.upstream[U] (where U = 0–1)	PVBusSlave
ARMCortexX3CT.ext_bus	PVBusLogger
ARMCortexX3CT.ext_bus.mapper	PVBusMapper
ARMCortexX3CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexX3CT.global_debug_rom	debug_rom
ARMCortexX3CT.secondary_debug_rom	debug_rom
ARMCortexX3CT.sve	ScalableVectorExtension

This model has the following MTI trace components:

Name	Component type
ARMCortexX3CT.AMU	PVBusLogger
ARMCortexX3CT.AMU.mapper	PVBusMapper
ARMCortexX3CT.DAP	PVBusLogger
ARMCortexX3CT.DAP.mapper	PVBusMapper
ARMCortexX3CT.DSU	DSU-110
ARMCortexX3CT.DSU.PPU_cluster	PPUv1
ARMCortexX3CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexX3CT.DSU.PPU_core0	PPUv1
ARMCortexX3CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexX3CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexX3CT.DSU.mpam_busslave	PVBusSlave
ARMCortexX3CT.DSU.shared_cache	PVCache
ARMCortexX3CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX3CT.DSU.shared_cache.upstream[Y] (where Y = 0–3)	PVBusSlave
ARMCortexX3CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexX3CT.MMAP	PVBusLogger
ARMCortexX3CT.MMAP.mapper	PVBusMapper
ARMCortexX3CT.RAS	PVBusLogger
ARMCortexX3CT.RAS.mapper	PVBusMapper
ARMCortexX3CT.cpu0	ARM_Cortex-X3
ARMCortexX3CT.cpu0.UTLB	TLB
ARMCortexX3CT.cpu0.l1dcache	PVCache
ARMCortexX3CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX3CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexX3CT.cpu0.l1icache	PVCache
ARMCortexX3CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX3CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexX3CT.cpu0.l2cache	PVCache
ARMCortexX3CT.cpu0.l2cache.downstream[0].pvbusmaster	PVBusMaster

Name	Component type
ARMCortexX3CT.cpu0.l2cache.upstream[U] (where U = 0-1)	PVBusSlave
ARMCortexX3CT.ext_bus	PVBusLogger
ARMCortexX3CT.ext_bus.mapper	PVBusMapper
ARMCortexX3CT.gic_cpuif_decoder_cluster	GlCv3CPUInterfaceDecoder

## Ports for ARMCortexX3CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AEND0MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsn_pchannel	master	PChannel	Cluster PCSM signal
cluster_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state

Port	Direction	Protocol	Description
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamiQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIRQ	master	Signal	Timer signals to SOC
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsn_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error
coreinstrrun	master	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdown	master	Signal	No power-down request.
dbgprupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.

Port	Direction	Protocol	Description
gicreset	master	Signal	An output from PPUs that can be used to reset GICCLK domain components
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_cluster_wakerequest	slave	Signal	PPU cluster wake request signal.
ppu_core_irq	master	Signal	PPU core interrupt.
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU Core wake request signals.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Reset signal to cluster.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq	master	Signal	Interrupt signal from the trace buffer unit.
utility_bus_s	slave	PVBus	Utility bus slave
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

## Parameters for ARMCortexX3CT

### **cpuX.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **cpuX.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### **cpuX.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **cpuX.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **cpuX.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **cpuX.force-fpsid**

Override the FPSID value.

Type: `bool`

Default value: `true`

**cpuX.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x100000

### **cpuX.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **cpuX.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **cpuX.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **cpuX.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

### **cpuX.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

### **cpuX.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**cpuX.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**cpuX.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**cpuX.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**cpuX.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**cpuX.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**cpuX.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**cpuX.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**cpuX.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: bool

Default value: true

**cpuX.semihosting-heap\_base**

Virtual address of heap base.

Type: uint64\_t

Default value: 0x0

**cpuX.semihosting-heap\_limit**

Virtual address of top of heap.

Type: uint64\_t

Default value: 0xf000000

**cpuX.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: uint64\_t

Default value: 0x10000000

**cpuX.semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint64\_t

Default value: 0xf000000

**cpuX.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**cpuX.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**cpuX.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**AEND0\_DEFAULT**

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

**AEND1\_DEFAULT**

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

**AEND2\_DEFAULT**

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

**AEND3\_DEFAULT**

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

**ASTART0\_DEFAULT**

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

**ASTART1\_DEFAULT**

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

**ASTART2\_DEFAULT**

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

**ASTART3\_DEFAULT**

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

**BROADCASTATOMIC**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTCACHEMAINT**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: `false`

**BROADCASTOUTER**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: `false`

**BROADCASTPERSIST**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: `true`

**CLUSTER\_ID**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. This value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: `1`

**CPUCFR**

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x0`

**GICDISABLE**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: `true`

**NUM\_CORES**

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

**bus\_type**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: 0

**core\_power\_on\_by\_default**

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: `false`

**cpi\_div**

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 0x1

**cpi\_mul**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: 0x1

**dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-maintenance\_latency**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-miss\_latency**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-prefetch\_enabled**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

Type: `bool`

Default value: `false`

**dcache-read\_access\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-read\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **dcache-size**

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

### **dcache-snoop\_data\_transfer\_latency**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **dcache-state\_modelled**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **dcache-write\_access\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **dcache-write\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. `dcache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **default\_opmode**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

### **diagnostics**

Enable DynamlQ diagnostic messages.

Type: `bool`

Default value: `false`

### **enable\_simulation\_performance\_optimizations**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of `stage12_tlb_size` parameter to 1024).

Type: `bool`

Default value: `true`

### **error\_record\_feature\_register**

RAS feature register values. An array of JSON objects. The JSON schema for the array is: `[{"ED":0x0, "IMPDEF_3_2":0x0, "UI":0x0, "FI":0x0, "UE":0x0, "CFI":0x0, "CEC":0x0, "RP":0x0, "DUI":0x0, "CEO":0x0, "CI":0x0, "TS":0x0, "INJ":0x0, "FRX":0x0, "UC":0x0, "UEU":0x0, "UER":0x0, "UEO":0x0, "DE":0x0, "CE":0x0, "Visibility":"Core"},other_feature_register_values]`. Where ED,UI,FI,CE and UE have valid values between 0x0 - 0x3. CFI and DUI have valid values 0x0, 0x2 and 0x3. CEC has valid values 0x0,0x2 or 0x4. RP,CEO,INJ,FRX,UC,UEU,UER,UEO,DE has valid values 0x0 or 0x1. CI and TS has valid values of 0x0, 0x1 and 0x2. Visibility has valid values "Core" or "Cluster".

Type: `string`

Default value: `"[{\"ED\":0x2,\"IMPDEF_3_2\":0x0,\"UI\":0x2,\"FI\":0x2,\"UE\":0x1,\"CFI\":0x2,\"CEC\":0x2,\"RP\":0x1,\"DUI\":0x0,\"CEO\":0x0,\"INJ\":0x1,\"CI\":0x0,\"TS\":0x0,\"Visibility\": \"Cluster\"},{\"ED\":0x2,\"IMPDEF_3_2\":0x0,\"UI\":0x2,\"FI\":0x2,\"UE\":0x1,\"CFI\":0x2,\"CEC\":0x2,\"RP\":0x1,\"DUI\":0x0,\"CEO\":0x0,\"INJ\":0x1,\"CI\":0x0,\"TS\":0x0}]]\"`

### **ete.CLAIMTAGS**

Number of claim tags.

Type: `uint8_t`

Default value: 32

### **ete.MAX\_INST\_PER\_Q**

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

#### **`ete.NumberOfRSPairs`**

Number of resource selector pairs.

Type: `uint8_t`

Default value: `8`

#### **`ete.PIDR_CM0D`**

TRCPIDR CM0D value.

Type: `uint8_t`

Default value: `0`

#### **`ete.PIDR_REVAND`**

TRCPIDR REVAND value.

Type: `uint8_t`

Default value: `0`

#### **`ete.PIDR_REVISION`**

TRCPIDR REVISION value.

Type: `uint8_t`

Default value: `0`

#### **`ete.Q_CADENCE`**

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: `0x1`

#### **`ete.RES0_STATEFUL`**

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: `false`

#### **`ete.RETSTACK`**

Return stack depth.

Type: `uint8_t`

Default value: 3

#### **ete.REVISION**

TRCIDR1 revision value.

Type: `uint8_t`

Default value: 0

#### **ete.SIM\_OVERFLOW\_GRANULARITY**

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: 0x64

#### **ete.SIM\_OVERFLOW\_PERCENTAGE**

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

#### **ete.SOURCE\_ADDRESS**

Allow generation of source address elements.

Type: `bool`

Default value: `false`

#### **ete.TRACE\_OUTPUT**

File to which to write trace byte stream.

Type: `string`

Default value: N/A

#### **ete.TRCRSRTA\_FORCED\_EXCEP**

TRCRSR.TA value for a forcibly traced exception.

Type: `bool`

Default value: `false`

#### **ext\_abort\_normal\_noncacheable\_read\_is\_sync**

Synchronous reporting of normal noncacheable-read external aborts.

Type: `bool`

Default value: `true`

### **ext\_abort\_so\_write\_ras\_type**

External Aborts are reported as RAS error type specified in this param. Values: 0 = NONE, 1 = UC, 2 = UEU, 3 = UEO, 4 = UER, 5 = CE.

Type: `uint8_t`

Default value: 2

### **force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks**

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: `false`

### **force\_zero\_PSTATE\_PAN**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: `false`

### **force\_zero\_mpam\_partid\_and\_pmg**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

Type: `uint8_t`

Default value: 0

### **has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `true`

### **has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `true`

### **has\_enhanced\_pan**

Implements Armv8.7 Enhanced PAN feature (FEAT\_PAN3) values of this parameter are:- 1, feature is implemented if ARMv8.7 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

### **has\_ete**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (-plugin or -P).

Type: `bool`

Default value: `false`

### **has\_large\_va**

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT\_LVA). values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.2 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 0

### **has\_peripheral\_port**

If true, an additional AXI peripheral port is configured.

Type: `bool`

Default value: `false`

### **icache-hit\_latency**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

### **icache-maintenance\_latency**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **icache-miss\_latency**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **icache-prefetch\_enabled**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

Type: `bool`

Default value: `false`

### **icache-read\_access\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **icache-read\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **icache-size**

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x8000`

**icache-state\_modelled**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

**instruction\_tlb\_size**

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

Type: `uint32_t`

Default value: `0x0`

**invalidate\_code\_cache\_on\_icache\_cmo**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: `0`

**l3cache-has\_mpam**

L3 Cache has MPAM support.

Type: `bool`

Default value: `true`

**l3cache-hit\_latency**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-maintenance\_latency**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-miss\_latency**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-read\_access\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size `l3cache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-read\_latency**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l3cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-size**

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

**l3cache-snoop\_data\_transfer\_latency**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-snoop\_issue\_latency**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-ways`**

L3 Cache number of ways (sets are implicit from size).

Type: `uint16_t`

Default value: `16`

### **`l3cache-write_access_latency`**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size `l3cache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-write_latency`**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l3cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`memory_tagging_support_level`**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

Type: `uint8_t`

Default value: `3`

### **`mpmm_accumulator_multiplier`**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of `n` means the accumulator will use  $(n * \text{accumulator value})$  to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantums in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: `uint8_t`

Default value: 1

### **num\_acp**

Number of ACP ports.

Type: uint8\_t

Default value: 0

### **num\_nodes**

Number of transport nodes. Zero implies direct-connect configuration.

Type: uint8\_t

Default value: 1

### **pmu-num\_counters**

Number of PMU counters implemented.

Type: uint8\_t

Default value: 6

### **pseudo\_fault\_generation\_feature\_register**

ARMv8.4 Standard Pseudo-fault generation feature register values. JSON schema for the parameter value is: [{"OF":false, "UC":false, "UEU":false, "UER":false, "UEO":false, "DE":false, "CE":0x0, "CI":false, "ER":false, "PN":false, "AV":false, "MV":false, "SYN":false, "R":false, "NA":false}, other\_pseudo-fault\_generating\_features\_register\_values]. Where OF, UC, UEU, UER, UEO, DE, CI, ER, PN, AV, MV, SYN, and R have valid false(NOT\_SUPPORTED) and true(FEATURE\_CONTROLLABLE), where CE can have 0(NOT\_SUPPORTED), 1(NONSPECIFIC\_CE\_SUPPORTED) and 3(TRANSIENT\_OR\_PERSISTENT\_CE\_SUPPORTED) and NA can have false(component fakes detection on next access) or true(component fakes detection spontaneously). Effective only when ERXFR's INJ field allows it or has\_ras\_fault\_injection is true.

Type: string

Default value: "[{"OF":true, "UC":true, "UEU":false, "UER":false, "UEO":false, "DE":0x1, "CE":0x1, "CI":true, "ER":false, "PN":true, "AV":false, "MV":true, "SYN":true, "R":true}, {"OF":false, "UC":true, "UEU":false, "UER":false, "UEO":false, "DE":0x1, "CE":0x1, "CI":false, "ER":false, "PN":false, "AV":false, "MV":false, "SYN":false, "R":true}]"

### **ptw\_latency**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

**stage12\_tlb\_size**

Number of stage1+2 tlb entries. Valid values are 0 or >= 4.

Type: `uint32_t`

Default value: `0x80`

**tlb\_latency**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

**tlbi\_stall\_enabled**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: `false`

**trace\_physical\_registers\_when\_host\_virtualisation\_enabled**

Trace sysreg accesses to physical register accessed (0=disabled, 1=Trace only ELR/SPSR\_EL1 as ELR/SPSR\_EL2, 2=Trace all redirected registers as physical registers affecting all features inc. the host virtualised registers.

Type: `uint8_t`

Default value: `1`

**treat\_PAC\_as\_NOP**

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are **NOP**. Branch, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

Type: `bool`

Default value: `false`

**walk\_cache\_latency**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

## 3.102 ARMCortexX4CT

Defined in `LISA/ARMCortexX4CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Changes in 11.31.15

The following parameters were added:

- `has_delayed_dbgreg`
- `has_delayed_sysreg`

### About ARMCortexX4CT

The model supports the following features:

- DynamIQ (DSU) system registers.
- DynamIQ r3p0.
- L2 cache is supported at the per-core level only and there is no implementation of Core-Complex with shared L2 cache yet.
- P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- `BROADCASTPERSIST` pin.
- Utility bus.
- Support for Interrupt signals from SPE is added as `pmbirq[8]`.

Support for the following features is planned for a future release:

- `BROADCASTCACHEMAINTPOU` pin.
- `COREINSTRRET`, `COREINSTRRUN`, and `nPMBIRQ` signals.
- Each thread has its own L1Cache and L2Cache instead of a common cache that is shared by all threads of the core.
- Per-thread parameters are not supported but signals are implemented.

The `cfgsdisable` signal will be removed in a future release.

The following features will not be implemented:

- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Cache stashing capability.
- Embedded Logic Analyzer (ELA).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

## Limitations

Some of the SVE instructions do not raise undefined exceptions when SP is used as a source register.

## Iris and MTI instances for ARMCortexX4CT

This model has the following Iris instances:

Name	Instance type
ARMCortexX4CT	Cluster_ARM_Cortex-X4
ARMCortexX4CT.AMU	PVBusLogger
ARMCortexX4CT.AMU.mapper	PVBusMapper
ARMCortexX4CT.DAP	PVBusLogger
ARMCortexX4CT.DAP.mapper	PVBusMapper
ARMCortexX4CT.DSU	DSU-120
ARMCortexX4CT.DSU.PPU_cluster	PPUv1
ARMCortexX4CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexX4CT.DSU.PPU_core0	PPUv1
ARMCortexX4CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexX4CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexX4CT.DSU.mpam_busslave	PVBusSlave

Name	Instance type
ARMCortexX4CT.DSU.shared_cache	PVCache
ARMCortexX4CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX4CT.DSU.shared_cache.upstream[Y] (where Y = 0–4)	PVBusSlave
ARMCortexX4CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexX4CT.MMAP	PVBusLogger
ARMCortexX4CT.MMAP.mapper	PVBusMapper
ARMCortexX4CT.RAS	PVBusLogger
ARMCortexX4CT.RAS.mapper	PVBusMapper
ARMCortexX4CT.cpu0	ARM_Cortex-X4
ARMCortexX4CT.cpu0.UTLB	TLB
ARMCortexX4CT.cpu0.debug_rom	debug_rom
ARMCortexX4CT.cpu0.dtlb	TLB
ARMCortexX4CT.cpu0.l1dcache	PVCache
ARMCortexX4CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX4CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexX4CT.cpu0.l1licache	PVCache
ARMCortexX4CT.cpu0.l1licache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX4CT.cpu0.l1licache.upstream[0]	PVBusSlave
ARMCortexX4CT.cpu0.l2cache	PVCache
ARMCortexX4CT.cpu0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX4CT.cpu0.l2cache.upstream[U] (where U = 0–1)	PVBusSlave
ARMCortexX4CT.ext_bus	PVBusLogger
ARMCortexX4CT.ext_bus.mapper	PVBusMapper
ARMCortexX4CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexX4CT.global_debug_rom	debug_rom
ARMCortexX4CT.secondary_debug_rom	debug_rom
ARMCortexX4CT.sve	ScalableVectorExtension

This model has the following MTI trace components:

Name	Component type
ARMCortexX4CT.AMU	PVBusLogger
ARMCortexX4CT.AMU.mapper	PVBusMapper
ARMCortexX4CT.DAP	PVBusLogger
ARMCortexX4CT.DAP.mapper	PVBusMapper
ARMCortexX4CT.DSU	DSU-120
ARMCortexX4CT.DSU.PPU_cluster	PPUv1
ARMCortexX4CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexX4CT.DSU.PPU_core0	PPUv1
ARMCortexX4CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexX4CT.DSU.l3_flusher	AsyncCacheFlushUnit

Name	Component type
ARMCortexX4CT.DSU.mpam_busslave	PVBusSlave
ARMCortexX4CT.DSU.shared_cache	PVCache
ARMCortexX4CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX4CT.DSU.shared_cache.upstream[Y] (where Y = 0-4)	PVBusSlave
ARMCortexX4CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexX4CT.MMAP	PVBusLogger
ARMCortexX4CT.MMAP.mapper	PVBusMapper
ARMCortexX4CT.RAS	PVBusLogger
ARMCortexX4CT.RAS.mapper	PVBusMapper
ARMCortexX4CT.cpu0	ARM_Cortex-X4
ARMCortexX4CT.cpu0.UTLB	TLB
ARMCortexX4CT.cpu0.l1dcache	PVCache
ARMCortexX4CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX4CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexX4CT.cpu0.l1icache	PVCache
ARMCortexX4CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX4CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexX4CT.cpu0.l2cache	PVCache
ARMCortexX4CT.cpu0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX4CT.cpu0.l2cache.upstream[U] (where U = 0-1)	PVBusSlave
ARMCortexX4CT.ext_bus	PVBusLogger
ARMCortexX4CT.ext_bus.mapper	PVBusMapper
ARMCortexX4CT.gic_cpuif_decoder_cluster	GIcV3CPUInterfaceDecoder

## Ports for ARMCortexX4CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AEND0MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).

Port	Direction	Protocol	Description
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcs_m_pchannel	master	PChannel	Cluster PCSM signal
cluster_powerdown_out	master	Signal	DEPRECATED - An output from PPU that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamiQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIQ	master	Signal	Timer signals to SOC
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcs_m_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPU that informs thermal controller of the core power info
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error

Port	Direction	Protocol	Description
coreinstrrun	master	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdown	master	Signal	No power-down request.
dbgpwrupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicreset	master	Signal	An output from PPU that can be used to reset GICCLK domain components
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_cluster_wakerequest	slave	Signal	PPU cluster wake request signal.
ppu_core_irq	master	Signal	PPU core interrupt.
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU core wake request signal.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Reset signal to cluster.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.

Port	Direction	Protocol	Description
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq	master	Signal	Interrupt signal from the trace buffer unit.
utility_bus_s	slave	PVBus	Utility bus slave
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

## Parameters for ARMCortexX4CT

### **cpuX.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **cpuX.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### **cpuX.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **cpuX.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **cpuX.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **`cpuX.l2cache-hit_latency`**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`cpuX.l2cache-maintenance_latency`**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`cpuX.l2cache-miss_latency`**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`cpuX.l2cache-read_access_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`cpuX.l2cache-read_latency`**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-size**

L2 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

**cpuX.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

**cpuX.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**cpuX.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**cpuX.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**cpuX.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**cpuX.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**cpuX.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**cpuX.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: uint8\_t

Default value: 171

**cpuX.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**cpuX.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**cpuX.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: `bool`

Default value: `true`

**cpuX.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**cpuX.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**cpuX.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**cpuX.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: 0xf000000

#### **cpuX.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

#### **cpuX.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: bool

Default value: false

#### **cpuX.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: bool

Default value: true

#### **AEND0\_DEFAULT**

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

Type: uint64\_t

Default value: 0x0

#### **AEND1\_DEFAULT**

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

Type: uint64\_t

Default value: 0x0

#### **AEND2\_DEFAULT**

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

Type: uint64\_t

Default value: 0x0

### **AEND3\_DEFAULT**

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

Type: uint64\_t

Default value: 0x0

### **ASTART0\_DEFAULT**

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

Type: uint64\_t

Default value: 0x0

### **ASTART1\_DEFAULT**

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

Type: uint64\_t

Default value: 0x0

### **ASTART2\_DEFAULT**

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

Type: uint64\_t

Default value: 0x0

### **ASTART3\_DEFAULT**

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

Type: uint64\_t

Default value: 0x0

### **BROADCASTATOMIC**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: bool

Default value: `true`

### **BROADCASTCACHEMAINT**

Enable broadcasting of cache maintenance operations to downstream caches. The `broadcastcachemaint` signal will override this value if used.

Type: `bool`

Default value: `false`

### **BROADCASTOUTER**

Enable broadcasting of Outer Shareable transactions. The `broadcastouter` signal will override this value if used.

Type: `bool`

Default value: `false`

### **BROADCASTPERSIST**

Enable broadcasting of cache clean to the point of persistence operations. The `broadcastpersist` signal will override this value if used.

Type: `bool`

Default value: `true`

### **CLUSTER\_ID**

The Cluster ID maps to the affinity levels of the `MPIDR_EL1` register and is evaluated based on the `MPIDR_EL1` layout. If `MPIDR_EL1` supports 16-bit cluster affinity levels, bits [15:8] map to `IDRAFF3`, while bits [7:0] map to `IDRAFF2`. If `MPIDR_EL1` supports 24-bit cluster affinity levels, the bits [23:16] map to `IDRAFF3`, bits [15:8] map to `IDRAFF2`, and bits [7:0] map to `IDRAFF1`. This configuration also updates all relevant component `DEVAFF` registers and is used to set the `ManagerID64` of the core.

Type: `uint32_t`

Default value: `0x0`

### **CMO\_broadcast\_when\_cache\_state\_modelling\_disabled**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. This value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain events even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: 1

**CPUCFR**

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x0`

**GICDISABLE**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: `true`

**NUM\_CORES**

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

**bus\_type**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: 0

**core\_power\_on\_by\_default**

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: `false`

**cpi\_div**

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

**cpi\_mul**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

**dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-maintenance\_latency**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-miss\_latency**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-prefetch\_enabled**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

Type: `bool`

Default value: `false`

**dcache-read\_access\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-read\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-size**

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

**dcache-snoop\_data\_transfer\_latency**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-state\_modelled**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

**dcache-write\_access\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-write\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. `dcache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

### **default\_opmode**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

### **diagnostics**

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: `false`

### **ecv\_support\_level**

Implement Enhanced Counter Virtualization feature from ARMv8.6. 0, Not supported. 1, fully supported without CNTPOFF. 2, fully supported with CNTPOFF (FEAT\_ECV).

Type: `uint8_t`

Default value: 2

### **enable\_simulation\_performance\_optimizations**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of `stage12_tlb_size` parameter to 1024).

Type: `bool`

Default value: `true`

### **ete.CLAIMTAGS**

Number of claim tags.

Type: `uint8_t`

Default value: 4

### **ete.MAX\_INST\_PER\_Q**

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: 0x1

**ete.NumberOfRSPairs**

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

**ete.PIDR\_CM0D**

TRCPIDR CM0D value.

Type: `uint8_t`

Default value: 0

**ete.Q\_CADENCE**

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: 0x1

**ete.RES0\_STATEFUL**

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: `false`

**ete.RETSTACK**

Return stack depth.

Type: `uint8_t`

Default value: 3

**ete.SIM\_OVERFLOW\_GRANULARITY**

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: 0x64

**ete.SIM\_OVERFLOW\_PERCENTAGE**

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

**ete.SOURCE\_ADDRESS**

Allow generation of source address elements.

Type: `bool`

Default value: `false`

**ete.TRACE\_OUTPUT**

File to which to write trace byte stream.

Type: `string`

Default value: `N/A`

**ete.TRCSRTA\_FORCED\_EXCEP**

TRCSRTA value for a forcibly traced exception.

Type: `bool`

Default value: `false`

**ext\_abort\_so\_write\_ras\_type**

External Aborts are reported as RAS error type specified in this param. Values: 0 = NONE, 1 = UC, 2 = UEU, 3 = UEO, 4 = UER, 5 = CE.

Type: `uint8_t`

Default value: 2

**force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks**

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: `false`

**force\_zero\_PSTATE\_PAN**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: `false`

**force\_zero\_mpam\_partid\_and\_pmg**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

Type: `uint8_t`

Default value: `0`

**has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

**has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `true`

**has\_enhanced\_pan**

Implements Armv8.7 Enhanced PAN feature (FEAT\_PAN3) values of this parameter are:- 1, feature is implemented if ARMv8.7 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: `2`

**has\_ete**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (-plugin or -P).

Type: `bool`

Default value: `false`

**has\_peripheral\_port**

If true, an additional AXI peripheral port is configured.

Type: `bool`

Default value: `false`

**has\_statistical\_profiling**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

Type: `bool`

Default value: `true`

**has\_v8\_7\_spe\_inverted\_filtering**

Where FEAT\_SPEv1p2 is implemented, whether inverted filtering by events is implemented (represented by PMISDR.FnE).

Type: `bool`

Default value: `false`

**has\_v8\_7\_spe\_previous\_branch\_target**

Where FEAT\_SPEv1p2 is implemented, whether the optional branch target feature is implemented (FEAT\_SPE\_PBT).

Type: `bool`

Default value: `false`

**icache-hit\_latency**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-maintenance\_latency**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-miss\_latency**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-prefetch\_enabled**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

Type: `bool`

Default value: `false`

**icache-read\_access\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**icache-read\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. icache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**icache-size**

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

**icache-state\_modelled**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

**instruction\_tlb\_size**

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

Type: `uint32_t`

Default value: 0x0

### **invalidate\_code\_cache\_on\_icache\_cmo**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: uint8\_t

Default value: 0

### **l3cache-size**

L3 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

### **l3cache-ways**

L3 Cache number of ways (sets are implicit from size).

Type: uint16\_t

Default value: 16

### **log2\_trace\_buffer\_alignment**

Log2 of trace buffer alignment constraint for output buffer (0->1B ... 11->2Kib).

Type: uint8\_t

Default value: 6

### **memory\_tagging\_support\_level**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

Type: uint8\_t

Default value: 3

### **mpam\_has\_altsp**

DEPRECATED: MPAMIDR\_EL1.HAS\_ALTSP is required when FEAT\_RME is implemented.

Type: bool

Default value: false

**mpamidr\_has\_force\_ns**

Whether MPAMIDR\_EL1.HAS\_FORCE\_NS bit is set or clear.values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.6 is enabled.- 2, feature is implemented.

Type: uint8\_t

Default value: 0

**mpamidr\_has\_sdeflt**

Whether MPAMIDR\_EL1.HAS\_SDEFLT bit is set or clear.values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.6 is enabled.- 2, feature is implemented.

Type: uint8\_t

Default value: 1

**mpamidr\_has\_tidr**

Whether MPAMIDR\_EL1.HAS\_TIDR bit is set or clear.values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.6 is enabled.- 2, feature is implemented.

Type: uint8\_t

Default value: 1

**mpmm\_accumulator\_multiplier**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of n means the accumulator will use (n \* accumulator value) to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantum in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: uint8\_t

Default value: 1

**num\_acp**

Number of ACP ports.

Type: uint8\_t

Default value: 0

**num\_nodes**

Number of transport nodes. Zero implies direct-connect configuration.

Type: uint8\_t

Default value: 1

**pmu-num\_counters**

Number of PMU counters implemented.

Type: `uint8_t`

Default value: 31

**ptw\_latency**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

**stage12\_tlb\_size**

Number of stage1+2 tlb entries. Valid values are 0 or >= 4.

Type: `uint32_t`

Default value: 0x80

**tcr\_txsz\_undersize\_should\_fault**

If large VA is not supported, Whether undersized TxSZ value should generate translation fault.

Type: `bool`

Default value: `false`

**tlb\_latency**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

**tlbi\_stall\_enabled**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: `false`

**treat\_PAC\_as\_NOP**

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are **NOP**. Branch, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

Type: `bool`

Default value: `false`

**walk\_cache\_latency**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

## 3.103 ARMCortexX925CT

Defined in `LISA/ARMCortexX925CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Changes in 11.31.15

The following parameters were added:

- `has_delayed_dbgreg`
- `has_delayed_sysreg`

### About ARMCortexX925CT

A DSU-120 DynamIQ cluster containing a configurable number of Cortex-X925 cores.

The number of cores in the cluster is configurable using the following parameter:

**NUM\_CORES**

Possible values are 1-14

The following DSU/CPU features will not be implemented:

- DynamIQ features that are irrelevant to the programmers' view simulation.
- 256-bit wide output transactions.

- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Snoop filtering.
- Cache stashing capability.
- Embedded Logic Analyzer (ELA).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

## Iris and MTI instances for ARM CortexX925CT

This model has the following Iris instances:

Name	Instance type
ARM CortexX925CT	Cluster_ARM_Cortex-X925
ARM CortexX925CT.AMU	PVBusLogger
ARM CortexX925CT.AMU.mapper	PVBusMapper
ARM CortexX925CT.DAP	PVBusLogger
ARM CortexX925CT.DAP.mapper	PVBusMapper
ARM CortexX925CT.DSU	DSU-120
ARM CortexX925CT.DSU.PPU_cluster	PPUv1
ARM CortexX925CT.DSU.PPU_cluster.busslave	PVBusSlave
ARM CortexX925CT.DSU.PPU_core0	PPUv1
ARM CortexX925CT.DSU.PPU_core0.busslave	PVBusSlave
ARM CortexX925CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARM CortexX925CT.DSU.mpam_busslave	PVBusSlave
ARM CortexX925CT.DSU.shared_cache	PVCache
ARM CortexX925CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARM CortexX925CT.DSU.shared_cache.upstream[Y] (where Y = 0-4)	PVBusSlave
ARM CortexX925CT.DSU.utility_slave[0]	PVBusSlave
ARM CortexX925CT.MMAP	PVBusLogger
ARM CortexX925CT.MMAP.mapper	PVBusMapper
ARM CortexX925CT.RAS	PVBusLogger
ARM CortexX925CT.RAS.mapper	PVBusMapper
ARM CortexX925CT.cpu0	ARM_Cortex-X925
ARM CortexX925CT.cpu0.UTLB	TLB
ARM CortexX925CT.cpu0.debug_rom	debug_rom
ARM CortexX925CT.cpu0.dtlb	TLB
ARM CortexX925CT.cpu0.l1dcache	PVCache
ARM CortexX925CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARM CortexX925CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARM CortexX925CT.cpu0.l1icache	PVCache

Name	Instance type
ARMCortexX925CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX925CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexX925CT.cpu0.l2cache	PVCache
ARMCortexX925CT.cpu0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX925CT.cpu0.l2cache.upstream[U] (where $U = 0-1$ )	PVBusSlave
ARMCortexX925CT.ext_bus	PVBusLogger
ARMCortexX925CT.ext_bus.mapper	PVBusMapper
ARMCortexX925CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexX925CT.global_debug_rom	debug_rom
ARMCortexX925CT.secondary_debug_rom	debug_rom
ARMCortexX925CT.sve	ScalableVectorExtension

This model has the following MTI trace components:

Name	Component type
ARMCortexX925CT.AMU	PVBusLogger
ARMCortexX925CT.AMU.mapper	PVBusMapper
ARMCortexX925CT.DAP	PVBusLogger
ARMCortexX925CT.DAP.mapper	PVBusMapper
ARMCortexX925CT.DSU	DSU-120
ARMCortexX925CT.DSU.PPU_cluster	PPUv1
ARMCortexX925CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexX925CT.DSU.PPU_core0	PPUv1
ARMCortexX925CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexX925CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexX925CT.DSU.mpam_busslave	PVBusSlave
ARMCortexX925CT.DSU.shared_cache	PVCache
ARMCortexX925CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX925CT.DSU.shared_cache.upstream[Y] (where $Y = 0-4$ )	PVBusSlave
ARMCortexX925CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexX925CT.MMAP	PVBusLogger
ARMCortexX925CT.MMAP.mapper	PVBusMapper
ARMCortexX925CT.RAS	PVBusLogger
ARMCortexX925CT.RAS.mapper	PVBusMapper
ARMCortexX925CT.cpu0	ARM_Cortex-X925
ARMCortexX925CT.cpu0.UTLB	TLB
ARMCortexX925CT.cpu0.l1dcache	PVCache
ARMCortexX925CT.cpu0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX925CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexX925CT.cpu0.l1icache	PVCache
ARMCortexX925CT.cpu0.l1icache.downstream[0].pvbusmaster	PVBusMaster

Name	Component type
ARMCortexX925CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexX925CT.cpu0.l2cache	PVCache
ARMCortexX925CT.cpu0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMCortexX925CT.cpu0.l2cache.upstream[U] (where U = 0-1)	PVBusSlave
ARMCortexX925CT.ext_bus	PVBusLogger
ARMCortexX925CT.ext_bus.mapper	PVBusMapper
ARMCortexX925CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

### Ports for ARMCortexX925CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port.
AEND0MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal is for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsn_pchannel	master	PChannel	Cluster PCSM signal
cluster_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info
cluster_ppu_hw_stat	master	Value	Cluster PPU power state

Port	Direction	Protocol	Description
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamiQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHPSIRQ	master	Signal	Timer signals to SOC
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTHVSIRQ	master	Signal	Timer signals to SOC
CNTPNSIRQ	master	Signal	Timer signals to SOC.
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsn_pchannel	master	PChannel	Core PCSM signals
core_powerdown_out	master	Signal	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
core_ppu_hw_stat	master	Value	Notify the power state change inside the PPU.
coreerrirq	master	Signal	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq	master	Signal	Fault indicator for a detected 1 or 2 bit ECC error
coreinstrrun	master	Signal	Core Running State
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdown	master	Signal	No power-down request.
dbgprupreq	master	Signal	Debug power up request.
defaultMP	slave	Signal	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.

Port	Direction	Protocol	Description
gicreset	master	Signal	An output from PPU that can be used to reset GICCLK domain components
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
pmbirq	master	Signal	Interrupt signal from the statistical profiling unit.
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	master	Signal	PPU cluster interrupt.
ppu_cluster_isolate	master	Signal	PPU Cluster Domain isolation control.
ppu_cluster_wakerequest	slave	Signal	PPU cluster wake request signal.
ppu_core_irq	master	Signal	PPU core interrupt.
ppu_core_isolate	master	Signal	PPU Core Domain isolation control.
ppu_core_wakerequest	slave	Signal	PPU core wake request signal.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Reset signal to cluster.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core System Error physical pins.
spiden	slave	Signal	External debug interface.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq	master	Signal	Interrupt signal from the trace buffer unit.
utility_bus_s	slave	PVBus	Utility bus slave
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

## Parameters for ARMCortexX925CT

### **cpuX.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian. Big endian is unsupported in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `false`

### **cpuX.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

### **cpuX.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **cpuX.RVBARADDR**

Value of RVBAR\_ELx register.

Type: `uint64_t`

Default value: `0x0`

### **cpuX.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **cpuX.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-size**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x80000`

**cpuX.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

**cpuX.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-ways**

L2 Cache number of ways (sets are implicit from size).

Type: uint8\_t

Default value: 8

**cpuX.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**cpuX.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**cpuX.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**cpuX.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: `uint16_t`

Default value: `0xf000`

**cpuX.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: `uint32_t`

Default value: `0x123456`

**cpuX.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: `uint8_t`

Default value: 60

**cpuX.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: `uint8_t`

Default value: 171

**cpuX.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: `string`

Default value: N/A

**cpuX.semihosting-cwd**

Base directory for semihosting file access.

Type: `string`

Default value: N/A

**cpuX.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: bool

Default value: true

**cpuX.semihosting-heap\_base**

Virtual address of heap base.

Type: uint64\_t

Default value: 0x0

**cpuX.semihosting-heap\_limit**

Virtual address of top of heap.

Type: uint64\_t

Default value: 0xf000000

**cpuX.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: uint64\_t

Default value: 0x10000000

**cpuX.semihosting-stack\_limit**

Virtual address of stack limit.

Type: uint64\_t

Default value: 0xf000000

**cpuX.trace\_special\_hlt\_imm16**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

Type: uint16\_t

Default value: 0xf000

**cpuX.vfp-enable\_at\_reset**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

**cpuX.vfp-present**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

**AEND0\_DEFAULT**

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

**AEND1\_DEFAULT**

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

**AEND2\_DEFAULT**

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

**AEND3\_DEFAULT**

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

**ASTART0\_DEFAULT**

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

Type: `uint64_t`

Default value: `0x0`

**ASTART1\_DEFAULT**

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

Type: `uint64_t`

Default value: `0x0`

**ASTART2\_DEFAULT**

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

Type: `uint64_t`

Default value: `0x0`

**ASTART3\_DEFAULT**

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

Type: `uint64_t`

Default value: `0x0`

**BROADCASTATOMIC**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

Type: `bool`

Default value: `true`

**BROADCASTCACHEMAINT**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

Type: `bool`

Default value: `false`

**BROADCASTOUTER**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

Type: `bool`

Default value: `false`

**BROADCASTPERSIST**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

Type: `bool`

Default value: `true`

**CLUSTER\_ID**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. This value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: `1`

**CPUCFR**

Value of CPU Configuration Register.

Type: `uint64_t`

Default value: `0x0`

**GICDISABLE**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: `true`

**NUM\_CORES**

Number of cores per cluster.

Type: `uint8_t`

Default value: 1

**bus\_type**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

Type: `uint8_t`

Default value: 0

**core\_power\_on\_by\_default**

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPUs which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

Type: `bool`

Default value: `false`

**cpi\_div**

Divider for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

**cpi\_mul**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: `uint32_t`

Default value: `0x1`

**dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-maintenance\_latency**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-miss\_latency**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-prefetch\_enabled**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

Type: `bool`

Default value: `false`

**dcache-read\_access\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-read\_latency**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **dcache-size**

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

### **dcache-snoop\_data\_transfer\_latency**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **dcache-state\_modelled**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **dcache-write\_access\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **dcache-write\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. `dcache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **default\_opmode**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

### **diagnostics**

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: `false`

### **ecv\_support\_level**

Implement Enhanced Counter Virtualization feature from ARMv8.6. 0, Not supported. 1, fully supported without CNTPOFF. 2, fully supported with CNTPOFF (FEAT\_ECV).

Type: `uint8_t`

Default value: 2

### **enable\_simulation\_performance\_optimizations**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of `stage12_tlb_size` parameter to 1024).

Type: `bool`

Default value: `true`

### **ete.CLAIMTAGS**

Number of claim tags.

Type: `uint8_t`

Default value: 4

### **ete.MAX\_INST\_PER\_Q**

Maximum limit for the number of instructions implied by a Q element.

Type: `uint16_t`

Default value: `0x1`

### **ete.NumberOfRSPairs**

Number of resource selector pairs.

Type: `uint8_t`

Default value: 8

**ete.PIDR\_CM0D**

TRCPIDR CM0D value.

Type: `uint8_t`

Default value: 0

**ete.Q\_CADENCE**

Number of instruction blocks traced between two Q elements.

Type: `uint16_t`

Default value: 0x1

**ete.RES0\_STATEFUL**

Whether **RES0** bits are stateful or **RAZ/WI**.

Type: `bool`

Default value: `false`

**ete.RETSTACK**

Return stack depth.

Type: `uint8_t`

Default value: 3

**ete.SIM\_OVERFLOW\_GRANULARITY**

Number of instruction blocks in each granule, for simulated overflow.

Type: `uint32_t`

Default value: 0x64

**ete.SIM\_OVERFLOW\_PERCENTAGE**

Percentage of instruction blocks lost in each granule, for simulated overflow.

Type: `uint8_t`

Default value: 0

**ete.SOURCE\_ADDRESS**

Allow generation of source address elements.

Type: `bool`

Default value: `false`

### **`ete.TRACE_OUTPUT`**

File to which to write trace byte stream.

Type: `string`

Default value: `N/A`

### **`ete.TRCSRSTA_FORCED_EXCEP`**

TRCSRSTA value for a forcibly traced exception.

Type: `bool`

Default value: `false`

### **`ext_abort_so_write_ras_type`**

External Aborts are reported as RAS error type specified in this param. Values: 0 = NONE, 1 = UC, 2 = UEU, 3 = UEO, 4 = UER, 5 = CE.

Type: `uint8_t`

Default value: 2

### **`force_mte_tag_access_razwi_and_ignore_tag_checks`**

Force MTE tag accesses to **RAZ/WI** and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

Type: `bool`

Default value: `false`

### **`force_zero_PSTATE_PAN`**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: `false`

### **`force_zero_mpam_partid_and_pmg`**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

Type: `uint8_t`

Default value: 0

**has\_delayed\_dbgreg**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

**has\_delayed\_sysreg**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `true`

**has\_enhanced\_pan**

Implements Armv8.7 Enhanced PAN feature (FEAT\_PAN3) values of this parameter are:- 1, feature is implemented if ARMv8.7 is enabled.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

**has\_ete**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (`-plugin` or `-P`).

Type: `bool`

Default value: `false`

**has\_mt\_pmu\_disable\_feature**

Implements Multi-threading PMU disable extension from ARMv8.6 (FEAT\_MTPMU). 0: FEAT\_MTPMU is disabled, 1: FEAT\_MTPMU is enabled if ARMv8.6 is implemented, 2: FEAT\_MTPMU is cherry-picked, 0xF: The feature is disabled and is represented by value 0xF in ID\_AA64DFR0\_EL1.MTPMU.

Type: `uint8_t`

Default value: 0

**has\_peripheral\_port**

If true, an additional AXI peripheral port is configured.

Type: `bool`

Default value: `false`

**has\_statistical\_profiling**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

Type: `bool`

Default value: `true`

**has\_v8\_7\_spe\_inverted\_filtering**

Where FEAT\_SPEv1p2 is implemented, whether inverted filtering by events is implemented (represented by PMISDR.FnE).

Type: `bool`

Default value: `false`

**has\_v8\_7\_spe\_previous\_branch\_target**

Where FEAT\_SPEv1p2 is implemented, whether the optional branch target feature is implemented (FEAT\_SPE\_PBT).

Type: `bool`

Default value: `false`

**icache-hit\_latency**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-maintenance\_latency**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-miss\_latency**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-prefetch\_enabled**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

Type: `bool`

Default value: `false`

**icache-read\_access\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**icache-read\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. icache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

**icache-size**

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

**icache-state\_modelled**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

**instruction\_tlb\_size**

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

Type: `uint32_t`

Default value: 0x0

### **invalidate\_code\_cache\_on\_icache\_cmo**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: uint8\_t

Default value: 0

### **l3cache-size**

L3 Cache size in bytes.

Type: uint32\_t

Default value: 0x80000

### **l3cache-ways**

L3 Cache number of ways (sets are implicit from size).

Type: uint16\_t

Default value: 16

### **log2\_trace\_buffer\_alignment**

Log2 of trace buffer alignment constraint for output buffer (0->1B ... 11->2Kib).

Type: uint8\_t

Default value: 6

### **memory\_tagging\_support\_level**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

Type: uint8\_t

Default value: 3

### **mpam\_has\_altsp**

DEPRECATED: MPAMIDR\_EL1.HAS\_ALTSP is required when FEAT\_RME is implemented.

Type: bool

Default value: false

**mpamidr\_has\_force\_ns**

Whether MPAMIDR\_EL1.HAS\_FORCE\_NS bit is set or clear.values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.6 is enabled.- 2, feature is implemented.

Type: uint8\_t

Default value: 0

**mpamidr\_has\_sdeflt**

Whether MPAMIDR\_EL1.HAS\_SDEFLT bit is set or clear.values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.6 is enabled.- 2, feature is implemented.

Type: uint8\_t

Default value: 1

**mpamidr\_has\_tidr**

Whether MPAMIDR\_EL1.HAS\_TIDR bit is set or clear.values of this parameter are:- 0, feature is not enabled.- 1, feature is implemented if ARMv8.6 is enabled.- 2, feature is implemented.

Type: uint8\_t

Default value: 1

**mpmm\_accumulator\_multiplier**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator.value of n means the accumulator will use (n \* accumulator value) to calculate the mpmm threshold (MPMM).is provided as a fast model workaround to handle cases where execution of quantum in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

Type: uint8\_t

Default value: 1

**num\_acp**

Number of ACP ports.

Type: uint8\_t

Default value: 0

**num\_nodes**

Number of transport nodes. Zero implies direct-connect configuration.

Type: uint8\_t

Default value: 1

**pmu-num\_counters**

Number of PMU counters implemented.

Type: `uint8_t`

Default value: 31

**ptw\_latency**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

**stage12\_tlb\_size**

Number of stage1+2 tlb entries. Valid values are 0 or >= 4.

Type: `uint32_t`

Default value: 0x80

**tcr\_txsz\_undersize\_should\_fault**

If large VA is not supported, Whether undersized TxSZ value should generate translation fault.

Type: `bool`

Default value: `false`

**tlb\_latency**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: 0x0

**tlbi\_stall\_enabled**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: `false`

**treat\_PAC\_as\_NOP**

Non-architecture parameter. Treat Pointer Authentication as **NOP**. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are **NOP**. Branch, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

Type: `bool`

Default value: `false`

**walk\_cache\_latency**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

## 3.104 ARMNeoverseE1CT

Defined in `LISA/ARMNeoverseE1CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

### Changes in 11.31.15

The following parameters were added:

- `has_delayed_dbgreg`
- `has_delayed_sysreg`

### About ARMNeoverseE1CT

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- `BROADCASTPERSIST` pin.

The model does not support the following features:

- `BROADCASTCACHEMAINTPOU` pin.
- `COREINSTRRET`, `COREINSTRRUN`, or `nPMBIRQ` signals.
- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Debug power management signals `DBGPWRDUP` and `DBGIRSTREQ` are not implemented, but `DBGPWRUPREQ` and `DBGNOPWRDWN` are implemented.
- Cache stashing capability.
- Each thread has its own L1Cache and L2Cache instead of a common cache that is shared by all threads of the core.
- Per-thread parameters are not yet supported but signals are implemented.

This model has a variable number of cores per cluster, specified using the `NUM_CORES` parameter.

The per-core parameters are preceded by `cpun.`, where `n` identifies the core (0-3).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

## Iris and MTI instances for ARMNeoverseE1CT

This model has the following Iris instances:

Name	Instance type
ARMNeoverseE1CT	Cluster_ARM_Neoverse-E1
ARMNeoverseE1CT.AMU	PVBusLogger
ARMNeoverseE1CT.AMU.mapper	PVBusMapper
ARMNeoverseE1CT.DAP	PVBusLogger
ARMNeoverseE1CT.DAP.mapper	PVBusMapper
ARMNeoverseE1CT.DSU	DSU
ARMNeoverseE1CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMNeoverseE1CT.DSU.mpam_busslave	PVBusSlave
ARMNeoverseE1CT.DSU.shared_cache	PVCache
ARMNeoverseE1CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMNeoverseE1CT.DSU.shared_cache.upstream[Y] (where Y = 0-3)	PVBusSlave

Name	Instance type
ARMNeoverseE1CT.MMAP	PVBusLogger
ARMNeoverseE1CT.MMAP.mapper	PVBusMapper
ARMNeoverseE1CT.RAS	PVBusLogger
ARMNeoverseE1CT.RAS.mapper	PVBusMapper
ARMNeoverseE1CT.cpu0.dtlb	TLB
ARMNeoverseE1CT.cpu0.threadZ (where Z = 0-1)	ARM_Neoverse-E1
ARMNeoverseE1CT.cpu0.threadZ.UTLB (where Z = 0-1)	TLB
ARMNeoverseE1CT.cpu0.thread0.l1dcache	PVCache
ARMNeoverseE1CT.cpu0.thread0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMNeoverseE1CT.cpu0.thread0.l1dcache.upstream[0]	PVBusSlave
ARMNeoverseE1CT.cpu0.thread0.l1icache	PVCache
ARMNeoverseE1CT.cpu0.thread0.l1icache.downstream[0].pvbusmaster	PVBusMaster
ARMNeoverseE1CT.cpu0.thread0.l1icache.upstream[0]	PVBusSlave
ARMNeoverseE1CT.cpu0.thread0.l2cache	PVCache
ARMNeoverseE1CT.cpu0.thread0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMNeoverseE1CT.cpu0.thread0.l2cache.upstream[V] (where V = 0-1)	PVBusSlave
ARMNeoverseE1CT.ext_bus	PVBusLogger
ARMNeoverseE1CT.ext_bus.mapper	PVBusMapper
ARMNeoverseE1CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMNeoverseE1CT.global_debug_rom	debug_rom

This model has the following MTI trace components:

Name	Component type
ARMNeoverseE1CT.AMU	PVBusLogger
ARMNeoverseE1CT.AMU.mapper	PVBusMapper
ARMNeoverseE1CT.DAP	PVBusLogger
ARMNeoverseE1CT.DAP.mapper	PVBusMapper
ARMNeoverseE1CT.DSU	DSU
ARMNeoverseE1CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMNeoverseE1CT.DSU.mpam_busslave	PVBusSlave
ARMNeoverseE1CT.DSU.shared_cache	PVCache
ARMNeoverseE1CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMNeoverseE1CT.DSU.shared_cache.upstream[Y] (where Y = 0-3)	PVBusSlave
ARMNeoverseE1CT.MMAP	PVBusLogger
ARMNeoverseE1CT.MMAP.mapper	PVBusMapper
ARMNeoverseE1CT.RAS	PVBusLogger
ARMNeoverseE1CT.RAS.mapper	PVBusMapper
ARMNeoverseE1CT.cpu0.threadZ (where Z = 0-1)	ARM_Neoverse-E1
ARMNeoverseE1CT.cpu0.threadZ.UTLB (where Z = 0-1)	TLB
ARMNeoverseE1CT.cpu0.thread0.l1dcache	PVCache

Name	Component type
ARMNeoverseE1CT.cpu0.thread0.l1dcache.downstream[0].pvbusmaster	PVBusMaster
ARMNeoverseE1CT.cpu0.thread0.l1dcache.upstream[0]	PVBusSlave
ARMNeoverseE1CT.cpu0.thread0.l1licache	PVCache
ARMNeoverseE1CT.cpu0.thread0.l1licache.downstream[0].pvbusmaster	PVBusMaster
ARMNeoverseE1CT.cpu0.thread0.l1licache.upstream[0]	PVBusSlave
ARMNeoverseE1CT.cpu0.thread0.l2cache	PVCache
ARMNeoverseE1CT.cpu0.thread0.l2cache.downstream[0].pvbusmaster	PVBusMaster
ARMNeoverseE1CT.cpu0.thread0.l2cache.upstream[V] (where V = 0–1)	PVBusSlave
ARMNeoverseE1CT.ext_bus	PVBusLogger
ARMNeoverseE1CT.ext_bus.mapper	PVBusMapper
ARMNeoverseE1CT.gic_cpuif_decoder_cluster	GLCv3CPUInterfaceDecoder

### Ports for ARMNeoverseE1CT

Port	Direction	Protocol	Description
acp_s	slave	PVBus	AXI ACP slave port
AENDMP	slave	Value_64	Port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	slave	Value_64	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	slave	Signal	CHI defined pins.
broadcastcachemaint	slave	Signal	ACE defined pins.
broadcastouter	slave	Signal	ACE defined pins.
broadcastpersist	slave	Signal	CHI defined pins.
cfgend	slave	Signal	This signal if for EE bit initialisation.
cfgsdisable	slave	Signal	This signal disables write access to some secure Interrupt Controller registers.
cfgte	slave	Signal	This signal provides default exception handling state.
clk_in	slave	ClockSignal	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
clusterid	slave	Value	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set ManagerID64 of the core.
clusterpmuirq	master	Signal	DynamiQ pmu irq
CNTHPIRQ	master	Signal	Timer signals to SOC.
CNTHVIRQ	master	Signal	Timer signals to SOC.
CNTPNSIRQ	master	Signal	Timer signals to SOC.

Port	Direction	Protocol	Description
CNTPSIRQ	master	Signal	Timer signals to SOC.
cntvalueb	slave	CounterInterface	Interface to SoC level counter module.
CNTVIRQ	master	Signal	Timer signals to SOC.
commirq	master	Signal	Interrupt signal from debug communications channel.
core_clk_in	slave	ClockSignal	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cp15sdisable	slave	Signal	This signal disables write access to some system control processor registers.
cpuporeset	slave	Signal	Power on reset. Initializes all the processor logic, including debug logic.
cryptodisable	slave	Signal	Disable cryptography extensions after reset.
cti	master	v8EmbeddedCrossTrigger_controlprotocol	Cross trigger matrix port.
ctidbgirq	master	Signal	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	slave	Signal	External debug interface.
dbgnopwrdown	master	Signal	These signals relate to core power down.
dbgppwrupreq	master	Signal	Debug power up request.
dev_debug_s	slave	PVBus	External debug interface.
event	peer	Signal	This peer port of event input (and output) is for wakeup from WFE.
fiq	slave	Signal	This signal drives the CPUs fast-interrupt handling.
gicv3_redistributor_s	slave	GICv3Comms	GICv3 AXI-stream port per thread.
irq	slave	Signal	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	slave	PVBus	External debug interface.
niden	slave	Signal	External debug interface.
pchannel_cluster	slave	PChannel	PChannel for cluster.
pchannel_core	slave	PChannel	PChannels for cores
pmuirq	master	Signal	Interrupt signal from performance monitoring unit.
presetdbg	slave	Signal	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	master	PVBus	The core will generate bus requests on this port.
pvbus_periph_m	master	PVBus	The core can generate peripheral bus request on this port.
rei	slave	Signal	Per core RAM Error Interrupt.
reset	slave	Signal	Raising this signal will put the core into reset mode.
rvbaraddr	slave	Value_64	Reset vector base address.
sci_m	master	SystemCoherencyInterface	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei	slave	Signal	Per core virtual System Error physical pins.
spiden	slave	Signal	External debug interface.
spniden	slave	Signal	External debug interface.

Port	Direction	Protocol	Description
sporeset	slave	Signal	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks	master	InstructionCount	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq	master	Signal	Interrupt signal for virtual CPU maintenance IRQ.
vfiq	slave	Signal	Virtualised FIQ.
vinithi	slave	Signal	This signal controls of the location of the exception vectors at reset.
virq	slave	Signal	Virtualised IRQ.
virtio_s	slave	PVBus	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei	slave	Signal	Per core virtual System Error physical pins.

## Parameters for ARMNeoverseE1CT

### **cpuX.CRYPTODISABLE**

Disable cryptographic features.

Type: `bool`

Default value: `false`

### **cpuX.enable\_single\_thread\_at\_reset**

Enable single thread after reset and keep other thread in reset.

Type: `bool`

Default value: `false`

### **cpuX.enable\_trace\_special\_hlt\_imm16**

Enable usage of parameter `trace_special_hlt_imm16`.

Type: `bool`

Default value: `false`

### **cpuX.l2cache-hit\_latency**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-maintenance\_latency**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-miss\_latency**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-read\_access\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-read\_latency**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**cpuX.l2cache-size**

L2 Cache size in bytes.

Type: `uint32_t`

Default value: `0x40000`

**cpuX.l2cache-snoop\_data\_transfer\_latency**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: 0x0

**cpuX.l2cache-snoop\_issue\_latency**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-write\_access\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.l2cache-write\_latency**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**cpuX.max\_code\_cache\_mb**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

Type: uint16\_t

Default value: 0x100

**cpuX.min\_sync\_level**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

Type: uint8\_t

Default value: 0

**cpuX.semihosting-A32\_HLT**

A32 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**cpuX.semihosting-A64\_HLT**

A64 HLT number for semihosting calls.

Type: uint16\_t

Default value: 0xf000

**cpuX.semihosting-ARM\_SVC**

A32 SVC number for semihosting calls.

Type: uint32\_t

Default value: 0x123456

**cpuX.semihosting-T32\_HLT**

T32 HLT number for semihosting calls.

Type: uint8\_t

Default value: 60

**cpuX.semihosting-Thumb\_SVC**

T32 SVC number for semihosting calls.

Type: uint8\_t

Default value: 171

**cpuX.semihosting-cmd\_line**

Command line available to semihosting calls.

Type: string

Default value: N/A

**cpuX.semihosting-cwd**

Base directory for semihosting file access.

Type: string

Default value: N/A

**cpuX.semihosting-enable**

Enable semihosting SVC/HLT traps.

Type: bool

Default value: `true`

**cpuX.semihosting-heap\_base**

Virtual address of heap base.

Type: `uint64_t`

Default value: `0x0`

**cpuX.semihosting-heap\_limit**

Virtual address of top of heap.

Type: `uint64_t`

Default value: `0xf000000`

**cpuX.semihosting-stack\_base**

Virtual address of base of descending stack.

Type: `uint64_t`

Default value: `0x10000000`

**cpuX.semihosting-stack\_limit**

Virtual address of stack limit.

Type: `uint64_t`

Default value: `0xf000000`

**cpuX.thread0.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: `bool`

Default value: `false`

**cpuX.thread0.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: `bool`

Default value: `false`

**cpuX.thread0.MPIDR-override**

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: `uint64_t`

Default value: 0x0

**cpuX.thread0.RVBARADDR**

Value of RVBAR\_ELx register.

Type: uint64\_t

Default value: 0x0

**cpuX.thread0.VINITHI**

Reset value of SCTLR.V.

Type: bool

Default value: false

**cpuX.thread1.CFGEND**

Endianness configuration at reset. 0, little endian. 1, big endian.

Type: bool

Default value: false

**cpuX.thread1.CFGTE**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

Type: bool

Default value: false

**cpuX.thread1.MPIDR-override**

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

Type: uint64\_t

Default value: 0x0

**cpuX.thread1.RVBARADDR**

Value of RVBAR\_ELx register.

Type: uint64\_t

Default value: 0x0

**cpuX.thread1.VINITHI**

Reset value of SCTLR.V.

Type: bool

Default value: `false`

#### **`cpuX.trace_special_hlt_imm16`**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

Type: `uint16_t`

Default value: `0xf000`

#### **`cpuX.vfp-enable_at_reset`**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

Type: `bool`

Default value: `false`

#### **`cpuX.vfp-present`**

Set whether the model has VFP support; always true in the presence of Future Architecture Technologies (FAT).

Type: `bool`

Default value: `true`

#### **`BROADCASTATOMIC`**

Enable broadcasting of atomic operation. The `broadcastatomic` signal will override this value if used.

Type: `bool`

Default value: `true`

#### **`BROADCASTCACHEMAINT`**

Enable broadcasting of cache maintenance operations to downstream caches. The `broadcastcachemaint` signal will override this value if used.

Type: `bool`

Default value: `true`

#### **`BROADCASTOUTER`**

Enable broadcasting of Outer Shareable transactions. The `broadcastouter` signal will override this value if used.

Type: `bool`

Default value: `true`

### **BROADCASTPERSIST**

Enable broadcasting of cache clean to the point of persistence operations. The `broadcastpersist` signal will override this value if used.

Type: `bool`

Default value: `true`

### **CLUSTER\_ID**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the ManagerID64 of the core.

Type: `uint32_t`

Default value: `0x0`

### **CMO\_broadcast\_when\_cache\_state\_modelling\_disabled**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. This value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain even when cache state modelling is disabled. Possible values are:- 0 = All CMOs are broadcast if architecturally required- 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required.

Type: `uint8_t`

Default value: `1`

### **GICDISABLE**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

Type: `bool`

Default value: `true`

### **NUM\_CORES**

Number of cores per cluster.

Type: `uint8_t`

Default value: `1`

**cluster\_patch\_level**

Cosmetic change to patch number in CLUSTERIDR. Corresponds to the Y in rXpY.

Type: uint8\_t

Default value: 0

**cluster\_revision\_number**

Cosmetic change to revision number in CLUSTERIDR, Corresponds to the X in rXpY.

Type: uint8\_t

Default value: 0

**cpi\_div**

Divider for calculating CPI (Cycles Per Instruction).

Type: uint32\_t

Default value: 0x1

**cpi\_mul**

Multiplier for calculating CPI (Cycles Per Instruction).

Type: uint32\_t

Default value: 0x1

**dcache-hit\_latency**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**dcache-maintenance\_latency**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**dcache-miss\_latency**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-prefetch_enabled`**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

Type: `bool`

Default value: `false`

### **`dcache-read_access_latency`**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-read_latency`**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`dcache-size`**

L1 D-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

### **`dcache-snoop_data_transfer_latency`**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-state\_modelled**

Set whether D-cache has stateful implementation.

Type: `bool`

Default value: `false`

**dcache-write\_access\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**dcache-write\_latency**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. `dcache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**default\_opmode**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

Type: `uint8_t`

Default value: 4

**diagnostics**

Enable DynamIQ diagnostic messages.

Type: `bool`

Default value: `false`

**enable\_simulation\_performance\_optimizations**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of `stage12_tlb_size` parameter to 1024).

Type: `bool`

Default value: `true`

### **`force_zero_PSTATE_PAN`**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

Type: `bool`

Default value: `false`

### **`has_acp`**

If true, Accelerator Coherency Port is configured.

Type: `bool`

Default value: `false`

### **`has_delayed_dbgreg`**

Delay the functional effect of external debug register writes until ISB or implicit barrier.

Type: `bool`

Default value: `false`

### **`has_delayed_sysreg`**

Delay the functional effect of system register writes until ISB or implicit barrier.

Type: `bool`

Default value: `true`

### **`has_dot_product`**

Possible values of this parameter are:- 1, feature not implemented.- 2, feature is implemented.

Type: `uint8_t`

Default value: 2

### **`has_peripheral_port`**

If true, additional AXI peripheral port is configured.

Type: `bool`

Default value: `false`

**icache-hit\_latency**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-maintenance\_latency**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-miss\_latency**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-prefetch\_enabled**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

Type: `bool`

Default value: `false`

**icache-read\_access\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**icache-read\_latency**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to

the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`icache-size`**

L1 I-Cache size in bytes.

Type: `uint32_t`

Default value: `0x10000`

### **`icache-state_modelled`**

Set whether I-cache has stateful implementation.

Type: `bool`

Default value: `false`

### **`invalidate_code_cache_on_icache_cmo`**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

Type: `uint8_t`

Default value: `0`

### **`l3cache-hit_latency`**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-maintenance_latency`**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-miss_latency`**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-read_access_latency`**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size `l3cache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-read_latency`**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l3cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-size`**

L3 Cache size in bytes.

Type: `uint32_t`

Default value: `0x400000`

### **`l3cache-snoop_data_transfer_latency`**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

### **`l3cache-snoop_issue_latency`**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

Type: `uint64_t`

Default value: `0x0`

**l3cache-write\_access\_latency**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**l3cache-write\_latency**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

Type: uint64\_t

Default value: 0x0

**pchannel\_treat\_simreset\_as\_poreset**

Register core as ON state to cluster with simulation reset.

Type: bool

Default value: false

**periph\_address\_end**

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

Type: uint64\_t

Default value: 0x0

**periph\_address\_start**

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

Type: uint64\_t

Default value: 0x0

**ptw\_latency**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

Type: uint64\_t

Default value: 0x0

**tlb\_latency**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

**tlbi\_stall\_enabled**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

Type: `bool`

Default value: `false`

**walk\_cache\_latency**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

Type: `uint64_t`

Default value: `0x0`

## 3.105 ARMNeoverseN1CT

Defined in `LISA/ARMNeoverseN1CT.lisa`.

This model supports the following revisions of the IP at the given quality levels:

Revision	Quality level
r4p0	Full support

For an explanation of the quality levels, see [Quality level definitions](#).

**Changes in 11.31.15**

The following parameters were added:

- `has_delayed_dbgreg`
- `has_delayed_sysreg`

**About ARMNeoverseN1CT**

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.

- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- BROADCASTPERSIST pin.

The model does not support the following features:

- BROADCASTCACHEMAINTPOU pin.
- COREINSTRRET, COREINSTRRUN, or nPMBIRQ signals.
- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Debug power management signals DBGWRUPREQ and DBGWRUPREQ are not implemented, but DBGWRUPREQ and DBGWRUPREQ are implemented.
- Cache stashing capability.

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (crypto.dll or crypto.so) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

## Iris and MTI instances for ARMNeoverseN1CT

This model has the following Iris instances:

Name	Instance type
ARMNeoverseN1CT	Cluster_ARM_Neoverse-N1
ARMNeoverseN1CT.AMU	PVBusLogger
ARMNeoverseN1CT.AMU.mapper	PVBusMapper
ARMNeoverseN1CT.DAP	PVBusLogger
ARMNeoverseN1CT.DAP.mapper	PVBusMapper
ARMNeoverseN1CT.DSU	DSU
ARMNeoverseN1CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMNeoverseN1CT.DSU.mpam_busslave	PVBusSlave
ARMNeoverseN1CT.DSU.shared_cache	PVCache
ARMNeoverseN1CT.DSU.shared_cache.downstream[0].pvbusmaster	PVBusMaster
ARMNeoverseN1CT.DSU.shared_cache.upstream[Y] (where Y = 0-3)	PVBusSlave
ARMNeoverseN1CT.MMAP	PVBusLogger

Name	Instance type
ARMNeoverseN1CT.MMAP.mapper	PVBusMapper
ARMNeoverseN1CT.RAS	PVBusLogger
ARMNeoverseN1CT.RAS.mapper	PVBusMapper
ARMNeoverseN1CT.cpu0	ARM_Neoverse-N1
ARMNeoverseN1CT.cpu0.UTLB	TLB
ARMNeoverseN1CT.cpu0.debug_rom	debug_rom
