- `subcluster1.cpu0` to `subcluster1.cpu9` identify cores in `subcluster1`.
- `subcluster2.cpu0` to `subcluster2.cpu9` identify cores in `subcluster2`.

For information about the cores in this model, see:

- [ARMCortexA510CT](#).
- [ARMCortexA710CT](#).
- [ARMCortexX2CT](#).

## Iris and MTI instances for ARMCortexA510CT\_CortexA710CT\_CortexX2CT

This model has the following Iris instances:

**Table 3-324: ARMCortexA510CT\_CortexA710CT\_CortexX2CT Iris instances**

InstanceName	ComponentName
ARMCortexA510CT_CortexA710CT_CortexX2CT	Cluster_ARM_CortexA510_CortexA710_CortexX2_Heterogeneous
ARMCortexA510CT_CortexA710CT_CortexX2CT.AMU	PVBusLogger
ARMCortexA510CT_CortexA710CT_CortexX2CT.AMU.mapper	PVBusMapper
ARMCortexA510CT_CortexA710CT_CortexX2CT.DAP	PVBusLogger
ARMCortexA510CT_CortexA710CT_CortexX2CT.DAP.mapper	PVBusMapper
ARMCortexA510CT_CortexA710CT_CortexX2CT.DSU	DSU
ARMCortexA510CT_CortexA710CT_CortexX2CT.DSU.PPU_cluster	PPUv1
ARMCortexA510CT_CortexA710CT_CortexX2CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexA510CT_CortexA710CT_CortexX2CT.DSU.PPU_core0	PPUv1
ARMCortexA510CT_CortexA710CT_CortexX2CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexA510CT_CortexA710CT_CortexX2CT.DSU.PPU_core1	PPUv1
ARMCortexA510CT_CortexA710CT_CortexX2CT.DSU.PPU_core1.busslave	PVBusSlave
ARMCortexA510CT_CortexA710CT_CortexX2CT.DSU.PPU_core2	PPUv1
ARMCortexA510CT_CortexA710CT_CortexX2CT.DSU.PPU_core2.busslave	PVBusSlave
ARMCortexA510CT_CortexA710CT_CortexX2CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA510CT_CortexA710CT_CortexX2CT.DSU.shared_cache	PVCache
ARMCortexA510CT_CortexA710CT_CortexX2CT.DSU.shared_cache.upstream[0]	PVBusSlave
ARMCortexA510CT_CortexA710CT_CortexX2CT.DSU.shared_cache.upstream[1]	PVBusSlave
ARMCortexA510CT_CortexA710CT_CortexX2CT.DSU.shared_cache.upstream[2]	PVBusSlave

### Ports for ARMCortexA510CT\_CortexA710CT\_CortexX2CT

**Table 3-326: Ports**

Name	Protocol	Type	Description
acp_s	PVBus	Slave	AXI ACP slave port.
AEND0MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	Signal	Slave	CHI defined pins.
broadcastcachemaint	Signal	Slave	ACE defined pins.
broadcastouter	Signal	Slave	ACE defined pins.
broadcastpersist	Signal	Slave	CHI defined pins.
cfgend[30]	Signal	Slave	This signal is for EE bit initialisation.
cfgsdisable	Signal	Slave	This signal disables write access to some secure Interrupt Controller registers.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.

Name	Protocol	Type	Description
cluster_pcs_m_pchannel	PChannel	Master	Cluster PCSM signal
cluster_powerdown_out	Signal	Master	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info
clusterid	Value	Slave	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.
clusterpmuirq	Signal	Master	DynamlQ pmu irq
CNTHPIRQ[30]	Signal	Master	Timer signals to SOC.
CNTHPSIRQ[30]	Signal	Master	Timer signals to SOC
CNTHVIRQ[30]	Signal	Master	Timer signals to SOC.
CNTHVSIRQ[30]	Signal	Master	Timer signals to SOC
CNTPNSIRQ[30]	Signal	Master	Timer signals to SOC.
CNTPSIRQ[30]	Signal	Master	Timer signals to SOC.
cntvalueb	CounterInterface	Slave	Interface to SoC level counter module.
CNTVIRQ[30]	Signal	Master	Timer signals to SOC.
commirq[30]	Signal	Master	Interrupt signal from debug communications channel.
core_clk_in[30]	ClockSignal	Slave	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcs_m_pchannel[30]	PChannel	Master	Core PCSM signals
core_powerdown_out[30]	Signal	Master	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
coreerrirq[30]	Signal	Master	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq[30]	Signal	Master	Fault indicator for a detected 1 or 2 bit ECC error
cryptodisable[30]	Signal	Slave	Disable cryptography extensions after reset.
cti[30]	v8EmbeddedCrossTrigger_controlprotocol	Master	Cross trigger matrix port.
ctidbgirq[30]	Signal	Master	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	Signal	Slave	External debug interface.
dbgnopwrdown[30]	Signal	Master	No power-down request.

Name	Protocol	Type	Description
dbgpwrupreq[30]	Signal	Master	Debug power up request.
defaultMP	Signal	Slave	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	PVBus	Slave	External debug interface.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
fiq[30]	Signal	Slave	This signal drives the CPUs fast-interrupt handling.
gicreset	Signal	Master	An output from PPU that can be used to reset GICCLK domain components
gicv3_redistributor_s[30]	GICv3Comms	Slave	GICv3 AXI-stream port.
irq[30]	Signal	Slave	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	PVBus	Slave	External debug interface.
pmuirq[30]	Signal	Master	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	Signal	Master	PPU cluster interrupt.
ppu_cluster_wakerequest	Signal	Slave	PPU cluster wake request signal.
ppu_core_irq[30]	Signal	Master	PPU core interrupt.
ppu_core_wakerequest[30]	Signal	Slave	PPU Core wake request signals.
presetdbg	Signal	Slave	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	PVBus	Master	The core will generate bus requests on this port.
pvbus_periph_m	PVBus	Master	The core can generate peripheral bus request on this port.
rei[30]	Signal	Slave	Per core RAM Error Interrupt.
reset	Signal	Slave	Reset signal to cluster.
rvbaraddr[30]	Value_64	Slave	Reset vector base address.
sci_m	SystemCoherencyInterface	Master	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei[30]	Signal	Slave	Per core System Error physical pins.
spiden	Signal	Slave	External debug interface.
ticks[30]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq[30]	Signal	Master	Interrupt signal from the trace buffer unit.

Name	Protocol	Type	Description
utility_bus_s	PVBus	Slave	Utility bus slave
vcpumntirq[30]	Signal	Master	Interrupt signal for virtual CPU maintenance IRQ.
vfiq[30]	Signal	Slave	Virtualised FIQ.
virq[30]	Signal	Slave	Virtualised IRQ.
virtio_s	PVBus	Slave	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei[30]	Signal	Slave	Per core virtual System Error physical pins.

## Parameters for ARMCortexA510CT\_CortexA710CT\_CortexX2CT

### AEND0\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

### AEND1\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

### AEND2\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

**AEND3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

**ASTART0\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

**ASTART1\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

**ASTART2\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

**ASTART3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

**BROADCASTATOMIC****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

**BROADCASTCACHEMAIN****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

**BROADCASTOUTER****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

**BROADCASTPERSIST****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

**CLUSTER\_ID****Type**

int

**Default value**

0x0

**Description**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled****Type**

int

**Default value**

0x1

**Description**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. Changing this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain CMOs even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required .

**GICDISABLE****Type**

bool

**Default value**

0x1

**Description**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

**core\_power\_on\_by\_default****Type**

bool

**Default value**

0x0

**Description**

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPU which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**default\_opmode****Type**

int

**Default value**

0x4

**Description**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

**diagnostics****Type**

bool

**Default value**

0x0

**Description**

Enable DynamIQ diagnostic messages.

**enable\_simulation\_performance\_optimizations****Type**

bool

**Default value**

0x1

**Description**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

**has\_acp****Type**

bool

**Default value**

0x0

**Description**

If true, Accelerator Coherency Port is configured.

**has\_peripheral\_port****Type**

bool

**Default value**

0x0

**Description**

If true, an additional AXI peripheral port is configured.

**icache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**l3cache-has\_mpam****Type**

bool

**Default value**

0x0

**Description**

L3 Cache has MPAM support.

**l3cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**l3cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**l3cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**l3cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**l3cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. l3cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**l3cache-size****Type**

int

**Default value**

0x0

**Description**

L3 Cache size in bytes.

**l3cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**l3cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**l3cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**l3cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**mpmm\_accumulator\_multiplier****Type**

int

**Default value**

0x1

**Description**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator. A value of n means the accumulator will use (n \* accumulator value) to calculate the mpmm threshold (MPMM). This is provided as a fast model workaround to handle cases where execution of quantum in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

**num\_nodes****Type**

int

**Default value**

0x1

**Description**

Number of transport nodes. Zero implies direct-connect configuration.

**pchannel\_treat\_simreset\_as\_poreset****Type**

bool

**Default value**

0x0

**Description**

Register core as ON state to cluster with simulation reset.

**`periph_address_end`****Type**

int

**Default value**

0x0

**Description**

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

**`periph_address_start`****Type**

int

**Default value**

0x0

**Description**

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

**`subcluster0.CPUCFR`****Type**

int

**Default value**

0x0

**Description**

Value of CPU Configuration Register.

**`subcluster0.NUM_CORES`****Type**

int

**Default value**

0x1

**Description**

Number of cores in the subcluster. Total number of cores in cluster may not exceed 12.

**subcluster0.cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**subcluster0.cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**subcluster0.cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**subcluster0.cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**subcluster0.cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**subcluster0.cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**subcluster0.cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**subcluster0.cpuX.l2cache-read\_bus\_width\_in\_bytes****Type**

int

**Default value**

0x10

**Description**

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

**subcluster0.cpuX.l2cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**subcluster0.cpuX.l2cache-size****Type**

int

**Default value**

0x80000

**Description**

L2 Cache size in bytes.

**subcluster0.cpuX.l2cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

**subcluster0.cpuX.l2cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

**subcluster0.cpuX.l2cache-ways****Type**

int

**Default value**

0x8

**Description**

L2 Cache number of ways (sets are implicit from size).

**subcluster0.cpuX.l2cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

**subcluster0.cpuX.l2cache-write\_bus\_width\_in\_bytes****Type**

int

**Default value**

0x20

**Description**

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

**subcluster0.cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**subcluster0.cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**subcluster0.cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**subcluster0.cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**subcluster0.cpuX.semihosting-ARM\_SVC**

**Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**subcluster0.cpuX.semihosting-T32\_HLT**

**Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**subcluster0.cpuX.semihosting-Thumb\_SVC**

**Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**subcluster0.cpuX.semihosting-cmd\_line**

**Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**subcluster0.cpuX.semihosting-cwd**

**Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**subcluster0.cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**subcluster0.cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**subcluster0.cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**subcluster0.cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**subcluster0.cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**subcluster0.cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**subcluster0.cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**subcluster0.cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**subcluster0.dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**subcluster0.dcache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-size****Type**

int

**Default value**

0x10000

**Description**

L1 D-Cache size in bytes.

**subcluster0.dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster0.ete.CLAIMTAGS****Type**

int

**Default value**

0x4

**Description**

Number of claim tags.

**subcluster0.ete.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**subcluster0.ete.NumberOfRSPairs****Type**

int

**Default value**

0x8

**Description**

Number of resource selector pairs.

**subcluster0.ete.PIDR\_CMOD****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CMOD value.

**subcluster0.ete.PIDR\_REVAND****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVAND value.

**subcluster0.ete.PIDR\_REVISION****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVISION value.

**subcluster0.ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**subcluster0.ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**subcluster0.ete.RETSTACK****Type**

int

**Default value**

0x3

**Description**

Return stack depth.

**subcluster0.ete.REVISION****Type**

int

**Default value**

0x0

**Description**

TRCIDR1 revision value.

**subcluster0.ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**subcluster0.ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**subcluster0.ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**subcluster0.ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**subcluster0.ete.TRCRSRTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCRSR.TA value for a forcibly traced exception.

**subcluster0.force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**subcluster0.force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**subcluster0.force\_zero\_mpam\_partid\_and\_pmg****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**subcluster0.has\_coherent\_icache****Type**

bool

**Default value**

0x1

**Description**

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

**subcluster0.has\_dot\_product****Type**

int

**Default value**

0x2

**Description**

Possible values of this parameter are: - 1, feature not implemented. - 2, feature is implemented.

**subcluster0.has\_ete****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**subcluster0.icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**subcluster0.icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

**subcluster0.icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

**subcluster0.icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

**subcluster0.icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

**subcluster0.icache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

**`subcluster0.icache-size`****Type**

int

**Default value**

0x10000

**Description**

L1 I-Cache size in bytes.

**`subcluster0.invalidate_code_cache_on_icache_cmo`****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

**`subcluster0.max_32bit_el`****Type**

int

**Default value**

0x0

**Description**

Maximum exception level supporting AArch32 modes. -1: No Support for A32 at any EL, 0: ELO supports A32. This parameter is ignored in Rev0 i.e. when `revision_number = 0`.

**`subcluster0.memory_tagging_support_level`****Type**

int

**Default value**

0x3

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

**subcluster0.ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster0.ras\_pfg\_clock\_mhz****Type**

int

**Default value**

0xc

**Description**

RAS Pseudo-Fault generation clock rate in MHz.

**subcluster0.revision\_number****Type**

int

**Default value**

0x1

**Description**

Revision number of TRM implemented by the model. Changing the value can change the model behaviour. Visible as the Variant field in MIDR/MIDR\_EL1. Corresponds to the revision number X in rXpY.

**subcluster0.tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster0.tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**subcluster0.treat\_PAC\_as\_NOP****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter. Treat Pointer Authentication as NOP. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are NOP. Branch, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

**subcluster0.walk\_cache\_latency****Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster1.NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores in the subcluster. Total number of cores in cluster may not exceed 12.

**subcluster1.cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**subcluster1.cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**subcluster1.cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**subcluster1.cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**subcluster1.cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**subcluster1.cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter `trace_special_hlt_imm16`.

**`subcluster1.cpuX.l2cache-hit_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

**`subcluster1.cpuX.l2cache-maintenance_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

**`subcluster1.cpuX.l2cache-miss_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**`subcluster1.cpuX.l2cache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-`

read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**subcluster1.cpuX.l2cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**subcluster1.cpuX.l2cache-size****Type**

int

**Default value**

0x80000

**Description**

L2 Cache size in bytes.

**subcluster1.cpuX.l2cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**subcluster1.cpuX.l2cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster1.cpuX.l2cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**subcluster1.cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster1.cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**subcluster1.cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**subcluster1.cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**subcluster1.cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**subcluster1.cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**subcluster1.cpuX.semihosting-T32\_HLT****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**subcluster1.cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**subcluster1.cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**subcluster1.cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**subcluster1.cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**subcluster1.cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**subcluster1.cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**subcluster1.cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**subcluster1.cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**subcluster1.cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**subcluster1.cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**subcluster1.dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**subcluster1.dcache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-size****Type**

int

**Default value**

0x8000

**Description**

L1 D-Cache size in bytes.

**subcluster1.dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster1.etc.CLAIMTAGS****Type**

int

**Default value**

0x20

**Description**

Number of claim tags.

**subcluster1.etc.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**subcluster1.etc.NumberOfRSPairs****Type**

int

**Default value**

0x8

**Description**

Number of resource selector pairs.

**subcluster1.etc.PIDR\_CMOD****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CMOD value.

**subcluster1.ete.PIDR\_REVAND****Type**

int

**Default value**

0x1

**Description**

TRCPIDR REVAND value.

**subcluster1.ete.PIDR\_REVISION****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVISION value.

**subcluster1.ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**subcluster1.ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**subcluster1.ete.RETSTACK****Type**

int

**Default value**

0x3

**Description**

Return stack depth.

**subcluster1.ete.REVISION****Type**

int

**Default value**

0x2

**Description**

TRCIDR1 revision value.

**subcluster1.ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**subcluster1.ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**subcluster1.ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**subcluster1.ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**subcluster1.etc.TRCRSRTA\_FORCED\_EXCEP**

**Type**

bool

**Default value**

0x0

**Description**

TRCRSR.TA value for a forcibly traced exception.

**subcluster1.ext\_abort\_device\_read\_is\_sync**

**Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRE read external aborts.

**subcluster1.ext\_abort\_device\_write\_is\_sync**

**Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRE write external aborts.

**subcluster1.ext\_abort\_so\_read\_is\_sync**

**Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRnE read external aborts.

**subcluster1.ext\_abort\_so\_write\_is\_sync**

**Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRnE write external aborts.

**subcluster1.force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**subcluster1.force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**subcluster1.force\_zero\_mpam\_partid\_and\_pmg****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**subcluster1.has\_coherent\_icache****Type**

bool

**Default value**

0x1

**Description**

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

**subcluster1.has\_ete****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**subcluster1.icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**subcluster1.icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

**subcluster1.icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state\_modelled=true.

**subcluster1.icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

**subcluster1.icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state\_modelled=true.

**subcluster1.icache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. icache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state\_modelled=true.

**subcluster1.icache-size****Type**

int

**Default value**

0x8000

**Description**

L1 I-Cache size in bytes.

**subcluster1.invalidate\_code\_cache\_on\_icache\_cmo****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE.  
Note: Enabling this parameter will reduce simulation performance.

**subcluster1.memory\_tagging\_support\_level****Type**

int

**Default value**

0x2

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).

**subcluster1.ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster1.tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster1.tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**subcluster1.treat-dcache-cmos-to-pou-as-nop****Type**

int

**Default value**

0x0

**Description**

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

**subcluster1.walk\_cache\_latency****Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster2.NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores in the subcluster. Total number of cores in cluster may not exceed 12.

**subcluster2.cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**subcluster2.cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**subcluster2.cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**subcluster2.cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**subcluster2.cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**subcluster2.cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**subcluster2.cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-size****Type**

int

**Default value**

0x80000

**Description**

L2 Cache size in bytes.

**subcluster2.cpuX.l2cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**subcluster2.cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**subcluster2.cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**subcluster2.cpuX.semihosting-A64\_HLT**

**Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**subcluster2.cpuX.semihosting-ARM\_SVC**

**Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**subcluster2.cpuX.semihosting-T32\_HLT**

**Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**subcluster2.cpuX.semihosting-Thumb\_SVC**

**Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**subcluster2.cpuX.semihosting-cmd\_line**

**Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**subcluster2.cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**subcluster2.cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**subcluster2.cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**subcluster2.cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**subcluster2.cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**subcluster2.cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**subcluster2.cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**subcluster2.cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**subcluster2.dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**subcluster2.dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster2.dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**subcluster2.dcache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

**subcluster2.dcache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**subcluster2.dcache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**subcluster2.dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**subcluster2.dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**subcluster2.dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster2.ete.CLAIMTAGS****Type**

int

**Default value**

0x20

**Description**

Number of claim tags.

**subcluster2.ete.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**subcluster2.ete.NumberOfRSPairs****Type**

int

**Default value**

0x8

**Description**

Number of resource selector pairs.

**subcluster2.ete.PIDR\_CM0D****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CM0D value.

**subcluster2.ete.PIDR\_REVAND****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVAND value.

**subcluster2.ete.PIDR\_REVISION****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVISION value.

**subcluster2.ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**subcluster2.ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**subcluster2.ete.RETSTACK****Type**

int

**Default value**

0x3

**Description**

Return stack depth.

**subcluster2.ete.REVISION****Type**

int

**Default value**

0x2

**Description**

TRCIDR1 revision value.

**subcluster2.ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**subcluster2.ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**subcluster2.ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**subcluster2.ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**subcluster2.ete.TRCSRSTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCSRSTA value for a forcibly traced exception.

**subcluster2.ext\_abort\_device\_read\_is\_sync****Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRE read external aborts.

**subcluster2.ext\_abort\_device\_write\_is\_sync****Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRE write external aborts.

**subcluster2.ext\_abort\_so\_read\_is\_sync****Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRnE read external aborts.

**subcluster2.ext\_abort\_so\_write\_is\_sync****Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRnE write external aborts.

**subcluster2.force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**subcluster2.force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**subcluster2.force\_zero\_mpam\_partid\_and\_pmg****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**subcluster2.has\_coherent\_icache****Type**

bool

**Default value**

0x1

**Description**

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

**subcluster2.has\_ete****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**subcluster2.icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**subcluster2.icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

**subcluster2.icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state\_modelled=true.

**subcluster2.icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

**subcluster2.icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state\_modelled=true.

**subcluster2.icache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. icache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state\_modelled=true.

**subcluster2.invalidate\_code\_cache\_on\_icache\_cmo****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

**subcluster2.memory\_tagging\_support\_level****Type**

int

**Default value**

0x2

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).

**subcluster2.ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster2.tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster2.tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**subcluster2.treat-dcache-cmos-to-pou-as-nop****Type**

int

**Default value**

0x0

**Description**

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

**subcluster2.walk\_cache\_latency****Type**

int

**Default value**

0x0

Description

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

3.5.37 ARMCortexA510CT\_CortexA710CT\_CortexX3CT

ARMCortexA510CT\_CortexA710CT\_CortexX3CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-327: IP revisions support

Revision	Quality level
CortexA510 r0p0	Full support
CortexA510 r1p3	Full support
CortexA710 r2p0	Full support
CortexX3 r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

About ARMCortexA510CT\_CortexA710CT\_CortexX3CT

The number of cores in each subcluster is configurable using the following parameters:

- subcluster0.NUM\_CORES**  
Possible values are 1-10 (ARMCortexA510CT).
- subcluster1.NUM\_CORES**  
Possible values are 1-10 (ARMCortexA710CT).
- subcluster2.NUM\_CORES**  
Possible values are 1-10 (ARMCortexX3CT).

The total number of cores in the cluster cannot exceed 12.

Port arrays are expanded to the width needed for the maximum number of cores in each subcluster. Use the following port array indexes:

- <port\_name>[0-9] for cores in subcluster0.
- <port\_name>[10-19] for cores in subcluster1.
- <port\_name>[20-29] for cores in subcluster2.

All instances in the Master cross trigger matrix port array, `cti[30]` must be connected, regardless of the `NUM_CORES` value used.

Core-specific parameters have the following prefixes:

- `subcluster0.cpu0` to `subcluster0.cpu9` identify cores in `subcluster0`.

- subcluster1.cpu0 to subcluster1.cpu9 identify cores in subcluster1.
- subcluster2.cpu0 to subcluster2.cpu9 identify cores in subcluster2.

For information about the cores in this model, see:

- [ARMCortexA510CT](#).
- [ARMCortexA710CT](#).
- [ARMCortexX3CT](#).

## Iris and MTI instances for ARMCortexA510CT\_CortexA710CT\_CortexX3CT

This model has the following Iris instances:

ARMCortexA510CT_CortexA710CT_CortexX3CT.subcluster1.cpu0.l2cache.upstream[1]	PVBusSlave
ARMCortexA510CT_CortexA710CT_CortexX3CT.subcluster2.cpu0	ARM_Cortex-X3
ARMCortexA510CT_CortexA710CT_CortexX3CT.subcluster2.cpu0.UTLB	TLB
ARMCortexA510CT_CortexA710CT_CortexX3CT.subcluster2.cpu0.l1dcache	PVCache
ARMCortexA510CT_CortexA710CT_CortexX3CT.subcluster2.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA510CT_CortexA710CT_CortexX3CT.subcluster2.cpu0.l1icache	PVCache
ARMCortexA510CT_CortexA710CT_CortexX3CT.subcluster2.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA510CT_CortexA710CT_CortexX3CT.subcluster2.cpu0.l2cache	PVCache
ARMCortexA510CT_CortexA710CT_CortexX3CT.subcluster2.cpu0.l2cache.upstream[0]	PVBusSlave
ARMCortexA510CT_CortexA710CT_CortexX3CT.subcluster2.cpu0.l2cache.upstream[1]	PVBusSlave

## Ports for ARMCortexA510CT\_CortexA710CT\_CortexX3CT

**Table 3-330: Ports**

Name	Protocol	Type	Description
acp_s	PVBus	Slave	AXI ACP slave port.
AEND0MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	Signal	Slave	CHI defined pins.

Name	Protocol	Type	Description
broadcastcachemaint	Signal	Slave	ACE defined pins.
broadcastouter	Signal	Slave	ACE defined pins.
broadcastpersist	Signal	Slave	CHI defined pins.
cfgend[30]	Signal	Slave	This signal is for EE bit initialisation.
cfgsdisable	Signal	Slave	This signal disables write access to some secure Interrupt Controller registers.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcs_m_pchannel	PChannel	Master	Cluster PCSM signal
cluster_powerdown_out	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the cluster power info
clusterid	Value	Slave	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.
clusterpmuirq	Signal	Master	DynamlQ pmu irq
CNTHPIRQ[30]	Signal	Master	Timer signals to SOC.
CNTHPSIRQ[30]	Signal	Master	Timer signals to SOC
CNTHVIRQ[30]	Signal	Master	Timer signals to SOC.
CNTHVSIRQ[30]	Signal	Master	Timer signals to SOC
CNTPNSIRQ[30]	Signal	Master	Timer signals to SOC.
CNTPSIRQ[30]	Signal	Master	Timer signals to SOC.
cntvalueb	CounterInterface	Slave	Interface to SoC level counter module.
CNTVIRQ[30]	Signal	Master	Timer signals to SOC.
commirq[30]	Signal	Master	Interrupt signal from debug communications channel.
core_clk_in[30]	ClockSignal	Slave	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcs_m_pchannel[30]	PChannel	Master	Core PCSM signals
core_powerdown_out[30]	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the core power info

Name	Protocol	Type	Description
coreerrirq[30]	Signal	Master	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq[30]	Signal	Master	Fault indicator for a detected 1 or 2 bit ECC error
cryptodisable[30]	Signal	Slave	Disable cryptography extensions after reset.
cti[30]	v8EmbeddedCrossTrigger_controlprotocol	Master	Cross trigger matrix port.
ctidbgirq[30]	Signal	Master	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	Signal	Slave	External debug interface.
dbgnopwrdown[30]	Signal	Master	No power-down request.
dbgpwrupreq[30]	Signal	Master	Debug power up request.
defaultMP	Signal	Slave	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	PVBus	Slave	External debug interface.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
fiq[30]	Signal	Slave	This signal drives the CPUs fast-interrupt handling.
gicreset	Signal	Master	An output from PPU that can be used to reset GICCLK domain components
gicv3_redistributor_s[30]	GICv3Comms	Slave	GICv3 AXI-stream port.
irq[30]	Signal	Slave	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	PVBus	Slave	External debug interface.
pmbirq[30]	Signal	Master	Interrupt signal from the statistical profiling unit.
pmuirq[30]	Signal	Master	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	Signal	Master	PPU cluster interrupt.
ppu_cluster_wakerequest	Signal	Slave	PPU cluster wake request signal.
ppu_core_irq[30]	Signal	Master	PPU core interrupt.
ppu_core_wakerequest[30]	Signal	Slave	PPU Core wake request signals.
presetdbg	Signal	Slave	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	PVBus	Master	The core will generate bus requests on this port.
pvbus_periph_m	PVBus	Master	The core can generate peripheral bus request on this port.
rei[30]	Signal	Slave	Per core RAM Error Interrupt.

Name	Protocol	Type	Description
reset	Signal	Slave	Reset signal to cluster.
rvbaraddr[30]	Value_64	Slave	Reset vector base address.
sci_m	SystemCoherencyInterface	Master	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei[30]	Signal	Slave	Per core System Error physical pins.
spiden	Signal	Slave	External debug interface.
ticks[30]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq[30]	Signal	Master	Interrupt signal from the trace buffer unit.
utility_bus_s	PVBus	Slave	Utility bus slave
vcpumntirq[30]	Signal	Master	Interrupt signal for virtual CPU maintenance IRQ.
vfiq[30]	Signal	Slave	Virtualised FIQ.
virq[30]	Signal	Slave	Virtualised IRQ.
virtio_s	PVBus	Slave	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei[30]	Signal	Slave	Per core virtual System Error physical pins.

## Parameters for ARM CortexA510CT\_CortexA710CT\_CortexX3CT

### AEND0\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

### AEND1\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

**AEND2\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

**AEND3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

**ASTART0\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

**ASTART1\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

**ASTART2\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

**ASTART3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

**BROADCASTATOMIC****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

**BROADCASTCACHEMAINT****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

**BROADCASTOUTER****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

**BROADCASTPERSIST****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

**CLUSTER\_ID****Type**

int

**Default value**

0x0

**Description**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled****Type**

int

**Default value**

0x1

**Description**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. Changing this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain CMOs even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required .

**GICDISABLE****Type**

bool

**Default value**

0x1

**Description**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

**core\_power\_on\_by\_default****Type**

bool

**Default value**

0x0

**Description**

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPU which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**default\_opmode****Type**

int

**Default value**

0x4

**Description**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

**diagnostics****Type**

bool

**Default value**

0x0

**Description**

Enable DynamIQ diagnostic messages.

**enable\_simulation\_performance\_optimizations****Type**

bool

**Default value**

0x1

**Description**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

**has\_acp****Type**

bool

**Default value**

0x0

**Description**

If true, Accelerator Coherency Port is configured.

**has\_peripheral\_port****Type**

bool

**Default value**

0x0

**Description**

If true, an additional AXI peripheral port is configured.

**icache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**l3cache-has\_mpam****Type**

bool

**Default value**

0x0

**Description**

L3 Cache has MPAM support.

**l3cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**l3cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**l3cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**l3cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**l3cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. l3cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**l3cache-size****Type**

int

**Default value**

0x0

**Description**

L3 Cache size in bytes.

**l3cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**l3cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**l3cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**l3cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**mpmm\_accumulator\_multiplier****Type**

int

**Default value**

0x1

**Description**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator. A value of n means the accumulator will use (n \* accumulator value) to calculate the mpmm threshold (MPMM). This is provided as a fast model workaround to handle cases where execution of quanta in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

**num\_nodes****Type**

int

**Default value**

0x1

**Description**

Number of transport nodes. Zero implies direct-connect configuration.

**pchannel\_treat\_simreset\_as\_poreset****Type**

bool

**Default value**

0x0

**Description**

Register core as ON state to cluster with simulation reset.

**periph\_address\_end****Type**

int

**Default value**

0x0

**Description**

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

**periph\_address\_start****Type**

int

**Default value**

0x0

**Description**

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

**subcluster0.CPUCFR****Type**

int

**Default value**

0x0

**Description**

Value of CPU Configuration Register.

**subcluster0.NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores in the subcluster. Total number of cores in cluster may not exceed 12.

**subcluster0.cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**subcluster0.cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**subcluster0.cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**subcluster0.cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**subcluster0.cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**subcluster0.cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**subcluster0.cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.l2cache-read\_bus\_width\_in\_bytes****Type**

int

**Default value**

0x10

**Description**

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

**subcluster0.cpuX.l2cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.l2cache-size****Type**

int

**Default value**

0x80000

**Description**

L2 Cache size in bytes.

**subcluster0.cpuX.l2cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.l2cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.l2cache-ways****Type**

int

**Default value**

0x8

**Description**

L2 Cache number of ways (sets are implicit from size).

**subcluster0.cpuX.l2cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.l2cache-write\_bus\_width\_in\_bytes****Type**

int

**Default value**

0x20

**Description**

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

**subcluster0.cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**subcluster0.cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**subcluster0.cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**subcluster0.cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**subcluster0.cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**subcluster0.cpuX.semihosting-T32\_HLT****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**subcluster0.cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**subcluster0.cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**subcluster0.cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**subcluster0.cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**subcluster0.cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**subcluster0.cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**subcluster0.cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**subcluster0.cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**subcluster0.cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**subcluster0.cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**subcluster0.cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**subcluster0.dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

**subcluster0.dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

**subcluster0.dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**subcluster0.dcache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

**subcluster0.dcache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit

or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

#### **`subcluster0.dcache-read_latency`**

##### **Type**

int

##### **Default value**

0x0

##### **Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

#### **`subcluster0.dcache-size`**

##### **Type**

int

##### **Default value**

0x10000

##### **Description**

L1 D-Cache size in bytes.

#### **`subcluster0.dcache-snoop_data_transfer_latency`**

##### **Type**

int

##### **Default value**

0x0

##### **Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

#### **`subcluster0.dcache-write_access_latency`**

##### **Type**

int

##### **Default value**

0x0

##### **Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be

used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster0.ete.CLAIMTAGS****Type**

int

**Default value**

0x4

**Description**

Number of claim tags.

**subcluster0.ete.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**subcluster0.ete.NumberOfRSPairs****Type**

int

**Default value**

0x8

**Description**

Number of resource selector pairs.

**subcluster0.ete.PIDR\_CMOD****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CMOD value.

**subcluster0.ete.PIDR\_REVAND**

**Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVAND value.

**subcluster0.ete.PIDR\_REVISION**

**Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVISION value.

**subcluster0.ete.Q\_CADENCE**

**Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**subcluster0.ete.RES0\_STATEFUL**

**Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**subcluster0.ete.RETSTACK**

**Type**

int

**Default value**

0x3

**Description**

Return stack depth.

**subcluster0.ete.REVISION****Type**

int

**Default value**

0x0

**Description**

TRCIDR1 revision value.

**subcluster0.ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**subcluster0.ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**subcluster0.ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**subcluster0.ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**subcluster0.etc.TRCRSRTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCRSR.TA value for a forcibly traced exception.

**subcluster0.force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**subcluster0.force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**subcluster0.force\_zero\_mpam\_partid\_and\_pmg****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect.  
1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**subcluster0.has\_coherent\_icache****Type**

bool

**Default value**

0x1

**Description**

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

**subcluster0.has\_dot\_product****Type**

int

**Default value**

0x2

**Description**

Possible values of this parameter are: - 1, feature not implemented. - 2, feature is implemented.

**subcluster0.has\_ete****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**subcluster0.icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**subcluster0.icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

**subcluster0.icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state\_modelled=true.

**subcluster0.icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

**subcluster0.icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state\_modelled=true.

**subcluster0.icache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. icache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state\_modelled=true.

**subcluster0.icache-size****Type**

int

**Default value**

0x10000

**Description**

L1 I-Cache size in bytes.

**subcluster0.invalidate\_code\_cache\_on\_icache\_cmo****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

**subcluster0.max\_32bit\_el****Type**

int

**Default value**

0x0

**Description**

Maximum exception level supporting AArch32 modes. -1: No Support for A32 at any EL, 0: ELO supports A32. This parameter is ignored in Rev0 i.e. when revision\_number = 0.

**subcluster0.memory\_tagging\_support\_level****Type**

int

**Default value**

0x3

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

**subcluster0.ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster0.ras\_pfg\_clock\_mhz****Type**

int

**Default value**

0xc

**Description**

RAS Pseudo-Fault generation clock rate in MHz.

**subcluster0.revision\_number****Type**

int

**Default value**

0x1

**Description**

Revision number of TRM implemented by the model. Changing the value can change the model behaviour. Visible as the Variant field in MIDR/MIDR\_EL1. Corresponds to the revision number X in rXpY.

**subcluster0.tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster0.tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**subcluster0.treat\_PAC\_as\_NOP****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter. Treat Pointer Authentication as NOP. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are NOP. Branch, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

**subcluster0.walk\_cache\_latency****Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster1.NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores in the subcluster. Total number of cores in cluster may not exceed 12.

**subcluster1.cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**subcluster1.cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**subcluster1.cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**subcluster1.cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**subcluster1.cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**subcluster1.cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter `trace_special_hlt_imm16`.

**`subcluster1.cpuX.l2cache-hit_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

**`subcluster1.cpuX.l2cache-maintenance_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

**`subcluster1.cpuX.l2cache-miss_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**`subcluster1.cpuX.l2cache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-`

read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

#### **subcluster1.cpuX.l2cache-read\_latency**

##### **Type**

int

##### **Default value**

0x0

##### **Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

#### **subcluster1.cpuX.l2cache-size**

##### **Type**

int

##### **Default value**

0x80000

##### **Description**

L2 Cache size in bytes.

#### **subcluster1.cpuX.l2cache-snoop\_data\_transfer\_latency**

##### **Type**

int

##### **Default value**

0x0

##### **Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

#### **subcluster1.cpuX.l2cache-snoop\_issue\_latency**

##### **Type**

int

##### **Default value**

0x0

##### **Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster1.cpuX.l2cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**subcluster1.cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster1.cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**subcluster1.cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**subcluster1.cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**subcluster1.cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**subcluster1.cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**subcluster1.cpuX.semihosting-T32\_HLT****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**subcluster1.cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**subcluster1.cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**subcluster1.cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**subcluster1.cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**subcluster1.cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**subcluster1.cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**subcluster1.cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**subcluster1.cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**subcluster1.cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**subcluster1.cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**subcluster1.dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**subcluster1.dcache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-size****Type**

int

**Default value**

0x8000

**Description**

L1 D-Cache size in bytes.

**subcluster1.dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster1.ete.CLAIMTAGS****Type**

int

**Default value**

0x20

**Description**

Number of claim tags.

**subcluster1.ete.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**subcluster1.ete.NumberOfRSPairs****Type**

int

**Default value**

0x8

**Description**

Number of resource selector pairs.

**subcluster1.ete.PIDR\_CMOD****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CMOD value.

**subcluster1.ete.PIDR\_REVAND****Type**

int

**Default value**

0x1

**Description**

TRCPIDR REVAND value.

**subcluster1.ete.PIDR\_REVISION****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVISION value.

**subcluster1.ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**subcluster1.ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**subcluster1.ete.RETSTACK****Type**

int

**Default value**

0x3

**Description**

Return stack depth.

**subcluster1.etc.REVISION****Type**

int

**Default value**

0x2

**Description**

TRCIDR1 revision value.

**subcluster1.etc.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**subcluster1.etc.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**subcluster1.etc.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**subcluster1.etc.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**subcluster1.etc.TRCRSRTA\_FORCED\_EXCEP**

**Type**

bool

**Default value**

0x0

**Description**

TRCRSR.TA value for a forcibly traced exception.

**subcluster1.ext\_abort\_device\_read\_is\_sync**

**Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRE read external aborts.

**subcluster1.ext\_abort\_device\_write\_is\_sync**

**Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRE write external aborts.

**subcluster1.ext\_abort\_so\_read\_is\_sync**

**Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRnE read external aborts.

**subcluster1.ext\_abort\_so\_write\_is\_sync**

**Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRnE write external aborts.

**subcluster1.force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**subcluster1.force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**subcluster1.force\_zero\_mpam\_partid\_and\_pmg****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**subcluster1.has\_coherent\_icache****Type**

bool

**Default value**

0x1

**Description**

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

**subcluster1.has\_ete****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**subcluster1.icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**subcluster1.icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

**subcluster1.icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state\_modelled=true.

**subcluster1.icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

**subcluster1.icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state\_modelled=true.

**subcluster1.icache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. icache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state\_modelled=true.

**subcluster1.icache-size****Type**

int

**Default value**

0x8000

**Description**

L1 I-Cache size in bytes.

**subcluster1.invalidate\_code\_cache\_on\_icache\_cmo****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE.  
Note: Enabling this parameter will reduce simulation performance.

**subcluster1.memory\_tagging\_support\_level****Type**

int

**Default value**

0x2

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).

**subcluster1.ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster1.tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster1.tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**subcluster1.treat-dcache-cmos-to-pou-as-nop****Type**

int

**Default value**

0x0

**Description**

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

**subcluster1.walk\_cache\_latency****Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster2.CPUCFR****Type**

int

**Default value**

0x0

**Description**

Value of CPU Configuration Register.

**subcluster2.NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores per cluster.

**subcluster2.cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**subcluster2.cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**subcluster2.cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**subcluster2.cpuX.CFGTE****Type**

bool

**Default value**

0x0

**Description**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

**subcluster2.cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**subcluster2.cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**subcluster2.cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**subcluster2.cpuX.force-fpsid****Type**

bool

**Default value**

0x1

**Description**

Override the FPSID value.

**subcluster2.cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

**subcluster2.cpuX.l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**subcluster2.cpuX.l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**subcluster2.cpuX.l2cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**subcluster2.cpuX.l2cache-size****Type**

int

**Default value**

0x100000

**Description**

L2 Cache size in bytes.

**subcluster2.cpuX.l2cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**subcluster2.cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**subcluster2.cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**subcluster2.cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**subcluster2.cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**subcluster2.cpuX.semihosting-T32\_HLT**

**Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**subcluster2.cpuX.semihosting-Thumb\_SVC**

**Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**subcluster2.cpuX.semihosting-cmd\_line**

**Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**subcluster2.cpuX.semihosting-cwd**

**Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**subcluster2.cpuX.semihosting-enable**

**Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**subcluster2.cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**subcluster2.cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**subcluster2.cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**subcluster2.cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**subcluster2.cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**subcluster2.cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**subcluster2.cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**subcluster2.dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**subcluster2.dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster2.dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**subcluster2.dcache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

**subcluster2.dcache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**subcluster2.dcache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**subcluster2.dcache-size****Type**

int

**Default value**

0x8000

**Description**

L1 D-Cache size in bytes.

**subcluster2.dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**subcluster2.dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**subcluster2.dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster2.error\_record\_feature\_register****Type**

string

**Default value**

```
"[{\"ED\":0x2,\"IMPDEF_3_2\":0x0,\"UI\":0x2,\"FI\":0x2,\"UE\":0x1,\"CFI\":0x2,\"CEC\":0x2,
\"RP\":0x1,\"DUI\":0x0,\"CEO\":0x0,\"INJ\":0x1,\"CI\":0x0,\"TS\":0x0,\"Visibility\": \"Cluster
\"},{\"ED\":0x2,\"IMPDEF_3_2\":0x0,\"UI\":0x2,\"FI\":0x2,\"UE\":0x1,\"CFI\":0x2,\"CEC\":0x2,
\"RP\":0x1,\"DUI\":0x0,\"CEO\":0x0,\"INJ\":0x1,\"CI\":0x0,\"TS\":0x0}],"
```

**Description**

RAS feature register values. An array of JSON objects. The JSON schema for the array is:

```
[{"ED":0x0, "IMPDEF_3_2":0x0, "UI":0x0, "FI":0x0, "UE":0x0, "CFI":0x0, "CEC":0x0, "RP":0x0,
"DUI":0x0, "CEO":0x0, "CI":0x0, "TS":0x0, "INJ":0x0, "FRX":0x0, "UC":0x0, "UEU":0x0,
"UER":0x0, "UEO":0x0, "DE":0x0, "CE":0x0, "Visibility": "Core"}, other_feature_register_values].
```

Where ED, UI, FI, CE and UE have valid values between 0x0 - 0x3. CFI and

DUI have valid values 0x0, 0x2 and 0x3. CEC has valid values 0x0, 0x2 or 0x4.

RP, CEO, INJ, FRX, UC, UEU, UER, UEO, DE has valid values 0x0 or 0x1. CI and TS has valid values of 0x0, 0x1 and 0x2. Visibility has valid values "Core" or "Cluster".

**subcluster2.ete.CLAIMTAGS****Type**

int

**Default value**

0x20

**Description**

Number of claim tags.

**subcluster2.ete.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**subcluster2.ete.NumberOfRSPairs****Type**

int

**Default value**

0x8

**Description**

Number of resource selector pairs.

**subcluster2.ete.PIDR\_CM0D****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CM0D value.

**subcluster2.ete.PIDR\_REVAND****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVAND value.

**subcluster2.ete.PIDR\_REVISION****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVISION value.

**subcluster2.ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**subcluster2.ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**subcluster2.ete.RETSTACK****Type**

int

**Default value**

0x3

**Description**

Return stack depth.

**subcluster2.ete.REVISION****Type**

int

**Default value**

0x0

**Description**

TRCIDR1 revision value.

**subcluster2.ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**subcluster2.ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**subcluster2.ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**subcluster2.ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**subcluster2.ete.TRCRSRTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCRSR.TA value for a forcibly traced exception.

**subcluster2.ext\_abort\_normal\_noncacheable\_read\_is\_sync****Type**

bool

**Default value**

0x1

**Description**

Synchronous reporting of normal noncacheable-read external aborts.

**subcluster2.ext\_abort\_so\_write\_ras\_type****Type**

int

**Default value**

0x2

**Description**

External Aborts are reported as RAS error type specified in this param. Values: 0 = NONE, 1 = UC, 2 = UEU, 3 = UEO , 4 = UER, 5 = CE.

**subcluster2.force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**subcluster2.force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**subcluster2.force\_zero\_mpam\_partid\_and\_pmg****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**subcluster2.has\_coherent\_icache****Type**

bool

**Default value**

0x1

**Description**

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

**subcluster2.has\_enhanced\_pan****Type**

int

**Default value**

0x2

**Description**

Implements Armv8.7 Enhanced PAN feature (FEAT\_PAN3) Possible values of this parameter are: - 1, feature is implemented if ARMv8.7 is enabled. - 2, feature is implemented.

**subcluster2.has\_ete****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**subcluster2.has\_large\_va****Type**

int

**Default value**

0x0

**Description**

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT\_LVA). Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.2 is enabled. - 2, feature is implemented.

**subcluster2.icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**subcluster2.icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

**subcluster2.icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state\_modelled=true.

**subcluster2.icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

**subcluster2.icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state\_modelled=true.

**subcluster2.icache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. icache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state\_modelled=true.

**subcluster2.icache-size****Type**

int

**Default value**

0x8000

**Description**

L1 I-Cache size in bytes.

**subcluster2.instruction\_tlb\_size****Type**

int

**Default value**

0x0

**Description**

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

**subcluster2.invalidate\_code\_cache\_on\_icache\_cmo****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE.  
Note: Enabling this parameter will reduce simulation performance.

**subcluster2.memory\_tagging\_support\_level****Type**

int

**Default value**

0x3

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

**subcluster2.pmu-num\_counters****Type**

int

**Default value**

0x6

**Description**

Number of PMU counters implemented.

**subcluster2.pseudo\_fault\_generation\_feature\_register****Type**

string

**Default value**

```
"[{\"OF\":true, \"UC\":true, \"UEU\":false, \"UER\":false, \"UEO\":false, \"DE\":0x1, \"CE\":0x1,
\"CI\":true, \"ER\":false, \"PN\":true, \"AV\":false, \"MV\":true, \"SYN\":true, \"R\":true},{\"OF
\":false, \"UC\":true, \"UEU\":false, \"UER\":false, \"UEO\":false, \"DE\":0x1, \"CE\":0x1, \"CI
\":false, \"ER\":false, \"PN\":false, \"AV\":false, \"MV\":false, \"SYN\":false, \"R\":true}]"
```

**Description**

ARMv8.4 Standard Pseudo-fault generation feature register values. JSON schema for the parameter value is: [{"OF":false, "UC":false, "UEU":false, "UER":false, "UEO":false, "DE":false, "CE":0x0, "CI":false, "ER":false, "PN":false, "AV":false, "MV":false, "SYN":false, "R":false, "NA":false}, other\_psuedo-fault\_generating\_features\_register\_values]. Where OF, UC, UEU, UER, UEO, DE, CI, ER, PN, AV, MV, SYN, and R have valid false(NOT\_SUPPORTED) and true(FEATURE\_CONTROLLABLE), where CE can have 0(NOT\_SUPPORTED), 1(NONSPECIFIC\_CE\_SUPPORTED) and 3(TRANSIENT\_OR\_PERSISTENT\_CE\_SUPPORTED) and NA can have false(component fakes detection on next access) or true(component fakes detection spontaneously). Effective only when ERXFR's INJ field allows it or has\_ras\_fault\_injection is true.

**subcluster2.ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster2.stage12\_tlb\_size****Type**

int

**Default value**

0x80

**Description**

Number of stage1+2 tlb entries.

**subcluster2.tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster2.tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**subcluster2.trace\_physical\_registers\_when\_host\_virtualisation\_enabled****Type**

int

**Default value**

0x1

**Description**

When host virtualisation is enabled, trace sysreg accesses to physical register accessed (0=disabled, 1=Trace only ELR/SPSR\_EL1 as ELR/SPSR\_EL2, 2=Trace all redirected registers as physical registers.

**subcluster2.treat\_PAC\_as\_NOP****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter. Treat Pointer Authentication as NOP. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are NOP. Branch, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

**subcluster2.walk\_cache\_latency****Type**

int

**Default value**

0x0

Description

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

3.5.38 ARMCortexA510CT\_CortexA715CT\_CortexX3CT

ARMCortexA510CT\_CortexA715CT\_CortexX3CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-331: IP revisions support

Revision	Quality level
CortexA510 r0p0	Full support
CortexA510 r1p3	Full support
CortexA715 r1p2	Full support
CortexX3 r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

About ARMCortexA510CT\_CortexA715CT\_CortexX3CT

The number of cores in each subcluster is configurable using the following parameters:

**subcluster0.NUM\_CORES**  
Possible values are 1-10 (ARMCortexA510CT).

**subcluster1.NUM\_CORES**  
Possible values are 1-10 (ARMCortexA715CT).

**subcluster2.NUM\_CORES**  
Possible values are 1-10 (ARMCortexX3CT).

The total number of cores in the cluster cannot exceed 12.

Port arrays are expanded to the width needed for the maximum number of cores in each subcluster. Use the following port array indexes:

- <port\_name>[0-9] for cores in subcluster0.
- <port\_name>[10-19] for cores in subcluster1.
- <port\_name>[20-29] for cores in subcluster2.

All instances in the Master cross trigger matrix port array, cti[30] must be connected, regardless of the NUM\_CORES value used.

Core-specific parameters have the following prefixes:

- subcluster0.cpu0 to subcluster0.cpu9 identify cores in subcluster0.

- subcluster1.cpu0 to subcluster1.cpu9 identify cores in subcluster1.
- subcluster2.cpu0 to subcluster2.cpu9 identify cores in subcluster2.

For information about the cores in this model, see:

- [ARMCortexA510CT](#).
- [ARMCortexA715CT](#).
- [ARMCortexX3CT](#).

## Iris and MTI instances for ARMCortexA510CT\_CortexA715CT\_CortexX3CT

This model has the following Iris instances:

**Table 3-332: ARMCortexA510CT\_CortexA715CT\_CortexX3CT Iris instances**

InstanceName	ComponentName
ARMCortexA510CT_CortexA715CT_CortexX3CT	Cluster_ARM_CortexA510_CortexA715_CortexX3_Heterogeneous
ARMCortexA510CT_CortexA715CT_CortexX3CT.AMU	PVBusLogger
ARMCortexA510CT_CortexA715CT_CortexX3CT.AMU.mapper	PVBusMapper
ARMCortexA510CT_CortexA715CT_CortexX3CT.DAP	PVBusLogger

### Ports for ARMCortexA510CT\_CortexA715CT\_CortexX3CT

**Table 3-334: Ports**

Name	Protocol	Type	Description
acp_s	PVBus	Slave	AXI ACP slave port.
AEND0MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).

Name	Protocol	Type	Description
broadcastatomic	Signal	Slave	CHI defined pins.
broadcastcachemaint	Signal	Slave	ACE defined pins.
broadcastouter	Signal	Slave	ACE defined pins.
broadcastpersist	Signal	Slave	CHI defined pins.
cfgend[30]	Signal	Slave	This signal is for EE bit initialisation.
cfgsdisable	Signal	Slave	This signal disables write access to some secure Interrupt Controller registers.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcs_m_pchannel	PChannel	Master	Cluster PCSM signal
cluster_powerdown_out	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the cluster power info
clusterid	Value	Slave	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.
clusterpmuirq	Signal	Master	DynamlQ pmu irq
CNTHPIRQ[30]	Signal	Master	Timer signals to SOC.
CNTHPSIRQ[30]	Signal	Master	Timer signals to SOC
CNTHVIRQ[30]	Signal	Master	Timer signals to SOC.
CNTHVSIRQ[30]	Signal	Master	Timer signals to SOC
CNTPNSIRQ[30]	Signal	Master	Timer signals to SOC.
CNTPSIRQ[30]	Signal	Master	Timer signals to SOC.
cntvalueb	CounterInterface	Slave	Interface to SoC level counter module.
CNTVIRQ[30]	Signal	Master	Timer signals to SOC.
commirq[30]	Signal	Master	Interrupt signal from debug communications channel.
core_clk_in[30]	ClockSignal	Slave	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcs_m_pchannel[30]	PChannel	Master	Core PCSM signals

Name	Protocol	Type	Description
core_powerdown_out[30]	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the core power info
coreerrirq[30]	Signal	Master	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq[30]	Signal	Master	Fault indicator for a detected 1 or 2 bit ECC error
cryptodisable[30]	Signal	Slave	Disable cryptography extensions after reset.
cti[30]	v8EmbeddedCrossTrigger_controlprotocol	Master	Cross trigger matrix port.
ctidbgirq[30]	Signal	Master	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	Signal	Slave	External debug interface.
dbgnopwrdown[30]	Signal	Master	No power-down request.
dbgpwrupreq[30]	Signal	Master	Debug power up request.
defaultMP	Signal	Slave	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	PVBus	Slave	External debug interface.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
fiq[30]	Signal	Slave	This signal drives the CPUs fast-interrupt handling.
gicreset	Signal	Master	An output from PPU that can be used to reset GICCLK domain components
gicv3_redistributor_s[30]	GICv3Comms	Slave	GICv3 AXI-stream port.
irq[30]	Signal	Slave	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	PVBus	Slave	External debug interface.
pmbirq[30]	Signal	Master	Interrupt signal from the statistical profiling unit.
pmuirq[30]	Signal	Master	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	Signal	Master	PPU cluster interrupt.
ppu_cluster_wakerequest	Signal	Slave	PPU cluster wake request signal.
ppu_core_irq[30]	Signal	Master	PPU core interrupt.
ppu_core_wakerequest[30]	Signal	Slave	PPU Core wake request signals.
presetdbg	Signal	Slave	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	PVBus	Master	The core will generate bus requests on this port.

Name	Protocol	Type	Description
pvbus_periph_m	PVBus	Master	The core can generate peripheral bus request on this port.
rei[30]	Signal	Slave	Per core RAM Error Interrupt.
reset	Signal	Slave	Reset signal to cluster.
rvbaraddr[30]	Value_64	Slave	Reset vector base address.
sci_m	SystemCoherencyInterface	Master	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei[30]	Signal	Slave	Per core System Error physical pins.
spiden	Signal	Slave	External debug interface.
ticks[30]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq[30]	Signal	Master	Interrupt signal from the trace buffer unit.
utility_bus_s	PVBus	Slave	Utility bus slave
vcpumntirq[30]	Signal	Master	Interrupt signal for virtual CPU maintenance IRQ.
vfiq[30]	Signal	Slave	Virtualised FIQ.
virq[30]	Signal	Slave	Virtualised IRQ.
virtio_s	PVBus	Slave	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei[30]	Signal	Slave	Per core virtual System Error physical pins.

## Parameters for ARMCortexA510CT\_CortexA715CT\_CortexX3CT

### AEND0\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

### AEND1\_DEFAULT

#### Type

int

#### Default value

0x0

**Description**

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

**AEND2\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

**AEND3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

**ASTART0\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

**ASTART1\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

**ASTART2\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

**ASTART3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

**BROADCASTATOMIC****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

**BROADCASTCACHEMAINT****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

**BROADCASTOUTER****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

**BROADCASTPERSIST****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

**CLUSTER\_ID****Type**

int

**Default value**

0x0

**Description**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled****Type**

int

**Default value**

0x1

**Description**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. Changing this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain CMOs even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required .

**GICDISABLE****Type**

bool

**Default value**

0x1

**Description**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

**bus\_type****Type**

int

**Default value**

0x0

**Description**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

**core\_power\_on\_by\_default****Type**

bool

**Default value**

0x0

**Description**

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPU which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**default\_opmode****Type**

int

**Default value**

0x4

**Description**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

**diagnostics****Type**

bool

**Default value**

0x0

**Description**

Enable DynamIQ diagnostic messages.

**enable\_simulation\_performance\_optimizations****Type**

bool

**Default value**

0x1

**Description**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

**has\_peripheral\_port****Type**

bool

**Default value**

0x0

**Description**

If true, an additional AXI peripheral port is configured.

**icache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**l3cache-has\_mpam****Type**

bool

**Default value**

0x0

**Description**

L3 Cache has MPAM support.

**l3cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**l3cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**l3cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**l3cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**l3cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. l3cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**l3cache-size****Type**

int

**Default value**

0x80000

**Description**

L3 Cache size in bytes.

**l3cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**l3cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**l3cache-ways****Type**

int

**Default value**

0x10

**Description**

L3 Cache number of ways (sets are implicit from size).

**l3cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**l3cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**mpmm\_accumulator\_multiplier****Type**

int

**Default value**

0x1

**Description**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator. A value of n means the accumulator will use (n \* accumulator value) to calculate

the mpm threshold (MPMM). This is provided as a fast model workaround to handle cases where execution of quantums in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

**num\_nodes****Type**

int

**Default value**

0x1

**Description**

Number of transport nodes. Zero implies direct-connect configuration.

**subcluster0.CPUCFR****Type**

int

**Default value**

0x0

**Description**

Value of CPU Configuration Register.

**subcluster0.NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores in the subcluster. Total number of cores in cluster may not exceed 12.

**subcluster0.cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**subcluster0.cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**subcluster0.cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**subcluster0.cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**subcluster0.cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**subcluster0.cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**subcluster0.cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

**subcluster0.cpuX.l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

**subcluster0.cpuX.l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**subcluster0.cpuX.l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**subcluster0.cpuX.l2cache-read\_bus\_width\_in\_bytes****Type**

int

**Default value**

0x10

**Description**

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

**subcluster0.cpuX.l2cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.l2cache-size****Type**

int

**Default value**

0x80000

**Description**

L2 Cache size in bytes.

**subcluster0.cpuX.l2cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.l2cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.l2cache-ways****Type**

int

**Default value**

0x8

**Description**

L2 Cache number of ways (sets are implicit from size).

**subcluster0.cpuX.l2cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.l2cache-write\_bus\_width\_in\_bytes****Type**

int

**Default value**

0x20

**Description**

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

**subcluster0.cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**subcluster0.cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**subcluster0.cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**subcluster0.cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**subcluster0.cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**subcluster0.cpuX.semihosting-T32\_HLT****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**subcluster0.cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**subcluster0.cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**subcluster0.cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**subcluster0.cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**subcluster0.cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**subcluster0.cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**subcluster0.cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**subcluster0.cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**subcluster0.cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**subcluster0.cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**subcluster0.cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**subcluster0.dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**subcluster0.dcache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-size****Type**

int

**Default value**

0x10000

**Description**

L1 D-Cache size in bytes.

**subcluster0.dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster0.ete.CLAIMTAGS****Type**

int

**Default value**

0x4

**Description**

Number of claim tags.

**subcluster0.ete.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**subcluster0.ete.NumberOfRSPairs****Type**

int

**Default value**

0x8

**Description**

Number of resource selector pairs.

**subcluster0.ete.PIDR\_CM0D****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CM0D value.

**subcluster0.ete.PIDR\_REVAND****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVAND value.

**subcluster0.ete.PIDR\_REVISION****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVISION value.

**subcluster0.ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**subcluster0.ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**subcluster0.ete.RETSTACK****Type**

int

**Default value**

0x3

**Description**

Return stack depth.

**subcluster0.ete.REVISION****Type**

int

**Default value**

0x0

**Description**

TRCIDR1 revision value.

**subcluster0.ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**subcluster0.ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**subcluster0.ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**subcluster0.ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**subcluster0.ete.TRCRSRTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCRSR.TA value for a forcibly traced exception.

**subcluster0.force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**subcluster0.force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**subcluster0.force\_zero\_mpam\_partid\_and\_pmg****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**subcluster0.has\_coherent\_icache****Type**

bool

**Default value**

0x1

**Description**

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

**subcluster0.has\_dot\_product****Type**

int

**Default value**

0x2

**Description**

Possible values of this parameter are: - 1, feature not implemented. - 2, feature is implemented.

**subcluster0.has\_ete****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**subcluster0.icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**subcluster0.icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

**subcluster0.icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

**subcluster0.icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

**subcluster0.icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

**subcluster0.icache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

**subcluster0.icache-size****Type**

int

**Default value**

0x10000

**Description**

L1 I-Cache size in bytes.

**subcluster0.invalidate\_code\_cache\_on\_icache\_cmo****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE.  
Note: Enabling this parameter will reduce simulation performance.

**subcluster0.max\_32bit\_el****Type**

int

**Default value**

0x0

**Description**

Maximum exception level supporting AArch32 modes. -1: No Support for A32 at any EL, 0: ELO supports A32. This parameter is ignored in Rev0 i.e. when revision\_number = 0.

**subcluster0.memory\_tagging\_support\_level****Type**

int

**Default value**

0x3

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

**subcluster0.ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster0.ras\_pfg\_clock\_mhz****Type**

int

**Default value**

0xc

**Description**

RAS Pseudo-Fault generation clock rate in MHz.

**subcluster0.revision\_number****Type**

int

**Default value**

0x1

**Description**

Revision number of TRM implemented by the model. Changing the value can change the model behaviour. Visible as the Variant field in MIDR/MIDR\_EL1. Corresponds to the revision number X in rXpY.

**subcluster0.tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster0.tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**subcluster0.treat\_PAC\_as\_NOP****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter. Treat Pointer Authentication as NOP. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are NOP. Branch, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

**subcluster0.walk\_cache\_latency****Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster1.CPUCFR****Type**

int

**Default value**

0x0

**Description**

Value of CPU Configuration Register.

**subcluster1.NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores per cluster.

**subcluster1.cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**subcluster1.cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**subcluster1.cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**subcluster1.cpuX.CFGTE****Type**

bool

**Default value**

0x0

**Description**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

**subcluster1.cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**subcluster1.cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**subcluster1.cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**subcluster1.cpuX.force-fpsid****Type**

bool

**Default value**

0x1

**Description**

Override the FPSID value.

**subcluster1.cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**subcluster1.cpuX.l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster1.cpuX.l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**subcluster1.cpuX.l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**subcluster1.cpuX.l2cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**subcluster1.cpuX.l2cache-size****Type**

int

**Default value**

0x80000

**Description**

L2 Cache size in bytes.

**subcluster1.cpuX.l2cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

**`subcluster1.cpuX.l2cache-snoop_issue_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

**`subcluster1.cpuX.l2cache-write_access_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

**`subcluster1.cpuX.l2cache-write_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

**`subcluster1.cpuX.max_code_cache_mb`****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**subcluster1.cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**subcluster1.cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**subcluster1.cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**subcluster1.cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**subcluster1.cpuX.semihosting-T32\_HLT****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**subcluster1.cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**subcluster1.cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**subcluster1.cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**subcluster1.cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**subcluster1.cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**subcluster1.cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**subcluster1.cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**subcluster1.cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**subcluster1.cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**subcluster1.cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**subcluster1.cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**subcluster1.dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**subcluster1.dcache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-size****Type**

int

**Default value**

0x8000

**Description**

L1 D-Cache size in bytes.

**subcluster1.dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster1.error\_record\_feature\_register****Type**

string

**Default value**

```
"[{\"ED\":0x2,\"IMPDEF_3_2\":0x1,\"UI\":0x2,\"FI\":0x2,\"UE\":0x1,\"CFI\":0x2,\"CEC\":0x2,\"RP\":0x1,\"DUI\":0x0,\"CEO\":0x0,\"INJ\":0x1,\"CI\":0x2,\"TS\":0x0,\"Visibility\":\"Cluster\"},{\"ED\":0x2,\"UI\":0x2,\"FI\":0x2,\"UE\":0x1,\"CFI\":0x2,\"CEC\":0x2,\"RP\":0x1,\"DUI\":0x0,\"CEO\":0x0,\"INJ\":0x1,\"CI\":0x0,\"TS\":0x0}],"
```

**Description**

RAS feature register values. An array of JSON objects. The JSON schema for the array is:  
 [{"ED":0x0, "IMPDEF\_3\_2":0x0, "UI":0x0, "FI":0x0, "UE":0x0, "CFI":0x0, "CEC":0x0, "RP":0x0, "DUI":0x0, "CEO":0x0, "CI":0x0, "TS":0x0, "INJ":0x0, "FRX":0x0, "UC":0x0, "UEU":0x0, "UER":0x0, "UEO":0x0, "DE":0x0, "CE":0x0, "Visibility":"Core"},other\_feature\_register\_values].  
 Where ED,UI,FI,CE and UE have valid values between 0x0 - 0x3. CFI and DUI have valid values 0x0, 0x2 and 0x3. CEC has valid values 0x0,0x2 or 0x4.  
 RP,CEO,INJ,FRX,UC,UEU,UER,UEO,DE has valid values 0x0 or 0x1. CI and TS has valid values of 0x0, 0x1 and 0x2. Visibility has valid values "Core" or "Cluster".

**subcluster1.ete.CLAIMTAGS****Type**

int

**Default value**

0x4

**Description**

Number of claim tags.

**subcluster1.ete.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**subcluster1.ete.NumberOfRSPairs****Type**

int

**Default value**

0x8

**Description**

Number of resource selector pairs.

**subcluster1.ete.PIDR\_CM0D****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CM0D value.

**subcluster1.ete.PIDR\_REVAND****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVAND value.

**subcluster1.ete.PIDR\_REVISION****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVISION value.

**subcluster1.ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**subcluster1.ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**subcluster1.ete.RETSTACK****Type**

int

**Default value**

0x3

**Description**

Return stack depth.

**subcluster1.ete.REVISION****Type**

int

**Default value**

0x1

**Description**

TRCIDR1 revision value.

**subcluster1.ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**subcluster1.ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**subcluster1.ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**subcluster1.ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**subcluster1.ete.TRCRSRTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCRSR.TA value for a forcibly traced exception.

**subcluster1.force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**subcluster1.force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**subcluster1.force\_zero\_mpam\_partid\_and\_pmg****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**subcluster1.has\_coherent\_icache****Type**

bool

**Default value**

0x1

**Description**

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

**subcluster1.has\_enhanced\_pan****Type**

int

**Default value**

0x2

**Description**

Implements Armv8.7 Enhanced PAN feature (FEAT\_PAN3) Possible values of this parameter are: - 1, feature is implemented if ARMv8.7 is enabled. - 2, feature is implemented.

**subcluster1.has\_ete****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**subcluster1.has\_large\_va****Type**

int

**Default value**

0x0

**Description**

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT\_LVA). Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.2 is enabled. - 2, feature is implemented.

**subcluster1.has\_statistical\_profiling****Type**

bool

**Default value**

0x0

**Description**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

**subcluster1.icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**subcluster1.icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

**subcluster1.icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state\_modelled=true.

**subcluster1.icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

**`subcluster1.icache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

**`subcluster1.icache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

**`subcluster1.icache-size`****Type**

int

**Default value**

0x8000

**Description**

L1 I-Cache size in bytes.

**`subcluster1.instruction_tlb_size`****Type**

int

**Default value**

0x0

**Description**

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

**subcluster1.invalidate\_code\_cache\_on\_icache\_cmo****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE.  
Note: Enabling this parameter will reduce simulation performance.

**subcluster1.memory\_tagging\_support\_level****Type**

int

**Default value**

0x3

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

**subcluster1.pmu-num\_counters****Type**

int

**Default value**

0x6

**Description**

Number of PMU counters implemented.

**subcluster1.pseudo\_fault\_generation\_feature\_register****Type**

string

**Default value**

"[{\"OF\":true, \"UC\":true, \"UEU\":false, \"UER\":false, \"UEO\":false, \"DE\":0x1, \"CE\":0x1, \"CI\":true, \"ER\":false, \"PN\":true, \"AV\":false, \"MV\":true, \"SYN\":true, \"R\":true},{\"OF\":false, \"UC\":true, \"UEU\":false, \"UER\":false, \"UEO\":false, \"DE\":0x1, \"CE\":0x1, \"CI\":false, \"ER\":false, \"PN\":false, \"AV\":false, \"MV\":false, \"SYN\":false, \"R\":true}]"

**Description**

ARMv8.4 Standard Pseudo-fault generation feature register values. JSON schema for the parameter value is: [{"OF":false, "UC":false, "UEU":false, "UER":false, "UEO":false, "DE":false,

"CE":0x0, "CI":false, "ER":false, "PN":false, "AV":false, "MV":false, "SYN":false, "R":false, "NA":false}, other\_psuedo-fault\_generating\_features\_register\_values]. Where OF, UC, UEU, UER, UEO, DE, CI, ER, PN, AV, MV, SYN, and R have valid false(NOT\_SUPPORTED) and true(FEATURE\_CONTROLLABLE), where CE can have 0(NOT\_SUPPORTED), 1(NONSPECIFIC\_CE\_SUPPORTED) and 3(TRANSIENT\_OR\_PERSISTENT\_CE\_SUPPORTED) and NA can have false(component fakes detection on next access) or true(component fakes detection spontaneously). Effective only when ERXFR's INJ field allows it or has\_ras\_fault\_injection is true.

### **subcluster1.ptw\_latency**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

### **subcluster1.stage12\_tlb\_size**

#### **Type**

int

#### **Default value**

0x80

#### **Description**

Number of stage1+2 tlb entries.

### **subcluster1.tlb\_latency**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

### **subcluster1.tlbi\_stall\_enabled**

#### **Type**

bool

#### **Default value**

0x0

#### **Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**subcluster1.treat\_PAC\_as\_NOP****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter. Treat Pointer Authentication as NOP. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are NOP. Branch, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

**subcluster1.walk\_cache\_latency****Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster2.CPUCFR****Type**

int

**Default value**

0x0

**Description**

Value of CPU Configuration Register.

**subcluster2.NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores per cluster.

**subcluster2.cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**subcluster2.cpi\_mul**

**Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**subcluster2.cpuX.CFGEND**

**Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**subcluster2.cpuX.CFGTE**

**Type**

bool

**Default value**

0x0

**Description**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

**subcluster2.cpuX.CRYPTODISABLE**

**Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**subcluster2.cpuX.RVBARADDR**

**Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**subcluster2.cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**subcluster2.cpuX.force-fpsid****Type**

bool

**Default value**

0x1

**Description**

Override the FPSID value.

**subcluster2.cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-size****Type**

int

**Default value**

0x100000

**Description**

L2 Cache size in bytes.

**subcluster2.cpuX.l2cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**`subcluster2.cpuX.min_sync_level`****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**`subcluster2.cpuX.semihosting-A32_HLT`****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**`subcluster2.cpuX.semihosting-A64_HLT`****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**`subcluster2.cpuX.semihosting-ARM_SVC`****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**`subcluster2.cpuX.semihosting-T32_HLT`****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**subcluster2.cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**subcluster2.cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**subcluster2.cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**subcluster2.cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**subcluster2.cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**subcluster2.cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**subcluster2.cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**subcluster2.cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**subcluster2.cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**subcluster2.cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**subcluster2.cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**subcluster2.dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**subcluster2.dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster2.dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**`subcluster2.dcache-prefetch_enabled`****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

**`subcluster2.dcache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**`subcluster2.dcache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**`subcluster2.dcache-size`****Type**

int

**Default value**

0x8000

**Description**

L1 D-Cache size in bytes.

**subcluster2.dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**subcluster2.dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**subcluster2.dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster2.error\_record\_feature\_register****Type**

string

**Default value**

"[{\"ED\":0x2,\"IMPDEF\_3\_2\":0x0,\"UI\":0x2,\"FI\":0x2,\"UE\":0x1,\"CFI\":0x2,\"CEC\":0x2,\"RP\":0x1,\"DUI\":0x0,\"CEO\":0x0,\"INJ\":0x1,\"CI\":0x0,\"TS\":0x0,\"Visibility\":\"Cluster\"},{\"ED\":0x2,\"IMPDEF\_3\_2\":0x0,\"UI\":0x2,\"FI\":0x2,\"UE\":0x1,\"CFI\":0x2,\"CEC\":0x2,\"RP\":0x1,\"DUI\":0x0,\"CEO\":0x0,\"INJ\":0x1,\"CI\":0x0,\"TS\":0x0}]]"

**Description**

RAS feature register values. An array of JSON objects. The JSON schema for the array is:  
 [{"ED":0x0, "IMPDEF\_3\_2":0x0, "UI":0x0, "FI":0x0, "UE":0x0, "CFI":0x0, "CEC":0x0, "RP":0x0, "DUI":0x0, "CEO":0x0, "CI":0x0, "TS":0x0, "INJ":0x0, "FRX":0x0, "UC":0x0, "UEU":0x0, "UER":0x0, "UEO":0x0, "DE":0x0, "CE":0x0, "Visibility":"Core"},other\_feature\_register\_values].  
 Where ED,UI,FI,CE and UE have valid values between 0x0 - 0x3. CFI and DUI have valid values 0x0, 0x2 and 0x3. CEC has valid values 0x0,0x2 or 0x4.  
 RP,CEO,INJ,FRX,UC,UEU,UER,UEO,DE has valid values 0x0 or 0x1. CI and TS has valid values of 0x0, 0x1 and 0x2. Visibility has valid values "Core" or "Cluster".

**subcluster2.ete.CLAIMTAGS****Type**

int

**Default value**

0x20

**Description**

Number of claim tags.

**subcluster2.ete.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**subcluster2.ete.NumberOfRSPairs****Type**

int

**Default value**

0x8

**Description**

Number of resource selector pairs.

**subcluster2.ete.PIDR\_CM0D****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CM0D value.

**subcluster2.ete.PIDR\_REVAND****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVAND value.

**subcluster2.ete.PIDR\_REVISION****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVISION value.

**subcluster2.ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**subcluster2.ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**subcluster2.ete.RETSTACK****Type**

int

**Default value**

0x3

**Description**

Return stack depth.

**subcluster2.ete.REVISION****Type**

int

**Default value**

0x0

**Description**

TRCIDR1 revision value.

**subcluster2.ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**subcluster2.ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**subcluster2.ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**subcluster2.ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**subcluster2.etc.TRCRSRTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCRSR.TA value for a forcibly traced exception.

**subcluster2.ext\_abort\_normal\_noncacheable\_read\_is\_sync****Type**

bool

**Default value**

0x1

**Description**

Synchronous reporting of normal noncacheable-read external aborts.

**subcluster2.ext\_abort\_so\_write\_ras\_type****Type**

int

**Default value**

0x2

**Description**

External Aborts are reported as RAS error type specified in this param. Values: 0 = NONE, 1 = UC, 2 = UEU, 3 = UEO, 4 = UER, 5 = CE.

**subcluster2.force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**subcluster2.force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**subcluster2.force\_zero\_mpam\_partid\_and\_pmg****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**subcluster2.has\_coherent\_icache****Type**

bool

**Default value**

0x1

**Description**

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

**subcluster2.has\_enhanced\_pan****Type**

int

**Default value**

0x2

**Description**

Implements Armv8.7 Enhanced PAN feature (FEAT\_PAN3) Possible values of this parameter are: - 1, feature is implemented if ARMv8.7 is enabled. - 2, feature is implemented.

**subcluster2.has\_ete****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**subcluster2.has\_large\_va****Type**

int

**Default value**

0x0

**Description**

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT\_LVA). Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.2 is enabled. - 2, feature is implemented.

**subcluster2.icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**subcluster2.icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

**subcluster2.icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state\_modelled=true.

**subcluster2.icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

**subcluster2.icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state\_modelled=true.

**subcluster2.icache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. icache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state\_modelled=true.

**subcluster2.icache-size****Type**

int

**Default value**

0x8000

**Description**

L1 I-Cache size in bytes.

**subcluster2.instruction\_tlb\_size****Type**

int

**Default value**

0x0

**Description**

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

**subcluster2.invalidate\_code\_cache\_on\_icache\_cmo****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE.  
Note: Enabling this parameter will reduce simulation performance.

**subcluster2.memory\_tagging\_support\_level****Type**

int

**Default value**

0x3

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

**subcluster2.pmu-num\_counters****Type**

int

**Default value**

0x6

**Description**

Number of PMU counters implemented.

**subcluster2.pseudo\_fault\_generation\_feature\_register****Type**

string

**Default value**

```
"[{\"OF\":true, \"UC\":true, \"UEU\":false, \"UER\":false, \"UEO\":false, \"DE\":0x1, \"CE\":0x1,
\"CI\":true, \"ER\":false, \"PN\":true, \"AV\":false, \"MV\":true, \"SYN\":true, \"R\":true},{\"OF
\":false, \"UC\":true, \"UEU\":false, \"UER\":false, \"UEO\":false, \"DE\":0x1, \"CE\":0x1, \"CI
\":false, \"ER\":false, \"PN\":false, \"AV\":false, \"MV\":false, \"SYN\":false, \"R\":true}]"
```

**Description**

ARMv8.4 Standard Pseudo-fault generation feature register values. JSON schema for the parameter value is: [{"OF":false, "UC":false, "UEU":false, "UER":false, "UEO":false, "DE":false, "CE":0x0, "CI":false, "ER":false, "PN":false, "AV":false, "MV":false, "SYN":false, "R":false, "NA":false}, other\_pseudo-fault\_generating\_features\_register\_values]. Where OF, UC, UEU, UER, UEO, DE, CI, ER, PN, AV, MV, SYN, and R have valid false(NOT\_SUPPORTED) and true(FEATURE\_CONTROLLABLE), where CE can have 0(NOT\_SUPPORTED), 1(NONSPECIFIC\_CE\_SUPPORTED) and 3(TRANSIENT\_OR\_PERSISTENT\_CE\_SUPPORTED) and NA can have false(component fakes detection on next access) or true(component fakes detection spontaneously). Effective only when ERXFR's INJ field allows it or has\_ras\_fault\_injection is true.

**subcluster2.ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster2.stage12\_tlb\_size****Type**

int

**Default value**

0x80

**Description**

Number of stage1+2 tlb entries.

**subcluster2.tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster2.tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**subcluster2.trace\_physical\_registers\_when\_host\_virtualisation\_enabled****Type**

int

**Default value**

0x1

**Description**

When host virtualisation is enabled, trace sysreg accesses to physical register accessed (0=disabled, 1=Trace only ELR/SPSR\_EL1 as ELR/SPSR\_EL2, 2=Trace all redirected registers as physical registers.

**subcluster2.treat\_PAC\_as\_NOP****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter. Treat Pointer Authentication as NOP. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are NOP. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

**subcluster2.walk\_cache\_latency****Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

### 3.5.39 ARM Cortex A520 AECT

ARM Cortex A520 AECT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-335: IP revisions support**

Revision	Quality level
r0p0	Preliminary support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### Changes in 11.29.19

Parameters added:

- `has_coherent_icache`

#### AE-specific features implemented

The only AE-specific features implemented in the model are Split-Lock and Lock-Step, with the following limitations:

- The implementation of Split-Lock and Lock-Step in the model is simply a halving of the number of cores available.
- Lock-step is implemented by a parameter that can be true or false for the entire execution only, rather than by a signal that can be enabled during execution.

As the model does not implement true Split-Lock functionality, the ports and parameters are contiguous. For example, for a 4-core CPU with Split-Lock enabled, `cpu0` and `cpu1` identify the available cores and associated ports, not `cpu0` and `cpu2`.

- Hybrid mode is not modeled in the DSU.

#### Iris and MTI instances for ARM Cortex A520 AECT

This model has the following Iris instances:

**Table 3-336: ARM Cortex A520 AECT Iris instances**

InstanceName	ComponentName
ARM Cortex A520 AECT	Cluster_ARM_Cortex-A520AE
ARM Cortex A520 AECT.AMU	PVBusLogger
ARM Cortex A520 AECT.AMU.mapper	PVBusMapper
ARM Cortex A520 AECT.DAP	PVBusLogger
ARM Cortex A520 AECT.DAP.mapper	PVBusMapper
ARM Cortex A520 AECT.DSU	DSU
ARM Cortex A520 AECT.DSU.PPU_cluster	PPUv1
ARM Cortex A520 AECT.DSU.PPU_cluster.busslave	PVBusSlave
ARM Cortex A520 AECT.DSU.PPU_core0	PPUv1

InstanceName	ComponentName
ARMCortexA520AECT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexA520AECT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA520AECT.DSU.mpam_busslave	PVBusSlave
ARMCortexA520AECT.DSU.shared_cache	PVCache
ARMCortexA520AECT.DSU.shared_cache.upstream[0]	PVBusSlave
ARMCortexA520AECT.DSU.shared_cache.upstream[1]	PVBusSlave
ARMCortexA520AECT.DSU.shared_cache.upstream[2]	PVBusSlave
ARMCortexA520AECT.DSU.shared_cache.upstream[3]	PVBusSlave
ARMCortexA520AECT.DSU.shared_cache.upstream[4]	PVBusSlave
ARMCortexA520AECT.DSU.utility_slave[0]	PVBusSlave
ARMCortexA520AECT.MMAP	PVBusLogger
ARMCortexA520AECT.MMAP.mapper	PVBusMapper
ARMCortexA520AECT.RAS	PVBusLogger
ARMCortexA520AECT.RAS.mapper	PVBusMapper
ARMCortexA520AECT.cpu0	ARM_Cortex-A520AE
ARMCortexA520AECT.cpu0.UTLB	TLB
ARMCortexA520AECT.cpu0.debug_rom	debug_rom
ARMCortexA520AECT.cpu0.dtlb	TLB
ARMCortexA520AECT.cpu0.l1dcache	PVCache
ARMCortexA520AECT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA520AECT.cpu0.l1icache	PVCache
ARMCortexA520AECT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA520AECT.cpu0.l2cache	PVCache
ARMCortexA520AECT.cpu0.l2cache.upstream[0]	PVBusSlave
ARMCortexA520AECT.cpu0.l2cache.upstream[1]	PVBusSlave
ARMCortexA520AECT.ext_bus	PVBusLogger
ARMCortexA520AECT.ext_bus.mapper	PVBusMapper
ARMCortexA520AECT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA520AECT.global_debug_rom	debug_rom
ARMCortexA520AECT.secondary_debug_rom	debug_rom
ARMCortexA520AECT.sve	ScalableVectorExtension

This model has the following MTI trace components:

**Table 3-337: ARMCortexA520AECT MTI instances**

InstanceName	ComponentName

ARMCortexA520AECT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

## Ports for ARMCortexA520AECT

**Table 3-338: Ports**

Name	Protocol	Type	Description
acp_s[2]	PVBus	Slave	AXI ACP slave port.
AEND0MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).

Name	Protocol	Type	Description
AEND2MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	Signal	Slave	CHI defined pins.
broadcastcachemaint	Signal	Slave	ACE defined pins.
broadcastouter	Signal	Slave	ACE defined pins.
broadcastpersist	Signal	Slave	CHI defined pins.
cfgend[14]	Signal	Slave	This signal is for EE bit initialisation.
cfgsdisable	Signal	Slave	This signal disables write access to some secure Interrupt Controller registers.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsmpchannel	PChannel	Master	Cluster PCSM signal
cluster_powerdown_out	Signal	Master	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info
clusterid	Value	Slave	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.
clusterpmuirq	Signal	Master	DynamlQ pmu irq
CNTHPIRQ[14]	Signal	Master	Timer signals to SOC.
CNTHPSIRQ[14]	Signal	Master	Timer signals to SOC
CNTHVIRQ[14]	Signal	Master	Timer signals to SOC.
CNTHVSIRQ[14]	Signal	Master	Timer signals to SOC
CNTPNSIRQ[14]	Signal	Master	Timer signals to SOC.

Name	Protocol	Type	Description
CNTPSIRQ[14]	Signal	Master	Timer signals to SOC.
cntvalueb	CounterInterface	Slave	Interface to SoC level counter module.
CNTVIRQ[14]	Signal	Master	Timer signals to SOC.
commirq[14]	Signal	Master	Interrupt signal from debug communications channel.
core_clk_in[14]	ClockSignal	Slave	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsmpchannel[14]	PChannel	Master	Core PCSM signals
core_powerdown_out[14]	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the core power info
coreerrirq[14]	Signal	Master	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq[14]	Signal	Master	Fault indicator for a detected 1 or 2 bit ECC error
cryptodisable[14]	Signal	Slave	Disable cryptography extensions after reset.
cti[14]	v8EmbeddedCrossTrigger_controlprotocol	Master	Cross trigger matrix port.
ctidbgirq[14]	Signal	Master	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	Signal	Slave	External debug interface.
dbgnopwrdown[14]	Signal	Master	No power-down request.
dbgprupreq[14]	Signal	Master	Debug power up request.
defaultMP	Signal	Slave	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	PVBus	Slave	External debug interface.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
fiq[14]	Signal	Slave	This signal drives the CPUs fast-interrupt handling.
gicreset	Signal	Master	An output from PPU that can be used to reset GICCLK domain components
gicv3_redistributor_s[14]	GICv3Comms	Slave	GICv3 AXI-stream port.
irq[14]	Signal	Slave	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	PVBus	Slave	External debug interface.
pmuirq[14]	Signal	Master	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	Signal	Master	PPU cluster interrupt.
ppu_cluster_wakerequest	Signal	Slave	PPU cluster wake request signal.

Name	Protocol	Type	Description
ppu_core_irq[14]	Signal	Master	PPU core interrupt.
ppu_core_wakerequest[14]	Signal	Slave	PPU core wake request signal.
presetdbg	Signal	Slave	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	PVBus	Master	The core will generate bus requests on this port.
pvbus_periph_m	PVBus	Master	The core can generate peripheral bus request on this port.
rei[14]	Signal	Slave	Per core RAM Error Interrupt.
reset	Signal	Slave	Reset signal to cluster.
rvbaraddr[14]	Value_64	Slave	Reset vector base address.
sci_m	SystemCoherencyInterface	Master	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei[14]	Signal	Slave	Per core System Error physical pins.
spiden	Signal	Slave	External debug interface.
ticks[14]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq[14]	Signal	Master	Interrupt signal from the trace buffer unit.
utility_bus_s	PVBus	Slave	Utility bus slave
vcpumntirq[14]	Signal	Master	Interrupt signal for virtual CPU maintenance IRQ.
vfiq[14]	Signal	Slave	Virtualised FIQ.
virq[14]	Signal	Slave	Virtualised IRQ.
virtio_s	PVBus	Slave	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei[14]	Signal	Slave	Per core virtual System Error physical pins.

## Parameters for ARM Cortex A520 AECT

### AEND0\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

**AEND1\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

**AEND2\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

**AEND3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

**ASTART0\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

**ASTART1\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

**ASTART2\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

**ASTART3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

**BROADCASTATOMIC****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

**BROADCASTCACHEMAINT****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

**BROADCASTOUTER****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

**BROADCASTPERSIST****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

**CLUSTER\_ID****Type**

int

**Default value**

0x0

**Description**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled****Type**

int

**Default value**

0x1

**Description**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. Changing this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain CMOs even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required .

**CPUCFR****Type**

int

**Default value**

0x0

**Description**

Value of CPU Configuration Register.

**DBGROMADDR****Type**

int

**Default value**

0x0

**Description**

Initialization value of DBGDRAR register. Bits[55:12] of this register specify the ROM table physical address.

**DBGROMADDRV****Type**

bool

**Default value**

0x0

**Description**

If true, set bits[1:0] of the CP15 DBGDRAR to indicate that the address is valid.

**GICDISABLE****Type**

bool

**Default value**

0x1

**Description**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

**NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores per cluster.

**bus\_type****Type**

int

**Default value**

0x0

**Description**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

**cluster\_split\_lock\_config****Type**

int

**Default value**

0x1

**Description**

Default SPLIT/LOCKED config. Directly maps to values of CLUSTERSLCFR. The valid values are: 1 - Only LOCKED configuration support 4 - Only SPLIT configuration support, 5 - Mixed Configuration support. Modes are not software visible, and not modeled. Valid only when enable\_ae\_features is true.

**core\_cache\_protection****Type**

int

**Default value**

0x1

**Description**

core\_cache\_protection can change ERROFR, ERROPFGF and ERROPFGCTL fields. Possible values are: -1:Not implemented (by default), 0:Disabled, 1:Enabled.

**core\_complex\_mapping****Type**

string

**Default value**

```
"{"complex0": { "cores": [0, 1], "l2-cache" :{"exists":1, "size":"16MB"}}, "complex1":
{ "cores": [2, 3], "l2-cache" :{"exists":1, "size":"16MB"}}, "complex2": { "cores": [4,
5], "l2-cache" :{"exists":1, "size":"16MB"}}, "complex3": { "cores": [6, 7], "l2-cache
" :{"exists":1, "size":"16MB"}}, "complex4": { "cores": [8, 9], "l2-cache" :{"exists
":1, "size":"16MB"}}, "complex5": { "cores": [10, 11], "l2-cache" :{"exists":1, "size":
"16MB"}}, "complex6": { "cores": [12, 13], "l2-cache" :{"exists":1, "size":"16MB"} }"
```

**Description**

Defines Complex descriptions for platforms that support several Cores per Complex like Cortex-A510. JSON format: {"complex0": { "cores" : [ 0, 1 ], "l2-cache" :{"exists":1, "size":16MB}}, ... , "complexN": { "cores" : [<core\_list>], "l2-cache" : {"exists":1, "size":16MB}}} where <core\_list> is the list of cores in the complexN. Effective only when the parameter value is not empty.

**core\_power\_on\_by\_default****Type**

bool

**Default value**

0x0

**Description**

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPU which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

**cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-maintenance_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-miss_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-read_bus_width_in_bytes`****Type**

int

**Default value**

0x10

**Description**

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

**cpuX.l2cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-size****Type**

int

**Default value**

0x80000

**Description**

L2 Cache size in bytes.

**cpuX.l2cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-ways****Type**

int

**Default value**

0x8

**Description**

L2 Cache number of ways (sets are implicit from size).

**cpuX.l2cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-write\_bus\_width\_in\_bytes****Type**

int

**Default value**

0x20

**Description**

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

**cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**cpuX.semihosting-T32\_HLT****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**`dcache-prefetch_enabled`****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

**`dcache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**`dcache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**`dcache-size`****Type**

int

**Default value**

0x8000

**Description**

L1 D-Cache size in bytes.

**dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**enable\_lock\_step****Type**

bool

**Default value**

0x0

**Description**

Whether the core is configured in Dual Core Lock Step mode (FEAT\_DCLS).

**enable\_simulation\_performance\_optimizations****Type**

bool

**Default value**

0x1

**Description**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

**ete.CLAIMTAGS****Type**

int

**Default value**

0x4

**Description**

Number of claim tags.

**ete.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**ete.PIDR\_CM0D****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CMOD value.

**ete.PIDR\_REVAND****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVAND value.

**ete.PIDR\_REVISION****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVISION value.

**ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**ete.RETSTACK****Type**

int

**Default value**

0x3

**Description**

Return stack depth.

**ete.REVISION****Type**

int

**Default value**

0x0

**Description**

TRCIDR1 revision value.

**ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**ete.TRCRSRTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCRSR.TA value for a forcibly traced exception.

**force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**force\_zero\_mpam\_partid\_and\_pmg****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**has\_actlr2****Type**

bool

**Default value**

0x1

**Description**

If true ACLTR2 exists and ACTLR2(NS) is aliased to ACTLR\_EL1[63:32].

**has\_coherent\_icache****Type**

bool

**Default value**

0x0

**Description**

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

**has\_dot\_product****Type**

int

**Default value**

0x2

**Description**

Possible values of this parameter are: - 1, feature not implemented. - 2, feature is implemented.

**has\_ete****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**has\_impdef\_transient\_fault\_protection****Type**

bool

**Default value**

0x1

**Description**

Support the Transient Fault Protection (TFP) flop parity errors through RAS registers (FEAT\_TFP).

**has\_peripheral\_port****Type**

bool

**Default value**

0x0

**Description**

If true, an additional AXI peripheral port is configured.

**icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

**icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state\_modelled=true.

**icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

**icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state\_modelled=true.

**icache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. icache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state\_modelled=true.

**icache-size****Type**

int

**Default value**

0x8000

**Description**

L1 I-Cache size in bytes.

**icache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**invalidate\_code\_cache\_on\_icache\_cmo****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE.  
Note: Enabling this parameter will reduce simulation performance.

**l3cache-has\_mpam****Type**

bool

**Default value**

0x1

**Description**

L3 Cache has MPAM support.

**l3cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**l3cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

**l3cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**l3cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size `l3cache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**l3cache-read\_bus\_width\_in\_bytes****Type**

int

**Default value**

0x10

**Description**

L3 Cache read bus width in bytes used to calculate per-access timing annotations.

**l3cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l3cache-read_access_latency` must be set to 0 for per-byte latencies to be applied.

This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**l3cache-size****Type**

int

**Default value**

0x80000

**Description**

L3 Cache size in bytes.

**l3cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

**l3cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

**l3cache-ways****Type**

int

**Default value**

0x10

**Description**

L3 Cache number of ways (sets are implicit from size).

**l3cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**l3cache-write\_bus\_width\_in\_bytes****Type**

int

**Default value**

0x10

**Description**

L3 Cache write bus width in bytes used to calculate per-access timing annotations.

**l3cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**memory\_tagging\_support\_level****Type**

int

**Default value**

0x3

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

**mpmm\_accumulator\_multiplier****Type**

int

**Default value**

0x1

**Description**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator. A value of  $n$  means the accumulator will use  $(n * \text{accumulator value})$  to calculate the mpmm threshold (MPMM). This is provided as a fast model workaround to handle cases where execution of quantum in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

**num\_acp****Type**

int

**Default value**

0x0

**Description**

Number of ACP ports.

**num\_nodes****Type**

int

**Default value**

0x1

**Description**

Number of transport nodes. Zero implies direct-connect configuration.

**pmu-num\_counters****Type**

int

**Default value**

0x6

**Description**

Number of PMU counters implemented.

**ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**ras\_extra\_configurations****Type**

string

**Default value**

```
"[ { \"Index\": 1, \"ERXMISCO_mask\": 0xFFFFc0003fc3, \"ERXMISC1_mask\":  
0x03F870003FF30f07, \"ERXPFGCTL_reset\": 0x1000 }, { \"Index\": 2, \"ERXMISCO_mask  
\": 0xFFFFe007ffc0, \"ERXMISCO_reset\": 0x2, \"ERXSTATUS_IERR_mask\": 0x300 ,  
\"ERXMISC1_mask\": 0x0FF8700ffff31f0f, \"ERXPFGCTL_reset\": 0x1000 } ]"
```

**Description**

Miscellaneous configurations for error records. An array of JSON objects. Note for ERXCTLR\_EL1 register it only allows to define the mask value for the IMPDEF fields, ie bits [63:32] and bit 1, but its reset value applies on all fields. Note for ERXMISCN masks - these are 64 bit masks covering the 64 bit registers ERXMISCN\_EL1. E.g. [{"Index": 0, "ERXMISCO\_mask": 0x0, "ERXMISCO\_reset": 0x0, "ERXMISC1\_mask": 0x0, "ERXMISC1\_reset": 0x0, "ERXMISC2\_mask": 0x0, "ERXMISC2\_reset": 0x0, "ERXMISC3\_mask": 0x0, "ERXMISC3\_reset": 0x0, "ERXCTLR\_EL1\_mask": 0x0, "ERXCTLR\_EL1\_reset": 0x0}, {"Index": 1, "ERXMISCO\_mask": 0x0, "ERXMISCO\_reset": 0x0, "ERXSTATUS\_IERR\_mask": 0x300}].

**ras\_pfg\_clock\_mhz****Type**

int

**Default value**

0xc

**Description**

RAS Pseudo-Fault generation clock rate in MHz.

**reported\_patch\_level****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**reported\_revision\_number****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**treat\_PAC\_as\_NOP****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter. Treat Pointer Authentication as NOP. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are NOP. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

**walk\_cache\_latency****Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

### 3.5.40 ARMCortexA520CT

ARMCortexA520CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-339: IP revisions support**

Revision	Quality level
r0p1	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### About ARMCortexA520CT

The model supports the following features:

- L2 cache is supported at the per-core level only and there is no implementation of Core-Complex with shared L2 cache yet.
- Internal PPU support is present.
- A P-Channel for the cluster and for each core.
- BROADCASTPERSIST pin.
- Optional peripheral port.
- Memory-mapped register access to MPAM.
- Per-core clock.
- Utility bus.

Support for the following features is planned for a future release:

- DSU-120 system features are not fully implemented.
- Transporting architectural metadata tags over TLM2 (OSCI) and AMBA-PV (TLM2 extensions from Arm) bus protocols.
- Core-Complex.
- BROADCASTCACHEMAINTPOU pin
- COREINSTRRET and COREINSTRRUN signals.
- Each thread has its own L1Cache and L2Cache instead of a common cache that is shared by all threads of the core.
- Per-thread parameters are not supported but signals are implemented.

The following features will not be implemented:

- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
- Automatic CPU retention mode.
- Level-3 Cache RAM retention.

- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Cache stashing capability.

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (crypto.dll or crypto.so) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

### Iris and MTI instances for ARM Cortex-A520CT

This model has the following Iris instances:

**Table 3-340: ARM Cortex-A520CT Iris instances**

InstanceName	ComponentName
ARM Cortex-A520CT	Cluster_ARM_Cortex-A520
ARM Cortex-A520CT.AMU	PVBusLogger
ARM Cortex-A520CT.AMU.mapper	PVBusMapper
ARM Cortex-A520CT.DAP	PVBusLogger
ARM Cortex-A520CT.DAP.mapper	PVBusMapper
ARM Cortex-A520CT.DSU	DSU
ARM Cortex-A520CT.DSU.PPU_cluster	PPUv1
ARM Cortex-A520CT.DSU.PPU_cluster.busslave	PVBusSlave
ARM Cortex-A520CT.DSU.PPU_core0	PPUv1
ARM Cortex-A520CT.DSU.PPU_core0.busslave	PVBusSlave
ARM Cortex-A520CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARM Cortex-A520CT.DSU.mpam_busslave	PVBusSlave
ARM Cortex-A520CT.DSU.shared_cache	PVCache
ARM Cortex-A520CT.DSU.shared_cache.upstream[0]	PVBusSlave
ARM Cortex-A520CT.DSU.shared_cache.upstream[1]	PVBusSlave
ARM Cortex-A520CT.DSU.shared_cache.upstream[2]	PVBusSlave
ARM Cortex-A520CT.DSU.shared_cache.upstream[3]	PVBusSlave
ARM Cortex-A520CT.DSU.shared_cache.upstream[4]	PVBusSlave
ARM Cortex-A520CT.DSU.utility_slave[0]	PVBusSlave
ARM Cortex-A520CT.MMAP	PVBusLogger
ARM Cortex-A520CT.MMAP.mapper	PVBusMapper
ARM Cortex-A520CT.RAS	PVBusLogger
ARM Cortex-A520CT.RAS.mapper	PVBusMapper
ARM Cortex-A520CT.cpu0	ARM_Cortex-A520

InstanceName	ComponentName
ARMCortexA520CT.cpu0.UTLB	TLB
ARMCortexA520CT.cpu0.debug_rom	debug_rom
ARMCortexA520CT.cpu0.dtlb	TLB
ARMCortexA520CT.cpu0.l1dcache	PVCache
ARMCortexA520CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA520CT.cpu0.l1icache	PVCache
ARMCortexA520CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA520CT.cpu0.l2cache	PVCache
ARMCortexA520CT.cpu0.l2cache.upstream[0]	PVBusSlave
ARMCortexA520CT.cpu0.l2cache.upstream[1]	PVBusSlave
ARMCortexA520CT.ext_bus	PVBusLogger
ARMCortexA520CT.ext_bus.mapper	PVBusMapper
ARMCortexA520CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA520CT.global_debug_rom	debug_rom
ARMCortexA520CT.secondary_debug_rom	debug_rom
ARMCortexA520CT.sve	ScalableVectorExtension

This model has the following MTI trace components:

**Table 3-341: ARMCortexA520CT MTI instances**

InstanceName	ComponentName
ARMCortexA520CT.AMU	PVBusLogger
ARMCortexA520CT.AMU.mapper	PVBusMapper

ARMCortexA520CT.cpu0.l2cache.upstream[0]	PVBusSlave
ARMCortexA520CT.cpu0.l2cache.upstream[1]	PVBusSlave
ARMCortexA520CT.ext_bus	PVBusLogger
ARMCortexA520CT.ext_bus.mapper	PVBusMapper
ARMCortexA520CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

## Ports for ARMCortexA520CT

**Table 3-342: Ports**

Name	Protocol	Type	Description
acp_s[2]	PVBus	Slave	AXI ACP slave port.
AEND0MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	Signal	Slave	CHI defined pins.
broadcastcachemaint	Signal	Slave	ACE defined pins.
broadcastouter	Signal	Slave	ACE defined pins.
broadcastpersist	Signal	Slave	CHI defined pins.
cfgend[14]	Signal	Slave	This signal is for EE bit initialisation.

Name	Protocol	Type	Description
cfgsdisable	Signal	Slave	This signal disables write access to some secure Interrupt Controller registers.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcs_m_pchannel	PChannel	Master	Cluster PCSM signal
cluster_powerdown_out	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the cluster power info
clusterid	Value	Slave	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.
clusterpmuirq	Signal	Master	DynamIQ pmu irq
CNTHPIRQ[14]	Signal	Master	Timer signals to SOC.
CNTHPSIRQ[14]	Signal	Master	Timer signals to SOC
CNTHVIRQ[14]	Signal	Master	Timer signals to SOC.
CNTHVSIRQ[14]	Signal	Master	Timer signals to SOC
CNTPNSIRQ[14]	Signal	Master	Timer signals to SOC.
CNTPSIRQ[14]	Signal	Master	Timer signals to SOC.
cntvalueb	CounterInterface	Slave	Interface to SoC level counter module.
CNTVIRQ[14]	Signal	Master	Timer signals to SOC.
commirq[14]	Signal	Master	Interrupt signal from debug communications channel.
core_clk_in[14]	ClockSignal	Slave	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcs_m_pchannel[14]	PChannel	Master	Core PCSM signals
core_powerdown_out[14]	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the core power info
coreerrirq[14]	Signal	Master	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq[14]	Signal	Master	Fault indicator for a detected 1 or 2 bit ECC error
cryptodisable[14]	Signal	Slave	Disable cryptography extensions after reset.

Name	Protocol	Type	Description
cti[14]	v8EmbeddedCrossTrigger_controlprotocol	Master	Cross trigger matrix port.
ctidbgirq[14]	Signal	Master	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	Signal	Slave	External debug interface.
dbgnopwrdown[14]	Signal	Master	No power-down request.
dbgpwrupreq[14]	Signal	Master	Debug power up request.
defaultMP	Signal	Slave	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	PVBus	Slave	External debug interface.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
fiq[14]	Signal	Slave	This signal drives the CPUs fast-interrupt handling.
gicreset	Signal	Master	An output from PPU that can be used to reset GICCLK domain components
gicv3_redistributor_s[14]	GICv3Comms	Slave	GICv3 AXI-stream port.
irq[14]	Signal	Slave	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	PVBus	Slave	External debug interface.
pmuirq[14]	Signal	Master	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	Signal	Master	PPU cluster interrupt.
ppu_cluster_wakerequest	Signal	Slave	PPU cluster wake request signal.
ppu_core_irq[14]	Signal	Master	PPU core interrupt.
ppu_core_wakerequest[14]	Signal	Slave	PPU core wake request signal.
presetdbg	Signal	Slave	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	PVBus	Master	The core will generate bus requests on this port.
pvbus_periph_m	PVBus	Master	The core can generate peripheral bus request on this port.
rei[14]	Signal	Slave	Per core RAM Error Interrupt.
reset	Signal	Slave	Reset signal to cluster.
rvbaraddr[14]	Value_64	Slave	Reset vector base address.
sci_m	SystemCoherencyInterface	Master	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei[14]	Signal	Slave	Per core System Error physical pins.
spiden	Signal	Slave	External debug interface.

Name	Protocol	Type	Description
ticks[14]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq[14]	Signal	Master	Interrupt signal from the trace buffer unit.
utility_bus_s	PVBus	Slave	Utility bus slave
vcpumntirq[14]	Signal	Master	Interrupt signal for virtual CPU maintenance IRQ.
vfiq[14]	Signal	Slave	Virtualised FIQ.
virq[14]	Signal	Slave	Virtualised IRQ.
virtio_s	PVBus	Slave	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei[14]	Signal	Slave	Per core virtual System Error physical pins.

## Parameters for ARMCortexA520CT

### AEND0\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

### AEND1\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

### AEND2\_DEFAULT

#### Type

int

#### Default value

0x0

**Description**

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

**AEND3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

**ASTART0\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

**ASTART1\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

**ASTART2\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

**ASTART3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

**BROADCASTATOMIC****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

**BROADCASTCACHEMAIN****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

**BROADCASTOUTER****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

**BROADCASTPERSIST****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

**CLUSTER\_ID****Type**

int

**Default value**

0x0

**Description**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled****Type**

int

**Default value**

0x1

**Description**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. Changing this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain CMOs even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required .

**CPUCFR****Type**

int

**Default value**

0x0

**Description**

Value of CPU Configuration Register.

**DBGROMADDR****Type**

int

**Default value**

0x0

**Description**

Initialization value of DBGDRAR register. Bits[55:12] of this register specify the ROM table physical address.

**DBGROMADDRV****Type**

bool

**Default value**

0x0

**Description**

If true, set bits[1:0] of the CP15 DBGDRAR to indicate that the address is valid.

**GICDISABLE****Type**

bool

**Default value**

0x1

**Description**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

**NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores per cluster.

**bus\_type****Type**

int

**Default value**

0x0

**Description**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

**core\_cache\_protection****Type**

int

**Default value**

0x1

**Description**

core\_cache\_protection can change ERROFR, ERROPFGF and ERROPFGCTL fields. Possible values are: -1:Not implemented (by default), 0:Disabled, 1:Enabled.

**core\_complex\_mapping****Type**

string

**Default value**

```
"{\complex0\": { \"cores\": [0, 1], \"l2-cache\" :{\"exists\":1, \"size\":\"16MB\"}}, \"complex1\":  
{ \"cores\": [2, 3], \"l2-cache\" :{\"exists\":1, \"size\":\"16MB\"}}, \"complex2\": { \"cores\": [4,  
5], \"l2-cache\" :{\"exists\":1, \"size\":\"16MB\"}}, \"complex3\": { \"cores\": [6, 7], \"l2-cache  
\" :{\"exists\":1, \"size\":\"16MB\"}}, \"complex4\": { \"cores\": [8, 9], \"l2-cache\" :{\"exists  
\":1, \"size\":\"16MB\"}}, \"complex5\": { \"cores\": [10, 11], \"l2-cache\" :{\"exists\":1, \"size\":  
\"16MB\"}}, \"complex6\": { \"cores\": [12, 13], \"l2-cache\" :{\"exists\":1, \"size\":\"16MB\"}} }
```

**Description**

Defines Complex descriptions for platforms that support several Cores per Complex like Cortex-A510. JSON format: {"complex0": { "cores" : [ 0, 1 ], "l2-cache" :{"exists":1, "size":16MB}}, ... , "complexN": { "cores" : [<core\_list>], "l2-cache" : {"exists":1, "size":16MB}}} where <core\_list> is the list of cores in the complexN. Effective only when the parameter value is not empty.

**core\_power\_on\_by\_default****Type**

bool

**Default value**

0x0

**Description**

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPU which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

**cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**`cpi_mul`****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**`cpuX.CFGEND`****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**`cpuX.CRYPTODISABLE`****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**`cpuX.RVBARADDR`****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**`cpuX.enable_trace_special_hlt_imm16`****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-

read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**cpuX.l2cache-read\_bus\_width\_in\_bytes****Type**

int

**Default value**

0x10

**Description**

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

**cpuX.l2cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-size****Type**

int

**Default value**

0x80000

**Description**

L2 Cache size in bytes.

**cpuX.l2cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-ways****Type**

int

**Default value**

0x8

**Description**

L2 Cache number of ways (sets are implicit from size).

**cpuX.l2cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-write\_bus\_width\_in\_bytes****Type**

int

**Default value**

0x20

**Description**

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

**cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**cpuX.semihosting-T32\_HLT****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

**`dcache-miss_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**`dcache-prefetch_enabled`****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

**`dcache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**`dcache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**`dcache-size`****Type**

int

**Default value**

0x8000

**Description**

L1 D-Cache size in bytes.

**`dcache-snoop_data_transfer_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

**`dcache-state_modelled`****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**`dcache-write_access_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be

used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**enable\_simulation\_performance\_optimizations****Type**

bool

**Default value**

0x1

**Description**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

**ete.CLAIMTAGS****Type**

int

**Default value**

0x4

**Description**

Number of claim tags.

**ete.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**ete.PIDR\_CM0D****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CM0D value.

**ete.PIDR\_REVAND****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVAND value.

**ete.PIDR\_REVISION****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVISION value.

**ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**ete.RETSTACK****Type**

int

**Default value**

0x3

**Description**

Return stack depth.

**ete.REVISION****Type**

int

**Default value**

0x0

**Description**

TRCIDR1 revision value.

**ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**ete.TRCRSRTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCRSR.TA value for a forcibly traced exception.

**force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**force\_zero\_mpam\_partid\_and\_pmg****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect.  
1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**has\_actlr2****Type**

bool

**Default value**

0x1

**Description**

If true ACLTR2 exists and ACTLR2(NS) is aliased to ACTLR\_EL1[63:32].

**has\_dot\_product****Type**

int

**Default value**

0x2

**Description**

Possible values of this parameter are: - 1, feature not implemented. - 2, feature is implemented.

**has\_ete****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**has\_peripheral\_port****Type**

bool

**Default value**

0x0

**Description**

If true, an additional AXI peripheral port is configured.

**icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

**icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state\_modelled=true.

**icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

**icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state\_modelled=true.

**icache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. icache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state\_modelled=true.

**icache-size****Type**

int

**Default value**

0x8000

**Description**

L1 I-Cache size in bytes.

**icache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**invalidate\_code\_cache\_on\_icache\_cmo****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE.  
Note: Enabling this parameter will reduce simulation performance.

**l3cache-has\_mpam****Type**

bool

**Default value**

0x1

**Description**

L3 Cache has MPAM support.

**l3cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**l3cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks.  
This is only used when dcache-state\_modelled=true.

**l3cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**l3cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size `l3cache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**l3cache-read\_bus\_width\_in\_bytes****Type**

int

**Default value**

0x10

**Description**

L3 Cache read bus width in bytes used to calculate per-access timing annotations.

**l3cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l3cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**l3cache-size****Type**

int

**Default value**

0x80000

**Description**

L3 Cache size in bytes.

**l3cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**l3cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**l3cache-ways****Type**

int

**Default value**

0x10

**Description**

L3 Cache number of ways (sets are implicit from size).

**l3cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**l3cache-write\_bus\_width\_in\_bytes****Type**

int

**Default value**

0x10

**Description**

L3 Cache write bus width in bytes used to calculate per-access timing annotations.

**l3cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**memory\_tagging\_support\_level****Type**

int

**Default value**

0x3

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

**mpmm\_accumulator\_multiplier****Type**

int

**Default value**

0x1

**Description**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator. A value of n means the accumulator will use (n \* accumulator value) to calculate the mpmm threshold (MPMM). This is provided as a fast model workaround to handle cases where execution of quantum in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

**num\_acp****Type**

int

**Default value**

0x0

**Description**

Number of ACP ports.

**num\_nodes****Type**

int

**Default value**

0x1

**Description**

Number of transport nodes. Zero implies direct-connect configuration.

**pmu-num\_counters****Type**

int

**Default value**

0x6

**Description**

Number of PMU counters implemented.

**ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**ras\_extra\_configurations****Type**

string

**Default value**

```
"[ { \"Index\": 1, \"ERXMISC0_mask\": 0xFFFFc0003fc3, \"ERXMISC1_mask\":  
0x03F870003FF30f07, \"ERXPFGCTL_reset\": 0x1000 }, { \"Index\": 2, \"ERXMISC0_mask  
\": 0xFFFFe007ffc0, \"ERXMISC0_reset\": 0x2, \"ERXSTATUS_IERR_mask\": 0x300 ,  
\"ERXMISC1_mask\": 0x0FF8700ffff31f0f, \"ERXPFGCTL_reset\": 0x1000 } ]"
```

**Description**

Miscellaneous configurations for error records. An array of JSON objects. Note for ERXCTLR\_EL1 register it only allows to define the mask value for the IMPDEF fields, ie bits [63:32] and bit 1, but its reset value applies on all fields. Note for ERXMISCN masks - these are 64 bit masks covering the 64 bit registers ERXMISCN\_EL1. E.g. [{"Index": 0, "ERXMISCO\_mask": 0x0, "ERXMISCO\_reset": 0x0, "ERXMISC1\_mask": 0x0, "ERXMISC1\_reset": 0x0, "ERXMISC2\_mask": 0x0, "ERXMISC2\_reset": 0x0, "ERXMISC3\_mask": 0x0, "ERXMISC3\_reset": 0x0, "ERXCTLR\_EL1\_mask": 0x0, "ERXCTLR\_EL1\_reset": 0x0}, {"Index": 1, "ERXMISCO\_mask": 0x0, "ERXMISCO\_reset": 0x0, "ERXSTATUS\_IERR\_mask": 0x300}].

**ras\_pfg\_clock\_mhz****Type**

int

**Default value**

0xc

**Description**

RAS Pseudo-Fault generation clock rate in MHz.

**revision\_number****Type**

int

**Default value**

0x0

**Description**

Revision number of TRM implemented by the model. Changing the value can change the model behaviour. Visible as the Variant field in MIDR/MIDR\_EL1. Corresponds to the revision number X in rXpY.

**tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**`treat_PAC_as_NOP`**

**Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter. Treat Pointer Authentication as NOP. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are NOP. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

**`walk_cache_latency`**

**Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

3.5.41 ARMCortexA520CT\_CortexA720CT

ARMCortexA520CT\_CortexA720CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-343: IP revisions support

Revision	Quality level
CortexA520 r0p1	Full support
CortexA720 r0p1	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

About ARMCortexA520CT\_CortexA720CT

The number of cores in each subcluster is configurable using the following parameters:

**`subcluster0.NUM_CORES`**

Possible values are 1-13 (ARMCortexA520CT).

**`subcluster1.NUM_CORES`**

Possible values are 1-13 (ARMCortexA720CT).

The total number of cores in the cluster cannot exceed 14.

Port arrays are expanded to the width needed for the maximum number of cores in each subcluster. Use the following port array indexes:

- `<port_name>[0-12]` for cores in `subcluster0`.
- `<port_name>[13-25]` for cores in `subcluster1`.

All instances in the Master cross trigger matrix port array, `cti[26]` must be connected, regardless of the `NUM_CORES` value used.

Core-specific parameters have the following prefixes:

- `subcluster0.cpu0` to `subcluster0.cpu12` identify cores in `subcluster0`.
- `subcluster1.cpu0` to `subcluster1.cpu12` identify cores in `subcluster1`.

For information about the cores in this model, see:

- [ARMCortexA520CT](#).
- [ARMCortexA720CT](#).

## Iris and MTI instances for ARMCortexA520CT\_CortexA720CT

This model has the following Iris instances:

## Ports for ARMCortexA520CT\_CortexA720CT

**Table 3-346: Ports**

Name	Protocol	Type	Description
acp_s[2]	PVBus	Slave	AXI ACP slave port.
AEND0MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	Signal	Slave	CHI defined pins.

Name	Protocol	Type	Description
broadcastcachemaint	Signal	Slave	ACE defined pins.
broadcastouter	Signal	Slave	ACE defined pins.
broadcastpersist	Signal	Slave	CHI defined pins.
cfgend[26]	Signal	Slave	This signal is for EE bit initialisation.
cfgsdisable	Signal	Slave	This signal disables write access to some secure Interrupt Controller registers.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcs_m_pchannel	PChannel	Master	Cluster PCSM signal
cluster_powerdown_out	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the cluster power info
clusterid	Value	Slave	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.
clusterpmuirq	Signal	Master	DynamlQ pmu irq
CNTHPIRQ[26]	Signal	Master	Timer signals to SOC.
CNTHPSIRQ[26]	Signal	Master	Timer signals to SOC
CNTHVIRQ[26]	Signal	Master	Timer signals to SOC.
CNTHVSIRQ[26]	Signal	Master	Timer signals to SOC
CNTPNSIRQ[26]	Signal	Master	Timer signals to SOC.
CNTPSIRQ[26]	Signal	Master	Timer signals to SOC.
cntvalueb	CounterInterface	Slave	Interface to SoC level counter module.
CNTVIRQ[26]	Signal	Master	Timer signals to SOC.
commirq[26]	Signal	Master	Interrupt signal from debug communications channel.
core_clk_in[26]	ClockSignal	Slave	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcs_m_pchannel[26]	PChannel	Master	Core PCSM signals
core_powerdown_out[26]	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the core power info

Name	Protocol	Type	Description
coreerrirq[26]	Signal	Master	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq[26]	Signal	Master	Fault indicator for a detected 1 or 2 bit ECC error
cryptodisable[26]	Signal	Slave	Disable cryptography extensions after reset.
cti[26]	v8EmbeddedCrossTrigger_controlprotocol	Master	Cross trigger matrix port.
ctidbgirq[26]	Signal	Master	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	Signal	Slave	External debug interface.
dbgnopwrdown[26]	Signal	Master	No power-down request.
dbgpwrupreq[26]	Signal	Master	Debug power up request.
defaultMP	Signal	Slave	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	PVBus	Slave	External debug interface.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
fiq[26]	Signal	Slave	This signal drives the CPUs fast-interrupt handling.
gicreset	Signal	Master	An output from PPU that can be used to reset GICCLK domain components
gicv3_redistributor_s[26]	GICv3Comms	Slave	GICv3 AXI-stream port.
irq[26]	Signal	Slave	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	PVBus	Slave	External debug interface.
pmbirq[26]	Signal	Master	Interrupt signal from the statistical profiling unit.
pmuirq[26]	Signal	Master	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	Signal	Master	PPU cluster interrupt.
ppu_cluster_wakerequest	Signal	Slave	PPU cluster wake request signal.
ppu_core_irq[26]	Signal	Master	PPU core interrupt.
ppu_core_wakerequest[26]	Signal	Slave	PPU core wake request signal.
presetdbg	Signal	Slave	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	PVBus	Master	The core will generate bus requests on this port.
pvbus_periph_m	PVBus	Master	The core can generate peripheral bus request on this port.
rei[26]	Signal	Slave	Per core RAM Error Interrupt.

Name	Protocol	Type	Description
reset	Signal	Slave	Reset signal to cluster.
rvbaraddr[26]	Value_64	Slave	Reset vector base address.
sci_m	SystemCoherencyInterface	Master	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei[26]	Signal	Slave	Per core System Error physical pins.
spiden	Signal	Slave	External debug interface.
ticks[26]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq[26]	Signal	Master	Interrupt signal from the trace buffer unit.
utility_bus_s	PVBus	Slave	Utility bus slave
vcpumntirq[26]	Signal	Master	Interrupt signal for virtual CPU maintenance IRQ.
vfiq[26]	Signal	Slave	Virtualised FIQ.
virq[26]	Signal	Slave	Virtualised IRQ.
virtio_s	PVBus	Slave	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei[26]	Signal	Slave	Per core virtual System Error physical pins.

## Parameters for ARM CortexA520CT\_CortexA720CT

### AEND0\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

### AEND1\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

**AEND2\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

**AEND3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

**ASTART0\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

**ASTART1\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

**ASTART2\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

**ASTART3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

**BROADCASTATOMIC****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

**BROADCASTCACHEMAINT****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

**BROADCASTOUTER****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

**BROADCASTPERSIST****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

**CLUSTER\_ID****Type**

int

**Default value**

0x0

**Description**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled****Type**

int

**Default value**

0x1

**Description**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. Changing this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain CMOs even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required .

**DBGROMADDR****Type**

int

**Default value**

0x0

**Description**

Initialization value of DBGDRAR register. Bits[55:12] of this register specify the ROM table physical address.

**DBGROMADDRV****Type**

bool

**Default value**

0x0

**Description**

If true, set bits[1:0] of the CP15 DBGDRAR to indicate that the address is valid.

**GICDISABLE****Type**

bool

**Default value**

0x1

**Description**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

**bus\_type****Type**

int

**Default value**

0x0

**Description**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

**core\_complex\_mapping****Type**

string

**Default value**

"{\\"complex0\\": { \\"cores\\": [0, 1], \\"l2-cache\\": {\\"exists\\":1, \\"size\\":\\"16MB\\"}}, \\"complex1\\": { \\"cores\\": [2, 3], \\"l2-cache\\": {\\"exists\\":1, \\"size\\":\\"16MB\\"}}, \\"complex2\\": { \\"cores\\": [4,

```
5], \"l2-cache\": { \"exists\": 1, \"size\": \"16MB\" }, \"complex3\": { \"cores\": [6, 7], \"l2-cache\": { \"exists\": 1, \"size\": \"16MB\" }, \"complex4\": { \"cores\": [8, 9], \"l2-cache\": { \"exists\": 1, \"size\": \"16MB\" }, \"complex5\": { \"cores\": [10, 11], \"l2-cache\": { \"exists\": 1, \"size\": \"16MB\" }, \"complex6\": { \"cores\": [12, 13], \"l2-cache\": { \"exists\": 1, \"size\": \"16MB\" } }
```

### Description

Defines Complex descriptions for platforms that support several Cores per Complex like Cortex-A510. JSON format: {\"complex0\": { \"cores\" : [ 0, 1 ], \"l2-cache\" : { \"exists\": 1, \"size\": 16MB }, ... , \"complexN\": { \"cores\" : [<core\_list>], \"l2-cache\" : { \"exists\": 1, \"size\": 16MB } } } where <core\_list> is the list of cores in the complexN. Effective only when the parameter value is not empty.

### core\_power\_on\_by\_default

#### Type

bool

#### Default value

0x0

#### Description

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPU which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

### dcache-state\_modelled

#### Type

bool

#### Default value

0x0

#### Description

Set whether D-cache has stateful implementation.

### enable\_simulation\_performance\_optimizations

#### Type

bool

#### Default value

0x1

#### Description

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

**has\_peripheral\_port****Type**

bool

**Default value**

0x0

**Description**

If true, an additional AXI peripheral port is configured.

**icache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**l3cache-has\_mpam****Type**

bool

**Default value**

0x0

**Description**

L3 Cache has MPAM support.

**l3cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**l3cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**l3cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**l3cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**l3cache-read\_bus\_width\_in\_bytes****Type**

int

**Default value**

0x10

**Description**

L3 Cache read bus width in bytes used to calculate per-access timing annotations.

**l3cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. l3cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied.

This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**l3cache-size****Type**

int

**Default value**

0x80000

**Description**

L3 Cache size in bytes.

**l3cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

**l3cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

**l3cache-ways****Type**

int

**Default value**

0x10

**Description**

L3 Cache number of ways (sets are implicit from size).

**l3cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**l3cache-write\_bus\_width\_in\_bytes****Type**

int

**Default value**

0x10

**Description**

L3 Cache write bus width in bytes used to calculate per-access timing annotations.

**l3cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**mpmm\_accumulator\_multiplier****Type**

int

**Default value**

0x1

**Description**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator. A value of n means the accumulator will use (n \* accumulator value) to calculate the mpmm threshold (MPMM). This is provided as a fast model workaround to handle cases where execution of quantum in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

**num\_nodes****Type**

int

**Default value**

0x1

**Description**

Number of transport nodes. Zero implies direct-connect configuration.

**revision\_number****Type**

int

**Default value**

0x0

**Description**

Revision number of TRM implemented by the model. Changing the value can change the model behaviour. Visible as the Variant field in MIDR/MIDR\_EL1. Corresponds to the revision number X in rXpY.

**subcluster0.CPUCFR****Type**

int

**Default value**

0x0

**Description**

Value of CPU Configuration Register.

**subcluster0.NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores in the subcluster. Total number of cores in cluster may not exceed 14.

**subcluster0.core\_cache\_protection****Type**

int

**Default value**

0x1

**Description**

core\_cache\_protection can change ERROFR, ERROPFGF and ERROPFGCTL fields. Possible values are: -1:Not implemented (by default), 0:Disabled, 1:Enabled.

**subcluster0.cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**subcluster0.cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**subcluster0.cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**subcluster0.cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**subcluster0.cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**subcluster0.cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**subcluster0.cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**subcluster0.cpuX.l2cache-read\_bus\_width\_in\_bytes****Type**

int

**Default value**

0x10

**Description**

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

**subcluster0.cpuX.l2cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**subcluster0.cpuX.l2cache-size****Type**

int

**Default value**

0x80000

**Description**

L2 Cache size in bytes.

**subcluster0.cpuX.l2cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

**subcluster0.cpuX.l2cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

**subcluster0.cpuX.l2cache-ways****Type**

int

**Default value**

0x8

**Description**

L2 Cache number of ways (sets are implicit from size).

**subcluster0.cpuX.l2cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

**subcluster0.cpuX.l2cache-write\_bus\_width\_in\_bytes****Type**

int

**Default value**

0x20

**Description**

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

**subcluster0.cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**subcluster0.cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**subcluster0.cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**subcluster0.cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**subcluster0.cpuX.semihosting-ARM\_SVC**

**Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**subcluster0.cpuX.semihosting-T32\_HLT**

**Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**subcluster0.cpuX.semihosting-Thumb\_SVC**

**Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**subcluster0.cpuX.semihosting-cmd\_line**

**Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**subcluster0.cpuX.semihosting-cwd**

**Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**subcluster0.cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**subcluster0.cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**subcluster0.cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**subcluster0.cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**subcluster0.cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**subcluster0.cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**subcluster0.cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**subcluster0.cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**subcluster0.dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**subcluster0.dcache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-size****Type**

int

**Default value**

0x8000

**Description**

L1 D-Cache size in bytes.

**subcluster0.dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster0.ete.CLAIMTAGS****Type**

int

**Default value**

0x4

**Description**

Number of claim tags.

**subcluster0.ete.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**subcluster0.ete.PIDR\_CM0D****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CM0D value.

**subcluster0.ete.PIDR\_REVAND****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVAND value.

**subcluster0.ete.PIDR\_REVISION****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVISION value.

**subcluster0.ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**subcluster0.ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**subcluster0.ete.RETSTACK****Type**

int

**Default value**

0x3

**Description**

Return stack depth.

**subcluster0.ete.REVISION****Type**

int

**Default value**

0x0

**Description**

TRCIDR1 revision value.

**subcluster0.ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**subcluster0.ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**subcluster0.ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**subcluster0.ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**subcluster0.ete.TRCRSRTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCRSR.TA value for a forcibly traced exception.

**subcluster0.force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**subcluster0.force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**subcluster0.force\_zero\_mpam\_partid\_and\_pmg****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**subcluster0.has\_actlr2****Type**

bool

**Default value**

0x1

**Description**

If true ACLTR2 exists and ACTLR2(NS) is aliased to ACTLR\_EL1[63:32].

**subcluster0.has\_dot\_product****Type**

int

**Default value**

0x2

**Description**

Possible values of this parameter are: - 1, feature not implemented. - 2, feature is implemented.

**subcluster0.has\_ete****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**subcluster0.icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**subcluster0.icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

**subcluster0.icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

**subcluster0.icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

**subcluster0.icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

**subcluster0.icache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

**subcluster0.icache-size****Type**

int

**Default value**

0x8000

**Description**

L1 I-Cache size in bytes.

**subcluster0.invalidate\_code\_cache\_on\_icache\_cmo****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE.  
Note: Enabling this parameter will reduce simulation performance.

**subcluster0.memory\_tagging\_support\_level****Type**

int

**Default value**

0x3

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

**subcluster0.pmu-num\_counters****Type**

int

**Default value**

0x6

**Description**

Number of PMU counters implemented.

**subcluster0.ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster0.ras\_extra\_configurations****Type**

string

**Default value**

```
"[ { \"Index\": 1, \"ERXMISCO_mask\": 0xFFFFc0003fc3, \"ERXMISC1_mask\":  
0x03F870003FF30f07, \"ERXPFGCTL_reset\": 0x1000 }, { \"Index\": 2, \"ERXMISCO_mask  
\": 0xFFFFe007ffc0, \"ERXMISCO_reset\": 0x2, \"ERXSTATUS_IERR_mask\": 0x300 ,  
\"ERXMISC1_mask\": 0x0FF8700ffff31f0f, \"ERXPFGCTL_reset\": 0x1000 } ]"
```

**Description**

Miscellaneous configurations for error records. An array of JSON objects. Note for ERXCTLR\_EL1 register it only allows to define the mask value for the IMPDEF fields, ie bits [63:32] and bit 1, but its reset value applies on all fields. Note for ERXMISCn masks - these are 64 bit masks covering the 64 bit registers ERXMISCn\_EL1. E.g. [{"Index": 0, "ERXMISCO\_mask": 0x0, "ERXMISCO\_reset": 0x0, "ERXMISC1\_mask": 0x0, "ERXMISC1\_reset": 0x0, "ERXMISC2\_mask": 0x0, "ERXMISC2\_reset": 0x0, "ERXMISC3\_mask": 0x0, "ERXMISC3\_reset": 0x0, "ERXCTLR\_EL1\_mask": 0x0, "ERXCTLR\_EL1\_reset": 0x0}, {"Index": 1, "ERXMISCO\_mask": 0x0, "ERXMISCO\_reset": 0x0, "ERXSTATUS\_IERR\_mask": 0x300}].

**subcluster0.ras\_pfg\_clock\_mhz****Type**

int

**Default value**

0xc

**Description**

RAS Pseudo-Fault generation clock rate in MHz.

**subcluster0.revision\_number****Type**

int

**Default value**

0x0

**Description**

Revision number of TRM implemented by the model. Changing the value can change the model behaviour. Visible as the Variant field in MIDR/MIDR\_EL1. Corresponds to the revision number X in rXpY.

**subcluster0.tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster0.tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**subcluster0.treat\_PAC\_as\_NOP****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter. Treat Pointer Authentication as NOP. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are NOP. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

**subcluster0.walk\_cache\_latency****Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster1.CPUCFR****Type**

int

**Default value**

0x0

**Description**

Value of CPU Configuration Register.

**subcluster1.NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores in the subcluster. Total number of cores in cluster may not exceed 14.

**subcluster1.cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**subcluster1.cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**subcluster1.cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**subcluster1.cpuX.CFGTE****Type**

bool

**Default value**

0x0

**Description**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

**subcluster1.cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**subcluster1.cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**subcluster1.cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**subcluster1.cpuX.force-fpsid****Type**

bool

**Default value**

0x1

**Description**

Override the FPSID value.

**subcluster1.cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

**`subcluster1.cpuX.l2cache-maintenance_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

**`subcluster1.cpuX.l2cache-miss_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**`subcluster1.cpuX.l2cache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**`subcluster1.cpuX.l2cache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**subcluster1.cpuX.l2cache-size****Type**

int

**Default value**

0x80000

**Description**

L2 Cache size in bytes.

**subcluster1.cpuX.l2cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

**subcluster1.cpuX.l2cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

**subcluster1.cpuX.l2cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

**subcluster1.cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster1.cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**subcluster1.cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**subcluster1.cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**subcluster1.cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**subcluster1.cpuX.semihosting-ARM\_SVC**

**Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**subcluster1.cpuX.semihosting-T32\_HLT**

**Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**subcluster1.cpuX.semihosting-Thumb\_SVC**

**Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**subcluster1.cpuX.semihosting-cmd\_line**

**Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**subcluster1.cpuX.semihosting-cwd**

**Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**subcluster1.cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**subcluster1.cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**subcluster1.cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**subcluster1.cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**subcluster1.cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**subcluster1.cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**subcluster1.cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**subcluster1.cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**subcluster1.dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**subcluster1.dcache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-size****Type**

int

**Default value**

0x8000

**Description**

L1 D-Cache size in bytes.

**subcluster1.dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster1.ete.CLAIMTAGS****Type**

int

**Default value**

0x4

**Description**

Number of claim tags.

**subcluster1.ete.ETE\_REVISION****Type**

int

**Default value**

0x1

**Description**

ETE revision: 0=ETEv1.0, 1=ETEv1.1, 2=ETEv1.2, 3=ETEv1.3.

**subcluster1.ete.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**subcluster1.ete.NumberOfRSPairs****Type**

int

**Default value**

0x8

**Description**

Number of resource selector pairs.

**subcluster1.etc.PIDR\_CM0D**

**Type**

int

**Default value**

0x0

**Description**

TRCPIDR CM0D value.

**subcluster1.etc.PIDR\_REVAND**

**Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVAND value.

**subcluster1.etc.PIDR\_REVISION**

**Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVISION value.

**subcluster1.etc.Q\_CADENCE**

**Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**subcluster1.etc.RES0\_STATEFUL**

**Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**subcluster1.ete.RETSTACK****Type**

int

**Default value**

0x3

**Description**

Return stack depth.

**subcluster1.ete.REVISION****Type**

int

**Default value**

0x0

**Description**

TRCIDR1 revision value.

**subcluster1.ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**subcluster1.ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**subcluster1.ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**subcluster1.etc.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**subcluster1.etc.TRCRSRTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCRSR.TA value for a forcibly traced exception.

**subcluster1.etc.TSMARK****Type**

bool

**Default value**

0x1

**Description**

Whether timestamp markers are supported.

**subcluster1.force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**subcluster1.force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**subcluster1.force\_zero\_mpam\_partid\_and\_pmg****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**subcluster1.has\_enhanced\_pan****Type**

int

**Default value**

0x2

**Description**

Implements Armv8.7 Enhanced PAN feature (FEAT\_PAN3) Possible values of this parameter are: - 1, feature is implemented if ARMv8.7 is enabled. - 2, feature is implemented.

**subcluster1.has\_ete****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**subcluster1.has\_large\_va****Type**

int

**Default value**

0x0

**Description**

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT\_LVA). Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.2 is enabled. - 2, feature is implemented.

**subcluster1.has\_statistical\_profiling****Type**

bool

**Default value**

0x0

**Description**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

**subcluster1.icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**subcluster1.icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

**subcluster1.icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

**subcluster1.icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

**subcluster1.icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

**subcluster1.icache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

**subcluster1.icache-size****Type**

int

**Default value**

0x8000

**Description**

L1 I-Cache size in bytes.

**subcluster1.instruction\_tlb\_size****Type**

int

**Default value**

0x0

**Description**

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

**subcluster1.invalidate\_code\_cache\_on\_icache\_cmo****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE.  
Note: Enabling this parameter will reduce simulation performance.

**subcluster1.memory\_tagging\_support\_level****Type**

int

**Default value**

0x3

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

**subcluster1.pmu-num\_counters****Type**

int

**Default value**

0x6

**Description**

Number of PMU counters implemented.

**subcluster1.ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster1.stage12\_tlb\_size****Type**

int

**Default value**

0x80

**Description**

Number of stage1+2 tlb entries.

**subcluster1.tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster1.tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**subcluster1.treat\_PAC\_as\_NOP****Type**

bool

**Default value**

0x0

Description

Non-architecture parameter. Treat Pointer Authentication as NOP. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are NOP. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

subcluster1.walk\_cache\_latency

Type

int

Default value

0x0

Description

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

3.5.42 ARMCortexA520CT\_CortexA720CT\_CortexX4CT

ARMCortexA520CT\_CortexA720CT\_CortexX4CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-347: IP revisions support

Revision	Quality level
CortexA520 r0p1	Full support
CortexA720 r0p1	Full support
CortexX4 r0p0	Preliminary support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

About ARMCortexA520CT\_CortexA720CT\_CortexX4CT

The number of cores in each subcluster is configurable using the following parameters:

subcluster0.NUM\_CORES

Possible values are 1-12 (ARMCortexA520CT).

subcluster1.NUM\_CORES

Possible values are 1-12 (ARMCortexA720CT).

subcluster2.NUM\_CORES

Possible values are 1-12 (ARMCortexX4CT).

The total number of cores in the cluster cannot exceed 14.

Port arrays are expanded to the width needed for the maximum number of cores in each subcluster. Use the following port array indexes:

- <port\_name>[0-11] for cores in subcluster0.

- `<port_name>`[12-23] for cores in `subcluster1`.
- `<port_name>`[24-35] for cores in `subcluster2`.

All instances in the Master cross trigger matrix port array, `cti[36]` must be connected, regardless of the `NUM_CORES` value used.

Core-specific parameters have the following prefixes:

- `subcluster0.cpu0` to `subcluster0.cpu11` identify cores in `subcluster0`.
- `subcluster1.cpu0` to `subcluster1.cpu11` identify cores in `subcluster1`.
- `subcluster2.cpu0` to `subcluster2.cpu11` identify cores in `subcluster2`.

For information about the cores in this model, see:

- [ARMCortexA520CT](#).
- [ARMCortexA720CT](#).
- [ARMCortexX4CT](#).

### Iris and MTI instances for ARMCortexA520CT\_CortexA720CT\_CortexX4CT

This model has the following Iris instances:

**Table 3-348: ARMCortexA520CT\_CortexA720CT\_CortexX4CT Iris instances**

InstanceName	ComponentName
ARMCortexA520CT_CortexA720CT_CortexX4CT	Cluster_ARM_CortexA520_CortexA720_CortexX4_Heterogeneous
ARMCortexA520CT_CortexA720CT_CortexX4CT.AMU	PVBusLogger

## Ports for ARMCortexA520CT\_CortexA720CT\_CortexX4CT

Table 3-350: Ports

Name	Protocol	Type	Description
acp_s[2]	PVBus	Slave	AXI ACP slave port.
AEND0MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	Signal	Slave	CHI defined pins.
broadcastcachemaint	Signal	Slave	ACE defined pins.
broadcastouter	Signal	Slave	ACE defined pins.
broadcastpersist	Signal	Slave	CHI defined pins.
cfgend[36]	Signal	Slave	This signal is for EE bit initialisation.
cfgsdisable	Signal	Slave	This signal disables write access to some secure Interrupt Controller registers.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsn_pchannel	PChannel	Master	Cluster PCSM signal
cluster_powerdown_out	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the cluster power info

Name	Protocol	Type	Description
clusterid	Value	Slave	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.
clusterpmuirq	Signal	Master	DynamlQ pmu irq
CNTHPIRQ[36]	Signal	Master	Timer signals to SOC.
CNTHPSIRQ[36]	Signal	Master	Timer signals to SOC
CNTHVIRQ[36]	Signal	Master	Timer signals to SOC.
CNTHVSIRQ[36]	Signal	Master	Timer signals to SOC
CNTPNSIRQ[36]	Signal	Master	Timer signals to SOC.
CNTPSIRQ[36]	Signal	Master	Timer signals to SOC.
cntvalueb	CounterInterface	Slave	Interface to SoC level counter module.
CNTVIRQ[36]	Signal	Master	Timer signals to SOC.
commirq[36]	Signal	Master	Interrupt signal from debug communications channel.
core_clk_in[36]	ClockSignal	Slave	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsmpchannel[36]	PChannel	Master	Core PCSM signals
core_powerdown_out[36]	Signal	Master	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
coreerrirq[36]	Signal	Master	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq[36]	Signal	Master	Fault indicator for a detected 1 or 2 bit ECC error
cryptodisable[36]	Signal	Slave	Disable cryptography extensions after reset.
cti[36]	v8EmbeddedCrossTrigger_controlprotocol	Master	Cross trigger matrix port.
ctidbgirq[36]	Signal	Master	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	Signal	Slave	External debug interface.
dbgnopwrdown[36]	Signal	Master	No power-down request.
dbgpwrupreq[36]	Signal	Master	Debug power up request.
defaultMP	Signal	Slave	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.

Name	Protocol	Type	Description
dev_debug_s	PVBus	Slave	External debug interface.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
fiq[36]	Signal	Slave	This signal drives the CPUs fast-interrupt handling.
gicreset	Signal	Master	An output from PPU that can be used to reset GICCLK domain components
gicv3_redistributor_s[36]	GICv3Comms	Slave	GICv3 AXI-stream port.
irq[36]	Signal	Slave	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	PVBus	Slave	External debug interface.
pmbirq[36]	Signal	Master	Interrupt signal from the statistical profiling unit.
pmuirq[36]	Signal	Master	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	Signal	Master	PPU cluster interrupt.
ppu_cluster_wakerequest	Signal	Slave	PPU cluster wake request signal.
ppu_core_irq[36]	Signal	Master	PPU core interrupt.
ppu_core_wakerequest[36]	Signal	Slave	PPU core wake request signal.
presetdbg	Signal	Slave	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	PVBus	Master	The core will generate bus requests on this port.
pvbus_periph_m	PVBus	Master	The core can generate peripheral bus request on this port.
rei[36]	Signal	Slave	Per core RAM Error Interrupt.
reset	Signal	Slave	Reset signal to cluster.
rvbaraddr[36]	Value_64	Slave	Reset vector base address.
sci_m	SystemCoherencyInterface	Master	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei[36]	Signal	Slave	Per core System Error physical pins.
spiden	Signal	Slave	External debug interface.
ticks[36]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq[36]	Signal	Master	Interrupt signal from the trace buffer unit.
utility_bus_s	PVBus	Slave	Utility bus slave
vcpumntirq[36]	Signal	Master	Interrupt signal for virtual CPU maintenance IRQ.

Name	Protocol	Type	Description
vfiq[36]	Signal	Slave	Virtualised FIQ.
virq[36]	Signal	Slave	Virtualised IRQ.
virtio_s	PVBus	Slave	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei[36]	Signal	Slave	Per core virtual System Error physical pins.

## Parameters for ARM CortexA520CT\_CortexA720CT\_CortexX4CT

### AEND0\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

### AEND1\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

### AEND2\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

### AEND3\_DEFAULT

#### Type

int

**Default value**

0x0

**Description**

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

**ASTART0\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

**ASTART1\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

**ASTART2\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

**ASTART3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

**BROADCASTATOMIC****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

**BROADCASTCACHEMAINT****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

**BROADCASTOUTER****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

**BROADCASTPERSIST****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

**CLUSTER\_ID****Type**

int

**Default value**

0x0

**Description**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled****Type**

int

**Default value**

0x1

**Description**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. Changing this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain CMOs even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required .

**DBGROMADDR****Type**

int

**Default value**

0x0

**Description**

Initialization value of DBGDRAR register. Bits[55:12] of this register specify the ROM table physical address.

**DBGROMADDRV****Type**

bool

**Default value**

0x0

**Description**

If true, set bits[1:0] of the CP15 DBGDRAR to indicate that the address is valid.

**GICDISABLE****Type**

bool

**Default value**

0x1

**Description**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

**bus\_type****Type**

int

**Default value**

0x0

**Description**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

**core\_complex\_mapping****Type**

string

**Default value**

```
"{"complex0": { "cores": [0, 1], "l2-cache" : {"exists":1, "size":"16MB"}}, "complex1":
{ "cores": [2, 3], "l2-cache" : {"exists":1, "size":"16MB"}}, "complex2": { "cores": [4,
5], "l2-cache" : {"exists":1, "size":"16MB"}}, "complex3": { "cores": [6, 7], "l2-cache
" : {"exists":1, "size":"16MB"}}, "complex4": { "cores": [8, 9], "l2-cache" : {"exists
":1, "size":"16MB"}}, "complex5": { "cores": [10, 11], "l2-cache" : {"exists":1, "size":
"16MB"}}, "complex6": { "cores": [12, 13], "l2-cache" : {"exists":1, "size":"16MB"}}}"
```

**Description**

Defines Complex descriptions for platforms that support several Cores per Complex like Cortex-A510. JSON format: {"complex0": { "cores" : [ 0, 1 ], "l2-cache" : {"exists":1, "size":16MB}}, ... , "complexN": { "cores" : [<core\_list>], "l2-cache" : {"exists":1, "size":16MB}}} where <core\_list> is the list of cores in the complexN. Effective only when the parameter value is not empty.

**core\_power\_on\_by\_default****Type**

bool

**Default value**

0x0

**Description**

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPU which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**enable\_simulation\_performance\_optimizations****Type**

bool

**Default value**

0x1

**Description**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

**has\_peripheral\_port****Type**

bool

**Default value**

0x0

**Description**

If true, an additional AXI peripheral port is configured.

**icache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**l3cache-has\_mpam****Type**

bool

**Default value**

0x1

**Description**

L3 Cache has MPAM support.

**l3cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**l3cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**l3cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**l3cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**l3cache-read\_bus\_width\_in\_bytes****Type**

int

**Default value**

0x10

**Description**

L3 Cache read bus width in bytes used to calculate per-access timing annotations.

**l3cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. l3cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**l3cache-size****Type**

int

**Default value**

0x80000

**Description**

L3 Cache size in bytes.

**l3cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

**l3cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

**l3cache-ways****Type**

int

**Default value**

0x10

**Description**

L3 Cache number of ways (sets are implicit from size).

**l3cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size `l3cache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

**l3cache-write\_bus\_width\_in\_bytes****Type**

int

**Default value**

0x10

**Description**

L3 Cache write bus width in bytes used to calculate per-access timing annotations.

**l3cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**mpmm\_accumulator\_multiplier****Type**

int

**Default value**

0x1

**Description**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator. A value of n means the accumulator will use (n \* accumulator value) to calculate the mpmm threshold (MPMM). This is provided as a fast model workaround to handle cases where execution of quantum in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

**num\_nodes****Type**

int

**Default value**

0x1

**Description**

Number of transport nodes. Zero implies direct-connect configuration.

**revision\_number****Type**

int

**Default value**

0x0

**Description**

Revision number of TRM implemented by the model. Changing the value can change the model behaviour. Visible as the Variant field in MIDR/MIDR\_EL1. Corresponds to the revision number X in rXpY.

**subcluster0.CPUCFR****Type**

int

**Default value**

0x0

**Description**

Value of CPU Configuration Register.

**subcluster0.NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores in the subcluster. Total number of cores in cluster may not exceed 14.

**subcluster0.core\_cache\_protection****Type**

int

**Default value**

0x1

**Description**

core\_cache\_protection can change ERROFR, ERROPFGF and ERROPFGCTL fields. Possible values are: -1:Not implemented (by default), 0:Disabled, 1:Enabled.

**subcluster0.cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**subcluster0.cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**subcluster0.cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**subcluster0.cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**subcluster0.cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**subcluster0.cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**subcluster0.cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

**`subcluster0.cpuX.l2cache-maintenance_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

**`subcluster0.cpuX.l2cache-miss_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**`subcluster0.cpuX.l2cache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**`subcluster0.cpuX.l2cache-read_bus_width_in_bytes`****Type**

int

**Default value**

0x10

**Description**

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

**subcluster0.cpuX.l2cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.l2cache-size****Type**

int

**Default value**

0x80000

**Description**

L2 Cache size in bytes.

**subcluster0.cpuX.l2cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.l2cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.l2cache-ways****Type**

int

**Default value**

0x8

**Description**

L2 Cache number of ways (sets are implicit from size).

**subcluster0.cpuX.l2cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.l2cache-write\_bus\_width\_in\_bytes****Type**

int

**Default value**

0x20

**Description**

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

**subcluster0.cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**subcluster0.cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**subcluster0.cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**subcluster0.cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**subcluster0.cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**subcluster0.cpuX.semihosting-T32\_HLT****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**subcluster0.cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**subcluster0.cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**subcluster0.cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**subcluster0.cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**subcluster0.cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**subcluster0.cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**subcluster0.cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**subcluster0.cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**subcluster0.cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**subcluster0.cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**subcluster0.cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**subcluster0.dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**`subcluster0.dcache-prefetch_enabled`****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

**`subcluster0.dcache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**`subcluster0.dcache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**`subcluster0.dcache-size`****Type**

int

**Default value**

0x8000

**Description**

L1 D-Cache size in bytes.

**subcluster0.dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster0.etc.CLAIMTAGS****Type**

int

**Default value**

0x4

**Description**

Number of claim tags.

**subcluster0.ete.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**subcluster0.ete.PIDR\_CM0D****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CM0D value.

**subcluster0.ete.PIDR\_REVAND****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVAND value.

**subcluster0.ete.PIDR\_REVISION****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVISION value.

**subcluster0.ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**subcluster0.ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**subcluster0.ete.RETSTACK****Type**

int

**Default value**

0x3

**Description**

Return stack depth.

**subcluster0.ete.REVISION****Type**

int

**Default value**

0x0

**Description**

TRCIDR1 revision value.

**subcluster0.ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**subcluster0.ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**subcluster0.ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**subcluster0.ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**subcluster0.ete.TRCSRTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCSRTA value for a forcibly traced exception.

**subcluster0.force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**subcluster0.force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**subcluster0.force\_zero\_mpam\_partid\_and\_pmg****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**subcluster0.has\_actlr2****Type**

bool

**Default value**

0x1

**Description**

If true ACLTR2 exists and ACTLR2(NS) is aliased to ACTLR\_EL1[63:32].

**subcluster0.has\_dot\_product****Type**

int

**Default value**

0x2

**Description**

Possible values of this parameter are: - 1, feature not implemented. - 2, feature is implemented.

**subcluster0.has\_ete****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**subcluster0.icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**subcluster0.icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

**subcluster0.icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state\_modelled=true.

**subcluster0.icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

**subcluster0.icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

**`subcluster0.icache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

**`subcluster0.icache-size`****Type**

int

**Default value**

0x8000

**Description**

L1 I-Cache size in bytes.

**`subcluster0.invalidate_code_cache_on_icache_cmo`****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

**`subcluster0.memory_tagging_support_level`****Type**

int

**Default value**

0x3

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

**subcluster0.pmu-num\_counters****Type**

int

**Default value**

0x6

**Description**

Number of PMU counters implemented.

**subcluster0.ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster0.ras\_extra\_configurations****Type**

string

**Default value**

```
"[ { \"Index\": 1, \"ERXMISCO_mask\": 0xFFFFc0003fc3, \"ERXMISC1_mask\": 0x03F870003FF30f07, \"ERXPFGCTL_reset\": 0x1000 }, { \"Index\": 2, \"ERXMISCO_mask\": 0xFFFFe007ffc0, \"ERXMISCO_reset\": 0x2, \"ERXSTATUS_IERR_mask\": 0x300, \"ERXMISC1_mask\": 0x0FF8700ffff31f0f, \"ERXPFGCTL_reset\": 0x1000 } ]"
```

**Description**

Miscellaneous configurations for error records. An array of JSON objects. Note for ERXCTLR\_EL1 register it only allows to define the mask value for the IMPDEF fields, ie bits [63:32] and bit 1, but its reset value applies on all fields. Note for ERXMISCn masks - these are 64 bit masks covering the 64 bit registers ERXMISCn\_EL1. E.g. [{"Index": 0, "ERXMISCO\_mask": 0x0, "ERXMISCO\_reset": 0x0, "ERXMISC1\_mask": 0x0, "ERXMISC1\_reset": 0x0, "ERXMISC2\_mask": 0x0, "ERXMISC2\_reset": 0x0, "ERXMISC3\_mask": 0x0, "ERXMISC3\_reset": 0x0, "ERXCTLR\_EL1\_mask": 0x0, "ERXCTLR\_EL1\_reset": 0x0}, {"Index": 1, "ERXMISCO\_mask": 0x0, "ERXMISCO\_reset": 0x0, "ERXSTATUS\_IERR\_mask": 0x300}].

**subcluster0.ras\_pfg\_clock\_mhz****Type**

int

**Default value**

0xc

**Description**

RAS Pseudo-Fault generation clock rate in MHz.

**subcluster0.revision\_number****Type**

int

**Default value**

0x0

**Description**

Revision number of TRM implemented by the model. Changing the value can change the model behaviour. Visible as the Variant field in MIDR/MIDR\_EL1. Corresponds to the revision number X in rXpY.

**subcluster0.tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster0.tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**subcluster0.treat\_PAC\_as\_NOP****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter. Treat Pointer Authentication as NOP. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are NOP. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

**subcluster0.walk\_cache\_latency****Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster1.CPUCFR****Type**

int

**Default value**

0x0

**Description**

Value of CPU Configuration Register.

**subcluster1.NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores in the subcluster. Total number of cores in cluster may not exceed 14.

**subcluster1.cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**subcluster1.cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**subcluster1.cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**subcluster1.cpuX.CFGTE****Type**

bool

**Default value**

0x0

**Description**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

**subcluster1.cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**subcluster1.cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**subcluster1.cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**subcluster1.cpuX.force-fpsid****Type**

bool

**Default value**

0x1

**Description**

Override the FPSID value.

**subcluster1.cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**subcluster1.cpuX.l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster1.cpuX.l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**subcluster1.cpuX.l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**subcluster1.cpuX.l2cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**subcluster1.cpuX.l2cache-size****Type**

int

**Default value**

0x80000

**Description**

L2 Cache size in bytes.

**subcluster1.cpuX.l2cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

**`subcluster1.cpuX.l2cache-snoop_issue_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

**`subcluster1.cpuX.l2cache-write_access_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

**`subcluster1.cpuX.l2cache-write_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

**`subcluster1.cpuX.max_code_cache_mb`****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**subcluster1.cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**subcluster1.cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**subcluster1.cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**subcluster1.cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**subcluster1.cpuX.semihosting-T32\_HLT****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**subcluster1.cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**subcluster1.cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**subcluster1.cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**subcluster1.cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**subcluster1.cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**subcluster1.cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**subcluster1.cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**subcluster1.cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**subcluster1.cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**subcluster1.cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**subcluster1.cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**subcluster1.dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**subcluster1.dcache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-size****Type**

int

**Default value**

0x8000

**Description**

L1 D-Cache size in bytes.

**subcluster1.dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster1.etc.CLAIMTAGS****Type**

int

**Default value**

0x4

**Description**

Number of claim tags.

**subcluster1.ete.ETE\_REVISION****Type**

int

**Default value**

0x1

**Description**

ETE revision: 0=ETEv1.0, 1=ETEv1.1, 2=ETEv1.2, 3=ETEv1.3.

**subcluster1.ete.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**subcluster1.ete.NumberOfRSPairs****Type**

int

**Default value**

0x8

**Description**

Number of resource selector pairs.

**subcluster1.ete.PIDR\_CM0D****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CM0D value.

**subcluster1.ete.PIDR\_REVAND****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVAND value.

**subcluster1.ete.PIDR\_REVISION****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVISION value.

**subcluster1.ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**subcluster1.ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**subcluster1.ete.RETSTACK****Type**

int

**Default value**

0x3

**Description**

Return stack depth.

**subcluster1.ete.REVISION****Type**

int

**Default value**

0x0

**Description**

TRCIDR1 revision value.

**subcluster1.ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**subcluster1.ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**subcluster1.ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**subcluster1.ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**subcluster1.ete.TRCSRSTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCSRSTA value for a forcibly traced exception.

**subcluster1.ete.TSMARK****Type**

bool

**Default value**

0x1

**Description**

Whether timestamp markers are supported.

**subcluster1.force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**subcluster1.force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**subcluster1.force\_zero\_mpam\_partid\_and\_pmg****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**subcluster1.has\_enhanced\_pan****Type**

int

**Default value**

0x2

**Description**

Implements Armv8.7 Enhanced PAN feature (FEAT\_PAN3). Possible values of this parameter are: - 1, feature is implemented if ARMv8.7 is enabled. - 2, feature is implemented.

**subcluster1.has\_ete****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**subcluster1.has\_large\_va****Type**

int

**Default value**

0x0

**Description**

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT\_LVA). Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.2 is enabled. - 2, feature is implemented.

**subcluster1.has\_statistical\_profiling****Type**

bool

**Default value**

0x0

**Description**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

**subcluster1.icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

**`subcluster1.icache-maintenance_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

**`subcluster1.icache-miss_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

**`subcluster1.icache-prefetch_enabled`****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

**`subcluster1.icache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

**`subcluster1.icache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

**`subcluster1.icache-size`****Type**

int

**Default value**

0x8000

**Description**

L1 I-Cache size in bytes.

**`subcluster1.instruction_tlb_size`****Type**

int

**Default value**

0x0

**Description**

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

**`subcluster1.invalidate_code_cache_on_icache_cmo`****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE.  
Note: Enabling this parameter will reduce simulation performance.

**subcluster1.memory\_tagging\_support\_level****Type**

int

**Default value**

0x3

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

**subcluster1.pmu-num\_counters****Type**

int

**Default value**

0x6

**Description**

Number of PMU counters implemented.

**subcluster1.ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster1.stage12\_tlb\_size****Type**

int

**Default value**

0x80

**Description**

Number of stage1+2 tlb entries.

**subcluster1.tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster1.tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**subcluster1.treat\_PAC\_as\_NOP****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter. Treat Pointer Authentication as NOP. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are NOP. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

**subcluster1.walk\_cache\_latency****Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster2.CPUCFR****Type**

int

**Default value**

0x0

**Description**

Value of CPU Configuration Register.

**subcluster2.NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores in the subcluster. Total number of cores in cluster may not exceed 14.

**subcluster2.cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**subcluster2.cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**subcluster2.cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**subcluster2.cpuX.CFGTE****Type**

bool

**Default value**

0x0

**Description**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

**subcluster2.cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**subcluster2.cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**subcluster2.cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**subcluster2.cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-size****Type**

int

**Default value**

0x80000

**Description**

L2 Cache size in bytes.

**subcluster2.cpuX.l2cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-ways****Type**

int

**Default value**

0x8

**Description**

L2 Cache number of ways (sets are implicit from size).

**subcluster2.cpuX.l2cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**subcluster2.cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**subcluster2.cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**subcluster2.cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**subcluster2.cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**subcluster2.cpuX.semihosting-T32\_HLT****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**subcluster2.cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**subcluster2.cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**subcluster2.cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**subcluster2.cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**subcluster2.cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**subcluster2.cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**subcluster2.cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**subcluster2.cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**subcluster2.cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**subcluster2.cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**subcluster2.cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**subcluster2.dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

**`subcluster2.dcache-maintenance_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

**`subcluster2.dcache-miss_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**`subcluster2.dcache-prefetch_enabled`****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

**`subcluster2.dcache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit

or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

#### **`subcluster2.dcache-read_latency`**

##### **Type**

int

##### **Default value**

0x0

##### **Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

#### **`subcluster2.dcache-size`**

##### **Type**

int

##### **Default value**

0x10000

##### **Description**

L1 D-Cache size in bytes.

#### **`subcluster2.dcache-snoop_data_transfer_latency`**

##### **Type**

int

##### **Default value**

0x0

##### **Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

#### **`subcluster2.dcache-write_access_latency`**

##### **Type**

int

##### **Default value**

0x0

##### **Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be

used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

#### **subcluster2.dcache-write\_latency**

##### **Type**

int

##### **Default value**

0x0

##### **Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

#### **subcluster2.ecv\_support\_level**

##### **Type**

int

##### **Default value**

0x2

##### **Description**

Implement Enhanced Counter Virtualization feature from ARMv8.6. 0, Not supported. 1, fully supported without CNTPOFF. 2, fully supported with CNTPOFF (FEAT\_ECV).

#### **subcluster2.ete.CLAIMTAGS**

##### **Type**

int

##### **Default value**

0x4

##### **Description**

Number of claim tags.

#### **subcluster2.ete.MAX\_INST\_PER\_Q**

##### **Type**

int

##### **Default value**

0x1

##### **Description**

Maximum limit for the number of instructions implied by a Q element.

#### **subcluster2.ete.NumberOfRSPairs**

##### **Type**

int

**Default value**

0x8

**Description**

Number of resource selector pairs.

**subcluster2.ete.PIDR\_CM0D****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CM0D value.

**subcluster2.ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**subcluster2.ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**subcluster2.ete.RETSTACK****Type**

int

**Default value**

0x3

**Description**

Return stack depth.

**subcluster2.ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**subcluster2.ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**subcluster2.ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**subcluster2.ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**subcluster2.ete.TRCRSRTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCRSR.TA value for a forcibly traced exception.

**subcluster2.ext\_abort\_so\_write\_ras\_type****Type**

int

**Default value**

0x2

**Description**

External Aborts are reported as RAS error type specified in this param. Values: 0 = NONE, 1 = UC, 2 = UEU, 3 = UEO , 4 = UER, 5 = CE.

**subcluster2.force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**subcluster2.force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**subcluster2.force\_zero\_mpam\_partid\_and\_pmg****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**subcluster2.has\_enhanced\_pan****Type**

int

**Default value**

0x2

**Description**

Implements Armv8.7 Enhanced PAN feature (FEAT\_PAN3) Possible values of this parameter are: - 1, feature is implemented if ARMv8.7 is enabled. - 2, feature is implemented.

**subcluster2.has\_ete****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**subcluster2.has\_statistical\_profiling****Type**

bool

**Default value**

0x1

**Description**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

**subcluster2.has\_v8\_7\_spe\_inverted\_filtering****Type**

bool

**Default value**

0x0

**Description**

Where FEAT\_SPEv1p2 is implemented, whether inverted filtering by events is implemented (represented by PMISDR.FnE).

**subcluster2.has\_v8\_7\_spe\_previous\_branch\_target****Type**

bool

**Default value**

0x0

**Description**

Where FEAT\_SPEv1p2 is implemented, whether the optional branch target feature is implemented (FEAT\_SPE\_PBT).

**subcluster2.icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**subcluster2.icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

**subcluster2.icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state\_modelled=true.

**subcluster2.icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

**subcluster2.icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

**`subcluster2.icache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

**`subcluster2.icache-size`****Type**

int

**Default value**

0x10000

**Description**

L1 I-Cache size in bytes.

**`subcluster2.instruction_tlb_size`****Type**

int

**Default value**

0x0

**Description**

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

**`subcluster2.invalidate_code_cache_on_icache_cmo`****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE.  
Note: Enabling this parameter will reduce simulation performance.

**subcluster2.memory\_tagging\_support\_level****Type**

int

**Default value**

0x3

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

**subcluster2.mpam\_has\_altsp****Type**

bool

**Default value**

0x0

**Description**

MPAM Whether MPAMIDR\_EL1.HAS\_ALTSP bit is set or clear.

**subcluster2.mpamidr\_has\_force\_ns****Type**

int

**Default value**

0x0

**Description**

Whether MPAMIDR\_EL1.HAS\_FORCE\_NS bit is set or clear. Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.6 is enabled. - 2, feature is implemented.

**subcluster2.mpamidr\_has\_sdeflt****Type**

int

**Default value**

0x1

**Description**

Whether MPAMIDR\_EL1.HAS\_SDEFLT bit is set or clear. Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.6 is enabled. - 2, feature is implemented.

**subcluster2.mpamidr\_has\_tidr****Type**

int

**Default value**

0x1

**Description**

Whether MPAMIDR\_EL1.HAS\_TIDR bit is set or clear Possible values of this parameter are:  
- 0, feature is not enabled. - 1, feature is implemented if ARMv8.6 is enabled. - 2, feature is implemented.

**subcluster2.pmu-num\_counters****Type**

int

**Default value**

0x1f

**Description**

Number of PMU counters implemented.

**subcluster2.ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster2.stage12\_tlb\_size****Type**

int

**Default value**

0x80

**Description**

Number of stage1+2 tlb entries.

**subcluster2.tcr\_txsz\_undersize\_should\_fault****Type**

bool

**Default value**

0x0

**Description**

If large VA is not supported, Whether undersized TxSZ value should generate translation fault.

**subcluster2.tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster2.tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlbi invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**subcluster2.treat\_PAC\_as\_NOP****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter. Treat Pointer Authentication as NOP. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are NOP. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

**subcluster2.walk\_cache\_latency****Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

### 3.5.43 ARMCortexA520CT\_CortexA725CT

ARMCortexA520CT\_CortexA725CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-351: IP revisions support**

Revision	Quality level
CortexA520 r0p1	Full support
CortexA725 r0p0	Preliminary support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### About ARMCortexA520CT\_CortexA725CT

The number of cores in each subcluster is configurable using the following parameters:

**subcluster0.NUM\_CORES**

Possible values are 1-13 (ARMCortexA520CT).

**subcluster1.NUM\_CORES**

Possible values are 1-13 (ARMCortexA725CT).

The total number of cores in the cluster cannot exceed 14.

Port arrays are expanded to the width needed for the maximum number of cores in each subcluster. Use the following port array indexes:

- <port\_name>[0-12] for cores in subcluster0.
- <port\_name>[13-25] for cores in subcluster1.

All instances in the Master cross trigger matrix port array, `cti[26]` must be connected, regardless of the `NUM_CORES` value used.

Core-specific parameters have the following prefixes:

- `subcluster0.cpu0` to `subcluster0.cpu12` identify cores in subcluster0.
- `subcluster1.cpu0` to `subcluster1.cpu12` identify cores in subcluster1.

For information about the cores in this model, see:

- [ARMCortexA520CT](#).
- [ARMCortexA725CT](#).

#### Iris and MTI instances for ARMCortexA520CT\_CortexA725CT

This model has the following Iris instances:

**Table 3-352: ARMCortexA520CT\_CortexA725CT Iris instances**

InstanceName	ComponentName
ARMCortexA520CT_CortexA725CT	Cluster_ARM_Cortex-A520_CortexA725_Heterogeneous

## Ports for ARMCortexA520CT\_CortexA725CT

**Table 3-354: Ports**

Name	Protocol	Type	Description
acp_s[2]	PVBus	Slave	AXI ACP slave port.
AEND0MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	Signal	Slave	CHI defined pins.
broadcastcachemaint	Signal	Slave	ACE defined pins.
broadcastouter	Signal	Slave	ACE defined pins.
broadcastpersist	Signal	Slave	CHI defined pins.
cfgend[26]	Signal	Slave	This signal is for EE bit initialisation.
cfgsdisable	Signal	Slave	This signal disables write access to some secure Interrupt Controller registers.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsn_pchannel	PChannel	Master	Cluster PCSM signal
cluster_powerdown_out	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the cluster power info

Name	Protocol	Type	Description
clusterid	Value	Slave	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.
clusterpmuirq	Signal	Master	DynamlQ pmu irq
CNTHPIRQ[26]	Signal	Master	Timer signals to SOC.
CNTHPSIRQ[26]	Signal	Master	Timer signals to SOC
CNTHVIRQ[26]	Signal	Master	Timer signals to SOC.
CNTHVSIRQ[26]	Signal	Master	Timer signals to SOC
CNTPNSIRQ[26]	Signal	Master	Timer signals to SOC.
CNTPSIRQ[26]	Signal	Master	Timer signals to SOC.
cntvalueb	CounterInterface	Slave	Interface to SoC level counter module.
CNTVIRQ[26]	Signal	Master	Timer signals to SOC.
commirq[26]	Signal	Master	Interrupt signal from debug communications channel.
core_clk_in[26]	ClockSignal	Slave	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsmpchannel[26]	PChannel	Master	Core PCSM signals
core_powerdown_out[26]	Signal	Master	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
coreerrirq[26]	Signal	Master	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq[26]	Signal	Master	Fault indicator for a detected 1 or 2 bit ECC error
cryptodisable[26]	Signal	Slave	Disable cryptography extensions after reset.
cti[26]	v8EmbeddedCrossTrigger_controlprotocol	Master	Cross trigger matrix port.
ctidbgirq[26]	Signal	Master	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	Signal	Slave	External debug interface.
dbgnopwrdown[26]	Signal	Master	No power-down request.
dbgpwrupreq[26]	Signal	Master	Debug power up request.
defaultMP	Signal	Slave	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.

Name	Protocol	Type	Description
dev_debug_s	PVBus	Slave	External debug interface.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
fiq[26]	Signal	Slave	This signal drives the CPUs fast-interrupt handling.
gicreset	Signal	Master	An output from PPU that can be used to reset GICCLK domain components
gicv3_redistributor_s[26]	GICv3Comms	Slave	GICv3 AXI-stream port.
irq[26]	Signal	Slave	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	PVBus	Slave	External debug interface.
pmbirq[26]	Signal	Master	Interrupt signal from the statistical profiling unit.
pmuirq[26]	Signal	Master	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	Signal	Master	PPU cluster interrupt.
ppu_cluster_wakerequest	Signal	Slave	PPU cluster wake request signal.
ppu_core_irq[26]	Signal	Master	PPU core interrupt.
ppu_core_wakerequest[26]	Signal	Slave	PPU core wake request signal.
presetdbg	Signal	Slave	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	PVBus	Master	The core will generate bus requests on this port.
pvbus_periph_m	PVBus	Master	The core can generate peripheral bus request on this port.
rei[26]	Signal	Slave	Per core RAM Error Interrupt.
reset	Signal	Slave	Reset signal to cluster.
rvbaraddr[26]	Value_64	Slave	Reset vector base address.
sci_m	SystemCoherencyInterface	Master	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei[26]	Signal	Slave	Per core System Error physical pins.
spiden	Signal	Slave	External debug interface.
ticks[26]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq[26]	Signal	Master	Interrupt signal from the trace buffer unit.
utility_bus_s	PVBus	Slave	Utility bus slave
vcpumntirq[26]	Signal	Master	Interrupt signal for virtual CPU maintenance IRQ.

Name	Protocol	Type	Description
vfiq[26]	Signal	Slave	Virtualised FIQ.
virq[26]	Signal	Slave	Virtualised IRQ.
virtio_s	PVBus	Slave	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei[26]	Signal	Slave	Per core virtual System Error physical pins.

## Parameters for ARM CortexA520CT\_CortexA725CT

### AEND0\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

### AEND1\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

### AEND2\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

### AEND3\_DEFAULT

#### Type

int

**Default value**

0x0

**Description**

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

**ASTART0\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

**ASTART1\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

**ASTART2\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

**ASTART3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

**BROADCASTATOMIC****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

**BROADCASTCACHEMAINT****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

**BROADCASTOUTER****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

**BROADCASTPERSIST****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

**CLUSTER\_ID****Type**

int

**Default value**

0x0

**Description**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled****Type**

int

**Default value**

0x1

**Description**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. Changing this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain CMOs even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required .

**DBGROMADDR****Type**

int

**Default value**

0x0

**Description**

Initialization value of DBGDRAR register. Bits[55:12] of this register specify the ROM table physical address.

**DBGROMADDRV****Type**

bool

**Default value**

0x0

**Description**

If true, set bits[1:0] of the CP15 DBGDRAR to indicate that the address is valid.

**GICDISABLE****Type**

bool

**Default value**

0x1

**Description**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

**bus\_type****Type**

int

**Default value**

0x0

**Description**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

**core\_complex\_mapping****Type**

string

**Default value**

```
"{"complex0": { "cores": [0, 1], "l2-cache" : {"exists":1, "size":"16MB"}}, "complex1":
{ "cores": [2, 3], "l2-cache" : {"exists":1, "size":"16MB"}}, "complex2": { "cores": [4,
5], "l2-cache" : {"exists":1, "size":"16MB"}}, "complex3": { "cores": [6, 7], "l2-cache
" : {"exists":1, "size":"16MB"}}, "complex4": { "cores": [8, 9], "l2-cache" : {"exists
":1, "size":"16MB"}}, "complex5": { "cores": [10, 11], "l2-cache" : {"exists":1, "size":
"16MB"}}, "complex6": { "cores": [12, 13], "l2-cache" : {"exists":1, "size":"16MB"}}}"
```

**Description**

Defines Complex descriptions for platforms that support several Cores per Complex like Cortex-A510. JSON format: {"complex0": { "cores" : [ 0, 1 ], "l2-cache" : {"exists":1, "size":16MB}}, ... , "complexN": { "cores" : [<core\_list>], "l2-cache" : {"exists":1, "size":16MB}}} where <core\_list> is the list of cores in the complexN. Effective only when the parameter value is not empty.

**core\_power\_on\_by\_default****Type**

bool

**Default value**

0x0

**Description**

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPU which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**enable\_simulation\_performance\_optimizations****Type**

bool

**Default value**

0x1

**Description**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

**has\_peripheral\_port****Type**

bool

**Default value**

0x0

**Description**

If true, an additional AXI peripheral port is configured.

**icache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**l3cache-has\_mpam****Type**

bool

**Default value**

0x1

**Description**

L3 Cache has MPAM support.

**l3cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**l3cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**l3cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**l3cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**l3cache-read\_bus\_width\_in\_bytes****Type**

int

**Default value**

0x10

**Description**

L3 Cache read bus width in bytes used to calculate per-access timing annotations.

**l3cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. l3cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**l3cache-size****Type**

int

**Default value**

0x80000

**Description**

L3 Cache size in bytes.

**l3cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

**l3cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

**l3cache-ways****Type**

int

**Default value**

0x10

**Description**

L3 Cache number of ways (sets are implicit from size).

**l3cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size `l3cache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

**l3cache-write\_bus\_width\_in\_bytes****Type**

int

**Default value**

0x10

**Description**

L3 Cache write bus width in bytes used to calculate per-access timing annotations.

**l3cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**mpmm\_accumulator\_multiplier****Type**

int

**Default value**

0x1

**Description**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator. A value of n means the accumulator will use (n \* accumulator value) to calculate the mpmm threshold (MPMM). This is provided as a fast model workaround to handle cases where execution of quantum in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

**num\_nodes****Type**

int

**Default value**

0x1

**Description**

Number of transport nodes. Zero implies direct-connect configuration.

**revision\_number****Type**

int

**Default value**

0x0

**Description**

Revision number of TRM implemented by the model. Changing the value can change the model behaviour. Visible as the Variant field in MIDR/MIDR\_EL1. Corresponds to the revision number X in rXpY.

**subcluster0.CPUCFR****Type**

int

**Default value**

0x0

**Description**

Value of CPU Configuration Register.

**subcluster0.NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores in the subcluster. Total number of cores in cluster may not exceed 14.

**subcluster0.core\_cache\_protection****Type**

int

**Default value**

0x1

**Description**

core\_cache\_protection can change ERROFR, ERROPFGF and ERROPFGCTL fields. Possible values are: -1:Not implemented (by default), 0:Disabled, 1:Enabled.

**subcluster0.cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**subcluster0.cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**subcluster0.cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**subcluster0.cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**subcluster0.cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**subcluster0.cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**subcluster0.cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

**`subcluster0.cpuX.l2cache-maintenance_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

**`subcluster0.cpuX.l2cache-miss_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**`subcluster0.cpuX.l2cache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**`subcluster0.cpuX.l2cache-read_bus_width_in_bytes`****Type**

int

**Default value**

0x10

**Description**

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

**subcluster0.cpuX.l2cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.l2cache-size****Type**

int

**Default value**

0x80000

**Description**

L2 Cache size in bytes.

**subcluster0.cpuX.l2cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.l2cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.l2cache-ways****Type**

int

**Default value**

0x8

**Description**

L2 Cache number of ways (sets are implicit from size).

**subcluster0.cpuX.l2cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.l2cache-write\_bus\_width\_in\_bytes****Type**

int

**Default value**

0x20

**Description**

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

**subcluster0.cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**subcluster0.cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**subcluster0.cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**subcluster0.cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**subcluster0.cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**subcluster0.cpuX.semihosting-T32\_HLT****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**subcluster0.cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**subcluster0.cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**subcluster0.cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**subcluster0.cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**subcluster0.cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**subcluster0.cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**subcluster0.cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**subcluster0.cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**subcluster0.cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**subcluster0.cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**subcluster0.cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**subcluster0.dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**`subcluster0.dcache-prefetch_enabled`****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

**`subcluster0.dcache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**`subcluster0.dcache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**`subcluster0.dcache-size`****Type**

int

**Default value**

0x8000

**Description**

L1 D-Cache size in bytes.

**subcluster0.dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster0.etc.CLAIMTAGS****Type**

int

**Default value**

0x4

**Description**

Number of claim tags.

**subcluster0.ete.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**subcluster0.ete.PIDR\_CM0D****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CM0D value.

**subcluster0.ete.PIDR\_REVAND****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVAND value.

**subcluster0.ete.PIDR\_REVISION****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVISION value.

**subcluster0.ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**subcluster0.ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**subcluster0.ete.RETSTACK****Type**

int

**Default value**

0x3

**Description**

Return stack depth.

**subcluster0.ete.REVISION****Type**

int

**Default value**

0x0

**Description**

TRCIDR1 revision value.

**subcluster0.ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**subcluster0.ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**subcluster0.ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**subcluster0.ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**subcluster0.ete.TRCSRTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCSRTA value for a forcibly traced exception.

**subcluster0.force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**subcluster0.force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**subcluster0.force\_zero\_mpam\_partid\_and\_pmg****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**subcluster0.has\_actlr2****Type**

bool

**Default value**

0x1

**Description**

If true ACLTR2 exists and ACTLR2(NS) is aliased to ACTLR\_EL1[63:32].

**subcluster0.has\_dot\_product****Type**

int

**Default value**

0x2

**Description**

Possible values of this parameter are: - 1, feature not implemented. - 2, feature is implemented.

**subcluster0.has\_ete****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**subcluster0.icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**subcluster0.icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

**subcluster0.icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state\_modelled=true.

**subcluster0.icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

**subcluster0.icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

**`subcluster0.icache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

**`subcluster0.icache-size`****Type**

int

**Default value**

0x8000

**Description**

L1 I-Cache size in bytes.

**`subcluster0.invalidate_code_cache_on_icache_cmo`****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

**`subcluster0.memory_tagging_support_level`****Type**

int

**Default value**

0x3

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

**subcluster0.pmu-num\_counters****Type**

int

**Default value**

0x6

**Description**

Number of PMU counters implemented.

**subcluster0.ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster0.ras\_extra\_configurations****Type**

string

**Default value**

```
"[ { \"Index\": 1, \"ERXMISCO_mask\": 0xFFFFc0003fc3, \"ERXMISC1_mask\": 0x03F870003FF30f07, \"ERXPFGCTL_reset\": 0x1000 }, { \"Index\": 2, \"ERXMISCO_mask\": 0xFFFFe007ffc0, \"ERXMISCO_reset\": 0x2, \"ERXSTATUS_IERR_mask\": 0x300, \"ERXMISC1_mask\": 0x0FF8700ffff31f0f, \"ERXPFGCTL_reset\": 0x1000 } ]"
```

**Description**

Miscellaneous configurations for error records. An array of JSON objects. Note for ERXCTLR\_EL1 register it only allows to define the mask value for the IMPDEF fields, ie bits [63:32] and bit 1, but its reset value applies on all fields. Note for ERXMISCn masks - these are 64 bit masks covering the 64 bit registers ERXMISCn\_EL1. E.g. [{"Index": 0, "ERXMISCO\_mask": 0x0, "ERXMISCO\_reset": 0x0, "ERXMISC1\_mask": 0x0, "ERXMISC1\_reset": 0x0, "ERXMISC2\_mask": 0x0, "ERXMISC2\_reset": 0x0, "ERXMISC3\_mask": 0x0, "ERXMISC3\_reset": 0x0, "ERXCTLR\_EL1\_mask": 0x0, "ERXCTLR\_EL1\_reset": 0x0}, {"Index": 1, "ERXMISCO\_mask": 0x0, "ERXMISCO\_reset": 0x0, "ERXSTATUS\_IERR\_mask": 0x300}].

**subcluster0.ras\_pfg\_clock\_mhz****Type**

int

**Default value**

0xc

**Description**

RAS Pseudo-Fault generation clock rate in MHz.

**subcluster0.revision\_number****Type**

int

**Default value**

0x0

**Description**

Revision number of TRM implemented by the model. Changing the value can change the model behaviour. Visible as the Variant field in MIDR/MIDR\_EL1. Corresponds to the revision number X in rXpY.

**subcluster0.tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster0.tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**subcluster0.treat\_PAC\_as\_NOP****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter. Treat Pointer Authentication as NOP. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are NOP. Branch, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

**subcluster0.walk\_cache\_latency****Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster1.CPUCFR****Type**

int

**Default value**

0x0

**Description**

Value of CPU Configuration Register.

**subcluster1.NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores in the subcluster. Total number of cores in cluster may not exceed 14.

**subcluster1.cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**subcluster1.cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**subcluster1.cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**subcluster1.cpuX.CFGTE****Type**

bool

**Default value**

0x0

**Description**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

**subcluster1.cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**subcluster1.cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**subcluster1.cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**subcluster1.cpuX.force-fpsid****Type**

bool

**Default value**

0x1

**Description**

Override the FPSID value.

**subcluster1.cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**subcluster1.cpuX.l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster1.cpuX.l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**subcluster1.cpuX.l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**subcluster1.cpuX.l2cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**subcluster1.cpuX.l2cache-size****Type**

int

**Default value**

0x100000

**Description**

L2 Cache size in bytes.

**subcluster1.cpuX.l2cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

**`subcluster1.cpuX.l2cache-snoop_issue_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

**`subcluster1.cpuX.l2cache-write_access_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

**`subcluster1.cpuX.l2cache-write_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

**`subcluster1.cpuX.max_code_cache_mb`****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**subcluster1.cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**subcluster1.cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**subcluster1.cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**subcluster1.cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**subcluster1.cpuX.semihosting-T32\_HLT****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**subcluster1.cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**subcluster1.cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**subcluster1.cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**subcluster1.cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**subcluster1.cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**subcluster1.cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**subcluster1.cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**subcluster1.cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**subcluster1.cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**subcluster1.cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**subcluster1.cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**subcluster1.dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**subcluster1.dcache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-size****Type**

int

**Default value**

0x10000

**Description**

L1 D-Cache size in bytes.

**subcluster1.dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster1.etc.CLAIMTAGS****Type**

int

**Default value**

0x4

**Description**

Number of claim tags.

**subcluster1.ete.ETE\_REVISION****Type**

int

**Default value**

0x1

**Description**

ETE revision: 0=ETEv1.0, 1=ETEv1.1, 2=ETEv1.2, 3=ETEv1.3.

**subcluster1.ete.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**subcluster1.ete.NumberOfRSPairs****Type**

int

**Default value**

0x8

**Description**

Number of resource selector pairs.

**subcluster1.ete.PIDR\_CM0D****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CM0D value.

**subcluster1.ete.PIDR\_REVAND****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVAND value.

**subcluster1.ete.PIDR\_REVISION****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVISION value.

**subcluster1.ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**subcluster1.ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**subcluster1.ete.RETSTACK****Type**

int

**Default value**

0x1

**Description**

Return stack depth.

**subcluster1.ete.REVISION****Type**

int

**Default value**

0x0

**Description**

TRCIDR1 revision value.

**subcluster1.ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**subcluster1.ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**subcluster1.ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**subcluster1.ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**subcluster1.ete.TRCSRSTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCSRSTA value for a forcibly traced exception.

**subcluster1.ete.TSMARK****Type**

bool

**Default value**

0x1

**Description**

Whether timestamp markers are supported.

**subcluster1.force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**subcluster1.force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**subcluster1.force\_zero\_mpam\_partid\_and\_pmg****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**subcluster1.has\_enhanced\_pan****Type**

int

**Default value**

0x2

**Description**

Implements Armv8.7 Enhanced PAN feature (FEAT\_PAN3). Possible values of this parameter are: - 1, feature is implemented if ARMv8.7 is enabled. - 2, feature is implemented.

**subcluster1.has\_ete****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**subcluster1.has\_large\_va****Type**

int

**Default value**

0x0

**Description**

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT\_LVA). Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.2 is enabled. - 2, feature is implemented.

**subcluster1.has\_statistical\_profiling****Type**

bool

**Default value**

0x0

**Description**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

**subcluster1.icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

**subcluster1.icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

**subcluster1.icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

**subcluster1.icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

**subcluster1.icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

**`subcluster1.icache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

**`subcluster1.icache-size`****Type**

int

**Default value**

0x10000

**Description**

L1 I-Cache size in bytes.

**`subcluster1.instruction_tlb_size`****Type**

int

**Default value**

0x0

**Description**

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

**`subcluster1.invalidate_code_cache_on_icache_cmo`****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE.  
Note: Enabling this parameter will reduce simulation performance.

**subcluster1.memory\_tagging\_support\_level****Type**

int

**Default value**

0x3

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

**subcluster1.pmu-num\_counters****Type**

int

**Default value**

0x6

**Description**

Number of PMU counters implemented.

**subcluster1.ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster1.stage12\_tlb\_size****Type**

int

**Default value**

0x80

**Description**

Number of stage1+2 tlb entries.

**subcluster1.tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster1.tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**subcluster1.treat\_PAC\_as\_NOP****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter. Treat Pointer Authentication as NOP. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are NOP. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

**subcluster1.walk\_cache\_latency****Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

### 3.5.44 ARMCortexA520CT\_CortexA725CT\_CortexX925CT

ARMCortexA520CT\_CortexA725CT\_CortexX925CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-355: IP revisions support**

Revision	Quality level
CortexA520 r0p1	Full support
CortexA725 r0p0	Preliminary support
CortexX925 r0p0	Preliminary support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### About ARMCortexA520CT\_CortexA725CT\_CortexX925CT

The number of cores in each subcluster is configurable using the following parameters:

**subcluster0.NUM\_CORES**

Possible values are 1-12 (ARMCortexA520CT).

**subcluster1.NUM\_CORES**

Possible values are 1-12 (ARMCortexA725CT).

**subcluster2.NUM\_CORES**

Possible values are 1-12 (ARMCortexX925CT).

The total number of cores in the cluster cannot exceed 14.

Port arrays are expanded to the width needed for the maximum number of cores in each subcluster. Use the following port array indexes:

- <port\_name>[0-11] for cores in subcluster0.
- <port\_name>[12-23] for cores in subcluster1.
- <port\_name>[24-35] for cores in subcluster2.

All instances in the Master cross trigger matrix port array, `cti[36]` must be connected, regardless of the `NUM_CORES` value used.

Core-specific parameters have the following prefixes:

- `subcluster0.cpu0` to `subcluster0.cpu11` identify cores in subcluster0.
- `subcluster1.cpu0` to `subcluster1.cpu11` identify cores in subcluster1.
- `subcluster2.cpu0` to `subcluster2.cpu11` identify cores in subcluster2.

For information about the cores in this model, see:

- [ARMCortexA520CT](#).
- [ARMCortexA725CT](#).
- [ARMCortexX925CT](#).

## Iris and MTI instances for ARMCortexA520CT\_CortexA725CT\_CortexX925CT

This model has the following Iris instances:

## Ports for ARMCortexA520CT\_CortexA725CT\_CortexX925CT

Table 3-358: Ports

Name	Protocol	Type	Description
acp_s[2]	PVBus	Slave	AXI ACP slave port.
AEND0MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	Signal	Slave	CHI defined pins.
broadcastcachemaint	Signal	Slave	ACE defined pins.
broadcastouter	Signal	Slave	ACE defined pins.
broadcastpersist	Signal	Slave	CHI defined pins.
cfgend[36]	Signal	Slave	This signal is for EE bit initialisation.
cfgsdisable	Signal	Slave	This signal disables write access to some secure Interrupt Controller registers.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsn_pchannel	PChannel	Master	Cluster PCSM signal
cluster_powerdown_out	Signal	Master	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info

Name	Protocol	Type	Description
clusterid	Value	Slave	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.
clusterpmuirq	Signal	Master	DynamlQ pmu irq
CNTHPIRQ[36]	Signal	Master	Timer signals to SOC.
CNTHPSIRQ[36]	Signal	Master	Timer signals to SOC
CNTHVIRQ[36]	Signal	Master	Timer signals to SOC.
CNTHVSIRQ[36]	Signal	Master	Timer signals to SOC
CNTPNSIRQ[36]	Signal	Master	Timer signals to SOC.
CNTPSIRQ[36]	Signal	Master	Timer signals to SOC.
cntvalueb	CounterInterface	Slave	Interface to SoC level counter module.
CNTVIRQ[36]	Signal	Master	Timer signals to SOC.
commirq[36]	Signal	Master	Interrupt signal from debug communications channel.
core_clk_in[36]	ClockSignal	Slave	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsmpchannel[36]	PChannel	Master	Core PCSM signals
core_powerdown_out[36]	Signal	Master	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
coreerrirq[36]	Signal	Master	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq[36]	Signal	Master	Fault indicator for a detected 1 or 2 bit ECC error
cryptodisable[36]	Signal	Slave	Disable cryptography extensions after reset.
cti[36]	v8EmbeddedCrossTrigger_controlprotocol	Master	Cross trigger matrix port.
ctidbgirq[36]	Signal	Master	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	Signal	Slave	External debug interface.
dbgnopwrdown[36]	Signal	Master	No power-down request.
dbgpwrupreq[36]	Signal	Master	Debug power up request.
defaultMP	Signal	Slave	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.

Name	Protocol	Type	Description
dev_debug_s	PVBus	Slave	External debug interface.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
fiq[36]	Signal	Slave	This signal drives the CPUs fast-interrupt handling.
gicreset	Signal	Master	An output from PPU that can be used to reset GICCLK domain components
gicv3_redistributor_s[36]	GICv3Comms	Slave	GICv3 AXI-stream port.
irq[36]	Signal	Slave	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	PVBus	Slave	External debug interface.
pmbirq[36]	Signal	Master	Interrupt signal from the statistical profiling unit.
pmuirq[36]	Signal	Master	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	Signal	Master	PPU cluster interrupt.
ppu_cluster_wakerequest	Signal	Slave	PPU cluster wake request signal.
ppu_core_irq[36]	Signal	Master	PPU core interrupt.
ppu_core_wakerequest[36]	Signal	Slave	PPU core wake request signal.
presetdbg	Signal	Slave	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	PVBus	Master	The core will generate bus requests on this port.
pvbus_periph_m	PVBus	Master	The core can generate peripheral bus request on this port.
rei[36]	Signal	Slave	Per core RAM Error Interrupt.
reset	Signal	Slave	Reset signal to cluster.
rvbaraddr[36]	Value_64	Slave	Reset vector base address.
sci_m	SystemCoherencyInterface	Master	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei[36]	Signal	Slave	Per core System Error physical pins.
spiden	Signal	Slave	External debug interface.
ticks[36]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq[36]	Signal	Master	Interrupt signal from the trace buffer unit.
utility_bus_s	PVBus	Slave	Utility bus slave
vcpumntirq[36]	Signal	Master	Interrupt signal for virtual CPU maintenance IRQ.

Name	Protocol	Type	Description
vfiq[36]	Signal	Slave	Virtualised FIQ.
virq[36]	Signal	Slave	Virtualised IRQ.
virtio_s	PVBus	Slave	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei[36]	Signal	Slave	Per core virtual System Error physical pins.

## Parameters for ARM CortexA520CT\_CortexA725CT\_CortexX925CT

### AEND0\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

### AEND1\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

### AEND2\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

### AEND3\_DEFAULT

#### Type

int

**Default value**

0x0

**Description**

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

**ASTART0\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

**ASTART1\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

**ASTART2\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

**ASTART3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

**BROADCASTATOMIC****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

**BROADCASTCACHEMAINT****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

**BROADCASTOUTER****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

**BROADCASTPERSIST****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

**CLUSTER\_ID****Type**

int

**Default value**

0x0

**Description**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled****Type**

int

**Default value**

0x1

**Description**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. Changing this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain CMOs even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required .

**GICDISABLE****Type**

bool

**Default value**

0x1

**Description**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

**bus\_type****Type**

int

**Default value**

0x0

**Description**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

**core\_power\_on\_by\_default****Type**

bool

**Default value**

0x0

**Description**

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPU which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**default\_opmode****Type**

int

**Default value**

0x4

**Description**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

**diagnostics****Type**

bool

**Default value**

0x0

**Description**

Enable DynamIQ diagnostic messages.

**enable\_simulation\_performance\_optimizations****Type**

bool

**Default value**

0x1

**Description**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

**has\_peripheral\_port****Type**

bool

**Default value**

0x0

**Description**

If true, an additional AXI peripheral port is configured.

**icache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**l3cache-has\_mpam****Type**

bool

**Default value**

0x1

**Description**

L3 Cache has MPAM support.

**l3cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

**l3cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

**l3cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**l3cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size `l3cache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**l3cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l3cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**`l3cache-size`****Type**

int

**Default value**

0x80000

**Description**

L3 Cache size in bytes.

**`l3cache-snoop_data_transfer_latency`****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

**`l3cache-snoop_issue_latency`****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

**`l3cache-ways`****Type**

int

**Default value**

0x10

**Description**

L3 Cache number of ways (sets are implicit from size).

**l3cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**l3cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**mpmm\_accumulator\_multiplier****Type**

int

**Default value**

0x1

**Description**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator. A value of n means the accumulator will use (n \* accumulator value) to calculate the mpmm threshold (MPMM). This is provided as a fast model workaround to handle cases where execution of quantum in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

**subcluster0.CPUCFR****Type**

int

**Default value**

0x0

**Description**

Value of CPU Configuration Register.

**subcluster0.NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores in the subcluster. Total number of cores in cluster may not exceed 14.

**subcluster0.core\_cache\_protection****Type**

int

**Default value**

0x1

**Description**

core\_cache\_protection can change ERROFR, ERROPFGF and ERROPFGCTL fields. Possible values are: -1:Not implemented (by default), 0:Disabled, 1:Enabled.

**subcluster0.cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**subcluster0.cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**subcluster0.cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**subcluster0.cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**subcluster0.cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**subcluster0.cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**subcluster0.cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

**subcluster0.cpuX.l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**subcluster0.cpuX.l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**subcluster0.cpuX.l2cache-read\_bus\_width\_in\_bytes****Type**

int

**Default value**

0x10

**Description**

L2 Cache read bus width in bytes used to calculate per-access timing annotations.

**subcluster0.cpuX.l2cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**`subcluster0.cpuX.l2cache-size`****Type**

int

**Default value**

0x80000

**Description**

L2 Cache size in bytes.

**`subcluster0.cpuX.l2cache-snoop_data_transfer_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

**`subcluster0.cpuX.l2cache-snoop_issue_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

**`subcluster0.cpuX.l2cache-ways`****Type**

int

**Default value**

0x8

**Description**

L2 Cache number of ways (sets are implicit from size).

**subcluster0.cpuX.l2cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.l2cache-write\_bus\_width\_in\_bytes****Type**

int

**Default value**

0x20

**Description**

L2 Cache write bus width in bytes used to calculate per-access timing annotations.

**subcluster0.cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**subcluster0.cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**subcluster0.cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**subcluster0.cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**subcluster0.cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**subcluster0.cpuX.semihosting-T32\_HLT****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**subcluster0.cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**subcluster0.cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**subcluster0.cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**subcluster0.cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**subcluster0.cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**subcluster0.cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**subcluster0.cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**subcluster0.cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**subcluster0.cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**subcluster0.cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**subcluster0.cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**subcluster0.dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

**subcluster0.dcache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**subcluster0.dcache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**subcluster0.dcache-size****Type**

int

**Default value**

0x8000

**Description**

L1 D-Cache size in bytes.

**subcluster0.dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

**subcluster0.dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

**subcluster0.dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. `dcache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

**subcluster0.ete.CLAIMTAGS****Type**

int

**Default value**

0x4

**Description**

Number of claim tags.

**subcluster0.ete.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**subcluster0.ete.PIDR\_CM0D****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CM0D value.

**subcluster0.ete.PIDR\_REVAND****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVAND value.

**subcluster0.ete.PIDR\_REVISION****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVISION value.

**subcluster0.ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**subcluster0.ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**subcluster0.ete.RETSTACK****Type**

int

**Default value**

0x3

**Description**

Return stack depth.

**subcluster0.ete.REVISION****Type**

int

**Default value**

0x0

**Description**

TRCIDR1 revision value.

**subcluster0.ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**subcluster0.ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**subcluster0.ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**subcluster0.ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**subcluster0.ete.TRCRSRTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCRSR.TA value for a forcibly traced exception.

**subcluster0.force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**subcluster0.force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**subcluster0.force\_zero\_mpam\_partid\_and\_pmg****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect.  
1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**subcluster0.has\_actlr2****Type**

bool

**Default value**

0x1

**Description**

If true ACLTR2 exists and ACTLR2(NS) is aliased to ACTLR\_EL1[63:32].

**subcluster0.has\_dot\_product****Type**

int

**Default value**

0x2

**Description**

Possible values of this parameter are: - 1, feature not implemented. - 2, feature is implemented.

**subcluster0.has\_ete****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**subcluster0.icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

**subcluster0.icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

**subcluster0.icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

**subcluster0.icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

**subcluster0.icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

**`subcluster0.icache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

**`subcluster0.icache-size`****Type**

int

**Default value**

0x8000

**Description**

L1 I-Cache size in bytes.

**`subcluster0.invalidate_code_cache_on_icache_cmo`****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

**`subcluster0.memory_tagging_support_level`****Type**

int

**Default value**

0x3

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

**subcluster0.pmu-num\_counters****Type**

int

**Default value**

0x6

**Description**

Number of PMU counters implemented.

**subcluster0.ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster0.ras\_extra\_configurations****Type**

string

**Default value**

```
"[ { \"Index\": 1, \"ERXMISCO_mask\": 0xFFFFc0003fc3, \"ERXMISC1_mask\": 0x03F870003FF30f07, \"ERXPFGCTL_reset\": 0x1000 }, { \"Index\": 2, \"ERXMISCO_mask\": 0xFFFFe007ffc0, \"ERXMISCO_reset\": 0x2, \"ERXSTATUS_IERR_mask\": 0x300, \"ERXMISC1_mask\": 0x0FF8700FFFF31f0f, \"ERXPFGCTL_reset\": 0x1000 } ]"
```

**Description**

Miscellaneous configurations for error records. An array of JSON objects. Note for ERXCTLR\_EL1 register it only allows to define the mask value for the IMPDEF fields, ie bits [63:32] and bit 1, but its reset value applies on all fields. Note for ERXMISCn masks - these are 64 bit masks covering the 64 bit registers ERXMISCn\_EL1. E.g. [{"Index": 0, "ERXMISCO\_mask": 0x0, "ERXMISCO\_reset": 0x0, "ERXMISC1\_mask": 0x0, "ERXMISC1\_reset": 0x0, "ERXMISC2\_mask": 0x0, "ERXMISC2\_reset": 0x0, "ERXMISC3\_mask": 0x0, "ERXMISC3\_reset": 0x0, "ERXCTLR\_EL1\_mask": 0x0, "ERXCTLR\_EL1\_reset": 0x0}, {"Index": 1, "ERXMISCO\_mask": 0x0, "ERXMISCO\_reset": 0x0, "ERXSTATUS\_IERR\_mask": 0x300}].

**subcluster0.ras\_pfg\_clock\_mhz****Type**

int

**Default value**

0xc

**Description**

RAS Pseudo-Fault generation clock rate in MHz.

**subcluster0.revision\_number****Type**

int

**Default value**

0x0

**Description**

Revision number of TRM implemented by the model. Changing the value can change the model behaviour. Visible as the Variant field in MIDR/MIDR\_EL1. Corresponds to the revision number X in rXpY.

**subcluster0.tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster0.tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**subcluster0.treat\_PAC\_as\_NOP****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter. Treat Pointer Authentication as NOP. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are NOP. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

**subcluster0.walk\_cache\_latency****Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster1.CPUCFR****Type**

int

**Default value**

0x0

**Description**

Value of CPU Configuration Register.

**subcluster1.NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores in the subcluster. Total number of cores in cluster may not exceed 14.

**subcluster1.cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**subcluster1.cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**subcluster1.cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**subcluster1.cpuX.CFGTE****Type**

bool

**Default value**

0x0

**Description**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

**subcluster1.cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**subcluster1.cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**subcluster1.cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**subcluster1.cpuX.force-fpsid****Type**

bool

**Default value**

0x1

**Description**

Override the FPSID value.

**subcluster1.cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**subcluster1.cpuX.l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster1.cpuX.l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**subcluster1.cpuX.l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**subcluster1.cpuX.l2cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**subcluster1.cpuX.l2cache-size****Type**

int

**Default value**

0x100000

**Description**

L2 Cache size in bytes.

**subcluster1.cpuX.l2cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

**`subcluster1.cpuX.l2cache-snoop_issue_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

**`subcluster1.cpuX.l2cache-write_access_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

**`subcluster1.cpuX.l2cache-write_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

**`subcluster1.cpuX.max_code_cache_mb`****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**subcluster1.cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**subcluster1.cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**subcluster1.cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**subcluster1.cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**subcluster1.cpuX.semihosting-T32\_HLT****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**subcluster1.cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**subcluster1.cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**subcluster1.cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**subcluster1.cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**subcluster1.cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**subcluster1.cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**subcluster1.cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**subcluster1.cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**subcluster1.cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**subcluster1.cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**subcluster1.cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**subcluster1.dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**subcluster1.dcache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-size****Type**

int

**Default value**

0x10000

**Description**

L1 D-Cache size in bytes.

**subcluster1.dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster1.etc.CLAIMTAGS****Type**

int

**Default value**

0x4

**Description**

Number of claim tags.

**subcluster1.ete.ETE\_REVISION****Type**

int

**Default value**

0x1

**Description**

ETE revision: 0=ETEv1.0, 1=ETEv1.1, 2=ETEv1.2, 3=ETEv1.3.

**subcluster1.ete.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**subcluster1.ete.NumberOfRSPairs****Type**

int

**Default value**

0x8

**Description**

Number of resource selector pairs.

**subcluster1.ete.PIDR\_CM0D****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CM0D value.

**subcluster1.ete.PIDR\_REVAND****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVAND value.

**subcluster1.ete.PIDR\_REVISION****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVISION value.

**subcluster1.ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**subcluster1.ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**subcluster1.ete.RETSTACK****Type**

int

**Default value**

0x1

**Description**

Return stack depth.

**subcluster1.ete.REVISION****Type**

int

**Default value**

0x0

**Description**

TRCIDR1 revision value.

**subcluster1.ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**subcluster1.ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**subcluster1.ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**subcluster1.ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**subcluster1.ete.TRCSRSTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCSRSTA value for a forcibly traced exception.

**subcluster1.ete.TSMARK****Type**

bool

**Default value**

0x1

**Description**

Whether timestamp markers are supported.

**subcluster1.force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**subcluster1.force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**subcluster1.force\_zero\_mpam\_partid\_and\_pmg****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**subcluster1.has\_enhanced\_pan****Type**

int

**Default value**

0x2

**Description**

Implements Armv8.7 Enhanced PAN feature (FEAT\_PAN3). Possible values of this parameter are: - 1, feature is implemented if ARMv8.7 is enabled. - 2, feature is implemented.

**subcluster1.has\_ete****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**subcluster1.has\_large\_va****Type**

int

**Default value**

0x0

**Description**

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT\_LVA). Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.2 is enabled. - 2, feature is implemented.

**subcluster1.has\_statistical\_profiling****Type**

bool

**Default value**

0x0

**Description**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

**subcluster1.icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

**subcluster1.icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

**subcluster1.icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

**subcluster1.icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

**subcluster1.icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

**`subcluster1.icache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

**`subcluster1.icache-size`****Type**

int

**Default value**

0x10000

**Description**

L1 I-Cache size in bytes.

**`subcluster1.instruction_tlb_size`****Type**

int

**Default value**

0x0

**Description**

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

**`subcluster1.invalidate_code_cache_on_icache_cmo`****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE.  
Note: Enabling this parameter will reduce simulation performance.

**subcluster1.memory\_tagging\_support\_level****Type**

int

**Default value**

0x3

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

**subcluster1.pmu-num\_counters****Type**

int

**Default value**

0x6

**Description**

Number of PMU counters implemented.

**subcluster1.ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster1.stage12\_tlb\_size****Type**

int

**Default value**

0x80

**Description**

Number of stage1+2 tlb entries.

**subcluster1.tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster1.tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**subcluster1.treat\_PAC\_as\_NOP****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter. Treat Pointer Authentication as NOP. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are NOP. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

**subcluster1.walk\_cache\_latency****Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster2.CPUCFR****Type**

int

**Default value**

0x0

**Description**

Value of CPU Configuration Register.

**subcluster2.NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores in the subcluster. Total number of cores in cluster may not exceed 14.

**subcluster2.cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**subcluster2.cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**subcluster2.cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**subcluster2.cpuX.CFGTE****Type**

bool

**Default value**

0x0

**Description**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

**subcluster2.cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**subcluster2.cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**subcluster2.cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**subcluster2.cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-size****Type**

int

**Default value**

0x80000

**Description**

L2 Cache size in bytes.

**subcluster2.cpuX.l2cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-ways****Type**

int

**Default value**

0x8

**Description**

L2 Cache number of ways (sets are implicit from size).

**subcluster2.cpuX.l2cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster2.cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**subcluster2.cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**subcluster2.cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**subcluster2.cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**subcluster2.cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**subcluster2.cpuX.semihosting-T32\_HLT****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**subcluster2.cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**subcluster2.cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**subcluster2.cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**subcluster2.cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**subcluster2.cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**subcluster2.cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**subcluster2.cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**subcluster2.cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**subcluster2.cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**subcluster2.cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**subcluster2.cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**subcluster2.dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

**`subcluster2.dcache-maintenance_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

**`subcluster2.dcache-miss_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**`subcluster2.dcache-prefetch_enabled`****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

**`subcluster2.dcache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit

or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

#### **`subcluster2.dcache-read_latency`**

##### **Type**

int

##### **Default value**

0x0

##### **Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

#### **`subcluster2.dcache-size`**

##### **Type**

int

##### **Default value**

0x10000

##### **Description**

L1 D-Cache size in bytes.

#### **`subcluster2.dcache-snoop_data_transfer_latency`**

##### **Type**

int

##### **Default value**

0x0

##### **Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

#### **`subcluster2.dcache-write_access_latency`**

##### **Type**

int

##### **Default value**

0x0

##### **Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be

used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

#### **subcluster2.dcache-write\_latency**

##### **Type**

int

##### **Default value**

0x0

##### **Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

#### **subcluster2.ecv\_support\_level**

##### **Type**

int

##### **Default value**

0x2

##### **Description**

Implement Enhanced Counter Virtualization feature from ARMv8.6. 0, Not supported. 1, fully supported without CNTPOFF. 2, fully supported with CNTPOFF (FEAT\_ECV).

#### **subcluster2.ete.CLAIMTAGS**

##### **Type**

int

##### **Default value**

0x4

##### **Description**

Number of claim tags.

#### **subcluster2.ete.MAX\_INST\_PER\_Q**

##### **Type**

int

##### **Default value**

0x1

##### **Description**

Maximum limit for the number of instructions implied by a Q element.

#### **subcluster2.ete.NumberOfRSPairs**

##### **Type**

int

**Default value**

0x8

**Description**

Number of resource selector pairs.

**subcluster2.ete.PIDR\_CM0D****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CM0D value.

**subcluster2.ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**subcluster2.ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**subcluster2.ete.RETSTACK****Type**

int

**Default value**

0x3

**Description**

Return stack depth.

**subcluster2.ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**subcluster2.ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**subcluster2.ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**subcluster2.ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**subcluster2.ete.TRCRSRTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCRSR.TA value for a forcibly traced exception.

**subcluster2.ext\_abort\_so\_write\_ras\_type****Type**

int

**Default value**

0x2

**Description**

External Aborts are reported as RAS error type specified in this param. Values: 0 = NONE, 1 = UC, 2 = UEU, 3 = UEO , 4 = UER, 5 = CE.

**subcluster2.force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**subcluster2.force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**subcluster2.force\_zero\_mpam\_partid\_and\_pmg****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**subcluster2.has\_enhanced\_pan****Type**

int

**Default value**

0x2

**Description**

Implements Armv8.7 Enhanced PAN feature (FEAT\_PAN3) Possible values of this parameter are: - 1, feature is implemented if ARMv8.7 is enabled. - 2, feature is implemented.

**subcluster2.has\_ete****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**subcluster2.has\_mt\_pmu\_disable\_feature****Type**

int

**Default value**

0x0

**Description**

Implements Multi-threading PMU disable extension from ARMv8.6 (FEAT\_MTPMU). 0: FEAT\_MTPMU is disabled, 1: FEAT\_MTPMU is enabled if ARMv8.6 is implemented, 2: FEAT\_MTPMU is cherry-picked, 0xF: The feature is disabled and is represented by value 0xF in ID\_AA64DFR0\_EL1.MTPMU.

**subcluster2.has\_statistical\_profiling****Type**

bool

**Default value**

0x1

**Description**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

**subcluster2.has\_v8\_7\_spe\_inverted\_filtering****Type**

bool

**Default value**

0x0

**Description**

Where FEAT\_SPEv1p2 is implemented, whether inverted filtering by events is implemented (represented by PMISDR.FnE).

**subcluster2.has\_v8\_7\_spe\_previous\_branch\_target****Type**

bool

**Default value**

0x0

**Description**

Where FEAT\_SPEv1p2 is implemented, whether the optional branch target feature is implemented (FEAT\_SPE\_PBT).

**subcluster2.icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**subcluster2.icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

**subcluster2.icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state\_modelled=true.

**subcluster2.icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

**subcluster2.icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state\_modelled=true.

**subcluster2.icache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. icache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state\_modelled=true.

**subcluster2.icache-size****Type**

int

**Default value**

0x10000

**Description**

L1 I-Cache size in bytes.

**subcluster2.instruction\_tlb\_size****Type**

int

**Default value**

0x0

**Description**

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

**subcluster2.invalidate\_code\_cache\_on\_icache\_cmo****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE.  
Note: Enabling this parameter will reduce simulation performance.

**subcluster2.memory\_tagging\_support\_level****Type**

int

**Default value**

0x3

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

**subcluster2.mpam\_has\_altsp****Type**

bool

**Default value**

0x0

**Description**

MPAM Whether MPAMIDR\_EL1.HAS\_ALTSP bit is set or clear.

**subcluster2.mpamidr\_has\_force\_ns****Type**

int

**Default value**

0x0

**Description**

Whether MPAMIDR\_EL1.HAS\_FORCE\_NS bit is set or clear. Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.6 is enabled. - 2, feature is implemented.

**subcluster2.mpamidr\_has\_sdeflt****Type**

int

**Default value**

0x1

**Description**

Whether MPAMIDR\_EL1.HAS\_SDEFLT bit is set or clear. Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.6 is enabled. - 2, feature is implemented.

**subcluster2.mpamidr\_has\_tidr****Type**

int

**Default value**

0x1

**Description**

Whether MPAMIDR\_EL1.HAS\_TIDR bit is set or clear. Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.6 is enabled. - 2, feature is implemented.

**subcluster2.pmu-num\_counters****Type**

int

**Default value**

0x1f

**Description**

Number of PMU counters implemented.

**subcluster2.ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster2.stage12\_tlb\_size****Type**

int

**Default value**

0x80

**Description**

Number of stage1+2 tlb entries.

**subcluster2.tcr\_txsz\_undersize\_should\_fault****Type**

bool

**Default value**

0x0

**Description**

If large VA is not supported, Whether undersized TxSZ value should generate translation fault.

**subcluster2.tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster2.tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**subcluster2.treat\_PAC\_as\_NOP****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter. Treat Pointer Authentication as NOP. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are NOP. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

**subcluster2.walk\_cache\_latency**

**Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

3.5.45 **ARMCortexA710CT**

ARMCortexA710CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-359: IP revisions support**

Revision	Quality level
r2p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**About ARMCortexA710CT**

The model supports the following features:

- DynamIQ Shared Unit-110 (DSU-110) system registers.
- L2 cache is supported at the per-core level only and there is no implementation of Core-Complex with shared L2 cache yet.
- PChannel for the cluster and for each core.
- BROADCASTPERSIST pin.
- Optional peripheral port.
- L3Cache partition.
- Per-core clock.
- Utility bus.
- AArch32 at EL0.

Support for the following features is planned for a future release:

- Transporting architectural metadata tags over TLM2 (OSCI) and AMBA-PV (the Arm TLM2 extensions) bus protocols.
- BROADCASTCACHEMAINTPOU pin.
- COREINSTRRET, COREINSTRRUN, and nPMBIRQ signals.

The following features will not be implemented:

- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- Error correction or detection features.
- Self-test features (MBIST).
- Snoop filtering.

This model supports the Arm®v8-A Cryptographic Extensions, which requires the crypto plug-in (crypto.dll or crypto.so) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

## Iris and MTI instances for ARM Cortex-A710CT

This model has the following Iris instances:

**Table 3-360: ARM Cortex-A710CT Iris instances**

InstanceName	ComponentName
ARM Cortex-A710CT	Cluster_ARM_Cortex-A710
ARM Cortex-A710CT.AMU	PVBusLogger
ARM Cortex-A710CT.AMU.mapper	PVBusMapper
ARM Cortex-A710CT.DAP	PVBusLogger
ARM Cortex-A710CT.DAP.mapper	PVBusMapper
ARM Cortex-A710CT.DSU	DSU
ARM Cortex-A710CT.DSU.PPU_cluster	PPUv1
ARM Cortex-A710CT.DSU.PPU_cluster.busslave	PVBusSlave
ARM Cortex-A710CT.DSU.PPU_core0	PPUv1
ARM Cortex-A710CT.DSU.PPU_core0.busslave	PVBusSlave
ARM Cortex-A710CT.DSU.mpam_busslave	PVBusSlave
ARM Cortex-A710CT.DSU.shared_cache	PVCache
ARM Cortex-A710CT.DSU.shared_cache.upstream[0]	PVBusSlave
ARM Cortex-A710CT.DSU.shared_cache.upstream[1]	PVBusSlave
ARM Cortex-A710CT.DSU.shared_cache.upstream[2]	PVBusSlave
ARM Cortex-A710CT.DSU.shared_cache.upstream[3]	PVBusSlave
ARM Cortex-A710CT.DSU.utility_slave[0]	PVBusSlave
ARM Cortex-A710CT.MMAP	PVBusLogger

InstanceName	ComponentName
ARMCortexA710CT.MMAP.mapper	PVBusMapper
ARMCortexA710CT.RAS	PVBusLogger
ARMCortexA710CT.RAS.mapper	PVBusMapper

ARMCortexA710CT.ext_bus.mapper	PVBusMapper
ARMCortexA710CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA710CT.global_debug_rom	debug_rom
ARMCortexA710CT.secondary_debug_rom	debug_rom
ARMCortexA710CT.sve	ScalableVectorExtension

This model has the following MTI trace components:

**Table 3-361: ARMCortexA710CT MTI instances**

InstanceName	ComponentName
ARMCortexA710CT.AMU	PVBusLogger
ARMCortexA710CT.AMU.mapper	PVBusMapper
ARMCortexA710CT.DAP	PVBusLogger
ARMCortexA710CT.DAP.mapper	PVBusMapper
ARMCortexA710CT.DSU	DSU
ARMCortexA710CT.DSU.PPU_cluster	PPUv1
ARMCortexA710CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexA710CT.DSU.PPU_core0	PPUv1
ARMCortexA710CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexA710CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA710CT.DSU.shared_cache	PVCache
ARMCortexA710CT.DSU.shared_cache.upstream[0]	PVBusSlave
ARMCortexA710CT.DSU.shared_cache.upstream[1]	PVBusSlave
ARMCortexA710CT.DSU.shared_cache.upstream[2]	PVBusSlave
ARMCortexA710CT.DSU.shared_cache.upstream[3]	PVBusSlave

InstanceName	ComponentName
ARMCortexA710CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexA710CT.MMAP	PVBusLogger
ARMCortexA710CT.MMAP.mapper	PVBusMapper
ARMCortexA710CT.RAS	PVBusLogger
ARMCortexA710CT.RAS.mapper	PVBusMapper
ARMCortexA710CT.cpu0	ARM_Cortex-A710
ARMCortexA710CT.cpu0.UTLB	TLB
ARMCortexA710CT.cpu0.l1dcache	PVCache
ARMCortexA710CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA710CT.cpu0.l1icache	PVCache
ARMCortexA710CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA710CT.cpu0.l2cache	PVCache
ARMCortexA710CT.cpu0.l2cache.upstream[0]	PVBusSlave
ARMCortexA710CT.cpu0.l2cache.upstream[1]	PVBusSlave
ARMCortexA710CT.ext_bus	PVBusLogger
ARMCortexA710CT.ext_bus.mapper	PVBusMapper
ARMCortexA710CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

## Ports for ARMCortexA710CT

**Table 3-362: Ports**

Name	Protocol	Type	Description
acp_s	PVBus	Slave	AXI ACP slave port.
AEND0MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	Signal	Slave	CHI defined pins.
broadcastcachemaint	Signal	Slave	ACE defined pins.
broadcastouter	Signal	Slave	ACE defined pins.
broadcastpersist	Signal	Slave	CHI defined pins.

Name	Protocol	Type	Description
cfgend[12]	Signal	Slave	This signal is for EE bit initialisation.
cfgsdisable	Signal	Slave	This signal disables write access to some secure Interrupt Controller registers.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsn_pchannel	PChannel	Master	Cluster PCSM signal
cluster_powerdown_out	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the cluster power info
clusterid	Value	Slave	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.
clusterpmuirq	Signal	Master	DynamlQ pmu irq
CNTHPIRQ[12]	Signal	Master	Timer signals to SOC.
CNTHPSIRQ[12]	Signal	Master	Timer signals to SOC
CNTHVIRQ[12]	Signal	Master	Timer signals to SOC.
CNTHVSIRQ[12]	Signal	Master	Timer signals to SOC
CNTPNSIRQ[12]	Signal	Master	Timer signals to SOC.
CNTPSIRQ[12]	Signal	Master	Timer signals to SOC.
cntvalueb	CounterInterface	Slave	Interface to SoC level counter module.
CNTVIRQ[12]	Signal	Master	Timer signals to SOC.
commirq[12]	Signal	Master	Interrupt signal from debug communications channel.
core_clk_in[12]	ClockSignal	Slave	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsn_pchannel[12]	PChannel	Master	Core PCSM signals
core_powerdown_out[12]	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the core power info
coreerrirq[12]	Signal	Master	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq[12]	Signal	Master	Fault indicator for a detected 1 or 2 bit ECC error

Name	Protocol	Type	Description
cryptodisable[12]	Signal	Slave	Disable cryptography extensions after reset.
cti[12]	v8EmbeddedCrossTrigger_controlprotocol	Master	Cross trigger matrix port.
ctidbgirq[12]	Signal	Master	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	Signal	Slave	External debug interface.
dbgnopwrdown[12]	Signal	Master	No power-down request.
dbgpwrupreq[12]	Signal	Master	Debug power up request.
defaultMP	Signal	Slave	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	PVBus	Slave	External debug interface.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
fiq[12]	Signal	Slave	This signal drives the CPUs fast-interrupt handling.
gicreset	Signal	Master	An output from PPU that can be used to reset GICCLK domain components
gicv3_redistributor_s[12]	GICv3Comms	Slave	GICv3 AXI-stream port.
irq[12]	Signal	Slave	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	PVBus	Slave	External debug interface.
pmuirq[12]	Signal	Master	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	Signal	Master	PPU cluster interrupt.
ppu_cluster_wakerequest	Signal	Slave	PPU cluster wake request signal.
ppu_core_irq[12]	Signal	Master	PPU core interrupt.
ppu_core_wakerequest[12]	Signal	Slave	PPU Core wake request signals.
presetdbg	Signal	Slave	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	PVBus	Master	The core will generate bus requests on this port.
pvbus_periph_m	PVBus	Master	The core can generate peripheral bus request on this port.
rei[12]	Signal	Slave	Per core RAM Error Interrupt.
reset	Signal	Slave	Reset signal to cluster.
rvbaraddr[12]	Value_64	Slave	Reset vector base address.
sci_m	SystemCoherencyInterface	Master	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei[12]	Signal	Slave	Per core System Error physical pins.

Name	Protocol	Type	Description
spiden	Signal	Slave	External debug interface.
ticks[12]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq[12]	Signal	Master	Interrupt signal from the trace buffer unit.
utility_bus_s	PVBus	Slave	Utility bus slave
vcpumntirq[12]	Signal	Master	Interrupt signal for virtual CPU maintenance IRQ.
vfiq[12]	Signal	Slave	Virtualised FIQ.
virq[12]	Signal	Slave	Virtualised IRQ.
virtio_s	PVBus	Slave	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei[12]	Signal	Slave	Per core virtual System Error physical pins.

## Parameters for ARM Cortex A710CT

### AEND0\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

### AEND1\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

### AEND2\_DEFAULT

#### Type

int

#### Default value

0x0

**Description**

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

**AEND3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

**ASTART0\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

**ASTART1\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

**ASTART2\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

**ASTART3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

**BROADCASTATOMIC****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

**BROADCASTCACHEMAINT****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

**BROADCASTOUTER****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

**BROADCASTPERSIST****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

**CLUSTER\_ID****Type**

int

**Default value**

0x0

**Description**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled****Type**

int

**Default value**

0x1

**Description**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. Changing this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain CMOs even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required .

**GICDISABLE****Type**

bool

**Default value**

0x1

**Description**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

**NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores per cluster.

**core\_power\_on\_by\_default****Type**

bool

**Default value**

0x0

**Description**

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPU which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

**cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-size****Type**

int

**Default value**

0x80000

**Description**

L2 Cache size in bytes.

**cpuX.l2cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**cpuX.semihosting-T32\_HLT****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**`dcache-prefetch_enabled`****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

**`dcache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**`dcache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**`dcache-size`****Type**

int

**Default value**

0x8000

**Description**

L1 D-Cache size in bytes.

**dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. `dcache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

**default\_opmode****Type**

int

**Default value**

0x4

**Description**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

**diagnostics****Type**

bool

**Default value**

0x0

**Description**

Enable DynamIQ diagnostic messages.

**enable\_simulation\_performance\_optimizations****Type**

bool

**Default value**

0x1

**Description**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of `stage12_tlb_size` parameter to 1024).

**etc.CLAIMTAGS****Type**

int

**Default value**

0x20

**Description**

Number of claim tags.

**ete.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**ete.NumberOfRSPairs****Type**

int

**Default value**

0x8

**Description**

Number of resource selector pairs.

**ete.PIDR\_CM0D****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CM0D value.

**ete.PIDR\_REVAND****Type**

int

**Default value**

0x1

**Description**

TRCPIDR REVAND value.

**ete.PIDR\_REVISION****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVISION value.

**ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**ete.RETSTACK****Type**

int

**Default value**

0x3

**Description**

Return stack depth.

**ete.REVISION****Type**

int

**Default value**

0x2

**Description**

TRCIDR1 revision value.

**ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**ete.TRCSRSTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCSRSTA value for a forcibly traced exception.

**ext\_abort\_device\_read\_is\_sync****Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRE read external aborts.

**ext\_abort\_device\_write\_is\_sync****Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRE write external aborts.

**ext\_abort\_so\_read\_is\_sync****Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRnE read external aborts.

**ext\_abort\_so\_write\_is\_sync****Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRnE write external aborts.

**force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**`force_zero_mpam_partid_and_pmg`****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**`has_acp`****Type**

bool

**Default value**

0x0

**Description**

If true, Accelerator Coherency Port is configured.

**`has_ete`****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**`has_peripheral_port`****Type**

bool

**Default value**

0x0

**Description**

If true, an additional AXI peripheral port is configured.

**icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

**icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state\_modelled=true.

**icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

**icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

**`icache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

**`icache-size`****Type**

int

**Default value**

0x8000

**Description**

L1 I-Cache size in bytes.

**`icache-state_modelled`****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**`invalidate_code_cache_on_icache_cmo`****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE.  
Note: Enabling this parameter will reduce simulation performance.

**l3cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**l3cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**l3cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**l3cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read\_latency is set. This is in addition to the hit

or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

### **l3cache-read\_latency**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l3cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

### **l3cache-size**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

L3 Cache size in bytes.

### **l3cache-snoop\_data\_transfer\_latency**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

### **l3cache-snoop\_issue\_latency**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

**l3cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**l3cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**memory\_tagging\_support\_level****Type**

int

**Default value**

0x2

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).

**mpmm\_accumulator\_multiplier****Type**

int

**Default value**

0x1

**Description**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator. A value of n means the accumulator will use (n \* accumulator value) to calculate the mpmm threshold (MPMM). This is provided as a fast model workaround to handle cases where execution of quantum in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

**num\_nodes****Type**

int

**Default value**

0x1

**Description**

Number of transport nodes. Zero implies direct-connect configuration.

**pchannel\_treat\_simreset\_as\_poreset****Type**

bool

**Default value**

0x0

**Description**

Register core as ON state to cluster with simulation reset.

**periph\_address\_end****Type**

int

**Default value**

0x0

**Description**

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

**periph\_address\_start****Type**

int

**Default value**

0x0

**Description**

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

**ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**treat-dcache-cmos-to-pou-as-nop****Type**

int

**Default value**

0x0

**Description**

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

**walk\_cache\_latency****Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

### 3.5.46 ARMCortexA715CT

ARMCortexA715CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-363: IP revisions support**

Revision	Quality level
r1p2	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### About ARMCortexA715CT

The model supports the following features:

- DynamIQ (DSU) system registers.
- DynamIQ r3p0.
- L2 cache is supported at the per-core level only and there is no implementation of Core-Complex with shared L2 cache yet.
- P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- BROADCASTPERSIST pin.
- Utility bus.
- Support for Interrupt signals from SPE is added as pmbirq[8].

Support for the following features is planned for a future release:

- TRBE.
- Transporting architectural metadata tags over TLM2 (OSCI) and AMBA-PV (TLM2 extensions from Arm) bus protocols.
- Core-Complex.
- BROADCASTCACHEMAINTPOU pin.
- COREINSTRRET, COREINSTRRUN, or nPMBIRQ signals.
- Each thread has its own L1Cache and L2Cache instead of a common cache that is shared by all threads of the core.
- Per-thread parameters are not yet supported but signals are implemented.

The `cfgsdisable` signal will be removed in a future release.

The following features will not be implemented:

- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Cache stashing capability.
- Embedded Logic Analyzer (ELA).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

## Limitations

- Some of the SVE instructions do not raise undefined exceptions when SP is used as a source register.

## Iris and MTI instances for ARMCortexA715CT

This model has the following Iris instances:

**Table 3-364: ARMCortexA715CT Iris instances**

InstanceName	ComponentName
ARMCortexA715CT	Cluster_ARM_Cortex-A715
ARMCortexA715CT.AMU	PVBusLogger
ARMCortexA715CT.AMU.mapper	PVBusMapper
ARMCortexA715CT.DAP	PVBusLogger
ARMCortexA715CT.DAP.mapper	PVBusMapper
ARMCortexA715CT.DSU	DSU
ARMCortexA715CT.DSU.PPU_cluster	PPUv1
ARMCortexA715CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexA715CT.DSU.PPU_core0	PPUv1
ARMCortexA715CT.DSU.PPU_core0.busslave	PVBusSlave

InstanceName	ComponentName
ARMCortexA715CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA715CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA715CT.DSU.shared_cache	PVCache
ARMCortexA715CT.DSU.shared_cache.upstream[0]	PVBusSlave
ARMCortexA715CT.DSU.shared_cache.upstream[1]	PVBusSlave
ARMCortexA715CT.DSU.shared_cache.upstream[2]	PVBusSlave
ARMCortexA715CT.DSU.shared_cache.upstream[3]	PVBusSlave
ARMCortexA715CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexA715CT.MMAP	PVBusLogger
ARMCortexA715CT.MMAP.mapper	PVBusMapper
ARMCortexA715CT.RAS	PVBusLogger
ARMCortexA715CT.RAS.mapper	PVBusMapper
ARMCortexA715CT.cpu0	ARM_Cortex-A715
ARMCortexA715CT.cpu0.UTLB	TLB
ARMCortexA715CT.cpu0.debug_rom	debug_rom
ARMCortexA715CT.cpu0.dtlb	TLB
ARMCortexA715CT.cpu0.l1dcache	PVCache
ARMCortexA715CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA715CT.cpu0.l1icache	PVCache
ARMCortexA715CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexA715CT.cpu0.l2cache	PVCache
ARMCortexA715CT.cpu0.l2cache.upstream[0]	PVBusSlave
ARMCortexA715CT.cpu0.l2cache.upstream[1]	PVBusSlave
ARMCortexA715CT.ext_bus	PVBusLogger
ARMCortexA715CT.ext_bus.mapper	PVBusMapper
ARMCortexA715CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA715CT.global_debug_rom	debug_rom
ARMCortexA715CT.secondary_debug_rom	debug_rom
ARMCortexA715CT.sve	ScalableVectorExtension

This model has the following MTI trace components:

**Table 3-365: ARMCortexA715CT MTI instances**

InstanceName	ComponentName
ARMCortexA715CT.AMU	PVBusLogger
ARMCortexA715CT.AMU.mapper	PVBusMapper
ARMCortexA715CT.DAP	PVBusLogger
ARMCortexA715CT.DAP.mapper	PVBusMapper

ARMCortexA715CT.cpu0.l2cache.upstream[0]	PVBusSlave
ARMCortexA715CT.cpu0.l2cache.upstream[1]	PVBusSlave
ARMCortexA715CT.ext_bus	PVBusLogger
ARMCortexA715CT.ext_bus.mapper	PVBusMapper
ARMCortexA715CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

## Ports for ARMCortexA715CT

**Table 3-366: Ports**

Name	Protocol	Type	Description
acp_s	PVBus	Slave	AXI ACP slave port.
AEND0MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).

Name	Protocol	Type	Description
ASTART0MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	Signal	Slave	CHI defined pins.
broadcastcachemaint	Signal	Slave	ACE defined pins.
broadcastouter	Signal	Slave	ACE defined pins.
broadcastpersist	Signal	Slave	CHI defined pins.
cfgend[12]	Signal	Slave	This signal is for EE bit initialisation.
cfgsdisable	Signal	Slave	This signal disables write access to some secure Interrupt Controller registers.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsn_pchannel	PChannel	Master	Cluster PCSM signal
cluster_powerdown_out	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the cluster power info
clusterid	Value	Slave	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.
clusterpmuirq	Signal	Master	DynamlQ pmu irq
CNTHPIRQ[12]	Signal	Master	Timer signals to SOC.
CNTHPSIRQ[12]	Signal	Master	Timer signals to SOC
CNTHVIRQ[12]	Signal	Master	Timer signals to SOC.
CNTHVSIRQ[12]	Signal	Master	Timer signals to SOC
CNTPNSIRQ[12]	Signal	Master	Timer signals to SOC.
CNTPSIRQ[12]	Signal	Master	Timer signals to SOC.
cntvalueb	CounterInterface	Slave	Interface to SoC level counter module.
CNTVIRQ[12]	Signal	Master	Timer signals to SOC.

Name	Protocol	Type	Description
commirq[12]	Signal	Master	Interrupt signal from debug communications channel.
core_clk_in[12]	ClockSignal	Slave	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsmpchannel[12]	PChannel	Master	Core PCSM signals
core_powerdown_out[12]	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the core power info
coreerrirq[12]	Signal	Master	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq[12]	Signal	Master	Fault indicator for a detected 1 or 2 bit ECC error
cryptodisable[12]	Signal	Slave	Disable cryptography extensions after reset.
cti[12]	v8EmbeddedCrossTrigger_controlprotocol	Master	Cross trigger matrix port.
ctidbgirq[12]	Signal	Master	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	Signal	Slave	External debug interface.
dbgnopwrdown[12]	Signal	Master	No power-down request.
dbgprupreq[12]	Signal	Master	Debug power up request.
defaultMP	Signal	Slave	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	PVBus	Slave	External debug interface.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
fiq[12]	Signal	Slave	This signal drives the CPUs fast-interrupt handling.
gicreset	Signal	Master	An output from PPU that can be used to reset GICCLK domain components
gicv3_redistributor_s[12]	GICv3Comms	Slave	GICv3 AXI-stream port.
irq[12]	Signal	Slave	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	PVBus	Slave	External debug interface.
pmbirq[12]	Signal	Master	Interrupt signal from the statistical profiling unit.
pmuirq[12]	Signal	Master	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	Signal	Master	PPU cluster interrupt.
ppu_cluster_wakerequest	Signal	Slave	PPU cluster wake request signal.
ppu_core_irq[12]	Signal	Master	PPU core interrupt.

Name	Protocol	Type	Description
ppu_core_wakerequest[12]	Signal	Slave	PPU Core wake request signals.
presetdbg	Signal	Slave	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	PVBus	Master	The core will generate bus requests on this port.
pvbus_periph_m	PVBus	Master	The core can generate peripheral bus request on this port.
rei[12]	Signal	Slave	Per core RAM Error Interrupt.
reset	Signal	Slave	Reset signal to cluster.
rvbaraddr[12]	Value_64	Slave	Reset vector base address.
sci_m	SystemCoherencyInterface	Master	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei[12]	Signal	Slave	Per core System Error physical pins.
spiden	Signal	Slave	External debug interface.
ticks[12]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq[12]	Signal	Master	Interrupt signal from the trace buffer unit.
utility_bus_s	PVBus	Slave	Utility bus slave
vcpumntirq[12]	Signal	Master	Interrupt signal for virtual CPU maintenance IRQ.
vfiq[12]	Signal	Slave	Virtualised FIQ.
virq[12]	Signal	Slave	Virtualised IRQ.
virtio_s	PVBus	Slave	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei[12]	Signal	Slave	Per core virtual System Error physical pins.

## Parameters for ARM Cortex A715CT

### AEND0\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

**AEND1\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

**AEND2\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

**AEND3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

**ASTART0\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

**ASTART1\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

**ASTART2\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

**ASTART3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

**BROADCASTATOMIC****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

**BROADCASTCACHEMAINT****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

**BROADCASTOUTER****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

**BROADCASTPERSIST****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

**CLUSTER\_ID****Type**

int

**Default value**

0x0

**Description**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled****Type**

int

**Default value**

0x1

**Description**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. Changing this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain CMOs even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required .

**CPUCFR****Type**

int

**Default value**

0x0

**Description**

Value of CPU Configuration Register.

**GICDISABLE****Type**

bool

**Default value**

0x1

**Description**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

**NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores per cluster.

**bus\_type****Type**

int

**Default value**

0x0

**Description**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

**core\_power\_on\_by\_default****Type**

bool

**Default value**

0x0

**Description**

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPU which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

**cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**cpuX.CFGTE****Type**

bool

**Default value**

0x0

**Description**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

**cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**cpuX.force-fpsid****Type**

bool

**Default value**

0x1

**Description**

Override the FPSID value.

**cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-maintenance_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-miss_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-size`****Type**

int

**Default value**

0x80000

**Description**

L2 Cache size in bytes.

**`cpuX.l2cache-snoop_data_transfer_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-snoop_issue_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-write_access_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**  
A64 HLT number for semihosting calls.

**cpuX.semihosting-ARM\_SVC**

**Type**  
int

**Default value**  
0x123456

**Description**  
A32 SVC number for semihosting calls.

**cpuX.semihosting-T32\_HLT**

**Type**  
int

**Default value**  
0x3c

**Description**  
T32 HLT number for semihosting calls.

**cpuX.semihosting-Thumb\_SVC**

**Type**  
int

**Default value**  
0xab

**Description**  
T32 SVC number for semihosting calls.

**cpuX.semihosting-cmd\_line**

**Type**  
string

**Default value**  
""

**Description**  
Command line available to semihosting calls.

**cpuX.semihosting-cwd**

**Type**  
string

**Default value**  
""

**Description**

Base directory for semihosting file access.

**cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**dcache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

**dcache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**dcache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**dcache-size****Type**

int

**Default value**

0x8000

**Description**

L1 D-Cache size in bytes.

**dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

**`dcache-write_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. `dcache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

**`default_opmode`****Type**

int

**Default value**

0x4

**Description**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

**`diagnostics`****Type**

bool

**Default value**

0x0

**Description**

Enable DynamIQ diagnostic messages.

**`enable_simulation_performance_optimizations`****Type**

bool

**Default value**

0x1

**Description**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

**error\_record\_feature\_register****Type**

string

**Default value**

```
"[{\"ED\":0x2,\"IMPDEF_3_2\":0x1,\"UI\":0x2,\"FI\":0x2,\"UE\":0x1,\"CFI\":0x2,\"CEC\":0x2,\"RP\":0x1,\"DUI\":0x0,\"CEO\":0x0,\"INJ\":0x1,\"CI\":0x2,\"TS\":0x0,\"Visibility\":\"Cluster\"},{\"ED\":0x2,\"UI\":0x2,\"FI\":0x2,\"UE\":0x1,\"CFI\":0x2,\"CEC\":0x2,\"RP\":0x1,\"DUI\":0x0,\"CEO\":0x0,\"INJ\":0x1,\"CI\":0x0,\"TS\":0x0}]\"
```

**Description**

RAS feature register values. An array of JSON objects. The JSON schema for the array is: [{"ED":0x0, "IMPDEF\_3\_2":0x0, "UI":0x0, "FI":0x0, "UE":0x0, "CFI":0x0, "CEC":0x0, "RP":0x0, "DUI":0x0, "CEO":0x0, "CI":0x0, "TS":0x0, "INJ":0x0, "FRX":0x0, "UC":0x0, "UEU":0x0, "UER":0x0, "UEO":0x0, "DE":0x0, "CE":0x0, "Visibility":"Core"},other\_feature\_register\_values]. Where ED,UI,FI,CE and UE have valid values between 0x0 - 0x3. CFI and DUI have valid values 0x0, 0x2 and 0x3. CEC has valid values 0x0,0x2 or 0x4. RP,CEO,INJ,FRX,UC,UEU,UER,UEO,DE has valid values 0x0 or 0x1. CI and TS has valid values of 0x0, 0x1 and 0x2. Visibility has valid values "Core" or "Cluster".

**ete.CLAIMTAGS****Type**

int

**Default value**

0x4

**Description**

Number of claim tags.

**ete.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**ete.NumberOfRSPairs****Type**

int

**Default value**

0x8

**Description**

Number of resource selector pairs.

**ete.PIDR\_CM0D****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CM0D value.

**ete.PIDR\_REVAND****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVAND value.

**ete.PIDR\_REVISION****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVISION value.

**ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**ete.RETSTACK****Type**

int

**Default value**

0x3

**Description**

Return stack depth.

**ete.REVISION****Type**

int

**Default value**

0x1

**Description**

TRCIDR1 revision value.

**ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**ete.TRCSRSTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCSRSTA value for a forcibly traced exception.

**force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**`force_zero_mpam_partid_and_pmg`****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**`has_enhanced_pan`****Type**

int

**Default value**

0x2

**Description**

Implements Armv8.7 Enhanced PAN feature (FEAT\_PAN3) Possible values of this parameter are: - 1, feature is implemented if ARMv8.7 is enabled. - 2, feature is implemented.

**`has_ete`****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**`has_large_va`****Type**

int

**Default value**

0x0

**Description**

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT\_LVA).  
Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.2 is enabled. - 2, feature is implemented.

**has\_peripheral\_port****Type**

bool

**Default value**

0x0

**Description**

If true, an additional AXI peripheral port is configured.

**has\_statistical\_profiling****Type**

bool

**Default value**

0x0

**Description**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

**icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

**icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state\_modelled=true.

**icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

**icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state\_modelled=true.

**icache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. icache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state\_modelled=true.

**icache-size****Type**

int

**Default value**

0x8000

**Description**

L1 I-Cache size in bytes.

**icache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**instruction\_tlb\_size****Type**

int

**Default value**

0x0

**Description**

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

**invalidate\_code\_cache\_on\_icache\_cmo****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE.  
Note: Enabling this parameter will reduce simulation performance.

**l3cache-has\_mpam****Type**

bool

**Default value**

0x1

**Description**

L3 Cache has MPAM support.

**l3cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**l3cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**l3cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**l3cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**l3cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. l3cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**l3cache-size****Type**

int

**Default value**

0x80000

**Description**

L3 Cache size in bytes.

**l3cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**l3cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**l3cache-ways****Type**

int

**Default value**

0x10

**Description**

L3 Cache number of ways (sets are implicit from size).

**l3cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**l3cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**memory\_tagging\_support\_level****Type**

int

**Default value**

0x3

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

**mpmm\_accumulator\_multiplier****Type**

int

**Default value**

0x1

**Description**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator. A value of  $n$  means the accumulator will use  $(n * \text{accumulator value})$  to calculate the mpmm threshold (MPMM). This is provided as a fast model workaround to handle cases where execution of quantum in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

**num\_nodes****Type**

int

**Default value**

0x1

**Description**

Number of transport nodes. Zero implies direct-connect configuration.

**pmu-num\_counters****Type**

int

**Default value**

0x6

**Description**

Number of PMU counters implemented.

**pseudo\_fault\_generation\_feature\_register****Type**

string

**Default value**

```
"[{\"OF\":true, \"UC\":true, \"UEU\":false, \"UER\":false, \"UEO\":false, \"DE\":0x1, \"CE\":0x1,
  \"CI\":true, \"ER\":false, \"PN\":true, \"AV\":false, \"MV\":true, \"SYN\":true, \"R\":true},{\"OF
  \":false, \"UC\":true, \"UEU\":false, \"UER\":false, \"UEO\":false, \"DE\":0x1, \"CE\":0x1, \"CI
  \":false, \"ER\":false, \"PN\":false, \"AV\":false, \"MV\":false, \"SYN\":false, \"R\":true}]"
```

**Description**

ARMv8.4 Standard Pseudo-fault generation feature register values. JSON schema for the parameter value is: [{"OF":false, "UC":false, "UEU":false, "UER":false, "UEO":false, "DE":false, "CE":0x0, "CI":false, "ER":false, "PN":false, "AV":false, "MV":false, "SYN":false, "R":false, "NA":false}, other\_pseudo-fault\_generating\_features\_register\_values]. Where OF, UC, UEU, UER, UEO, DE, CI, ER, PN, AV, MV, SYN, and R have valid false(NOT\_SUPPORTED) and true(FEATURE\_CONTROLLABLE), where CE can have 0(NOT\_SUPPORTED), 1(NONSPECIFIC\_CE\_SUPPORTED) and 3(TRANSIENT\_OR\_PERSISTENT\_CE\_SUPPORTED) and NA can have false(component fakes detection on next access) or true(component fakes detection spontaneously). Effective only when ERXFR's INJ field allows it or has\_ras\_fault\_injection is true.

**ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**stage12\_tlb\_size****Type**

int

**Default value**

0x80

**Description**

Number of stage1+2 tlb entries.

**tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**treat\_PAC\_as\_NOP****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter. Treat Pointer Authentication as NOP. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are NOP. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

**walk\_cache\_latency**

**Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

3.5.47 **ARMCortexA720AECT**

ARMCortexA720AECT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-367: IP revisions support**

Revision	Quality level
r0p0	Preliminary support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**AE-specific features implemented**

The only AE-specific features implemented in the model are Split-Lock and Lock-Step, with the following limitations:

- The implementation of Split-Lock and Lock-Step in the model is simply a halving of the number of cores available.
- Lock-step is implemented by a parameter that can be true or false for the entire execution only, rather than by a signal that can be enabled during execution.

As the model does not implement true Split-Lock functionality, the ports and parameters are contiguous. For example, for a 4-core CPU with Split-Lock enabled, cpu0 and cpu1 identify the available cores and associated ports, not cpu0 and cpu2.

- Hybrid mode is not modeled in the DSU.

**Iris and MTI instances for ARMCortexA720AECT**

This model has the following Iris instances:

**Table 3-368: ARMCortexA720AECT Iris instances**

InstanceName	ComponentName
ARMCortexA720AECT	Cluster_ARM_Cortex-A720AE
ARMCortexA720AECT.AMU	PVBusLogger
ARMCortexA720AECT.AMU.mapper	PVBusMapper
ARMCortexA720AECT.DAP	PVBusLogger
ARMCortexA720AECT.DAP.mapper	PVBusMapper
ARMCortexA720AECT.DSU	DSU
ARMCortexA720AECT.DSU.PPU_cluster	PPUv1
ARMCortexA720AECT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexA720AECT.DSU.PPU_core0	PPUv1
ARMCortexA720AECT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexA720AECT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA720AECT.DSU.mpam_busslave	PVBusSlave
ARMCortexA720AECT.DSU.shared_cache	PVCache
ARMCortexA720AECT.DSU.shared_cache.upstream[0]	PVBusSlave
ARMCortexA720AECT.DSU.shared_cache.upstream[1]	PVBusSlave
ARMCortexA720AECT.DSU.shared_cache.upstream[2]	PVBusSlave
ARMCortexA720AECT.DSU.shared_cache.upstream[3]	PVBusSlave
ARMCortexA720AECT.DSU.shared_cache.upstream[4]	PVBusSlave
ARMCortexA720AECT.DSU.utility_slave[0]	PVBusSlave

## Ports for ARMCortexA720AECT

**Table 3-370: Ports**

Name	Protocol	Type	Description
acp_s[2]	PVBus	Slave	AXI ACP slave port.
AEND0MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	Signal	Slave	CHI defined pins.
broadcastcachemaint	Signal	Slave	ACE defined pins.
broadcastouter	Signal	Slave	ACE defined pins.
broadcastpersist	Signal	Slave	CHI defined pins.
cfgend[14]	Signal	Slave	This signal is for EE bit initialisation.
cfgsdisable	Signal	Slave	This signal disables write access to some secure Interrupt Controller registers.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsn_pchannel	PChannel	Master	Cluster PCSM signal
cluster_powerdown_out	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the cluster power info

Name	Protocol	Type	Description
clusterid	Value	Slave	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.
clusterpmuirq	Signal	Master	DynamlQ pmu irq
CNTHPIRQ[14]	Signal	Master	Timer signals to SOC.
CNTHPSIRQ[14]	Signal	Master	Timer signals to SOC
CNTHVIRQ[14]	Signal	Master	Timer signals to SOC.
CNTHVSIRQ[14]	Signal	Master	Timer signals to SOC
CNTPNSIRQ[14]	Signal	Master	Timer signals to SOC.
CNTPSIRQ[14]	Signal	Master	Timer signals to SOC.
cntvalueb	CounterInterface	Slave	Interface to SoC level counter module.
CNTVIRQ[14]	Signal	Master	Timer signals to SOC.
commirq[14]	Signal	Master	Interrupt signal from debug communications channel.
core_clk_in[14]	ClockSignal	Slave	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsmpchannel[14]	PChannel	Master	Core PCSM signals
core_powerdown_out[14]	Signal	Master	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
coreerrirq[14]	Signal	Master	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq[14]	Signal	Master	Fault indicator for a detected 1 or 2 bit ECC error
cryptodisable[14]	Signal	Slave	Disable cryptography extensions after reset.
cti[14]	v8EmbeddedCrossTrigger_controlprotocol	Master	Cross trigger matrix port.
ctidbgirq[14]	Signal	Master	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	Signal	Slave	External debug interface.
dbgnopwrdown[14]	Signal	Master	No power-down request.
dbgpwrupreq[14]	Signal	Master	Debug power up request.
defaultMP	Signal	Slave	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.

Name	Protocol	Type	Description
dev_debug_s	PVBus	Slave	External debug interface.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
fiq[14]	Signal	Slave	This signal drives the CPUs fast-interrupt handling.
gicreset	Signal	Master	An output from PPU that can be used to reset GICCLK domain components
gicv3_redistributor_s[14]	GICv3Comms	Slave	GICv3 AXI-stream port.
irq[14]	Signal	Slave	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	PVBus	Slave	External debug interface.
pmbirq[14]	Signal	Master	Interrupt signal from the statistical profiling unit.
pmuirq[14]	Signal	Master	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	Signal	Master	PPU cluster interrupt.
ppu_cluster_wakerequest	Signal	Slave	PPU cluster wake request signal.
ppu_core_irq[14]	Signal	Master	PPU core interrupt.
ppu_core_wakerequest[14]	Signal	Slave	PPU core wake request signal.
presetdbg	Signal	Slave	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	PVBus	Master	The core will generate bus requests on this port.
pvbus_periph_m	PVBus	Master	The core can generate peripheral bus request on this port.
rei[14]	Signal	Slave	Per core RAM Error Interrupt.
reset	Signal	Slave	Reset signal to cluster.
rvbaraddr[14]	Value_64	Slave	Reset vector base address.
sci_m	SystemCoherencyInterface	Master	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei[14]	Signal	Slave	Per core System Error physical pins.
spiden	Signal	Slave	External debug interface.
ticks[14]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq[14]	Signal	Master	Interrupt signal from the trace buffer unit.
utility_bus_s	PVBus	Slave	Utility bus slave
vcpumntirq[14]	Signal	Master	Interrupt signal for virtual CPU maintenance IRQ.

Name	Protocol	Type	Description
vfiq[14]	Signal	Slave	Virtualised FIQ.
virq[14]	Signal	Slave	Virtualised IRQ.
virtio_s	PVBus	Slave	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei[14]	Signal	Slave	Per core virtual System Error physical pins.

## Parameters for ARMCortexA720AECT

### AEND0\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

### AEND1\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

### AEND2\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

### AEND3\_DEFAULT

#### Type

int

**Default value**

0x0

**Description**

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

**ASTART0\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

**ASTART1\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

**ASTART2\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

**ASTART3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

**BROADCASTATOMIC****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

**BROADCASTCACHEMAINT****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

**BROADCASTOUTER****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

**BROADCASTPERSIST****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

**CLUSTER\_ID****Type**

int

**Default value**

0x0

**Description**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled****Type**

int

**Default value**

0x1

**Description**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. Changing this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain CMOs even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required .

**CPUCFR****Type**

int

**Default value**

0x0

**Description**

Value of CPU Configuration Register.

**GICDISABLE****Type**

bool

**Default value**

0x1

**Description**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

**NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores per cluster.

**bus\_type****Type**

int

**Default value**

0x0

**Description**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

**cluster\_split\_lock\_config****Type**

int

**Default value**

0x1

**Description**

Default SPLIT/LOCKED config. The valid values are: 1 - Only LOCKED mode support, 4 - Only SPLIT mode support, 5 - SPLIT or MIXED mode support. Valid only when enable\_ae\_features is true.

**core\_power\_on\_by\_default****Type**

bool

**Default value**

0x0

**Description**

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPU which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

**cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**cpuX.CFGTE****Type**

bool

**Default value**

0x0

**Description**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

**cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**cpuX.force-fpsid****Type**

bool

**Default value**

0x1

**Description**

Override the FPSID value.

**cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-size****Type**

int

**Default value**

0x80000

**Description**

L2 Cache size in bytes.

**cpuX.l2cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**`cpuX.semihosting-T32_HLT`****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**`cpuX.semihosting-Thumb_SVC`****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**`cpuX.semihosting-cmd_line`****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**`cpuX.semihosting-cwd`****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**`cpuX.semihosting-enable`****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**`cpuX.semihosting-heap_base`****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**`cpuX.semihosting-heap_limit`****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**`cpuX.semihosting-stack_base`****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**`cpuX.semihosting-stack_limit`****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**`cpuX.trace_special_hlt_imm16`****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**dcache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

**dcache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**dcache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**dcache-size****Type**

int

**Default value**

0x10000

**Description**

L1 D-Cache size in bytes.

**dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**default\_opmode****Type**

int

**Default value**

0x4

**Description**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

**diagnostics****Type**

bool

**Default value**

0x0

**Description**

Enable DynamIQ diagnostic messages.

**enable\_lock\_step****Type**

bool

**Default value**

0x0

**Description**

Whether the core is configured in Dual Core Lock Step mode (FEAT\_DCLS).

**enable\_simulation\_performance\_optimizations****Type**

bool

**Default value**

0x1

**Description**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase

differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

**ete.CLAIMTAGS****Type**

int

**Default value**

0x4

**Description**

Number of claim tags.

**ete.ETE\_REVISION****Type**

int

**Default value**

0x1

**Description**

ETE revision: 0=ETEv1.0, 1=ETEv1.1, 2=ETEv1.2, 3=ETEv1.3.

**ete.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**ete.NumberOfRSPairs****Type**

int

**Default value**

0x8

**Description**

Number of resource selector pairs.

**ete.PIDR\_CMOD****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CMOD value.

**ete.PIDR\_REVAND****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVAND value.

**ete.PIDR\_REVISION****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVISION value.

**ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**ete.RETSTACK****Type**

int

**Default value**

0x3

**Description**

Return stack depth.

**ete.REVISION****Type**

int

**Default value**

0x0

**Description**

TRCIDR1 revision value.

**ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**ete.TRCRSRTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCRSR.TA value for a forcibly traced exception.

**ete.TSMARK****Type**

bool

**Default value**

0x1

**Description**

Whether timestamp markers are supported.

**force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**force\_zero\_mpam\_partid\_and\_pmg****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect.  
1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**has\_enhanced\_pan****Type**

int

**Default value**

0x2

**Description**

Implements Armv8.7 Enhanced PAN feature (FEAT\_PAN3) Possible values of this parameter are: - 1, feature is implemented if ARMv8.7 is enabled. - 2, feature is implemented.

**has\_ete****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**has\_impdef\_transient\_fault\_protection****Type**

bool

**Default value**

0x1

**Description**

Support the Transient Fault Protection (TFP) flop parity errors through RAS registers (FEAT\_TFP).

**has\_large\_va****Type**

int

**Default value**

0x0

**Description**

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT\_LVA). Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.2 is enabled. - 2, feature is implemented.

**has\_peripheral\_port****Type**

bool

**Default value**

0x0

**Description**

If true, an additional AXI peripheral port is configured.

**has\_statistical\_profiling****Type**

bool

**Default value**

0x0

**Description**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

**icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

**`icache-miss_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

**`icache-prefetch_enabled`****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

**`icache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

**`icache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

**`icache-size`****Type**

int

**Default value**

0x10000

**Description**

L1 I-Cache size in bytes.

**`icache-state_modelled`****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**`instruction_tlb_size`****Type**

int

**Default value**

0x0

**Description**

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

**`invalidate_code_cache_on_icache_cmo`****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

**l3cache-has\_mpam****Type**

bool

**Default value**

0x1

**Description**

L3 Cache has MPAM support.

**l3cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**l3cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**l3cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**l3cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**l3cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. l3cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**l3cache-size****Type**

int

**Default value**

0x80000

**Description**

L3 Cache size in bytes.

**l3cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**l3cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**l3cache-ways****Type**

int

**Default value**

0x10

**Description**

L3 Cache number of ways (sets are implicit from size).

**l3cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**l3cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**memory\_tagging\_support\_level****Type**

int

**Default value**

0x3

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

**mpmm\_accumulator\_multiplier****Type**

int

**Default value**

0x1

**Description**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator. A value of n means the accumulator will use (n \* accumulator value) to calculate the mpmm threshold (MPMM). This is provided as a fast model workaround to handle cases where execution of quantum in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

**num\_nodes****Type**

int

**Default value**

0x1

**Description**

Number of transport nodes. Zero implies direct-connect configuration.

**pmu-num\_counters****Type**

int

**Default value**

0x6

**Description**

Number of PMU counters implemented.

**ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**reported\_patch\_level****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**reported\_revision\_number****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**stage12\_tlb\_size****Type**

int

**Default value**

0x80

**Description**

Number of stage1+2 tlb entries.

**tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**`treat_PAC_as_NOP`**

**Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter. Treat Pointer Authentication as NOP. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are NOP. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

**`walk_cache_latency`**

**Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

**3.5.48 ARMCortexA720CT**

ARMCortexA720CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-371: IP revisions support**

Revision	Quality level
r0p1	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**About ARMCortexA720CT**

The model supports the following features:

- L2 cache is supported at the per-core level only and there is no implementation of Core-Complex with shared L2 cache yet.
- Internal PPU support is present.

- A P-Channel for the cluster and for each core.
- `BROADCASTPERSIST` pin.
- Optional peripheral port.
- Memory-mapped register access to MPAM.
- Per-core clock.
- Utility bus.

Support for the following features is planned for a future release:

- DSU-120 system features are not fully implemented.
- Transporting architectural metadata tags over TLM2 (OSCI) and AMBA-PV (TLM2 extensions from Arm) bus protocols.
- Core-Complex.
- `BROADCASTCACHEMAINTPOU` pin
- `COREINSTRRET` and `COREINSTRRUN` signals.
- Each thread has its own L1Cache and L2Cache instead of a common cache that is shared by all threads of the core.
- Per-thread parameters are not supported but signals are implemented.

The following features will not be implemented:

- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Cache stashing capability.

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

### Iris and MTI instances for ARMCortexA720CT

This model has the following Iris instances:

**Table 3-372: ARMCortexA720CT Iris instances**

InstanceName	ComponentName
ARMCortexA720CT	Cluster_ARM_Cortex-A720

InstanceName	ComponentName
ARMCortexA720CT.AMU	PVBusLogger
ARMCortexA720CT.AMU.mapper	PVBusMapper
ARMCortexA720CT.DAP	PVBusLogger
ARMCortexA720CT.DAP.mapper	PVBusMapper
ARMCortexA720CT.DSU	DSU
ARMCortexA720CT.DSU.PPU_cluster	PPUv1
ARMCortexA720CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexA720CT.DSU.PPU_core0	PPUv1
ARMCortexA720CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexA720CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexA720CT.DSU.mpam_busslave	PVBusSlave
ARMCortexA720CT.DSU.shared_cache	PVCache
ARMCortexA720CT.DSU.shared_cache.upstream[0]	PVBusSlave
ARMCortexA720CT.DSU.shared_cache.upstream[1]	PVBusSlave
ARMCortexA720CT.DSU.shared_cache.upstream[2]	PVBusSlave
ARMCortexA720CT.DSU.shared_cache.upstream[3]	PVBusSlave
ARMCortexA720CT.DSU.shared_cache.upstream[4]	PVBusSlave

ARMCortexA720CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

## Ports for ARMCortexA720CT

Table 3-374: Ports

Name	Protocol	Type	Description
acp_s[2]	PVBus	Slave	AXI ACP slave port.
AEND0MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	Signal	Slave	CHI defined pins.
broadcastcachemaint	Signal	Slave	ACE defined pins.
broadcastouter	Signal	Slave	ACE defined pins.
broadcastpersist	Signal	Slave	CHI defined pins.
cfgend[14]	Signal	Slave	This signal is for EE bit initialisation.
cfgsdisable	Signal	Slave	This signal disables write access to some secure Interrupt Controller registers.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsn_pchannel	PChannel	Master	Cluster PCSM signal
cluster_powerdown_out	Signal	Master	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info

Name	Protocol	Type	Description
clusterid	Value	Slave	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.
clusterpmuirq	Signal	Master	DynamlQ pmu irq
CNTHPIRQ[14]	Signal	Master	Timer signals to SOC.
CNTHPSIRQ[14]	Signal	Master	Timer signals to SOC
CNTHVIRQ[14]	Signal	Master	Timer signals to SOC.
CNTHVSIRQ[14]	Signal	Master	Timer signals to SOC
CNTPNSIRQ[14]	Signal	Master	Timer signals to SOC.
CNTPSIRQ[14]	Signal	Master	Timer signals to SOC.
cntvalueb	CounterInterface	Slave	Interface to SoC level counter module.
CNTVIRQ[14]	Signal	Master	Timer signals to SOC.
commirq[14]	Signal	Master	Interrupt signal from debug communications channel.
core_clk_in[14]	ClockSignal	Slave	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsmpchannel[14]	PChannel	Master	Core PCSM signals
core_powerdown_out[14]	Signal	Master	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
coreerrirq[14]	Signal	Master	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq[14]	Signal	Master	Fault indicator for a detected 1 or 2 bit ECC error
cryptodisable[14]	Signal	Slave	Disable cryptography extensions after reset.
cti[14]	v8EmbeddedCrossTrigger_controlprotocol	Master	Cross trigger matrix port.
ctidbgirq[14]	Signal	Master	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	Signal	Slave	External debug interface.
dbgnopwrdown[14]	Signal	Master	No power-down request.
dbgpwrupreq[14]	Signal	Master	Debug power up request.
defaultMP	Signal	Slave	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.

Name	Protocol	Type	Description
dev_debug_s	PVBus	Slave	External debug interface.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
fiq[14]	Signal	Slave	This signal drives the CPUs fast-interrupt handling.
gicreset	Signal	Master	An output from PPU that can be used to reset GICCLK domain components
gicv3_redistributor_s[14]	GICv3Comms	Slave	GICv3 AXI-stream port.
irq[14]	Signal	Slave	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	PVBus	Slave	External debug interface.
pmbirq[14]	Signal	Master	Interrupt signal from the statistical profiling unit.
pmuirq[14]	Signal	Master	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	Signal	Master	PPU cluster interrupt.
ppu_cluster_wakerequest	Signal	Slave	PPU cluster wake request signal.
ppu_core_irq[14]	Signal	Master	PPU core interrupt.
ppu_core_wakerequest[14]	Signal	Slave	PPU core wake request signal.
presetdbg	Signal	Slave	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	PVBus	Master	The core will generate bus requests on this port.
pvbus_periph_m	PVBus	Master	The core can generate peripheral bus request on this port.
rei[14]	Signal	Slave	Per core RAM Error Interrupt.
reset	Signal	Slave	Reset signal to cluster.
rvbaraddr[14]	Value_64	Slave	Reset vector base address.
sci_m	SystemCoherencyInterface	Master	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei[14]	Signal	Slave	Per core System Error physical pins.
spiden	Signal	Slave	External debug interface.
ticks[14]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq[14]	Signal	Master	Interrupt signal from the trace buffer unit.
utility_bus_s	PVBus	Slave	Utility bus slave
vcpumntirq[14]	Signal	Master	Interrupt signal for virtual CPU maintenance IRQ.

Name	Protocol	Type	Description
vfiq[14]	Signal	Slave	Virtualised FIQ.
virq[14]	Signal	Slave	Virtualised IRQ.
virtio_s	PVBus	Slave	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei[14]	Signal	Slave	Per core virtual System Error physical pins.

## Parameters for ARMCortexA720CT

### AEND0\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

### AEND1\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

### AEND2\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

### AEND3\_DEFAULT

#### Type

int

**Default value**

0x0

**Description**

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

**ASTART0\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

**ASTART1\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

**ASTART2\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

**ASTART3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

**BROADCASTATOMIC****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

**BROADCASTCACHEMAINT****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

**BROADCASTOUTER****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

**BROADCASTPERSIST****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

**CLUSTER\_ID****Type**

int

**Default value**

0x0

**Description**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled****Type**

int

**Default value**

0x1

**Description**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. Changing this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain CMOs even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required .

**CPUCFR****Type**

int

**Default value**

0x0

**Description**

Value of CPU Configuration Register.

**GICDISABLE****Type**

bool

**Default value**

0x1

**Description**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

**NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores per cluster.

**bus\_type****Type**

int

**Default value**

0x0

**Description**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

**core\_power\_on\_by\_default****Type**

bool

**Default value**

0x0

**Description**

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPU which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

**cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**`cpi_mul`****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**`cpuX.CFGEND`****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**`cpuX.CFGTE`****Type**

bool

**Default value**

0x0

**Description**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

**`cpuX.CRYPTODISABLE`****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**`cpuX.RVBARADDR`****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**cpuX.force-fpsid****Type**

bool

**Default value**

0x1

**Description**

Override the FPSID value.

**cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-size****Type**

int

**Default value**

0x80000

**Description**

L2 Cache size in bytes.

**cpuX.l2cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

**cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**cpuX.semihosting-T32\_HLT****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**dcache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

**dcache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**dcache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**dcache-size****Type**

int

**Default value**

0x8000

**Description**

L1 D-Cache size in bytes.

**dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**default\_opmode****Type**

int

**Default value**

0x4

**Description**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

**diagnostics****Type**

bool

**Default value**

0x0

**Description**

Enable DynamIQ diagnostic messages.

**enable\_simulation\_performance\_optimizations****Type**

bool

**Default value**

0x1

**Description**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

**ete.CLAIMTAGS****Type**

int

**Default value**

0x4

**Description**

Number of claim tags.

**ete.ETE\_REVISION****Type**

int

**Default value**

0x1

**Description**

ETE revision: 0=ETEv1.0, 1=ETEv1.1, 2=ETEv1.2, 3=ETEv1.3.

**ete.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**ete.NumberOfRSPairs****Type**

int

**Default value**

0x8

**Description**

Number of resource selector pairs.

**ete.PIDR\_CM0D****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CM0D value.

**ete.PIDR\_REVAND****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVAND value.

**ete.PIDR\_REVISION****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVISION value.

**ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**ete.RETSTACK****Type**

int

**Default value**

0x3

**Description**

Return stack depth.

**ete.REVISION****Type**

int

**Default value**

0x0

**Description**

TRCIDR1 revision value.

**ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**ete.TRCRSRTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCRSR.TA value for a forcibly traced exception.

**ete.TSMARK****Type**

bool

**Default value**

0x1

**Description**

Whether timestamp markers are supported.

**`force_mte_tag_access_razwi_and_ignore_tag_checks`****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**`force_zero_PSTATE_PAN`****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**`force_zero_mpam_partid_and_pmg`****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**`has_enhanced_pan`****Type**

int

**Default value**

0x2

**Description**

Implements Armv8.7 Enhanced PAN feature (FEAT\_PAN3). Possible values of this parameter are: - 1, feature is implemented if ARMv8.7 is enabled. - 2, feature is implemented.

**has\_ete****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**has\_large\_va****Type**

int

**Default value**

0x0

**Description**

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT\_LVA). Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.2 is enabled. - 2, feature is implemented.

**has\_peripheral\_port****Type**

bool

**Default value**

0x0

**Description**

If true, an additional AXI peripheral port is configured.

**has\_statistical\_profiling****Type**

bool

**Default value**

0x0

**Description**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

**icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

**icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state\_modelled=true.

**icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

**icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

**`icache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

**`icache-size`****Type**

int

**Default value**

0x8000

**Description**

L1 I-Cache size in bytes.

**`icache-state_modelled`****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**`instruction_tlb_size`****Type**

int

**Default value**

0x0

**Description**

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

**`invalidate_code_cache_on_icache_cmo`****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE.  
Note: Enabling this parameter will reduce simulation performance.

**`l3cache-has_mpam`****Type**

bool

**Default value**

0x1

**Description**

L3 Cache has MPAM support.

**`l3cache-hit_latency`****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**`l3cache-maintenance_latency`****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**l3cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**l3cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**l3cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. l3cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**l3cache-size****Type**

int

**Default value**

0x80000

**Description**

L3 Cache size in bytes.

**l3cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**l3cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**l3cache-ways****Type**

int

**Default value**

0x10

**Description**

L3 Cache number of ways (sets are implicit from size).

**l3cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**l3cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**memory\_tagging\_support\_level****Type**

int

**Default value**

0x3

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

**mpmm\_accumulator\_multiplier****Type**

int

**Default value**

0x1

**Description**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator. A value of n means the accumulator will use (n \* accumulator value) to calculate the mpmm threshold (MPMM). This is provided as a fast model workaround to handle cases where execution of quantum in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

**num\_acp****Type**

int

**Default value**

0x0

**Description**

Number of ACP ports.

**num\_nodes****Type**

int

**Default value**

0x1

**Description**

Number of transport nodes. Zero implies direct-connect configuration.

**pmu-num\_counters****Type**

int

**Default value**

0x6

**Description**

Number of PMU counters implemented.

**ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**stage12\_tlb\_size****Type**

int

**Default value**

0x80

**Description**

Number of stage1+2 tlb entries.

**tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**`treat_PAC_as_NOP`**

**Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter. Treat Pointer Authentication as NOP. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are NOP. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

**`walk_cache_latency`**

**Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

**3.5.49 ARMCortexA725CT**

ARMCortexA725CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-375: IP revisions support**

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**About ARMCortexA725CT**

A DSU-120 DynamIQ cluster containing a configurable number of Cortex-A725 cores.

The number of cores in the cluster is configurable using the following parameter:

**NUM\_CORES**

Possible values are 1-14

The following DSU/CPU features will not be implemented:

- DynamIQ features that are irrelevant to the programmers' view simulation.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Snoop filtering.
- Cache stashing capability.
- Embedded Logic Analyzer (ELA).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

**Iris and MTI instances for ARM Cortex-A725CT**

This model has the following Iris instances:

**Table 3-376: ARM Cortex-A725CT Iris instances**

InstanceName	ComponentName
ARM Cortex-A725CT	Cluster_ARM_Cortex-A725
ARM Cortex-A725CT.AMU	PVBusLogger
ARM Cortex-A725CT.AMU.mapper	PVBusMapper
ARM Cortex-A725CT.DAP	PVBusLogger
ARM Cortex-A725CT.DAP.mapper	PVBusMapper
ARM Cortex-A725CT.DSU	DSU
ARM Cortex-A725CT.DSU.PPU_cluster	PPUv1
ARM Cortex-A725CT.DSU.PPU_cluster.busslave	PVBusSlave
ARM Cortex-A725CT.DSU.PPU_core0	PPUv1
ARM Cortex-A725CT.DSU.PPU_core0.busslave	PVBusSlave
ARM Cortex-A725CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARM Cortex-A725CT.DSU.mpam_busslave	PVBusSlave
ARM Cortex-A725CT.DSU.shared_cache	PVCache
ARM Cortex-A725CT.DSU.shared_cache.upstream[0]	PVBusSlave
ARM Cortex-A725CT.DSU.shared_cache.upstream[1]	PVBusSlave
ARM Cortex-A725CT.DSU.shared_cache.upstream[2]	PVBusSlave
ARM Cortex-A725CT.DSU.shared_cache.upstream[3]	PVBusSlave
ARM Cortex-A725CT.DSU.shared_cache.upstream[4]	PVBusSlave
ARM Cortex-A725CT.DSU.utility_slave[0]	PVBusSlave

ARMCortexA725CT.ext_bus.mapper	PVBusMapper
ARMCortexA725CT.gic_cpuif_decoder_cluster	GLCv3CPUInterfaceDecoder

## Ports for ARMCortexA725CT

**Table 3-378: Ports**

Name	Protocol	Type	Description
acp_s[2]	PVBus	Slave	AXI ACP slave port.
AEND0MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	Signal	Slave	CHI defined pins.
broadcastcachemaint	Signal	Slave	ACE defined pins.

Name	Protocol	Type	Description
broadcastouter	Signal	Slave	ACE defined pins.
broadcastpersist	Signal	Slave	CHI defined pins.
cfgend[14]	Signal	Slave	This signal is for EE bit initialisation.
cfgsdisable	Signal	Slave	This signal disables write access to some secure Interrupt Controller registers.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcs_m_pchannel	PChannel	Master	Cluster PCSM signal
cluster_powerdown_out	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the cluster power info
clusterid	Value	Slave	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.
clusterpmuirq	Signal	Master	DynamlQ pmu irq
CNTHPIRQ[14]	Signal	Master	Timer signals to SOC.
CNTHPSIRQ[14]	Signal	Master	Timer signals to SOC
CNTHVIRQ[14]	Signal	Master	Timer signals to SOC.
CNTHVSIRQ[14]	Signal	Master	Timer signals to SOC
CNTPNSIRQ[14]	Signal	Master	Timer signals to SOC.
CNTPSIRQ[14]	Signal	Master	Timer signals to SOC.
cntvalueb	CounterInterface	Slave	Interface to SoC level counter module.
CNTVIRQ[14]	Signal	Master	Timer signals to SOC.
commirq[14]	Signal	Master	Interrupt signal from debug communications channel.
core_clk_in[14]	ClockSignal	Slave	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcs_m_pchannel[14]	PChannel	Master	Core PCSM signals
core_powerdown_out[14]	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the core power info

Name	Protocol	Type	Description
coreerrirq[14]	Signal	Master	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq[14]	Signal	Master	Fault indicator for a detected 1 or 2 bit ECC error
cryptodisable[14]	Signal	Slave	Disable cryptography extensions after reset.
cti[14]	v8EmbeddedCrossTrigger_controlprotocol	Master	Cross trigger matrix port.
ctidbgirq[14]	Signal	Master	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	Signal	Slave	External debug interface.
dbgnopwrdown[14]	Signal	Master	No power-down request.
dbgpwrupreq[14]	Signal	Master	Debug power up request.
defaultMP	Signal	Slave	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	PVBus	Slave	External debug interface.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
fiq[14]	Signal	Slave	This signal drives the CPUs fast-interrupt handling.
gicreset	Signal	Master	An output from PPU that can be used to reset GICCLK domain components
gicv3_redistributor_s[14]	GICv3Comms	Slave	GICv3 AXI-stream port.
irq[14]	Signal	Slave	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	PVBus	Slave	External debug interface.
pmbirq[14]	Signal	Master	Interrupt signal from the statistical profiling unit.
pmuirq[14]	Signal	Master	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	Signal	Master	PPU cluster interrupt.
ppu_cluster_wakerequest	Signal	Slave	PPU cluster wake request signal.
ppu_core_irq[14]	Signal	Master	PPU core interrupt.
ppu_core_wakerequest[14]	Signal	Slave	PPU core wake request signal.
presetdbg	Signal	Slave	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	PVBus	Master	The core will generate bus requests on this port.
pvbus_periph_m	PVBus	Master	The core can generate peripheral bus request on this port.
rei[14]	Signal	Slave	Per core RAM Error Interrupt.

Name	Protocol	Type	Description
reset	Signal	Slave	Reset signal to cluster.
rvbaraddr[14]	Value_64	Slave	Reset vector base address.
sci_m	SystemCoherencyInterface	Master	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei[14]	Signal	Slave	Per core System Error physical pins.
spiden	Signal	Slave	External debug interface.
ticks[14]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq[14]	Signal	Master	Interrupt signal from the trace buffer unit.
utility_bus_s	PVBus	Slave	Utility bus slave
vcpumntirq[14]	Signal	Master	Interrupt signal for virtual CPU maintenance IRQ.
vfiq[14]	Signal	Slave	Virtualised FIQ.
virq[14]	Signal	Slave	Virtualised IRQ.
virtio_s	PVBus	Slave	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei[14]	Signal	Slave	Per core virtual System Error physical pins.

## Parameters for ARM Cortex A725CT

### AEND0\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

### AEND1\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

**AEND2\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

**AEND3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

**ASTART0\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

**ASTART1\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

**ASTART2\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

**ASTART3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

**BROADCASTATOMIC****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

**BROADCASTCACHEMAINT****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

**BROADCASTOUTER****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

**BROADCASTPERSIST****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

**CLUSTER\_ID****Type**

int

**Default value**

0x0

**Description**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled****Type**

int

**Default value**

0x1

**Description**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. Changing this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain CMOs even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required .

**CPUCFR****Type**

int

**Default value**

0x0

**Description**

Value of CPU Configuration Register.

**GICDISABLE****Type**

bool

**Default value**

0x1

**Description**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

**NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores per cluster.

**bus\_type****Type**

int

**Default value**

0x0

**Description**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

**core\_power\_on\_by\_default****Type**

bool

**Default value**

0x0

**Description**

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPU which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

**`cpi_div`****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**`cpi_mul`****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**`cpuX.CFGEND`****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**`cpuX.CFGTE`****Type**

bool

**Default value**

0x0

**Description**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

**`cpuX.CRYPTODISABLE`****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**cpuX.force-fpsid****Type**

bool

**Default value**

0x1

**Description**

Override the FPSID value.

**cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**cpuX.l2cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-size****Type**

int

**Default value**

0x100000

**Description**

L2 Cache size in bytes.

**cpuX.l2cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**cpuX.semihosting-T32\_HLT****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

**`dcache-miss_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**`dcache-prefetch_enabled`****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

**`dcache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**`dcache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**`dcache-size`****Type**

int

**Default value**

0x10000

**Description**

L1 D-Cache size in bytes.

**`dcache-snoop_data_transfer_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

**`dcache-state_modelled`****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**`dcache-write_access_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be

used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

### **dcache-write\_latency**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

### **default\_opmode**

#### **Type**

int

#### **Default value**

0x4

#### **Description**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

### **diagnostics**

#### **Type**

bool

#### **Default value**

0x0

#### **Description**

Enable DynamIQ diagnostic messages.

### **enable\_simulation\_performance\_optimizations**

#### **Type**

bool

#### **Default value**

0x1

#### **Description**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

**ete.CLAIMTAGS****Type**

int

**Default value**

0x4

**Description**

Number of claim tags.

**ete.ETE\_REVISION****Type**

int

**Default value**

0x1

**Description**

ETE revision: 0=ETEv1.0, 1=ETEv1.1, 2=ETEv1.2, 3=ETEv1.3.

**ete.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**ete.NumberOfRSPairs****Type**

int

**Default value**

0x8

**Description**

Number of resource selector pairs.

**ete.PIDR\_CM0D****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CM0D value.

**ete.PIDR\_REVAND****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVAND value.

**ete.PIDR\_REVISION****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVISION value.

**ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**ete.RETSTACK****Type**

int

**Default value**

0x1

**Description**

Return stack depth.

**ete.REVISION****Type**

int

**Default value**

0x0

**Description**

TRCIDR1 revision value.

**ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**ete.TRCRSRTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCRSR.TA value for a forcibly traced exception.

**ete.TSMARK****Type**

bool

**Default value**

0x1

**Description**

Whether timestamp markers are supported.

**force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**force\_zero\_mpam\_partid\_and\_pmg****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect.  
1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**has\_enhanced\_pan****Type**

int

**Default value**

0x2

**Description**

Implements Armv8.7 Enhanced PAN feature (FEAT\_PAN3) Possible values of this parameter are: - 1, feature is implemented if ARMv8.7 is enabled. - 2, feature is implemented.

**has\_ete****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**has\_large\_va****Type**

int

**Default value**

0x0

**Description**

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT\_LVA). Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.2 is enabled. - 2, feature is implemented.

**has\_peripheral\_port****Type**

bool

**Default value**

0x0

**Description**

If true, an additional AXI peripheral port is configured.

**has\_statistical\_profiling****Type**

bool

**Default value**

0x0

**Description**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

**icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

**icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state\_modelled=true.

**icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

**icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state\_modelled=true.

**icache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. icache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state\_modelled=true.

**icache-size****Type**

int

**Default value**

0x10000

**Description**

L1 I-Cache size in bytes.

**icache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**instruction\_tlb\_size****Type**

int

**Default value**

0x0

**Description**

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

**invalidate\_code\_cache\_on\_icache\_cmo****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE.  
Note: Enabling this parameter will reduce simulation performance.

**l3cache-has\_mpam****Type**

bool

**Default value**

0x1

**Description**

L3 Cache has MPAM support.

**l3cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

**l3cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

**l3cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**l3cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size `l3cache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**l3cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l3cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**`l3cache-size`****Type**

int

**Default value**

0x80000

**Description**

L3 Cache size in bytes.

**`l3cache-snoop_data_transfer_latency`****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

**`l3cache-snoop_issue_latency`****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

**`l3cache-ways`****Type**

int

**Default value**

0x10

**Description**

L3 Cache number of ways (sets are implicit from size).

**l3cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**l3cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**memory\_tagging\_support\_level****Type**

int

**Default value**

0x3

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

**mpmm\_accumulator\_multiplier****Type**

int

**Default value**

0x1

**Description**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator. A value of n means the accumulator will use (n \* accumulator value) to calculate the mpmm threshold (MPMM). This is provided as a fast model workaround to handle cases

where execution of quantums in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

**pmu-num\_counters****Type**

int

**Default value**

0x6

**Description**

Number of PMU counters implemented.

**ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**stage12\_tlb\_size****Type**

int

**Default value**

0x80

**Description**

Number of stage1+2 tlb entries.

**tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**`treat_PAC_as_NOP`**

**Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter. Treat Pointer Authentication as NOP. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are NOP. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

**`walk_cache_latency`**

**Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

3.5.50 ARMCortexA725CT\_CortexX925CT

ARMCortexA725CT\_CortexX925CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-379: IP revisions support

Revision	Quality level
CortexA725 r0p0	Preliminary support
CortexX925 r0p0	Preliminary support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

About ARMCortexA720CT\_CortexX925CT

The number of cores in each subcluster is configurable using the following parameters:

**`subcluster0.NUM_CORES`**

Possible values are 1-13 (ARMCortexA720CT).

**`subcluster1.NUM_CORES`**

Possible values are 1-13 (ARMCortexX925CT).

The total number of cores in the cluster cannot exceed 14.

Port arrays are expanded to the width needed for the maximum number of cores in each subcluster. Use the following port array indexes:

- `<port_name>[0-12]` for cores in `subcluster0`.
- `<port_name>[13-25]` for cores in `subcluster1`.

All instances in the Master cross trigger matrix port array, `cti[26]` must be connected, regardless of the `NUM_CORES` value used.

Core-specific parameters have the following prefixes:

- `subcluster0.cpu0` to `subcluster0.cpu12` identify cores in `subcluster0`.
- `subcluster1.cpu0` to `subcluster1.cpu12` identify cores in `subcluster1`.

For information about the cores in this model, see:

- [ARMCortexA720CT](#).
- [ARMCortexX925CT](#).

## Iris and MTI instances for ARMCortexA725CT\_CortexX925CT

This model has the following Iris instances:

**Table 3-380: ARMCortexA725CT\_CortexX925CT Iris instances**

InstanceName	ComponentName

ARMCortexA725CT_CortexX925CT.DSU.shared_cache.upstream[5]	PVBusSlave
ARMCortexA725CT_CortexX925CT.DSU.shared_cache.upstream[6]	PVBusSlave
ARMCortexA725CT_CortexX925CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexA725CT_CortexX925CT.MMAP	PVBusLogger
ARMCortexA725CT_CortexX925CT.MMAP.mapper	PVBusMapper
ARMCortexA725CT_CortexX925CT.RAS	PVBusLogger
ARMCortexA725CT_CortexX925CT.RAS.mapper	PVBusMapper
ARMCortexA725CT_CortexX925CT.ext_bus	PVBusLogger

InstanceName	ComponentName
ARMCortexA725CT_CortexX925CT.ext_bus.mapper	PVBusMapper
ARMCortexA725CT_CortexX925CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexA725CT_CortexX925CT.subcluster0.cpu0	ARM_Cortex-A725
ARMCortexA725CT_CortexX925CT.subcluster0.cpu0.UTLB	TLB
ARMCortexA725CT_CortexX925CT.subcluster0.cpu0.l1dcache	PVCache
ARMCortexA725CT_CortexX925CT.subcluster0.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA725CT_CortexX925CT.subcluster0.cpu0.l1licache	PVCache
ARMCortexA725CT_CortexX925CT.subcluster0.cpu0.l1licache.upstream[0]	PVBusSlave
ARMCortexA725CT_CortexX925CT.subcluster0.cpu0.l2cache	PVCache
ARMCortexA725CT_CortexX925CT.subcluster0.cpu0.l2cache.upstream[0]	PVBusSlave
ARMCortexA725CT_CortexX925CT.subcluster0.cpu0.l2cache.upstream[1]	PVBusSlave
ARMCortexA725CT_CortexX925CT.subcluster1.cpu0	ARM_Cortex-X925
ARMCortexA725CT_CortexX925CT.subcluster1.cpu0.UTLB	TLB
ARMCortexA725CT_CortexX925CT.subcluster1.cpu0.l1dcache	PVCache
ARMCortexA725CT_CortexX925CT.subcluster1.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexA725CT_CortexX925CT.subcluster1.cpu0.l1licache	PVCache
ARMCortexA725CT_CortexX925CT.subcluster1.cpu0.l1licache.upstream[0]	PVBusSlave
ARMCortexA725CT_CortexX925CT.subcluster1.cpu0.l2cache	PVCache
ARMCortexA725CT_CortexX925CT.subcluster1.cpu0.l2cache.upstream[0]	PVBusSlave
ARMCortexA725CT_CortexX925CT.subcluster1.cpu0.l2cache.upstream[1]	PVBusSlave

## Ports for ARMCortexA725CT\_CortexX925CT

**Table 3-382: Ports**

Name	Protocol	Type	Description
acp_s[2]	PVBus	Slave	AXI ACP slave port.
AEND0MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	Signal	Slave	CHI defined pins.

Name	Protocol	Type	Description
broadcastcachemaint	Signal	Slave	ACE defined pins.
broadcastouter	Signal	Slave	ACE defined pins.
broadcastpersist	Signal	Slave	CHI defined pins.
cfgend[26]	Signal	Slave	This signal is for EE bit initialisation.
cfgsdisable	Signal	Slave	This signal disables write access to some secure Interrupt Controller registers.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcs_m_pchannel	PChannel	Master	Cluster PCSM signal
cluster_powerdown_out	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the cluster power info
clusterid	Value	Slave	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.
clusterpmuirq	Signal	Master	DynamlQ pmu irq
CNTHPIRQ[26]	Signal	Master	Timer signals to SOC.
CNTHPSIRQ[26]	Signal	Master	Timer signals to SOC
CNTHVIRQ[26]	Signal	Master	Timer signals to SOC.
CNTHVSIRQ[26]	Signal	Master	Timer signals to SOC
CNTPNSIRQ[26]	Signal	Master	Timer signals to SOC.
CNTPSIRQ[26]	Signal	Master	Timer signals to SOC.
cntvalueb	CounterInterface	Slave	Interface to SoC level counter module.
CNTVIRQ[26]	Signal	Master	Timer signals to SOC.
commirq[26]	Signal	Master	Interrupt signal from debug communications channel.
core_clk_in[26]	ClockSignal	Slave	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcs_m_pchannel[26]	PChannel	Master	Core PCSM signals
core_powerdown_out[26]	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the core power info

Name	Protocol	Type	Description
coreerrirq[26]	Signal	Master	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq[26]	Signal	Master	Fault indicator for a detected 1 or 2 bit ECC error
cryptodisable[26]	Signal	Slave	Disable cryptography extensions after reset.
cti[26]	v8EmbeddedCrossTrigger_controlprotocol	Master	Cross trigger matrix port.
ctidbgirq[26]	Signal	Master	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	Signal	Slave	External debug interface.
dbgnopwrdown[26]	Signal	Master	No power-down request.
dbgpwrupreq[26]	Signal	Master	Debug power up request.
defaultMP	Signal	Slave	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	PVBus	Slave	External debug interface.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
fiq[26]	Signal	Slave	This signal drives the CPUs fast-interrupt handling.
gicreset	Signal	Master	An output from PPU that can be used to reset GICCLK domain components
gicv3_redistributor_s[26]	GICv3Comms	Slave	GICv3 AXI-stream port.
irq[26]	Signal	Slave	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	PVBus	Slave	External debug interface.
pmbirq[26]	Signal	Master	Interrupt signal from the statistical profiling unit.
pmuirq[26]	Signal	Master	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	Signal	Master	PPU cluster interrupt.
ppu_cluster_wakerequest	Signal	Slave	PPU cluster wake request signal.
ppu_core_irq[26]	Signal	Master	PPU core interrupt.
ppu_core_wakerequest[26]	Signal	Slave	PPU core wake request signal.
presetdbg	Signal	Slave	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	PVBus	Master	The core will generate bus requests on this port.
pvbus_periph_m	PVBus	Master	The core can generate peripheral bus request on this port.
rei[26]	Signal	Slave	Per core RAM Error Interrupt.

Name	Protocol	Type	Description
reset	Signal	Slave	Reset signal to cluster.
rvbaraddr[26]	Value_64	Slave	Reset vector base address.
sci_m	SystemCoherencyInterface	Master	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei[26]	Signal	Slave	Per core System Error physical pins.
spiden	Signal	Slave	External debug interface.
ticks[26]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq[26]	Signal	Master	Interrupt signal from the trace buffer unit.
utility_bus_s	PVBus	Slave	Utility bus slave
vcpumntirq[26]	Signal	Master	Interrupt signal for virtual CPU maintenance IRQ.
vfiq[26]	Signal	Slave	Virtualised FIQ.
virq[26]	Signal	Slave	Virtualised IRQ.
virtio_s	PVBus	Slave	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei[26]	Signal	Slave	Per core virtual System Error physical pins.

## Parameters for ARM Cortex A725CT\_Cortex X925CT

### AEND0\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

### AEND1\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

**AEND2\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

**AEND3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

**ASTART0\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

**ASTART1\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

**ASTART2\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

**ASTART3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

**BROADCASTATOMIC****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

**BROADCASTCACHEMAINT****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

**BROADCASTOUTER****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

**BROADCASTPERSIST****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

**CLUSTER\_ID****Type**

int

**Default value**

0x0

**Description**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled****Type**

int

**Default value**

0x1

**Description**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. Changing this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain CMOs even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required .

**GICDISABLE****Type**

bool

**Default value**

0x1

**Description**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

**bus\_type****Type**

int

**Default value**

0x0

**Description**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

**core\_power\_on\_by\_default****Type**

bool

**Default value**

0x0

**Description**

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPU which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**default\_opmode****Type**

int

**Default value**

0x4

**Description**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

**diagnostics****Type**

bool

**Default value**

0x0

**Description**

Enable DynamIQ diagnostic messages.

**enable\_simulation\_performance\_optimizations****Type**

bool

**Default value**

0x1

**Description**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

**has\_peripheral\_port****Type**

bool

**Default value**

0x0

**Description**

If true, an additional AXI peripheral port is configured.

**icache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**l3cache-has\_mpam****Type**

bool

**Default value**

0x1

**Description**

L3 Cache has MPAM support.

**l3cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**l3cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**l3cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**l3cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**l3cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. l3cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**l3cache-size****Type**

int

**Default value**

0x80000

**Description**

L3 Cache size in bytes.

**l3cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**l3cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**l3cache-ways****Type**

int

**Default value**

0x10

**Description**

L3 Cache number of ways (sets are implicit from size).

**l3cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**l3cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**mpmm\_accumulator\_multiplier****Type**

int

**Default value**

0x1

**Description**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator. A value of n means the accumulator will use (n \* accumulator value) to calculate

the mpmm threshold (MPMM). This is provided as a fast model workaround to handle cases where execution of quantums in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

**subcluster0.CPUCFR****Type**

int

**Default value**

0x0

**Description**

Value of CPU Configuration Register.

**subcluster0.NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores in the subcluster. Total number of cores in cluster may not exceed 14.

**subcluster0.cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**subcluster0.cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**subcluster0.cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**subcluster0.cpuX.CFGTE****Type**

bool

**Default value**

0x0

**Description**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

**subcluster0.cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**subcluster0.cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**subcluster0.cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**subcluster0.cpuX.force-fpsid****Type**

bool

**Default value**

0x1

**Description**

Override the FPSID value.

**subcluster0.cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-

read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

### **subcluster0.cpuX.l2cache-read\_latency**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

### **subcluster0.cpuX.l2cache-size**

#### **Type**

int

#### **Default value**

0x100000

#### **Description**

L2 Cache size in bytes.

### **subcluster0.cpuX.l2cache-snoop\_data\_transfer\_latency**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

### **subcluster0.cpuX.l2cache-snoop\_issue\_latency**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.l2cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster0.cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**subcluster0.cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**subcluster0.cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**subcluster0.cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**subcluster0.cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**subcluster0.cpuX.semihosting-T32\_HLT****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**subcluster0.cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**subcluster0.cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**subcluster0.cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**subcluster0.cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**subcluster0.cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**subcluster0.cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**subcluster0.cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**subcluster0.cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**subcluster0.cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**subcluster0.cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**subcluster0.cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**subcluster0.dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

**subcluster0.dcache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**`subcluster0.dcache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**`subcluster0.dcache-size`****Type**

int

**Default value**

0x10000

**Description**

L1 D-Cache size in bytes.

**`subcluster0.dcache-snoop_data_transfer_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

**`subcluster0.dcache-write_access_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

**`subcluster0.dcache-write_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. `dcache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

**`subcluster0.ete.CLAIMTAGS`****Type**

int

**Default value**

0x4

**Description**

Number of claim tags.

**`subcluster0.ete.ETE_REVISION`****Type**

int

**Default value**

0x1

**Description**

ETE revision: 0=ETEv1.0, 1=ETEv1.1, 2=ETEv1.2, 3=ETEv1.3.

**`subcluster0.ete.MAX_INST_PER_Q`****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**subcluster0.etc.NumberOfRSPairs****Type**

int

**Default value**

0x8

**Description**

Number of resource selector pairs.

**subcluster0.etc.PIDR\_CM0D****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CM0D value.

**subcluster0.etc.PIDR\_REVAND****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVAND value.

**subcluster0.etc.PIDR\_REVISION****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVISION value.

**subcluster0.etc.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**subcluster0.etc.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**subcluster0.etc.RETSTACK****Type**

int

**Default value**

0x1

**Description**

Return stack depth.

**subcluster0.etc.REVISION****Type**

int

**Default value**

0x0

**Description**

TRCIDR1 revision value.

**subcluster0.etc.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**subcluster0.etc.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**subcluster0.ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**subcluster0.ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**subcluster0.ete.TRCRSRTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCRSR.TA value for a forcibly traced exception.

**subcluster0.ete.TSMARK****Type**

bool

**Default value**

0x1

**Description**

Whether timestamp markers are supported.

**subcluster0.force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**subcluster0.force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**subcluster0.force\_zero\_mpam\_partid\_and\_pmg****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**subcluster0.has\_enhanced\_pan****Type**

int

**Default value**

0x2

**Description**

Implements Armv8.7 Enhanced PAN feature (FEAT\_PAN3) Possible values of this parameter are: - 1, feature is implemented if ARMv8.7 is enabled. - 2, feature is implemented.

**subcluster0.has\_ete****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**subcluster0.has\_large\_va****Type**

int

**Default value**

0x0

**Description**

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT\_LVA). Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.2 is enabled. - 2, feature is implemented.

**subcluster0.has\_statistical\_profiling****Type**

bool

**Default value**

0x0

**Description**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

**subcluster0.icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**subcluster0.icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

**subcluster0.icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state\_modelled=true.

**subcluster0.icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

**subcluster0.icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state\_modelled=true.

**subcluster0.icache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. icache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state\_modelled=true.

**subcluster0.icache-size****Type**

int

**Default value**

0x10000

**Description**

L1 I-Cache size in bytes.

**subcluster0.instruction\_tlb\_size****Type**

int

**Default value**

0x0

**Description**

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

**subcluster0.invalidate\_code\_cache\_on\_icache\_cmo****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE.  
Note: Enabling this parameter will reduce simulation performance.

**subcluster0.memory\_tagging\_support\_level****Type**

int

**Default value**

0x3

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

**subcluster0.pmu-num\_counters****Type**

int

**Default value**

0x6

**Description**

Number of PMU counters implemented.

**subcluster0.ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster0.stage12\_tlb\_size****Type**

int

**Default value**

0x80

**Description**

Number of stage1+2 tlb entries.

**subcluster0.tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster0.tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**subcluster0.treat\_PAC\_as\_NOP****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter. Treat Pointer Authentication as NOP. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are NOP. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

**subcluster0.walk\_cache\_latency****Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster1.CPUCFR****Type**

int

**Default value**

0x0

**Description**

Value of CPU Configuration Register.

**subcluster1.NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores in the subcluster. Total number of cores in cluster may not exceed 14.

**subcluster1.cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**subcluster1.cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**subcluster1.cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**subcluster1.cpuX.CFGTE****Type**

bool

**Default value**

0x0

**Description**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

**subcluster1.cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**subcluster1.cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**subcluster1.cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**subcluster1.cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**subcluster1.cpuX.l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster1.cpuX.l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**subcluster1.cpuX.l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**subcluster1.cpuX.l2cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**subcluster1.cpuX.l2cache-size****Type**

int

**Default value**

0x80000

**Description**

L2 Cache size in bytes.

**subcluster1.cpuX.l2cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**subcluster1.cpuX.l2cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster1.cpuX.l2cache-ways****Type**

int

**Default value**

0x8

**Description**

L2 Cache number of ways (sets are implicit from size).

**subcluster1.cpuX.l2cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**subcluster1.cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster1.cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**subcluster1.cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**subcluster1.cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**subcluster1.cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**subcluster1.cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**subcluster1.cpuX.semihosting-T32\_HLT****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**subcluster1.cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**subcluster1.cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**subcluster1.cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**subcluster1.cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**subcluster1.cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**subcluster1.cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**subcluster1.cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**subcluster1.cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**subcluster1.cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**subcluster1.cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**subcluster1.cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**subcluster1.dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**subcluster1.dcache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-size****Type**

int

**Default value**

0x10000

**Description**

L1 D-Cache size in bytes.

**subcluster1.dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**subcluster1.dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**subcluster1.ecv\_support\_level****Type**

int

**Default value**

0x2

**Description**

Implement Enhanced Counter Virtualization feature from ARMv8.6. 0, Not supported. 1, fully supported without CNTPOFF. 2, fully supported with CNTPOFF (FEAT\_ECV).

**subcluster1.ete.CLAIMTAGS****Type**

int

**Default value**

0x4

**Description**

Number of claim tags.

**subcluster1.ete.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**subcluster1.ete.NumberOfRSPairs****Type**

int

**Default value**

0x8

**Description**

Number of resource selector pairs.

**subcluster1.ete.PIDR\_CM0D****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CM0D value.

**subcluster1.ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**subcluster1.ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**subcluster1.ete.RETSTACK****Type**

int

**Default value**

0x3

**Description**

Return stack depth.

**subcluster1.ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**subcluster1.ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**subcluster1.ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**subcluster1.ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**subcluster1.ete.TRCRSRTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCRSR.TA value for a forcibly traced exception.

**subcluster1.ext\_abort\_so\_write\_ras\_type****Type**

int

**Default value**

0x2

**Description**

External Aborts are reported as RAS error type specified in this param. Values: 0 = NONE, 1 = UC, 2 = UEU, 3 = UEO, 4 = UER, 5 = CE.

**subcluster1.force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**subcluster1.force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**subcluster1.force\_zero\_mpam\_partid\_and\_pmg****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**subcluster1.has\_enhanced\_pan****Type**

int

**Default value**

0x2

**Description**

Implements Armv8.7 Enhanced PAN feature (FEAT\_PAN3) Possible values of this parameter are: - 1, feature is implemented if ARMv8.7 is enabled. - 2, feature is implemented.

**subcluster1.has\_ete****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**subcluster1.has\_mt\_pmu\_disable\_feature****Type**

int

**Default value**

0x0

**Description**

Implements Multi-threading PMU disable extension from ARMv8.6 (FEAT\_MTPMU). 0: FEAT\_MTPMU is disabled, 1: FEAT\_MTPMU is enabled if ARMv8.6 is implemented, 2: FEAT\_MTPMU is cherry-picked, 0xF: The feature is disabled and is represented by value 0xF in ID\_AA64DFR0\_EL1.MTPMU.

**subcluster1.has\_statistical\_profiling****Type**

bool

**Default value**

0x1

**Description**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

**subcluster1.has\_v8\_7\_spe\_inverted\_filtering****Type**

bool

**Default value**

0x0

**Description**

Where FEAT\_SPEv1p2 is implemented, whether inverted filtering by events is implemented (represented by PMISDR.FnE).

**subcluster1.has\_v8\_7\_spe\_previous\_branch\_target****Type**

bool

**Default value**

0x0

**Description**

Where FEAT\_SPEv1p2 is implemented, whether the optional branch target feature is implemented (FEAT\_SPE\_PBT).

**subcluster1.icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**subcluster1.icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

**subcluster1.icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state\_modelled=true.

**subcluster1.icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

**subcluster1.icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state\_modelled=true.

**subcluster1.icache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. icache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state\_modelled=true.

**subcluster1.icache-size****Type**

int

**Default value**

0x10000

**Description**

L1 I-Cache size in bytes.

**subcluster1.instruction\_tlb\_size****Type**

int

**Default value**

0x0

**Description**

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

**subcluster1.invalidate\_code\_cache\_on\_icache\_cmo****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

**subcluster1.memory\_tagging\_support\_level****Type**

int

**Default value**

0x3

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

**subcluster1.mpam\_has\_altsp****Type**

bool

**Default value**

0x0

**Description**

MPAM Whether MPAMIDR\_EL1.HAS\_ALTSP bit is set or clear.

**subcluster1.mpamidr\_has\_force\_ns****Type**

int

**Default value**

0x0

**Description**

Whether MPAMIDR\_EL1.HAS\_FORCE\_NS bit is set or clear. Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.6 is enabled. - 2, feature is implemented.

**subcluster1.mpamidr\_has\_sdeflt****Type**

int

**Default value**

0x1

**Description**

Whether MPAMIDR\_EL1.HAS\_SDEFILT bit is set or clear. Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.6 is enabled. - 2, feature is implemented.

**subcluster1.mpamidr\_has\_tidr****Type**

int

**Default value**

0x1

**Description**

Whether MPAMIDR\_EL1.HAS\_TIDR bit is set or clear Possible values of this parameter are:  
- 0, feature is not enabled. - 1, feature is implemented if ARMv8.6 is enabled. - 2, feature is implemented.

**subcluster1.pmu-num\_counters****Type**

int

**Default value**

0x1f

**Description**

Number of PMU counters implemented.

**subcluster1.ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster1.stage12\_tlb\_size****Type**

int

**Default value**

0x80

**Description**

Number of stage1+2 tlb entries.

**subcluster1.tcr\_txsz\_undersize\_should\_fault****Type**

bool

**Default value**

0x0

**Description**

If large VA is not supported, Whether undersized TxSZ value should generate translation fault.

**subcluster1.tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**subcluster1.tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**subcluster1.treat\_PAC\_as\_NOP****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter. Treat Pointer Authentication as NOP. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are NOP. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

**subcluster1.walk\_cache\_latency****Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

### 3.5.51 ARMCortexM0CT

ARMCortexM0CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-383: IP revisions support**

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### Differences between the model and the RTL

This model does not have a parameter that is equivalent to the RAR integration option. The architecturally-required register state is reset.

This model exposes a VTOR register through CADI but this register does not exist in the IP.

Armv6-M is a subset of Armv7-M. Arm does not guarantee that all Armv7-M-specific behavior is absent from Armv6-M Fast Models cores. Therefore, Arm does not guarantee that code that runs on Armv7-M cores but fails on Armv6-M cores will also fail on Armv6-M Fast Models cores.

#### Iris and MTI instances for ARMCortexM0CT

This model has the following Iris instances:

**Table 3-384: ARMCortexM0CT Iris instances**

InstanceName	ComponentName
ARMCortexM0CT	ARM_Cortex-M0
ARMCortexM0CT.acp_mapper	PVBusMapper
ARMCortexM0CT.ext_bus	PVBusLogger
ARMCortexM0CT.ext_bus.mapper	PVBusMapper
ARMCortexM0CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

**Table 3-385: ARMCortexM0CT MTI instances**

InstanceName	ComponentName
ARMCortexM0CT	ARM_Cortex-M0
ARMCortexM0CT.acp_mapper	PVBusMapper
ARMCortexM0CT.ext_bus	PVBusLogger
ARMCortexM0CT.ext_bus.mapper	PVBusMapper
ARMCortexM0CT.l2_flusher	AsyncCacheFlushUnit

## Ports for ARMCortexM0CT

Table 3-386: Ports

Name	Protocol	Type	Description
ahbd	PVBus	Slave	Debug AHB - core bus slave driven by the DAP.
bigend	Signal	Slave	Configure big endian data format.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
currpri	Value	Master	Current execution priority.
edbgrq	Signal	Slave	External debug request.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
intisr[32]	Signal	Slave	This signal array delivers signals to the NVIC.
intnmi	Signal	Slave	Configure non maskable interrupt.
lockup	Signal	Master	Asserted when the processor is in lockup state.
poreset	Signal	Slave	Raising this signal will do a power-on reset of the core.
pv_ppbus_m	PVBus	Master	The core will generate External Private Peripheral Bus requests on this port.
pvbus_m	PVBus	Master	The core will generate bus requests on this port.
sleepdeep	Signal	Master	Asserted when the processor is in deep sleep.
sleeping	Signal	Master	Asserted when the processor is in sleep.
stcalib	Value	Slave	This is the calibration value for the SysTick timer.
stclk	ClockSignal	Slave	This is the reference clock for the SysTick timer.
sysreset	Signal	Slave	Raising this signal will put the core into reset mode (but does not reset the debug logic).
sysresetreq	Signal	Master	Asserted to indicate that a reset is required.
ticks	InstructionCount	Master	Port allowing the number of instructions since startup to be read from the CPU.

## Parameters for ARMCortexM0CT

**BIGENDINIT****Type**

bool

**Default value**

0x0

**Description**

Initialize processor to big endian mode.

**BKPT****Type**

int

**Default value**

0x4

**Description**

Number of breakpoint unit comparators implemented.

**DBG****Type**

bool

**Default value**

0x1

**Description**

Set whether debug extensions are implemented.

**NUM\_IRQ****Type**

int

**Default value**

0x20

**Description**

Number of user interrupts.

**SYST****Type**

bool

**Default value**

0x1

**Description**

Enable support for SysTick timer functionality.

**WIC****Type**

bool

**Default value**

0x1

**Description**

Include support for WIC-mode deep sleep.

**WPT****Type**

int

**Default value**

0x2

**Description**

Number of watchpoint unit comparators implemented.

**`cpi_div`****Type**

int

**Default value**

0x1

**Description**

divider for calculating CPI (Cycles Per Instruction).

**`cpi_mul`****Type**

int

**Default value**

0x1

**Description**

multiplier for calculating CPI (Cycles Per Instruction).

**`master_id`****Type**

int

**Default value**

0x0

**Description**

Master ID presented in bus transactions.

**`min_sync_level`****Type**

int

**Default value**

0x0

**Description**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**`reported_patch_level`****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic patch level value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**reported\_revision\_number****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic revision number value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting.

**semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting SVC calls.

**semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

**semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**semihosting-heap\_limit****Type**

int

**Default value**

0x20700000

**Description**

Virtual address of top of heap.

**semihosting-stack\_base****Type**

int

**Default value**

0x20800000

**Description**

Virtual address of base of descending stack.

**semihosting-stack\_limit****Type**

int

**Default value**

0x20700000

**Description**

Virtual address of stack limit.

### 3.5.52 ARMCortexM0PlusCT

ARMCortexM0PlusCT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-387: IP revisions support**

Revision	Quality level
r0p1	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**Differences between the model and the RTL**

This model does not have a parameter that is equivalent to the RAR integration option. The architecturally required register state is reset.

This model does not have a parameter that is equivalent to the RAR integration option. The architecturally-required register state is reset.

This model exposes a VTOR register through CADI but this register does not exist in the IP.

Armv6-M is a subset of Armv7-M. Arm does not guarantee that all Armv7-M-specific behavior is absent from Armv6-M Fast Models cores. Therefore, Arm does not guarantee that code that runs on Armv7-M cores but fails on Armv6-M cores will also fail on Armv6-M Fast Models cores.

**Iris and MTI instances for ARMCortexM0PlusCT**

This model has the following Iris instances:

**Table 3-388: ARMCortexM0PlusCT Iris instances**

InstanceName	ComponentName
ARMCortexM0PlusCT	ARM_Cortex-M0+
ARMCortexM0PlusCT.acp_mapper	PVBusMapper
ARMCortexM0PlusCT.ext_bus	PVBusLogger
ARMCortexM0PlusCT.ext_bus.mapper	PVBusMapper
ARMCortexM0PlusCT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

**Table 3-389: ARMCortexM0PlusCT MTI instances**

InstanceName	ComponentName
ARMCortexM0PlusCT	ARM_Cortex-M0+

InstanceName	ComponentName
ARMCortexM0PlusCT.acp_mapper	PVBusMapper
ARMCortexM0PlusCT.ext_bus	PVBusLogger
ARMCortexM0PlusCT.ext_bus.mapper	PVBusMapper
ARMCortexM0PlusCT.l2_flusher	AsyncCacheFlushUnit

## Ports for ARMCortexM0PlusCT

**Table 3-390: Ports**

Name	Protocol	Type	Description
ahbd	PVBus	Slave	Debug AHB - core bus slave driven by the DAP.
bigend	Signal	Slave	Configure big endian data format.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
cpuwait	Signal	Slave	CPUWAIT extends effect of reset when true
currpri	Value	Master	Current execution priority.
edbgrq	Signal	Slave	External debug request.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
intisr[32]	Signal	Slave	This signal array delivers signals to the NVIC.
intnmi	Signal	Slave	Configure non maskable interrupt.
io_port_in	PVBus	Slave	I/O port pair. See the documentation for the io_port_out port.
io_port_out	PVBus	Master	I/O port pair. Used if IOP is true. Transactions from io_port_out which do not "match" should be returned via io_port_in. For performance reasons, the I/O port interface is not modelled directly. Instead, a simple PVBus gasket is inserted at the point in the memory system where the I/O port would be. In hardware, a device would be attached to the port which would tell the CPU whether it would like to intercept each transaction, given its address. This can be modelled in a performant manner by connecting a PVBusMapper-based device to io_port_out which intercepts transactions of interest and passes other transactions back to the CPU via io_port_in. Your I/O port device model is also responsible for aborting transactions which would be aborted on hardware (e.g. exclusives) if necessary.
lockup	Signal	Master	Asserted when the processor is in lockup state.
poreset	Signal	Slave	Raising this signal will do a power-on reset of the core.
pv_ppbus_m	PVBus	Master	The core will generate External Private Peripheral Bus requests on this port.
pvbus_m	PVBus	Master	The core will generate bus requests on this port.
sleepdeep	Signal	Master	Asserted when the processor is in deep sleep.
sleeping	Signal	Master	Asserted when the processor is in sleep.
stcalib	Value	Slave	This is the calibration value for the SysTick timer.
stclk	ClockSignal	Slave	This is the reference clock for the SysTick timer.
sysreset	Signal	Slave	Raising this signal will put the core into reset mode (but does not reset the debug logic).
sysresetreq	Signal	Master	Asserted to indicate that a reset is required.
ticks	InstructionCount	Master	Port allowing the number of instructions since startup to be read from the CPU.

## Parameters for ARMCortexM0PlusCT

### **BIGENDINIT**

**Type**

bool

**Default value**

0x0

**Description**

Initialize processor to big endian mode.

### **BKPT**

**Type**

int

**Default value**

0x4

**Description**

Number of breakpoint unit comparators implemented.

### **DBG**

**Type**

bool

**Default value**

0x1

**Description**

Set whether debug extensions are implemented.

### **IOP**

**Type**

bool

**Default value**

0x0

**Description**

Send all d-side transactions to the port, io\_port\_out. Transactions which do not match should be returned to the port, io\_port\_in.

### **IRQDIS**

**Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n].

**NUM\_IRQ****Type**

int

**Default value**

0x20

**Description**

Number of user interrupts.

**NUM\_MPU\_REGION****Type**

int

**Default value**

0x0

**Description**

Number of MPU regions.

**SYST****Type**

bool

**Default value**

0x1

**Description**

Enable support for SysTick timer functionality.

**USER****Type**

bool

**Default value**

0x0

**Description**

Enable support for Unprivileged/Privileged Extension.

**VTOR****Type**

bool

**Default value**

0x0

**Description**

Include Vector Table Offset Register.

**WIC****Type**

bool

**Default value**

0x1

**Description**

Include support for WIC-mode deep sleep.

**WPT****Type**

int

**Default value**

0x2

**Description**

Number of watchpoint unit comparators implemented.

**`cpi_div`****Type**

int

**Default value**

0x1

**Description**

divider for calculating CPI (Cycles Per Instruction).

**`cpi_mul`****Type**

int

**Default value**

0x1

**Description**

multiplier for calculating CPI (Cycles Per Instruction).

**`master_id`****Type**

int

**Default value**

0x0

**Description**

Master ID presented in bus transactions.

**min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**reported\_patch\_level****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic patch level value to be displayed from the CUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**reported\_revision\_number****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic revision number value to be displayed from the CUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting.

**semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting SVC calls.

**semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

**semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**semihosting-heap\_limit****Type**

int

**Default value**

0x20700000

**Description**

Virtual address of top of heap.

**semihosting-stack\_base**

**Type**

int

**Default value**

0x20800000

**Description**

Virtual address of base of descending stack.

**semihosting-stack\_limit**

**Type**

int

**Default value**

0x20700000

**Description**

Virtual address of stack limit.

**3.5.53 ARM CortexM3CT**

ARM CortexM3CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-391: IP revisions support**

Revision	Quality level
r2p1	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**Differences between the model and the RTL**

This component has the following differences from the corresponding revision of the RTL implementation:

- The WIC is not currently implemented.
- Power control is not implemented, so the processor does not set the SLEEPING or SLEEPDEEP signals. It does not support powering down of the processor.
- Only the minimal level of debug support is provided (no DAP, FPB, DWT, or halting debug capability).
- Debug-related components are not implemented.

- The unimplemented registers are the processor debug registers, system debug registers, debug interface port registers, TPIU registers, and ETM registers.
- The processor must still be clocked even if it has asserted the sleeping or sleepdeep signals.
- Disabling processor features using the Auxiliary Control Register is not supported.
- Only a single pvbus\_m master port is provided. This combines the ICode, DCode, and System bus interfaces of the RTL. The external PPB bus is provided by the pv\_ppbus\_m master port.
- In privileged mode, STRT and LDRT to the PPB region are not forbidden access.
- No support for ETM, TPIU, or HTM.
- There is no supported equivalent of the RESET\_ALL\_REGS configuration setting in RTL (that forces all registers to have a well-defined value on reset).
- The RTL implements the ROM table as an external component on the External Private Peripheral Bus. In the CT model, the ROM table is implemented internally as a fallback if an external PPB access in the ROM table address region aborts. This permits the default ROM table to be overridden (by implementing an external component connected to the external PPB to handle accesses to these addresses) without requiring every user of the processor to implement and connect a ROM table component.

### Implementation of ITM in M-class models

This model has a parameter that enables partial support for Instrumentation Trace Macrocell (ITM). In hardware or RTL, trace data from ITM is sent in packets to the trace block serially using a single pin or wire. In the model, if it is enabled, the ITM trace data is output using an MTI trace source called ITM. The ITM trace source has an `ITM_PACKET_TYPE` field. The following table shows which packet types the model supports:

Field value	Description	Supported by model
ITM_SYNC	Synchronization packet	Not supported.
ITM_P_OVERFLOW	Protocol: Overflow packet	Not supported.
ITM_P_LOCAL_TIMESTAMP	Protocol: Local timestamp packets	Not supported.
ITM_P_GLOBAL_TIMESTAMP	Protocol: Global timestamp packets	Not supported.
ITM_P_EXTEN	Protocol: Extension packet	Not supported.
ITM_S_INSTRUMENTATION	Source: Instrumentation packet	Supported.
ITM_S_DWT_EVENT_COUNTER	Hardware source: Event counter wrapping	Not supported.
ITM_S_DWT_EXCEPTION	Hardware source: Exception tracing	Supported.
ITM_S_DWT_PC_SAMPLING	Hardware source: PC sampling	Not supported.
ITM_S_DWT_DATA_PC_TRACE	Hardware source: DWT Data trace PC value	Supported.
ITM_S_DWT_DATA_ADDRESS_TRACE	Hardware source: DWT Data trace address value	Supported.
ITM_S_DWT_DATA_DATA_TRACE	Hardware source: DWT Data trace DATA value	Supported.

### Iris and MTI instances for ARMCortexM3CT

This model has the following Iris instances:

**Table 3-393: ARMCortexM3CT Iris instances**

InstanceName	ComponentName
ARMCortexM3CT	ARM_Cortex-M3
ARMCortexM3CT.acp_mapper	PVBusMapper
ARMCortexM3CT.ext_bus	PVBusLogger
ARMCortexM3CT.ext_bus.mapper	PVBusMapper
ARMCortexM3CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

**Table 3-394: ARMCortexM3CT MTI instances**

InstanceName	ComponentName
ARMCortexM3CT	ARM_Cortex-M3
ARMCortexM3CT.acp_mapper	PVBusMapper
ARMCortexM3CT.ext_bus	PVBusLogger
ARMCortexM3CT.ext_bus.mapper	PVBusMapper
ARMCortexM3CT.l2_flusher	AsyncCacheFlushUnit

## Ports for ARMCortexM3CT

**Table 3-395: Ports**

Name	Protocol	Type	Description
ahb_ap	PVBus	Slave	Debug AHB - core bus slave driven by the DAP.
auxfault	Value	Slave	This is wired to the Auxiliary Fault Status Register.
bigend	Signal	Slave	Configure big endian data format.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
currpri	Value	Master	Current execution priority.
edbgrq	Signal	Slave	External debug request.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
intisr[240]	Signal	Slave	This signal array delivers signals to the NVIC.
intnmi	Signal	Slave	Configure non maskable interrupt.
lockup	Signal	Master	Asserted when the processor is in lockup state.
poreset	Signal	Slave	Raising this signal will do a power-on reset of the core.
pv_ppbus_m	PVBus	Master	The core will generate External Private Peripheral Bus requests on this port.
pvbus_m	PVBus	Master	The core will generate bus requests on this port.
sleepdeep	Signal	Master	Asserted when the processor is in deep sleep.
sleeping	Signal	Master	Asserted when the processor is in sleep.
stcalib	Value	Slave	This is the calibration value for the SysTick timer.
stclk	ClockSignal	Slave	This is the reference clock for the SysTick timer.
sysreset	Signal	Slave	Raising this signal will put the core into reset mode (but does not reset the debug logic).

Name	Protocol	Type	Description
sysresetreq	Signal	Master	Asserted to indicate that a reset is required.
ticks	InstructionCount	Master	Port allowing the number of instructions since startup to be read from the CPU.

## Parameters for ARMCortexM3CT

### BB\_PRESENT

#### Type

bool

#### Default value

0x1

#### Description

Enable bitbanding.

### BIGENDINIT

#### Type

bool

#### Default value

0x0

#### Description

Initialize processor to big endian mode.

### DBG\_LVL

#### Type

int

#### Default value

0x3

#### Description

0: No debug; 1: Minimal debug; 2: Full debug without DWT address matching; 3: Full debug support with DWT data-comparators.

### LVL\_WIDTH

#### Type

int

#### Default value

0x3

#### Description

Number of bits of interrupt priority.

**NUM\_IRQ****Type**

int

**Default value**

0x10

**Description**

Number of user interrupts.

**NUM\_MPU\_REGION****Type**

int

**Default value**

0x8

**Description**

Number of MPU regions.

**TRACE\_LVL****Type**

int

**Default value**

0x1

**Description**

Level of instrumentation trace supported. 0: No trace, 1: Standard trace. ITM, TPIU and DWT triggers and counters present, 2: Full trace. ITM, TPIU, ETM and DWT triggers and counters present.

**WIC****Type**

bool

**Default value**

0x1

**Description**

Include support for WIC-mode deep sleep.

**cpi\_div****Type**

int

**Default value**

0x1

**Description**

divider for calculating CPI (Cycles Per Instruction).

**cpi\_mul****Type**

int

**Default value**

0x1

**Description**

multiplier for calculating CPI (Cycles Per Instruction).

**master\_id****Type**

int

**Default value**

0x0

**Description**

Master ID presented in bus transactions.

**min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**reported\_patch\_level****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic patch level value to be displayed from the CUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**reported\_revision\_number****Type**

int

**Default value**`0xffffffffffffffff`**Description**

Purely cosmetic revision number value to be displayed from the CUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**`semihosting-Thumb_SVC`****Type**`int`**Default value**`0xab`**Description**

T32 SVC number for semihosting.

**`semihosting-cmd_line`****Type**`string`**Default value**`""`**Description**

Command line available to semihosting SVC calls.

**`semihosting-cwd`****Type**`string`**Default value**`""`**Description**

Base directory for semihosting file access.

**`semihosting-enable`****Type**`bool`**Default value**`0x1`**Description**

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

**semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**semihosting-heap\_limit****Type**

int

**Default value**

0x20700000

**Description**

Virtual address of top of heap.

**semihosting-stack\_base****Type**

int

**Default value**

0x20800000

**Description**

Virtual address of base of descending stack.

**semihosting-stack\_limit****Type**

int

**Default value**

0x20700000

**Description**

Virtual address of stack limit.

### 3.5.54 ARMCortexM4CT

ARMCortexM4CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-396: IP revisions support**

Revision	Quality level
r0p1	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

### Differences between the model and the RTL

This component has the following differences from the corresponding revision of the RTL implementation:

- The Wakeup Interrupt Controller (WIC) is not implemented.
- Power control is not implemented. Powering down of the processor is not supported. The processor must still be clocked even if it has asserted the sleeping or sleepdeep signals.
- Only the minimal level of debug support is provided (no DAP, FPB, DWT, or halting debug capability).
- No debug-related components are implemented.
- The unimplemented registers are the processor debug registers, system debug registers, debug interface port registers, TPIU registers, and ETM registers.
- No support for ETM, TPIU, or HTM.
- There is no supported equivalent of the RESET\_ALL\_REGS configuration setting in RTL (that forces all registers to have a well-defined value on reset).
- Disabling processor features using the Auxiliary Control Register is not supported.
- Only a single pbus\_m master port is provided. This combines the ICode, DCode, and System bus interfaces of the RTL. The external PPB bus is provided by the pv\_ppbus\_m master port.
- In privileged mode, STRT and LDRT to the PPB region are not forbidden access.
- The RTL implements the ROM table as an external component on the External Private Peripheral Bus. In the CT model, the ROM table is implemented internally as a fallback if an external PPB access in the ROM table address region aborts. This permits the default ROM table to be overridden (by implementing an external component connected to the external PPB to handle accesses to these addresses) without requiring every user of the processor to implement and connect a ROM table component.
- Because the CT model does not provide a DAP port or halting debug capability, the dbgen signal is ignored.

### Implementation of ITM in M-class models

This model has a parameter that enables partial support for Instrumentation Trace Macrocell (ITM). In hardware or RTL, trace data from ITM is sent in packets to the trace block serially using a single pin or wire. In the model, if it is enabled, the ITM trace data is output using an MTI trace source called ITM. The ITM trace source has an `ITM_PACKET_TYPE` field. The following table shows which packet types the model supports:

Field value	Description	Supported by model
ITM_SYNC	Synchronization packet	Not supported.

Field value	Description	Supported by model
ITM_P_OVERFLOW	Protocol: Overflow packet	Not supported.
ITM_P_LOCAL_TIMESTAMP	Protocol: Local timestamp packets	Not supported.
ITM_P_GLOBAL_TIMESTAMP	Protocol: Global timestamp packets	Not supported.
ITM_P_EXTEN	Protocol: Extension packet	Not supported.
ITM_S_INSTRUMENTATION	Source: Instrumentation packet	Supported.
ITM_S_DWT_EVENT_COUNTER	Hardware source: Event counter wrapping	Not supported.
ITM_S_DWT_EXCEPTION	Hardware source: Exception tracing	Supported.
ITM_S_DWT_PC_SAMPLING	Hardware source: PC sampling	Not supported.
ITM_S_DWT_DATA_PC_TRACE	Hardware source: DWT Data trace PC value	Supported.
ITM_S_DWT_DATA_ADDRESS_TRACE	Hardware source: DWT Data trace address value	Supported.
ITM_S_DWT_DATA_DATA_TRACE	Hardware source: DWT Data trace DATA value	Supported.

## Iris and MTI instances for ARMCortexM4CT

This model has the following Iris instances:

**Table 3-398: ARMCortexM4CT Iris instances**

InstanceName	ComponentName
ARMCortexM4CT	ARM_Cortex-M4
ARMCortexM4CT.acp_mapper	PVBusMapper
ARMCortexM4CT.ext_bus	PVBusLogger
ARMCortexM4CT.ext_bus.mapper	PVBusMapper
ARMCortexM4CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

**Table 3-399: ARMCortexM4CT MTI instances**

InstanceName	ComponentName
ARMCortexM4CT	ARM_Cortex-M4
ARMCortexM4CT.acp_mapper	PVBusMapper
ARMCortexM4CT.ext_bus	PVBusLogger
ARMCortexM4CT.ext_bus.mapper	PVBusMapper
ARMCortexM4CT.l2_flusher	AsyncCacheFlushUnit

## Ports for ARMCortexM4CT

**Table 3-400: Ports**

Name	Protocol	Type	Description
ahb_ap	PVBus	Slave	Debug AHB - core bus slave driven by the DAP.
auxfault	Value	Slave	This is wired to the Auxiliary Fault Status Register.
bigend	Signal	Slave	Configure big endian data format.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.

Name	Protocol	Type	Description
currpri	Value	Master	Current execution priority.
dbgen	Signal	Slave	Disallow (DAP) debugger access.
edbgrq	Signal	Slave	External debug request.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
fpudisable	Signal	Slave	Configure core with no FPU on reset.
fpxxc	Value	Master	Port that sends the value of the FPxxC exception flags (FPIX, FPIDC, FPOFC, FPUFC, FPDZC, FPIOC). Each flag is present in the same position as in the FPSCR register (e.g. fpxxc[0] = FPIOC).
intisr[240]	Signal	Slave	This signal array delivers signals to the NVIC.
intnmi	Signal	Slave	Configure non maskable interrupt.
lockup	Signal	Master	Asserted when the processor is in lockup state.
mpudisable	Signal	Slave	Configure core with no MPU on reset.
poreset	Signal	Slave	Raising this signal will do a power-on reset of the core.
pv_ppbus_m	PVBus	Master	The core will generate External Private Peripheral Bus requests on this port.
pdbus_m	PVBus	Master	The core will generate bus requests on this port.
sleepdeep	Signal	Master	Asserted when the processor is in deep sleep.
sleeping	Signal	Master	Asserted when the processor is in sleep.
stcalib	Value	Slave	This is the calibration value for the SysTick timer.
stclk	ClockSignal	Slave	This is the reference clock for the SysTick timer.
sysreset	Signal	Slave	Raising this signal will put the core into reset mode (but does not reset the debug logic).
sysresetreq	Signal	Master	Asserted to indicate that a reset is required.
ticks	InstructionCount	Master	Port allowing the number of instructions since startup to be read from the CPU.

## Parameters for ARM CortexM4CT

### BB\_PRESENT

#### Type

bool

#### Default value

0x1

#### Description

Enable bitbanding.

### BIGENDINIT

#### Type

bool

#### Default value

0x0

**Description**

Initialize processor to big endian mode.

**DBGLVL****Type**

int

**Default value**

0x3

**Description**

0: No debug; 1: Minimal debug; 2: Full debug without DWT address matching; 3: Full debug support with, DWT can compare data as well as address.

**LVL\_WIDTH****Type**

int

**Default value**

0x3

**Description**

Number of bits of interrupt priority.

**NUM\_IRQ****Type**

int

**Default value**

0x10

**Description**

Number of user interrupts.

**NUM\_MPU\_REGION****Type**

int

**Default value**

0x8

**Description**

Number of MPU regions.

**TRACE\_LVL****Type**

int

**Default value**

0x1

**Description**

Level of instrumentation trace supported. 0: No trace, 1: Standard trace. ITM, TPIU and DWT triggers and counters present, 2: Full trace. ITM, TPIU, ETM and DWT triggers and counters present.

**WIC****Type**

bool

**Default value**

0x1

**Description**

Include support for WIC-mode deep sleep.

**`cpi_div`****Type**

int

**Default value**

0x1

**Description**

divider for calculating CPI (Cycles Per Instruction).

**`cpi_mul`****Type**

int

**Default value**

0x1

**Description**

multiplier for calculating CPI (Cycles Per Instruction).

**`master_id`****Type**

int

**Default value**

0x0

**Description**

Master ID presented in bus transactions.

**min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**reported\_patch\_level****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic patch level value to be displayed from the CUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**reported\_revision\_number****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic revision number value to be displayed from the CUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting.

**semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting SVC calls.

**`semihosting-cwd`****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**`semihosting-enable`****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

**`semihosting-heap_base`****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**`semihosting-heap_limit`****Type**

int

**Default value**

0x20700000

**Description**

Virtual address of top of heap.

**semihosting-stack\_base**

**Type**  
int

**Default value**  
0x20800000

**Description**  
Virtual address of base of descending stack.

**semihosting-stack\_limit**

**Type**  
int

**Default value**  
0x20700000

**Description**  
Virtual address of stack limit.

**vfp-present**

**Type**  
bool

**Default value**  
0x1

**Description**  
Set whether the model has VFP support.

3.5.55 ARMCortexM7CT

ARMCortexM7CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-401: IP revisions support

Revision	Quality level
r1p2	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

Differences between the model and the RTL

- TCMs are modeled internally and the model does not support external TCMs or the ports associated with them.
- ECC support is hardware-specific so is not modeled.

## Implementation of ITM in M-class models

This model has a parameter that enables partial support for Instrumentation Trace Macrocell (ITM). In hardware or RTL, trace data from ITM is sent in packets to the trace block serially using a single pin or wire. In the model, if it is enabled, the ITM trace data is output using an MTI trace source called ITM. The ITM trace source has an `ITM_PACKET_TYPE` field. The following table shows which packet types the model supports:

Field value	Description	Supported by model
ITM_SYNC	Synchronization packet	Not supported.
ITM_P_OVERFLOW	Protocol: Overflow packet	Not supported.
ITM_P_LOCAL_TIMESTAMP	Protocol: Local timestamp packets	Not supported.
ITM_P_GLOBAL_TIMESTAMP	Protocol: Global timestamp packets	Not supported.
ITM_P_EXTEN	Protocol: Extension packet	Not supported.
ITM_S_INSTRUMENTATION	Source: Instrumentation packet	Supported.
ITM_S_DWT_EVENT_COUNTER	Hardware source: Event counter wrapping	Not supported.
ITM_S_DWT_EXCEPTION	Hardware source: Exception tracing	Supported.
ITM_S_DWT_PC_SAMPLING	Hardware source: PC sampling	Not supported.
ITM_S_DWT_DATA_PC_TRACE	Hardware source: DWT Data trace PC value	Supported.
ITM_S_DWT_DATA_ADDRESS_TRACE	Hardware source: DWT Data trace address value	Supported.
ITM_S_DWT_DATA_DATA_TRACE	Hardware source: DWT Data trace DATA value	Supported.

## Iris and MTI instances for ARM CortexM7CT

This model has the following Iris instances:

**Table 3-403: ARM CortexM7CT Iris instances**

InstanceName	ComponentName
ARM CortexM7CT	ARM_Cortex-M7
ARM CortexM7CT.acp_mapper	PVBusMapper
ARM CortexM7CT.ext_bus	PVBusLogger
ARM CortexM7CT.ext_bus.mapper	PVBusMapper
ARM CortexM7CT.l1_incoherent_interconnect	PVCache
ARM CortexM7CT.l1_incoherent_interconnect.upstream[0]	PVBusSlave
ARM CortexM7CT.l1_incoherent_interconnect.upstream[10]	PVBusSlave
ARM CortexM7CT.l1_incoherent_interconnect.upstream[11]	PVBusSlave
ARM CortexM7CT.l1_incoherent_interconnect.upstream[12]	PVBusSlave
ARM CortexM7CT.l1_incoherent_interconnect.upstream[13]	PVBusSlave
ARM CortexM7CT.l1_incoherent_interconnect.upstream[14]	PVBusSlave
ARM CortexM7CT.l1_incoherent_interconnect.upstream[15]	PVBusSlave
ARM CortexM7CT.l1_incoherent_interconnect.upstream[16]	PVBusSlave
ARM CortexM7CT.l1_incoherent_interconnect.upstream[17]	PVBusSlave
ARM CortexM7CT.l1_incoherent_interconnect.upstream[1]	PVBusSlave
ARM CortexM7CT.l1_incoherent_interconnect.upstream[2]	PVBusSlave

InstanceName	ComponentName
ARMCortexM7CT.l1_incoherent_interconnect.upstream[3]	PVBusSlave
ARMCortexM7CT.l1_incoherent_interconnect.upstream[4]	PVBusSlave
ARMCortexM7CT.l1_incoherent_interconnect.upstream[5]	PVBusSlave
ARMCortexM7CT.l1_incoherent_interconnect.upstream[6]	PVBusSlave
ARMCortexM7CT.l1_incoherent_interconnect.upstream[7]	PVBusSlave
ARMCortexM7CT.l1_incoherent_interconnect.upstream[8]	PVBusSlave
ARMCortexM7CT.l1_incoherent_interconnect.upstream[9]	PVBusSlave
ARMCortexM7CT.l1dcache	PVCache
ARMCortexM7CT.l1dcache.upstream[0]	PVBusSlave
ARMCortexM7CT.l1icache	PVCache
ARMCortexM7CT.l1icache.upstream[0]	PVBusSlave
ARMCortexM7CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

**Table 3-404: ARMCortexM7CT MTI instances**

InstanceName	ComponentName
ARMCortexM7CT	ARM_Cortex-M7
ARMCortexM7CT.acp_mapper	PVBusMapper
ARMCortexM7CT.ext_bus	PVBusLogger
ARMCortexM7CT.ext_bus.mapper	PVBusMapper
ARMCortexM7CT.l1_incoherent_interconnect	PVCache
ARMCortexM7CT.l1_incoherent_interconnect.upstream[0]	PVBusSlave
ARMCortexM7CT.l1_incoherent_interconnect.upstream[10]	PVBusSlave
ARMCortexM7CT.l1_incoherent_interconnect.upstream[11]	PVBusSlave
ARMCortexM7CT.l1_incoherent_interconnect.upstream[12]	PVBusSlave
ARMCortexM7CT.l1_incoherent_interconnect.upstream[13]	PVBusSlave
ARMCortexM7CT.l1_incoherent_interconnect.upstream[14]	PVBusSlave
ARMCortexM7CT.l1_incoherent_interconnect.upstream[15]	PVBusSlave
ARMCortexM7CT.l1_incoherent_interconnect.upstream[16]	PVBusSlave
ARMCortexM7CT.l1_incoherent_interconnect.upstream[17]	PVBusSlave
ARMCortexM7CT.l1_incoherent_interconnect.upstream[1]	PVBusSlave
ARMCortexM7CT.l1_incoherent_interconnect.upstream[2]	PVBusSlave
ARMCortexM7CT.l1_incoherent_interconnect.upstream[3]	PVBusSlave
ARMCortexM7CT.l1_incoherent_interconnect.upstream[4]	PVBusSlave
ARMCortexM7CT.l1_incoherent_interconnect.upstream[5]	PVBusSlave
ARMCortexM7CT.l1_incoherent_interconnect.upstream[6]	PVBusSlave
ARMCortexM7CT.l1_incoherent_interconnect.upstream[7]	PVBusSlave
ARMCortexM7CT.l1_incoherent_interconnect.upstream[8]	PVBusSlave
ARMCortexM7CT.l1_incoherent_interconnect.upstream[9]	PVBusSlave

InstanceName	ComponentName
ARMCortexM7CT.l1dcache	PVCache
ARMCortexM7CT.l1dcache.upstream[0]	PVBusSlave
ARMCortexM7CT.l1icache	PVCache
ARMCortexM7CT.l1icache.upstream[0]	PVBusSlave
ARMCortexM7CT.l2_flusher	AsyncCacheFlushUnit

## Ports for ARMCortexM7CT

**Table 3-405: Ports**

Name	Protocol	Type	Description
ahbd	PVBus	Slave	Debug AHB - core bus slave driven by the DAP.
ahbp_m	PVBus	Master	The core will generate Vendor System data accesses on this port.
ahbs	PVBus	Slave	External master (e.g. DMA) can write TCMs (whether or not enabled in xTCMCR).
auxfault	Value	Slave	This is wired to the Auxiliary Fault Status Register.
bigend	Signal	Slave	Configure big endian data format.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
cpuwait	Signal	Slave	When this signal is HIGH out of reset, it forces the processor into a quiescent state that delays its boot-up sequence and instruction execution until this signal is driven LOW
currpri	Value	Master	Current execution priority.
dap_s	PVBus	Slave	Debug Access Port (DAP).
dbgen	Signal	Slave	Invasive debug enable.
dbgrestart	Signal	Slave	External debug request.
dbgrestarted	Signal	Master	External debug request.
edbgrq	Signal	Slave	External debug request.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
fpudisable	Signal	Slave	Configure core with no FPU on reset.
fpxxc	Value	Master	Port that sends the value of the FPxxC exception flags (FPIX, FPIDC, FPOFC, FPUFC, FPDZC, FPIOC). Each flag is present in the same position as in the FPSCR register (e.g. fpxxc[0] = FPIOC).
halted	Signal	Master	External debug request.
initahbpen	Signal	Slave	Enable AHBP on the next reset
initvtor	Value	Slave	Initial value of the Vector Table Offset Register (VTOR)
intisr[240]	Signal	Slave	This signal array delivers signals to the NVIC.
intnmi	Signal	Slave	Configure non maskable interrupt.
lockup	Signal	Master	Asserted when the processor is in lockup state.
mpudisable	Signal	Slave	Configure core with no MPU on reset.
niden	Signal	Slave	Non-invasive debug enable.
poreset	Signal	Slave	Raising this signal will do a power-on reset of the core.
pv_ppbus_m	PVBus	Master	The core will generate External Private Peripheral Bus requests on this port.
pdbus_m	PVBus	Master	The core will generate bus requests on this port.

Name	Protocol	Type	Description
sleepdeep	Signal	Master	Asserted when the processor is in deep sleep.
sleeping	Signal	Master	Asserted when the processor is in sleep.
stcalib	Value	Slave	This is the calibration value for the SysTick timer.
stclk	ClockSignal	Slave	This is the reference clock for the SysTick timer.
sysreset	Signal	Slave	Raising this signal will put the core into reset mode (but does not reset the debug logic).
sysresetreq	Signal	Master	Asserted to indicate that a reset is required.
ticks	InstructionCount	Master	Port allowing the number of instructions since startup to be read from the CPU.

## Parameters for ARM Cortex M7CT

### **BIGENDINIT**

#### Type

bool

#### Default value

0x0

#### Description

Initialize processor to big endian mode.

### **CFG\_AHBPSZ**

#### Type

int

#### Default value

0x0

#### Description

Size of the AHB port memory region. 0=AHBP disabled, 1=64MB, 2=128MB, 3=256MB, 4=512MB.

### **CTI**

#### Type

bool

#### Default value

0x0

#### Description

CTI (Cross Trigger Interface) included.

### **CTI\_irq0\_pin**

#### Type

int

**Default value**

0x4

**Description**

CTI interrupt request 0 pin.

**CTI\_irq1\_pin****Type**

int

**Default value**

0x5

**Description**

CTI interrupt request 1 pin.

**DBGLVL****Type**

int

**Default value**

0x1

**Description**

0: 2 DWT, 4 FPB; 1: 4 DWT, 8 FPB comparators.

**DP\_FLOAT****Type**

bool

**Default value**

0x1

**Description**

Support 8-byte floats.

**INITAHBPEN****Type**

bool

**Default value**

0x0

**Description**

The AHBP enable state at reset.

**INITVTOR****Type**

int

**Default value**

0x0

**Description**

vector-table offset at reset.

**LVL\_WIDTH****Type**

int

**Default value**

0x3

**Description**

Number of bits of interrupt priority.

**NUM\_IRQ****Type**

int

**Default value**

0x20

**Description**

Number of user interrupts.

**NUM\_MPU\_REGION****Type**

int

**Default value**

0x10

**Description**

Number of MPU regions.

**TRC****Type**

bool

**Default value**

0x1

**Description**

Level of instrumentation trace supported. false : No ITM trace included, true: ITM trace included.

**WIC****Type**

bool

**Default value**

0x1

**Description**

Include support for WIC-mode deep sleep.

**`cpi_div`****Type**

int

**Default value**

0x1

**Description**

divider for calculating CPI (Cycles Per Instruction).

**`cpi_mul`****Type**

int

**Default value**

0x1

**Description**

multiplier for calculating CPI (Cycles Per Instruction).

**`dcache-size`****Type**

int

**Default value**

0x8000

**Description**

L1 D-cache size in bytes.

**`dcache-state_modelled`****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**dtcm\_enable****Type**

bool

**Default value**

0x0

**Description**

Enable DTCM at reset.

**dtcm\_size****Type**

int

**Default value**

0x100

**Description**

DTCM size in KB.

**icache-size****Type**

int

**Default value**

0x8000

**Description**

L1 I-cache size in bytes.

**icache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**itcm\_enable****Type**

bool

**Default value**

0x0

**Description**

Enable ITCM at reset.

**itcm\_size****Type**

int

**Default value**

0x100

**Description**

ITCM size in KB.

**master\_id****Type**

int

**Default value**

0x0

**Description**

Master ID presented in bus transactions.

**min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**reported\_patch\_level****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic patch level value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**reported\_revision\_number****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic revision number value to be displayed from the CUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting.

**semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting SVC calls.

**semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

**semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**semihosting-heap\_limit****Type**

int

**Default value**

0x20700000

**Description**

Virtual address of top of heap.

**semihosting-stack\_base****Type**

int

**Default value**

0x20800000

**Description**

Virtual address of base of descending stack.

**semihosting-stack\_limit****Type**

int

**Default value**

0x20700000

**Description**

Virtual address of stack limit.

**vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

### 3.5.56 ARMCortexM23CT

ARMCortexM23CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-406: IP revisions support**

Revision	Quality level
r1p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### Differences between the CT model and RTL implementations

The model does not support MTB, ETM, or TPIU. MTB RAM is absent on the model.

#### Iris and MTI instances for ARMCortexM23CT

This model has the following Iris instances:

**Table 3-407: ARMCortexM23CT Iris instances**

InstanceName	ComponentName
ARMCortexM23CT	ARM_Cortex-M23
ARMCortexM23CT.acp_mapper	PVBusMapper
ARMCortexM23CT.ext_bus	PVBusLogger
ARMCortexM23CT.ext_bus.mapper	PVBusMapper
ARMCortexM23CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

**Table 3-408: ARMCortexM23CT MTI instances**

InstanceName	ComponentName
ARMCortexM23CT	ARM_Cortex-M23
ARMCortexM23CT.acp_mapper	PVBusMapper
ARMCortexM23CT.ext_bus	PVBusLogger
ARMCortexM23CT.ext_bus.mapper	PVBusMapper
ARMCortexM23CT.l2_flusher	AsyncCacheFlushUnit

#### Ports for ARMCortexM23CT

**Table 3-409: Ports**

Name	Protocol	Type	Description
ahbd	PVBus	Slave	Debug AHB - core bus slave driven by the DAP.
bigend	Signal	Slave	Configure big endian data format.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.

Name	Protocol	Type	Description
core_dside_bus_gasket_in	PVBus	Slave	-
core_dside_bus_gasket_out	PVBus	Master	-
cpuwait	Signal	Slave	Clear = Core goes through reset sequence as normal, Set = Core waits out of reset.
currpri	Value	Master	Current execution priority.
dap_s	PVBus	Slave	Debug Access Port (DAP).
dbgen	Signal	Slave	Invasive debug control signals. Debug enable, Set=enabled, Clear=disabled
dbgrestart	Signal	Slave	External request to leave debug state
dbgrestarted	Signal	Master	Acknowledge for DBGRESTART
edbgrq	Signal	Slave	External debug request.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
halted	Signal	Master	Core is in halt mode debug state
hreset	Signal	Slave	Raising this signal will put the core into reset mode (but does not reset the debug logic).
idau	PVBus	Master	The core will generate IDAU requests on this port.
idau_invalidate_region	Value_64	Slave	64 bit number to invalid IDAU memory range (start_address<<32 end_address)
initvtor	Value	Slave	Reset configuration port - Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset This port remains functional no matter ARMv8-M Security Extensions are included or not When ARMv8-M Security Extensions are not included, all exceptions will use NS vector base address given by this port.
initvtorns	Value	Slave	Reset configuration port - Non-Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset It becomes functional when ARMv8-M Security Extensions are included When ARMv8-M Security Extensions are not included, this port will be ignored.
io_port_in	PVBus	Slave	I/O port pair. See the documentation for the io_port_out port.
io_port_out	PVBus	Master	I/O port pair. Used if IOP is true. Transactions from io_port_out which do not "match" should be returned via io_port_in. For performance reasons, the I/O port interface is not modelled directly. Instead, a simple PVBus gasket is inserted at the point in the memory system where the I/O port would be. In hardware, a device would be attached to the port which would tell the CPU whether it would like to intercept each transaction, given its address. This can be modelled in a performant manner by connecting a PVBusMapper-based device to io_port_out which intercepts transactions of interest and passes other transactions back to the CPU via io_port_in. Your I/O port device model is also responsible for aborting transactions which would be aborted on hardware (e.g. exclusives) if necessary.
irq[240]	Signal	Slave	This signal array delivers signals to the NVIC.
lockup	Signal	Master	Asserted when the processor is in lockup state.
niden	Signal	Slave	Non-invasive debug enable, Set=enabled, Clear=disabled
nmi	Signal	Slave	Configure non maskable interrupt.
poreset	Signal	Slave	Raising this signal will do a power-on reset of the core.
pv_ppbus_m	PVBus	Master	The core will generate External Private Peripheral Bus requests on this port.

Name	Protocol	Type	Description
pvbus_m	PVBus	Master	The core will generate bus requests on this port.
sleepdeep	Signal	Master	Asserted when the processor is in deep sleep.
sleeping	Signal	Master	Asserted when the processor is in sleep.
spiden	Signal	Slave	Secure Debug enable , Set=enabled, Clear=disabled
spniden	Signal	Slave	Secure Non-invasive debug enable, Set=enabled, Clear=disabled
stcalib	Value	Slave	This is the calibration value for the Secure (or only, when ARMv8-M Security Extensions are not included) SysTick timer.
stcalibns	Value	Slave	This is the calibration value for the Non-Secure SysTick timer. When ARMv8-M Security Extensions are not included, this port will be ignored.
stclk	ClockSignal	Slave	This is the reference clock for the SysTick timer.
sysresetreq	Signal	Master	Asserted to indicate that a reset is required.
ticks	InstructionCount	Master	Port allowing the number of instructions since startup to be read from the CPU.
wicenack	Signal	Master	Acknowledge signal for WICENREQ
wicenreq	Signal	Slave	Request for deep sleep to be WIC-based deep sleep.
wicsense[483]	Signal	Master	Indicates which input events can cause the WIC to generate the WAKEUP signal.

## Parameters for ARMCortexM23CT

### BE

#### Type

bool

#### Default value

0x0

#### Description

Initialize processor to big endian mode.

### BKPT

#### Type

int

#### Default value

0x4

#### Description

Number of breakpoint unit comparators implemented.

### CTI

#### Type

bool

**Default value**

0x0

**Description**

CTI (Cross Trigger Interface) included.

**CTI\_irq0\_pin****Type**

int

**Default value**

0x4

**Description**

CTI interrupt request 0 pin.

**CTI\_irq1\_pin****Type**

int

**Default value**

0x5

**Description**

CTI interrupt request 1 pin.

**DBG****Type**

bool

**Default value**

0x1

**Description**

Set whether debug extensions are implemented.

**INITVTOR****Type**

int

**Default value**

0x0

**Description**

Secure vector-table offset at reset.

**INITVTORNS****Type**

int

**Default value**

0x0

**Description**

Non-Secure vector-table offset at reset.

**IOP****Type**

bool

**Default value**

0x0

**Description**

Send all d-side transactions to the port, io\_port\_out. Transactions which do not match should be returned to the port, io\_port\_in.

**IRQDIS0****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+0].

**IRQDIS1****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+32].

**IRQDIS2****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+64].

**IRQDIS3****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+96].

**IRQDIS4****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+128].

**IRQDIS5****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+160].

**IRQDIS6****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+192].

**IRQDIS7****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+224].

**MPU\_NS****Type**

int

**Default value**

0x8

**Description**

Number of regions in the Non-Secure MPU. If Security Extensions are absent, this is the total number of MPU regions.

**MPU\_S****Type**

int

**Default value**

0x8

**Description**

Number of regions in the Secure MPU. If Security Extensions are absent, this is ignored.

**NUMIRQ****Type**

int

**Default value**

0x10

**Description**

Number of user interrupts.

**SAU****Type**

int

**Default value**

0x4

**Description**

Number of SAU regions (0 => no SAU).

**SAU\_CTRL.ALLNS****Type**

bool

**Default value**

0x0

**Description**

At reset, the SAU treats entire memory space as NS when the SAU is disabled if this is set.

**SAU\_CTRL.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Enable SAU at reset.

**SAU\_REGION0.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of SAU region0 at reset.

**SAU\_REGION0.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Enable SAU region0 at reset.

**SAU\_REGION0.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of SAU region0 at reset.

**SAU\_REGION0.NSC****Type**

bool

**Default value**

0x0

**Description**

Set NSC for SAU region0 at reset.

**SAU\_REGION1.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of SAU region1 at reset.

**SAU\_REGION1.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Enable SAU region1 at reset.

**SAU\_REGION1.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of SAU region1 at reset.

**SAU\_REGION1.NSC****Type**

bool

**Default value**

0x0

**Description**

Set NSC for SAU region1 at reset.

**SAU\_REGION2.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of SAU region2 at reset.

**SAU\_REGION2.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Enable SAU region2 at reset.

**SAU\_REGION2.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of SAU region2 at reset.

**SAU\_REGION2.NSC****Type**

bool

**Default value**

0x0

**Description**

Set NSC for SAU region2 at reset.

**SAU\_REGION3.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of SAU region3 at reset.

**SAU\_REGION3.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Enable SAU region3 at reset.

**SAU\_REGION3.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of SAU region3 at reset.

**SAU\_REGION3.NSC****Type**

bool

**Default value**

0x0

**Description**

Set NSC for SAU region3 at reset.

**SAU\_REGION4.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of SAU region4 at reset.

**SAU\_REGION4.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Enable SAU region4 at reset.

**SAU\_REGION4.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of SAU region4 at reset.

**SAU\_REGION4.NSC****Type**

bool

**Default value**

0x0

**Description**

Set NSC for SAU region4 at reset.

**SAU\_REGION5.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of SAU region5 at reset.

**SAU\_REGION5.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Enable SAU region5 at reset.

**SAU\_REGION5.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of SAU region5 at reset.

**SAU\_REGION5.NSC****Type**

bool

**Default value**

0x0

**Description**

Set NSC for SAU region5 at reset.

**SAU\_REGION6.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of SAU region6 at reset.

**SAU\_REGION6.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Enable SAU region6 at reset.

**SAU\_REGION6.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of SAU region6 at reset.

**SAU\_REGION6.NSC****Type**

bool

**Default value**

0x0

**Description**

Set NSC for SAU region6 at reset.

**SAU\_REGION7.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of SAU region7 at reset.

**SAU\_REGION7.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Enable SAU region7 at reset.

**SAU\_REGION7.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of SAU region7 at reset.

**SAU\_REGION7.NSC****Type**

bool

**Default value**

0x0

**Description**

Set NSC for SAU region7 at reset.

**SECEXT****Type**

bool

**Default value**

0x1

**Description**

Whether the ARMv8-M Security Extensions are included.

**SYST****Type**

int

**Default value**

0x2

**Description**

Include SysTick timer functionality (0=Absent, 1=Secure only, 2=Secure and NS).

**VTOR****Type**

bool

**Default value**

0x1

**Description**

Include Vector Table Offset Register.

**WIC****Type**

bool

**Default value**

0x1

**Description**

Include support for WIC-mode deep sleep.

**WICLINES****Type**

int

**Default value**

0x12

**Description**

Number of lines supported by the WIC interface.

**WPT****Type**

int

**Default value**

0x4

**Description**

Number of watchpoint unit comparators implemented.

**cpi\_div****Type**

int

**Default value**

0x1

**Description**

divider for calculating CPI (Cycles Per Instruction).

**`cpi_mul`**

**Type**

int

**Default value**

0x1

**Description**

multiplier for calculating CPI (Cycles Per Instruction).

**`has_core_dside_bus_gasket`**

**Type**

bool

**Default value**

0x0

**Description**

STL gasket enabled.

**`master_id`**

**Type**

int

**Default value**

0x0

**Description**

Master ID presented in bus transactions.

**`min_sync_level`**

**Type**

int

**Default value**

0x0

**Description**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**`reported_patch_level`**

**Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic patch level value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**reported\_revision\_number****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic revision number value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting.

**semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting SVC calls.

**semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

**semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**semihosting-heap\_limit****Type**

int

**Default value**

0x20700000

**Description**

Virtual address of top of heap.

**semihosting-stack\_base****Type**

int

**Default value**

0x20800000

**Description**

Virtual address of base of descending stack.

**semihosting-stack\_limit****Type**

int

**Default value**

0x20700000

**Description**

Virtual address of stack limit.

**3.5.57 ARMCortexM33CT**

ARMCortexM33CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-410: IP revisions support**

Revision	Quality level
r1p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**Differences between the model and the RTL**

The model does not support the following:

- ETM, MTB, CTI, or TPIU. MTB RAM is absent on the model.
- The power control (Q-Channel) interface.

**Implementation of ITM in M-class models**

This model has a parameter that enables partial support for Instrumentation Trace Macrocell (ITM). In hardware or RTL, trace data from ITM is sent in packets to the trace block serially using a single pin or wire. In the model, if it is enabled, the ITM trace data is output using an MTI trace source called ITM. The ITM trace source has an `ITM_PACKET_TYPE` field. The following table shows which packet types the model supports:

Field value	Description	Supported by model
ITM_SYNC	Synchronization packet	Not supported.
ITM_P_OVERFLOW	Protocol: Overflow packet	Not supported.
ITM_P_LOCAL_TIMESTAMP	Protocol: Local timestamp packets	Not supported.
ITM_P_GLOBAL_TIMESTAMP	Protocol: Global timestamp packets	Not supported.
ITM_P_EXTEN	Protocol: Extension packet	Not supported.
ITM_S_INSTRUMENTATION	Source: Instrumentation packet	Supported.
ITM_S_DWT_EVENT_COUNTER	Hardware source: Event counter wrapping	Not supported.
ITM_S_DWT_EXCEPTION	Hardware source: Exception tracing	Supported.
ITM_S_DWT_PC_SAMPLING	Hardware source: PC sampling	Not supported.
ITM_S_DWT_DATA_PC_TRACE	Hardware source: DWT Data trace PC value	Supported.
ITM_S_DWT_DATA_ADDRESS_TRACE	Hardware source: DWT Data trace address value	Supported.
ITM_S_DWT_DATA_DATA_TRACE	Hardware source: DWT Data trace DATA value	Supported.

**Iris and MTI instances for ARMCortexM33CT**

This model has the following Iris instances:

**Table 3-412: ARMCortexM33CT Iris instances**

InstanceName	ComponentName
ARMCortexM33CT	ARM_Cortex-M33
ARMCortexM33CT.acp_mapper	PVBusMapper
ARMCortexM33CT.ext_bus	PVBusLogger
ARMCortexM33CT.ext_bus.mapper	PVBusMapper
ARMCortexM33CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

**Table 3-413: ARMCortexM33CT MTI instances**

InstanceName	ComponentName
ARMCortexM33CT	ARM_Cortex-M33
ARMCortexM33CT.acp_mapper	PVBusMapper
ARMCortexM33CT.ext_bus	PVBusLogger
ARMCortexM33CT.ext_bus.mapper	PVBusMapper
ARMCortexM33CT.l2_flusher	AsyncCacheFlushUnit

## Ports for ARMCortexM33CT

**Table 3-414: Ports**

Name	Protocol	Type	Description
ahbd	PVBus	Slave	Debug AHB - core bus slave driven by the DAP.
auxfault	Value	Slave	This is wired to the Auxiliary Fault Status Register.
bigend	Signal	Slave	Configure big endian data format.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions. Referred to in some documents as 'CLKIN'.
coproc_bus	CoprocBusProtocol	Slave	Co-Processor Interface
cpuwait	Signal	Slave	Stall the CPU out of reset
currns	Signal	Master	Current Security state of the processor
currpri	Value	Master	Current execution priority.
dbgen	Signal	Slave	Invasive debug enable
dbgrestart	Signal	Slave	Request for synchronised exit from halt mode
dbgrestarted	Signal	Master	Handshakes with DBGRESTART
edbgrq	Signal	Slave	External request to enter halt mode
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
fpxxc	Value	Master	Port that sends the value of the FPxxC exception flags (FPIXC, FPIDC, FPOFC, FPUFC, FPDZC, FPIOC). Each flag is present in the same position as in the FPSCR register (e.g. fpxxc[0] = FPIOC).
halted	Signal	Master	Indicates that the processor is in halt mode
idau	PVBus	Master	The core will generate IDAU requests on this port.

Name	Protocol	Type	Description
idau_invalidate_region	Value_64	Slave	64 bit number to invalid IDAU memory range (start_address<<32 end_address)
initnsvtor	Value	Slave	Reset configuration port - Non-Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset This port remains functional no matter ARMv8-M Security Extensions are included or not When ARMv8-M Security Extensions are not included, all exceptions will use NS vector base address given by this port.
initsvtor	Value	Slave	Reset configuration port - Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset It becomes functional when ARMv8-M Security Extensions are included When ARMv8-M Security Extensions are not included, this port will be ignored.
intnum	Value	Master	Exception number of the current execution context (from IPSR[8:0]) When the processor is in Thread mode, INTNUM is 0 When the processor is in Handler mode, INTNUM is the exception number of the currently-executing exception.
irq[480]	Signal	Slave	This signal array delivers signals to the NVIC.
locknsmpu	Signal	Slave	Disable writes to the Non-Secure MPU_*_NS registers
locknsvtor	Signal	Slave	Cortex-M33-specific LOCKNSVTOR, LOCKSVTAIRCR, LOCKSMPU, LOCKNSMPU, LOCKSAU. Disable writes to VTOR_NS
locksau	Signal	Slave	Disable writes to the SAU_* registers
locksmpu	Signal	Slave	Disable writes to the Secure MPU_* registers
locksvtaircr	Signal	Slave	Disable writes to VTOR_S, AIRCR.PRIS, AIRCR.BFHFNMINS
lockup	Signal	Master	Asserted when the processor is in lockup state.
niden	Signal	Slave	Non-invasive debug enable
nmi	Signal	Slave	Configure non maskable interrupt.
poreset	Signal	Slave	Raising this signal will do a power-on reset of the core.
pv_ppbus_m	PVBus	Master	The core will generate External Private Peripheral Bus requests on this port.
pdbus_m	PVBus	Master	The core will generate bus requests on this port.
sleepdeep	Signal	Master	Asserted when the processor is in deep sleep.
sleeping	Signal	Master	Asserted when the processor is in sleep.
spiden	Signal	Slave	Secure invasive debug enable
spniden	Signal	Slave	Secure non-invasive debug enable
stcalib[2]	Value	Slave	This is the calibration value for the SysTick timer.
stclk	ClockSignal	Slave	This is the reference clock for the SysTick timer.
sysreset	Signal	Slave	Raising this signal will put the core into reset mode (but does not reset the debug logic).
sysresetreq	Signal	Master	Asserted to indicate that a reset is required.
ticks	InstructionCount	Master	Port allowing the number of instructions since startup to be read from the CPU.
wicenack	Signal	Master	Acknowledge signal for WICENREQ
wicenreq	Signal	Slave	Request for deep sleep to be WIC-based deep sleep.
wicsense[483]	Signal	Master	Indicates which input events can cause the WIC to generate the WAKEUP signal.

## Parameters for ARMCortexM33CT

### **BIGENDINIT**

**Type**

bool

**Default value**

0x0

**Description**

Initialize processor to big endian mode.

### **CDEMAPPEDONCP**

**Type**

int

**Default value**

0xff

**Description**

Bit N specifies whether the instruction for coprocessor N (CP7:CP0) is redirected to the CDE module.

### **CDERTLID**

**Type**

int

**Default value**

0x20

**Description**

Value of ID\_AFR0.CDERTLID.

### **CFGNOCDECP**

**Type**

int

**Default value**

0x0

**Description**

Bit N means external coprocessor N (CP7:CP0) disable for CDE coprocessor.

### **CPIF**

**Type**

bool

**Default value**

0x1

**Description**

Specifies whether the external coprocessor interface is included.

**CPNSPRESENT****Type**

int

**Default value**

0xff

**Description**

Bit N means external coprocessor N (CP7:CP0) is accessible in Non-Secure state.

**CPSPPRESENT****Type**

int

**Default value**

0xff

**Description**

Bit N means external coprocessor N (CP7:CP0) is accessible in Secure state.

**CTI****Type**

bool

**Default value**

0x0

**Description**

CTI (Cross Trigger Interface) included.

**CTI\_irq0\_pin****Type**

int

**Default value**

0x4

**Description**

CTI interrupt request 0 pin.

**CTI\_irq1\_pin****Type**

int

**Default value**

0x5

**Description**

CTI interrupt request 1 pin.

**DBGLVL****Type**

int

**Default value**

0x2

**Description**

0: Minimal debug; 1: 2 Watchpoints, 4 Breakpoint comparators; 2: 4 Watchpoints, 8 Breakpoint comparators.

**DSP****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has the DSP extension.

**FPU****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**INITNSVTOR****Type**

int

**Default value**

0x0

**Description**

Non-Secure vector-table offset at reset.

**INITSVTOR****Type**

int

**Default value**

0x0

**Description**

Secure vector-table offset at reset.

**IRQDIS0****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+0].

**IRQDIS1****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+32].

**IRQDIS10****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+320].

**IRQDIS11****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+352].

**IRQDIS12****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+384].

**IRQDIS13****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+416].

**IRQDIS14****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+448].

**IRQDIS2****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+64].

**IRQDIS3****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+96].

**IRQDIS4****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+128].

**IRQDIS5****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+160].

**IRQDIS6****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+192].

**IRQDIS7****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+224].

**IRQDIS8****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+256].

**IRQDIS9****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+288].

**IRQLVL****Type**

int

**Default value**

0x3

**Description**

Number of bits of interrupt priority.

**ITM****Type**

bool

**Default value**

0x1

**Description**

Level of instrumentation trace supported. false : No ITM trace included, true: ITM trace included.

**LOCK\_NS\_MPU****Type**

bool

**Default value**

0x0

**Description**

Lock down of Non-Secure MPU registers write.

**LOCK\_SAU****Type**

bool

**Default value**

0x0

**Description**

Lock down of SAU registers write.

**LOCK\_S\_MPU****Type**

bool

**Default value**

0x0

**Description**

Lock down of Secure MPU registers write.

**MPU\_NS****Type**

int

**Default value**

0x8

**Description**

Number of regions in the Non-Secure MPU. If Security Extensions are absent, this is the total number of MPU regions.

**MPU\_S****Type**

int

**Default value**

0x8

**Description**

Number of regions in the Secure MPU. If Security Extensions are absent, this is ignored.

**NUMIRQ****Type**

int

**Default value**

0x20

**Description**

Number of user interrupts.

**SAU****Type**

int

**Default value**

0x4

**Description**

Number of SAU regions (0 => no SAU).

**SAU\_CTRL.ALLNS****Type**

bool

**Default value**

0x0

**Description**

At reset, the SAU treats entire memory space as NS when the SAU is disabled if this is set.

**SAU\_CTRL.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Enable SAU at reset.

**SAU\_REGION0.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of SAU region0 at reset.

**SAU\_REGION0.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Enable SAU region0 at reset.

**SAU\_REGION0.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of SAU region0 at reset.

**SAU\_REGION0.NSC****Type**

bool

**Default value**

0x0

**Description**

Set NSC for SAU region0 at reset.

**SAU\_REGION1.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of SAU region1 at reset.

**SAU\_REGION1.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Enable SAU region1 at reset.

**SAU\_REGION1.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of SAU region1 at reset.

**SAU\_REGION1.NSC****Type**

bool

**Default value**

0x0

**Description**

Set NSC for SAU region1 at reset.

**SAU\_REGION2.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of SAU region2 at reset.

**SAU\_REGION2.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Enable SAU region2 at reset.

**SAU\_REGION2.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of SAU region2 at reset.

**SAU\_REGION2.NSC****Type**

bool

**Default value**

0x0

**Description**

Set NSC for SAU region2 at reset.

**SAU\_REGION3.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of SAU region3 at reset.

**SAU\_REGION3.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Enable SAU region3 at reset.

**SAU\_REGION3.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of SAU region3 at reset.

**SAU\_REGION3.NSC****Type**

bool

**Default value**

0x0

**Description**

Set NSC for SAU region3 at reset.

**SAU\_REGION4.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of SAU region4 at reset.

**SAU\_REGION4.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Enable SAU region4 at reset.

**SAU\_REGION4.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of SAU region4 at reset.

**SAU\_REGION4.NSC****Type**

bool

**Default value**

0x0

**Description**

Set NSC for SAU region4 at reset.

**SAU\_REGION5.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of SAU region5 at reset.

**SAU\_REGION5.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Enable SAU region5 at reset.

**SAU\_REGION5.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of SAU region5 at reset.

**SAU\_REGION5.NSC****Type**

bool

**Default value**

0x0

**Description**

Set NSC for SAU region5 at reset.

**SAU\_REGION6.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of SAU region6 at reset.

**SAU\_REGION6.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Enable SAU region6 at reset.

**SAU\_REGION6.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of SAU region6 at reset.

**SAU\_REGION6.NSC****Type**

bool

**Default value**

0x0

**Description**

Set NSC for SAU region6 at reset.

**SAU\_REGION7.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of SAU region7 at reset.

**SAU\_REGION7.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Enable SAU region7 at reset.

**SAU\_REGION7.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of SAU region7 at reset.

**SAU\_REGION7.NSC****Type**

bool

**Default value**

0x0

**Description**

Set NSC for SAU region7 at reset.

**SECEXT****Type**

bool

**Default value**

0x1

**Description**

Whether the ARMv8-M Security Extensions are included.

**WIC****Type**

bool

**Default value**

0x1

**Description**

Include support for WIC-mode deep sleep.

**WICLINES****Type**

int

**Default value**

0x23

**Description**

Number of lines supported by the WIC interface.

**cde\_impl\_name****Type**

string

**Default value**

""

**Description**

Name of the CDE implementation for this core (implementation contributed by MTI plugin).

**cpi\_div****Type**

int

**Default value**

0x1

**Description**

divider for calculating CPI (Cycles Per Instruction).

**cpi\_mul****Type**

int

**Default value**

0x1

**Description**

multiplier for calculating CPI (Cycles Per Instruction).

**has\_cde****Type**

bool

**Default value**

0x0

**Description**

Enables Custom Datapath Extensions.

**master\_id****Type**

int

**Default value**

0x0

**Description**

Master ID presented in bus transactions.

**min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**reported\_patch\_level****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic patch level value to be displayed from the CUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**reported\_revision\_number****Type**

int

**Default value**`0xffffffffffffffff`**Description**

Purely cosmetic revision number value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**`semihosting-Thumb_SVC`****Type**`int`**Default value**`0xab`**Description**

T32 SVC number for semihosting.

**`semihosting-cmd_line`****Type**`string`**Default value**`""`**Description**

Command line available to semihosting SVC calls.

**`semihosting-cwd`****Type**`string`**Default value**`""`**Description**

Base directory for semihosting file access.

**`semihosting-enable`****Type**`bool`**Default value**`0x1`**Description**

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

**semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**semihosting-heap\_limit****Type**

int

**Default value**

0x20700000

**Description**

Virtual address of top of heap.

**semihosting-stack\_base****Type**

int

**Default value**

0x20800000

**Description**

Virtual address of base of descending stack.

**semihosting-stack\_limit****Type**

int

**Default value**

0x20700000

**Description**

Virtual address of stack limit.

**vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**3.5.58 ARMCortexM35PCT**

ARMCortexM35PCT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-415: IP revisions support**

Revision	Quality level
r1p2	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**Differences between the model and the RTL**

- The model does not support the following:
  - ETM, MTB, CTI, or TPIU. MTB RAM is absent on the model.
  - Caches.
  - The co-processor interface.
  - The power control (Q-Channel) interface.
- The model does not implement any physical security features.
- Bits[3:0] of the Anti-tampering Features Control Register are supported for read/write. No functionality is implemented.
- Read/write access to the Anti-tampering Features Control Register is supported using SECKEY. No functionality is implemented.

**Implementation of ITM in M-class models**

This model has a parameter that enables partial support for Instrumentation Trace Macrocell (ITM). In hardware or RTL, trace data from ITM is sent in packets to the trace block serially using a single pin or wire. In the model, if it is enabled, the ITM trace data is output using an MTI trace source called ITM. The ITM trace source has an `ITM_PACKET_TYPE` field. The following table shows which packet types the model supports:

Field value	Description	Supported by model
ITM_SYNC	Synchronization packet	Not supported.
ITM_P_OVERFLOW	Protocol: Overflow packet	Not supported.
ITM_P_LOCAL_TIMESTAMP	Protocol: Local timestamp packets	Not supported.
ITM_P_GLOBAL_TIMESTAMP	Protocol: Global timestamp packets	Not supported.
ITM_P_EXTEN	Protocol: Extension packet	Not supported.
ITM_S_INSTRUMENTATION	Source: Instrumentation packet	Supported.

Field value	Description	Supported by model
ITM_S_DWT_EVENT_COUNTER	Hardware source: Event counter wrapping	Not supported.
ITM_S_DWT_EXCEPTION	Hardware source: Exception tracing	Supported.
ITM_S_DWT_PC_SAMPLING	Hardware source: PC sampling	Not supported.
ITM_S_DWT_DATA_PC_TRACE	Hardware source: DWT Data trace PC value	Supported.
ITM_S_DWT_DATA_ADDRESS_TRACE	Hardware source: DWT Data trace address value	Supported.
ITM_S_DWT_DATA_DATA_TRACE	Hardware source: DWT Data trace DATA value	Supported.

## Iris and MTI instances for ARMCortexM35PCT

This model has the following Iris instances:

**Table 3-417: ARMCortexM35PCT Iris instances**

InstanceName	ComponentName
ARMCortexM35PCT	ARM_Cortex-M35P
ARMCortexM35PCT.acp_mapper	PVBusMapper
ARMCortexM35PCT.ext_bus	PVBusLogger
ARMCortexM35PCT.ext_bus.mapper	PVBusMapper
ARMCortexM35PCT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

**Table 3-418: ARMCortexM35PCT MTI instances**

InstanceName	ComponentName
ARMCortexM35PCT	ARM_Cortex-M35P
ARMCortexM35PCT.acp_mapper	PVBusMapper
ARMCortexM35PCT.ext_bus	PVBusLogger
ARMCortexM35PCT.ext_bus.mapper	PVBusMapper
ARMCortexM35PCT.l2_flusher	AsyncCacheFlushUnit

## Ports for ARMCortexM35PCT

**Table 3-419: Ports**

Name	Protocol	Type	Description
auxfault	Value	Slave	This is wired to the Auxiliary Fault Status Register.
bigend	Signal	Slave	Configure big endian data format.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions. Referred to in some documents as 'CLKIN'.
coproc_bus	CoprocBusProtocol	Slave	Co-Processor Interface
cpuwait	Signal	Slave	Stall the CPU out of reset
currns	Signal	Master	Current Security state of the processor
currpri	Value	Master	Current execution priority.
dbgen	Signal	Slave	Invasive debug enable

Name	Protocol	Type	Description
dbgrestart	Signal	Slave	Request for synchronised exit from halt mode
dbgrestorted	Signal	Master	Handshakes with DBGRESTART
edbgrq	Signal	Slave	External request to enter halt mode
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
fpxxc	Value	Master	Port that sends the value of the FPxxC exception flags (FPIXC, FPIDC, FPOFC, FPUFC, FPDZC, FPIOC). Each flag is present in the same position as in the FPSCR register (e.g. fpxxc[0] = FPIOC).
halted	Signal	Master	Indicates that the processor is in halt mode
idau	PVBus	Master	The core will generate IDAU requests on this port.
idau_invalidate_region	Value_64	Slave	64 bit number to invalid IDAU memory range (start_address<<32 end_address)
initnsvtor	Value	Slave	Reset configuration port - Non-Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset This port remains functional no matter ARMv8-M Security Extensions are included or not When ARMv8-M Security Extensions are not included, all exceptions will use NS vector base address given by this port.
initsvtor	Value	Slave	Reset configuration port - Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset It becomes functional when ARMv8-M Security Extensions are included When ARMv8-M Security Extensions are not included, this port will be ignored.
intnum	Value	Master	Exception number of the current execution context (from IPSR[8:0]) When the processor is in Thread mode, INTNUM is 0 When the processor is in Handler mode, INTNUM is the exception number of the currently-executing exception.
irq[480]	Signal	Slave	This signal array delivers signals to the NVIC.
LOCKATFCR	Signal	Slave	Port Lock ATFCR register
locknsmpu	Signal	Slave	Disable writes to the Non-Secure MPU_*_NS registers
locknsvtor	Signal	Slave	Disable writes to VTOR_NS
locksau	Signal	Slave	Disable writes to the SAU_* registers
locksmpu	Signal	Slave	Disable writes to the Secure MPU_* registers
locksvtaircr	Signal	Slave	Disable writes to VTOR_S, AIRCR.PRIS, AIRCR.BFHFNMINS
lockup	Signal	Master	Asserted when the processor is in lockup state.
niden	Signal	Slave	Non-invasive debug enable
nmi	Signal	Slave	Configure non maskable interrupt.
poreset	Signal	Slave	Raising this signal will do a power-on reset of the core.
pv_ppbus_m	PVBus	Master	The core will generate External Private Peripheral Bus requests on this port.
pdbus_m	PVBus	Master	The core will generate bus requests on this port.
sleepdeep	Signal	Master	Asserted when the processor is in deep sleep.
sleeping	Signal	Master	Asserted when the processor is in sleep.
spiden	Signal	Slave	Secure invasive debug enable
spniden	Signal	Slave	Secure non-invasive debug enable
stcalib[2]	Value	Slave	This is the calibration value for the SysTick timer.
stclk	ClockSignal	Slave	This is the reference clock for the SysTick timer.

Name	Protocol	Type	Description
sysreset	Signal	Slave	Raising this signal will put the core into reset mode (but does not reset the debug logic).
sysresetreq	Signal	Master	Asserted to indicate that a reset is required.
ticks	InstructionCount	Master	Port allowing the number of instructions since startup to be read from the CPU.
wicenack	Signal	Master	Acknowledge signal for WICENREQ
wicenreq	Signal	Slave	Request for deep sleep to be WIC-based deep sleep.
wicsense[483]	Signal	Master	Indicates which input events can cause the WIC to generate the WAKEUP signal.

## Parameters for ARM CortexM35PCT

### ATFINITEN

#### Type

bool

#### Default value

0x0

#### Description

ATFCR is enabled when the core goes out of reset.

### BIGENDINIT

#### Type

bool

#### Default value

0x0

#### Description

Initialize processor to big endian mode.

### CPIF

#### Type

bool

#### Default value

0x1

#### Description

Specifies whether the external coprocessor interface is included.

### CPNSPRESENT

#### Type

int

**Default value**

0xff

**Description**

Bit N means external coprocessor N (CP7:CP0) is accessible in Non-Secure state.

**CPSPRESENT****Type**

int

**Default value**

0xff

**Description**

Bit N means external coprocessor N (CP7:CP0) is accessible in Secure state.

**CTI****Type**

bool

**Default value**

0x0

**Description**

CTI (Cross Trigger Interface) included.

**CTI\_irq0\_pin****Type**

int

**Default value**

0x4

**Description**

CTI interrupt request 0 pin.

**CTI\_irq1\_pin****Type**

int

**Default value**

0x5

**Description**

CTI interrupt request 1 pin.

**DBGLVL****Type**

int

**Default value**

0x2

**Description**

0: Minimal debug; 1: 2 Watchpoints, 4 Breakpoint comparators; 2: 4 Watchpoints, 8 Breakpoint comparators.

**DSP****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has the DSP extension.

**FPU****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**INITNSVTOR****Type**

int

**Default value**

0x0

**Description**

Non-Secure vector-table offset at reset.

**INITSVTOR****Type**

int

**Default value**

0x0

**Description**

Secure vector-table offset at reset.

**IRQDIS0****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+0].

**IRQDIS1****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+32].

**IRQDIS10****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+320].

**IRQDIS11****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+352].

**IRQDIS12****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+384].

**IRQDIS13****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+416].

**IRQDIS14****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+448].

**IRQDIS2****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+64].

**IRQDIS3****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+96].

**IRQDIS4****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+128].

**IRQDIS5****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+160].

**IRQDIS6****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+192].

**IRQDIS7****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+224].

**IRQDIS8****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+256].

**IRQDIS9****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+288].

**IRQLVL****Type**

int

**Default value**

0x3

**Description**

Number of bits of interrupt priority.

**ITM****Type**

bool

**Default value**

0x1

**Description**

Level of instrumentation trace supported. false : No ITM trace included, true: ITM trace included.

**LOCK\_NS\_MPU****Type**

bool

**Default value**

0x0

**Description**

Lock down of Non-Secure MPU registers write.

**LOCK\_SAU****Type**

bool

**Default value**

0x0

**Description**

Lock down of SAU registers write.

**LOCK\_S\_MPU****Type**

bool

**Default value**

0x0

**Description**

Lock down of Secure MPU registers write.

**MPU\_NS****Type**

int

**Default value**

0x8

**Description**

Number of regions in the Non-Secure MPU. If Security Extensions are absent, this is the total number of MPU regions.

**MPU\_S****Type**

int

**Default value**

0x8

**Description**

Number of regions in the Secure MPU. If Security Extensions are absent, this is ignored.

**NUMIRQ****Type**

int

**Default value**

0x20

**Description**

Number of user interrupts.

**SAU****Type**

int

**Default value**

0x4

**Description**

Number of SAU regions (0 => no SAU).

**SAU\_CTRL.ALLNS****Type**

bool

**Default value**

0x0

**Description**

At reset, the SAU treats entire memory space as NS when the SAU is disabled if this is set.

**SAU\_CTRL.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Enable SAU at reset.

**SAU\_REGION0.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of SAU region0 at reset.

**SAU\_REGION0.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Enable SAU region0 at reset.

**SAU\_REGION0.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of SAU region0 at reset.

**SAU\_REGION0.NSC****Type**

bool

**Default value**

0x0

**Description**

Set NSC for SAU region0 at reset.

**SAU\_REGION1.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of SAU region1 at reset.

**SAU\_REGION1.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Enable SAU region1 at reset.

**SAU\_REGION1.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of SAU region1 at reset.

**SAU\_REGION1.NSC****Type**

bool

**Default value**

0x0

**Description**

Set NSC for SAU region1 at reset.

**SAU\_REGION2.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of SAU region2 at reset.

**SAU\_REGION2.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Enable SAU region2 at reset.

**SAU\_REGION2.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of SAU region2 at reset.

**SAU\_REGION2.NSC****Type**

bool

**Default value**

0x0

**Description**

Set NSC for SAU region2 at reset.

**SAU\_REGION3.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of SAU region3 at reset.

**SAU\_REGION3.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Enable SAU region3 at reset.

**SAU\_REGION3.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of SAU region3 at reset.

**SAU\_REGION3.NSC****Type**

bool

**Default value**

0x0

**Description**

Set NSC for SAU region3 at reset.

**SAU\_REGION4.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of SAU region4 at reset.

**SAU\_REGION4.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Enable SAU region4 at reset.

**SAU\_REGION4.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of SAU region4 at reset.

**SAU\_REGION4.NSC****Type**

bool

**Default value**

0x0

**Description**

Set NSC for SAU region4 at reset.

**SAU\_REGION5.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of SAU region5 at reset.

**SAU\_REGION5.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Enable SAU region5 at reset.

**SAU\_REGION5.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of SAU region5 at reset.

**SAU\_REGION5.NSC****Type**

bool

**Default value**

0x0

**Description**

Set NSC for SAU region5 at reset.

**SAU\_REGION6.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of SAU region6 at reset.

**SAU\_REGION6.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Enable SAU region6 at reset.

**SAU\_REGION6.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of SAU region6 at reset.

**SAU\_REGION6.NSC****Type**

bool

**Default value**

0x0

**Description**

Set NSC for SAU region6 at reset.

**SAU\_REGION7.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of SAU region7 at reset.

**SAU\_REGION7.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Enable SAU region7 at reset.

**SAU\_REGION7.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of SAU region7 at reset.

**SAU\_REGION7.NSC****Type**

bool

**Default value**

0x0

**Description**

Set NSC for SAU region7 at reset.

**SECEXT****Type**

bool

**Default value**

0x1

**Description**

Whether the ARMv8-M Security Extensions are included.

**WIC****Type**

bool

**Default value**

0x1

**Description**

Include support for WIC-mode deep sleep.

**WICLINES****Type**

int

**Default value**

0x23

**Description**

Number of lines supported by the WIC interface.

**`cpi_div`****Type**

int

**Default value**

0x1

**Description**

divider for calculating CPI (Cycles Per Instruction).

**`cpi_mul`****Type**

int

**Default value**

0x1

**Description**

multiplier for calculating CPI (Cycles Per Instruction).

**`master_id`****Type**

int

**Default value**

0x0

**Description**

Master ID presented in bus transactions.

**`min_sync_level`****Type**

int

**Default value**

0x0

**Description**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**reported\_patch\_level****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic patch level value to be displayed from the CUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**reported\_revision\_number****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic revision number value to be displayed from the CUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting.

**semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting SVC calls.

**semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

**semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**semihosting-heap\_limit****Type**

int

**Default value**

0x20700000

**Description**

Virtual address of top of heap.

**semihosting-stack\_base****Type**

int

**Default value**

0x20800000

**Description**  
Virtual address of base of descending stack.

**semihosting-stack\_limit**

**Type**  
int

**Default value**  
0x20700000

**Description**  
Virtual address of stack limit.

**vfp-enable\_at\_reset**

**Type**  
bool

**Default value**  
0x0

**Description**  
Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

3.5.59 ARMCortexM52CT

CortexM52CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-420: IP revisions support

Revision	Quality level
r0p0	Preliminary support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

About ARMCortexM52CT

This model supports the M-Profile Vector Extension (MVE) and the Custom Datapath Extension (CDE). For more information, see [CDE](#).

Iris and MTI instances for ARMCortexM52CT

This model has the following Iris instances:

Table 3-421: ARMCortexM52CT Iris instances

InstanceName	ComponentName
ARMCortexM52CT	ARM_Cortex-M52

InstanceName	ComponentName
ARMCortexM52CT.acp_mapper	PVBusMapper
ARMCortexM52CT.ext_bus	PVBusLogger
ARMCortexM52CT.ext_bus.mapper	PVBusMapper
ARMCortexM52CT.l1_incoherent_interconnect	PVCache
ARMCortexM52CT.l1_incoherent_interconnect.upstream[0]	PVBusSlave
ARMCortexM52CT.l1_incoherent_interconnect.upstream[10]	PVBusSlave
ARMCortexM52CT.l1_incoherent_interconnect.upstream[11]	PVBusSlave
ARMCortexM52CT.l1_incoherent_interconnect.upstream[12]	PVBusSlave
ARMCortexM52CT.l1_incoherent_interconnect.upstream[13]	PVBusSlave
ARMCortexM52CT.l1_incoherent_interconnect.upstream[14]	PVBusSlave
ARMCortexM52CT.l1_incoherent_interconnect.upstream[15]	PVBusSlave
ARMCortexM52CT.l1_incoherent_interconnect.upstream[16]	PVBusSlave
ARMCortexM52CT.l1_incoherent_interconnect.upstream[17]	PVBusSlave
ARMCortexM52CT.l1_incoherent_interconnect.upstream[1]	PVBusSlave
ARMCortexM52CT.l1_incoherent_interconnect.upstream[2]	PVBusSlave
ARMCortexM52CT.l1_incoherent_interconnect.upstream[3]	PVBusSlave
ARMCortexM52CT.l1_incoherent_interconnect.upstream[4]	PVBusSlave
ARMCortexM52CT.l1_incoherent_interconnect.upstream[5]	PVBusSlave
ARMCortexM52CT.l1_incoherent_interconnect.upstream[6]	PVBusSlave
ARMCortexM52CT.l1_incoherent_interconnect.upstream[7]	PVBusSlave
ARMCortexM52CT.l1_incoherent_interconnect.upstream[8]	PVBusSlave
ARMCortexM52CT.l1_incoherent_interconnect.upstream[9]	PVBusSlave
ARMCortexM52CT.l1dcache	PVCache
ARMCortexM52CT.l1dcache.upstream[0]	PVBusSlave
ARMCortexM52CT.l1icache	PVCache
ARMCortexM52CT.l1icache.upstream[0]	PVBusSlave
ARMCortexM52CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

**Table 3-422: ARMCortexM52CT MTI instances**

InstanceName	ComponentName
ARMCortexM52CT	<a href="#">ARM_Cortex-M52</a>
ARMCortexM52CT.acp_mapper	<a href="#">PVBusMapper</a>
ARMCortexM52CT.ext_bus	<a href="#">PVBusLogger</a>
ARMCortexM52CT.ext_bus.mapper	<a href="#">PVBusMapper</a>
ARMCortexM52CT.l1_incoherent_interconnect	<a href="#">PVCache</a>
ARMCortexM52CT.l1_incoherent_interconnect.upstream[0]	<a href="#">PVBusSlave</a>
ARMCortexM52CT.l1_incoherent_interconnect.upstream[10]	<a href="#">PVBusSlave</a>
ARMCortexM52CT.l1_incoherent_interconnect.upstream[11]	<a href="#">PVBusSlave</a>

InstanceName	ComponentName
ARMCortexM52CT.11_incoherent_interconnect.upstream[12]	PVBusSlave
ARMCortexM52CT.11_incoherent_interconnect.upstream[13]	PVBusSlave
ARMCortexM52CT.11_incoherent_interconnect.upstream[14]	PVBusSlave
ARMCortexM52CT.11_incoherent_interconnect.upstream[15]	PVBusSlave
ARMCortexM52CT.11_incoherent_interconnect.upstream[16]	PVBusSlave
ARMCortexM52CT.11_incoherent_interconnect.upstream[17]	PVBusSlave
ARMCortexM52CT.11_incoherent_interconnect.upstream[1]	PVBusSlave

ARMCortexM52CT.11_incoherent_interconnect.upstream[3]	PVBusSlave
ARMCortexM52CT.11_incoherent_interconnect.upstream[4]	PVBusSlave
ARMCortexM52CT.11_incoherent_interconnect.upstream[5]	PVBusSlave
ARMCortexM52CT.11_incoherent_interconnect.upstream[6]	PVBusSlave
ARMCortexM52CT.11_incoherent_interconnect.upstream[7]	PVBusSlave
ARMCortexM52CT.11_incoherent_interconnect.upstream[8]	PVBusSlave
ARMCortexM52CT.11_incoherent_interconnect.upstream[9]	PVBusSlave
ARMCortexM52CT.11dcache	PVCache
ARMCortexM52CT.11dcache.upstream[0]	PVBusSlave
ARMCortexM52CT.11icache	PVCache
ARMCortexM52CT.11icache.upstream[0]	PVBusSlave
ARMCortexM52CT.12_flusher	AsyncCacheFlushUnit

## Ports for ARMCortexM52CT

**Table 3-423: Ports**

Name	Protocol	Type	Description
ahbd	PVBus	Slave	Debug AHB - core bus slave driven by the DAP.
ahbp_m	PVBus	Master	The core will generate Vendor System data accesses on this port.
ahbs	PVBus	Slave	Slave AHB - External master (e.g. DMA) can write to TCMs (whether or not enabled in xTCMCR)
auxfault	Value	Slave	This is wired to the Auxiliary Fault Status Register.
bigend	Signal	Slave	Configure big endian data format.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions. Referred to in some documents as 'CLKIN'.
coproc_bus	CoprocBusProtocol	Slave	Co-Processor Interface
core_dside_bus_gasket_in	PVBus	Slave	-
core_dside_bus_gasket_out	PVBus	Master	-
cpuwait	Signal	Slave	Stall the CPU out of reset
currns	Signal	Master	Current Security state of the processor
currpri	Value	Master	Current execution priority.

Name	Protocol	Type	Description
dbgen	Signal	Slave	Invasive debug enable
dbgrestart	Signal	Slave	Request for synchronised exit from halt mode
dbgrestarted	Signal	Master	Handshakes with DBGRESTART
edbgrq	Signal	Slave	External request to enter halt mode
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
fpxxc	Value	Master	Port that sends the value of the FPxxC exception flags (FPIX, FPIDC, FPOFC, FPUFC, FPDZC, FPIOC). Each flag is present in the same position as in the FPSCR register (e.g. fpxxc[0] = FPIOC).
halted	Signal	Master	Indicates that the processor is in halt mode
idau	PVBus	Master	The core will generate IDAU requests on this port.
idau_invalidate_region	Value_64	Slave	64 bit number to invalid IDAU memory range (start_address<<32 end_address)
initnsvtor	Value	Slave	Reset configuration port - Non-Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset This port remains functional no matter ARMv8-M Security Extensions are included or not When ARMv8-M Security Extensions are not included, all exceptions will use NS vector base address given by this port.
initpahben	Signal	Slave	Enable P-AHB on the next reset
initsvtor	Value	Slave	Reset configuration port - Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset It becomes functional when ARMv8-M Security Extensions are included When ARMv8-M Security Extensions are not included, this port will be ignored.
inittcmem[2]	Signal	Slave	Reset configuration port - TCM enable initialisation out of reset Bit[0] HIGH = ITCM is enabled Bit[1] HIGH = DTCM is enabled
intnum	Value	Master	Exception number of the current execution context (from IPSR[8:0]) When the processor is in Thread mode, INTNUM is 0 When the processor is in Handler mode, INTNUM is the exception number of the currently-executing exception.
irq[480]	Signal	Slave	This signal array delivers signals to the NVIC.
lockdcaic	Signal	Slave	Disable access to instruction cache direct cache access registers
lockdtgu	Signal	Slave	Disable writes to registers associated with the DTGU
lockitgu	Signal	Slave	Disable writes to registers associated with the ITGU
locknsmpu	Signal	Slave	Disable writes to the Non-Secure MPU_*_NS registers
locknsvtor	Signal	Slave	Cortex-M52-specific LOCKNSVTOR, LOCKSVTAIRCR, LOCKSMPU, LOCKNSMPU, LOCKSAU. Disable writes to VTOR_NS
lockpahb	Signal	Slave	P-AHB related ports Disable writes to PAHBCR
locksau	Signal	Slave	Disable writes to the SAU_* registers
locksmpu	Signal	Slave	Disable writes to the Secure MPU_* registers
locksvtaircr	Signal	Slave	Disable writes to VTOR_S, AIRCR.PRIS, AIRCR.BFHFNMINS
locktcm	Signal	Slave	Disable writes to registers associated with the TCM
lockup	Signal	Master	Asserted when the processor is in lockup state.
niden	Signal	Slave	Non-invasive debug enable
nmi	Signal	Slave	Configure non maskable interrupt.

Name	Protocol	Type	Description
poreset	Signal	Slave	Raising this signal will do a power-on reset of the core.
prequest	PChannel	Slave	Low Power Interface
pv_ppbus_m	PVBus	Master	The core will generate External Private Peripheral Bus requests on this port.
pdbus_m	PVBus	Master	The core will generate bus requests on this port.
qrequest	PChannel	Slave	-
sleepdeep	Signal	Master	Asserted when the processor is in deep sleep.
sleeping	Signal	Master	Asserted when the processor is in sleep.
spiden	Signal	Slave	Secure invasive debug enable
spniden	Signal	Slave	Secure non-invasive debug enable
stcalib[2]	Value	Slave	This is the calibration value for the SysTick timer.
stclk	ClockSignal	Slave	This is the reference clock for the SysTick timer.
sysreset	Signal	Slave	Raising this signal will put the core into reset mode (but does not reset the debug logic).
sysresetreq	Signal	Master	Asserted to indicate that a reset is required.
ticks	InstructionCount	Master	Port allowing the number of instructions since startup to be read from the CPU.
wicenack	Signal	Master	Acknowledge signal for WICENREQ
wicenreq	Signal	Slave	Request for deep sleep to be WIC-based deep sleep.
wicsense[483]	Signal	Master	Indicates which input events can cause the WIC to generate the WAKEUP signal.

## Parameters for ARMCortexM52CT

### CDEMAPPEDONCP

#### Type

int

#### Default value

0xff

#### Description

Bit N specifies whether the instruction for coprocessor N (CP7:CP0) is redirected to the CDE module.

### CDERTLID

#### Type

int

#### Default value

0x20

#### Description

Value of ID\_AFR0.CDERTLID.

**CFGBIGEND****Type**

bool

**Default value**

0x0

**Description**

Initialize processor to big endian mode.

**CFGCPUINST****Type**

int

**Default value**

0x0

**Description**

CPU instance number. This is part of the TCM base address, in bits 25:24.

**CFGDTCMSZ****Type**

int

**Default value**

0x9

**Description**

Size of the data TCM. 0=No DTCM implemented. Otherwise=Size of DTCM=pow(2, CFGDTCMSZ - 1) KB. Minimum size is 4KB.

**CFGITCMSZ****Type**

int

**Default value**

0x9

**Description**

Size of the instruction TCM. 0=No ITCM implemented. Otherwise=Size of ITCM=pow(2, CFGITCMSZ - 1) KB. Minimum size is 4KB.

**CFGMEMALIAS****Type**

int

**Default value**

0x0

**Description**

Memory address alias bit for the ITCM, DTCM and P-AHB regions. 0=No alias, 1=Alias bit 26, 2=Alias bit 27, 4=Alias bit 28.

**CFGNOCECP****Type**

int

**Default value**

0x0

**Description**

Bit N means external coprocessor N (CP7:CP0) disable for CDE coprocessor.

**CFGPAACBTI****Type**

bool

**Default value**

0x0

**Description**

Enables support for the Pointer Authentication and Branch Target Identification (PACBTI) Extension. FALSE: Disabled, TRUE:PAC implemented using the QARMA3 algorithm with BTI.

**CFGPAHBSZ****Type**

int

**Default value**

0x0

**Description**

Size of the P-AHB peripheral port memory region. 0=P-AHB disabled, 1=64MB, 2=128MB, 3=256MB, 4=512MB.

**CPIF****Type**

bool

**Default value**

0x1

**Description**

Specifies whether the external coprocessor interface is included.

**CPNSPRESENT****Type**

int

**Default value**

0xff

**Description**

Bit N means external coprocessor N (CP7:CP0) is accessible in Non-Secure state.

**CPSPPRESENT****Type**

int

**Default value**

0xff

**Description**

Bit N means external coprocessor N (CP7:CP0) is accessible in Secure state.

**CTI****Type**

bool

**Default value**

0x0

**Description**

CTI (Cross Trigger Interface) included.

**CTI\_irq0\_pin****Type**

int

**Default value**

0x4

**Description**

CTI interrupt request 0 pin.

**CTI\_irq1\_pin****Type**

int

**Default value**

0x5

**Description**

CTI interrupt request 1 pin.

**DBGLVL****Type**

int

**Default value**

0x2

**Description**

0: Minimal debug; 1: 2 Watchpoints, 4 Breakpoint comparators; 2: 4 Watchpoints, 8 Breakpoint comparators; 3: 8 Watchpoints, 8 Breakpoint comparators.

**DCACHESZ****Type**

int

**Default value**

0xf

**Description**

Whether the D-cache is included and, if included, the size of it. Bit 0: 0=No D-cache included, 1=D-cache included. Bits [4:1]: 0x0=4KB D-cache, 0x1=8KB D-cache, 0x3=16KB D-cache, 0x7=32KB D-cache, 0xF=64KB D-cache.

**DTGU****Type**

bool

**Default value**

0x0

**Description**

DTCM Security Gate Unit included.

**DTGUBLKSZ****Type**

int

**Default value**

0x3

**Description**

DTCM gate unit block size. Size=pow(2, DTGUBLKSZ + 5) bytes.

**DTGUMAXBLKS****Type**

int

**Default value**

0x0

**Description**

Maximum number of DTCM gate unit blocks. Number of blocks= $\text{pow}(2, \text{DTGUMAXBLKS})$ .

**ECOREVNUM****Type**

int

**Default value**

0x0

**Description**

ECO Revision number.

**ERRDEVID . NUM****Type**

int

**Default value**

0x1

**Description**

RAS: Number of implemented error record indexes, 0 to 1.

**ETM****Type**

bool

**Default value**

0x1

**Description**

Support for ETM trace. false : No ETM trace included, true: ETM trace included.

**FPMVE****Type**

int

**Default value**

0x5

**Description**

Set whether the model has FP and / or MVE support. 0: No FP and MVE support. 1: FP half and single precision. 2: FP half, single and double precision. 3: MVE integer. 4: FP half and single precision and MVE integer. 5: FP half, single and double precision and MVE floating point.

**ICACHESZ****Type**

int

**Default value**

0x3f

**Description**

Whether the I-cache is included and, if included, the size of it. Bit 0: 0=No I-cache included, 1=I-cache included. Bits [6:1]: 0x0=1KB I-cache (only with unified cache), 0x1=2KB I-cache (only with unified cache), 0x3=4KB I-cache, 0x7=8KB I-cache, 0xF=16KB I-cache, 0x1F=32KB I-cache, 0x3F=64KB I-cache.

**INITNSVTOR****Type**

int

**Default value**

0x0

**Description**

Non-Secure vector-table offset at reset.

**INITPAHBEN****Type**

bool

**Default value**

0x0

**Description**

The P-AHB enable state at reset.

**INITSVTOR****Type**

int

**Default value**

0x0

**Description**

Secure vector-table offset at reset.

**INITTCMEN****Type**

int

**Default value**

0x3

**Description**

The TCM enable state at reset. Bit 0 corresponds to ITCM enable state, bit 1 corresponds to DTCM enable state.

**IRQDIS0****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+0].

**IRQDIS1****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+32].

**IRQDIS10****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+320].

**IRQDIS11****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+352].

**IRQDIS12****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+384].

**IRQDIS13****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+416].

**IRQDIS14****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+448].

**IRQDIS2****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+64].

**IRQDIS3****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+96].

**IRQDIS4****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+128].

**IRQDIS5****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+160].

**IRQDIS6****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+192].

**IRQDIS7****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+224].

**IRQDIS8****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+256].

**IRQDIS9****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+288].

**IRQLVL****Type**

int

**Default value**

0x3

**Description**

Number of bits of interrupt priority.

**ITGU****Type**

bool

**Default value**

0x0

**Description**

ITCM Security Gate Unit included.

**ITGUBLKSZ****Type**

int

**Default value**

0x3

**Description**

ITCM gate unit block size. Size=pow(2, ITGUBLKSZ + 5) bytes.

**ITGUMAXBLKS****Type**

int

**Default value**

0x0

**Description**

Maximum number of ITCM gate unit blocks. Number of blocks=pow(2, ITGUMAXBLKS).

**ITM****Type**

bool

**Default value**

0x1

**Description**

Level of instrumentation trace supported. false : No ITM trace included, true: ITM trace included.

**IWIC****Type**

bool

**Default value**

0x1

**Description**

Include support for Internal Wake-up Interrupt Controller.

**LOCKDTGU****Type**

bool

**Default value**

0x0

**Description**

Lock down of Data TGU registers write.

**LOCKITGU****Type**

bool

**Default value**

0x0

**Description**

Lock down of Instruction TGU registers write.

**LOCKTCM****Type**

bool

**Default value**

0x0

**Description**

Lock down of TCM registers write.

**LOCK\_NS\_MPU****Type**

bool

**Default value**

0x0

**Description**

Lock down of Non-Secure MPU registers write.

**LOCK\_SAU****Type**

bool

**Default value**

0x0

**Description**

Lock down of SAU registers write.

**LOCK\_S\_MPU****Type**

bool

**Default value**

0x0

**Description**

Lock down of Secure MPU registers write.

**MPU\_NS****Type**

int

**Default value**

0x8

**Description**

Number of regions in the Non-Secure MPU. If Security Extensions are absent, this is the total number of MPU regions.

**MPU\_S****Type**

int

**Default value**

0x8

**Description**

Number of regions in the Secure MPU. If Security Extensions are absent, this is ignored.

**NUMIRQ****Type**

int

**Default value**

0x20

**Description**

Number of user interrupts.

**SAU****Type**

int

**Default value**

0x4

**Description**

Number of SAU regions (0 => no SAU).

**SECEXT****Type**

bool

**Default value**

0x1

**Description**

Whether the ARMv8-M Security Extensions are included.

**UCACHE****Type**

bool

**Default value**

0x0

**Description**

Whether the I-cache acts as a unified cache (ICACHESZ is used for the size).

**WICLINES****Type**

int

**Default value**

0x23

**Description**

Number of lines supported by the WIC interface.

**cde\_impl\_name****Type**

string

**Default value**

""

**Description**

Name of the CDE implementation for this core (implementation contributed by MTI plugin).

**cpi\_div****Type**

int

**Default value**

0x1

**Description**

divider for calculating CPI (Cycles Per Instruction).

**cpi\_mul****Type**

int

**Default value**

0x1

**Description**

multiplier for calculating CPI (Cycles Per Instruction).

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**delay\_faultmask\_update****Type**

bool

**Default value**

0x0

**Description**

Delay FAULTMASK update to context sync.

**delay\_sysreg\_update****Type**

bool

**Default value**

0x0

**Description**

Delay some system register updates (e.g. SHCSR) to context sync.

**ecc\_on****Type**

bool

**Default value**

0x0

**Description**

Enable Error Correcting Code.

**has\_cde****Type**

bool

**Default value**

0x0

**Description**

Enables Custom Datapath Extensions.

**has\_core\_dside\_bus\_gasket****Type**

bool

**Default value**

0x0

**Description**

STL gasket enabled.

**icache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**master\_id****Type**

int

**Default value**

0x0

**Description**

Master ID presented in bus transactions.

**min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**reported\_patch\_level****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic patch level value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**reported\_revision\_number****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic revision number value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting.

**semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting SVC calls.

**semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

**semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**semihosting-heap\_limit****Type**

int

**Default value**

0x20700000

**Description**

Virtual address of top of heap.

**semihosting-stack\_base****Type**

int

**Default value**

0x20800000

**Description**

Virtual address of base of descending stack.

**semihosting-stack\_limit****Type**

int

**Default value**

0x20700000

**Description**

Virtual address of stack limit.

**trace\_style****Type**

int

**Default value**

0x2

**Description**

MVE instruction trace style: Add 16 for [\*\*-] beat trace. Add 32 for tracing IMPLIED LOB instructions. Add 64 to change opcode of implied BF to 0xBF00.

**vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**3.5.60 ARMCortexM55CT**

CortexM55CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-424: IP revisions support**

Revision	Quality level
r1p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**Changes in 11.29.19**

Ports added:

- `tramdueeca`
- `tramsceeca`

Parameters added:

- `rse_ecc_support`

**About ARMCortexM55CT**

The model supports Custom Datapath Extension (CDE). For more information, see [CDE](#).

The model does not support the following functionality:

- Cross Trigger Interface (CTI).
- Programmable MBIST controller (PMC-100).
- Error Correcting Code (ECC).
- Q-Channel.

The following interfaces and registers are not modeled:

- ITM and ETM trace and trace synchronization and trigger interface signals.
- Dual-core lock-step operation.
- Interrupt latencies.
- Prefetcher Control Register (PFCR).
- Direct cache access registers.

In the Memory System Control Register (MSCR), only the cache-related bits are supported:

- FORCEWT
- DCACTIVE
- ICACTIVE
- IDCCLEAN

## Differences between the model and the RTL

In hardware, PMU\_CCNTR is an alias of the DWT\_CYCCNT register, so they contain the same values. In the model, PMU\_CCNTR is implemented differently to DWT\_CYCCNT, so they contain different values. The value held in DWT\_CYCCNT is not representative of hardware.

## Implementation of ITM in M-class models

This model has a parameter that enables partial support for Instrumentation Trace Macrocell (ITM). In hardware or RTL, trace data from ITM is sent in packets to the trace block serially using a single pin or wire. In the model, if it is enabled, the ITM trace data is output using an MTI trace source called ITM. The ITM trace source has an ITM\_PACKET\_TYPE field. The following table shows which packet types the model supports:

Field value	Description	Supported by model
ITM_SYNC	Synchronization packet	Not supported.
ITM_P_OVERFLOW	Protocol: Overflow packet	Not supported.
ITM_P_LOCAL_TIMESTAMP	Protocol: Local timestamp packets	Not supported.
ITM_P_GLOBAL_TIMESTAMP	Protocol: Global timestamp packets	Not supported.
ITM_P_EXTEN	Protocol: Extension packet	Not supported.
ITM_S_INSTRUMENTATION	Source: Instrumentation packet	Supported.
ITM_S_DWT_EVENT_COUNTER	Hardware source: Event counter wrapping	Not supported.
ITM_S_DWT_EXCEPTION	Hardware source: Exception tracing	Supported.
ITM_S_DWT_PC_SAMPLING	Hardware source: PC sampling	Not supported.
ITM_S_DWT_DATA_PC_TRACE	Hardware source: DWT Data trace PC value	Supported.
ITM_S_DWT_DATA_ADDRESS_TRACE	Hardware source: DWT Data trace address value	Supported.
ITM_S_DWT_DATA_DATA_TRACE	Hardware source: DWT Data trace DATA value	Supported.

## Iris and MTI instances for ARM CortexM55CT

This model has the following Iris instances:

**Table 3-426: ARM CortexM55CT Iris instances**

InstanceName	ComponentName
ARM CortexM55CT	ARM_Cortex-M55
ARM CortexM55CT.acp_mapper	PVBusMapper
ARM CortexM55CT.ext_bus	PVBusLogger
ARM CortexM55CT.ext_bus.mapper	PVBusMapper
ARM CortexM55CT.l1_incoherent_interconnect	PVCache

InstanceName	ComponentName
ARMCortexM55CT.l1_incoherent_interconnect.upstream[0]	PVBusSlave
ARMCortexM55CT.l1_incoherent_interconnect.upstream[10]	PVBusSlave
ARMCortexM55CT.l1_incoherent_interconnect.upstream[11]	PVBusSlave
ARMCortexM55CT.l1_incoherent_interconnect.upstream[12]	PVBusSlave
ARMCortexM55CT.l1_incoherent_interconnect.upstream[13]	PVBusSlave
ARMCortexM55CT.l1_incoherent_interconnect.upstream[14]	PVBusSlave
ARMCortexM55CT.l1_incoherent_interconnect.upstream[15]	PVBusSlave
ARMCortexM55CT.l1_incoherent_interconnect.upstream[16]	PVBusSlave
ARMCortexM55CT.l1_incoherent_interconnect.upstream[17]	PVBusSlave
ARMCortexM55CT.l1_incoherent_interconnect.upstream[1]	PVBusSlave
ARMCortexM55CT.l1_incoherent_interconnect.upstream[2]	PVBusSlave
ARMCortexM55CT.l1_incoherent_interconnect.upstream[3]	PVBusSlave
ARMCortexM55CT.l1_incoherent_interconnect.upstream[4]	PVBusSlave
ARMCortexM55CT.l1_incoherent_interconnect.upstream[5]	PVBusSlave
ARMCortexM55CT.l1_incoherent_interconnect.upstream[6]	PVBusSlave
ARMCortexM55CT.l1_incoherent_interconnect.upstream[7]	PVBusSlave
ARMCortexM55CT.l1_incoherent_interconnect.upstream[8]	PVBusSlave
ARMCortexM55CT.l1_incoherent_interconnect.upstream[9]	PVBusSlave
ARMCortexM55CT.l1dcache	PVCache
ARMCortexM55CT.l1dcache.upstream[0]	PVBusSlave
ARMCortexM55CT.l1licache	PVCache
ARMCortexM55CT.l1licache.upstream[0]	PVBusSlave
ARMCortexM55CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

**Table 3-427: ARMCortexM55CT MTI instances**

InstanceName	ComponentName
ARMCortexM55CT	ARM_Cortex-M55
ARMCortexM55CT.acp_mapper	PVBusMapper
ARMCortexM55CT.ext_bus	PVBusLogger
ARMCortexM55CT.ext_bus.mapper	PVBusMapper
ARMCortexM55CT.l1_incoherent_interconnect	PVCache
ARMCortexM55CT.l1_incoherent_interconnect.upstream[0]	PVBusSlave
ARMCortexM55CT.l1_incoherent_interconnect.upstream[10]	PVBusSlave
ARMCortexM55CT.l1_incoherent_interconnect.upstream[11]	PVBusSlave
ARMCortexM55CT.l1_incoherent_interconnect.upstream[12]	PVBusSlave
ARMCortexM55CT.l1_incoherent_interconnect.upstream[13]	PVBusSlave
ARMCortexM55CT.l1_incoherent_interconnect.upstream[14]	PVBusSlave
ARMCortexM55CT.l1_incoherent_interconnect.upstream[15]	PVBusSlave

InstanceName	ComponentName
ARMCortexM55CT.11_incoherent_interconnect.upstream[16]	PVBusSlave
ARMCortexM55CT.11_incoherent_interconnect.upstream[17]	PVBusSlave
ARMCortexM55CT.11_incoherent_interconnect.upstream[1]	PVBusSlave
ARMCortexM55CT.11_incoherent_interconnect.upstream[2]	PVBusSlave
ARMCortexM55CT.11_incoherent_interconnect.upstream[3]	PVBusSlave
ARMCortexM55CT.11_incoherent_interconnect.upstream[4]	PVBusSlave
ARMCortexM55CT.11_incoherent_interconnect.upstream[5]	PVBusSlave
ARMCortexM55CT.11_incoherent_interconnect.upstream[6]	PVBusSlave
ARMCortexM55CT.11_incoherent_interconnect.upstream[7]	PVBusSlave
ARMCortexM55CT.11_incoherent_interconnect.upstream[8]	PVBusSlave
ARMCortexM55CT.11_incoherent_interconnect.upstream[9]	PVBusSlave
ARMCortexM55CT.11dcache	PVCache
ARMCortexM55CT.11dcache.upstream[0]	PVBusSlave
ARMCortexM55CT.11icache	PVCache
ARMCortexM55CT.11icache.upstream[0]	PVBusSlave
ARMCortexM55CT.12_flusher	AsyncCacheFlushUnit

## Ports for ARMCortexM55CT

**Table 3-428: Ports**

Name	Protocol	Type	Description
ahbd	PVBus	Slave	Debug AHB - core bus slave driven by the DAP.
ahbp_m	PVBus	Master	The core will generate Vendor System data accesses on this port.
ahbs	PVBus	Slave	Slave AHB - External master (e.g. DMA) can write to TCMs (whether or not enabled in xTCMCR)
auxfault	Value	Slave	This is wired to the Auxiliary Fault Status Register.
bigend	Signal	Slave	Configure big endian data format.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions. Referred to in some documents as 'CLKIN'.
coproc_bus	CoprocBusProtocol	Slave	Co-Processor Interface
core_dside_bus_gasket_in	PVBus	Slave	-
core_dside_bus_gasket_out	PVBus	Master	-
cpuwait	Signal	Slave	Stall the CPU out of reset
currns	Signal	Master	Current Security state of the processor
currpri	Value	Master	Current execution priority.
dbgen	Signal	Slave	Invasive debug enable
dbgrestart	Signal	Slave	Request for synchronised exit from halt mode
dbgrestarted	Signal	Master	Handshakes with DBGRESTART
edbgrq	Signal	Slave	External request to enter halt mode

Name	Protocol	Type	Description
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
fpxxc	Value	Master	Port that sends the value of the FPxxC exception flags (FPIX, FPIDC, FPOFC, FPUFC, FPDZC, FPIOC). Each flag is present in the same position as in the FPSCR register (e.g. fpxxc[0] = FPIOC).
halted	Signal	Master	Indicates that the processor is in halt mode
idau	PVBus	Master	The core will generate IDAU requests on this port.
idau_invalidate_region	Value_64	Slave	64 bit number to invalidate IDAU memory range (start_address<<32 end_address)
initnsvtor	Value	Slave	Reset configuration port - Non-Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset This port remains functional no matter ARMv8-M Security Extensions are included or not When ARMv8-M Security Extensions are not included, all exceptions will use NS vector base address given by this port.
initpahben	Signal	Slave	Enable P-AHB on the next reset
initsvtor	Value	Slave	Reset configuration port - Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset It becomes functional when ARMv8-M Security Extensions are included When ARMv8-M Security Extensions are not included, this port will be ignored.
inittcmem[2]	Signal	Slave	Reset configuration port - TCM enable initialisation out of reset Bit[0] HIGH = ITCM is enabled Bit[1] HIGH = DTCM is enabled
intnum	Value	Master	Exception number of the current execution context (from IPSR[8:0]) When the processor is in Thread mode, INTNUM is 0 When the processor is in Handler mode, INTNUM is the exception number of the currently-executing exception.
irq[480]	Signal	Slave	This signal array delivers signals to the NVIC.
lockdcaic	Signal	Slave	Disable access to instruction cache direct cache access registers
lockdtgu	Signal	Slave	Disable writes to registers associated with the DTGU
lockitgu	Signal	Slave	Disable writes to registers associated with the ITGU
locknsmpu	Signal	Slave	Disable writes to the Non-Secure MPU_*_NS registers
locknsvtor	Signal	Slave	Cortex-M55-specific LOCKNSVTOR, LOCKSVTAIRCR, LOCKSMPU, LOCKNSMPU, LOCKSAU. Disable writes to VTOR_NS
lockpahb	Signal	Slave	P-AHB related ports Disable writes to PAHBCR
locksau	Signal	Slave	Disable writes to the SAU_* registers
locksmpu	Signal	Slave	Disable writes to the Secure MPU_* registers
locksvtaircr	Signal	Slave	Disable writes to VTOR_S, AIRCR.PRIS, AIRCR.BFHFNMIN
locktcm	Signal	Slave	Disable writes to registers associated with the TCM
lockup	Signal	Master	Asserted when the processor is in lockup state.
niden	Signal	Slave	Non-invasive debug enable
nmi	Signal	Slave	Configure non maskable interrupt.
poreset	Signal	Slave	Raising this signal will do a power-on reset of the core.
prequest	PChannel	Slave	Low Power Interface
pv_ppbus_m	PVBus	Master	The core will generate External Private Peripheral Bus requests on this port.

Name	Protocol	Type	Description
pvbus_m	PVBus	Master	The core will generate bus requests on this port.
qrequest	PChannel	Slave	-
sleepdeep	Signal	Master	Asserted when the processor is in deep sleep.
sleeping	Signal	Master	Asserted when the processor is in sleep.
spiden	Signal	Slave	Secure invasive debug enable
spniden	Signal	Slave	Secure non-invasive debug enable
stcalib[2]	Value	Slave	This is the calibration value for the SysTick timer.
stclk	ClockSignal	Slave	This is the reference clock for the SysTick timer.
sysreset	Signal	Slave	Raising this signal will put the core into reset mode (but does not reset the debug logic).
sysresetreq	Signal	Master	Asserted to indicate that a reset is required.
ticks	InstructionCount	Master	Port allowing the number of instructions since startup to be read from the CPU.
tramdueeca	Value	Master	-
tramsceeca	Value	Master	-
wicenack	Signal	Master	Acknowledge signal for WICENREQ
wicenreq	Signal	Slave	Request for deep sleep to be WIC-based deep sleep.
wicsense[483]	Signal	Master	Indicates which input events can cause the WIC to generate the WAKEUP signal.

## Parameters for ARMCortexM55CT

### CDEMAPPEDONCP

#### Type

int

#### Default value

0xff

#### Description

Bit N specifies whether the instruction for coprocessor N (CP7:CP0) is redirected to the CDE module.

### CDERTLID

#### Type

int

#### Default value

0x20

#### Description

Value of ID\_AFR0.CDERTLID.

**CFGBIGEND****Type**

bool

**Default value**

0x0

**Description**

Initialize processor to big endian mode.

**CFGDTCMSZ****Type**

int

**Default value**

0x9

**Description**

Size of the data TCM. 0=No DTCM implemented. Otherwise=Size of DTCM=pow(2, CFGDTCMSZ - 1) KB. Minimum size is 4KB.

**CFGITCMSZ****Type**

int

**Default value**

0x9

**Description**

Size of the instruction TCM. 0=No ITCM implemented. Otherwise=Size of ITCM=pow(2, CFGITCMSZ - 1) KB. Minimum size is 4KB.

**CFGMEMALIAS****Type**

int

**Default value**

0x0

**Description**

Memory address alias bit for the ITCM, DTCM and P-AHB regions. 0=No alias, 1=Alias bit 24, 2=Alias bit 25, 4=Alias bit 26, 8=Alias bit 27, 16=Alias bit 28.

**CFGNOCDECP****Type**

int

**Default value**

0x0

**Description**

Bit N means external coprocessor N (CP7:CP0) disable for CDE coprocessor.

**CFGPAHBSZ****Type**

int

**Default value**

0x0

**Description**

Size of the P-AHB peripheral port memory region. 0=P-AHB disabled, 1=64MB, 2=128MB, 3=256MB, 4=512MB.

**CPIF****Type**

bool

**Default value**

0x1

**Description**

Specifies whether the external coprocessor interface is included.

**CPNSPRESENT****Type**

int

**Default value**

0xff

**Description**

Bit N means external coprocessor N (CP7:CP0) is accessible in Non-Secure state.

**CPSPRESENT****Type**

int

**Default value**

0xff

**Description**

Bit N means external coprocessor N (CP7:CP0) is accessible in Secure state.

**CTI****Type**

bool

**Default value**

0x0

**Description**

CTI (Cross Trigger Interface) included.

**CTI\_irq0\_pin****Type**

int

**Default value**

0x4

**Description**

CTI interrupt request 0 pin.

**CTI\_irq1\_pin****Type**

int

**Default value**

0x5

**Description**

CTI interrupt request 1 pin.

**DBG\_LVL****Type**

int

**Default value**

0x2

**Description**

0: Minimal debug; 1: 2 Watchpoints, 4 Breakpoint comparators; 2: 4 Watchpoints, 8 Breakpoint comparators; 3: 8 Watchpoints, 8 Breakpoint comparators.

**DCACHESZ****Type**

int

**Default value**

0xf

**Description**

Whether the D-cache is included and, if included, the size of it. Bit 0: 0=No D-cache included, 1=D-cache included. Bits [4:1]: 0x0=4KB D-cache, 0x1=8KB D-cache, 0x3=16KB D-cache, 0x7=32KB D-cache, 0xF=64KB D-cache.

**DTGU****Type**

bool

**Default value**

0x0

**Description**

DTCM Security Gate Unit included.

**DTGUBLKSZ****Type**

int

**Default value**

0x3

**Description**

DTCM gate unit block size. Size=pow(2, DTGUBLKSZ + 5) bytes.

**DTGUMAXBLKS****Type**

int

**Default value**

0x0

**Description**

Maximum number of DTCM gate unit blocks. Number of blocks=pow(2, DTGUMAXBLKS).

**ECOREVNUM****Type**

int

**Default value**

0x0

**Description**

ECO Revision number.

**ERRDEVID . NUM****Type**

int

**Default value**

0x1

**Description**

RAS: Number of implemented error record indexes, 0 to 1.

**ETM****Type**

bool

**Default value**

0x1

**Description**

Support for ETM trace. false : No ETM trace included, true: ETM trace included.

**FPU****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**ICACHESZ****Type**

int

**Default value**

0xf

**Description**

Whether the I-cache is included and, if included, the size of it. Bit 0: 0=No I-cache included, 1=I-cache included. Bits [4:1]: 0x0=4KB I-cache, 0x1=8KB I-cache, 0x3=16KB I-cache, 0x7=32KB I-cache, 0xF=64KB I-cache.

**INITNSVTOR****Type**

int

**Default value**

0x0

**Description**

Non-Secure vector-table offset at reset.

**INITPAHBEN****Type**

bool

**Default value**

0x0

**Description**

The P-AHB enable state at reset.

**INITSVTOR****Type**

int

**Default value**

0x0

**Description**

Secure vector-table offset at reset.

**INITTCMEN****Type**

int

**Default value**

0x3

**Description**

The TCM enable state at reset. Bit 0 corresponds to ITCM enable state, bit 1 corresponds to DTCM enable state.

**IRQDIS0****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+0].

**IRQDIS1****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+32].

**IRQDIS10****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+320].

**IRQDIS11****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+352].

**IRQDIS12****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+384].

**IRQDIS13****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+416].

**IRQDIS14****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+448].

**IRQDIS2****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+64].

**IRQDIS3****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+96].

**IRQDIS4****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+128].

**IRQDIS5****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+160].

**IRQDIS6****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+192].

**IRQDIS7****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+224].

**IRQDIS8****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+256].

**IRQDIS9****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+288].

**IRQLVL****Type**

int

**Default value**

0x3

**Description**

Number of bits of interrupt priority.

**ITGU****Type**

bool

**Default value**

0x0

**Description**

ITCM Security Gate Unit included.

**ITGUBLKSZ****Type**

int

**Default value**

0x3

**Description**

ITCM gate unit block size. Size=pow(2, ITGUBLKSZ + 5) bytes.

**ITGUMAXBLKS****Type**

int

**Default value**

0x0

**Description**

Maximum number of ITCM gate unit blocks. Number of blocks=pow(2, ITGUMAXBLKS).

**ITM****Type**

bool

**Default value**

0x1

**Description**

Level of instrumentation trace supported. false : No ITM trace included, true: ITM trace included.

**IWIC****Type**

bool

**Default value**

0x1

**Description**

Include support for Internal Wake-up Interrupt Controller.

**LOCKDTGU****Type**

bool

**Default value**

0x0

**Description**

Lock down of Data TGU registers write.

**LOCKITGU****Type**

bool

**Default value**

0x0

**Description**

Lock down of Instruction TGU registers write.

**LOCKTCM****Type**

bool

**Default value**

0x0

**Description**

Lock down of TCM registers write.

**LOCK\_NS\_MPU****Type**

bool

**Default value**

0x0

**Description**

Lock down of Non-Secure MPU registers write.

**LOCK\_SAU****Type**

bool

**Default value**

0x0

**Description**

Lock down of SAU registers write.

**LOCK\_S\_MPU****Type**

bool

**Default value**

0x0

**Description**

Lock down of Secure MPU registers write.

**MPU\_NS****Type**

int

**Default value**

0x8

**Description**

Number of regions in the Non-Secure MPU. If Security Extensions are absent, this is the total number of MPU regions.

**MPU\_S****Type**

int

**Default value**

0x8

**Description**

Number of regions in the Secure MPU. If Security Extensions are absent, this is ignored.

**MVE****Type**

int

**Default value**

0x1

**Description**

Set whether the model has MVE support. If FPU = 0: 0=MVE not included, 1=Integer subset of MVE included. If FPU = 1: 0=MVE not included, 1=Integer subset of MVE included, 2=Integer and half and single precision floating point MVE included.

**NUMIRQ****Type**

int

**Default value**

0x20

**Description**

Number of user interrupts.

**SAU****Type**

int

**Default value**

0x4

**Description**

Number of SAU regions (0 => no SAU).

**SECEXT****Type**

bool

**Default value**

0x1

**Description**

Whether the ARMv8-M Security Extensions are included.

**WICLINES****Type**

int

**Default value**

0x23

**Description**

Number of lines supported by the WIC interface.

**cde\_impl\_name****Type**

string

**Default value**

""

**Description**

Name of the CDE implementation for this core (implementation contributed by MTI plugin).

**cpi\_div****Type**

int

**Default value**

0x1

**Description**

divider for calculating CPI (Cycles Per Instruction).

**cpi\_mul****Type**

int

**Default value**

0x1

**Description**

multiplier for calculating CPI (Cycles Per Instruction).

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**delay\_faultmask\_update****Type**

bool

**Default value**

0x0

**Description**

Delay FAULTMASK update to context sync.

**delay\_sysreg\_update****Type**

bool

**Default value**

0x0

**Description**

Delay some system register updates (e.g. SHCSR) to context sync.

**ecc\_on****Type**

bool

**Default value**

0x0

**Description**

Enable Error Correcting Code.

**has\_cde****Type**

bool

**Default value**

0x0

**Description**

Enables Custom Datapath Extensions.

**has\_core\_dside\_bus\_gasket****Type**

bool

**Default value**

0x0

**Description**

STL gasket enabled.

**icache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**master\_id****Type**

int

**Default value**

0x0

**Description**

Master ID presented in bus transactions.

**min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**reported\_patch\_level****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic patch level value to be displayed from the CUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**reported\_revision\_number****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic revision number value to be displayed from the CUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**rse\_ecc\_support****Type**

int

**Default value**

0x0

**Description**

Support for ECC initialization in TCM, following RSE spec. 0=No support, 1=Supported, faults are reported as single bit correctable errors, 2=Supported, faults are reported as double bit uncorrected errors.

**semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting.

**semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting SVC calls.

**semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

**semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**semihosting-heap\_limit****Type**

int

**Default value**

0x20700000

**Description**

Virtual address of top of heap.

**semihosting-stack\_base****Type**

int

**Default value**

0x20800000

**Description**  
Virtual address of base of descending stack.

**semihosting-stack\_limit**

**Type**  
int

**Default value**  
0x20700000

**Description**  
Virtual address of stack limit.

**trace\_style**

**Type**  
int

**Default value**  
0x2

**Description**  
MVE instruction trace style: Add 16 for [\*\*-] beat trace. Add 32 for tracing IMPLIED LOB instructions. Add 64 to change opcode of implied BF to 0xBF00.

**vfp-enable\_at\_reset**

**Type**  
bool

**Default value**  
0x0

**Description**  
Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

3.5.61 ARMCortexM85CT

CortexM85CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-429: IP revisions support

Revision	Quality level
r1p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

## Iris and MTI instances for ARM CortexM85CT

This model has the following Iris instances:

**Table 3-430: ARM CortexM85CT Iris instances**

InstanceName	ComponentName
ARM CortexM85CT	ARM_Cortex-M85
ARM CortexM85CT.acp_mapper	PVBusMapper
ARM CortexM85CT.ext_bus	PVBusLogger
ARM CortexM85CT.ext_bus.mapper	PVBusMapper
ARM CortexM85CT.l1_incoherent_interconnect	PVCache
ARM CortexM85CT.l1_incoherent_interconnect.upstream[0]	PVBusSlave
ARM CortexM85CT.l1_incoherent_interconnect.upstream[10]	PVBusSlave
ARM CortexM85CT.l1_incoherent_interconnect.upstream[11]	PVBusSlave
ARM CortexM85CT.l1_incoherent_interconnect.upstream[12]	PVBusSlave
ARM CortexM85CT.l1_incoherent_interconnect.upstream[13]	PVBusSlave
ARM CortexM85CT.l1_incoherent_interconnect.upstream[14]	PVBusSlave
ARM CortexM85CT.l1_incoherent_interconnect.upstream[15]	PVBusSlave
ARM CortexM85CT.l1_incoherent_interconnect.upstream[16]	PVBusSlave
ARM CortexM85CT.l1_incoherent_interconnect.upstream[17]	PVBusSlave
ARM CortexM85CT.l1_incoherent_interconnect.upstream[1]	PVBusSlave
ARM CortexM85CT.l1_incoherent_interconnect.upstream[2]	PVBusSlave
ARM CortexM85CT.l1_incoherent_interconnect.upstream[3]	PVBusSlave
ARM CortexM85CT.l1_incoherent_interconnect.upstream[4]	PVBusSlave
ARM CortexM85CT.l1_incoherent_interconnect.upstream[5]	PVBusSlave
ARM CortexM85CT.l1_incoherent_interconnect.upstream[6]	PVBusSlave
ARM CortexM85CT.l1_incoherent_interconnect.upstream[7]	PVBusSlave
ARM CortexM85CT.l1_incoherent_interconnect.upstream[8]	PVBusSlave
ARM CortexM85CT.l1_incoherent_interconnect.upstream[9]	PVBusSlave
ARM CortexM85CT.l1dcache	PVCache
ARM CortexM85CT.l1dcache.upstream[0]	PVBusSlave
ARM CortexM85CT.l1licache	PVCache
ARM CortexM85CT.l1licache.upstream[0]	PVBusSlave
ARM CortexM85CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

**Table 3-431: ARM CortexM85CT MTI instances**

InstanceName	ComponentName
ARM CortexM85CT	ARM_Cortex-M85
ARM CortexM85CT.acp_mapper	PVBusMapper
ARM CortexM85CT.ext_bus	PVBusLogger

InstanceName	ComponentName
ARMCortexM85CT.ext_bus.mapper	PVBusMapper
ARMCortexM85CT.l1_incoherent_interconnect	PVCache
ARMCortexM85CT.l1_incoherent_interconnect.upstream[0]	PVBusSlave
ARMCortexM85CT.l1_incoherent_interconnect.upstream[10]	PVBusSlave
ARMCortexM85CT.l1_incoherent_interconnect.upstream[11]	PVBusSlave
ARMCortexM85CT.l1_incoherent_interconnect.upstream[12]	PVBusSlave
ARMCortexM85CT.l1_incoherent_interconnect.upstream[13]	PVBusSlave
ARMCortexM85CT.l1_incoherent_interconnect.upstream[14]	PVBusSlave
ARMCortexM85CT.l1_incoherent_interconnect.upstream[15]	PVBusSlave
ARMCortexM85CT.l1_incoherent_interconnect.upstream[16]	PVBusSlave
ARMCortexM85CT.l1_incoherent_interconnect.upstream[17]	PVBusSlave
ARMCortexM85CT.l1_incoherent_interconnect.upstream[1]	PVBusSlave
ARMCortexM85CT.l1_incoherent_interconnect.upstream[2]	PVBusSlave
ARMCortexM85CT.l1_incoherent_interconnect.upstream[3]	PVBusSlave
ARMCortexM85CT.l1_incoherent_interconnect.upstream[4]	PVBusSlave
ARMCortexM85CT.l1_incoherent_interconnect.upstream[5]	PVBusSlave
ARMCortexM85CT.l1_incoherent_interconnect.upstream[6]	PVBusSlave
ARMCortexM85CT.l1_incoherent_interconnect.upstream[7]	PVBusSlave
ARMCortexM85CT.l1_incoherent_interconnect.upstream[8]	PVBusSlave
ARMCortexM85CT.l1_incoherent_interconnect.upstream[9]	PVBusSlave
ARMCortexM85CT.l1dcache	PVCache
ARMCortexM85CT.l1dcache.upstream[0]	PVBusSlave
ARMCortexM85CT.l1icache	PVCache
ARMCortexM85CT.l1icache.upstream[0]	PVBusSlave
ARMCortexM85CT.l2_flusher	AsyncCacheFlushUnit

## Ports for ARMCortexM85CT

**Table 3-432: Ports**

Name	Protocol	Type	Description
ahbd	PVBus	Slave	Debug AHB - core bus slave driven by the DAP.
ahbp_m	PVBus	Master	The core will generate Vendor System data accesses on this port.
ahbs	PVBus	Slave	Slave AHB - External master (e.g. DMA) can write to TCMs (whether or not enabled in xTCMCR)
auxfault	Value	Slave	This is wired to the Auxiliary Fault Status Register.
bigend	Signal	Slave	Configure big endian data format.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions. Referred to in some documents as 'CLKIN'.
coproc_bus	CoprocBusProtocol	Slave	Co-Processor Interface

Name	Protocol	Type	Description
core_dside_bus_gasket_in	PVBus	Slave	-
core_dside_bus_gasket_out	PVBus	Master	-
cpuwait	Signal	Slave	Stall the CPU out of reset
currns	Signal	Master	Current Security state of the processor
currpri	Value	Master	Current execution priority.
dbgen	Signal	Slave	Invasive debug enable
dbgrestart	Signal	Slave	Request for synchronised exit from halt mode
dbgrestarted	Signal	Master	Handshakes with DBGRESTART
edbgrq	Signal	Slave	External request to enter halt mode
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
fpxxc	Value	Master	Port that sends the value of the FPxxC exception flags (FPIXC, FPIDC, FPOFC, FPUFC, FPDZC, FPIOC). Each flag is present in the same position as in the FPSCR register (e.g. fpxxc[0] = FPIOC).
halted	Signal	Master	Indicates that the processor is in halt mode
idau	PVBus	Master	The core will generate IDAU requests on this port.
idau_invalidate_region	Value_64	Slave	64 bit number to invalid IDAU memory range (start_address<<32 end_address)
initnsvtor	Value	Slave	Reset configuration port - Non-Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset This port remains functional no matter ARMv8-M Security Extensions are included or not When ARMv8-M Security Extensions are not included, all exceptions will use NS vector base address given by this port.
initpahben	Signal	Slave	Enable P-AHB on the next reset
initsvtor	Value	Slave	Reset configuration port - Secure Vector table offset (VTOR.TBLOFF[31:7]) out of reset It becomes functional when ARMv8-M Security Extensions are included When ARMv8-M Security Extensions are not included, this port will be ignored.
inittcmem[2]	Signal	Slave	Reset configuration port - TCM enable initialisation out of reset Bit[0] HIGH = ITCM is enabled Bit[1] HIGH = DTCM is enabled
intnum	Value	Master	Exception number of the current execution context (from IPSR[8:0]) When the processor is in Thread mode, INTNUM is 0 When the processor is in Handler mode, INTNUM is the exception number of the currently-executing exception.
irq[480]	Signal	Slave	This signal array delivers signals to the NVIC.
lockdcaic	Signal	Slave	Disable access to instruction cache direct cache access registers
lockdtgu	Signal	Slave	Disable writes to registers associated with the DTGU
lockitgu	Signal	Slave	Disable writes to registers associated with the ITGU
locknsmpu	Signal	Slave	Disable writes to the Non-Secure MPU_*_NS registers
locknsvtor	Signal	Slave	Cortex-M85 specific LOCKNSVTOR, LOCKSVTAIRCR, LOCKSMPU, LOCKNSMPU, LOCKSAU. Disable writes to VTOR_NS
lockpahb	Signal	Slave	P-AHB related ports Disable writes to PAHBCCR
locksau	Signal	Slave	Disable writes to the SAU_* registers

Name	Protocol	Type	Description
locksmpu	Signal	Slave	Disable writes to the Secure MPU_* registers
locksvtaircr	Signal	Slave	Disable writes to VTOR_S, AIRCR.PRIS, AIRCR.BFHFNMINS
locktcm	Signal	Slave	Disable writes to registers associated with the TCM
lockup	Signal	Master	Asserted when the processor is in lockup state.
niden	Signal	Slave	Non-invasive debug enable
nmi	Signal	Slave	Configure non maskable interrupt.
poreset	Signal	Slave	Raising this signal will do a power-on reset of the core.
prequest	PChannel	Slave	Low Power Interface
pv_ppbus_m	PVBus	Master	The core will generate External Private Peripheral Bus requests on this port.
pdbus_m	PVBus	Master	The core will generate bus requests on this port.
qrequest	PChannel	Slave	-
sleepdeep	Signal	Master	Asserted when the processor is in deep sleep.
sleeping	Signal	Master	Asserted when the processor is in sleep.
spiden	Signal	Slave	Secure invasive debug enable
spniden	Signal	Slave	Secure non-invasive debug enable
stcalib[2]	Value	Slave	This is the calibration value for the SysTick timer.
stclk	ClockSignal	Slave	This is the reference clock for the SysTick timer.
sysreset	Signal	Slave	Raising this signal will put the core into reset mode (but does not reset the debug logic).
sysresetreq	Signal	Master	Asserted to indicate that a reset is required.
ticks	InstructionCount	Master	Port allowing the number of instructions since startup to be read from the CPU.
wicenack	Signal	Master	Acknowledge signal for WICENREQ
wicenreq	Signal	Slave	Request for deep sleep to be WIC-based deep sleep.
wicsense[483]	Signal	Master	Indicates which input events can cause the WIC to generate the WAKEUP signal.

## Parameters for ARMCortexM85CT

### CDEMAPPEDONCP

#### Type

int

#### Default value

0xff

#### Description

Bit N specifies whether the instruction for coprocessor N (CP7:CP0) is redirected to the CDE module.

**CDERTLID****Type**

int

**Default value**

0x20

**Description**

Value of ID\_AFR0.CDERTLID.

**CFGBIGEND****Type**

bool

**Default value**

0x0

**Description**

Initialize processor to big endian mode.

**CFGCPUINST****Type**

int

**Default value**

0x0

**Description**

CPU instance number. This is part of the TCM base address, in bits 25:24.

**CFGDTCMSZ****Type**

int

**Default value**

0x9

**Description**

Size of the data TCM. 0=No DTCM implemented. Otherwise=Size of DTCM=pow(2, CFGDTCMSZ - 1) KB. Minimum size is 4KB.

**CFGITCMSZ****Type**

int

**Default value**

0x9

**Description**

Size of the instruction TCM. 0=No ITCM implemented. Otherwise=Size of ITCM=pow(2, CFGITCMSZ - 1) KB. Minimum size is 4KB.

**CFGMEMALIAS****Type**

int

**Default value**

0x0

**Description**

Memory address alias bit for the ITCM, DTCM and P-AHB regions. 0=No alias, 1=Alias bit 24, 2=Alias bit 25, 4=Alias bit 26, 8=Alias bit 27, 16=Alias bit 28.

**CFGNOCDECP****Type**

int

**Default value**

0x0

**Description**

Bit N means external coprocessor N (CP7:CP0) disable for CDE coprocessor.

**CFGPACBTI****Type**

bool

**Default value**

0x0

**Description**

Enables support for the Pointer Authentication and Branch Target Identification (PACBTI) Extension. FALSE: Disabled, TRUE:PAC implemented using the QARMA3 algorithm with BTI.

**CFGPAHBSZ****Type**

int

**Default value**

0x0

**Description**

Size of the P-AHB peripheral port memory region. 0=P-AHB disabled, 1=64MB, 2=128MB, 3=256MB, 4=512MB.

**CPIF****Type**

bool

**Default value**

0x1

**Description**

Specifies whether the external coprocessor interface is included.

**CPNSPRESENT****Type**

int

**Default value**

0xff

**Description**

Bit N means external coprocessor N (CP7:CP0) is accessible in Non-Secure state.

**CPSPPRESENT****Type**

int

**Default value**

0xff

**Description**

Bit N means external coprocessor N (CP7:CP0) is accessible in Secure state.

**CTI****Type**

bool

**Default value**

0x0

**Description**

CTI (Cross Trigger Interface) included.

**CTI\_irq0\_pin****Type**

int

**Default value**

0x4

**Description**

CTI interrupt request 0 pin.

**CTI\_irq1\_pin****Type**

int

**Default value**

0x5

**Description**

CTI interrupt request 1 pin.

**DBGLVL****Type**

int

**Default value**

0x2

**Description**

1: 4 Watchpoints, 4 Breakpoint comparators; 2: 8 Watchpoints, 8 Breakpoint comparators.

**DCACHESZ****Type**

int

**Default value**

0xf

**Description**

Whether the D-cache is included and, if included, the size of it. Bit 0: 0=No D-cache included, 1=D-cache included. Bits [4:1]: 0x0=4KB D-cache, 0x1=8KB D-cache, 0x3=16KB D-cache, 0x7=32KB D-cache, 0xF=64KB D-cache.

**DTGU****Type**

bool

**Default value**

0x0

**Description**

DTCM Security Gate Unit included.

**DTGUBLKSZ****Type**

int

**Default value**

0x3

**Description**

DTCM gate unit block size. Size= $\text{pow}(2, \text{DTGUBLKSZ} + 5)$  bytes.

**DTGUMAXBLKS****Type**

int

**Default value**

0x0

**Description**

Maximum number of DTCM gate unit blocks. Number of blocks= $\text{pow}(2, \text{DTGUMAXBLKS})$ .

**ECOREVNUM****Type**

int

**Default value**

0x0

**Description**

ECO Revision number.

**ERRDEVID . NUM****Type**

int

**Default value**

0x1

**Description**

RAS: Number of implemented error record indexes, 0 to 1.

**ETM****Type**

bool

**Default value**

0x1

**Description**

Support for ETM trace. false : No ETM trace included, true: ETM trace included.

**FPU****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**ICACHESZ****Type**

int

**Default value**

0xf

**Description**

Whether the I-cache is included and, if included, the size of it. Bit 0: 0=No I-cache included, 1=I-cache included. Bits [4:1]: 0x0=4KB I-cache, 0x1=8KB I-cache, 0x3=16KB I-cache, 0x7=32KB I-cache, 0xF=64KB I-cache.

**INITNSVTOR****Type**

int

**Default value**

0x0

**Description**

Non-Secure vector-table offset at reset.

**INITPAHBEN****Type**

bool

**Default value**

0x0

**Description**

The P-AHB enable state at reset.

**INITSVTOR****Type**

int

**Default value**

0x0

**Description**

Secure vector-table offset at reset.

**INITTCMEN****Type**

int

**Default value**

0x3

**Description**

The TCM enable state at reset. Bit 0 corresponds to ITCM enable state, bit 1 corresponds to DTCM enable state.

**IRQDIS0****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+0].

**IRQDIS1****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+32].

**IRQDIS10****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+320].

**IRQDIS11****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+352].

**IRQDIS12****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+384].

**IRQDIS13****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+416].

**IRQDIS14****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+448].

**IRQDIS2****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+64].

**IRQDIS3****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+96].

**IRQDIS4****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+128].

**IRQDIS5****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+160].

**IRQDIS6****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+192].

**IRQDIS7****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+224].

**IRQDIS8****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+256].

**IRQDIS9****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n+288].

**IRQLVL****Type**

int

**Default value**

0x3

**Description**

Number of bits of interrupt priority.

**ITGU****Type**

bool

**Default value**

0x0

**Description**

ITCM Security Gate Unit included.

**ITGUBLKSZ****Type**

int

**Default value**

0x3

**Description**

ITCM gate unit block size. Size=pow(2, ITGUBLKSZ + 5) bytes.

**ITGUMAXBLKS****Type**

int

**Default value**

0x0

**Description**

Maximum number of ITCM gate unit blocks. Number of blocks=pow(2, ITGUMAXBLKS).

**ITM****Type**

bool

**Default value**

0x1

**Description**

Level of instrumentation trace supported. false : No ITM trace included, true: ITM trace included.

**IWIC****Type**

bool

**Default value**

0x1

**Description**

Include support for Internal Wake-up Interrupt Controller.

**LOCKDTGU****Type**

bool

**Default value**

0x0

**Description**

Lock down of Data TGU registers write.

**LOCKITGU****Type**

bool

**Default value**

0x0

**Description**

Lock down of Instruction TGU registers write.

**LOCKTCM****Type**

bool

**Default value**

0x0

**Description**

Lock down of TCM registers write.

**LOCK\_NS\_MPU****Type**

bool

**Default value**

0x0

**Description**

Lock down of Non-Secure MPU registers write.

**LOCK\_SAU****Type**

bool

**Default value**

0x0

**Description**

Lock down of SAU registers write.

**LOCK\_S\_MPU****Type**

bool

**Default value**

0x0

**Description**

Lock down of Secure MPU registers write.

**MPU\_NS****Type**

int

**Default value**

0x8

**Description**

Number of regions in the Non-Secure MPU. If Security Extensions are absent, this is the total number of MPU regions.

**MPU\_S****Type**

int

**Default value**

0x8

**Description**

Number of regions in the Secure MPU. If Security Extensions are absent, this is ignored.

**MVE****Type**

int

**Default value**

0x1

**Description**

Set whether the model has MVE support. If FPU = 0: 0=MVE not included, 1=Integer subset of MVE included. If FPU = 1: 0=MVE not included, 1=Integer subset of MVE included, 2=Integer and half and single precision floating point MVE included.

**NUMIRQ****Type**

int

**Default value**

0x20

**Description**

Number of user interrupts.

**SAU****Type**

int

**Default value**

0x4

**Description**

Number of SAU regions (0 => no SAU).

**SECEXT****Type**

bool

**Default value**

0x1

**Description**

Whether the ARMv8-M Security Extensions are included.

**WICLINES****Type**

int

**Default value**

0x23

**Description**

Number of lines supported by the WIC interface.

**cde\_impl\_name****Type**

string

**Default value**

""

**Description**

Name of the CDE implementation for this core (implementation contributed by MTI plugin).

**cpi\_div****Type**

int

**Default value**

0x1

**Description**

divider for calculating CPI (Cycles Per Instruction).

**cpi\_mul****Type**

int

**Default value**

0x1

**Description**

multiplier for calculating CPI (Cycles Per Instruction).

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**delay\_faultmask\_update****Type**

bool

**Default value**

0x0

**Description**

Delay FAULTMASK update to context sync.

**delay\_sysreg\_update****Type**

bool

**Default value**

0x0

**Description**

Delay some system register updates (e.g. SHCSR) to context sync.

**ecc\_on****Type**

bool

**Default value**

0x0

**Description**

Enable Error Correcting Code.

**has\_cde****Type**

bool

**Default value**

0x0

**Description**

Enables Custom Datapath Extensions.

**has\_core\_dside\_bus\_gasket****Type**

bool

**Default value**

0x0

**Description**

STL gasket enabled.

**icache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**master\_id****Type**

int

**Default value**

0x0

**Description**

Master ID presented in bus transactions.

**min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**reported\_patch\_level****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic patch level value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**reported\_revision\_number****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic revision number value to be displayed from the CUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting.

**semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting SVC calls.

**semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

**semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**semihosting-heap\_limit****Type**

int

**Default value**

0x20700000

**Description**

Virtual address of top of heap.

**semihosting-stack\_base****Type**

int

**Default value**

0x20800000

**Description**

Virtual address of base of descending stack.

**semihosting-stack\_limit****Type**

int

**Default value**

0x20700000

**Description**

Virtual address of stack limit.

**trace\_style****Type**

int

**Default value**

0x2

**Description**

MVE instruction trace style: Add 16 for `[**--]` beat trace. Add 32 for tracing IMPLIED LOB instructions. Add 64 to change opcode of implied BF to 0xBF00.

**vfp-enable\_at\_reset**

**Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

3.5.62 **ARMCortexR4CT**

ARMCortexR4CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-433: IP revisions support

Revision	Quality level
r1p2	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**About ARMCortexR4CT**

- The model implements the `cfgie` port, although it is optional in hardware.
- `pvbuss_s` is the slave port to access the TCM RAM. Bits [3:0] of the user flags in the transaction are used to select the TCM:

1

selects the ATCM.

2

selects the BTCM.

Any other value is reserved.
- When you use the `semihosting-cmd_line` parameter to set the command line that is available to semihosting SVC calls, the value of `argv[0]` is set to the first command-line argument, not to the name of an image.

**Differences between the model and the RTL**

This component has the following differences from the corresponding revision of the RTL implementation:

- There is a single memory port combining instruction, data, DMA and peripheral access.
- ECC and parity schemes are not supported (although the registers might be present).
- The dual core redundancy configuration is not supported.
- TCMs are modeled internally and the model does not support external TCMs or the ports associated with them.
- The hardware refers to the TCMs as “A” and “B”. The model refers to these as “i” and “d”.
- The RTL permits two data TCMs, B0 and B1, to be configured for extra bandwidth. These are not modeled.
- The `vfp-enable_at_reset` option is model-specific and has no hardware equivalent. Arm recommends that it is only used in test systems and tied off to false in production systems.

### Vectored Interrupt Controller (VIC) ports

The ARMCortexR4CT and ARMCortexR5xnCT models implement a simplified model of the Vectored Interrupt Controller (VIC) port.

The protocol consists of two ports:

- The `vic_addr` port signals the vectored interrupt address from the external VIC.
- The `vic_ack` port signals the VIC that an interrupt has been detected and is being serviced.

The expected interrupt sequence is:

1. The software enables the VIC interface by setting the VE bit in the CP15 control register and setting up suitable interrupt routines.
2. The VIC asserts IRQ.
3. Some time later, the processor detects and responds to the IRQ by asserting `vic_ack`.
4. The VIC writes the vector address to the processor using `vic_addr`.
5. The processor de-asserts `vic_ack`.
6. The processor transfers control to the vectored address returned from the VIC.

The interaction between the processor and the VIC is untimed after the processor acknowledges the interrupt, so certain interrupt sequences cannot occur in the code translation processor models.

### Iris and MTI instances for ARMCortexR4CT

This model has the following Iris instances:

**Table 3-434: ARMCortexR4CT Iris instances**

InstanceName	ComponentName
ARMCortexR4CT	ARM_Cortex-R4
ARMCortexR4CT.acp_mapper	PVBusMapper
ARMCortexR4CT.cpu0.l1dcache	PVCache
ARMCortexR4CT.cpu0.l1dcache.upstream[0]	PVBusSlave

InstanceName	ComponentName
ARMCortexR4CT.cpu0.l1licache	PVCache
ARMCortexR4CT.cpu0.l1licache.upstream[0]	PVBusSlave
ARMCortexR4CT.ext_bus	PVBusLogger
ARMCortexR4CT.ext_bus.mapper	PVBusMapper
ARMCortexR4CT.l1_incoherent_interconnect	PVCache
ARMCortexR4CT.l1_incoherent_interconnect.upstream[0]	PVBusSlave
ARMCortexR4CT.l1_incoherent_interconnect.upstream[10]	PVBusSlave
ARMCortexR4CT.l1_incoherent_interconnect.upstream[11]	PVBusSlave
ARMCortexR4CT.l1_incoherent_interconnect.upstream[12]	PVBusSlave
ARMCortexR4CT.l1_incoherent_interconnect.upstream[13]	PVBusSlave
ARMCortexR4CT.l1_incoherent_interconnect.upstream[14]	PVBusSlave
ARMCortexR4CT.l1_incoherent_interconnect.upstream[15]	PVBusSlave
ARMCortexR4CT.l1_incoherent_interconnect.upstream[16]	PVBusSlave
ARMCortexR4CT.l1_incoherent_interconnect.upstream[17]	PVBusSlave
ARMCortexR4CT.l1_incoherent_interconnect.upstream[1]	PVBusSlave
ARMCortexR4CT.l1_incoherent_interconnect.upstream[2]	PVBusSlave
ARMCortexR4CT.l1_incoherent_interconnect.upstream[3]	PVBusSlave
ARMCortexR4CT.l1_incoherent_interconnect.upstream[4]	PVBusSlave
ARMCortexR4CT.l1_incoherent_interconnect.upstream[5]	PVBusSlave
ARMCortexR4CT.l1_incoherent_interconnect.upstream[6]	PVBusSlave
ARMCortexR4CT.l1_incoherent_interconnect.upstream[7]	PVBusSlave
ARMCortexR4CT.l1_incoherent_interconnect.upstream[8]	PVBusSlave
ARMCortexR4CT.l1_incoherent_interconnect.upstream[9]	PVBusSlave
ARMCortexR4CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

**Table 3-435: ARMCortexR4CT MTI instances**

InstanceName	ComponentName
ARMCortexR4CT	ARM_Cortex-R4
ARMCortexR4CT.acp_mapper	PVBusMapper
ARMCortexR4CT.cpu0.l1dcache	PVCache
ARMCortexR4CT.cpu0.l1dcache.upstream[0]	PVBusSlave

ARMCortexR4CT.11_incoherent_interconnect.upstream[8]	PVBusSlave
ARMCortexR4CT.11_incoherent_interconnect.upstream[9]	PVBusSlave
ARMCortexR4CT.12_flusher	AsyncCacheFlushUnit

## Ports for ARMCortexR4CT

**Table 3-436: Ports**

Name	Protocol	Type	Description
cfgend0	Signal	Slave	Configure BE8 mode after a reset.
cfgie	Signal	Slave	Configure big endian instruction format after a reset.
cfgnmfi	Signal	Slave	Configure FIQs as non-maskable after a reset.
cfgte	Signal	Slave	Configure exceptions to be taken in thumb mode after a reset.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
cpuhalt	Signal	Slave	Raising this signal will put the core into halt mode.
fiq	Signal	Slave	This signal drives the CPU's fast-interrupt handling.
initramd	Signal	Slave	Configure DTCM enabled after a reset.
initrami	Signal	Slave	Configure ITCM enabled after a reset.
irq	Signal	Slave	This signal drives the CPU's interrupt handling.
loczrama	Signal	Slave	Location of ATCM at reset.
pmuirq	Signal	Master	Interrupt signal from performance monitoring unit.
pvbus_m	PVBus	Master	The core will generate bus requests on this port.
pvbus_s	PVBus	Slave	Slave access to TCMs.
reset	Signal	Slave	Raising this signal will put the core into reset mode.
standbywfi	Signal	Master	Signal from the core that it is waiting in standby for an interrupt.
ticks	InstructionCount	Master	Port allowing the number of instructions since startup to be read from the CPU.

Name	Protocol	Type	Description
vic_ack	Signal	Master	Vic acknowledge port to primary VIC.
vic_addr	Value	Slave	Vic address port from primary VIC.
vinithi	Signal	Slave	Configure high vectors after a reset.

## Parameters for ARM Cortex R4CT

### CFGEND0

#### Type

bool

#### Default value

0x0

#### Description

Initialize to BE8 endianness.

### CFGIE

#### Type

bool

#### Default value

0x0

#### Description

Set the reset value of the instruction endian bit.

### CFGNMF1

#### Type

bool

#### Default value

0x0

#### Description

Enable nonmaskable FIQ interrupts on startup.

### CFGTE

#### Type

bool

#### Default value

0x0

#### Description

Initialize to take exceptions in T32 state. Model starts in T32 state.

**INITRAMD****Type**

bool

**Default value**

0x0

**Description**

Set or reset the INITRAMD signal.

**INITRAMI****Type**

bool

**Default value**

0x0

**Description**

Set or reset the INITRAMI signal.

**LOCZRAMI****Type**

bool

**Default value**

0x0

**Description**

Set or reset the LOCZRAMI signal.

**NUM\_MPU\_REGION****Type**

int

**Default value**

0x8

**Description**

Number of MPU regions.

**VINITHI****Type**

bool

**Default value**

0x0

**Description**

Initialize with high vectors enabled.

**cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**dcache-size****Type**

int

**Default value**

0x10000

**Description**

Set D-cache size in bytes.

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**dtcm0\_base****Type**

int

**Default value**

0x800000

**Description**

Base address of DTCM at startup.

**dttcm0\_size****Type**

int

**Default value**

0x8

**Description**

Size of DTCM in KB.

**icache-size****Type**

int

**Default value**

0x10000

**Description**

Set I-cache size in bytes.

**icache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**implements\_vfp****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has been built with VFP support.

**itcm0\_base****Type**

int

**Default value**

0x0

**Description**

Base address of ITCM at startup.

**itcm0\_size****Type**

int

**Default value**

0x8

**Description**

Size of ITCM in KB.

**master\_id****Type**

int

**Default value**

0x0

**Description**

Master ID presented in bus transactions.

**min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**reported\_fp\_revision****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored. Updates the FPSID.revision value.

**reported\_patch\_level****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**reported\_revision\_number****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**scheduler\_mode****Type**

int

**Default value**

0x0

**Description**

Control the interleaving of instructions in this processor. 0, default long quantum. 1, low latency mode, short quantum and signal checking. 2, lock-breaking mode, long quantum with additional context switches near load-exclusive instructions. WARNING: This parameter is intended for validation purposes and may result in unwanted behaviour if altered!.

**semihosting-ARM\_HLT****Type**

int

**Default value**

0xf000

**Description**

ARM HLT number for semihosting.

**semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

ARM SVC number for semihosting.

**semihosting-Thumb\_HLT****Type**

int

**Default value**

0x3c

**Description**

Thumb HLT number for semihosting.

**semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

Thumb SVC number for semihosting.

**semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting SVC calls.

**semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

**semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**semihosting-hlt-enable****Type**

bool

**Default value**

0x0

**Description**

Enable semihosting HLT traps. Applications that use HLT semihosting must set this parameter to true and the semihosting-enable parameter to true.

**semihosting-prefix****Type**

bool

**Default value**

0x0

**Description**

Prefix semihosting output with target instance name.

**semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**semihosting-stack\_limit**

**Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**vfp-enable\_at\_reset**

**Type**

bool

**Default value**

0x0

**Description**

Enable coprocessor access and VFP at reset.

**3.5.63 ARMCortexR5x1CT**

ARMCortexR5x1CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-437: IP revisions support**

Revision	Quality level
r1p2	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**About ARMCortexR5x1CT**

An ARMCortexR5x2CT component also exists.

The per-core parameters are preceded by cpun., where n identifies the core (0 or 1).

The allowed values for the LOCK\_STEP parameter are:

**0**

Disable. Set for two independent cores.

**1**

Lock Step. Appears to the system as two cores but is internally modeled as a single core.

**3**

Split Lock. Appears to the system as two cores but can be statically configured from reset either as two independent cores or two locked cores. For the model, these are equivalent to Disable and Lock Step, respectively, except for the value of build options registers. The model does not support dynamically splitting and locking the cluster.

`pvbus_s` is the slave port to access the TCM RAM of CPU *n*. Bits [3:0] of the user flags in the transaction are used to select the TCM:

**1**

Selects the ATCM of CPU 0

**2**

Selects the BTCM of CPU 0

**3**

Selects the ATCM of CPU 1

**4**

Selects the BTCM of CPU 1

Any other value is reserved.

## Differences between the model and the RTL

This component has the following differences from the corresponding revision of the RTL implementation:

- The RR bit in the SCTLR is ignored.
- The Low Latency Peripheral Port is not modeled.
- The model only has a single bus master port combining instruction, data, DMA and peripheral accesses. The CP15 control registers associated with peripheral buses preserve values but do not have any other effect.
- The model only supports static split lock and not dynamic split lock. Contact Arm for details.
- TCMs are modeled internally and the model does not support external TCMs or the ports associated with them.
- The model cannot experience an ECC error and does not support fault injection into the system, so Arm does not provide the ability to set error schemes for the caches or TCMs. Contact Arm if you require a particular value in the Build Options registers.

## Vectored Interrupt Controller (VIC) ports

The ARMCortexR4CT and ARMCortexR5xnCT models implement a simplified model of the Vectored Interrupt Controller (VIC) port.

The protocol consists of two ports:

- The `vic_addr` port signals the vectored interrupt address from the external VIC.

- The `vic_ack` port signals the VIC that an interrupt has been detected and is being serviced.

The expected interrupt sequence is:

1. The software enables the VIC interface by setting the VE bit in the CP15 control register and setting up suitable interrupt routines.
2. The VIC asserts IRQ.
3. Some time later, the processor detects and responds to the IRQ by asserting `vic_ack`.
4. The VIC writes the vector address to the processor using `vic_addr`.
5. The processor de-asserts `vic_ack`.
6. The processor transfers control to the vectored address returned from the VIC.

The interaction between the processor and the VIC is untimed after the processor acknowledges the interrupt, so certain interrupt sequences cannot occur in the code translation processor models.

### Iris and MTI instances for ARMCortexR5x1CT

This model has the following Iris instances:

**Table 3-438: ARMCortexR5x1CT Iris instances**

InstanceName	ComponentName
ARMCortexR5x1CT	Cluster_ARM_Cortex-R5
ARMCortexR5x1CT.acp_mapper	PVBusMapper
ARMCortexR5x1CT.cpu0	ARM_Cortex-R5
ARMCortexR5x1CT.cpu0.l1dcache	PVCache
ARMCortexR5x1CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexR5x1CT.cpu0.l1icache	PVCache
ARMCortexR5x1CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexR5x1CT.ext_bus	PVBusLogger
ARMCortexR5x1CT.ext_bus.mapper	PVBusMapper

ARMCortexR5x1CT.l1_incoherent_interconnect.upstream[7]	PVBusSlave
ARMCortexR5x1CT.l1_incoherent_interconnect.upstream[8]	PVBusSlave
ARMCortexR5x1CT.l1_incoherent_interconnect.upstream[9]	PVBusSlave

InstanceName	ComponentName
ARMCortexR5x1CT.l2_flusher	AsyncCacheFlushUnit

## Ports for ARMCortexR5x1CT

**Table 3-440: Ports**

Name	Protocol	Type	Description
acp_s	PVBus	Slave	ACP slave port.
cfgatcmsz[2]	Value	Slave	ATCM size.
cfgbtcmsz[2]	Value	Slave	BTCM Size.
cfgend[2]	Signal	Slave	This signal is for EE bit initialisation. This is CFGEE in RTL but cfgend here fastsim consistency reasons.
cfgnmfi[2]	Signal	Slave	Controls non-maskable Fast Interrupts.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
cpuhalt[2]	Signal	Slave	Raising this signal will put the core into halt mode.
event[2]	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
fiq[2]	Signal	Slave	This signal drives the CPU's fast-interrupt handling.
groupid	Value	Slave	Group ID used for MPIDR.
initrama[2]	Signal	Slave	If ATCM is enabled at reset.
initramb[2]	Signal	Slave	If BTCM is enabled at reset.
irq[2]	Signal	Slave	This signal drives the CPU's interrupt handling.
loczrama[2]	Signal	Slave	Location of ATCM at reset.
pmuirq[2]	Signal	Master	Interrupt signal from performance monitoring unit.
pvbus_m	PVBus	Master	The core will generate bus requests on this port.
pvbus_s[1]	PVBus	Slave	tcm slave port.
reset[2]	Signal	Slave	Raising this signal will put the core into reset mode.
standbywfe[2]	Signal	Master	This signal indicate if a core is in wfe state RTL calls this WFEPIPESTOPPED.
standbywfi[2]	Signal	Master	This signal indicates if a core is in WFI state RTL uses WFIPIPESTOPPED.
teinit[2]	Signal	Slave	Default exception handling state.
ticks[2]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vic_ack[2]	Signal	Master	Vic acknowledge port to primary VIC.
vic_addr[2]	Value	Slave	Vic address port from primary VIC.
vinithi[2]	Signal	Slave	This signal controls of the location of the exception vectors at reset.

## Parameters for ARMCortexR5x1CT

### GROUP\_ID

#### Type

int

**Default value**

0x0

**Description**

Value read in GROUP ID register field, bits[15:8] of the MPIDR.

**INST\_ENDIAN****Type**

bool

**Default value**

0x1

**Description**

Controls whether the model supports the instruction endianness bit.

**LOCK\_STEP****Type**

int

**Default value**

0x0

**Description**

Affects dual-processor configurations only, and ignored by single-processor configurations.

**MICRO\_SCU****Type**

bool

**Default value**

0x1

**Description**

Controls whether the effects of the MicroSCU are modeled.

**NUM\_BREAKPOINTS****Type**

int

**Default value**

0x3

**Description**

Controls with how many breakpoint pairs the model has been configured. This only affects the build options registers, because debug is not modeled.

**NUM\_MPU\_REGION****Type**

int

**Default value**

0xc

**Description**

Sets the number of MPU regions.

**NUM\_WATCHPOINTS****Type**

int

**Default value**

0x2

**Description**

Controls with how many watchpoint pairs the model has been configured. This only affects the build options registers, because debug is not modeled.

**SLSPLIT****Type**

bool

**Default value**

0x0

**Description**

Sets whether the model starts in split mode or locked mode.

**cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**cpuX.CFGATCMSZ****Type**

int

**Default value**

0xe

**Description**

Sets the size of the ATCM.

**cpuX.CFGBTCMSZ****Type**

int

**Default value**

0xe

**Description**

Sets the size of the BTCM.

**cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Initialize to BE8 endianness.

**cpuX.CFGIE****Type**

bool

**Default value**

0x0

**Description**

Set the reset value of the instruction endian bit.

**cpuX.CFGNMF1****Type**

bool

**Default value**

0x0

**Description**

Enable nonmaskable FIQ interrupts on startup.

**cpuX.DP\_FLOAT****Type**

bool

**Default value**

0x1

**Description**

Sets whether double-precision instructions are available.

**cpuX.INITRAMA****Type**

bool

**Default value**

0x0

**Description**

Initialize with TCMA enabled.

**cpuX.INITRAMB****Type**

bool

**Default value**

0x0

**Description**

Initialize with TCMB enabled.

**cpuX.LOCZRAMA****Type**

bool

**Default value**

0x0

**Description**

Initialize with LOCZRAMA set to 1.

**cpuX.TEINIT****Type**

bool

**Default value**

0x0

**Description**

T32 exception enable. The default has exceptions including reset handled in A32 state.

**cpuX.VINITHI****Type**

bool

**Default value**

0x0

**Description**

Initialize with high vectors enabled.

**cpuX.atcm\_base****Type**

int

**Default value**

0x40000000

**Description**

Model-specific. Sets the base address of the ATCM (forced to 0 if LOCZRAMA is 1).

**cpuX.btcn\_base****Type**

int

**Default value**

0x0

**Description**

Model-specific. Sets the base address of the BTCN (forced to 0 if LOCZRAMA is 0).

**cpuX.dcache-size****Type**

int

**Default value**

0x10000

**Description**

Set D-cache size in bytes.

**cpuX.icache-size****Type**

int

**Default value**

0x10000

**Description**

Set I-cache size in bytes.

**cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**cpuX.semihosting-ARM\_HLT****Type**

int

**Default value**

0xf000

**Description**

ARM HLT number for semihosting.

**cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

ARM SVC number for semihosting.

**cpuX.semihosting-Thumb\_HLT****Type**

int

**Default value**

0x3c

**Description**

Thumb HLT number for semihosting.

**cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

Thumb SVC number for semihosting.

**cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting SVC calls.

**cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

**cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**cpuX.semihosting-hlt-enable****Type**

bool

**Default value**

0x0

**Description**

Enable semihosting HLT traps. Applications that use HLT semihosting must set this parameter to true and the semihosting-enable parameter to true.

**cpuX.semihosting-prefix****Type**

bool

**Default value**

0x0

**Description**

Prefix semihosting output with target instance name.

**cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable coprocessor access and VFP at reset.

**cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether model has VFP support.

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**icache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**reported\_fp\_revision****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored. Updates the FPSID.revision value.

**reported\_patch\_level****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**reported\_revision\_number****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**scheduler\_mode****Type**

int

**Default value**

0x0

**Description**

Control the interleaving of instructions in this processor. 0, default long quantum. 1, low latency mode, short quantum and signal checking. 2, lock-breaking mode, long quantum with additional context switches near load-exclusive instructions. **WARNING:** This parameter is intended for validation purposes and may result in unwanted behaviour if altered!.

## 3.5.64 ARM Cortex R7x1CT

ARM Cortex R7x1CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-441: IP revisions support**

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

### About ARM Cortex-R7x1CT

An ARM Cortex-R7x2CT component also exists.

The per-core parameters are preceded by `cpun.`, where `n` identifies the core (0 or 1).

`pvtbus_s` is the slave port to access the TCM RAM of CPU `n`. Bits [3:0] of the user flags in the transaction are used to select the TCM:

**0**

Selects the ITCM of CPU 0

**1**

Selects the DTCM of CPU 0

**2**

Selects the ITCM of CPU 1

**3**

Selects the DTCM of CPU 1

Any other value is reserved.

When you use the `semihosting-cmd_line` parameter to set the command line that is available to semihosting SVC calls, the value of `argv[0]` is set to the first command-line argument, not to the name of an image.

### Differences between the model and the RTL

This component has the following differences from the corresponding revision of the RTL implementation:

- This component does not implement address filtering within the SCU. The enable bit for this feature is ignored.
- The GIC does not respect the `CFGSDISABLE` signal. This leads to some registers being accessible when they must not be.
- The SCU enable bit is ignored. The SCU is always enabled.
- The SCU ignores the invalidate all register.
- The Broadcast TLB or cache operations in this model do not cause other cores in the cluster that are asleep because of WFI to wake up.
- The RR bit in the SCTL is ignored.
- The Power Control Register in the system control coprocessor is implemented but writing to it does not change the behavior of the model.

- The model cannot be configured with a 128-entry TLB.
- When modeling the SCU, coherency operations are represented by a memory write followed by a read to refill from memory, rather than using cache-to-cache transfers.
- TCMs are modeled internally and the model does not support external TCMs or the ports associated with them.
- This component implements L1 cache as architecturally defined, but does not implement L2 cache. If you require an L2 cache you can add a PL310 Level 2 Cache Controller component.
- ECC and parity schemes are hardware-specific so are not supported.
- The `vfp-enable_at_reset` option is model-specific and has no hardware equivalent. Arm recommends that it is only used in test systems and tied off to false in production systems.

### Iris and MTI instances for ARMCortexR7x1CT

This model has the following Iris instances:

**Table 3-442: ARMCortexR7x1CT Iris instances**

InstanceName	ComponentName
ARMCortexR7x1CT	Cluster_ARM_Cortex-R7
ARMCortexR7x1CT.ARM_CortexR7x1CT.debug_rom	debug_rom
ARMCortexR7x1CT.acp_mapper	PVBusMapper
ARMCortexR7x1CT.cpu0	ARM_Cortex-R7
ARMCortexR7x1CT.cpu0.l1dcache	PVCache
ARMCortexR7x1CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexR7x1CT.cpu0.l1icache	PVCache
ARMCortexR7x1CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexR7x1CT.ext_bus	PVBusLogger
ARMCortexR7x1CT.ext_bus.mapper	PVBusMapper
ARMCortexR7x1CT.l1_incoherent_interconnect	PVCache
ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[0]	PVBusSlave
ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[10]	PVBusSlave
ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[11]	PVBusSlave
ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[12]	PVBusSlave
ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[13]	PVBusSlave
ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[14]	PVBusSlave
ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[15]	PVBusSlave
ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[16]	PVBusSlave
ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[17]	PVBusSlave
ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[1]	PVBusSlave
ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[2]	PVBusSlave
ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[3]	PVBusSlave
ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[4]	PVBusSlave
ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[5]	PVBusSlave

InstanceName	ComponentName
ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[6]	PVBusSlave
ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[7]	PVBusSlave
ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[8]	PVBusSlave
ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[9]	PVBusSlave
ARMCortexR7x1CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

**Table 3-443: ARMCortexR7x1CT MTI instances**

InstanceName	ComponentName
ARMCortexR7x1CT.acp_mapper	PVBusMapper
ARMCortexR7x1CT.cpu0	ARM_Cortex-R7
ARMCortexR7x1CT.cpu0.l1dcache	PVCache
ARMCortexR7x1CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexR7x1CT.cpu0.l1icache	PVCache
ARMCortexR7x1CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexR7x1CT.ext_bus	PVBusLogger
ARMCortexR7x1CT.ext_bus.mapper	PVBusMapper
ARMCortexR7x1CT.l1_incoherent_interconnect	PVCache
ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[0]	PVBusSlave
ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[10]	PVBusSlave
ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[11]	PVBusSlave
ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[12]	PVBusSlave
ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[13]	PVBusSlave
ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[14]	PVBusSlave
ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[15]	PVBusSlave

ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[4]	PVBusSlave
ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[5]	PVBusSlave
ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[6]	PVBusSlave
ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[7]	PVBusSlave
ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[8]	PVBusSlave
ARMCortexR7x1CT.l1_incoherent_interconnect.upstream[9]	PVBusSlave
ARMCortexR7x1CT.l2_flusher	AsyncCacheFlushUnit

## Ports for ARMCortexR7x1CT

Table 3-444: Ports

Name	Protocol	Type	Description
acp_s	PVBus	Slave	AXI ACP slave port.
cfgend[1]	Signal	Slave	This signal is for EE bit initialisation.
cfgnmfi[1]	Signal	Slave	This signal disables FIQ mask in CPSR.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
clusterid	Value	Slave	The port reads the value in CPU ID register field, bits[11:8] of the MPIDR.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
fiq[1]	Signal	Slave	Legacy FIQ request input line.
fiqout[1]	Signal	Master	Output of individual processor nFIQ from the interrupt controller.
fpuflags[1]	ValueState	Master	Floating-Point Unit output flags.
halt[1]	Signal	Slave	Raising this signal will put the core into halt mode. Equivalent to the hardware nCPUHALT[N:0] signal.
initram[1]	Signal	Slave	This signal enables the processor to boot from the instruction TCM.
ints[480]	Signal	Slave	Interrupt distributor interrupt lines.
irq[1]	Signal	Slave	Legacy IRQ request input line.
irqout[1]	Signal	Master	Output of individual processor nIRQ from the interrupt controller.
mfilteren	Signal	Slave	This signal enables filtering of address ranges between master bus ports.
mfilterend	Value	Slave	This port sets end of region mapped to pvbus_m1.
mfilterstart	Value	Slave	This port sets start of region mapped to pvbus_m1.
periphbase	Value	Slave	This port sets the base address of private peripheral region.
periphclk_in	ClockSignal	Slave	The timer and the watchdog take need a clk that is scaled down at least by factor of two.
periphreset	Signal	Slave	This signal resets timer and interrupt controller.
pfilterend	Value	Slave	This port sets end of region mapped to pvbus_mp.
pfilterstart	Value	Slave	This port sets start of region mapped to pvbus_mp.
pmuirq[2]	Signal	Master	Interrupt signal from performance monitoring unit.
pvbus_m0	PVBus	Master	The core will generate bus requests on this port.
pvbus_m1	PVBus	Master	The core will generate bus requests on this port.
pvbus_mp	PVBus	Master	The core will generate bus requests on this port.
pvbus_s	PVBus	Slave	tcm slave port
reset[1]	Signal	Slave	Raising this signal will put the core into reset mode.
scureset	Signal	Slave	This signal resets SCU.
smpnamp[1]	Signal	Master	This signals AMP or SMP mode for each Cortex-R7 processor.
standbywfe[1]	Signal	Master	This signal indicates if a core is in WFE state.
standbywfi[1]	Signal	Master	This signal indicates if a core is in WFI state.
teinit[1]	Signal	Slave	This signal provides default exception handling state.
ticks[1]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.

Name	Protocol	Type	Description
vinithi[1]	Signal	Slave	This signal controls of the location of the exception vectors at reset.
wdreset[1]	Signal	Slave	This signal resets individual watchdog.
wdresetreq[1]	Signal	Master	CPU watchdog reset requests.

## Parameters for ARM Cortex R7x1CT

### CLUSTER\_ID

#### Type

int

#### Default value

0x0

#### Description

Processor cluster ID value.

### LOCK\_STEP

#### Type

int

#### Default value

0x0

#### Description

Affects dual-processor configurations only, and ignored by single-processor configurations. 0 - Disable. Set for two independent processors. 1 - Lock Step. Appears to the system as two processors but is internally modeled as a single processor. 3 - Split Lock. Appears to the system as two processors but can be statically configured from reset either as two independent processors or two locked processors. For the model, these are equivalent to Disable and Lock Step, respectively, except for the value of build options registers. The model does not support dynamically splitting and locking the processor.

### MFILTEREN

#### Type

bool

#### Default value

0x0

#### Description

Enables filtering of address ranges.

### MFILTEREND

#### Type

int

**Default value**

0x0

**Description**

Specifies the end address for address filtering.

**MFILTERSTART****Type**

int

**Default value**

0x0

**Description**

Specifies the start address for address filtering.

**NUM\_MPU\_REGION****Type**

int

**Default value**

0xc

**Description**

Sets the number of MPU regions.

**PERIPHBASE****Type**

int

**Default value**

0xae000000

**Description**

Base address of peripheral memory space.

**PFILTEREND****Type**

int

**Default value**

0x0

**Description**

Specifies the end address for peripheral port address filtering.

**PFILTERSTART****Type**

int

**Default value**

0xffff00000

**Description**

Specifies the start address for peripheral port address filtering.

**`cpi_div`****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**`cpi_mul`****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**`cpuX.CFGEND`****Type**

bool

**Default value**

0x0

**Description**

Initialize to BE8 endianness.

**`cpuX.CFGNMFI`****Type**

bool

**Default value**

0x0

**Description**

Enable nonmaskable FIQ interrupts on startup.

**`cpuX.DP_FLOAT`****Type**

bool

**Default value**

0x1

**Description**

Sets whether double-precision instructions are available.

**cpuX . INITRAM****Type**

bool

**Default value**

0x0

**Description**

Enable the processor to boot from the instruction TCM.

**cpuX . POWERCTLI****Type**

int

**Default value**

0x0

**Description**

Default power control state for processor.

**cpuX . SMPnAMP****Type**

bool

**Default value**

0x0

**Description**

Set whether the processor is part of a coherent domain.

**cpuX . TEINIT****Type**

bool

**Default value**

0x0

**Description**

T32 exception enable. The default has exceptions including reset handled in A32 state.

**cpuX . VINITHI****Type**

bool

**Default value**

0x0

**Description**

Initialize with high vectors enabled.

**cpuX.dcache-size****Type**

int

**Default value**

0x8000

**Description**

Set D-cache size in bytes.

**cpuX.dtcn\_size****Type**

int

**Default value**

0x8

**Description**

DTCM size in KB.

**cpuX.icache-size****Type**

int

**Default value**

0x8000

**Description**

Set I-cache size in bytes.

**cpuX.itcm\_size****Type**

int

**Default value**

0x8

**Description**

ITCM size in KB.

**cpuX.min\_sync\_level****Type**

int

**Default value**  
0x0

**Description**  
Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**cpuX.semihosting-ARM\_HLT**

**Type**  
int

**Default value**  
0xf000

**Description**  
ARM HLT number for semihosting.

**cpuX.semihosting-ARM\_SVC**

**Type**  
int

**Default value**  
0x123456

**Description**  
ARM SVC number for semihosting.

**cpuX.semihosting-Thumb\_HLT**

**Type**  
int

**Default value**  
0x3c

**Description**  
Thumb HLT number for semihosting.

**cpuX.semihosting-Thumb\_SVC**

**Type**  
int

**Default value**  
0xab

**Description**  
Thumb SVC number for semihosting.

**cpuX.semihosting-cmd\_line**

**Type**  
string

**Default value**

""

**Description**

Command line available to semihosting SVC calls.

**cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

**cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**cpuX.semihosting-hlt-enable****Type**

bool

**Default value**

0x0

**Description**

Enable semihosting HLT traps. Applications that use HLT semihosting must set this parameter to true and the semihosting-enable parameter to true.

**cpuX.semihosting-prefix****Type**

bool

**Default value**

0x0

**Description**

Prefix semihosting output with target instance name.

**cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**cpuX.tcm-present****Type**

bool

**Default value**

0x1

**Description**

Disables the DTCM and ITCM.

**cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable coprocessor access and VFP at reset.

**cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether model has VFP support.

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**dic-spi\_count****Type**

int

**Default value**

0x40

**Description**

Number of shared peripheral interrupts implemented.

**ecc\_on****Type**

bool

**Default value**

0x0

**Description**

Enable Error Correcting Code.

**icache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**reported\_fp\_revision****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored. Updates the FPSID.revision value.

**reported\_patch\_level****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**reported\_revision\_number****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**scheduler\_mode**

**Type**  
int

**Default value**  
0x0

**Description**  
Control the interleaving of instructions in this processor. 0, default long quantum. 1, low latency mode, short quantum and signal checking. 2, lock-breaking mode, long quantum with additional context switches near load-exclusive instructions. WARNING: This parameter is intended for validation purposes and may result in unwanted behaviour if altered!.

3.5.65 ARMCortexR8x1CT

ARMCortexR8x1CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-445: IP revisions support

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

About ARMCortexR8x1CT

The following components also exist:

ARMCortexR8x2CT. ARMCortexR8x3CT. ARMCortexR8x4CT.

The per-core parameters are preceded by cpun., where n identifies the core (0-3).

pvbus\_s is the slave port to access the TCM RAM of CPU n. Bits [3:0] of the user flags in the transaction are used to select the TCM:

- 0
- Selects the ITCM of CPU 0.
- 1
- Selects the DTCM of CPU 0.
- 2
- Selects the ITCM of CPU 1.
- 3
- Selects the DTCM of CPU 1.
- 4
- Selects the ITCM of CPU 2.

**5**

Selects the DTCM of CPU 2.

**6**

Selects the ITCM of CPU 3.

**7**

Selects the DTCM of CPU 3.

Any other value is reserved.

The `semihosting-cwd` parameter sets the CWD that is used for semihosting. The host operating system limits the maximum path length. The `semihosting-cwd` parameter does not provide any security. Software running on the model can access files outside this directory using relative paths containing `..` or using absolute paths.

## Differences between the model and the RTL

This component has the following differences from the corresponding revision of the RTL implementation:

- This component does not implement address filtering within the SCU. The enable bit for this feature is ignored.
- The GIC does not respect the `CFGSDISABLE` signal. This leads to some registers being accessible when they must not be.
- The SCU enable bit is ignored. The SCU is always enabled.
- The SCU ignores the invalidate all register.
- The Broadcast TLB or cache operations in this model do not cause other cores in the cluster that are asleep because of WFI to wake up.
- The RR bit in the SCTLR is ignored.
- The Power Control Register in the system control coprocessor is implemented but writing to it does not change the behavior of the model.
- The model cannot be configured with a 128-entry TLB.
- When modeling the SCU, coherency operations are represented by a memory write followed by a read to refill from memory, rather than using cache-to-cache transfers.
- TCMs are modeled internally and the model does not support external TCMs or the ports associated with them.
- This component implements L1 cache as architecturally defined, but does not implement L2 cache. If you require an L2 cache you can add a PL310 Level 2 Cache Controller component.
- The `vfp-enable_at_reset` option is model-specific and has no hardware equivalent. Arm recommends that it is only used in test systems and tied off to false in production systems.
- ECC and parity schemes are hardware-specific so are not supported.

## Iris and MTI instances for ARMCortexR8x1CT

This model has the following Iris instances:

**Table 3-446: ARMCortexR8x1CT Iris instances**

InstanceName	ComponentName
ARMCortexR8x1CT	Cluster_ARM_Cortex-R8
ARMCortexR8x1CT.ARM_CortexR8x1CT.debug_rom	debug_rom
ARMCortexR8x1CT.acp_mapper	PVBusMapper
ARMCortexR8x1CT.cpu0	ARM_Cortex-R8
ARMCortexR8x1CT.cpu0.l1dcache	PVCache
ARMCortexR8x1CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexR8x1CT.cpu0.l1licache	PVCache
ARMCortexR8x1CT.cpu0.l1licache.upstream[0]	PVBusSlave
ARMCortexR8x1CT.ext_bus	PVBusLogger
ARMCortexR8x1CT.ext_bus.mapper	PVBusMapper
ARMCortexR8x1CT.l1_incoherent_interconnect	PVCache
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[0]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[10]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[11]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[12]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[13]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[14]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[15]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[16]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[17]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[1]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[2]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[3]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[4]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[5]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[6]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[7]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[8]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[9]	PVBusSlave
ARMCortexR8x1CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

**Table 3-447: ARMCortexR8x1CT MTI instances**

InstanceName	ComponentName
ARMCortexR8x1CT.acp_mapper	PVBusMapper
ARMCortexR8x1CT.cpu0	ARM_Cortex-R8
ARMCortexR8x1CT.cpu0.l1dcache	PVCache
ARMCortexR8x1CT.cpu0.l1dcache.upstream[0]	PVBusSlave

InstanceName	ComponentName
ARMCortexR8x1CT.cpu0.l1icache	PVCache
ARMCortexR8x1CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexR8x1CT.ext_bus	PVBusLogger
ARMCortexR8x1CT.ext_bus.mapper	PVBusMapper
ARMCortexR8x1CT.l1_incoherent_interconnect	PVCache
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[0]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[10]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[11]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[12]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[13]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[14]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[15]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[16]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[17]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[1]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[2]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[3]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[4]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[5]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[6]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[7]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[8]	PVBusSlave
ARMCortexR8x1CT.l1_incoherent_interconnect.upstream[9]	PVBusSlave
ARMCortexR8x1CT.l2_flusher	AsyncCacheFlushUnit

## Ports for ARMCortexR8x1CT

**Table 3-448: Ports**

Name	Protocol	Type	Description
acp_s	PVBus	Slave	AXI ACP slave port.
cfgend[1]	Signal	Slave	This signal is for EE bit initialisation.
cfgnmfi[1]	Signal	Slave	This signal disables FIQ mask in CPSR.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
clusterid	Value	Slave	The port reads the value in CPU ID register field, bits[11:8] of the MPIDR.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
fiq[1]	Signal	Slave	Legacy FIQ request input line.
fiqout[1]	Signal	Master	Output of individual processor nFIQ from the interrupt controller.
fpfilterend0	Value	Slave	This port sets end of region mapped to pvbus_mfp0.
fpfilterend1	Value	Slave	This port sets end of region mapped to pvbus_mfp1.

Name	Protocol	Type	Description
fpfilterend2	Value	Slave	This port sets end of region mapped to pvbus_mfp2.
fpfilterend3	Value	Slave	This port sets end of region mapped to pvbus_mfp3.
fpfilterstart0	Value	Slave	This port sets start of region mapped to pvbus_mfp0.
fpfilterstart1	Value	Slave	This port sets start of region mapped to pvbus_mfp1.
fpfilterstart2	Value	Slave	This port sets start of region mapped to pvbus_mfp2.
fpfilterstart3	Value	Slave	This port sets start of region mapped to pvbus_mfp3.
fpuflags[1]	ValueState	Master	Floating-Point Unit output flags.
halt[1]	Signal	Slave	Raising this signal will put the core into halt mode. Equivalent to the hardware nCPUHALT[N:0] signal.
initram[1]	Signal	Slave	This signal enables the processor to boot from the instruction TCM.
ints[480]	Signal	Slave	Interrupt distributor interrupt lines.
irq[1]	Signal	Slave	Legacy IRQ request input line.
irqout[1]	Signal	Master	Output of individual processor nIRQ from the interrupt controller.
mfilteren	Signal	Slave	This signal enables filtering of address ranges between master bus ports.
mfilterend	Value	Slave	This port sets end of region mapped to pvbus_m1.
mfilterstart	Value	Slave	This port sets start of region mapped to pvbus_m1.
periphbase	Value	Slave	This port sets the base address of private peripheral region.
periphclk_in	ClockSignal	Slave	The timer and the watchdog take need a clk that is scaled down at least by factor of two.
periphreset	Signal	Slave	This signal resets timer and interrupt controller.
pfilterend	Value	Slave	This port sets end of region mapped to pvbus_mp.
pfilterstart	Value	Slave	This port sets start of region mapped to pvbus_mp.
pmuirq[2]	Signal	Master	Interrupt signal from performance monitoring unit.
pvbus_m0	PVBus	Master	AXI master port 0.
pvbus_m1	PVBus	Master	AXI master port 1.
pvbus_mfp0	PVBus	Master	Fast peripheral port for core 0.
pvbus_mfp1	PVBus	Master	Fast peripheral port for core 1.
pvbus_mfp2	PVBus	Master	Fast peripheral port for core 2.
pvbus_mfp3	PVBus	Master	Fast peripheral port for core 3.
pvbus_mp	PVBus	Master	Shared peripheral port.
pvbus_s	PVBus	Slave	tcm slave port.
reset[1]	Signal	Slave	Raising this signal will put the core into reset mode.
scureset	Signal	Slave	This signal resets SCU.
smpnamp[1]	Signal	Master	This signals AMP or SMP mode for each Cortex-R8 processor.
standbywfe[1]	Signal	Master	This signal indicates if a core is in WFE state.
standbywfi[1]	Signal	Master	This signal indicates if a core is in WFI state.
teinit[1]	Signal	Slave	This signal provides default exception handling state.
ticks[1]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vinithi[1]	Signal	Slave	This signal controls of the location of the exception vectors at reset.

Name	Protocol	Type	Description
wdreset[1]	Signal	Slave	This signal resets individual watchdog.
wdresetreq[1]	Signal	Master	CPU watchdog reset requests.

## Parameters for ARM Cortex R8x1CT

### CLUSTER\_ID

#### Type

int

#### Default value

0x0

#### Description

Processor cluster ID value.

### FPFILTEREND0

#### Type

int

#### Default value

0x0

#### Description

Specifies the end address for the fast peripheral port address filtering.

### FPFILTEREND1

#### Type

int

#### Default value

0x0

#### Description

Specifies the end address for the fast peripheral port address filtering.

### FPFILTEREND2

#### Type

int

#### Default value

0x0

#### Description

Specifies the end address for the fast peripheral port address filtering.

**FPFILTEREND3****Type**

int

**Default value**

0x0

**Description**

Specifies the end address for the fast peripheral port address filtering.

**FPFILTERSTART0****Type**

int

**Default value**

0xffff00000

**Description**

Specifies the start address for the fast peripheral port address filtering.

**FPFILTERSTART1****Type**

int

**Default value**

0xffff00000

**Description**

Specifies the start address for the fast peripheral port address filtering.

**FPFILTERSTART2****Type**

int

**Default value**

0xffff00000

**Description**

Specifies the start address for the fast peripheral port address filtering.

**FPFILTERSTART3****Type**

int

**Default value**

0xffff00000

**Description**

Specifies the start address for the fast peripheral port address filtering.

**LOCK\_STEP****Type**

int

**Default value**

0x0

**Description**

Affects dual-processor configurations only, and ignored by single-processor configurations. 0 - Disable. Set for two independent processors. 1 - Lock Step. Appears to the system as two processors but is internally modeled as a single processor. 3 - Split Lock. Appears to the system as two processors but can be statically configured from reset either as two independent processors or two locked processors. For the model, these are equivalent to Disable and Lock Step, respectively, except for the value of build options registers. The model does not support dynamically splitting and locking the processor.

**MFILTEREN****Type**

bool

**Default value**

0x0

**Description**

Enables filtering of address ranges.

**MFILTEREND****Type**

int

**Default value**

0x0

**Description**

Specifies the end address for address filtering.

**MFILTERSTART****Type**

int

**Default value**

0x0

**Description**

Specifies the start address for address filtering.

**NUM\_MPU\_REGION****Type**

int

**Default value**

0xc

**Description**

Sets the number of MPU regions.

**PERIPHBASE****Type**

int

**Default value**

0xae000000

**Description**

Base address of peripheral memory space.

**PFILTEREND****Type**

int

**Default value**

0x0

**Description**

Specifies the end address for peripheral port address filtering.

**PFILTERSTART****Type**

int

**Default value**

0xffff0000

**Description**

Specifies the start address for peripheral port address filtering.

**cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Initialize to BE8 endianness.

**cpuX.CFGNMFI****Type**

bool

**Default value**

0x0

**Description**

Enable nonmaskable FIQ interrupts on startup.

**cpuX.DP\_FLOAT****Type**

bool

**Default value**

0x1

**Description**

Sets whether double-precision instructions are available.

**cpuX.INITRAM****Type**

bool

**Default value**

0x0

**Description**

Enable the processor to boot from the instruction TCM.

**cpuX . POWERCTLI****Type**

int

**Default value**

0x0

**Description**

Default power control state for processor.

**cpuX . SMPnAMP****Type**

bool

**Default value**

0x0

**Description**

Set whether the processor is part of a coherent domain.

**cpuX . TEINIT****Type**

bool

**Default value**

0x0

**Description**

T32 exception enable. The default has exceptions including reset handled in A32 state.

**cpuX . VINITHI****Type**

bool

**Default value**

0x0

**Description**

Initialize with high vectors enabled.

**cpuX . dcache-size****Type**

int

**Default value**

0x8000

**Description**

Set D-cache size in bytes.

**cpuX.dtcm\_size****Type**

int

**Default value**

0x8

**Description**

DTCM size in KB.

**cpuX.icache-size****Type**

int

**Default value**

0x8000

**Description**

Set I-cache size in bytes.

**cpuX.itcm\_size****Type**

int

**Default value**

0x8

**Description**

ITCM size in KB.

**cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**cpuX.semihosting-ARM\_HLT****Type**

int

**Default value**

0xf000

**Description**

ARM HLT number for semihosting.

**cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

ARM SVC number for semihosting.

**cpuX.semihosting-Thumb\_HLT****Type**

int

**Default value**

0x3c

**Description**

Thumb HLT number for semihosting.

**cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

Thumb SVC number for semihosting.

**cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting SVC calls.

**cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

**cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**cpuX.semihosting-hlt-enable****Type**

bool

**Default value**

0x0

**Description**

Enable semihosting HLT traps. Applications that use HLT semihosting must set this parameter to true and the semihosting-enable parameter to true.

**cpuX.semihosting-prefix****Type**

bool

**Default value**

0x0

**Description**

Prefix semihosting output with target instance name.

**cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**cpuX.tcm-present****Type**

bool

**Default value**

0x1

**Description**

Disables the DTCM and ITCM.

**cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable coprocessor access and VFP at reset.

**cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether model has VFP support.

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**dic-spi\_count****Type**

int

**Default value**

0x40

**Description**

Number of shared peripheral interrupts implemented.

**ecc\_on****Type**

bool

**Default value**

0x0

**Description**

Enable Error Correcting Code.

**icache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**reported\_fp\_revision****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored. Updates the FPSID.revision value.

**reported\_patch\_level****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**reported\_revision\_number****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**scheduler\_mode****Type**

int

**Default value**

0x0

**Description**

Control the interleaving of instructions in this processor. 0, default long quantum. 1, low latency mode, short quantum and signal checking. 2, lock-breaking mode, long quantum with additional context switches near load-exclusive instructions. **WARNING:** This parameter is intended for validation purposes and may result in unwanted behaviour if altered!.

## 3.5.66 ARM CortexR52CT

ARM CortexR52CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-449: IP revisions support**

Revision	Quality level
r1p4	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

### Changes in 11.29.19

Parameters removed:

- `cpu4.CFGEND`
- `cpu4.CFGTE`
- `cpu4.RVBARADDR`
- `cpu4.ase-present`
- `cpu4.dcache-size`
- `cpu4.enable_trace_special_hlt_imm16`
- `cpu4.flash.enable`
- `cpu4.icache-size`
- `cpu4.llpp.base`
- `cpu4.llpp.size`
- `cpu4.max_code_cache_mb`
- `cpu4.min_sync_level`
- `cpu4.semihosting-A32_HLT`
- `cpu4.semihosting-ARM_SVC`
- `cpu4.semihosting-T32_HLT`
- `cpu4.semihosting-Thumb_SVC`
- `cpu4.semihosting-cmd_line`
- `cpu4.semihosting-cwd`
- `cpu4.semihosting-enable`
- `cpu4.semihosting-heap_base`
- `cpu4.semihosting-heap_limit`
- `cpu4.semihosting-stack_base`
- `cpu4.semihosting-stack_limit`
- `cpu4.tcm.a.enable`
- `cpu4.tcm.a.size`
- `cpu4.tcm.a.wait`
- `cpu4.tcm.b.size`
- `cpu4.tcm.b.wait`

- `cpu4.tcm.c.size`
- `cpu4.tcm.c.wait`
- `cpu4.trace_special_hlt_imm16`
- `cpu4.vfp-dp-present`
- `cpu4.vfp-enable_at_reset`
- `cpu5.CFGEND`
- `cpu5.CFGTE`
- `cpu5.RVBARADDR`
- `cpu5.ase-present`
- `cpu5.dcache-size`
- `cpu5.enable_trace_special_hlt_imm16`
- `cpu5.flash.enable`
- `cpu5.icache-size`

- `cpu5.vfp-enable_at_reset`

About ARMCortexR52CT

The per-core parameters are preceded by `cpun.`, where `n` identifies the core (0-3).

- When you use the `semihosting-cmd_line` parameter to set the command line that is available to semihosting SVC calls, the value of `argv[0]` is set to the first command-line argument, not to the name of an image.
- The Cortex-R52 processor does not implement TrustZone technology, therefore the model does not support `S_*` or `NS_*` registers or exceptions.
- If flash memory is not enabled, to disable all routing to the flash port, set the `has_flash` parameter to `false`.

Differences between the model and the RTL

- The model does not implement redundant cores for Dual-Core Lock-Step operations.
- The model does not implement the Low Power Interface to wake up the target core on receiving a `wake_request` signal from the GIC distributor.
- TCMs are modeled internally and the model does not support external TCMs or the ports associated with them.
- The model does not support running Software Test Libraries (STLs).
- The `vfp-enable_at_reset` parameter is a model-specific behavior with no hardware equivalent.
- ECC and parity schemes are hardware-specific so are not supported.

This model has a variable number of cores per cluster, specified using the `NUM_CORES` parameter.

Debug accesses

For debug accesses to succeed, they must have permissions that are compliant with the permission value in the `IMP_SLAVEPCTLR` register.

Note

The reset value of `IMP_SLAVEPCTLR` is `0x1` which means privileged access only.

Iris and MTI instances for ARMCortexR52CT

This model has the following Iris instances:

Table 3-450: ARMCortexR52CT Iris instances

InstanceName	ComponentName
ARMCortexR52CT	Cluster_ARM_Cortex-R52

InstanceName	ComponentName
ARMCortexR52CT.AMU	PVBusLogger
ARMCortexR52CT.AMU.mapper	PVBusMapper
ARMCortexR52CT.DAP	PVBusLogger
ARMCortexR52CT.DAP.mapper	PVBusMapper
ARMCortexR52CT.MMAP	PVBusLogger
ARMCortexR52CT.MMAP.mapper	PVBusMapper
ARMCortexR52CT.RAS	PVBusLogger
ARMCortexR52CT.RAS.mapper	PVBusMapper
ARMCortexR52CT.acp_mapper	PVBusMapper
ARMCortexR52CT.cpu0	ARM_CortexR52
ARMCortexR52CT.cpu0.UTLB	TLB
ARMCortexR52CT.cpu0.dtlb	TLB
ARMCortexR52CT.cpu0.gicv3_cpu_if	GICv3CPUInterface
ARMCortexR52CT.cpu0.l1dcache	PVCache
ARMCortexR52CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexR52CT.cpu0.l1licache	PVCache
ARMCortexR52CT.cpu0.l1licache.upstream[0]	PVBusSlave
ARMCortexR52CT.ext_bus	PVBusLogger
ARMCortexR52CT.ext_bus.mapper	PVBusMapper
ARMCortexR52CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexR52CT.gic_iri	GIC_IRI
ARMCortexR52CT.gic_iri.rd_0	GICv3RedistributorInternal
ARMCortexR52CT.gic_iri.rd_0_0	GICv3RedistributorInternal

## Ports for ARMCortexR52CT

**Table 3-452: Ports**

Name	Protocol	Type	Description
cfgdbgromaddr	Value_64	Slave	Debug ROM base address.
cfgdbgromaddrv	Signal	Slave	Debug ROM base address valid.
cfgendianess[4]	Signal	Slave	This signal if for EE bit initialisation.
cfgperiphbase	Value_64	Slave	This port sets the base address of private peripheral region.
cfgthumbexceptions[4]	Signal	Slave	This signal provides default exception handling state.
cfgvectable[4]	Value_64	Slave	Reset vector base address.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
clrexmonack	Signal	Master	Acknowledge handshake signal for the clrexmonreq signal
clrexmonreq	Signal	Slave	Signals the clearing of an external global exclusive monitor
clusterid	Value	Slave	Configure Aff2 and Aff1 fields of MPIDR. Aff1 = value[7:0], Aff2 = value[15:8]

Name	Protocol	Type	Description
cntvalueb	CounterInterface	Slave	Interface to SoC level counter module.
commr[4]	Signal	Master	Receive portion of Data Transfer Register full.
commt[4]	Signal	Master	Transmit portion of Data Transfer Register empty.
COREPACTIVEx1[4]	Signal	Master	These signals relate to core power down. Equivalent to COREPACTIVEx[1]
cpuhalt[4]	Signal	Slave	Raising this signal will put the core into halt mode.
cpuporeset[4]	Signal	Slave	Power on reset. Initializes all the processor logic, including debug logic.
cti[4]	v8EmbeddedCrossTrigger_controlprotocol	Master	Cross trigger matrix port.
dbgack[4]	Signal	Master	External debug interface.
dbgen[4]	Signal	Slave	External debug interface.
dbgnopwrdown[4]	Signal	Master	There is no support for PChannel in CortexR52. These signals relate to core power down. Equivalent to COREPACTIVEx[0]
dbgpwrupreq[4]	Signal	Master	Debug power up request.
dev_debug_s	PVBus	Slave	External debug interface.
edbgrq[4]	Signal	Slave	External debug interface.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
ext_slave_s	PVBus	Slave	External Slave port. Equivalent to AXIS port
extppi_in_0[9]	Signal	Slave	Core 0 external ppi signals.
extppi_in_1[9]	Signal	Slave	Core 1 external ppi signals.
extppi_in_2[9]	Signal	Slave	Core 2 external ppi signals.
extppi_in_3[9]	Signal	Slave	Core 3 external ppi signals.
flash_m[4]	PVBus	Master	Flash Port.
gdu_external_m	GICv3Comms	Master	GDU external messaging port.
hiden[4]	Signal	Slave	External debug interface.
hniden[4]	Signal	Slave	External debug interface.
llpp_m[4]	PVBus	Master	LLPP (Low-Latency Peripheral Port).
memorymapped_debug_s	PVBus	Slave	External debug interface.
niden[4]	Signal	Slave	External debug interface.
presetdbg	Signal	Slave	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_core_m[4]	PVBus	Master	The core will generate bus requests on this port. Equivalent to AXIM port
reset[4]	Signal	Slave	Raising this signal will put the core into reset mode.
sei[4]	Signal	Slave	Per core virtual System Error physical pins.

Name	Protocol	Type	Description
spi_in[960]	Signal	Slave	Shared peripheral interrupts.
standbywfe[4]	Signal	Master	This signal indicates if a core is in WFE state.
standbywfi[4]	Signal	Master	This signal indicates if a core is in WFI state.
ticks[4]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
topreset	Signal	Slave	This signal resets timer and interrupt controller.
vsei[4]	Signal	Slave	Per core virtual System Error physical pins.
warmrstreq[4]	Signal	Master	Warm reset request from core.

## Parameters for ARMCortexR52CT

### CLUSTER\_ID

#### Type

int

#### Default value

0x0

#### Description

CLUSTER\_ID[15:8] equivalent to CFGMPIDRAFF2, CLUSTER\_ID[7:0] equivalent to CFGMPIDRAFF1.

### CMO\_broadcast\_when\_cache\_state\_modelling\_disabled

#### Type

int

#### Default value

0x1

#### Description

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. Changing this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain CMOs even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required .

### DBGROMADDR

#### Type

int

**Default value**

0x0

**Description**

Equivalent to CFGDBGROMADDR.

**DBGROMADDRV****Type**

bool

**Default value**

0x0

**Description**

If true, set bits[1:0] of the CP15 DBGDRAR to indicate that the address is valid.

**GICDISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

**NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores in cluster.

**PERIPHBASE****Type**

int

**Default value**

0x13080000

**Description**

Equivalent to CFGPERIPHBASE.

**cluster\_utid****Type**

int

**Default value**

0x0

**Description**

Equivalent to CFGCLUSTERUTID.

**cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**cpuX.CFGTE****Type**

bool

**Default value**

0x0

**Description**

Equivalent to CFGTHUMBEXCEPTIONS.

**cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Equivalent to CFGVECTABLE.

**cpuX.ase-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has been built with NEON support.

**cpuX.dcache-size****Type**

int

**Default value**

0x8000

**Description**

L1 D-Cache size in bytes.

**cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**cpuX.flash.enable****Type**

bool

**Default value**

0x0

**Description**

Equivalent to CFGFLASHEN.

**cpuX.icache-size****Type**

int

**Default value**

0x8000

**Description**

L1 I-Cache size in bytes.

**cpuX.llpp.base****Type**

int

**Default value**

0x0

**Description**

Equivalent to CFGLLPPBASEADDR.

**cpuX.llpp.size****Type**

int

**Default value**

0x1000

**Description**

Equivalent to CFGLLPPSIZE.

**cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**cpuX.semihosting-T32\_HLT****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**cpuX.tcm.a.enable****Type**

bool

**Default value**

0x0

**Description**

Equivalent to CFGTCMBOOT.

**cpuX.tcm.a.size****Type**

int

**Default value**

0x4000

**Description**

Sets the size of the ATCM(in bytes).

**cpuX.tcm.a.wait****Type**

int

**Default value**

0x0

**Description**

TCM Register A accesses wait states: 0-1 states.

**cpuX.tcm.b.size****Type**

int

**Default value**

0x4000

**Description**

Sets the size of the BTCM(in bytes).

**cpuX.tcm.b.wait****Type**

int

**Default value**

0x0

**Description**

TCM Register B accesses wait states: 0-1 states.

**cpuX.tcm.c.size****Type**

int

**Default value**

0x2000

**Description**

Sets the size of the CTCM(in bytes).

**cpuX.tcm.c.wait****Type**

int

**Default value**

0x0

**Description**

TCM Register C accesses wait states: 0-1 states.

**cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**cpuX.vfp-dp-present****Type**

bool

**Default value**

0x1

**Description**

Whether double-precision floating point feature is implemented (FEAT\_F64MM).

**cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**dcache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

**dcache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**enable\_lock\_step****Type**

bool

**Default value**

0x0

**Description**

(equivalent to CFGSLSPPLIT).

**enable\_simulation\_performance\_optimizations****Type**

bool

**Default value**

0x1

**Description**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

**flash\_protection\_enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Equivalent to CFGFLASHPROTEN.

**has\_export\_m\_port****Type**

bool

**Default value**

0x1

**Description**

The interrupt distributor has an optional interrupt export port for routing interrupts to an external device.

**has\_flash****Type**

bool

**Default value**

0x0

**Description**

Equivalent to CFGFLASHIMP.

**has\_flash\_protection****Type**

bool

**Default value**

0x1

**Description**

Equivalent to CFGFLASHPROTIMP.

**has\_llpp****Type**

bool

**Default value**

0x0

**Description**

Equivalent to CFGLLPPIMP.

**icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

**`icache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

**`icache-state_modelled`****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**`memory.ext_slave_base`****Type**

int

**Default value**

0x0

**Description**

Equivalent to `CFGAXISTCMBASEADDR`.

**`memory.flash_base`****Type**

int

**Default value**

0x0

**Description**

Equivalent to `CFGFLASHBASEADDR`.

**num\_protection\_regions\_s1****Type**

int

**Default value**

0x18

**Description**

Number of v8-R protection regions.

**num\_protection\_regions\_s2****Type**

int

**Default value**

0x18

**Description**

Number of v8-R hyp protection regions.

**num\_spi****Type**

int

**Default value**

0x3c0

**Description**

Number of interrupts (SPI) into the internal GIC controller.

**ram\_protection\_enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Equivalent to CFGRAMPROTEN.

**reported\_fp\_revision****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored. Updates the FPSID.revision value.

**reported\_patch\_level**

**Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**reported\_revision\_number**

**Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

3.5.67 **ARMCortexR52PlusCT**

ARMCortexR52PlusCT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-453: IP revisions support

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**About ARMCortexR52PlusCT**

The model does not implement the following:

- Redundant cores for Dual Core Lock Step operation.
- Low Power Interface to wake the target core on receiving a wake\_request from the GIC Distributor.

## Debug accesses

For debug accesses to succeed, they must have permissions that are compliant with the permission value in the `IMP_SLAVEPCTLR` register.

Note

The reset value of `IMP_SLAVEPCTLR` is `0x1` which means privileged access only.

## Iris and MTI instances for ARMCortexR52PlusCT

This model has the following Iris instances:

**Table 3-454: ARMCortexR52PlusCT Iris instances**

InstanceName	ComponentName
ARMCortexR52PlusCT	Cluster_ARM_Cortex-R52Plus
ARMCortexR52PlusCT.AMU	PVBusLogger
ARMCortexR52PlusCT.AMU.mapper	PVBusMapper
ARMCortexR52PlusCT.DAP	PVBusLogger
ARMCortexR52PlusCT.DAP.mapper	PVBusMapper
ARMCortexR52PlusCT.MMAP	PVBusLogger
ARMCortexR52PlusCT.MMAP.mapper	PVBusMapper
ARMCortexR52PlusCT.RAS	PVBusLogger
ARMCortexR52PlusCT.RAS.mapper	PVBusMapper
ARMCortexR52PlusCT.acp_mapper	PVBusMapper
ARMCortexR52PlusCT.cpu0	ARM_Cortex-R52Plus
ARMCortexR52PlusCT.cpu0.UTLB	TLB
ARMCortexR52PlusCT.cpu0.dtlb	TLB
ARMCortexR52PlusCT.cpu0.gicv3_cpu_if	GICv3CPUInterface
ARMCortexR52PlusCT.cpu0.l1dcache	PVCache
ARMCortexR52PlusCT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexR52PlusCT.cpu0.l1icache	PVCache
ARMCortexR52PlusCT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexR52PlusCT.ext_bus	PVBusLogger
ARMCortexR52PlusCT.ext_bus.mapper	PVBusMapper
ARMCortexR52PlusCT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexR52PlusCT.gic_iri	GIC_IRI
ARMCortexR52PlusCT.gic_iri.rd_0	GICv3RedistributorInternal
ARMCortexR52PlusCT.gic_iri.rd_0_0	GICv3RedistributorInternal
ARMCortexR52PlusCT.gic_iri.rd_0_0_0	GICv3RedistributorInternal
ARMCortexR52PlusCT.gic_iri.rd_0_0_0_0	GICv3Redistributor
ARMCortexR52PlusCT.gic_iri.rd_0_0_0_1	GICv3Redistributor

InstanceName	ComponentName
ARMCortexR52PlusCT.gic_iri.rd_tl	GICv3Distributor
ARMCortexR52PlusCT.global_debug_rom	debug_rom
ARMCortexR52PlusCT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

**Table 3-455: ARMCortexR52PlusCT MTI instances**

InstanceName	ComponentName
ARMCortexR52PlusCT.AMU	PVBusLogger
ARMCortexR52PlusCT.AMU.mapper	PVBusMapper
ARMCortexR52PlusCT.DAP	PVBusLogger
ARMCortexR52PlusCT.DAP.mapper	PVBusMapper
ARMCortexR52PlusCT.MMAP	PVBusLogger
ARMCortexR52PlusCT.MMAP.mapper	PVBusMapper
ARMCortexR52PlusCT.RAS	PVBusLogger
ARMCortexR52PlusCT.RAS.mapper	PVBusMapper
ARMCortexR52PlusCT.acp_mapper	PVBusMapper
ARMCortexR52PlusCT.cpu0	ARM_Cortex-R52Plus
ARMCortexR52PlusCT.cpu0.UTLB	TLB
ARMCortexR52PlusCT.cpu0.gicv3_cpu_if	GICv3CPUInterface
ARMCortexR52PlusCT.cpu0.l1dcache	PVCache

ARMCortexR52PlusCT.cpu0.l1icache	PVCache
ARMCortexR52PlusCT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexR52PlusCT.ext_bus	PVBusLogger
ARMCortexR52PlusCT.ext_bus.mapper	PVBusMapper
ARMCortexR52PlusCT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexR52PlusCT.gic_iri.rd_0	GICv3RedistributorInternal
ARMCortexR52PlusCT.gic_iri.rd_0_0	GICv3RedistributorInternal
ARMCortexR52PlusCT.gic_iri.rd_0_0_0	GICv3RedistributorInternal
ARMCortexR52PlusCT.gic_iri.rd_0_0_0_0	GICv3Redistributor
ARMCortexR52PlusCT.gic_iri.rd_0_0_0_1	GICv3Redistributor
ARMCortexR52PlusCT.gic_iri.rd_tl	GICv3Distributor
ARMCortexR52PlusCT.l2_flusher	AsyncCacheFlushUnit

## Ports for ARMCortexR52PlusCT

**Table 3-456: Ports**

Name	Protocol	Type	Description
cfgdbgromaddr	Value_64	Slave	Debug ROM base address.
cfgdbgromaddrv	Signal	Slave	Debug ROM base address valid.

Name	Protocol	Type	Description
cfgendianess[4]	Signal	Slave	This signal is for EE bit initialisation.
cfgperiphbase	Value_64	Slave	This port sets the base address of private peripheral region.
cfgthumbexceptions[4]	Signal	Slave	This signal provides default exception handling state.
cfgvectable[4]	Value_64	Slave	Reset vector base address.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
clusterid	Value	Slave	Configure Aff2 and Aff1 fields of MPIDR. Aff1 = value[7:0], Aff2 = value[15:8]
cntvalueb	CounterInterface	Slave	Interface to SoC level counter module.
commrx[4]	Signal	Master	Receive portion of Data Transfer Register full.
commtx[4]	Signal	Master	Transmit portion of Data Transfer Register empty.
cpuhalt[4]	Signal	Slave	Raising this signal will put the core into halt mode.
cpuporeset[4]	Signal	Slave	Power on reset. Initializes all the processor logic, including debug logic.
cti[4]	v8EmbeddedCrossTrigger_controlprotocol	Master	Cross trigger matrix port.
dbgack[4]	Signal	Master	External debug interface.
dbgen[4]	Signal	Slave	External debug interface.
dbgnopwrdown[4]	Signal	Master	There is no support for PChannel in CortexR52Plus. These signals relate to core power down. Equivalent to COREPACTIVEx
dbgpwrupreq[4]	Signal	Master	Debug power up request.
dev_debug_s	PVBus	Slave	External debug interface.
edbgrq[4]	Signal	Slave	External debug interface.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
ext_slave_s	PVBus	Slave	External Slave port. Equivalent to AXIS port
extppi_in_0[9]	Signal	Slave	Core 0 external ppi signals.
extppi_in_1[9]	Signal	Slave	Core 1 external ppi signals.
extppi_in_2[9]	Signal	Slave	Core 2 external ppi signals.
extppi_in_3[9]	Signal	Slave	Core 3 external ppi signals.
flash_m[4]	PVBus	Master	Flash Port.
gdu_external_m	GICv3Comms	Master	GDU external messaging port.
hiden[4]	Signal	Slave	External debug interface.
hniden[4]	Signal	Slave	External debug interface.
llpp_m[4]	PVBus	Master	LLPP (Low-Latency Peripheral Port).
memorymapped_debug_s	PVBus	Slave	External debug interface.
niden[4]	Signal	Slave	External debug interface.

Name	Protocol	Type	Description
presetdbg	Signal	Slave	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_core_m[4]	PVBus	Master	The core will generate bus requests on this port. Equivalent to AXIM port
reset[4]	Signal	Slave	Raising this signal will put the core into reset mode.
sei[4]	Signal	Slave	Per core virtual System Error physical pins.
spi_in[960]	Signal	Slave	Shared peripheral interrupts.
standbywfe[4]	Signal	Master	This signal indicates if a core is in WFE state.
standbywfi[4]	Signal	Master	This signal indicates if a core is in WFI state.
ticks[4]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
topreset	Signal	Slave	This signal resets timer and interrupt controller.
vsei[4]	Signal	Slave	Per core virtual System Error physical pins.
warmrstreq[4]	Signal	Master	Warm reset request from core.

## Parameters for ARM Cortex R52 Plus CT

### CLUSTER\_ID

#### Type

int

#### Default value

0x0

#### Description

CLUSTER\_ID[15:8] equivalent to CFGMPIDRAFF2, CLUSTER\_ID[7:0] equivalent to CFGMPIDRAFF1.

### CMO\_broadcast\_when\_cache\_state\_modelling\_disabled

#### Type

int

#### Default value

0x1

#### Description

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. Changing this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain CMOs even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not

broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required .

**DBGROMADDR****Type**

int

**Default value**

0x0

**Description**

Equivalent to CFGDBGROMADDR.

**DBGROMADDRV****Type**

bool

**Default value**

0x0

**Description**

If true, set bits[1:0] of the CP15 DBGDRAR to indicate that the address is valid.

**GICDISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

**NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores in cluster.

**PERIPHBASE****Type**

int

**Default value**

0x13080000

**Description**

Equivalent to CFGPERIPHBASE.

**cluster\_utid****Type**

int

**Default value**

0x0

**Description**

Equivalent to CFGCLUSTERUTID.

**cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**cpuX.CFGTE****Type**

bool

**Default value**

0x0

**Description**

Equivalent to CFGTHUMBEXCEPTIONS.

**cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Equivalent to CFGVECTABLE.

**cpuX.ase-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has been built with NEON support.

**cpuX.dcache-size****Type**

int

**Default value**

0x8000

**Description**

L1 D-Cache size in bytes.

**cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**cpuX.flash.enable****Type**

bool

**Default value**

0x0

**Description**

Equivalent to CFGFLASHEN.

**cpuX.icache-size****Type**

int

**Default value**

0x8000

**Description**

L1 I-Cache size in bytes.

**cpuX.llpp.base****Type**

int

**Default value**

0x0

**Description**

Equivalent to CFGLLPPBASEADDR.

**cpuX.llpp.size****Type**

int

**Default value**

0x8000000

**Description**

Equivalent to CFGLLPPSIZE.

**cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**cpuX.semihosting-T32\_HLT****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**cpuX.tcm.a.enable****Type**

bool

**Default value**

0x0

**Description**

Equivalent to CFGTCMBOOT.

**cpuX.tcm.a.size****Type**

int

**Default value**

0x4000

**Description**

Sets the size of the ATCM(in bytes).

**cpuX.tcm.a.wait****Type**

int

**Default value**

0x0

**Description**

TCM Register A accesses wait states: 0-1 states.

**cpuX.tcm.b.size****Type**

int

**Default value**

0x4000

**Description**

Sets the size of the BTCM(in bytes).

**cpuX.tcm.b.wait****Type**

int

**Default value**

0x0

**Description**

TCM Register B accesses wait states: 0-1 states.

**cpuX.tcm.c.size****Type**

int

**Default value**

0x2000

**Description**

Sets the size of the CTCM(in bytes).

**cpuX.tcm.c.wait****Type**

int

**Default value**

0x0

**Description**

TCM Register C accesses wait states: 0-1 states.

**cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**cpuX.vfp-dp-present****Type**

bool

**Default value**

0x1

**Description**

Whether double-precision floating point feature is implemented (FEAT\_F64MM).

**cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**dcache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

**dcache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**enable\_lock\_step****Type**

bool

**Default value**

0x0

**Description**

(equivalent to CFGSLSPPLIT).

**enable\_simulation\_performance\_optimizations****Type**

bool

**Default value**

0x1

**Description**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

**flash\_protection\_enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Equivalent to CFGFLASHPROTEN.

**has\_export\_m\_port****Type**

bool

**Default value**

0x1

**Description**

The interrupt distributor has an optional interrupt export port for routing interrupts to an external device.

**has\_flash****Type**

bool

**Default value**

0x0

**Description**

Equivalent to CFGFLASHIMP.

**has\_flash\_protection****Type**

bool

**Default value**

0x1

**Description**

Equivalent to CFGFLASHPROTIMP.

**has\_llpp****Type**

bool

**Default value**

0x0

**Description**

Equivalent to CFGLLPPIMP.

**icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

**icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state\_modelled=true.

**icache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**memory.ext\_slave\_base****Type**

int

**Default value**

0x0

**Description**

Equivalent to CFGAXISTCMBASEADDR.

**memory.flash\_base****Type**

int

**Default value**

0x0

**Description**

Equivalent to CFGFLASHBASEADDR.

**num\_protection\_regions\_s1****Type**

int

**Default value**

0x18

**Description**

Number of v8-R protection regions.

**num\_protection\_regions\_s2****Type**

int

**Default value**

0x18

**Description**

Number of v8-R hyp protection regions.

**num\_spi****Type**

int

**Default value**

0x3c0

**Description**

Number of interrupts (SPI) into the internal GIC controller.

**ram\_protection\_enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Equivalent to CFGRAMPROTEN.

**reported\_fp\_revision**

Type  
int

Default value  
0xffffffffffffffff

Description  
Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored. Updates the FPSID.revision value.

**reported\_patch\_level**

Type  
int

Default value  
0xffffffffffffffff

Description  
Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**reported\_revision\_number**

Type  
int

Default value  
0xffffffffffffffff

Description  
Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**3.5.68 ARMCortexR82AECT**

ARMCortexR82AECT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-457: IP revisions support

Revision	Quality level
r0p0	Preliminary support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

## AE-specific features implemented

The only AE-specific features implemented in the model are Split-Lock and Lock-Step, with the following limitations:

- The implementation of Split-Lock and Lock-Step in the model is simply a halving of the number of cores available.
- Lock-step is implemented by a parameter that can be true or false for the entire execution only, rather than by a signal that can be enabled during execution.

As the model does not implement true Split-Lock functionality, the ports and parameters are contiguous. For example, for a 4-core CPU with Split-Lock enabled, `cpu0` and `cpu1` identify the available cores and associated ports, not `cpu0` and `cpu2`.

- Hybrid mode is not modeled in the DSU.

## Iris and MTI instances for ARMCortexR82AECT

This model has the following Iris instances:

**Table 3-458: ARMCortexR82AECT Iris instances**

InstanceName	ComponentName
ARMCortexR82AECT	Cluster_ARM_Cortex-R82AE
ARMCortexR82AECT.AMU	PVBusLogger
ARMCortexR82AECT.AMU.mapper	PVBusMapper
ARMCortexR82AECT.DAP	PVBusLogger
ARMCortexR82AECT.DAP.mapper	PVBusMapper
ARMCortexR82AECT.DSU	DSU
ARMCortexR82AECT.DSU.PPU_cluster	PPUv1
ARMCortexR82AECT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexR82AECT.DSU.PPU_core0	PPUv1
ARMCortexR82AECT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexR82AECT.DSU.utility_slave[0]	PVBusSlave
ARMCortexR82AECT.MMAP	PVBusLogger
ARMCortexR82AECT.MMAP.mapper	PVBusMapper
ARMCortexR82AECT.RAS	PVBusLogger
ARMCortexR82AECT.RAS.mapper	PVBusMapper
ARMCortexR82AECT.cpu0	ARM_Cortex-R82AE
ARMCortexR82AECT.cpu0.UTLB	TLB
ARMCortexR82AECT.cpu0.debug_rom	debug_rom
ARMCortexR82AECT.cpu0.dtlb	TLB
ARMCortexR82AECT.cpu0.gicv3_cpu_if	GICv3CPUInterface
ARMCortexR82AECT.cpu0.l1dcache	PVCache
ARMCortexR82AECT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexR82AECT.cpu0.l1licache	PVCache

InstanceName	ComponentName
ARMCortexR82AECT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexR82AECT.ext_bus	PVBusLogger
ARMCortexR82AECT.ext_bus.mapper	PVBusMapper
ARMCortexR82AECT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexR82AECT.global_debug_rom	debug_rom
ARMCortexR82AECT.l2_cache	PVCache
ARMCortexR82AECT.l2_cache.upstream[0]	PVBusSlave
ARMCortexR82AECT.l2_cache.upstream[10]	PVBusSlave
ARMCortexR82AECT.l2_cache.upstream[11]	PVBusSlave
ARMCortexR82AECT.l2_cache.upstream[12]	PVBusSlave
ARMCortexR82AECT.l2_cache.upstream[13]	PVBusSlave
ARMCortexR82AECT.l2_cache.upstream[14]	PVBusSlave
ARMCortexR82AECT.l2_cache.upstream[15]	PVBusSlave
ARMCortexR82AECT.l2_cache.upstream[16]	PVBusSlave
ARMCortexR82AECT.l2_cache.upstream[1]	PVBusSlave
ARMCortexR82AECT.l2_cache.upstream[2]	PVBusSlave
ARMCortexR82AECT.l2_cache.upstream[3]	PVBusSlave
ARMCortexR82AECT.l2_cache.upstream[4]	PVBusSlave
ARMCortexR82AECT.l2_cache.upstream[5]	PVBusSlave
ARMCortexR82AECT.l2_cache.upstream[6]	PVBusSlave
ARMCortexR82AECT.l2_cache.upstream[7]	PVBusSlave
ARMCortexR82AECT.l2_cache.upstream[8]	PVBusSlave
ARMCortexR82AECT.l2_cache.upstream[9]	PVBusSlave
ARMCortexR82AECT.llram_atomic_filter	LLRAMAtomicOpFilter
ARMCortexR82AECT.llram_atomic_filter.atomic_bus_slave	PVBusSlave
ARMCortexR82AECT.llram_atomic_filter.filter	PVBusMapper
ARMCortexR82AECT.llram_atomic_filter.llram_exclusive_monitor	PVBusExclusiveMonitor
ARMCortexR82AECT.llram_atomic_filter.llram_exclusive_monitor.bus_mapper	PVBusMapper
ARMCortexR82AECT.llram_atomic_filter.pvbusmaster	PVBusMaster
ARMCortexR82AECT.llram_coherent_interconnect	PVCache
ARMCortexR82AECT.llram_coherent_interconnect.upstream[0]	PVBusSlave
ARMCortexR82AECT.llram_coherent_interconnect.upstream[1]	PVBusSlave
ARMCortexR82AECT.llram_coherent_interconnect.upstream[2]	PVBusSlave
ARMCortexR82AECT.secondary_debug_rom	debug_rom

This model has the following MTI trace components:

**Table 3-459: ARMCortexR82AECT MTI instances**

InstanceName	ComponentName
ARMCortexR82AECT.AMU	PVBusLogger

InstanceName	ComponentName
ARMCortexR82AECT.AMU.mapper	PVBusMapper
ARMCortexR82AECT.DAP	PVBusLogger
ARMCortexR82AECT.DAP.mapper	PVBusMapper
ARMCortexR82AECT.DSU	DSU
ARMCortexR82AECT.DSU.PPU_cluster	PPUv1
ARMCortexR82AECT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexR82AECT.DSU.PPU_core0	PPUv1
ARMCortexR82AECT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexR82AECT.DSU.utility_slave[0]	PVBusSlave
ARMCortexR82AECT.MMAP	PVBusLogger
ARMCortexR82AECT.MMAP.mapper	PVBusMapper
ARMCortexR82AECT.RAS	PVBusLogger
ARMCortexR82AECT.RAS.mapper	PVBusMapper
ARMCortexR82AECT.cpu0	ARM_Cortex-R82AE
ARMCortexR82AECT.cpu0.UTLB	TLB
ARMCortexR82AECT.cpu0.gicv3_cpu_if	GICv3CPUInterface
ARMCortexR82AECT.cpu0.l1dcache	PVCache
ARMCortexR82AECT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexR82AECT.cpu0.l1licache	PVCache
ARMCortexR82AECT.cpu0.l1licache.upstream[0]	PVBusSlave
ARMCortexR82AECT.ext_bus	PVBusLogger
ARMCortexR82AECT.ext_bus.mapper	PVBusMapper
ARMCortexR82AECT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexR82AECT.l2_cache	PVCache
ARMCortexR82AECT.l2_cache.upstream[0]	PVBusSlave
ARMCortexR82AECT.l2_cache.upstream[10]	PVBusSlave
ARMCortexR82AECT.l2_cache.upstream[11]	PVBusSlave
ARMCortexR82AECT.l2_cache.upstream[12]	PVBusSlave
ARMCortexR82AECT.l2_cache.upstream[13]	PVBusSlave
ARMCortexR82AECT.l2_cache.upstream[14]	PVBusSlave
ARMCortexR82AECT.l2_cache.upstream[15]	PVBusSlave
ARMCortexR82AECT.l2_cache.upstream[16]	PVBusSlave
ARMCortexR82AECT.l2_cache.upstream[1]	PVBusSlave
ARMCortexR82AECT.l2_cache.upstream[2]	PVBusSlave
ARMCortexR82AECT.l2_cache.upstream[3]	PVBusSlave
ARMCortexR82AECT.l2_cache.upstream[4]	PVBusSlave
ARMCortexR82AECT.l2_cache.upstream[5]	PVBusSlave
ARMCortexR82AECT.l2_cache.upstream[6]	PVBusSlave
ARMCortexR82AECT.l2_cache.upstream[7]	PVBusSlave

InstanceName	ComponentName
ARMCortexR82AECT.l2_cache.upstream[8]	PVBusSlave
ARMCortexR82AECT.l2_cache.upstream[9]	PVBusSlave
ARMCortexR82AECT.llram_atomic_filter	LLRAMAtomicOpFilter
ARMCortexR82AECT.llram_atomic_filter.atomic_bus_slave	PVBusSlave
ARMCortexR82AECT.llram_atomic_filter.filter	PVBusMapper
ARMCortexR82AECT.llram_atomic_filter.llram_exclusive_monitor	PVBusExclusiveMonitor
ARMCortexR82AECT.llram_atomic_filter.llram_exclusive_monitor.bus_mapper	PVBusMapper
ARMCortexR82AECT.llram_atomic_filter.pvbusmaster	PVBusMaster
ARMCortexR82AECT.llram_coherent_interconnect	PVCache
ARMCortexR82AECT.llram_coherent_interconnect.upstream[0]	PVBusSlave
ARMCortexR82AECT.llram_coherent_interconnect.upstream[1]	PVBusSlave
ARMCortexR82AECT.llram_coherent_interconnect.upstream[2]	PVBusSlave

## Ports for ARMCortexR82AECT

**Table 3-460: Ports**

Name	Protocol	Type	Description
acel_s	PVBus	Slave	External Slave port. Equivalent to AXIS port.
broadcastatomic	Signal	Slave	CHI defined pins.
broadcastcachemaint	Signal	Slave	Enable broadcasting of cache maintenance operations to downstream caches.
broadcastouter	Signal	Slave	Enable broadcasting of Outer Shareable transactions.
cache_validation_control	Value	Slave	This signal provides default exception handling state.
cfgendianess[8]	Signal	Slave	This signal if for EE bit initialisation
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
cluster_pcsn_pchannel	PChannel	Master	Cluster PCSM signal
clusterid	Value	Slave	The port reads the value in CPU ID register field, bits[11:8] of the MPIDR.
clusterpmuirq	Signal	Master	DynamlQ pmu irq
CNTHPSIRQ[8]	Signal	Master	Timer signals to SOC
CNTHVSIRQ[8]	Signal	Master	Timer signals to SOC
CNTPSIRQ[8]	Signal	Master	Timer signals to SOC
cntvalueb	CounterInterface	Slave	Interface to SoC level counter module
CNTVIRQ[8]	Signal	Master	Timer signals to SOC
commirq[8]	Signal	Master	Interrupt signal from debug communication channel.
core_pcsn_pchannel[8]	PChannel	Master	Core PCSM signals

Name	Protocol	Type	Description
coreerrirq[8]	Signal	Master	Core RAS error interrupt
corefaultirq[8]	Signal	Master	Core RAS fault interrupt
cp15sdisable[8]	Signal	Slave	This signal disables write access to some system control processor registers
cpuhalt[8]	Signal	Slave	Raising this signal will put the core into halt mode.
cti[8]	v8EmbeddedCrossTrigger_controlprotocol	Master	-
cti0extin[4]	Signal	Slave	CTI trace inputs for core 0.
cti0extout[4]	Signal	Master	CTI trace outputs for core 0.
cti1extin[4]	Signal	Slave	CTI trace inputs for core 1.
cti1extout[4]	Signal	Master	CTI trace outputs for core 1.
cti2extin[4]	Signal	Slave	CTI trace inputs for core 2.
cti2extout[4]	Signal	Master	CTI trace outputs for core 2.
cti3extin[4]	Signal	Slave	CTI trace inputs for core 3.
cti3extout[4]	Signal	Master	CTI trace outputs for core 3.
cti4extin[4]	Signal	Slave	CTI trace inputs for core 4.
cti4extout[4]	Signal	Master	CTI trace outputs for core 4.
cti5extin[4]	Signal	Slave	CTI trace inputs for core 5.
cti5extout[4]	Signal	Master	CTI trace outputs for core 5.
cti6extin[4]	Signal	Slave	CTI trace inputs for core 6.
cti6extout[4]	Signal	Master	CTI trace outputs for core 6.
cti7extin[4]	Signal	Slave	CTI trace inputs for core 7.
cti7extout[4]	Signal	Master	CTI trace outputs for core 7.
ctidbgirq[8]	Signal	Master	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	Signal	Slave	-
dbgnopwrdown[8]	Signal	Master	These signals relate to core power down.
dbgpwrdownack[8]	Signal	Master	Debug power down acknowledge.
dbgpwrdownreq[8]	Signal	Slave	Debug power down request.
dev_debug_s	PVBus	Slave	External debug interface.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
external_trace_reset[8]	Signal	Slave	ETMv4 External Trace Reset signal.
fiq[8]	Signal	Slave	This signal drives the CPUs fast-interrupt handling.
gicv3_redistributor_s[8]	GICv3Comms	Slave	GICv3 AXI-stream port.
irq[8]	Signal	Slave	This signal drives the CPUs interrupt handling.
l2reset	Signal	Slave	This signal resets timer and interrupt controller and l2cache

Name	Protocol	Type	Description
llpp_m[8]	PVBus	Master	LLPP (Low-Latency Peripheral Port).
llram_m	PVBus	Master	LLRAM Port
macp_s	PVBus	Slave	MACP slave interface
memorymapped_debug_s	PVBus	Slave	External debug interface.
periphbase	Value_64	Slave	This port sets the base address of private peripheral region
pmuirq[8]	Signal	Master	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	Signal	Master	PPU cluster irq signal
ppu_cluster_wakerequest	Signal	Slave	PPU cluster wakeup request
ppu_core_irq[8]	Signal	Master	PPU core irq signal
ppu_core_wakerequest[8]	Signal	Slave	PPU core wakeup request
presetdbg[8]	Signal	Slave	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	PVBus	Master	The core will generate bus requests on this port.
reset	Signal	Slave	-
romaddr	Value_64	Slave	Debug ROM base address.
romaddrv	Signal	Slave	Debug ROM base address valid.
rvbar[8]	Value_64	Slave	Reset vector base address.
sei[8]	Signal	Slave	Per core System Error physical pins
spiden	Signal	Slave	Secure invasive debug enable.
spp_m	PVBus	Master	SPP (Shared Peripheral Port).
standbywfe[8]	Signal	Master	This signal indicates if a core is in WFE state
standbywfi[8]	Signal	Master	This signal indicates if a core is in WFI state
ticks[8]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trace_unit_reset[8]	Signal	Slave	ETMv4 Trace Unit Reset signal.
utility_bus_s	PVBus	Slave	Utility bus slave
vcpumntirq[8]	Signal	Master	Interrupt signal for virtual CPU maintenance IRQ.
vfiq[8]	Signal	Slave	This signal drives the CPUs virtual fast-interrupt handling.
virq[8]	Signal	Slave	This signal drives the CPUs virtual interrupt handling.
virtio_s	PVBus	Slave	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).

## Parameters for ARMCortexR82AECT

### **BROADCASTATOMIC**

**Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of atomic operation to NC/DEV memory. The broadcastatomic signal will override this value if used.

### **BROADCASTATOMICL**

**Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of atomic operation to LLRAM memory. The broadcastatomicl signal will override this value and it will be functional for revision 2.

### **BROADCASTCACHEMAINT**

**Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

### **BROADCASTOUTER**

**Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

**CCSIDR-L1D\_override****Type**

int

**Default value**

0x0

**Description**

If nonzero, override the value presented in CCSIDR for L1D (this is cosmetic and does not affect cache behaviour).

**CCSIDR-L1I\_override****Type**

int

**Default value**

0x0

**Description**

If nonzero, override the value presented in CCSIDR for L1I (this is cosmetic and does not affect cache behaviour).

**CCSIDR-L2\_override****Type**

int

**Default value**

0x0

**Description**

If nonzero, override the value presented in CCSIDR for L2 (this is cosmetic and does not affect cache behaviour).

**CCSIDR-L3\_override****Type**

int

**Default value**

0x0

**Description**

If nonzero, allow L3 selection in CSSELR and present this value in CCSIDR (this is cosmetic and does not affect cache behaviour).

**CFGTFPEN\_pin\_reset****Type**

bool

**Default value**

0x0

**Description**

CFGTFPEN pin at reset.

**CHI****Type**

bool

**Default value**

0x0

**Description**

Selects the type of protocol the Main Manager(MM) interface implements. 0, MM port configured as AXI. 1, MM port configured as CHI.

**CLUSTER\_ID****Type**

int

**Default value**

0x0

**Description**

CLUSTER\_ID[15:8] equivalent to CFGMPIDRAFF3, CLUSTER\_ID[7:0] equivalent to CFGMPIDRAFF2.

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled****Type**

int

**Default value**

0x1

**Description**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. Changing this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain CMOs even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required .

**DBGROMADDR****Type**

int

**Default value**

0x0

**Description**

Initialization value of DBGDRAR register. Bits[55:12] of this register specify the ROM table physical address.

**DBGROMADDRV****Type**

bool

**Default value**

0x0

**Description**

If true, set bits[1:0] of the CP15 DBGDRAR to indicate that the address is valid.

**GICDISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

**NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores in cluster.

**PA\_SIZE****Type**

int

**Default value**

0x28

**Description**

Physical address range supported (FEAT\_LPA).

**PERIPHBASE****Type**

int

**Default value**

0x13080000

**Description**

Base address of peripheral memory space.

**VMSA\_supported****Type**

bool

**Default value**

0x1

**Description**

VMSA is supported at EL1.

**bus\_protection\_enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Equivalent to CFGBUSPROTEN.

**core\_power\_on\_by\_default****Type**

bool

**Default value**

0x1

**Description**

Equivalent to PPU\_RST\_STATE. 0 = Cluster PPU and all core PPU's reset to OFF, 1 = Cluster PPU and all core PPU's reset to ON.

**cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**`cpu_mul`**

**Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**`cpuX.CFGEND`**

**Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**`cpuX.CP15SDISABLE`**

**Type**

bool

**Default value**

0x0

**Description**

Initialize to disable access to some CP15 registers.

**`cpuX.RVBAR`**

**Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**`cpuX.TEINIT`**

**Type**

bool

**Default value**

0x0

**Description**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

**cpuX.ase-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has been built with NEON support.

**cpuX.dcache-size****Type**

int

**Default value**

0x10000

**Description**

L1 D-Cache size in bytes.

**cpuX.dtcn\_base****Type**

int

**Default value**

0x0

**Description**

Sets the 16K aligned base address of DTCM.

**cpuX.dtcn\_size****Type**

int

**Default value**

0x0

**Description**

Sets the size of DTCM (in bytes).

**cpuX.dtcn\_stretch\_clk****Type**

bool

**Default value**

0x0

**Description**

Whether DTCM clock stretched to occupy full cycle.

**cpuX.dtcn\_wait**

**Type**

int

**Default value**

0x0

**Description**

DTCM accesses wait states: 0-3 cycles.

**cpuX.enable\_trace\_special\_hlt\_imm16**

**Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**cpuX.icache-size**

**Type**

int

**Default value**

0x10000

**Description**

L1 I-Cache size in bytes.

**cpuX.itcm\_base**

**Type**

int

**Default value**

0x0

**Description**

Sets the 16K aligned base address of ITCM.

**cpuX.itcm\_size**

**Type**

int

**Default value**

0x0

**Description**

Sets the size of ITCM (in bytes).

**`cpuX.itcm_stretch_clk`****Type**

bool

**Default value**

0x0

**Description**

Whether ITCM clock stretched to occupy full cycle.

**`cpuX.itcm_wait`****Type**

int

**Default value**

0x0

**Description**

ITCM accesses wait states: 0-3 cycles.

**`cpuX.llpp.base`****Type**

int

**Default value**

0x0

**Description**

Equivalent to CFGLLPPBASEADDR.

**`cpuX.llpp.size`****Type**

int

**Default value**

0x8000000

**Description**

Equivalent to CFGLLPPSIZE.

**`cpuX.max_code_cache_mb`****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**cpuX.semihosting-T32\_HLT****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**cpuX.tcm.a.enable****Type**

bool

**Default value**

0x0

**Description**

Equivalent to CFGITCMENm.

**cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**cpuX.vfp-dp-present****Type**

bool

**Default value**

0x1

**Description**

Whether double-precision floating point feature is implemented (FEAT\_F64MM).

**cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**dcache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

**dcache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**dcache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**enable\_lock\_step****Type**

bool

**Default value**

0x0

**Description**

Whether the core is configured in Dual Core Lock Step mode (FEAT\_DCLS).

**enable\_simulation\_performance\_optimizations****Type**

bool

**Default value**

0x1

**Description**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

**gicv3.BPR-min****Type**

int

**Default value**

0x2

**Description**

The minimum value for the GICC\_BPR register (non-secure version will be 1 + this value).

**gicv3.VBPR-min****Type**

int

**Default value**

0x2

**Description**

The minimum value for the GICV\_BPR register (non-secure version will be 1 + this value).

**has\_dense\_mem\_map****Type**

bool

**Default value**

0x0

**Description**

If true, the cluster follows the dense memory map else it implements the sparse memory map.

**has\_impdef\_transient\_fault\_protection****Type**

bool

**Default value**

0x1

**Description**

Support the Transient Fault Protection (TFP) flop parity errors through RAS registers (FEAT\_TFP).

**has\_llpp****Type**

bool

**Default value**

0x1

**Description**

Equivalent to CFGLLPPIMP.

**has\_pmc****Type**

bool

**Default value**

0x0

**Description**

Programmable MBIST controllers implemented.

**has\_spp****Type**

bool

**Default value**

0x1

**Description**

Equivalent to CFGSPPIMP.

**icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

**icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state\_modelled=true.

**icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

**`icache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

**`icache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

**`icache-state_modelled`****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**`l2cache-hit_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

**`l2cache-maintenance_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

**`l2cache-miss_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**`l2cache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**`l2cache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**`l2cache-size`****Type**

int

**Default value**

0x400000

**Description**

L2 Cache size in bytes.

**`l2cache-snoop_data_transfer_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

**`l2cache-snoop_issue_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

**`l2cache-write_access_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

**l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**memory.ext\_slave\_base****Type**

int

**Default value**

0x0

**Description**

Equivalent to CFGACELSTCMBASEADDR.

**memory.has\_llram****Type**

bool

**Default value**

0x1

**Description**

Equivalent to CFGLLRAMIMP.

**memory.llram\_base****Type**

int

**Default value**

0x20000000

**Description**

Equivalent to CFGLLRAMBASEADDR.

**memory.llram\_enable\_at\_reset****Type**

bool

**Default value**

0x1

**Description**

Equivalent to CFGLLRAMEN.

**memory.llram\_shared****Type**

bool

**Default value**

0x0

**Description**

Equivalent to CFGLLRAMSHARED and it is only functional for revision 2.

**memory.llram\_size****Type**

int

**Default value**

0x10000000

**Description**

Size of the LLRAM.

**num\_protection\_regions\_s1****Type**

int

**Default value**

0x10

**Description**

Number of v8-R protection regions.

**num\_protection\_regions\_s2****Type**

int

**Default value**

0x10

**Description**

Number of v8-R hyp protection regions.

**ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**ram\_protection\_enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Equivalent to CFGRAMPROTEN.

**reported\_patch\_level****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**reported\_revision\_number****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**spp.base****Type**

int

**Default value**

0x0

**Description**

Equivalent to CFGSPPBASEADDR.

**spp.size****Type**

int

**Default value**

0x8000000

**Description**

Sets the size of SPP(in bytes).

**stage12\_tlb\_size****Type**

int

**Default value**

0x0

**Description**

If VMSA is supported at stage1, number of stage1+2 tlb entries. If instruction\_tlb\_size !=0, this is treated as dtlb size.

**tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**walk\_cache\_latency****Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

## 3.5.69 ARM CortexR82CT

ARM CortexR82CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-461: IP revisions support**

Revision	Quality level
r0p0	Preliminary support
r1p1	Preliminary support
r2p1	Preliminary support
r3p1	Preliminary support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

### About ARMCortexR82CT

To simulate the r1p0 model, use the following parameters:

- `revision_number=1`
- `VMSA_supported=1`

### Limitations

Dense memory map support has been added for the Utility bus only.

### Iris and MTI instances for ARMCortexR82CT

This model has the following Iris instances:

**Table 3-462: ARMCortexR82CT Iris instances**

InstanceName	ComponentName
ARMCortexR82CT	Cluster_ARM_Cortex-R82
ARMCortexR82CT.AMU	PVBusLogger
ARMCortexR82CT.AMU.mapper	PVBusMapper
ARMCortexR82CT.DAP	PVBusLogger
ARMCortexR82CT.DAP.mapper	PVBusMapper
ARMCortexR82CT.DSU	DSU
ARMCortexR82CT.DSU.PPU_cluster	PPUv1
ARMCortexR82CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexR82CT.DSU.PPU_core0	PPUv1
ARMCortexR82CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexR82CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexR82CT.MMAP	PVBusLogger
ARMCortexR82CT.MMAP.mapper	PVBusMapper
ARMCortexR82CT.RAS	PVBusLogger
ARMCortexR82CT.RAS.mapper	PVBusMapper
ARMCortexR82CT.cpu0	ARM_Cortex-R82
ARMCortexR82CT.cpu0.UTLB	TLB
ARMCortexR82CT.cpu0.debug_rom	debug_rom
ARMCortexR82CT.cpu0.dtlb	TLB

InstanceName	ComponentName
ARMCortexR82CT.cpu0.gicv3_cpu_if	GICv3CPUInterface
ARMCortexR82CT.cpu0.l1dcache	PVCache
ARMCortexR82CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexR82CT.cpu0.l1icache	PVCache
ARMCortexR82CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexR82CT.ext_bus	PVBusLogger
ARMCortexR82CT.ext_bus.mapper	PVBusMapper
ARMCortexR82CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexR82CT.global_debug_rom	debug_rom
ARMCortexR82CT.l2_cache	PVCache
ARMCortexR82CT.l2_cache.upstream[0]	PVBusSlave
ARMCortexR82CT.l2_cache.upstream[10]	PVBusSlave
ARMCortexR82CT.l2_cache.upstream[11]	PVBusSlave
ARMCortexR82CT.l2_cache.upstream[12]	PVBusSlave
ARMCortexR82CT.l2_cache.upstream[13]	PVBusSlave
ARMCortexR82CT.l2_cache.upstream[14]	PVBusSlave
ARMCortexR82CT.l2_cache.upstream[15]	PVBusSlave
ARMCortexR82CT.l2_cache.upstream[16]	PVBusSlave
ARMCortexR82CT.l2_cache.upstream[1]	PVBusSlave
ARMCortexR82CT.l2_cache.upstream[2]	PVBusSlave
ARMCortexR82CT.l2_cache.upstream[3]	PVBusSlave
ARMCortexR82CT.l2_cache.upstream[4]	PVBusSlave
ARMCortexR82CT.l2_cache.upstream[5]	PVBusSlave
ARMCortexR82CT.l2_cache.upstream[6]	PVBusSlave
ARMCortexR82CT.l2_cache.upstream[7]	PVBusSlave
ARMCortexR82CT.l2_cache.upstream[8]	PVBusSlave
ARMCortexR82CT.l2_cache.upstream[9]	PVBusSlave
ARMCortexR82CT.llram_atomic_filter	LLRAMAtomicOpFilter
ARMCortexR82CT.llram_atomic_filter.atomic_bus_slave	PVBusSlave
ARMCortexR82CT.llram_atomic_filter.filter	PVBusMapper
ARMCortexR82CT.llram_atomic_filter.llram_exclusive_monitor	PVBusExclusiveMonitor
ARMCortexR82CT.llram_atomic_filter.llram_exclusive_monitor.bus_mapper	PVBusMapper
ARMCortexR82CT.llram_atomic_filter.pvbusmaster	PVBusMaster
ARMCortexR82CT.llram_coherent_interconnect	PVCache
ARMCortexR82CT.llram_coherent_interconnect.upstream[0]	PVBusSlave
ARMCortexR82CT.llram_coherent_interconnect.upstream[1]	PVBusSlave
ARMCortexR82CT.llram_coherent_interconnect.upstream[2]	PVBusSlave
ARMCortexR82CT.secondary_debug_rom	debug_rom

This model has the following MTI trace components:

**Table 3-463: ARMCortexR82CT MTI instances**

InstanceName	ComponentName
ARMCortexR82CT.AMU	PVBusLogger
ARMCortexR82CT.AMU.mapper	PVBusMapper
ARMCortexR82CT.DAP	PVBusLogger
ARMCortexR82CT.DAP.mapper	PVBusMapper
ARMCortexR82CT.DSU	DSU
ARMCortexR82CT.DSU.PPU_cluster	PPUv1
ARMCortexR82CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexR82CT.DSU.PPU_core0	PPUv1
ARMCortexR82CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexR82CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexR82CT.MMAP	PVBusLogger
ARMCortexR82CT.MMAP.mapper	PVBusMapper
ARMCortexR82CT.RAS	PVBusLogger
ARMCortexR82CT.RAS.mapper	PVBusMapper
ARMCortexR82CT.cpu0	ARM_Cortex-R82
ARMCortexR82CT.cpu0.UTLB	TLB
ARMCortexR82CT.cpu0.gicv3_cpu_if	GICv3CPUInterface
ARMCortexR82CT.cpu0.l1dcache	PVCache
ARMCortexR82CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexR82CT.cpu0.l1icache	PVCache
ARMCortexR82CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexR82CT.ext_bus	PVBusLogger
ARMCortexR82CT.ext_bus.mapper	PVBusMapper
ARMCortexR82CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexR82CT.l2_cache	PVCache
ARMCortexR82CT.l2_cache.upstream[0]	PVBusSlave
ARMCortexR82CT.l2_cache.upstream[10]	PVBusSlave
ARMCortexR82CT.l2_cache.upstream[11]	PVBusSlave
ARMCortexR82CT.l2_cache.upstream[12]	PVBusSlave
ARMCortexR82CT.l2_cache.upstream[13]	PVBusSlave
ARMCortexR82CT.l2_cache.upstream[14]	PVBusSlave
ARMCortexR82CT.l2_cache.upstream[15]	PVBusSlave
ARMCortexR82CT.l2_cache.upstream[16]	PVBusSlave
ARMCortexR82CT.l2_cache.upstream[1]	PVBusSlave
ARMCortexR82CT.l2_cache.upstream[2]	PVBusSlave
ARMCortexR82CT.l2_cache.upstream[3]	PVBusSlave

InstanceName	ComponentName
ARMCortexR82CT.l2_cache.upstream[4]	PVBusSlave
ARMCortexR82CT.l2_cache.upstream[5]	PVBusSlave
ARMCortexR82CT.l2_cache.upstream[6]	PVBusSlave
ARMCortexR82CT.l2_cache.upstream[7]	PVBusSlave
ARMCortexR82CT.l2_cache.upstream[8]	PVBusSlave
ARMCortexR82CT.l2_cache.upstream[9]	PVBusSlave
ARMCortexR82CT.llram_atomic_filter	LLRAMAtomicOpFilter
ARMCortexR82CT.llram_atomic_filter.atomic_bus_slave	PVBusSlave
ARMCortexR82CT.llram_atomic_filter.filter	PVBusMapper
ARMCortexR82CT.llram_atomic_filter.llram_exclusive_monitor	PVBusExclusiveMonitor
ARMCortexR82CT.llram_atomic_filter.llram_exclusive_monitor.bus_mapper	PVBusMapper
ARMCortexR82CT.llram_atomic_filter.pvbusmaster	PVBusMaster
ARMCortexR82CT.llram_coherent_interconnect	PVCache
ARMCortexR82CT.llram_coherent_interconnect.upstream[0]	PVBusSlave
ARMCortexR82CT.llram_coherent_interconnect.upstream[1]	PVBusSlave
ARMCortexR82CT.llram_coherent_interconnect.upstream[2]	PVBusSlave

## Ports for ARMCortexR82CT

**Table 3-464: Ports**

Name	Protocol	Type	Description
acel_s	PVBus	Slave	External Slave port. Equivalent to AXIS port.
broadcastatomic	Signal	Slave	CHI defined pins.
broadcastatomicl	Signal	Slave	BROADCASTATOMIC pin for LLRAM
broadcastcachemaint	Signal	Slave	Enable broadcasting of cache maintenance operations to downstream caches.
broadcastouter	Signal	Slave	Enable broadcasting of Outer Shareable transactions.
cache_validation_control	Value	Slave	This signal provides default exception handling state.
cfgendianess[8]	Signal	Slave	This signal if for EE bit initialisation
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
cluster_pcsn_pchannel	PChannel	Master	Cluster PCSM signal
clusterid	Value	Slave	The port reads the value in CPU ID register field, bits[11:8] of the MPIDR.
clusterpmuirq	Signal	Master	DynamlQ pmu irq
CNTHPSIRQ[8]	Signal	Master	Timer signals to SOC
CNTHVSIRQ[8]	Signal	Master	Timer signals to SOC
CNTPSIRQ[8]	Signal	Master	Timer signals to SOC

Name	Protocol	Type	Description
cntvalueb	CounterInterface	Slave	Interface to SoC level counter module
CNTVIRQ[8]	Signal	Master	Timer signals to SOC
commirq[8]	Signal	Master	Interrupt signal from debug communication channel.
core_pcs_m_pchannel[8]	PChannel	Master	Core PCSM signals
coreerrirq[8]	Signal	Master	Core RAS error interrupt
corefaultirq[8]	Signal	Master	Core RAS fault interrupt
cp15sdisable[8]	Signal	Slave	This signal disables write access to some system control processor registers
cpuhalt[8]	Signal	Slave	Raising this signal will put the core into halt mode.
cti[8]	v8EmbeddedCrossTrigger_controlprotocol	Master	-
cti0extin[4]	Signal	Slave	CTI trace inputs for core 0.
cti0extout[4]	Signal	Master	CTI trace outputs for core 0.
cti1extin[4]	Signal	Slave	CTI trace inputs for core 1.
cti1extout[4]	Signal	Master	CTI trace outputs for core 1.
cti2extin[4]	Signal	Slave	CTI trace inputs for core 2.
cti2extout[4]	Signal	Master	CTI trace outputs for core 2.
cti3extin[4]	Signal	Slave	CTI trace inputs for core 3.
cti3extout[4]	Signal	Master	CTI trace outputs for core 3.
cti4extin[4]	Signal	Slave	CTI trace inputs for core 4.
cti4extout[4]	Signal	Master	CTI trace outputs for core 4.
cti5extin[4]	Signal	Slave	CTI trace inputs for core 5.
cti5extout[4]	Signal	Master	CTI trace outputs for core 5.
cti6extin[4]	Signal	Slave	CTI trace inputs for core 6.
cti6extout[4]	Signal	Master	CTI trace outputs for core 6.
cti7extin[4]	Signal	Slave	CTI trace inputs for core 7.
cti7extout[4]	Signal	Master	CTI trace outputs for core 7.
ctidbgirq[8]	Signal	Master	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	Signal	Slave	-
dbgnopwrdown[8]	Signal	Master	These signals relate to core power down.
dbgpwrdownack[8]	Signal	Master	Debug power down acknowledge.
dbgpwrdownreq[8]	Signal	Slave	Debug power down request.
dev_debug_s	PVBus	Slave	External debug interface.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
external_trace_reset[8]	Signal	Slave	ETMv4 External Trace Reset signal.
fiq[8]	Signal	Slave	This signal drives the CPUs fast-interrupt handling.

Name	Protocol	Type	Description
gicv3_redistributor_s[8]	GICv3Comms	Slave	GICv3 AXI-stream port.
irq[8]	Signal	Slave	This signal drives the CPUs interrupt handling.
l2reset	Signal	Slave	This signal resets timer and interrupt controller and l2cache
llpp_m[8]	PVBus	Master	LLPP (Low-Latency Peripheral Port).
llram_m	PVBus	Master	LLRAM Port
macp_s	PVBus	Slave	MACP slave interface
memorymapped_debug_s	PVBus	Slave	External debug interface.
periphbase	Value_64	Slave	This port sets the base address of private peripheral region
pmuirq[8]	Signal	Master	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	Signal	Master	PPU cluster irq signal
ppu_cluster_wakerequest	Signal	Slave	PPU cluster wakeup request
ppu_core_irq[8]	Signal	Master	PPU core irq signal
ppu_core_wakerequest[8]	Signal	Slave	PPU core wakeup request
presetdbg[8]	Signal	Slave	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	PVBus	Master	The core will generate bus requests on this port.
reset	Signal	Slave	-
romaddr	Value_64	Slave	Debug ROM base address.
romaddrv	Signal	Slave	Debug ROM base address valid.
rvbar[8]	Value_64	Slave	Reset vector base address.
sei[8]	Signal	Slave	Per core System Error physical pins
spiden	Signal	Slave	Secure invasive debug enable.
spp_m	PVBus	Master	SPP (Shared Peripheral Port).
standbywfe[8]	Signal	Master	This signal indicates if a core is in WFE state
standbywfi[8]	Signal	Master	This signal indicates if a core is in WFI state
ticks[8]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trace_unit_reset[8]	Signal	Slave	ETMv4 Trace Unit Reset signal.
utility_bus_s	PVBus	Slave	Utility bus slave
vcpumntirq[8]	Signal	Master	Interrupt signal for virtual CPU maintenance IRQ.
vfiq[8]	Signal	Slave	This signal drives the CPUs virtual fast-interrupt handling.

Name	Protocol	Type	Description
virq[8]	Signal	Slave	This signal drives the CPUs virtual interrupt handling.
virtio_s	PVBus	Slave	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).

## Parameters for ARM CortexR82CT

### BROADCASTATOMIC

#### Type

bool

#### Default value

0x1

#### Description

Enable broadcasting of atomic operation to NC/DEV memory. The broadcastatomic signal will override this value if used.

### BROADCASTATOMICL

#### Type

bool

#### Default value

0x1

#### Description

Enable broadcasting of atomic operation to LLRAM memory. The broadcastatomicl signal will override this value and it will be functional for revision 2.

### BROADCASTCACHEMAINT

#### Type

bool

#### Default value

0x1

#### Description

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

### BROADCASTOUTER

#### Type

bool

#### Default value

0x1

**Description**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

**CCSIDR-L1D\_override****Type**

int

**Default value**

0x0

**Description**

If nonzero, override the value presented in CCSIDR for L1D (this is cosmetic and does not affect cache behaviour).

**CCSIDR-L1I\_override****Type**

int

**Default value**

0x0

**Description**

If nonzero, override the value presented in CCSIDR for L1I (this is cosmetic and does not affect cache behaviour).

**CCSIDR-L2\_override****Type**

int

**Default value**

0x0

**Description**

If nonzero, override the value presented in CCSIDR for L2 (this is cosmetic and does not affect cache behaviour).

**CCSIDR-L3\_override****Type**

int

**Default value**

0x0

**Description**

If nonzero, allow L3 selection in CSSELR and present this value in CCSIDR (this is cosmetic and does not affect cache behaviour).

**CHI****Type**

bool

**Default value**

0x0

**Description**

Selects the type of protocol the Main Manager(MM) interface implements. 0, MM port configured as AXI. 1, MM port configured as CHI.

**CLUSTER\_ID****Type**

int

**Default value**

0x0

**Description**

CLUSTER\_ID[15:8] equivalent to CFGMPIDRAFF3, CLUSTER\_ID[7:0] equivalent to CFGMPIDRAFF2.

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled****Type**

int

**Default value**

0x1

**Description**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. Changing this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain CMOs even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required .

**DBGROMADDR****Type**

int

**Default value**

0x0

**Description**

Initialization value of DBGDRAR register. Bits[55:12] of this register specify the ROM table physical address.

**DBGROMADDRV****Type**

bool

**Default value**

0x0

**Description**

If true, set bits[1:0] of the CP15 DBGDRAR to indicate that the address is valid.

**GICDISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

**NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores in cluster.

**PA\_SIZE****Type**

int

**Default value**

0x28

**Description**

Physical address range supported (FEAT\_LPA).

**PERIPHBASE****Type**

int

**Default value**

0x13080000

**Description**

Base address of peripheral memory space.

**VMSA\_supported****Type**

bool

**Default value**

0x0

**Description**

VMSA is supported at EL1.

**core\_power\_on\_by\_default****Type**

bool

**Default value**

0x1

**Description**

Equivalent to PPU\_RST\_STATE. 0 = Cluster PPU and all core PPUs reset to OFF, 1 = Cluster PPU and all core PPUs reset to ON.

**cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**cpuX.CP15SDISABLE****Type**

bool

**Default value**

0x0

**Description**

Initialize to disable access to some CP15 registers.

**cpuX.RVBAR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**cpuX.TEINIT****Type**

bool

**Default value**

0x0

**Description**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

**cpuX.ase-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has been built with NEON support.

**cpuX.dcache-size****Type**

int

**Default value**

0x10000

**Description**

L1 D-Cache size in bytes.

**cpuX.dtcn\_base****Type**

int

**Default value**

0x0

**Description**

Sets the 16K aligned base address of DTCM.

**cpuX.dtcn\_size****Type**

int

**Default value**

0x0

**Description**

Sets the size of DTCM (in bytes).

**cpuX.dtcn\_stretch\_clk****Type**

bool

**Default value**

0x0

**Description**

Whether DTCM clock stretched to occupy full cycle.

**cpuX.dtcn\_wait****Type**

int

**Default value**

0x0

**Description**

DTCM accesses wait states: 0-3 cycles.

**cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**cpuX.icache-size****Type**

int

**Default value**

0x10000

**Description**

L1 I-Cache size in bytes.

**cpuX.itcm\_base****Type**

int

**Default value**

0x0

**Description**

Sets the 16K aligned base address of ITCM.

**cpuX.itcm\_size****Type**

int

**Default value**

0x0

**Description**

Sets the size of ITCM (in bytes).

**cpuX.itcm\_stretch\_clk****Type**

bool

**Default value**

0x0

**Description**

Whether ITCM clock stretched to occupy full cycle.

**cpuX.itcm\_wait****Type**

int

**Default value**

0x0

**Description**

ITCM accesses wait states: 0-3 cycles.

**cpuX.llpp.base****Type**

int

**Default value**

0x0

**Description**

Equivalent to CFGLLPPBASEADDR.

**cpuX.llpp.size****Type**

int

**Default value**

0x8000000

**Description**

Equivalent to CFGLLPPSIZE.

**cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**cpuX.semihosting-T32\_HLT****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**cpuX.tcm.a.enable****Type**

bool

**Default value**

0x0

**Description**

Equivalent to CFGITCMENm.

**cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**cpuX.vfp-dp-present****Type**

bool

**Default value**

0x1

**Description**

Whether double-precision floating point feature is implemented (FEAT\_F64MM).

**cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**dcache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

**dcache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**dcache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**enable\_lock\_step****Type**

bool

**Default value**

0x0

**Description**

Whether the core is configured in Dual Core Lock Step mode (FEAT\_DCLS).

**enable\_simulation\_performance\_optimizations****Type**

bool

**Default value**

0x1

**Description**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

**gicv3.BPR-min****Type**

int

**Default value**

0x2

**Description**

The minimum value for the GICC\_BPR register (non-secure version will be 1 + this value).

**gicv3.VBPR-min****Type**

int

**Default value**

0x2

**Description**

The minimum value for the GICV\_BPR register (non-secure version will be 1 + this value).

**has\_dense\_mem\_map****Type**

bool

**Default value**

0x0

**Description**

If true, the cluster follows the dense memory map else it implements the sparse memory map.

**has\_llpp****Type**

bool

**Default value**

0x1

**Description**

Equivalent to CFGLLPPIMP.

**has\_spp****Type**

bool

**Default value**

0x1

**Description**

Equivalent to CFGSPPIMP.

**icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

**icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state\_modelled=true.

**icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

**icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state\_modelled=true.

**icache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. icache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state\_modelled=true.

**icache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**`l2cache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**`l2cache-size`****Type**

int

**Default value**

0x400000

**Description**

L2 Cache size in bytes.

**`l2cache-snoop_data_transfer_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

**`l2cache-snoop_issue_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**`l2cache-write_access_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**`l2cache-write_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**`memory.ext_slave_base`****Type**

int

**Default value**

0x0

**Description**

Equivalent to CFGACELSTCMBASEADDR.

**`memory.has_llram`****Type**

bool

**Default value**

0x1

**Description**

Equivalent to CFGLLRAMIMP.

**memory.llram\_base****Type**

int

**Default value**

0x20000000

**Description**

Equivalent to CFGLLRAMBASEADDR.

**memory.llram\_enable\_at\_reset****Type**

bool

**Default value**

0x1

**Description**

Equivalent to CFGLLRAMEN.

**memory.llram\_shared****Type**

bool

**Default value**

0x0

**Description**

Equivalent to CFGLLRAMSHARED and it is only functional for revision 2.

**memory.llram\_size****Type**

int

**Default value**

0x10000000

**Description**

Size of the LLRAM.

**num\_protection\_regions\_s1****Type**

int

**Default value**

0x10

**Description**

Number of v8-R protection regions.

**num\_protection\_regions\_s2****Type**

int

**Default value**

0x10

**Description**

Number of v8-R hyp protection regions.

**patch\_level****Type**

int

**Default value**

0x1

**Description**

Patch level of TRM implemented by the model. Changing the value can change the model behaviour. Visible as the Revision field in MIDR/MIDR\_EL1. Corresponds to the patch number Y in rXpY.

**ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**ram\_protection\_enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Equivalent to CFGRAMPROTEN.

**revision\_number****Type**

int

**Default value**

0x1

**Description**

Revision number of TRM implemented by the model. Changing the value can change the model behaviour. Visible as the Variant field in MIDR/MIDR\_EL1. Corresponds to the revision number X in rXpY.

**spp.base****Type**

int

**Default value**

0x0

**Description**

Equivalent to CFGSPPBASEADDR.

**spp.size****Type**

int

**Default value**

0x8000000

**Description**

Sets the size of SPP(in bytes).

**stage12\_tlb\_size****Type**

int

**Default value**

0x0

**Description**

If VMSA is supported at stage1, number of stage1+2 tlb entries. If instruction\_tlb\_size !=0, this is treated as dtlb size.

**tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**walk\_cache\_latency**

**Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

**3.5.70 ARMCortexX1CCT**

ARMCortexX1CCT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-465: IP revisions support**

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**About ARMCortexX1CCT**

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- BROADCASTPERSIST pin.

The model does not support the following features:

- BROADCASTCACHEMAINTPOU pin.
- COREINSTRRET, COREINSTRRUN, or nPMBIRQ signals.
- DynamIQ features that are irrelevant to the programmers’ view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).

- Latency configuration.
- Snoop filtering.
- Cache stashing capability.
- Each thread has its own L1Cache and L2Cache instead of a common cache that is shared by all threads of the core.
- Per-thread parameters are not yet supported but signals are implemented.

**Note**

The `cfgsdisable` signal will be removed in a future release.

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

### Iris and MTI instances for ARMCortexX1CCT

This model has the following Iris instances:

**Table 3-466: ARMCortexX1CCT Iris instances**

InstanceName	ComponentName
ARMCortexX1CCT	Cluster_ARM_Cortex-X1C
ARMCortexX1CCT.AMU	PVBusLogger
ARMCortexX1CCT.AMU.mapper	PVBusMapper
ARMCortexX1CCT.DAP	PVBusLogger
ARMCortexX1CCT.DAP.mapper	PVBusMapper
ARMCortexX1CCT.DSU	DSU
ARMCortexX1CCT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexX1CCT.DSU.mpam_busslave	PVBusSlave
ARMCortexX1CCT.DSU.shared_cache	PVCache
ARMCortexX1CCT.DSU.shared_cache.upstream[0]	PVBusSlave
ARMCortexX1CCT.DSU.shared_cache.upstream[1]	PVBusSlave
ARMCortexX1CCT.DSU.shared_cache.upstream[2]	PVBusSlave
ARMCortexX1CCT.DSU.shared_cache.upstream[3]	PVBusSlave
ARMCortexX1CCT.MMAP	PVBusLogger
ARMCortexX1CCT.MMAP.mapper	PVBusMapper
ARMCortexX1CCT.RAS	PVBusLogger
ARMCortexX1CCT.RAS.mapper	PVBusMapper
ARMCortexX1CCT.cpu0	ARM_Cortex-X1C
ARMCortexX1CCT.cpu0.UTLB	TLB
ARMCortexX1CCT.cpu0.debug_rom	debug_rom

InstanceName	ComponentName
ARMCortexX1CCT.cpu0.dtlb	TLB
ARMCortexX1CCT.cpu0.l1dcache	PVCache
ARMCortexX1CCT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexX1CCT.cpu0.l1icache	PVCache
ARMCortexX1CCT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexX1CCT.cpu0.l2cache	PVCache
ARMCortexX1CCT.cpu0.l2cache.upstream[0]	PVBusSlave
ARMCortexX1CCT.cpu0.l2cache.upstream[1]	PVBusSlave
ARMCortexX1CCT.ext_bus	PVBusLogger
ARMCortexX1CCT.ext_bus.mapper	PVBusMapper
ARMCortexX1CCT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexX1CCT.global_debug_rom	debug_rom
ARMCortexX1CCT.secondary_debug_rom	debug_rom

This model has the following MTI trace components:

**Table 3-467: ARMCortexX1CCT MTI instances**

InstanceName	ComponentName
ARMCortexX1CCT.AMU	PVBusLogger
ARMCortexX1CCT.AMU.mapper	PVBusMapper
ARMCortexX1CCT.DAP	PVBusLogger
ARMCortexX1CCT.DAP.mapper	PVBusMapper
ARMCortexX1CCT.DSU	DSU
ARMCortexX1CCT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexX1CCT.DSU.mpam_busslave	PVBusSlave
ARMCortexX1CCT.DSU.shared_cache	PVCache
ARMCortexX1CCT.DSU.shared_cache.upstream[0]	PVBusSlave
ARMCortexX1CCT.DSU.shared_cache.upstream[1]	PVBusSlave
ARMCortexX1CCT.DSU.shared_cache.upstream[2]	PVBusSlave
ARMCortexX1CCT.DSU.shared_cache.upstream[3]	PVBusSlave
ARMCortexX1CCT.MMAP	PVBusLogger
ARMCortexX1CCT.MMAP.mapper	PVBusMapper
ARMCortexX1CCT.RAS	PVBusLogger
ARMCortexX1CCT.RAS.mapper	PVBusMapper
ARMCortexX1CCT.cpu0	ARM_Cortex-X1C
ARMCortexX1CCT.cpu0.UTLB	TLB
ARMCortexX1CCT.cpu0.l1dcache	PVCache
ARMCortexX1CCT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexX1CCT.cpu0.l1icache	PVCache
ARMCortexX1CCT.cpu0.l1icache.upstream[0]	PVBusSlave

InstanceName	ComponentName
ARMCortexX1CCT.cpu0.l2cache	PVCache
ARMCortexX1CCT.cpu0.l2cache.upstream[0]	PVBusSlave
ARMCortexX1CCT.cpu0.l2cache.upstream[1]	PVBusSlave
ARMCortexX1CCT.ext_bus	PVBusLogger
ARMCortexX1CCT.ext_bus.mapper	PVBusMapper
ARMCortexX1CCT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

## Ports for ARMCortexX1CCT

**Table 3-468: Ports**

Name	Protocol	Type	Description
acp_s	PVBus	Slave	AXI ACP slave port.
AENDMP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	Signal	Slave	CHI defined pins.
broadcastcachemaint	Signal	Slave	ACE defined pins.
broadcastouter	Signal	Slave	ACE defined pins.
broadcastpersist	Signal	Slave	CHI defined pins.
cfgend[8]	Signal	Slave	This signal if for EE bit initialisation.
cfgsdisable	Signal	Slave	This signal disables write access to some secure Interrupt Controller registers.
cfgte[8]	Signal	Slave	This signal provides default exception handling state.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
clusterid	Value	Slave	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.
clusterpmuirq	Signal	Master	DynamlQ pmu irq
CNTHPIRQ[8]	Signal	Master	Timer signals to SOC.
CNTHVIRQ[8]	Signal	Master	Timer signals to SOC.
CNTPNSIRQ[8]	Signal	Master	Timer signals to SOC.

Name	Protocol	Type	Description
CNTPSIRQ[8]	Signal	Master	Timer signals to SOC.
cntvalueb	CounterInterface	Slave	Interface to SoC level counter module.
CNTVIRQ[8]	Signal	Master	Timer signals to SOC.
commirq[8]	Signal	Master	Interrupt signal from debug communications channel.
core_clk_in[8]	ClockSignal	Slave	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cpuporeset[8]	Signal	Slave	CPU power on reset. Initializes all the processor logic, including debug logic.
cryptodisable[8]	Signal	Slave	Disable cryptography extensions after reset.
cti[8]	v8EmbeddedCrossTrigger_controlprotocol	Master	Cross trigger matrix port.
ctidbgirq[8]	Signal	Master	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	Signal	Slave	External debug interface.
dbgnopwrdown[8]	Signal	Master	No power-down request.
dbgprupreq[8]	Signal	Master	Debug power up request.
dev_debug_s	PVBus	Slave	External debug interface.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
fiq[8]	Signal	Slave	This signal drives the CPUs fast-interrupt handling.
gicv3_redistributor_s[8]	GICv3Comms	Slave	GICv3 AXI-stream port.
irq[8]	Signal	Slave	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	PVBus	Slave	External debug interface.
niden	Signal	Slave	External debug interface.
pchannel_cluster	PChannel	Slave	PChannel for cluster.
pchannel_core[8]	PChannel	Slave	PChannels for cores
pmbirq[8]	Signal	Master	Interrupt signal from the statistical profiling unit.
pmuirq[8]	Signal	Master	Interrupt signal from performance monitoring unit.
presetdbg	Signal	Slave	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	PVBus	Master	The core will generate bus requests on this port.
pvbus_periph_m	PVBus	Master	The core can generate peripheral bus request on this port.
rei[8]	Signal	Slave	Per core RAM Error Interrupt.
reset[8]	Signal	Slave	Raising this signal will put the core into reset mode.

Name	Protocol	Type	Description
rvbaraddr[8]	Value_64	Slave	Reset vector base address.
sci_m	SystemCoherencyInterface	Master	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei[8]	Signal	Slave	Per core System Error physical pins.
spiden	Signal	Slave	External debug interface.
spniden	Signal	Slave	External debug interface.
sporeset	Signal	Slave	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks[8]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq[8]	Signal	Master	Interrupt signal for virtual CPU maintenance IRQ.
vfiq[8]	Signal	Slave	Virtualised FIQ.
vinithi[8]	Signal	Slave	This signal controls of the location of the exception vectors at reset.
virq[8]	Signal	Slave	Virtualised IRQ.
virtio_s	PVBus	Slave	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei[8]	Signal	Slave	Per core virtual System Error physical pins.

## Parameters for ARM CortexX1CCT

### BROADCASTATOMIC

#### Type

bool

#### Default value

0x1

#### Description

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

### BROADCASTCACHEMAINT

#### Type

bool

#### Default value

0x1

#### Description

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

**BROADCASTOUTER****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

**BROADCASTPERSIST****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

**CLUSTER\_ID****Type**

int

**Default value**

0x0

**Description**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled****Type**

int

**Default value**

0x1

**Description**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. Changing this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain CMOs even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are

broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required .

**GICDISABLE****Type**

bool

**Default value**

0x1

**Description**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

**NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores per cluster.

**cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**cpuX.CFGTE****Type**

bool

**Default value**

0x0

**Description**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

**cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**cpuX.VINITHI****Type**

bool

**Default value**

0x0

**Description**

Reset value of SCTLR.V.

**cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-

read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

### **cpuX.l2cache-read\_latency**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

### **cpuX.l2cache-size**

#### **Type**

int

#### **Default value**

0x80000

#### **Description**

L2 Cache size in bytes.

### **cpuX.l2cache-snoop\_data\_transfer\_latency**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

### **cpuX.l2cache-snoop\_issue\_latency**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**cpuX.semihosting-T32\_HLT****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**`cpuX.semihosting-stack_limit`****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**`cpuX.trace_special_hlt_imm16`****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

**`cpuX.vfp-enable_at_reset`****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**`dcache-hit_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

**dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**dcache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

**dcache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**dcache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**dcache-size****Type**

int

**Default value**

0x10000

**Description**

L1 D-Cache size in bytes.

**dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

**`dcache-write_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. `dcache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

**`default_opmode`****Type**

int

**Default value**

0x4

**Description**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

**`diagnostics`****Type**

bool

**Default value**

0x0

**Description**

Enable DynamIQ diagnostic messages.

**`enable_simulation_performance_optimizations`****Type**

bool

**Default value**

0x1

**Description**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

**ext\_abort\_device\_read\_is\_sync****Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRE read external aborts.

**ext\_abort\_device\_write\_is\_sync****Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRE write external aborts.

**ext\_abort\_so\_read\_is\_sync****Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRnE read external aborts.

**ext\_abort\_so\_write\_is\_sync****Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRnE write external aborts.

**force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**has\_acp****Type**

bool

**Default value**

0x0

**Description**

If true, Accelerator Coherency Port is configured.

**has\_coherent\_icache****Type**

bool

**Default value**

0x0

**Description**

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

**has\_dot\_product****Type**

int

**Default value**

0x2

**Description**

Possible values of this parameter are: - 1, feature not implemented. - 2, feature is implemented.

**has\_peripheral\_port****Type**

bool

**Default value**

0x0

**Description**

If true, additional AXI peripheral port is configured.

**icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

**icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state\_modelled=true.

**icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

**icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state\_modelled=true.

**icache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. icache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state\_modelled=true.

**icache-size****Type**

int

**Default value**

0x10000

**Description**

L1 I-Cache size in bytes.

**icache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**invalidate\_code\_cache\_on\_icache\_cmo****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE.  
Note: Enabling this parameter will reduce simulation performance.

**l3cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**l3cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**l3cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**l3cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**l3cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. l3cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**l3cache-size****Type**

int

**Default value**

0x100000

**Description**

L3 Cache size in bytes.

**l3cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**l3cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**l3cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**l3cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**pchannel\_treat\_simreset\_as\_poreset****Type**

bool

**Default value**

0x0

**Description**

Register core as ON state to cluster with simulation reset.

**periph\_address\_end****Type**

int

**Default value**

0x0

**Description**

End address for peripheral port address range exclusive (corresponds to AENDMP input signal).

**`periph_address_start`****Type**

int

**Default value**

0x0

**Description**

Start address for peripheral port address range inclusive (corresponds to ASTARTMP input signal).

**`ptw_latency`****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**`tlb_latency`****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**`tlbi_stall_enabled`****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**treat-dcache-cmos-to-pou-as-nop**

**Type**  
int

**Default value**  
0x0

**Description**  
Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

**treat\_PAC\_as\_NOP**

**Type**  
bool

**Default value**  
0x0

**Description**  
Non-architecture parameter. Treat Pointer Authentication as NOP. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are NOP. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

**walk\_cache\_latency**

**Type**  
int

**Default value**  
0x0

**Description**  
Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

3.5.71 ARMCortexX1CT

ARMCortexX1CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-469: IP revisions support

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

## About ARMCortexX1CT

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- BROADCASTPERSIST pin.

The model does not support the following features:

- BROADCASTCACHEMAINTPOU pin.
- COREINSTRRET, COREINSTRRUN, or nPMBIRQ signals.
- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Debug power management signals DBGPWRDUP and DBGIRSTREQ are not implemented, but DBGPWRUPREQ and DBGNOPWRDWN are implemented.
- Cache stashing capability.
- Each thread has its own L1Cache and L2Cache instead of a common cache that is shared by all threads of the core.
- Per-thread parameters are not yet supported but signals are implemented.

This model has a variable number of cores per cluster, specified using the `NUM_CORES` parameter.

The per-core parameters are preceded by `cpun.`, where n identifies the core (0-3).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

## Iris and MTI instances for ARMCortexX1CT

This model has the following Iris instances:

**Table 3-470: ARMCortexX1CT Iris instances**

InstanceName	ComponentName
ARMCortexX1CT	Cluster_ARM_Cortex-X1
ARMCortexX1CT.AMU	PVBusLogger
ARMCortexX1CT.AMU.mapper	PVBusMapper
ARMCortexX1CT.DAP	PVBusLogger
ARMCortexX1CT.DAP.mapper	PVBusMapper
ARMCortexX1CT.DSU	DSU
ARMCortexX1CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexX1CT.DSU.mpam_busslave	PVBusSlave
ARMCortexX1CT.DSU.shared_cache	PVCache
ARMCortexX1CT.DSU.shared_cache.upstream[0]	PVBusSlave
ARMCortexX1CT.DSU.shared_cache.upstream[1]	PVBusSlave
ARMCortexX1CT.DSU.shared_cache.upstream[2]	PVBusSlave
ARMCortexX1CT.DSU.shared_cache.upstream[3]	PVBusSlave
ARMCortexX1CT.MMAP	PVBusLogger
ARMCortexX1CT.MMAP.mapper	PVBusMapper
ARMCortexX1CT.RAS	PVBusLogger
ARMCortexX1CT.RAS.mapper	PVBusMapper
ARMCortexX1CT.cpu0	ARM_Cortex-X1
ARMCortexX1CT.cpu0.UTLB	TLB
ARMCortexX1CT.cpu0.debug_rom	debug_rom
ARMCortexX1CT.cpu0.dtlb	TLB
ARMCortexX1CT.cpu0.l1dcache	PVCache
ARMCortexX1CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexX1CT.cpu0.l1icache	PVCache
ARMCortexX1CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexX1CT.cpu0.l2cache	PVCache
ARMCortexX1CT.cpu0.l2cache.upstream[0]	PVBusSlave
ARMCortexX1CT.cpu0.l2cache.upstream[1]	PVBusSlave
ARMCortexX1CT.ext_bus	PVBusLogger
ARMCortexX1CT.ext_bus.mapper	PVBusMapper
ARMCortexX1CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexX1CT.global_debug_rom	debug_rom
ARMCortexX1CT.secondary_debug_rom	debug_rom

This model has the following MTI trace components:

**Table 3-471: ARMCortexX1CT MTI instances**

InstanceName	ComponentName
ARMCortexX1CT.AMU	PVBusLogger

InstanceName	ComponentName
ARMCortexX1CT.AMU.mapper	PVBusMapper

## Ports for ARMCortexX1CT

**Table 3-472: Ports**

Name	Protocol	Type	Description
acp_s	PVBus	Slave	AXI ACP slave port.
AENDMP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	Signal	Slave	CHI defined pins.
broadcastcachemaint	Signal	Slave	ACE defined pins.
broadcastouter	Signal	Slave	ACE defined pins.
broadcastpersist	Signal	Slave	CHI defined pins.

Name	Protocol	Type	Description
cfgend[4]	Signal	Slave	This signal is for EE bit initialisation.
cfgsdisable	Signal	Slave	This signal disables write access to some secure Interrupt Controller registers.
cfgte[4]	Signal	Slave	This signal provides default exception handling state.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
clusterid	Value	Slave	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.
clusterpmuirq	Signal	Master	DynamlQ pmu irq
CNTHPIRQ[4]	Signal	Master	Timer signals to SOC.
CNTHVIRQ[4]	Signal	Master	Timer signals to SOC.
CNTPNSIRQ[4]	Signal	Master	Timer signals to SOC.
CNTPSIRQ[4]	Signal	Master	Timer signals to SOC.
cntvalueb	CounterInterface	Slave	Interface to SoC level counter module.
CNTVIRQ[4]	Signal	Master	Timer signals to SOC.
commirq[4]	Signal	Master	Interrupt signal from debug communications channel.
core_clk_in[4]	ClockSignal	Slave	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cpuporeset[4]	Signal	Slave	CPU power on reset. Initializes all the processor logic, including debug logic.
cryptodisable[4]	Signal	Slave	Disable cryptography extensions after reset.
cti[4]	v8EmbeddedCrossTrigger_controlprotocol	Master	Cross trigger matrix port.
ctidbgirq[4]	Signal	Master	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	Signal	Slave	External debug interface.
dbgnopwrdown[4]	Signal	Master	No power-down request.
dbgpwrupreq[4]	Signal	Master	Debug power up request.
dev_debug_s	PVBus	Slave	External debug interface.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.

Name	Protocol	Type	Description
fiq[4]	Signal	Slave	This signal drives the CPUs fast-interrupt handling.
gicv3_redistributor_s[4]	GICv3Comms	Slave	GICv3 AXI-stream port.
irq[4]	Signal	Slave	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	PVBus	Slave	External debug interface.
niden	Signal	Slave	External debug interface.
pchannel_cluster	PChannel	Slave	PChannel for cluster.
pchannel_core[4]	PChannel	Slave	PChannels for cores
pmbirq[4]	Signal	Master	Interrupt signal from the statistical profiling unit.
pmuirq[4]	Signal	Master	Interrupt signal from performance monitoring unit.
presetdbg	Signal	Slave	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	PVBus	Master	The core will generate bus requests on this port.
pvbus_periph_m	PVBus	Master	The core can generate peripheral bus request on this port.
rei[4]	Signal	Slave	Per core RAM Error Interrupt.
reset[4]	Signal	Slave	Raising this signal will put the core into reset mode.
rvbaraddr[4]	Value_64	Slave	Reset vector base address.
sci_m	SystemCoherencyInterface	Master	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei[4]	Signal	Slave	Per core System Error physical pins.
spiden	Signal	Slave	External debug interface.
spniden	Signal	Slave	External debug interface.
sporeset	Signal	Slave	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks[4]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq[4]	Signal	Master	Interrupt signal for virtual CPU maintenance IRQ.
vfiq[4]	Signal	Slave	Virtualised FIQ.
vinithi[4]	Signal	Slave	This signal controls of the location of the exception vectors at reset.
virq[4]	Signal	Slave	Virtualised IRQ.

Name	Protocol	Type	Description
virtio_s	PVBus	Slave	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei[4]	Signal	Slave	Per core virtual System Error physical pins.

## Parameters for ARM CortexX1CT

### BROADCASTATOMIC

#### Type

bool

#### Default value

0x1

#### Description

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

### BROADCASTCACHEMAINT

#### Type

bool

#### Default value

0x1

#### Description

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

### BROADCASTOUTER

#### Type

bool

#### Default value

0x1

#### Description

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

### BROADCASTPERSIST

#### Type

bool

#### Default value

0x1

**Description**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

**CLUSTER\_ID****Type**

int

**Default value**

0x0

**Description**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled****Type**

int

**Default value**

0x1

**Description**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. Changing this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain CMOs even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required .

**GICDISABLE****Type**

bool

**Default value**

0x1

**Description**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

**NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores per cluster.

**cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**cpuX.CFGTE****Type**

bool

**Default value**

0x0

**Description**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

**cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**cpuX.VINITHI****Type**

bool

**Default value**

0x0

**Description**

Reset value of SCTLR.V.

**cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-size`****Type**

int

**Default value**

0x80000

**Description**

L2 Cache size in bytes.

**`cpuX.l2cache-snoop_data_transfer_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-snoop_issue_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-write_access_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**`cpuX.semihosting-ARM_SVC`****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**`cpuX.semihosting-T32_HLT`****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**`cpuX.semihosting-Thumb_SVC`****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**`cpuX.semihosting-cmd_line`****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**`cpuX.semihosting-cwd`****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**`cpuX.trace_special_hlt_imm16`****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

**`cpuX.vfp-enable_at_reset`****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**`dcache-hit_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

**`dcache-maintenance_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

**dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**dcache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

**dcache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**dcache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**dcache-size****Type**

int

**Default value**

0x10000

**Description**

L1 D-Cache size in bytes.

**dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**default\_opmode****Type**

int

**Default value**

0x4

**Description**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

**diagnostics****Type**

bool

**Default value**

0x0

**Description**

Enable DynamIQ diagnostic messages.

**enable\_simulation\_performance\_optimizations****Type**

bool

**Default value**

0x1

**Description**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

**ext\_abort\_device\_read\_is\_sync****Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRE read external aborts.

**ext\_abort\_device\_write\_is\_sync****Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRE write external aborts.

**ext\_abort\_so\_read\_is\_sync****Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRnE read external aborts.

**ext\_abort\_so\_write\_is\_sync****Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRnE write external aborts.

**force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**has\_acp****Type**

bool

**Default value**

0x0

**Description**

If true, Accelerator Coherency Port is configured.

**has\_coherent\_icache****Type**

bool

**Default value**

0x0

**Description**

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

**has\_dot\_product****Type**

int

**Default value**

0x2

**Description**

Possible values of this parameter are: - 1, feature not implemented. - 2, feature is implemented.

**has\_peripheral\_port****Type**

bool

**Default value**

0x0

**Description**

If true, additional AXI peripheral port is configured.

**icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

**icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state\_modelled=true.

**icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

**icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state\_modelled=true.

**icache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. icache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state\_modelled=true.

**icache-size****Type**

int

**Default value**

0x10000

**Description**

L1 I-Cache size in bytes.

**icache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**invalidate\_code\_cache\_on\_icache\_cmo****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

**l3cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

**l3cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

**l3cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**l3cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size `l3cache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**l3cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l3cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**`l3cache-size`****Type**

int

**Default value**

0x100000

**Description**

L3 Cache size in bytes.

**`l3cache-snoop_data_transfer_latency`****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

**`l3cache-snoop_issue_latency`****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

**`l3cache-write_access_latency`****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size `l3cache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be

used instead of per-byte even if l3cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

### **l3cache-write\_latency**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

### **pchannel\_treat\_simreset\_as\_poreset**

#### **Type**

bool

#### **Default value**

0x0

#### **Description**

Register core as ON state to cluster with simulation reset.

### **periph\_address\_end**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

### **periph\_address\_start**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

**ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**treat-dcache-cmos-to-pou-as-nop****Type**

int

**Default value**

0x0

**Description**

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

**walk\_cache\_latency****Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

3.5.72 **ARMCortexX2CT**

ARMCortexX2CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-473: IP revisions support**

Revision	Quality level
r2p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**About ARMCortexX2CT**

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- BROADCASTPERSIST pin.

Support for the following features is planned for a future release:

- BROADCASTCACHEMAINTPOU pin.
- COREINSTRRET, COREINSTRRUN, and nPMBIRQ signals.
- Transporting architectural metadata tags over TLM2 (OSCI) and AMBA-PV (TLM2 extensions from Arm) bus protocols.

The following features will not be implemented:

- 256-bit wide output transactions.
- Error correction/detection features.
- Self-test features (MBIST).
- Snoop filtering.

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (crypto.dll or crypto.so) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

## Iris and MTI instances for ARMCortexX2CT

This model has the following Iris instances:

**Table 3-474: ARMCortexX2CT Iris instances**

InstanceName	ComponentName
ARMCortexX2CT	Cluster_ARM_Cortex-X2
ARMCortexX2CT.AMU	PVBusLogger
ARMCortexX2CT.AMU.mapper	PVBusMapper
ARMCortexX2CT.DAP	PVBusLogger
ARMCortexX2CT.DAP.mapper	PVBusMapper
ARMCortexX2CT.DSU	DSU
ARMCortexX2CT.DSU.PPU_cluster	PPUv1
ARMCortexX2CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexX2CT.DSU.PPU_core0	PPUv1
ARMCortexX2CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexX2CT.DSU.mpam_busslave	PVBusSlave
ARMCortexX2CT.DSU.shared_cache	PVCache
ARMCortexX2CT.DSU.shared_cache.upstream[0]	PVBusSlave
ARMCortexX2CT.DSU.shared_cache.upstream[1]	PVBusSlave
ARMCortexX2CT.DSU.shared_cache.upstream[2]	PVBusSlave
ARMCortexX2CT.DSU.shared_cache.upstream[3]	PVBusSlave
ARMCortexX2CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexX2CT.MMAP	PVBusLogger
ARMCortexX2CT.MMAP.mapper	PVBusMapper
ARMCortexX2CT.RAS	PVBusLogger
ARMCortexX2CT.RAS.mapper	PVBusMapper
ARMCortexX2CT.cpu0	ARM_Cortex-X2
ARMCortexX2CT.cpu0.UTLB	TLB
ARMCortexX2CT.cpu0.debug_rom	debug_rom
ARMCortexX2CT.cpu0.dtlb	TLB
ARMCortexX2CT.cpu0.l1dcache	PVCache
ARMCortexX2CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexX2CT.cpu0.l1licache	PVCache
ARMCortexX2CT.cpu0.l1licache.upstream[0]	PVBusSlave
ARMCortexX2CT.cpu0.l2cache	PVCache
ARMCortexX2CT.cpu0.l2cache.upstream[0]	PVBusSlave
ARMCortexX2CT.cpu0.l2cache.upstream[1]	PVBusSlave
ARMCortexX2CT.ext_bus	PVBusLogger
ARMCortexX2CT.ext_bus.mapper	PVBusMapper
ARMCortexX2CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

InstanceName	ComponentName
ARMCortexX2CT.global_debug_rom	debug_rom
ARMCortexX2CT.secondary_debug_rom	debug_rom
ARMCortexX2CT.sve	ScalableVectorExtension

This model has the following MTI trace components:

ARMCortexX2CT.DSU.shared_cache.upstream[2]	PVBusSlave
ARMCortexX2CT.DSU.shared_cache.upstream[3]	PVBusSlave
ARMCortexX2CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexX2CT.MMAP	PVBusLogger
ARMCortexX2CT.MMAP.mapper	PVBusMapper
ARMCortexX2CT.RAS	PVBusLogger
ARMCortexX2CT.RAS.mapper	PVBusMapper
ARMCortexX2CT.cpu0	ARM_Cortex-X2
ARMCortexX2CT.cpu0.UTLB	TLB
ARMCortexX2CT.cpu0.l1dcache	PVCache
ARMCortexX2CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexX2CT.cpu0.l1licache	PVCache
ARMCortexX2CT.cpu0.l1licache.upstream[0]	PVBusSlave
ARMCortexX2CT.cpu0.l2cache	PVCache
ARMCortexX2CT.cpu0.l2cache.upstream[0]	PVBusSlave
ARMCortexX2CT.cpu0.l2cache.upstream[1]	PVBusSlave
ARMCortexX2CT.ext_bus	PVBusLogger
ARMCortexX2CT.ext_bus.mapper	PVBusMapper
ARMCortexX2CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

## Ports for ARMCortexX2CT

Table 3-476: Ports

Name	Protocol	Type	Description
acp_s	PVBus	Slave	AXI ACP slave port.
AEND0MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	Signal	Slave	CHI defined pins.
broadcastcachemaint	Signal	Slave	ACE defined pins.
broadcastouter	Signal	Slave	ACE defined pins.
broadcastpersist	Signal	Slave	CHI defined pins.
cfgend[12]	Signal	Slave	This signal is for EE bit initialisation.
cfgsdisable	Signal	Slave	This signal disables write access to some secure Interrupt Controller registers.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsn_pchannel	PChannel	Master	Cluster PCSM signal
cluster_powerdown_out	Signal	Master	DEPRECATED - An output from PPUs that informs thermal controller of the cluster power info

Name	Protocol	Type	Description
clusterid	Value	Slave	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.
clusterpmuirq	Signal	Master	DynamlQ pmu irq
CNTHPIRQ[12]	Signal	Master	Timer signals to SOC.
CNTHPSIRQ[12]	Signal	Master	Timer signals to SOC
CNTHVIRQ[12]	Signal	Master	Timer signals to SOC.
CNTHVSIRQ[12]	Signal	Master	Timer signals to SOC
CNTPNSIRQ[12]	Signal	Master	Timer signals to SOC.
CNTPSIRQ[12]	Signal	Master	Timer signals to SOC.
cntvalueb	CounterInterface	Slave	Interface to SoC level counter module.
CNTVIRQ[12]	Signal	Master	Timer signals to SOC.
commirq[12]	Signal	Master	Interrupt signal from debug communications channel.
core_clk_in[12]	ClockSignal	Slave	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsmpchannel[12]	PChannel	Master	Core PCSM signals
core_powerdown_out[12]	Signal	Master	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
coreerrirq[12]	Signal	Master	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq[12]	Signal	Master	Fault indicator for a detected 1 or 2 bit ECC error
cryptodisable[12]	Signal	Slave	Disable cryptography extensions after reset.
cti[12]	v8EmbeddedCrossTrigger_controlprotocol	Master	Cross trigger matrix port.
ctidbgirq[12]	Signal	Master	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	Signal	Slave	External debug interface.
dbgnopwrdown[12]	Signal	Master	No power-down request.
dbgpwrupreq[12]	Signal	Master	Debug power up request.
defaultMP	Signal	Slave	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.

Name	Protocol	Type	Description
dev_debug_s	PVBus	Slave	External debug interface.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
fiq[12]	Signal	Slave	This signal drives the CPUs fast-interrupt handling.
gicreset	Signal	Master	An output from PPU that can be used to reset GICCLK domain components
gicv3_redistributor_s[12]	GICv3Comms	Slave	GICv3 AXI-stream port.
irq[12]	Signal	Slave	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	PVBus	Slave	External debug interface.
pmuirq[12]	Signal	Master	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	Signal	Master	PPU cluster interrupt.
ppu_cluster_wakerequest	Signal	Slave	PPU cluster wake request signal.
ppu_core_irq[12]	Signal	Master	PPU core interrupt.
ppu_core_wakerequest[12]	Signal	Slave	PPU Core wake request signals.
presetdbg	Signal	Slave	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	PVBus	Master	The core will generate bus requests on this port.
pvbus_periph_m	PVBus	Master	The core can generate peripheral bus request on this port.
rei[12]	Signal	Slave	Per core RAM Error Interrupt.
reset	Signal	Slave	Reset signal to cluster.
rvbaraddr[12]	Value_64	Slave	Reset vector base address.
sci_m	SystemCoherencyInterface	Master	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei[12]	Signal	Slave	Per core System Error physical pins.
spiden	Signal	Slave	External debug interface.
ticks[12]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq[12]	Signal	Master	Interrupt signal from the trace buffer unit.
utility_bus_s	PVBus	Slave	Utility bus slave
vcpumntirq[12]	Signal	Master	Interrupt signal for virtual CPU maintenance IRQ.
vfiq[12]	Signal	Slave	Virtualised FIQ.
virq[12]	Signal	Slave	Virtualised IRQ.

Name	Protocol	Type	Description
virtio_s	PVBus	Slave	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei[12]	Signal	Slave	Per core virtual System Error physical pins.

## Parameters for ARM CortexX2CT

### BROADCASTATOMIC

#### Type

bool

#### Default value

0x1

#### Description

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

### BROADCASTCACHEMAINT

#### Type

bool

#### Default value

0x1

#### Description

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

### BROADCASTOUTER

#### Type

bool

#### Default value

0x1

#### Description

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

### BROADCASTPERSIST

#### Type

bool

#### Default value

0x1

**Description**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

**CLUSTER\_ID****Type**

int

**Default value**

0x0

**Description**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled****Type**

int

**Default value**

0x1

**Description**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. Changing this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain CMOs even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required .

**GICDISABLE****Type**

bool

**Default value**

0x1

**Description**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

**NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores per cluster.

**core\_power\_on\_by\_default****Type**

bool

**Default value**

0x0

**Description**

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPU which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

**cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-size****Type**

int

**Default value**

0x80000

**Description**

L2 Cache size in bytes.

**cpuX.l2cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**cpuX.semihosting-T32\_HLT****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**`dcache-prefetch_enabled`****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

**`dcache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**`dcache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**`dcache-snoop_data_transfer_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

**`dcache-state_modelled`****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**`dcache-write_access_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

**`dcache-write_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. `dcache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

**`default_opmode`****Type**

int

**Default value**

0x4

**Description**

Operating mode of DynamlQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

**diagnostics****Type**

bool

**Default value**

0x0

**Description**

Enable DynamlQ diagnostic messages.

**enable\_simulation\_performance\_optimizations****Type**

bool

**Default value**

0x1

**Description**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

**ete.CLAIMTAGS****Type**

int

**Default value**

0x20

**Description**

Number of claim tags.

**ete.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**ete.NumberOfRSPairs****Type**

int

**Default value**

0x8

**Description**

Number of resource selector pairs.

**ete.PIDR\_CM0D****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CM0D value.

**ete.PIDR\_REVAND****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVAND value.

**ete.PIDR\_REVISION****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVISION value.

**ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**ete.RETSTACK****Type**

int

**Default value**

0x3

**Description**

Return stack depth.

**ete.REVISION****Type**

int

**Default value**

0x2

**Description**

TRCIDR1 revision value.

**ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**ete.TRCSRSTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCSRSTA value for a forcibly traced exception.

**ext\_abort\_device\_read\_is\_sync****Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRE read external aborts.

**ext\_abort\_device\_write\_is\_sync****Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRE write external aborts.

**ext\_abort\_so\_read\_is\_sync****Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRnE read external aborts.

**ext\_abort\_so\_write\_is\_sync****Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRnE write external aborts.

**force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**force\_zero\_mpam\_partid\_and\_pmg****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect.  
1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**has\_acp****Type**

bool

**Default value**

0x0

**Description**

If true, Accelerator Coherency Port is configured.

**has\_ete****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**has\_peripheral\_port****Type**

bool

**Default value**

0x0

**Description**

If true, an additional AXI peripheral port is configured.

**icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

**`icache-maintenance_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

**`icache-miss_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

**`icache-prefetch_enabled`****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

**`icache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or

miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

### **`icache-read_latency`**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

### **`icache-state_modelled`**

#### **Type**

bool

#### **Default value**

0x0

#### **Description**

Set whether I-cache has stateful implementation.

### **`invalidate_code_cache_on_icache_cmo`**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

### **`l3cache-hit_latency`**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

**l3cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**l3cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**l3cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**l3cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. l3cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**l3cache-size****Type**

int

**Default value**

0x0

**Description**

L3 Cache size in bytes.

**l3cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**l3cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**l3cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**l3cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**memory\_tagging\_support\_level****Type**

int

**Default value**

0x2

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).

**mpmm\_accumulator\_multiplier****Type**

int

**Default value**

0x1

**Description**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator. A value of n means the accumulator will use (n \* accumulator value) to calculate the mpmm threshold (MPMM). This is provided as a fast model workaround to handle cases where execution of quantum in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

**num\_nodes****Type**

int

**Default value**

0x1

**Description**

Number of transport nodes. Zero implies direct-connect configuration.

**pchannel\_treat\_simreset\_as\_poreset****Type**

bool

**Default value**

0x0

**Description**

Register core as ON state to cluster with simulation reset.

**`periph_address_end`****Type**

int

**Default value**

0x0

**Description**

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

**`periph_address_start`****Type**

int

**Default value**

0x0

**Description**

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

**`ptw_latency`****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**`tlb_latency`****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**`tlbi_stall_enabled`****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**`treat-dcache-cmos-to-pou-as-nop`**

**Type**

int

**Default value**

0x0

**Description**

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

**`walk_cache_latency`**

**Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

**3.5.73 ARMCortexX3CT**

ARMCortexX3CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-477: IP revisions support**

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**About ARMCortexX3CT**

The model supports the following features:

- DynamIQ (DSU) system registers.
- DynamIQ r3p0.

- L2 cache is supported at the per-core level only and there is no implementation of Core-Complex with shared L2 cache yet.
- P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- BROADCASTPERSIST pin.
- Utility bus.
- Support for Interrupt signals from SPE is added as pmbirq[8].

Support for the following features is planned for a future release:

- TRBE.
- Transporting architectural metadata tags over TLM2 (OSCI) and AMBA-PV (TLM2 extensions from Arm) bus protocols.
- Core-Complex.
- BROADCASTCACHEMAINTPOU pin.
- COREINSTRRET, COREINSTRRUN, or nPMBIRQ signals.
- Each thread has its own L1Cache and L2Cache instead of a common cache that is shared by all threads of the core.
- Per-thread parameters are not yet supported but signals are implemented.

Note

The `cfgsdisable` signal will be removed in a future release.

---

The following features will not be implemented:

- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Cache stashing capability.
- Embedded Logic Analyzer (ELA).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (crypto.dll or crypto.so) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

## Limitations

Some of the SVE instructions do not raise undefined exceptions when SP is used as a source register.

## Iris and MTI instances for ARMCortexX3CT

This model has the following Iris instances:

**Table 3-478: ARMCortexX3CT Iris instances**

InstanceName	ComponentName
ARMCortexX3CT	Cluster_ARM_Cortex-X3
ARMCortexX3CT.AMU	PVBusLogger
ARMCortexX3CT.AMU.mapper	PVBusMapper
ARMCortexX3CT.DAP	PVBusLogger
ARMCortexX3CT.DAP.mapper	PVBusMapper
ARMCortexX3CT.DSU	DSU
ARMCortexX3CT.DSU.PPU_cluster	PPUv1
ARMCortexX3CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexX3CT.DSU.PPU_core0	PPUv1
ARMCortexX3CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexX3CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexX3CT.DSU.mpam_busslave	PVBusSlave
ARMCortexX3CT.DSU.shared_cache	PVCache
ARMCortexX3CT.DSU.shared_cache.upstream[0]	PVBusSlave
ARMCortexX3CT.DSU.shared_cache.upstream[1]	PVBusSlave
ARMCortexX3CT.DSU.shared_cache.upstream[2]	PVBusSlave
ARMCortexX3CT.DSU.shared_cache.upstream[3]	PVBusSlave
ARMCortexX3CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexX3CT.MMAP	PVBusLogger
ARMCortexX3CT.MMAP.mapper	PVBusMapper
ARMCortexX3CT.RAS	PVBusLogger
ARMCortexX3CT.RAS.mapper	PVBusMapper
ARMCortexX3CT.cpu0	ARM_Cortex-X3
ARMCortexX3CT.cpu0.UTLB	TLB
ARMCortexX3CT.cpu0.debug_rom	debug_rom
ARMCortexX3CT.cpu0.dtlb	TLB
ARMCortexX3CT.cpu0.l1dcache	PVCache
ARMCortexX3CT.cpu0.l1dcache.upstream[0]	PVBusSlave

InstanceName	ComponentName
ARMCortexX3CT.cpu0.l1icache	PVCache
ARMCortexX3CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexX3CT.cpu0.l2cache	PVCache
ARMCortexX3CT.cpu0.l2cache.upstream[0]	PVBusSlave
ARMCortexX3CT.cpu0.l2cache.upstream[1]	PVBusSlave
ARMCortexX3CT.ext_bus	PVBusLogger
ARMCortexX3CT.ext_bus.mapper	PVBusMapper
ARMCortexX3CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexX3CT.global_debug_rom	debug_rom
ARMCortexX3CT.secondary_debug_rom	debug_rom
ARMCortexX3CT.sve	ScalableVectorExtension

This model has the following MTI trace components:

**Table 3-479: ARMCortexX3CT MTI instances**

InstanceName	ComponentName
ARMCortexX3CT.AMU	PVBusLogger
ARMCortexX3CT.AMU.mapper	PVBusMapper
ARMCortexX3CT.DAP	PVBusLogger
ARMCortexX3CT.DAP.mapper	PVBusMapper
ARMCortexX3CT.DSU	DSU
ARMCortexX3CT.DSU.PPU_cluster	PPUv1
ARMCortexX3CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexX3CT.DSU.PPU_core0	PPUv1
ARMCortexX3CT.DSU.PPU_core0.busslave	PVBusSlave

ARMCortexX3CT.cpu0.UTLB	TLB
ARMCortexX3CT.cpu0.l1dcache	PVCache

InstanceName	ComponentName
ARMCortexX3CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexX3CT.cpu0.l1icache	PVCache
ARMCortexX3CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexX3CT.cpu0.l2cache	PVCache
ARMCortexX3CT.cpu0.l2cache.upstream[0]	PVBusSlave
ARMCortexX3CT.cpu0.l2cache.upstream[1]	PVBusSlave
ARMCortexX3CT.ext_bus	PVBusLogger
ARMCortexX3CT.ext_bus.mapper	PVBusMapper
ARMCortexX3CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

## Ports for ARMCortexX3CT

**Table 3-480: Ports**

Name	Protocol	Type	Description
acp_s	PVBus	Slave	AXI ACP slave port.
AEND0MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	Signal	Slave	CHI defined pins.
broadcastcachemaint	Signal	Slave	ACE defined pins.
broadcastouter	Signal	Slave	ACE defined pins.
broadcastpersist	Signal	Slave	CHI defined pins.
cfgend[12]	Signal	Slave	This signal is for EE bit initialisation.
cfgsdisable	Signal	Slave	This signal disables write access to some secure Interrupt Controller registers.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsn_pchannel	PChannel	Master	Cluster PCSM signal

Name	Protocol	Type	Description
cluster_powerdown_out	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the cluster power info
clusterid	Value	Slave	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.
clusterpmuirq	Signal	Master	DynamlQ pmu irq
CNTHPIRQ[12]	Signal	Master	Timer signals to SOC.
CNTHPSIRQ[12]	Signal	Master	Timer signals to SOC
CNTHVIRQ[12]	Signal	Master	Timer signals to SOC.
CNTHVSIRQ[12]	Signal	Master	Timer signals to SOC
CNTPNSIRQ[12]	Signal	Master	Timer signals to SOC.
CNTPSIRQ[12]	Signal	Master	Timer signals to SOC.
cntvalueb	CounterInterface	Slave	Interface to SoC level counter module.
CNTVIRQ[12]	Signal	Master	Timer signals to SOC.
commirq[12]	Signal	Master	Interrupt signal from debug communications channel.
core_clk_in[12]	ClockSignal	Slave	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsmpchannel[12]	PChannel	Master	Core PCSM signals
core_powerdown_out[12]	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the core power info
coreerrirq[12]	Signal	Master	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq[12]	Signal	Master	Fault indicator for a detected 1 or 2 bit ECC error
cryptodisable[12]	Signal	Slave	Disable cryptography extensions after reset.
cti[12]	v8EmbeddedCrossTrigger_controlprotocol	Master	Cross trigger matrix port.
ctidbgirq[12]	Signal	Master	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	Signal	Slave	External debug interface.
dbgnopwrdown[12]	Signal	Master	No power-down request.
dbgpwrupreq[12]	Signal	Master	Debug power up request.

Name	Protocol	Type	Description
defaultMP	Signal	Slave	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	PVBus	Slave	External debug interface.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
fiq[12]	Signal	Slave	This signal drives the CPUs fast-interrupt handling.
gicreset	Signal	Master	An output from PPU that can be used to reset GICCLK domain components
gicv3_redistributor_s[12]	GICv3Comms	Slave	GICv3 AXI-stream port.
irq[12]	Signal	Slave	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	PVBus	Slave	External debug interface.
pmbirq[12]	Signal	Master	Interrupt signal from the statistical profiling unit.
pmuirq[12]	Signal	Master	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	Signal	Master	PPU cluster interrupt.
ppu_cluster_wakerequest	Signal	Slave	PPU cluster wake request signal.
ppu_core_irq[12]	Signal	Master	PPU core interrupt.
ppu_core_wakerequest[12]	Signal	Slave	PPU Core wake request signals.
presetdbg	Signal	Slave	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	PVBus	Master	The core will generate bus requests on this port.
pvbus_periph_m	PVBus	Master	The core can generate peripheral bus request on this port.
rei[12]	Signal	Slave	Per core RAM Error Interrupt.
reset	Signal	Slave	Reset signal to cluster.
rvbaraddr[12]	Value_64	Slave	Reset vector base address.
sci_m	SystemCoherencyInterface	Master	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei[12]	Signal	Slave	Per core System Error physical pins.
spiden	Signal	Slave	External debug interface.
ticks[12]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq[12]	Signal	Master	Interrupt signal from the trace buffer unit.

Name	Protocol	Type	Description
utility_bus_s	PVBus	Slave	Utility bus slave
vcpumntirq[12]	Signal	Master	Interrupt signal for virtual CPU maintenance IRQ.
vfiq[12]	Signal	Slave	Virtualised FIQ.
virq[12]	Signal	Slave	Virtualised IRQ.
virtio_s	PVBus	Slave	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei[12]	Signal	Slave	Per core virtual System Error physical pins.

## Parameters for ARMCortexX3CT

### AEND0\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

### AEND1\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

### AEND2\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

**AEND3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

**ASTART0\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

**ASTART1\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

**ASTART2\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

**ASTART3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

**BROADCASTATOMIC****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

**BROADCASTCACHEMAJINT****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

**BROADCASTOUTER****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

**BROADCASTPERSIST****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

**CLUSTER\_ID****Type**

int

**Default value**

0x0

**Description**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled****Type**

int

**Default value**

0x1

**Description**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. Changing this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain CMOs even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required .

**CPUCFR****Type**

int

**Default value**

0x0

**Description**

Value of CPU Configuration Register.

**GICDISABLE****Type**

bool

**Default value**

0x1

**Description**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

**NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores per cluster.

**bus\_type****Type**

int

**Default value**

0x0

**Description**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

**core\_power\_on\_by\_default****Type**

bool

**Default value**

0x0

**Description**

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPU which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

**cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**cpuX.CFGTE****Type**

bool

**Default value**

0x0

**Description**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

**cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**cpuX.force-fpsid****Type**

bool

**Default value**

0x1

**Description**

Override the FPSID value.

**cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-size****Type**

int

**Default value**

0x100000

**Description**

L2 Cache size in bytes.

**cpuX.l2cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

**cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**cpuX.semihosting-T32\_HLT****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**dcache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

**dcache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**dcache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**dcache-size****Type**

int

**Default value**

0x8000

**Description**

L1 D-Cache size in bytes.

**dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**default\_opmode****Type**

int

**Default value**

0x4

**Description**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

**diagnostics****Type**

bool

**Default value**

0x0

**Description**

Enable DynamIQ diagnostic messages.

**enable\_simulation\_performance\_optimizations****Type**

bool

**Default value**

0x1

**Description**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

**error\_record\_feature\_register****Type**

string

**Default value**

```
"[{\"ED\":0x2,\"IMPDEF_3_2\":0x0,\"UI\":0x2,\"FI\":0x2,\"UE\":0x1,\"CFI\":0x2,\"CEC\":0x2,
  \"RP\":0x1,\"DUI\":0x0,\"CEO\":0x0,\"INJ\":0x1,\"CI\":0x0,\"TS\":0x0,\"Visibility\": \"Cluster
  \",{\"ED\":0x2,\"IMPDEF_3_2\":0x0,\"UI\":0x2,\"FI\":0x2,\"UE\":0x1,\"CFI\":0x2,\"CEC\":0x2,
  \"RP\":0x1,\"DUI\":0x0,\"CEO\":0x0,\"INJ\":0x1,\"CI\":0x0,\"TS\":0x0}]]"
```

**Description**

RAS feature register values. An array of JSON objects. The JSON schema for the array is:  
 [{"ED":0x0, "IMPDEF\_3\_2":0x0, "UI":0x0, "FI":0x0, "UE":0x0, "CFI":0x0, "CEC":0x0, "RP":0x0, "DUI":0x0, "CEO":0x0, "CI":0x0, "TS":0x0, "INJ":0x0, "FRX":0x0, "UC":0x0, "UEU":0x0, "UER":0x0, "UEO":0x0, "DE":0x0, "CE":0x0, "Visibility": "Core"}, other\_feature\_register\_values].

Where ED,UI,FI,CE and UE have valid values between 0x0 - 0x3. CFI and DUI have valid values 0x0, 0x2 and 0x3. CEC has valid values 0x0,0x2 or 0x4. RP,CEO,INJ,FRX,UC,UEU,UER,UEO,DE has valid values 0x0 or 0x1. CI and TS has valid values of 0x0, 0x1 and 0x2. Visibility has valid values "Core" or "Cluster".

**ete.CLAIMTAGS****Type**

int

**Default value**

0x20

**Description**

Number of claim tags.

**ete.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**ete.NumberOfRSPairs****Type**

int

**Default value**

0x8

**Description**

Number of resource selector pairs.

**ete.PIDR\_CM0D****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CM0D value.

**ete.PIDR\_REVAND****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVAND value.

**ete.PIDR\_REVISION****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVISION value.

**ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**ete.RETSTACK****Type**

int

**Default value**

0x3

**Description**

Return stack depth.

**ete.REVISION****Type**

int

**Default value**

0x0

**Description**

TRCIDR1 revision value.

**ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**ete.TRCSRSTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCRSR.TA value for a forcibly traced exception.

**ext\_abort\_normal\_noncacheable\_read\_is\_sync****Type**

bool

**Default value**

0x1

**Description**

Synchronous reporting of normal noncacheable-read external aborts.

**ext\_abort\_so\_write\_ras\_type****Type**

int

**Default value**

0x2

**Description**

External Aborts are reported as RAS error type specified in this param. Values: 0 = NONE, 1 = UC, 2 = UEU, 3 = UEO , 4 = UER, 5 = CE.

**force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**`force_zero_mpam_partid_and_pmg`****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**`has_enhanced_pan`****Type**

int

**Default value**

0x2

**Description**

Implements Armv8.7 Enhanced PAN feature (FEAT\_PAN3) Possible values of this parameter are: - 1, feature is implemented if ARMv8.7 is enabled. - 2, feature is implemented.

**`has_ete`****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**`has_large_va`****Type**

int

**Default value**

0x0

**Description**

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT\_LVA).

Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.2 is enabled. - 2, feature is implemented.

**has\_peripheral\_port****Type**

bool

**Default value**

0x0

**Description**

If true, an additional AXI peripheral port is configured.

**icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

**icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state\_modelled=true.

**icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

**icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state\_modelled=true.

**icache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. icache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state\_modelled=true.

**icache-size****Type**

int

**Default value**

0x8000

**Description**

L1 I-Cache size in bytes.

**icache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**instruction\_tlb\_size****Type**

int

**Default value**

0x0

**Description**

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

**invalidate\_code\_cache\_on\_icache\_cmo****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE.  
Note: Enabling this parameter will reduce simulation performance.

**l3cache-has\_mpam****Type**

bool

**Default value**

0x1

**Description**

L3 Cache has MPAM support.

**l3cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

**l3cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

**l3cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**l3cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size `l3cache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**l3cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l3cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**`l3cache-size`****Type**

int

**Default value**

0x40000

**Description**

L3 Cache size in bytes.

**`l3cache-snoop_data_transfer_latency`****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

**`l3cache-snoop_issue_latency`****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

**`l3cache-ways`****Type**

int

**Default value**

0x10

**Description**

L3 Cache number of ways (sets are implicit from size).

**l3cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**l3cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**memory\_tagging\_support\_level****Type**

int

**Default value**

0x3

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

**mpmm\_accumulator\_multiplier****Type**

int

**Default value**

0x1

**Description**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator. A value of n means the accumulator will use (n \* accumulator value) to calculate the mpmm threshold (MPMM). This is provided as a fast model workaround to handle cases

where execution of quantum in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

### **num\_nodes**

#### **Type**

int

#### **Default value**

0x1

#### **Description**

Number of transport nodes. Zero implies direct-connect configuration.

### **pmu-num\_counters**

#### **Type**

int

#### **Default value**

0x6

#### **Description**

Number of PMU counters implemented.

### **pseudo\_fault\_generation\_feature\_register**

#### **Type**

string

#### **Default value**

```
"[{\"OF\":true, \"UC\":true, \"UEU\":false, \"UER\":false, \"UEO\":false, \"DE\":0x1, \"CE\":0x1,
\"CI\":true, \"ER\":false, \"PN\":true, \"AV\":false, \"MV\":true, \"SYN\":true, \"R\":true},{\"OF
\":false, \"UC\":true, \"UEU\":false, \"UER\":false, \"UEO\":false, \"DE\":0x1, \"CE\":0x1, \"CI
\":false, \"ER\":false, \"PN\":false, \"AV\":false, \"MV\":false, \"SYN\":false, \"R\":true}]"
```

#### **Description**

ARMv8.4 Standard Pseudo-fault generation feature register values. JSON schema for the parameter value is: [{"OF":false, "UC":false, "UEU":false, "UER":false, "UEO":false, "DE":false, "CE":0x0, "CI":false, "ER":false, "PN":false, "AV":false, "MV":false, "SYN":false, "R":false, "NA":false}, other\_pseudo-fault\_generating\_features\_register\_values]. Where OF, UC, UEU, UER, UEO, DE, CI, ER, PN, AV, MV, SYN, and R have valid false(NOT\_SUPPORTED) and true(FEATURE\_CONTROLLABLE), where CE can have 0(NOT\_SUPPORTED), 1(NONSPECIFIC\_CE\_SUPPORTED) and 3(TRANSIENT\_OR\_PERSISTENT\_CE\_SUPPORTED) and NA can have false(component fakes detection on next access) or true(component fakes detection spontaneously). Effective only when ERXFR's INJ field allows it or has\_ras\_fault\_injection is true.

### **ptw\_latency**

#### **Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**stage12\_tlb\_size****Type**

int

**Default value**

0x80

**Description**

Number of stage1+2 tlb entries.

**tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**trace\_physical\_registers\_when\_host\_virtualisation\_enabled****Type**

int

**Default value**

0x1

**Description**

When host virtualisation is enabled, trace sysreg accesses to physical register accessed (0=disabled, 1=Trace only ELR/SPSR\_EL1 as ELR/SPSR\_EL2, 2=Trace all redirected registers as physical registers.

**treat\_PAC\_as\_NOP**

**Type**  
bool

**Default value**  
0x0

**Description**  
Non-architecture parameter. Treat Pointer Authentication as NOP. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are NOP. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

**walk\_cache\_latency**

**Type**  
int

**Default value**  
0x0

**Description**  
Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

3.5.74 ARMCortexX4CT

ARMCortexX4CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-481: IP revisions support

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

About ARMCortexX4CT

The model supports the following features:

- DynamIQ (DSU) system registers.
- DynamIQ r3p0.
- L2 cache is supported at the per-core level only and there is no implementation of Core-Complex with shared L2 cache yet.
- P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.

- Per-core clock.
- `BROADCASTPERSIST` pin.
- Utility bus.
- Support for Interrupt signals from SPE is added as `pmbirq[8]`.

Support for the following features is planned for a future release:

- Transporting architectural metadata tags over TLM2 (OSCI) and AMBA-PV (TLM2 extensions from Arm) bus protocols.
- `BROADCASTCACHEMAINTPOU` pin.
- `COREINSTRRET`, `COREINSTRRUN`, and `nPMBIRQ` signals.
- Each thread has its own L1Cache and L2Cache instead of a common cache that is shared by all threads of the core.
- Per-thread parameters are not supported but signals are implemented.

The `cfgsdisable` signal will be removed in a future release.

---

The following features will not be implemented:

- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Cache stashing capability.
- Embedded Logic Analyzer (ELA).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

## Limitations

Some of the SVE instructions do not raise undefined exceptions when SP is used as a source register.

## Iris and MTI instances for ARMCortexX4CT

This model has the following Iris instances:

**Table 3-482: ARMCortexX4CT Iris instances**

InstanceName	ComponentName
ARMCortexX4CT	Cluster_ARM_Cortex-X4
ARMCortexX4CT.AMU	PVBusLogger
ARMCortexX4CT.AMU.mapper	PVBusMapper
ARMCortexX4CT.DAP	PVBusLogger
ARMCortexX4CT.DAP.mapper	PVBusMapper
ARMCortexX4CT.DSU	DSU
ARMCortexX4CT.DSU.PPU_cluster	PPUv1
ARMCortexX4CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexX4CT.DSU.PPU_core0	PPUv1
ARMCortexX4CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexX4CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexX4CT.DSU.mpam_busslave	PVBusSlave
ARMCortexX4CT.DSU.shared_cache	PVCache
ARMCortexX4CT.DSU.shared_cache.upstream[0]	PVBusSlave
ARMCortexX4CT.DSU.shared_cache.upstream[1]	PVBusSlave
ARMCortexX4CT.DSU.shared_cache.upstream[2]	PVBusSlave
ARMCortexX4CT.DSU.shared_cache.upstream[3]	PVBusSlave
ARMCortexX4CT.DSU.shared_cache.upstream[4]	PVBusSlave
ARMCortexX4CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexX4CT.MMAP	PVBusLogger
ARMCortexX4CT.MMAP.mapper	PVBusMapper
ARMCortexX4CT.RAS	PVBusLogger
ARMCortexX4CT.RAS.mapper	PVBusMapper
ARMCortexX4CT.cpu0	ARM_Cortex-X4

## Ports for ARMCortexX4CT

**Table 3-484: Ports**

Name	Protocol	Type	Description
acp_s[2]	PVBus	Slave	AXI ACP slave port.
AEND0MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	Signal	Slave	CHI defined pins.
broadcastcachemaint	Signal	Slave	ACE defined pins.
broadcastouter	Signal	Slave	ACE defined pins.
broadcastpersist	Signal	Slave	CHI defined pins.
cfgend[14]	Signal	Slave	This signal is for EE bit initialisation.
cfgsdisable	Signal	Slave	This signal disables write access to some secure Interrupt Controller registers.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsn_pchannel	PChannel	Master	Cluster PCSM signal
cluster_powerdown_out	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the cluster power info

Name	Protocol	Type	Description
clusterid	Value	Slave	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.
clusterpmuirq	Signal	Master	DynamlQ pmu irq
CNTHPIRQ[14]	Signal	Master	Timer signals to SOC.
CNTHPSIRQ[14]	Signal	Master	Timer signals to SOC
CNTHVIRQ[14]	Signal	Master	Timer signals to SOC.
CNTHVSIRQ[14]	Signal	Master	Timer signals to SOC
CNTPNSIRQ[14]	Signal	Master	Timer signals to SOC.
CNTPSIRQ[14]	Signal	Master	Timer signals to SOC.
cntvalueb	CounterInterface	Slave	Interface to SoC level counter module.
CNTVIRQ[14]	Signal	Master	Timer signals to SOC.
commirq[14]	Signal	Master	Interrupt signal from debug communications channel.
core_clk_in[14]	ClockSignal	Slave	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsmpchannel[14]	PChannel	Master	Core PCSM signals
core_powerdown_out[14]	Signal	Master	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
coreerrirq[14]	Signal	Master	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq[14]	Signal	Master	Fault indicator for a detected 1 or 2 bit ECC error
cryptodisable[14]	Signal	Slave	Disable cryptography extensions after reset.
cti[14]	v8EmbeddedCrossTrigger_controlprotocol	Master	Cross trigger matrix port.
ctidbgirq[14]	Signal	Master	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	Signal	Slave	External debug interface.
dbgnopwrdown[14]	Signal	Master	No power-down request.
dbgpwrupreq[14]	Signal	Master	Debug power up request.
defaultMP	Signal	Slave	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.

Name	Protocol	Type	Description
dev_debug_s	PVBus	Slave	External debug interface.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
fiq[14]	Signal	Slave	This signal drives the CPUs fast-interrupt handling.
gicreset	Signal	Master	An output from PPU that can be used to reset GICCLK domain components
gicv3_redistributor_s[14]	GICv3Comms	Slave	GICv3 AXI-stream port.
irq[14]	Signal	Slave	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	PVBus	Slave	External debug interface.
pmbirq[14]	Signal	Master	Interrupt signal from the statistical profiling unit.
pmuirq[14]	Signal	Master	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	Signal	Master	PPU cluster interrupt.
ppu_cluster_wakerequest	Signal	Slave	PPU cluster wake request signal.
ppu_core_irq[14]	Signal	Master	PPU core interrupt.
ppu_core_wakerequest[14]	Signal	Slave	PPU core wake request signal.
presetdbg	Signal	Slave	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	PVBus	Master	The core will generate bus requests on this port.
pvbus_periph_m	PVBus	Master	The core can generate peripheral bus request on this port.
rei[14]	Signal	Slave	Per core RAM Error Interrupt.
reset	Signal	Slave	Reset signal to cluster.
rvbaraddr[14]	Value_64	Slave	Reset vector base address.
sci_m	SystemCoherencyInterface	Master	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei[14]	Signal	Slave	Per core System Error physical pins.
spiden	Signal	Slave	External debug interface.
ticks[14]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq[14]	Signal	Master	Interrupt signal from the trace buffer unit.
utility_bus_s	PVBus	Slave	Utility bus slave
vcpumntirq[14]	Signal	Master	Interrupt signal for virtual CPU maintenance IRQ.

Name	Protocol	Type	Description
vfiq[14]	Signal	Slave	Virtualised FIQ.
virq[14]	Signal	Slave	Virtualised IRQ.
virtio_s	PVBus	Slave	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei[14]	Signal	Slave	Per core virtual System Error physical pins.

## Parameters for ARMCortexX4CT

### AEND0\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

### AEND1\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

### AEND2\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

### AEND3\_DEFAULT

#### Type

int

**Default value**

0x0

**Description**

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

**ASTART0\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

**ASTART1\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

**ASTART2\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

**ASTART3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

**BROADCASTATOMIC****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

**BROADCASTCACHEMAINT****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

**BROADCASTOUTER****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

**BROADCASTPERSIST****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

**CLUSTER\_ID****Type**

int

**Default value**

0x0

**Description**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled****Type**

int

**Default value**

0x1

**Description**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. Changing this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain CMOs even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required .

**CPUCFR****Type**

int

**Default value**

0x0

**Description**

Value of CPU Configuration Register.

**GICDISABLE****Type**

bool

**Default value**

0x1

**Description**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

**NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores per cluster.

**bus\_type****Type**

int

**Default value**

0x0

**Description**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

**core\_power\_on\_by\_default****Type**

bool

**Default value**

0x0

**Description**

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPU which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

**cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**cpuX.CFGTE****Type**

bool

**Default value**

0x0

**Description**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

**cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-size`****Type**

int

**Default value**

0x80000

**Description**

L2 Cache size in bytes.

**`cpuX.l2cache-snoop_data_transfer_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-snoop_issue_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-ways`****Type**

int

**Default value**

0x8

**Description**

L2 Cache number of ways (sets are implicit from size).

**`cpuX.l2cache-write_access_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-write_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

**`cpuX.max_code_cache_mb`****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**cpuX.semihosting-T32\_HLT****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**dcache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

**dcache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**dcache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**dcache-size****Type**

int

**Default value**

0x10000

**Description**

L1 D-Cache size in bytes.

**dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**default\_opmode****Type**

int

**Default value**

0x4

**Description**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

**diagnostics****Type**

bool

**Default value**

0x0

**Description**

Enable DynamIQ diagnostic messages.

**ecv\_support\_level****Type**

int

**Default value**

0x2

**Description**

Implement Enhanced Counter Virtualization feature from ARMv8.6. 0, Not supported. 1, fully supported without CNTPOFF. 2, fully supported with CNTPOFF (FEAT\_ECV).

**enable\_simulation\_performance\_optimizations****Type**

bool

**Default value**

0x1

**Description**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

**ete.CLAIMTAGS****Type**

int

**Default value**

0x4

**Description**

Number of claim tags.

**ete.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**ete.NumberOfRSPairs****Type**

int

**Default value**

0x8

**Description**

Number of resource selector pairs.

**ete.PIDR\_CM0D****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CM0D value.

**ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**ete.RETSTACK****Type**

int

**Default value**

0x3

**Description**

Return stack depth.

**ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**ete.TRCRSRTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCRSR.TA value for a forcibly traced exception.

**ext\_abort\_so\_write\_ras\_type****Type**

int

**Default value**

0x2

**Description**

External Aborts are reported as RAS error type specified in this param. Values: 0 = NONE, 1 = UC, 2 = UEU, 3 = UEO , 4 = UER, 5 = CE.

**force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**`force_zero_mpam_partid_and_pmg`****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**`has_enhanced_pan`****Type**

int

**Default value**

0x2

**Description**

Implements Armv8.7 Enhanced PAN feature (FEAT\_PAN3) Possible values of this parameter are: - 1, feature is implemented if ARMv8.7 is enabled. - 2, feature is implemented.

**`has_ete`****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**`has_peripheral_port`****Type**

bool

**Default value**

0x0

**Description**

If true, an additional AXI peripheral port is configured.

**has\_statistical\_profiling****Type**

bool

**Default value**

0x1

**Description**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

**has\_v8\_7\_spe\_inverted\_filtering****Type**

bool

**Default value**

0x0

**Description**

Where FEAT\_SPEv1p2 is implemented, whether inverted filtering by events is implemented (represented by PMISDR.FnE).

**has\_v8\_7\_spe\_previous\_branch\_target****Type**

bool

**Default value**

0x0

**Description**

Where FEAT\_SPEv1p2 is implemented, whether the optional branch target feature is implemented (FEAT\_SPE\_PBT).

**icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

**`icache-miss_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

**`icache-prefetch_enabled`****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

**`icache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

**`icache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

**`icache-size`****Type**

int

**Default value**

0x10000

**Description**

L1 I-Cache size in bytes.

**`icache-state_modelled`****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**`instruction_tlb_size`****Type**

int

**Default value**

0x0

**Description**

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

**`invalidate_code_cache_on_icache_cmo`****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

**l3cache-size****Type**

int

**Default value**

0x80000

**Description**

L3 Cache size in bytes.

**l3cache-ways****Type**

int

**Default value**

0x10

**Description**

L3 Cache number of ways (sets are implicit from size).

**log2\_trace\_buffer\_alignment****Type**

int

**Default value**

0x6

**Description**

Log2 of trace buffer alignment constraint for output buffer (0-&gt;1B ... 11-&gt;2Kib).

**memory\_tagging\_support\_level****Type**

int

**Default value**

0x3

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

**mpam\_has\_altsp****Type**

bool

**Default value**

0x0

**Description**

MPAM Whether MPAMIDR\_EL1.HAS\_ALTSP bit is set or clear.

**mpamidr\_has\_force\_ns****Type**

int

**Default value**

0x0

**Description**

Whether MPAMIDR\_EL1.HAS\_FORCE\_NS bit is set or clear. Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.6 is enabled. - 2, feature is implemented.

**mpamidr\_has\_sdeflt****Type**

int

**Default value**

0x1

**Description**

Whether MPAMIDR\_EL1.HAS\_SDEFLT bit is set or clear. Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.6 is enabled. - 2, feature is implemented.

**mpamidr\_has\_tidr****Type**

int

**Default value**

0x1

**Description**

Whether MPAMIDR\_EL1.HAS\_TIDR bit is set or clear Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.6 is enabled. - 2, feature is implemented.

**mpmm\_accumulator\_multiplier****Type**

int

**Default value**

0x1

**Description**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator. A value of n means the accumulator will use (n \* accumulator value) to calculate

the mpmm threshold (MPMM). This is provided as a fast model workaround to handle cases where execution of quantums in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

**num\_acp****Type**

int

**Default value**

0x0

**Description**

Number of ACP ports.

**num\_nodes****Type**

int

**Default value**

0x1

**Description**

Number of transport nodes. Zero implies direct-connect configuration.

**pmu-num\_counters****Type**

int

**Default value**

0x1f

**Description**

Number of PMU counters implemented.

**ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**stage12\_tlb\_size****Type**

int

**Default value**

0x80

**Description**

Number of stage1+2 tlb entries.

**tcr\_txsz\_undersize\_should\_fault****Type**

bool

**Default value**

0x0

**Description**

If large VA is not supported, Whether undersized TxSZ value should generate translation fault.

**tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**treat\_PAC\_as\_NOP****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter. Treat Pointer Authentication as NOP. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\*

instructions are NOP. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAAuth traps.

**walk\_cache\_latency**

**Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

3.5.75 **ARMCortexX925CT**

ARMCortexX925CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-485: IP revisions support**

Revision	Quality level
r0p0	Preliminary support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**About ARMCortexX925CT**

A DSU-120 DynamIQ cluster containing a configurable number of Cortex-X925 cores.

The number of cores in the cluster is configurable using the following parameter:

**NUM\_CORES**

Possible values are 1-14

The following DSU/CPU features will not be implemented:

- DynamIQ features that are irrelevant to the programmers’ view simulation.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Snoop filtering.
- Cache stashing capability.
- Embedded Logic Analyzer (ELA).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

## Iris and MTI instances for ARMCortexX925CT

This model has the following Iris instances:

**Table 3-486: ARMCortexX925CT Iris instances**

InstanceName	ComponentName
ARMCortexX925CT	Cluster_ARM_Cortex-X925
ARMCortexX925CT.AMU	PVBusLogger
ARMCortexX925CT.AMU.mapper	PVBusMapper
ARMCortexX925CT.DAP	PVBusLogger
ARMCortexX925CT.DAP.mapper	PVBusMapper
ARMCortexX925CT.DSU	DSU
ARMCortexX925CT.DSU.PPU_cluster	PPUv1
ARMCortexX925CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexX925CT.DSU.PPU_core0	PPUv1
ARMCortexX925CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexX925CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexX925CT.DSU.mpam_busslave	PVBusSlave
ARMCortexX925CT.DSU.shared_cache	PVCache
ARMCortexX925CT.DSU.shared_cache.upstream[0]	PVBusSlave
ARMCortexX925CT.DSU.shared_cache.upstream[1]	PVBusSlave
ARMCortexX925CT.DSU.shared_cache.upstream[2]	PVBusSlave
ARMCortexX925CT.DSU.shared_cache.upstream[3]	PVBusSlave
ARMCortexX925CT.DSU.shared_cache.upstream[4]	PVBusSlave
ARMCortexX925CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexX925CT.MMAP	PVBusLogger
ARMCortexX925CT.MMAP.mapper	PVBusMapper
ARMCortexX925CT.RAS	PVBusLogger
ARMCortexX925CT.RAS.mapper	PVBusMapper
ARMCortexX925CT.cpu0	ARM_Cortex-X925
ARMCortexX925CT.cpu0.UTLB	TLB
ARMCortexX925CT.cpu0.debug_rom	debug_rom
ARMCortexX925CT.cpu0.dtlb	TLB
ARMCortexX925CT.cpu0.l1dcache	PVCache
ARMCortexX925CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexX925CT.cpu0.l1icache	PVCache
ARMCortexX925CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexX925CT.cpu0.l2cache	PVCache
ARMCortexX925CT.cpu0.l2cache.upstream[0]	PVBusSlave
ARMCortexX925CT.cpu0.l2cache.upstream[1]	PVBusSlave
ARMCortexX925CT.ext_bus	PVBusLogger

InstanceName	ComponentName
ARMCortexX925CT.ext_bus.mapper	PVBusMapper
ARMCortexX925CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMCortexX925CT.global_debug_rom	debug_rom
ARMCortexX925CT.secondary_debug_rom	debug_rom
ARMCortexX925CT.sve	ScalableVectorExtension

This model has the following MTI trace components:

**Table 3-487: ARMCortexX925CT MTI instances**

InstanceName	ComponentName
ARMCortexX925CT.AMU	PVBusLogger
ARMCortexX925CT.AMU.mapper	PVBusMapper
ARMCortexX925CT.DAP	PVBusLogger
ARMCortexX925CT.DAP.mapper	PVBusMapper
ARMCortexX925CT.DSU	DSU
ARMCortexX925CT.DSU.PPU_cluster	PPUv1
ARMCortexX925CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMCortexX925CT.DSU.PPU_core0	PPUv1
ARMCortexX925CT.DSU.PPU_core0.busslave	PVBusSlave
ARMCortexX925CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMCortexX925CT.DSU.mpam_busslave	PVBusSlave
ARMCortexX925CT.DSU.shared_cache	PVCache
ARMCortexX925CT.DSU.shared_cache.upstream[0]	PVBusSlave

ARMCortexX925CT.DSU.shared_cache.upstream[3]	PVBusSlave
ARMCortexX925CT.DSU.shared_cache.upstream[4]	PVBusSlave
ARMCortexX925CT.DSU.utility_slave[0]	PVBusSlave
ARMCortexX925CT.MMAP	PVBusLogger
ARMCortexX925CT.MMAP.mapper	PVBusMapper
ARMCortexX925CT.RAS	PVBusLogger
ARMCortexX925CT.RAS.mapper	PVBusMapper
ARMCortexX925CT.cpu0	ARM_Cortex-X925
ARMCortexX925CT.cpu0.UTLB	TLB
ARMCortexX925CT.cpu0.l1dcache	PVCache
ARMCortexX925CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMCortexX925CT.cpu0.l1icache	PVCache
ARMCortexX925CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMCortexX925CT.cpu0.l2cache	PVCache
ARMCortexX925CT.cpu0.l2cache.upstream[0]	PVBusSlave

InstanceName	ComponentName
ARMCortexX925CT.cpu0.l2cache.upstream[1]	PVBusSlave
ARMCortexX925CT.ext_bus	PVBusLogger
ARMCortexX925CT.ext_bus.mapper	PVBusMapper
ARMCortexX925CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

## Ports for ARMCortexX925CT

**Table 3-488: Ports**

Name	Protocol	Type	Description
acp_s[2]	PVBus	Slave	AXI ACP slave port.
AEND0MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	Signal	Slave	CHI defined pins.
broadcastcachemaint	Signal	Slave	ACE defined pins.
broadcastouter	Signal	Slave	ACE defined pins.
broadcastpersist	Signal	Slave	CHI defined pins.
cfgend[14]	Signal	Slave	This signal is for EE bit initialisation.
cfgsdisable	Signal	Slave	This signal disables write access to some secure Interrupt Controller registers.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsn_pchannel	PChannel	Master	Cluster PCSM signal
cluster_powerdown_out	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the cluster power info

Name	Protocol	Type	Description
clusterid	Value	Slave	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.
clusterpmuirq	Signal	Master	DynamlQ pmu irq
CNTHPIRQ[14]	Signal	Master	Timer signals to SOC.
CNTHPSIRQ[14]	Signal	Master	Timer signals to SOC
CNTHVIRQ[14]	Signal	Master	Timer signals to SOC.
CNTHVSIRQ[14]	Signal	Master	Timer signals to SOC
CNTPNSIRQ[14]	Signal	Master	Timer signals to SOC.
CNTPSIRQ[14]	Signal	Master	Timer signals to SOC.
cntvalueb	CounterInterface	Slave	Interface to SoC level counter module.
CNTVIRQ[14]	Signal	Master	Timer signals to SOC.
commirq[14]	Signal	Master	Interrupt signal from debug communications channel.
core_clk_in[14]	ClockSignal	Slave	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsmpchannel[14]	PChannel	Master	Core PCSM signals
core_powerdown_out[14]	Signal	Master	DEPRECATED - An output from PPUs that informs thermal controller of the core power info
coreerrirq[14]	Signal	Master	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq[14]	Signal	Master	Fault indicator for a detected 1 or 2 bit ECC error
cryptodisable[14]	Signal	Slave	Disable cryptography extensions after reset.
cti[14]	v8EmbeddedCrossTrigger_controlprotocol	Master	Cross trigger matrix port.
ctidbgirq[14]	Signal	Master	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	Signal	Slave	External debug interface.
dbgnopwrdown[14]	Signal	Master	No power-down request.
dbgpwrupreq[14]	Signal	Master	Debug power up request.
defaultMP	Signal	Slave	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.

Name	Protocol	Type	Description
dev_debug_s	PVBus	Slave	External debug interface.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
fiq[14]	Signal	Slave	This signal drives the CPUs fast-interrupt handling.
gicreset	Signal	Master	An output from PPU that can be used to reset GICCLK domain components
gicv3_redistributor_s[14]	GICv3Comms	Slave	GICv3 AXI-stream port.
irq[14]	Signal	Slave	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	PVBus	Slave	External debug interface.
pmbirq[14]	Signal	Master	Interrupt signal from the statistical profiling unit.
pmuirq[14]	Signal	Master	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	Signal	Master	PPU cluster interrupt.
ppu_cluster_wakerequest	Signal	Slave	PPU cluster wake request signal.
ppu_core_irq[14]	Signal	Master	PPU core interrupt.
ppu_core_wakerequest[14]	Signal	Slave	PPU core wake request signal.
presetdbg	Signal	Slave	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	PVBus	Master	The core will generate bus requests on this port.
pvbus_periph_m	PVBus	Master	The core can generate peripheral bus request on this port.
rei[14]	Signal	Slave	Per core RAM Error Interrupt.
reset	Signal	Slave	Reset signal to cluster.
rvbaraddr[14]	Value_64	Slave	Reset vector base address.
sci_m	SystemCoherencyInterface	Master	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei[14]	Signal	Slave	Per core System Error physical pins.
spiden	Signal	Slave	External debug interface.
ticks[14]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq[14]	Signal	Master	Interrupt signal from the trace buffer unit.
utility_bus_s	PVBus	Slave	Utility bus slave
vcpumntirq[14]	Signal	Master	Interrupt signal for virtual CPU maintenance IRQ.

Name	Protocol	Type	Description
vfiq[14]	Signal	Slave	Virtualised FIQ.
virq[14]	Signal	Slave	Virtualised IRQ.
virtio_s	PVBus	Slave	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei[14]	Signal	Slave	Per core virtual System Error physical pins.

## Parameters for ARMCortexX925CT

### AEND0\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

### AEND1\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

### AEND2\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

### AEND3\_DEFAULT

#### Type

int

**Default value**

0x0

**Description**

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

**ASTART0\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

**ASTART1\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

**ASTART2\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

**ASTART3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

**BROADCASTATOMIC****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

**BROADCASTCACHEMAINT****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

**BROADCASTOUTER****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

**BROADCASTPERSIST****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

**CLUSTER\_ID****Type**

int

**Default value**

0x0

**Description**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled****Type**

int

**Default value**

0x1

**Description**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. Changing this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain CMOs even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required .

**CPUCFR****Type**

int

**Default value**

0x0

**Description**

Value of CPU Configuration Register.

**GICDISABLE****Type**

bool

**Default value**

0x1

**Description**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

**NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores per cluster.

**bus\_type****Type**

int

**Default value**

0x0

**Description**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

**core\_power\_on\_by\_default****Type**

bool

**Default value**

0x0

**Description**

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPU which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

**cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**cpuX.CFGTE****Type**

bool

**Default value**

0x0

**Description**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

**cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-size`****Type**

int

**Default value**

0x80000

**Description**

L2 Cache size in bytes.

**`cpuX.l2cache-snoop_data_transfer_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-snoop_issue_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-ways`****Type**

int

**Default value**

0x8

**Description**

L2 Cache number of ways (sets are implicit from size).

**`cpuX.l2cache-write_access_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-write_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. `l2cache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

**`cpuX.max_code_cache_mb`****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**cpuX.semihosting-T32\_HLT****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**dcache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

**dcache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**dcache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**dcache-size****Type**

int

**Default value**

0x10000

**Description**

L1 D-Cache size in bytes.

**dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**default\_opmode****Type**

int

**Default value**

0x4

**Description**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

**diagnostics****Type**

bool

**Default value**

0x0

**Description**

Enable DynamIQ diagnostic messages.

**ecv\_support\_level****Type**

int

**Default value**

0x2

**Description**

Implement Enhanced Counter Virtualization feature from ARMv8.6. 0, Not supported. 1, fully supported without CNTPOFF. 2, fully supported with CNTPOFF (FEAT\_ECV).

**enable\_simulation\_performance\_optimizations****Type**

bool

**Default value**

0x1

**Description**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

**ete.CLAIMTAGS****Type**

int

**Default value**

0x4

**Description**

Number of claim tags.

**ete.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**ete.NumberOfRSPairs****Type**

int

**Default value**

0x8

**Description**

Number of resource selector pairs.

**ete.PIDR\_CM0D****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CM0D value.

**ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**ete.RETSTACK****Type**

int

**Default value**

0x3

**Description**

Return stack depth.

**ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**ete.TRCRSRTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCRSR.TA value for a forcibly traced exception.

**ext\_abort\_so\_write\_ras\_type****Type**

int

**Default value**

0x2

**Description**

External Aborts are reported as RAS error type specified in this param. Values: 0 = NONE, 1 = UC, 2 = UEU, 3 = UEO, 4 = UER, 5 = CE.

**force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**`force_zero_mpam_partid_and_pmg`****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**`has_enhanced_pan`****Type**

int

**Default value**

0x2

**Description**

Implements Armv8.7 Enhanced PAN feature (FEAT\_PAN3) Possible values of this parameter are: - 1, feature is implemented if ARMv8.7 is enabled. - 2, feature is implemented.

**`has_ete`****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**`has_mt_pmu_disable_feature`****Type**

int

**Default value**

0x0

**Description**

Implements Multi-threading PMU disable extension from ARMv8.6 (FEAT\_MTPMU). 0: FEAT\_MTPMU is disabled, 1: FEAT\_MTPMU is enabled if ARMv8.6 is implemented, 2:

FEAT\_MTPMU is cherry-picked, 0xF: The feature is disabled and is represented by value 0xF in ID\_AA64DFR0\_EL1.MTPMU.

**has\_peripheral\_port****Type**

bool

**Default value**

0x0

**Description**

If true, an additional AXI peripheral port is configured.

**has\_statistical\_profiling****Type**

bool

**Default value**

0x1

**Description**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

**has\_v8\_7\_spe\_inverted\_filtering****Type**

bool

**Default value**

0x0

**Description**

Where FEAT\_SPEv1p2 is implemented, whether inverted filtering by events is implemented (represented by PMISDR.FnE).

**has\_v8\_7\_spe\_previous\_branch\_target****Type**

bool

**Default value**

0x0

**Description**

Where FEAT\_SPEv1p2 is implemented, whether the optional branch target feature is implemented (FEAT\_SPE\_PBT).

**icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

**`icache-maintenance_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

**`icache-miss_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

**`icache-prefetch_enabled`****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

**`icache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

**`icache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

**`icache-size`****Type**

int

**Default value**

0x10000

**Description**

L1 I-Cache size in bytes.

**`icache-state_modelled`****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**`instruction_tlb_size`****Type**

int

**Default value**

0x0

**Description**

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

**invalidate\_code\_cache\_on\_icache\_cmo****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE.  
Note: Enabling this parameter will reduce simulation performance.

**l3cache-size****Type**

int

**Default value**

0x80000

**Description**

L3 Cache size in bytes.

**l3cache-ways****Type**

int

**Default value**

0x10

**Description**

L3 Cache number of ways (sets are implicit from size).

**log2\_trace\_buffer\_alignment****Type**

int

**Default value**

0x6

**Description**

Log2 of trace buffer alignment constraint for output buffer (0-&gt;1B ... 11-&gt;2Kib).

**memory\_tagging\_support\_level****Type**

int

**Default value**

0x3

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

**mpam\_has\_altsp****Type**

bool

**Default value**

0x0

**Description**

MPAM Whether MPAMIDR\_EL1.HAS\_ALTSP bit is set or clear.

**mpamidr\_has\_force\_ns****Type**

int

**Default value**

0x0

**Description**

Whether MPAMIDR\_EL1.HAS\_FORCE\_NS bit is set or clear. Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.6 is enabled. - 2, feature is implemented.

**mpamidr\_has\_sdeflt****Type**

int

**Default value**

0x1

**Description**

Whether MPAMIDR\_EL1.HAS\_SDEFLT bit is set or clear. Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.6 is enabled. - 2, feature is implemented.

**mpamidr\_has\_tidr****Type**

int

**Default value**

0x1

**Description**

Whether MPAMIDR\_EL1.HAS\_TIDR bit is set or clear Possible values of this parameter are:  
- 0, feature is not enabled. - 1, feature is implemented if ARMv8.6 is enabled. - 2, feature is implemented.

**mpmm\_accumulator\_multiplier****Type**

int

**Default value**

0x1

**Description**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator. A value of n means the accumulator will use (n \* accumulator value) to calculate the mpmm threshold (MPMM). This is provided as a fast model workaround to handle cases where execution of quantum in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

**num\_acp****Type**

int

**Default value**

0x0

**Description**

Number of ACP ports.

**num\_nodes****Type**

int

**Default value**

0x1

**Description**

Number of transport nodes. Zero implies direct-connect configuration.

**pmu-num\_counters****Type**

int

**Default value**

0x1f

**Description**

Number of PMU counters implemented.

**ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**stage12\_tlb\_size****Type**

int

**Default value**

0x80

**Description**

Number of stage1+2 tlb entries.

**tcr\_txsz\_undersize\_should\_fault****Type**

bool

**Default value**

0x0

**Description**

If large VA is not supported, Whether undersized TxSZ value should generate translation fault.

**tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**`treat_PAC_as_NOP`**

**Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter. Treat Pointer Authentication as NOP. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are NOP. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

**`walk_cache_latency`**

**Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

**3.5.76 ARMNeoverseE1CT**

ARMNeoverseE1CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-489: IP revisions support

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**About ARMNeoverseE1CT**

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.

- L3 cache partition.
- Per-core clock.
- BROADCASTPERSIST pin.

The model does not support the following features:

- BROADCASTCACHEMAINTPOU pin.
- COREINSTRRET, COREINSTRRUN, or nPMBIRQ signals.
- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Debug power management signals DBGWRDUP and DBGRSTREQ are not implemented, but DBGWRUPREQ and DBGNOPWRDWN are implemented.
- Cache stashing capability.
- Each thread has its own L1Cache and L2Cache instead of a common cache that is shared by all threads of the core.
- Per-thread parameters are not yet supported but signals are implemented.

This model has a variable number of cores per cluster, specified using the `NUM_CORES` parameter.

The per-core parameters are preceded by `cpun.`, where `n` identifies the core (0-3).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

## Iris and MTI instances for ARMNeoverseE1CT

This model has the following Iris instances:

**Table 3-490: ARMNeoverseE1CT Iris instances**

InstanceName	ComponentName
ARMNeoverseE1CT	Cluster_ARM_Neoverse-E1
ARMNeoverseE1CT.AMU	PVBusLogger
ARMNeoverseE1CT.AMU.mapper	PVBusMapper
ARMNeoverseE1CT.DAP	PVBusLogger
ARMNeoverseE1CT.DAP.mapper	PVBusMapper

InstanceName	ComponentName
ARMNeoverseE1CT.DSU	DSU
ARMNeoverseE1CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMNeoverseE1CT.DSU.mpam_busslave	PVBusSlave
ARMNeoverseE1CT.DSU.shared_cache	PVCache
ARMNeoverseE1CT.DSU.shared_cache.upstream[0]	PVBusSlave
ARMNeoverseE1CT.DSU.shared_cache.upstream[1]	PVBusSlave
ARMNeoverseE1CT.DSU.shared_cache.upstream[2]	PVBusSlave
ARMNeoverseE1CT.DSU.shared_cache.upstream[3]	PVBusSlave
ARMNeoverseE1CT.MMAP	PVBusLogger
ARMNeoverseE1CT.MMAP.mapper	PVBusMapper
ARMNeoverseE1CT.RAS	PVBusLogger
ARMNeoverseE1CT.RAS.mapper	PVBusMapper
ARMNeoverseE1CT.cpu0.dtlb	TLB
ARMNeoverseE1CT.cpu0.thread0	ARM_Neoverse-E1
ARMNeoverseE1CT.cpu0.thread0.UTLB	TLB
ARMNeoverseE1CT.cpu0.thread0.l1dcache	PVCache
ARMNeoverseE1CT.cpu0.thread0.l1dcache.upstream[0]	PVBusSlave
ARMNeoverseE1CT.cpu0.thread0.l1licache	PVCache
ARMNeoverseE1CT.cpu0.thread0.l1licache.upstream[0]	PVBusSlave
ARMNeoverseE1CT.cpu0.thread0.l2cache	PVCache
ARMNeoverseE1CT.cpu0.thread0.l2cache.upstream[0]	PVBusSlave
ARMNeoverseE1CT.cpu0.thread0.l2cache.upstream[1]	PVBusSlave
ARMNeoverseE1CT.cpu0.thread1	ARM_Neoverse-E1
ARMNeoverseE1CT.cpu0.thread1.UTLB	TLB
ARMNeoverseE1CT.ext_bus	PVBusLogger
ARMNeoverseE1CT.ext_bus.mapper	PVBusMapper
ARMNeoverseE1CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMNeoverseE1CT.global_debug_rom	debug_rom

This model has the following MTI trace components:

**Table 3-491: ARMNeoverseE1CT MTI instances**

InstanceName	ComponentName
ARMNeoverseE1CT.AMU	PVBusLogger
ARMNeoverseE1CT.AMU.mapper	PVBusMapper
ARMNeoverseE1CT.DAP	PVBusLogger
ARMNeoverseE1CT.DAP.mapper	PVBusMapper
ARMNeoverseE1CT.DSU	DSU
ARMNeoverseE1CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMNeoverseE1CT.DSU.mpam_busslave	PVBusSlave

InstanceName	ComponentName
ARMNeoverseE1CT.DSU.shared_cache	PVCache
ARMNeoverseE1CT.DSU.shared_cache.upstream[0]	PVBusSlave
ARMNeoverseE1CT.DSU.shared_cache.upstream[1]	PVBusSlave
ARMNeoverseE1CT.DSU.shared_cache.upstream[2]	PVBusSlave
ARMNeoverseE1CT.DSU.shared_cache.upstream[3]	PVBusSlave

## Ports for ARMNeoverseE1CT

**Table 3-492: Ports**

Name	Protocol	Type	Description
acp_s	PVBus	Slave	AXI ACP slave port
AENDMP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	Signal	Slave	CHI defined pins.
broadcastcachemaint	Signal	Slave	ACE defined pins.
broadcastouter	Signal	Slave	ACE defined pins.
broadcastpersist	Signal	Slave	CHI defined pins.
cfgend[16]	Signal	Slave	This signal if for EE bit initialisation.
cfgsdisable	Signal	Slave	This signal disables write access to some secure Interrupt Controller registers.

Name	Protocol	Type	Description
cfgte[16]	Signal	Slave	This signal provides default exception handling state.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
clusterid	Value	Slave	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.
clusterpmuirq	Signal	Master	DynamlQ pmu irq
CNTHPIRQ[16]	Signal	Master	Timer signals to SOC.
CNTHVIRQ[16]	Signal	Master	Timer signals to SOC.
CNTPNSIRQ[16]	Signal	Master	Timer signals to SOC.
CNTPSIRQ[16]	Signal	Master	Timer signals to SOC.
cntvalueb	CounterInterface	Slave	Interface to SoC level counter module.
CNTVIRQ[16]	Signal	Master	Timer signals to SOC.
commirq[16]	Signal	Master	Interrupt signal from debug communications channel.
core_clk_in[8]	ClockSignal	Slave	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cp15sdisable[16]	Signal	Slave	This signal disables write access to some system control processor registers.
cpuporeset[8]	Signal	Slave	Power on reset. Initializes all the processor logic, including debug logic.
cryptodisable[16]	Signal	Slave	Disable cryptography extensions after reset.
cti[16]	v8EmbeddedCrossTrigger_controlprotocol	Master	Cross trigger matrix port.
ctidbgirq[16]	Signal	Master	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	Signal	Slave	External debug interface.
dbgnopwrdown[16]	Signal	Master	These signals relate to core power down.
dbgpwrupreq[16]	Signal	Master	Debug power up request.
dev_debug_s	PVBus	Slave	External debug interface.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
fiq[16]	Signal	Slave	This signal drives the CPUs fast-interrupt handling.

Name	Protocol	Type	Description
gicv3_redistributor_s[16]	GICv3Comms	Slave	GICv3 AXI-stream port per thread.
irq[16]	Signal	Slave	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	PVBus	Slave	External debug interface.
niden	Signal	Slave	External debug interface.
pchannel_cluster	PChannel	Slave	PChannel for cluster.
pchannel_core[8]	PChannel	Slave	PChannels for cores
pmuirq[16]	Signal	Master	Interrupt signal from performance monitoring unit.
presetdbg	Signal	Slave	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	PVBus	Master	The core will generate bus requests on this port.
pvbus_periph_m	PVBus	Master	The core can generate peripheral bus request on this port.
rei[16]	Signal	Slave	Per core RAM Error Interrupt.
reset[8]	Signal	Slave	Raising this signal will put the core into reset mode.
rvbaraddr[16]	Value_64	Slave	Reset vector base address.
sci_m	SystemCoherencyInterface	Master	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei[16]	Signal	Slave	Per core virtual System Error physical pins.
spiden	Signal	Slave	External debug interface.
spniden	Signal	Slave	External debug interface.
sporeset	Signal	Slave	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks[16]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq[16]	Signal	Master	Interrupt signal for virtual CPU maintenance IRQ.
vfiq[16]	Signal	Slave	Virtualised FIQ.
vinithi[16]	Signal	Slave	This signal controls of the location of the exception vectors at reset.
virq[16]	Signal	Slave	Virtualised IRQ.
virtio_s	PVBus	Slave	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei[16]	Signal	Slave	Per core virtual System Error physical pins.

## Parameters for ARMNeoverseE1CT

### **BROADCASTATOMIC**

**Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

### **BROADCASTCACHEMAINT**

**Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

### **BROADCASTOUTER**

**Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

### **BROADCASTPERSIST**

**Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

**CLUSTER\_ID****Type**

int

**Default value**

0x0

**Description**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled****Type**

int

**Default value**

0x1

**Description**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. Changing this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain CMOs even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required .

**GICDISABLE****Type**

bool

**Default value**

0x1

**Description**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

**NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores per cluster.

**cluster\_patch\_level****Type**

int

**Default value**

0x0

**Description**

Cosmetic change to patch number in CLUSTERIDR. Corresponds to the Y in rXpY.

**cluster\_revision\_number****Type**

int

**Default value**

0x0

**Description**

Cosmetic change to revision number in CLUSTERIDR, Corresponds to the X in rXpY.

**cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**cpuX.enable\_single\_thread\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable single thread after reset and keep other thread in reset.

**cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-size****Type**

int

**Default value**

0x40000

**Description**

L2 Cache size in bytes.

**cpuX.l2cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**cpuX.semihosting-T32\_HLT****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**cpuX.threadY.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**cpuX.threadY.CFGTE****Type**

bool

**Default value**

0x0

**Description**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

**cpuX.threadY.MPIDR-override****Type**

int

**Default value**

0x0

**Description**

Override MPIDR value. A nonzero value will override the MT,cluster,cpu,thread ID bits in MPIDR.

**cpuX.threadY.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**cpuX.threadY.VINITHI****Type**

bool

**Default value**

0x0

**Description**

Reset value of SCTLR.V.

**cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**`dcache-prefetch_enabled`****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

**`dcache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**`dcache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**`dcache-size`****Type**

int

**Default value**

0x10000

**Description**

L1 D-Cache size in bytes.

**dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**default\_opmode****Type**

int

**Default value**

0x4

**Description**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

**diagnostics****Type**

bool

**Default value**

0x0

**Description**

Enable DynamIQ diagnostic messages.

**enable\_simulation\_performance\_optimizations****Type**

bool

**Default value**

0x1

**Description**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

**force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**has\_acp****Type**

bool

**Default value**

0x0

**Description**

If true, Accelerator Coherency Port is configured.

**has\_dot\_product****Type**

int

**Default value**

0x2

**Description**

Possible values of this parameter are: - 1, feature not implemented. - 2, feature is implemented.

**has\_peripheral\_port****Type**

bool

**Default value**

0x0

**Description**

If true, additional AXI peripheral port is configured.

**icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

**icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state\_modelled=true.

**icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

**icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state\_modelled=true.

**icache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. icache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state\_modelled=true.

**icache-size****Type**

int

**Default value**

0x10000

**Description**

L1 I-Cache size in bytes.

**icache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**invalidate\_code\_cache\_on\_icache\_cmo****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE.  
Note: Enabling this parameter will reduce simulation performance.

**l3cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**l3cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

**l3cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**l3cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size `l3cache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l3cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**l3cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l3cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**l3cache-size****Type**

int

**Default value**

0x400000

**Description**

L3 Cache size in bytes.

**l3cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**l3cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**l3cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**l3cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**pchannel\_treat\_simreset\_as\_poreset****Type**

bool

**Default value**

0x0

**Description**

Register core as ON state to cluster with simulation reset.

**periph\_address\_end****Type**

int

**Default value**

0x0

**Description**

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

**periph\_address\_start****Type**

int

**Default value**

0x0

**Description**

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

**ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**tlb\_latency****Type**

int

**Default value**

0x0

**Description**  
TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**tlbi\_stall\_enabled**

**Type**  
bool

**Default value**  
0x0

**Description**  
If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**walk\_cache\_latency**

**Type**  
int

**Default value**  
0x0

**Description**  
Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

3.5.77 ARMNeoverseN1CT

ARMNeoverseN1CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-493: IP revisions support

Revision	Quality level
r4p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

About ARMNeoverseN1CT

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.

- BROADCASTPERSIST pin.

The model does not support the following features:

- BROADCASTCACHEMAINTPOU pin.
- COREINSTRRET, COREINSTRRUN, or nPMBIRQ signals.
- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Latency configuration.
- Snoop filtering.
- Debug power management signals DBGWRUP and DBGRSTREQ are not implemented, but DBGWRUPREQ and DBGNOPWRDN are implemented.
- Cache stashing capability.

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (crypto.dll or crypto.so) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

## Iris and MTI instances for ARMNeoverseN1CT

This model has the following Iris instances:

**Table 3-494: ARMNeoverseN1CT Iris instances**

InstanceName	ComponentName
ARMNeoverseN1CT	Cluster_ARM_Neoverse-N1
ARMNeoverseN1CT.AMU	PVBusLogger
ARMNeoverseN1CT.AMU.mapper	PVBusMapper
ARMNeoverseN1CT.DAP	PVBusLogger
ARMNeoverseN1CT.DAP.mapper	PVBusMapper
ARMNeoverseN1CT.DSU	DSU
ARMNeoverseN1CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMNeoverseN1CT.DSU.mpam_busslave	PVBusSlave
ARMNeoverseN1CT.DSU.shared_cache	PVCache
ARMNeoverseN1CT.DSU.shared_cache.upstream[0]	PVBusSlave
ARMNeoverseN1CT.DSU.shared_cache.upstream[1]	PVBusSlave
ARMNeoverseN1CT.DSU.shared_cache.upstream[2]	PVBusSlave
ARMNeoverseN1CT.DSU.shared_cache.upstream[3]	PVBusSlave
ARMNeoverseN1CT.MMAP	PVBusLogger

InstanceName	ComponentName
ARMNeoverseN1CT.MMAP.mapper	PVBusMapper
ARMNeoverseN1CT.RAS	PVBusLogger
ARMNeoverseN1CT.RAS.mapper	PVBusMapper
ARMNeoverseN1CT.cpu0	ARM_Neoverse-N1
ARMNeoverseN1CT.cpu0.UTLB	TLB
ARMNeoverseN1CT.cpu0.debug_rom	debug_rom
ARMNeoverseN1CT.cpu0.dtlb	TLB
ARMNeoverseN1CT.cpu0.l1dcache	PVCache
ARMNeoverseN1CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMNeoverseN1CT.cpu0.l1icache	PVCache
ARMNeoverseN1CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMNeoverseN1CT.cpu0.l2cache	PVCache
ARMNeoverseN1CT.cpu0.l2cache.upstream[0]	PVBusSlave
ARMNeoverseN1CT.cpu0.l2cache.upstream[1]	PVBusSlave
ARMNeoverseN1CT.ext_bus	PVBusLogger
ARMNeoverseN1CT.ext_bus.mapper	PVBusMapper
ARMNeoverseN1CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMNeoverseN1CT.global_debug_rom	debug_rom
ARMNeoverseN1CT.secondary_debug_rom	debug_rom

This model has the following MTI trace components:

**Table 3-495: ARMNeoverseN1CT MTI instances**

InstanceName	ComponentName
ARMNeoverseN1CT.AMU	PVBusLogger
ARMNeoverseN1CT.AMU.mapper	PVBusMapper
ARMNeoverseN1CT.DAP	PVBusLogger
ARMNeoverseN1CT.DAP.mapper	PVBusMapper
ARMNeoverseN1CT.DSU	DSU
ARMNeoverseN1CT.DSU.l3_flusher	AsyncCacheFlushUnit
ARMNeoverseN1CT.DSU.mpam_busslave	PVBusSlave
ARMNeoverseN1CT.DSU.shared_cache	PVCache
ARMNeoverseN1CT.DSU.shared_cache.upstream[0]	PVBusSlave
ARMNeoverseN1CT.DSU.shared_cache.upstream[1]	PVBusSlave
ARMNeoverseN1CT.DSU.shared_cache.upstream[2]	PVBusSlave
ARMNeoverseN1CT.DSU.shared_cache.upstream[3]	PVBusSlave
ARMNeoverseN1CT.MMAP	PVBusLogger
ARMNeoverseN1CT.MMAP.mapper	PVBusMapper
ARMNeoverseN1CT.RAS	PVBusLogger
ARMNeoverseN1CT.RAS.mapper	PVBusMapper

InstanceName	ComponentName
ARMNeoverseN1CT.cpu0	ARM_Neoverse-N1
ARMNeoverseN1CT.cpu0.UTLB	TLB
ARMNeoverseN1CT.cpu0.l1dcache	PVCache
ARMNeoverseN1CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMNeoverseN1CT.cpu0.l1icache	PVCache
ARMNeoverseN1CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMNeoverseN1CT.cpu0.l2cache	PVCache
ARMNeoverseN1CT.cpu0.l2cache.upstream[0]	PVBusSlave
ARMNeoverseN1CT.cpu0.l2cache.upstream[1]	PVBusSlave
ARMNeoverseN1CT.ext_bus	PVBusLogger
ARMNeoverseN1CT.ext_bus.mapper	PVBusMapper
ARMNeoverseN1CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

## Ports for ARMNeoverseN1CT

**Table 3-496: Ports**

Name	Protocol	Type	Description
acp_s	PVBus	Slave	AXI ACP slave port.
AENDMP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	Signal	Slave	CHI defined pins.
broadcastcachemaint	Signal	Slave	ACE defined pins.
broadcastouter	Signal	Slave	ACE defined pins.
broadcastpersist	Signal	Slave	CHI defined pins.
cfgend[4]	Signal	Slave	This signal is for EE bit initialisation.
cfgsdisable	Signal	Slave	This signal disables write access to some secure Interrupt Controller registers.
cfgte[4]	Signal	Slave	This signal provides default exception handling state.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.

Name	Protocol	Type	Description
clusterid	Value	Slave	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.
clusterpmuirq	Signal	Master	DynamlQ pmu irq
CNTHPIRQ[4]	Signal	Master	Timer signals to SOC.
CNTHVIRQ[4]	Signal	Master	Timer signals to SOC.
CNTPNSIRQ[4]	Signal	Master	Timer signals to SOC.
CNTPSIRQ[4]	Signal	Master	Timer signals to SOC.
cntvalueb	CounterInterface	Slave	Interface to SoC level counter module.
CNTVIRQ[4]	Signal	Master	Timer signals to SOC.
commirq[4]	Signal	Master	Interrupt signal from debug communications channel.
core_clk_in[4]	ClockSignal	Slave	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cpuporeset[4]	Signal	Slave	CPU power on reset. Initializes all the processor logic, including debug logic.
cryptodisable[4]	Signal	Slave	Disable cryptography extensions after reset.
cti[4]	v8EmbeddedCrossTrigger_controlprotocol	Master	Cross trigger matrix port.
ctidbgirq[4]	Signal	Master	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	Signal	Slave	External debug interface.
dbgnopwrdown[4]	Signal	Master	No power-down request.
dbgpwrupreq[4]	Signal	Master	Debug power up request.
dev_debug_s	PVBus	Slave	External debug interface.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
fiq[4]	Signal	Slave	This signal drives the CPUs fast-interrupt handling.
gicv3_redistributor_s[4]	GICv3Comms	Slave	GICv3 AXI-stream port.
irq[4]	Signal	Slave	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	PVBus	Slave	External debug interface.
niden	Signal	Slave	External debug interface.
pchannel_cluster	PChannel	Slave	PChannel for cluster.

Name	Protocol	Type	Description
pchannel_core[4]	PChannel	Slave	PChannels for cores
pmbirq[4]	Signal	Master	Interrupt signal from the statistical profiling unit.
pmuirq[4]	Signal	Master	Interrupt signal from performance monitoring unit.
presetdbg	Signal	Slave	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	PVBus	Master	The core will generate bus requests on this port.
pvbus_periph_m	PVBus	Master	The core can generate peripheral bus request on this port.
rei[4]	Signal	Slave	Per core RAM Error Interrupt.
reset[4]	Signal	Slave	Raising this signal will put the core into reset mode.
rvbaraddr[4]	Value_64	Slave	Reset vector base address.
sci_m	SystemCoherencyInterface	Master	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei[4]	Signal	Slave	Per core System Error physical pins.
spiden	Signal	Slave	External debug interface.
spniden	Signal	Slave	External debug interface.
sporeset	Signal	Slave	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks[4]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq[4]	Signal	Master	Interrupt signal for virtual CPU maintenance IRQ.
vfiq[4]	Signal	Slave	Virtualised FIQ.
vinithi[4]	Signal	Slave	This signal controls of the location of the exception vectors at reset.
virq[4]	Signal	Slave	Virtualised IRQ.
virtio_s	PVBus	Slave	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei[4]	Signal	Slave	Per core virtual System Error physical pins.

## Parameters for ARMNeoverseN1CT

### BROADCASTATOMIC

#### Type

bool

**Default value**

0x1

**Description**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

**BROADCASTCACHEMAINT****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

**BROADCASTOUTER****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

**BROADCASTPERSIST****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

**CLUSTER\_ID****Type**

int

**Default value**

0x0

**Description**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled****Type**

int

**Default value**

0x1

**Description**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. Changing this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain CMOs even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required .

**GICDISABLE****Type**

bool

**Default value**

0x1

**Description**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

**NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores per cluster.

**cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**`cpi_mul`****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**`cpuX.CFGEND`****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**`cpuX.CFGTE`****Type**

bool

**Default value**

0x0

**Description**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

**`cpuX.CRYPTODISABLE`****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**`cpuX.RVBARADDR`****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**cpuX.VINITHI****Type**

bool

**Default value**

0x0

**Description**

Reset value of SCTLR.V.

**cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**cpuX.l2cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-size****Type**

int

**Default value**

0x80000

**Description**

L2 Cache size in bytes.

**cpuX.l2cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**`cpuX.semihosting-T32_HLT`****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**`cpuX.semihosting-Thumb_SVC`****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**`cpuX.semihosting-cmd_line`****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**`cpuX.semihosting-cwd`****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**`cpuX.semihosting-enable`****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**dcache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

**dcache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**dcache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**default\_opmode****Type**

int

**Default value**

0x4

**Description**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

**diagnostics****Type**

bool

**Default value**

0x0

**Description**

Enable DynamIQ diagnostic messages.

**enable\_simulation\_performance\_optimizations****Type**

bool

**Default value**

0x1

**Description**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

**ext\_abort\_device\_read\_is\_sync****Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRE read external aborts.

**ext\_abort\_device\_write\_is\_sync****Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRE write external aborts.

**ext\_abort\_so\_read\_is\_sync****Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRnE read external aborts.

**ext\_abort\_so\_write\_is\_sync****Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRnE write external aborts.

**force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**has\_acp****Type**

bool

**Default value**

0x0

**Description**

If true, Accelerator Coherency Port is configured.

**has\_coherent\_icache****Type**

bool

**Default value**

0x0

**Description**

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

**has\_peripheral\_port****Type**

bool

**Default value**

0x0

**Description**

If true, additional AXI peripheral port is configured.

**has\_statistical\_profiling****Type**

bool

**Default value**

0x1

**Description**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

**icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

**icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state\_modelled=true.

**icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

**icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state\_modelled=true.

**icache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. icache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state\_modelled=true.

**icache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**invalidate\_code\_cache\_on\_icache\_cmo****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE.  
Note: Enabling this parameter will reduce simulation performance.

**l3cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**l3cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**l3cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**l3cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**l3cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. l3cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**l3cache-size****Type**

int

**Default value**

0x100000

**Description**

L3 Cache size in bytes.

**l3cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**l3cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**l3cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**l3cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**pchannel\_treat\_simreset\_as\_poreset****Type**

bool

**Default value**

0x0

**Description**

Register core as ON state to cluster with simulation reset.

**periph\_address\_end****Type**

int

**Default value**

0x0

**Description**

End address for peripheral port address range exclusive (corresponds to AENDMP input signal).

**`periph_address_start`****Type**

int

**Default value**

0x0

**Description**

Start address for peripheral port address range inclusive (corresponds to ASTARTMP input signal).

**`ptw_latency`****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**`tlb_latency`****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**`tlbi_stall_enabled`****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**treat-dcache-cmos-to-pou-as-nop**

**Type**

int

**Default value**

0x0

**Description**

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

**walk\_cache\_latency**

**Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

**3.5.78 ARMNeoverseN2CT**

ARMNeoverseN2CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-497: IP revisions support**

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**About ARMNeoverseN2CT**

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- BROADCASTPERSIST pin.

Support for the following features is planned for a future release:

- DynamIQ Shared Unit-110 (DSU-110) system registers.
- BROADCASTCACHEMAINTPOU pin
- COREINSTRRET, COREINSTRRUN, and nPMBIRQ signals
- DSU-110 cluster. The implementation relies on DynamIQ only.
- TRBE.
- Transporting architectural metadata tags over TLM2 (OSCI) and AMBA-PV (the Arm TLM2 extensions) bus protocols.

The following features will not be implemented:

- 256-bit wide output transactions.
- Error correction/detection features.
- Self-test features (MBIST).
- Snoop filtering.
- Armv9 trace extensions.

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (crypto.dll or crypto.so) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

## Iris and MTI instances for ARMNeoverseN2CT

This model has the following Iris instances:

**Table 3-498: ARMNeoverseN2CT Iris instances**

InstanceName	ComponentName
ARMNeoverseN2CT	Cluster_ARM_Neoverse-N2
ARMNeoverseN2CT.AMU	PVBusLogger
ARMNeoverseN2CT.AMU.mapper	PVBusMapper
ARMNeoverseN2CT.DAP	PVBusLogger
ARMNeoverseN2CT.DAP.mapper	PVBusMapper
ARMNeoverseN2CT.DSU	DSU
ARMNeoverseN2CT.DSU.PPU_cluster	PPUv1
ARMNeoverseN2CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMNeoverseN2CT.DSU.PPU_core0	PPUv1
ARMNeoverseN2CT.DSU.PPU_core0.busslave	PVBusSlave
ARMNeoverseN2CT.DSU.mpam_busslave	PVBusSlave
ARMNeoverseN2CT.DSU.shared_cache	PVCache
ARMNeoverseN2CT.DSU.shared_cache.upstream[0]	PVBusSlave
ARMNeoverseN2CT.DSU.shared_cache.upstream[1]	PVBusSlave
ARMNeoverseN2CT.DSU.shared_cache.upstream[2]	PVBusSlave

InstanceName	ComponentName
ARMNeoverseN2CT.DSU.shared_cache.upstream[3]	PVBusSlave
ARMNeoverseN2CT.DSU.utility_slave[0]	PVBusSlave
ARMNeoverseN2CT.MMAP	PVBusLogger
ARMNeoverseN2CT.MMAP.mapper	PVBusMapper
ARMNeoverseN2CT.RAS	PVBusLogger
ARMNeoverseN2CT.RAS.mapper	PVBusMapper
ARMNeoverseN2CT.cpu0	ARM_Neoverse-N2
ARMNeoverseN2CT.cpu0.UTLB	TLB
ARMNeoverseN2CT.cpu0.debug_rom	debug_rom
ARMNeoverseN2CT.cpu0.dtlb	TLB
ARMNeoverseN2CT.cpu0.l1dcache	PVCache
ARMNeoverseN2CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMNeoverseN2CT.cpu0.l1icache	PVCache
ARMNeoverseN2CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMNeoverseN2CT.cpu0.l2cache	PVCache
ARMNeoverseN2CT.cpu0.l2cache.upstream[0]	PVBusSlave
ARMNeoverseN2CT.cpu0.l2cache.upstream[1]	PVBusSlave
ARMNeoverseN2CT.default_CTM	EmbeddedCT
ARMNeoverseN2CT.ext_bus	PVBusLogger
ARMNeoverseN2CT.ext_bus.mapper	PVBusMapper
ARMNeoverseN2CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMNeoverseN2CT.global_debug_rom	debug_rom
ARMNeoverseN2CT.secondary_debug_rom	debug_rom
ARMNeoverseN2CT.sve	ScalableVectorExtension

This model has the following MTI trace components:

**Table 3-499: ARMNeoverseN2CT MTI instances**

InstanceName	ComponentName
ARMNeoverseN2CT.AMU	PVBusLogger
ARMNeoverseN2CT.AMU.mapper	PVBusMapper
ARMNeoverseN2CT.DAP	PVBusLogger
ARMNeoverseN2CT.DAP.mapper	PVBusMapper
ARMNeoverseN2CT.DSU	DSU

ARMNeoverseN2CT.cpu0.l1dcache	PVCache
ARMNeoverseN2CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMNeoverseN2CT.cpu0.l1icache	PVCache
ARMNeoverseN2CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMNeoverseN2CT.cpu0.l2cache	PVCache
ARMNeoverseN2CT.cpu0.l2cache.upstream[0]	PVBusSlave
ARMNeoverseN2CT.cpu0.l2cache.upstream[1]	PVBusSlave
ARMNeoverseN2CT.ext_bus	PVBusLogger
ARMNeoverseN2CT.ext_bus.mapper	PVBusMapper
ARMNeoverseN2CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

## Ports for ARMNeoverseN2CT

**Table 3-500: Ports**

Name	Protocol	Type	Description
acp_s	PVBus	Slave	AXI ACP slave port.
AEND0MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).

Name	Protocol	Type	Description
broadcastatomic	Signal	Slave	CHI defined pins.
broadcastcachemaint	Signal	Slave	ACE defined pins.
broadcastouter	Signal	Slave	ACE defined pins.
broadcastpersist	Signal	Slave	CHI defined pins.
cfgend[1]	Signal	Slave	This signal is for EE bit initialisation.
cfgsdisable	Signal	Slave	This signal disables write access to some secure Interrupt Controller registers.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcs_m_pchannel	PChannel	Master	Cluster PCSM signal
cluster_powerdown_out	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the cluster power info
clusterid	Value	Slave	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.
clusterpmuirq	Signal	Master	DynamlQ pmu irq
CNTHPIRQ[1]	Signal	Master	Timer signals to SOC.
CNTHPSIRQ[1]	Signal	Master	Timer signals to SOC
CNTHVIRQ[1]	Signal	Master	Timer signals to SOC.
CNTHVSIIRQ[1]	Signal	Master	Timer signals to SOC
CNTPNSIRQ[1]	Signal	Master	Timer signals to SOC.
CNTPSIRQ[1]	Signal	Master	Timer signals to SOC.
cntvalueb	CounterInterface	Slave	Interface to SoC level counter module.
CNTVIRQ[1]	Signal	Master	Timer signals to SOC.
commirq[1]	Signal	Master	Interrupt signal from debug communications channel.
core_clk_in[1]	ClockSignal	Slave	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcs_m_pchannel[1]	PChannel	Master	Core PCSM signals

Name	Protocol	Type	Description
core_powerdown_out[1]	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the core power info
coreerrirq[1]	Signal	Master	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq[1]	Signal	Master	Fault indicator for a detected 1 or 2 bit ECC error
cryptodisable[1]	Signal	Slave	Disable cryptography extensions after reset.
cti[1]	v8EmbeddedCrossTrigger_controlprotocol	Master	Cross trigger matrix port.
ctidbgirq[1]	Signal	Master	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	Signal	Slave	External debug interface.
dbgnopwrdown[1]	Signal	Master	No power-down request.
dbgpwrupreq[1]	Signal	Master	Debug power up request.
defaultMP	Signal	Slave	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	PVBus	Slave	External debug interface.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
fiq[1]	Signal	Slave	This signal drives the CPUs fast-interrupt handling.
gicreset	Signal	Master	An output from PPU that can be used to reset GICCLK domain components
gicv3_redistributor_s[1]	GICv3Comms	Slave	GICv3 AXI-stream port.
irq[1]	Signal	Slave	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	PVBus	Slave	External debug interface.
pmbirq[1]	Signal	Master	Interrupt signal from the statistical profiling unit.
pmuirq[1]	Signal	Master	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	Signal	Master	PPU cluster interrupt.
ppu_cluster_wakerequest	Signal	Slave	PPU cluster wake request signal.
ppu_core_irq[1]	Signal	Master	PPU core interrupt.
ppu_core_wakerequest[1]	Signal	Slave	PPU Core wake request signals.
presetdbg	Signal	Slave	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	PVBus	Master	The core will generate bus requests on this port.

Name	Protocol	Type	Description
pvbus_periph_m	PVBus	Master	The core can generate peripheral bus request on this port.
rei[1]	Signal	Slave	Per core RAM Error Interrupt.
reset	Signal	Slave	Reset signal to cluster.
rvbaraddr[1]	Value_64	Slave	Reset vector base address.
sci_m	SystemCoherencyInterface	Master	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei[1]	Signal	Slave	Per core System Error physical pins.
spiden	Signal	Slave	External debug interface.
ticks[1]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq[1]	Signal	Master	Interrupt signal from the trace buffer unit.
utility_bus_s	PVBus	Slave	Utility bus slave
vcpumntirq[1]	Signal	Master	Interrupt signal for virtual CPU maintenance IRQ.
vfiq[1]	Signal	Slave	Virtualised FIQ.
virq[1]	Signal	Slave	Virtualised IRQ.
virtio_s	PVBus	Slave	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei[1]	Signal	Slave	Per core virtual System Error physical pins.

## Parameters for ARMNeoverseN2CT

### BROADCASTATOMIC

#### Type

bool

#### Default value

0x1

#### Description

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

### BROADCASTCACHEMAINT

#### Type

bool

#### Default value

0x1

**Description**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

**BROADCASTOUTER****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

**BROADCASTPERSIST****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

**CLUSTER\_ID****Type**

int

**Default value**

0x0

**Description**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled****Type**

int

**Default value**

0x1

**Description**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. Changing this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain CMOs even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required .

**GICDISABLE****Type**

bool

**Default value**

0x1

**Description**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

**NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores per cluster.

**core\_power\_on\_by\_default****Type**

bool

**Default value**

0x0

**Description**

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPU which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

**cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**`cpi_mul`**

**Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**`cpuX.CFGEND`**

**Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**`cpuX.CRYPTODISABLE`**

**Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**`cpuX.RVBARADDR`**

**Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**`cpuX.enable_trace_special_hlt_imm16`**

**Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter `trace_special_hlt_imm16`.

**`cpuX.l2cache-hit_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-maintenance_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-miss_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-size****Type**

int

**Default value**

0x100000

**Description**

L2 Cache size in bytes.

**cpuX.l2cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**`cpuX.semihosting-A64_HLT`****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**`cpuX.semihosting-ARM_SVC`****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**`cpuX.semihosting-T32_HLT`****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**`cpuX.semihosting-Thumb_SVC`****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**`cpuX.semihosting-cmd_line`****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**`cpuX.semihosting-stack_limit`****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**`cpuX.trace_special_hlt_imm16`****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**`cpuX.vfp-enable_at_reset`****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**`dcache-hit_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**dcache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

**dcache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**dcache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**default\_opmode****Type**

int

**Default value**

0x4

**Description**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

**diagnostics****Type**

bool

**Default value**

0x0

**Description**

Enable DynamIQ diagnostic messages.

**enable\_simulation\_performance\_optimizations****Type**

bool

**Default value**

0x1

**Description**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

**ete.CLAIMTAGS****Type**

int

**Default value**

0x20

**Description**

Number of claim tags.

**ete.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**ete.NumberOfRSPairs****Type**

int

**Default value**

0x8

**Description**

Number of resource selector pairs.

**ete.PIDR\_CM0D****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CM0D value.

**ete.PIDR\_REVAND****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVAND value.

**ete.PIDR\_REVISION****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVISION value.

**ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**ete.RETSTACK****Type**

int

**Default value**

0x3

**Description**

Return stack depth.

**ete.REVISION****Type**

int

**Default value**

0x0

**Description**

TRCIDR1 revision value.

**ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**ete.TRCRSRTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCRSR.TA value for a forcibly traced exception.

**ext\_abort\_device\_read\_is\_sync****Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRE read external aborts.

**ext\_abort\_device\_write\_is\_sync****Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRE write external aborts.

**ext\_abort\_so\_read\_is\_sync****Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRnE read external aborts.

**ext\_abort\_so\_read\_ras\_type****Type**

int

**Default value**

0x0

**Description**

External Aborts are reported as RAS error type specified in this param. Values: 0 = NONE, 1 = UC, 2 = UEU, 3 = UEO , 4 = UER, 5 = CE.

**ext\_abort\_so\_write\_is\_sync****Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRnE write external aborts.

**`force_mte_tag_access_razwi_and_ignore_tag_checks`****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**`force_zero_PSTATE_PAN`****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**`force_zero_mpam_partid_and_pmg`****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**`has_acp`****Type**

bool

**Default value**

0x0

**Description**

If true, Accelerator Coherency Port is configured.

**has\_coherent\_icache****Type**

bool

**Default value**

0x0

**Description**

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

**has\_ete****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**has\_external\_rndr****Type**

int

**Default value**

0x1

**Description**

Implement external random number generator module. When enabling this with has\_rndr enabled, the external random number generator will be used instead of internal random number generator.

**has\_peripheral\_port****Type**

bool

**Default value**

0x0

**Description**

If true, an additional AXI peripheral port is configured.

**has\_rndr****Type**

int

**Default value**

0x1

**Description**

Implement random number instructions to read from RNDR and RNDRSS random number registers from ARMv8.5 (FEAT\_RNG).

**icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

**icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state\_modelled=true.

**icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

**`icache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

**`icache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

**`icache-state_modelled`****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**`invalidate_code_cache_on_icache_cmo`****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE.  
Note: Enabling this parameter will reduce simulation performance.

**l3cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**l3cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**l3cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**l3cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read\_latency is set. This is in addition to the hit

or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

### **`l3cache-read_latency`**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l3cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

### **`l3cache-snoop_data_transfer_latency`**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

### **`l3cache-snoop_issue_latency`**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

### **`l3cache-write_access_latency`**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size `l3cache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be

used instead of per-byte even if l3cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

### **l3cache-write\_latency**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

### **memory\_tagging\_support\_level**

#### **Type**

int

#### **Default value**

0x2

#### **Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).

### **mpam\_max\_partid**

#### **Type**

int

#### **Default value**

0x1ff

#### **Description**

MPAM Maximum PARTID Supported.

### **mpmm\_accumulator\_multiplier**

#### **Type**

int

#### **Default value**

0x1

#### **Description**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator. A value of n means the accumulator will use (n \* accumulator value) to calculate the mpmm threshold (MPMM). This is provided as a fast model workaround to handle cases where execution of quantum in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

**pchannel\_treat\_simreset\_as\_poreset****Type**

bool

**Default value**

0x0

**Description**

Register core as ON state to cluster with simulation reset.

**periph\_address\_end****Type**

int

**Default value**

0x0

**Description**

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

**periph\_address\_start****Type**

int

**Default value**

0x0

**Description**

Start address for peripheral port address range inclusive(corresponds to ASTARTMP input signal).

**ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**rndr\_rndrrs\_seed****Type**

int

**Default value**

0x0

**Description**

Initial seed for random engine used in RNDR register.

**tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**treat-dcache-cmos-to-pou-as-nop****Type**

int

**Default value**

0x0

**Description**

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

**walk\_cache\_latency****Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

### 3.5.79 ARMNeoverseN3CT

ARMNeoverseN3CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-501: IP revisions support**

Revision	Quality level
r0p0	Preliminary support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### About ARMNeoverseN3CT

A DSU-120 DynamIQ cluster containing a single Neoverse-N3 core configured for Direct connect.

The following DSU/CPU features will not be implemented:

- DynamIQ features that are irrelevant to the programmers' view simulation.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Snoop filtering.
- Cache stashing capability.
- Embedded Logic Analyzer (ELA).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

#### Iris and MTI instances for ARMNeoverseN3CT

This model has the following Iris instances:

**Table 3-502: ARMNeoverseN3CT Iris instances**

InstanceName	ComponentName
ARMNeoverseN3CT	Cluster_ARM_Neoverse-N3
ARMNeoverseN3CT.AMU	PVBusLogger
ARMNeoverseN3CT.AMU.mapper	PVBusMapper
ARMNeoverseN3CT.DAP	PVBusLogger
ARMNeoverseN3CT.DAP.mapper	PVBusMapper
ARMNeoverseN3CT.DSU	DSU
ARMNeoverseN3CT.DSU.PPU_cluster	PPUv1
ARMNeoverseN3CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMNeoverseN3CT.DSU.PPU_core0	PPUv1

InstanceName	ComponentName
ARMNeoverseN3CT.DSU.PPU_core0.busslave	PVBusSlave
ARMNeoverseN3CT.DSU.mpam_busslave	PVBusSlave
ARMNeoverseN3CT.DSU.shared_cache	PVCache
ARMNeoverseN3CT.DSU.shared_cache.upstream[0]	PVBusSlave
ARMNeoverseN3CT.DSU.shared_cache.upstream[1]	PVBusSlave
ARMNeoverseN3CT.DSU.shared_cache.upstream[2]	PVBusSlave
ARMNeoverseN3CT.DSU.shared_cache.upstream[3]	PVBusSlave
ARMNeoverseN3CT.DSU.shared_cache.upstream[4]	PVBusSlave
ARMNeoverseN3CT.DSU.utility_slave[0]	PVBusSlave
ARMNeoverseN3CT.MMAP	PVBusLogger
ARMNeoverseN3CT.MMAP.mapper	PVBusMapper
ARMNeoverseN3CT.RAS	PVBusLogger
ARMNeoverseN3CT.RAS.mapper	PVBusMapper
ARMNeoverseN3CT.cpu0	ARM_Neoverse-N3
ARMNeoverseN3CT.cpu0.UTLB	TLB
ARMNeoverseN3CT.cpu0.debug_rom	debug_rom
ARMNeoverseN3CT.cpu0.dtlb	TLB
ARMNeoverseN3CT.cpu0.l1dcache	PVCache
ARMNeoverseN3CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMNeoverseN3CT.cpu0.l1icache	PVCache
ARMNeoverseN3CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMNeoverseN3CT.cpu0.l2cache	PVCache
ARMNeoverseN3CT.cpu0.l2cache.upstream[0]	PVBusSlave
ARMNeoverseN3CT.cpu0.l2cache.upstream[1]	PVBusSlave
ARMNeoverseN3CT.default_CTM	EmbeddedCT
ARMNeoverseN3CT.ext_bus	PVBusLogger
ARMNeoverseN3CT.ext_bus.mapper	PVBusMapper
ARMNeoverseN3CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMNeoverseN3CT.global_debug_rom	debug_rom
ARMNeoverseN3CT.secondary_debug_rom	debug_rom
ARMNeoverseN3CT.sve	ScalableVectorExtension

This model has the following MTI trace components:

**Table 3-503: ARMNeoverseN3CT MTI instances**

InstanceName	ComponentName
ARMNeoverseN3CT.AMU	PVBusLogger
ARMNeoverseN3CT.AMU.mapper	PVBusMapper
ARMNeoverseN3CT.DAP	PVBusLogger
ARMNeoverseN3CT.DAP.mapper	PVBusMapper

InstanceName	ComponentName
ARMNeoverseN3CT.DSU	DSU
ARMNeoverseN3CT.DSU.PPU_cluster	PPUv1
ARMNeoverseN3CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMNeoverseN3CT.DSU.PPU_core0	PPUv1
ARMNeoverseN3CT.DSU.PPU_core0.busslave	PVBusSlave
ARMNeoverseN3CT.DSU.mpam_busslave	PVBusSlave
ARMNeoverseN3CT.DSU.shared_cache	PVCache
ARMNeoverseN3CT.DSU.shared_cache.upstream[0]	PVBusSlave
ARMNeoverseN3CT.DSU.shared_cache.upstream[1]	PVBusSlave
ARMNeoverseN3CT.DSU.shared_cache.upstream[2]	PVBusSlave
ARMNeoverseN3CT.DSU.shared_cache.upstream[3]	PVBusSlave

## Ports for ARMNeoverseN3CT

**Table 3-504: Ports**

Name	Protocol	Type	Description
acp_s[2]	PVBus	Slave	AXI ACP slave port.
AEND0MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).

Name	Protocol	Type	Description
AEND3MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	Signal	Slave	CHI defined pins.
broadcastcachemaint	Signal	Slave	ACE defined pins.
broadcastouter	Signal	Slave	ACE defined pins.
broadcastpersist	Signal	Slave	CHI defined pins.
cfgend[1]	Signal	Slave	This signal is for EE bit initialisation.
cfgsdisable	Signal	Slave	This signal disables write access to some secure Interrupt Controller registers.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsn_pchannel	PChannel	Master	Cluster PCSM signal
cluster_powerdown_out	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the cluster power info
clusterid	Value	Slave	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.
clusterpmuirq	Signal	Master	DynamlQ pmu irq
CNTHPIRQ[1]	Signal	Master	Timer signals to SOC.
CNTHPSIRQ[1]	Signal	Master	Timer signals to SOC
CNTHVIRQ[1]	Signal	Master	Timer signals to SOC.
CNTHVSIRQ[1]	Signal	Master	Timer signals to SOC
CNTPNSIRQ[1]	Signal	Master	Timer signals to SOC.
CNTPSIRQ[1]	Signal	Master	Timer signals to SOC.
cntvalueb	CounterInterface	Slave	Interface to SoC level counter module.

Name	Protocol	Type	Description
CNTVIRQ[1]	Signal	Master	Timer signals to SOC.
commirq[1]	Signal	Master	Interrupt signal from debug communications channel.
core_clk_in[1]	ClockSignal	Slave	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsmpchannel[1]	PChannel	Master	Core PCSM signals
core_powerdown_out[1]	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the core power info
coreerrirq[1]	Signal	Master	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq[1]	Signal	Master	Fault indicator for a detected 1 or 2 bit ECC error
cryptodisable[1]	Signal	Slave	Disable cryptography extensions after reset.
cti[1]	v8EmbeddedCrossTrigger_controlprotocol	Master	Cross trigger matrix port.
ctidbgirq[1]	Signal	Master	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	Signal	Slave	External debug interface.
dbgnopwrdown[1]	Signal	Master	No power-down request.
dbgpwrupreq[1]	Signal	Master	Debug power up request.
defaultMP	Signal	Slave	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	PVBus	Slave	External debug interface.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
fiq[1]	Signal	Slave	This signal drives the CPUs fast-interrupt handling.
gicreset	Signal	Master	An output from PPU that can be used to reset GICCLK domain components
gicv3_redistributor_s[1]	GICv3Comms	Slave	GICv3 AXI-stream port.
irq[1]	Signal	Slave	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	PVBus	Slave	External debug interface.
pmbirq[1]	Signal	Master	Interrupt signal from the statistical profiling unit.
pmuirq[1]	Signal	Master	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	Signal	Master	PPU cluster interrupt.
ppu_cluster_wakerequest	Signal	Slave	PPU cluster wake request signal.

Name	Protocol	Type	Description
ppu_core_irq[1]	Signal	Master	PPU core interrupt.
ppu_core_wakerequest[1]	Signal	Slave	PPU core wake request signal.
presetdbg	Signal	Slave	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	PVBus	Master	The core will generate bus requests on this port.
pvbus_periph_m	PVBus	Master	The core can generate peripheral bus request on this port.
rei[1]	Signal	Slave	Per core RAM Error Interrupt.
reset	Signal	Slave	Reset signal to cluster.
rvbaraddr[1]	Value_64	Slave	Reset vector base address.
sci_m	SystemCoherencyInterface	Master	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei[1]	Signal	Slave	Per core System Error physical pins.
spiden	Signal	Slave	External debug interface.
ticks[1]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq[1]	Signal	Master	Interrupt signal from the trace buffer unit.
utility_bus_s	PVBus	Slave	Utility bus slave
vcpumntirq[1]	Signal	Master	Interrupt signal for virtual CPU maintenance IRQ.
vfiq[1]	Signal	Slave	Virtualised FIQ.
virq[1]	Signal	Slave	Virtualised IRQ.
virtio_s	PVBus	Slave	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei[1]	Signal	Slave	Per core virtual System Error physical pins.

## Parameters for ARMNeoverseN3CT

### AEND0\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

**AEND1\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

**AEND2\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

**AEND3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

**ASTART0\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

**ASTART1\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

**ASTART2\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

**ASTART3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

**BROADCASTATOMIC****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

**BROADCASTCACHEMAINT****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

**BROADCASTOUTER****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

**BROADCASTPERSIST****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

**CLUSTER\_ID****Type**

int

**Default value**

0x0

**Description**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled****Type**

int

**Default value**

0x1

**Description**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. Changing this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain CMOs even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required .

**CPUCFR****Type**

int

**Default value**

0x4

**Description**

Value of CPU Configuration Register.

**GICDISABLE****Type**

bool

**Default value**

0x1

**Description**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

**NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores per cluster.

**bus\_type****Type**

int

**Default value**

0x0

**Description**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

**core\_power\_on\_by\_default****Type**

bool

**Default value**

0x0

**Description**

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPU which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

**cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**cpuX.CFGTE****Type**

bool

**Default value**

0x0

**Description**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

**cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**cpuX.force-fpsid****Type**

bool

**Default value**

0x1

**Description**

Override the FPSID value.

**cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-maintenance_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-miss_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-size`****Type**

int

**Default value**

0x100000

**Description**

L2 Cache size in bytes.

**`cpuX.l2cache-snoop_data_transfer_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-snoop_issue_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-write_access_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

**cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**  
A64 HLT number for semihosting calls.

**cpuX.semihosting-ARM\_SVC**

**Type**  
int

**Default value**  
0x123456

**Description**  
A32 SVC number for semihosting calls.

**cpuX.semihosting-T32\_HLT**

**Type**  
int

**Default value**  
0x3c

**Description**  
T32 HLT number for semihosting calls.

**cpuX.semihosting-Thumb\_SVC**

**Type**  
int

**Default value**  
0xab

**Description**  
T32 SVC number for semihosting calls.

**cpuX.semihosting-cmd\_line**

**Type**  
string

**Default value**  
""

**Description**  
Command line available to semihosting calls.

**cpuX.semihosting-cwd**

**Type**  
string

**Default value**  
""

**Description**

Base directory for semihosting file access.

**cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**`cpuX.trace_special_hlt_imm16`****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF `enable_trace_special_hlt_imm16=true`, skip performing usual HLT execution but call MTI trace if registered.

**`cpuX.vfp-enable_at_reset`****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**`cpuX.vfp-present`****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**`dcache-hit_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

**dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**dcache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

**dcache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**dcache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**dcache-size****Type**

int

**Default value**

0x10000

**Description**

L1 D-Cache size in bytes.

**dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

**`dcache-write_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. `dcache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

**`default_opmode`****Type**

int

**Default value**

0x4

**Description**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

**`diagnostics`****Type**

bool

**Default value**

0x0

**Description**

Enable DynamIQ diagnostic messages.

**`enable_simulation_performance_optimizations`****Type**

bool

**Default value**

0x1

**Description**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

**ete.CLAIMTAGS****Type**

int

**Default value**

0x4

**Description**

Number of claim tags.

**ete.ETE\_REVISION****Type**

int

**Default value**

0x1

**Description**

ETE revision: 0=ETEv1.0, 1=ETEv1.1, 2=ETEv1.2, 3=ETEv1.3.

**ete.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**ete.NumberOfRSPairs****Type**

int

**Default value**

0x8

**Description**

Number of resource selector pairs.

**ete.PIDR\_CM0D****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CM0D value.

**ete.PIDR\_REVAND****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVAND value.

**ete.PIDR\_REVISION****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVISION value.

**ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**ete.RETSTACK****Type**

int

**Default value**

0x1

**Description**

Return stack depth.

**ete.REVISION****Type**

int

**Default value**

0x0

**Description**

TRCIDR1 revision value.

**ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**ete.TRCSRSTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCSRSTA value for a forcibly traced exception.

**ete.TSMARK****Type**

bool

**Default value**

0x1

**Description**

Whether timestamp markers are supported.

**force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**`force_zero_mpam_partid_and_pmg`****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**`has_coherent_icache`****Type**

bool

**Default value**

0x1

**Description**

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

**`has_enhanced_pan`****Type**

int

**Default value**

0x2

**Description**

Implements Armv8.7 Enhanced PAN feature (FEAT\_PAN3) Possible values of this parameter are: - 1, feature is implemented if ARMv8.7 is enabled. - 2, feature is implemented.

**`has_ete`****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**has\_large\_va****Type**

int

**Default value**

0x0

**Description**

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT\_LVA). Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.2 is enabled. - 2, feature is implemented.

**has\_peripheral\_port****Type**

bool

**Default value**

0x0

**Description**

If true, an additional AXI peripheral port is configured.

**has\_rndr\_trap****Type**

int

**Default value**

0x2

**Description**

Implement trapping for RNDR and RNDRSS random number registers from ARMv8.8. (FEAT\_RNG\_TRAP) Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.8 is enabled. - 2, feature is implemented.

**has\_statistical\_profiling****Type**

bool

**Default value**

0x0

**Description**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

**icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `icache-state_modelled=true`.

**`icache-maintenance_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

**`icache-miss_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

**`icache-prefetch_enabled`****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

**`icache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

**`icache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

**`icache-size`****Type**

int

**Default value**

0x10000

**Description**

L1 I-Cache size in bytes.

**`icache-state_modelled`****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**`instruction_tlb_size`****Type**

int

**Default value**

0x0

**Description**

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

**invalidate\_code\_cache\_on\_icache\_cmo****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE.  
Note: Enabling this parameter will reduce simulation performance.

**memory\_tagging\_support\_level****Type**

int

**Default value**

0x3

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

**mpmm\_accumulator\_multiplier****Type**

int

**Default value**

0x1

**Description**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator. A value of n means the accumulator will use (n \* accumulator value) to calculate the mpmm threshold (MPMM). This is provided as a fast model workaround to handle cases where execution of quantum in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

**pmu-num\_counters****Type**

int

**Default value**

0x6

**Description**

Number of PMU counters implemented.

**ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**stage12\_tlb\_size****Type**

int

**Default value**

0x80

**Description**

Number of stage1+2 tlb entries.

**tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**treat\_PAC\_as\_NOP****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter. Treat Pointer Authentication as NOP. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are NOP. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

**walk\_cache\_latency**

**Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

3.5.80 ARMNeoverseV1CT

ARMNeoverseV1CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-505: IP revisions support

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**About ARMNeoverseV1CT**

The model supports the following features:

- DynamIQ (DSU) system registers.
- Per-core L2 cache.
- A P-Channel for the cluster and for each core.
- Optional peripheral port.
- L3 cache partition.
- Per-core clock.
- BROADCASTPERSIST pin.

Support for the following features is planned for a future release:

- BROADCASTCACHEMAINTPOU pin.
- COREINSTRRET, COREINSTRRUN, and nPMBIRQ signals.
- A common cache that is shared by all threads of the core. Currently, each thread has its own L1 cache and L2 cache.

- Per-thread parameters, although signals are implemented.

The following features will not be implemented:

- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Snoop filtering.
- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- Latency configuration.
- Cache stashing capability.

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (crypto.dll or crypto.so) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

## Iris and MTI instances for ARMNeoverseV1CT

This model has the following Iris instances:

**Table 3-506: ARMNeoverseV1CT Iris instances**

InstanceName	ComponentName
ARMNeoverseV1CT	Cluster_ARM_Neoverse-V1
ARMNeoverseV1CT.AMU	PVBusLogger
ARMNeoverseV1CT.AMU.mapper	PVBusMapper
ARMNeoverseV1CT.DAP	PVBusLogger
ARMNeoverseV1CT.DAP.mapper	PVBusMapper
ARMNeoverseV1CT.DSU	DSU
ARMNeoverseV1CT.DSU.mpam_busslave	PVBusSlave
ARMNeoverseV1CT.DSU.shared_cache	PVCache
ARMNeoverseV1CT.DSU.shared_cache.upstream[0]	PVBusSlave
ARMNeoverseV1CT.DSU.shared_cache.upstream[1]	PVBusSlave
ARMNeoverseV1CT.DSU.shared_cache.upstream[2]	PVBusSlave
ARMNeoverseV1CT.DSU.shared_cache.upstream[3]	PVBusSlave
ARMNeoverseV1CT.MMAP	PVBusLogger
ARMNeoverseV1CT.MMAP.mapper	PVBusMapper
ARMNeoverseV1CT.RAS	PVBusLogger
ARMNeoverseV1CT.RAS.mapper	PVBusMapper
ARMNeoverseV1CT.cpu0	ARM_Neoverse-V1
ARMNeoverseV1CT.cpu0.UTLB	TLB

InstanceName	ComponentName
ARMNeoverseV1CT.cpu0.debug_rom	debug_rom
ARMNeoverseV1CT.cpu0.dtlb	TLB
ARMNeoverseV1CT.cpu0.l1dcache	PVCache
ARMNeoverseV1CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMNeoverseV1CT.cpu0.l1icache	PVCache
ARMNeoverseV1CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMNeoverseV1CT.cpu0.l2cache	PVCache
ARMNeoverseV1CT.cpu0.l2cache.upstream[0]	PVBusSlave
ARMNeoverseV1CT.cpu0.l2cache.upstream[1]	PVBusSlave
ARMNeoverseV1CT.ext_bus	PVBusLogger
ARMNeoverseV1CT.ext_bus.mapper	PVBusMapper
ARMNeoverseV1CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMNeoverseV1CT.global_debug_rom	debug_rom
ARMNeoverseV1CT.secondary_debug_rom	debug_rom
ARMNeoverseV1CT.sve	ScalableVectorExtension

This model has the following MTI trace components:

**Table 3-507: ARMNeoverseV1CT MTI instances**

InstanceName	ComponentName
ARMNeoverseV1CT.AMU	PVBusLogger
ARMNeoverseV1CT.AMU.mapper	PVBusMapper
ARMNeoverseV1CT.DAP	PVBusLogger
ARMNeoverseV1CT.DAP.mapper	PVBusMapper
ARMNeoverseV1CT.DSU	DSU
ARMNeoverseV1CT.DSU.mpam_busslave	PVBusSlave
ARMNeoverseV1CT.DSU.shared_cache	PVCache
ARMNeoverseV1CT.DSU.shared_cache.upstream[0]	PVBusSlave
ARMNeoverseV1CT.DSU.shared_cache.upstream[1]	PVBusSlave
ARMNeoverseV1CT.DSU.shared_cache.upstream[2]	PVBusSlave
ARMNeoverseV1CT.DSU.shared_cache.upstream[3]	PVBusSlave
ARMNeoverseV1CT.MMAP	PVBusLogger
ARMNeoverseV1CT.MMAP.mapper	PVBusMapper
ARMNeoverseV1CT.RAS	PVBusLogger

ARMNeoverseV1CT.cpu0	ARM_Neoverse-V1
ARMNeoverseV1CT.cpu0.UTLB	TLB
ARMNeoverseV1CT.cpu0.l1dcache	PVCache
ARMNeoverseV1CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMNeoverseV1CT.cpu0.l1icache	PVCache

InstanceName	ComponentName
ARMNeoverseV1CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMNeoverseV1CT.cpu0.l2cache	PVCache
ARMNeoverseV1CT.cpu0.l2cache.upstream[0]	PVBusSlave
ARMNeoverseV1CT.cpu0.l2cache.upstream[1]	PVBusSlave
ARMNeoverseV1CT.ext_bus	PVBusLogger
ARMNeoverseV1CT.ext_bus.mapper	PVBusMapper
ARMNeoverseV1CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

## Ports for ARMNeoverseV1CT

**Table 3-508: Ports**

Name	Protocol	Type	Description
acp_s	PVBus	Slave	AXI ACP slave port.
AENDMP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
ASTARTMP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	Signal	Slave	CHI defined pins.
broadcastcachemaint	Signal	Slave	ACE defined pins.
broadcastouter	Signal	Slave	ACE defined pins.
broadcastpersist	Signal	Slave	CHI defined pins.
cfgend[4]	Signal	Slave	This signal if for EE bit initialisation.
cfgsdisable	Signal	Slave	This signal disables write access to some secure Interrupt Controller registers.
cfgte[4]	Signal	Slave	This signal provides default exception handling state.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
clusterid	Value	Slave	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.
clusterpmuirq	Signal	Master	DynamlQ pmu irq
CNTHPIRQ[4]	Signal	Master	Timer signals to SOC.
CNTHVIRQ[4]	Signal	Master	Timer signals to SOC.

Name	Protocol	Type	Description
CNTPNSIRQ[4]	Signal	Master	Timer signals to SOC.
CNTPSIRQ[4]	Signal	Master	Timer signals to SOC.
cntvalueb	CounterInterface	Slave	Interface to SoC level counter module.
CNTVIRQ[4]	Signal	Master	Timer signals to SOC.
commirq[4]	Signal	Master	Interrupt signal from debug communications channel.
core_clk_in[4]	ClockSignal	Slave	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
cpuporeset[4]	Signal	Slave	CPU power on reset. Initializes all the processor logic, including debug logic.
cryptodisable[4]	Signal	Slave	Disable cryptography extensions after reset.
cti[4]	v8EmbeddedCrossTrigger_controlprotocol	Master	Cross trigger matrix port.
ctidbgirq[4]	Signal	Master	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	Signal	Slave	External debug interface.
dbgnopwrdown[4]	Signal	Master	No power-down request.
dbgpwrupreq[4]	Signal	Master	Debug power up request.
dev_debug_s	PVBus	Slave	External debug interface.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
fiq[4]	Signal	Slave	This signal drives the CPUs fast-interrupt handling.
gicv3_redistributor_s[4]	GICv3Comms	Slave	GICv3 AXI-stream port.
irq[4]	Signal	Slave	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	PVBus	Slave	External debug interface.
niden	Signal	Slave	External debug interface.
pchannel_cluster	PChannel	Slave	PChannel for cluster.
pchannel_core[4]	PChannel	Slave	PChannels for cores
pmbirq[4]	Signal	Master	Interrupt signal from the statistical profiling unit.
pmuirq[4]	Signal	Master	Interrupt signal from performance monitoring unit.
presetdbg	Signal	Slave	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	PVBus	Master	The core will generate bus requests on this port.
pvbus_periph_m	PVBus	Master	The core can generate peripheral bus request on this port.
rei[4]	Signal	Slave	Per core RAM Error Interrupt.

Name	Protocol	Type	Description
reset[4]	Signal	Slave	Raising this signal will put the core into reset mode.
rvbaraddr[4]	Value_64	Slave	Reset vector base address.
sci_m	SystemCoherencyInterface	Master	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei[4]	Signal	Slave	Per core System Error physical pins.
spiden	Signal	Slave	External debug interface.
spniden	Signal	Slave	External debug interface.
sporeset	Signal	Slave	A single cluster-wide power on reset signal for all resettable registers in DynamIQ.
ticks[4]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
vcpumntirq[4]	Signal	Master	Interrupt signal for virtual CPU maintenance IRQ.
vfiq[4]	Signal	Slave	Virtualised FIQ.
vinithi[4]	Signal	Slave	This signal controls of the location of the exception vectors at reset.
virq[4]	Signal	Slave	Virtualised IRQ.
virtio_s	PVBus	Slave	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei[4]	Signal	Slave	Per core virtual System Error physical pins.

## Parameters for ARMNeoverseV1CT

### BROADCASTATOMIC

#### Type

bool

#### Default value

0x1

#### Description

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

### BROADCASTCACHEMAINT

#### Type

bool

#### Default value

0x1

**Description**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

**BROADCASTOUTER****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

**BROADCASTPERSIST****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

**CLUSTER\_ID****Type**

int

**Default value**

0x0

**Description**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled****Type**

int

**Default value**

0x1

**Description**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. Changing this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain CMOs even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required .

**GICDISABLE****Type**

bool

**Default value**

0x1

**Description**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

**NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores per cluster.

**cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**cpuX.CFGTE****Type**

bool

**Default value**

0x0

**Description**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

**cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**cpuX.VINITHI****Type**

bool

**Default value**

0x0

**Description**

Reset value of SCTLR.V.

**cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `l2cache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l2cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-size`****Type**

int

**Default value**

0x80000

**Description**

L2 Cache size in bytes.

**`cpuX.l2cache-snoop_data_transfer_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

**`cpuX.l2cache-snoop_issue_latency`****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**cpuX.semihosting-T32\_HLT****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

**`dcache-maintenance_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

**`dcache-miss_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**`dcache-prefetch_enabled`****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

**`dcache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit

or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**dcache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**dcache-size****Type**

int

**Default value**

0x10000

**Description**

L1 D-Cache size in bytes.

**dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**default\_opmode****Type**

int

**Default value**

0x4

**Description**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

**diagnostics****Type**

bool

**Default value**

0x0

**Description**

Enable DynamIQ diagnostic messages.

**enable\_simulation\_performance\_optimizations****Type**

bool

**Default value**

0x1

**Description**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

**enhanced\_pac2\_level****Type**

int

**Default value**

0x1

**Description**

Implements Enhanced PAC2 from ARMv8.6 (FEAT\_PAuth2), and PAC enhancements from ARMv9.5 (FEAT\_PAuth\_LR). options 0-3 of this feature are mandatory for ARMv8.6 but can be cherry-picked to a ARMv8.3(or greater) implementation. 0: No EnhancedPAC2, 1: EnhancedPAC2 Only (FEAT\_PAuth2), 2: EnhancedPAC2 with FPAC (FEAT\_FPAC), 3: EnhancedPAC2 with FPACCombined (FEAT\_FPACCOMBINE), 4: EnhancedPAC2 with LR signing (FEAT\_PAuth\_LR).

**ext\_abort\_device\_read\_is\_sync****Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRE read external aborts.

**ext\_abort\_device\_write\_is\_sync****Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRE write external aborts.

**ext\_abort\_so\_read\_is\_sync****Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRnE read external aborts.

**ext\_abort\_so\_write\_is\_sync****Type**

bool

**Default value**

0x0

**Description**

Synchronous reporting of device-nGnRnE write external aborts.

**force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**force\_zero\_mpam\_partid\_and\_pmg****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**has\_acp****Type**

bool

**Default value**

0x0

**Description**

If true, Accelerator Coherency Port is configured.

**has\_coherent\_icache****Type**

bool

**Default value**

0x1

**Description**

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

**has\_external\_rndr****Type**

int

**Default value**

0x1

**Description**

Implement external random number generator module. When enabling this with has\_rndr enabled, the external random number generator will be used instead of internal random number generator.

**has\_peripheral\_port****Type**

bool

**Default value**

0x0

**Description**

If true, additional AXI peripheral port is configured.

**has\_rndr****Type**

int

**Default value**

0x1

**Description**

Implement random number instructions to read from RNDR and RNDRSS random number registers from ARMv8.5 (FEAT\_RNG).

**icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

**icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state\_modelled=true.

**icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

**icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

**`icache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

**`icache-size`****Type**

int

**Default value**

0x10000

**Description**

L1 I-Cache size in bytes.

**`icache-state_modelled`****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**`invalidate_code_cache_on_icache_cmo`****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE.  
Note: Enabling this parameter will reduce simulation performance.

**l3cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**l3cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**l3cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**l3cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for read accesses given in ticks per access (of size l3cache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-read\_latency is set. This is in addition to the hit

or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

### **l3cache-read\_latency**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

L3 Cache timing annotation latency for read accesses given in ticks per byte accessed. `l3cache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

### **l3cache-size**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

L3 Cache size in bytes.

### **l3cache-snoop\_data\_transfer\_latency**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

L3 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

### **l3cache-snoop\_issue\_latency**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

L3 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when `dcache-state_modelled=true`.

**l3cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per access (of size l3cache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l3cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**l3cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L3 Cache timing annotation latency for write accesses given in ticks per byte accessed. l3cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**pchannel\_treat\_simreset\_as\_poreset****Type**

bool

**Default value**

0x0

**Description**

Register core as ON state to cluster with simulation reset.

**periph\_address\_end****Type**

int

**Default value**

0x0

**Description**

End address for peripheral port address range exclusive(corresponds to AENDMP input signal).

**periph\_address\_start****Type**

int

**Default value**

0x0

**Description**

Start address for peripheral port address range inclusive (corresponds to ASTARTMP input signal).

**ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**treat-dcache-cmos-to-pou-as-nop****Type**

int

**Default value**

0x0

**Description**

Whether dcache invalidation to the point of unification is required for instruction to data coherence. 0 - Invalidate ops required, 1 - Invalidate ops not required and cannot generate faults, 2 - Invalidate ops not required but can generate faults.

**walk\_cache\_latency**

**Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

3.5.81 ARMNeoverseV2CT

ARMNeoverseV2CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-509: IP revisions support

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

About ARMNeoverseV2CT

The model supports the following features:

- DynamIQ r3p0.
- DynamIQ Shared Unit-110 (DSU-110) system registers.
- L2 cache is supported at the per-core level only and there is no implementation of Core-Complex with shared L2 cache yet.
- PChannel for the cluster and for each core.
- BROADCASTPERSIST pin.
- Optional peripheral port.
- L3Cache partition.
- Per-core clock.
- Utility bus.

Support for the following features is planned for a future release:

- Transporting architectural metadata tags over TLM2 (OSCI) and AMBA-PV (the Arm TLM2 extensions) bus protocols.

- BROADCASTCACHEMAINTPOU pin.
- COREINSTRRET, COREINSTRRUN, and nPMBIRQ signals.
- Core-Complex.
- Each thread currently has its own L1Cache and L2Cache instead of a common cache that is shared by all threads of the core.
- Per-thread parameters are not yet supported but signals are implemented.

The following features will not be implemented:

- DynamIQ features that are irrelevant to the programmers' view simulation, for example:
  - Automatic CPU retention mode.
  - Level-3 Cache RAM retention.
- 256-bit wide output transactions.
- Error correction or detection features.
- Self-test features (MBIST).
- Snoop filtering.
- Latency configuration
- Cache stashing capability
- Embedded Logic Analyzer (ELA).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (crypto.dll or crypto.so) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

## Iris and MTI instances for ARMNeoverseV2CT

This model has the following Iris instances:

**Table 3-510: ARMNeoverseV2CT Iris instances**

InstanceName	ComponentName
ARMNeoverseV2CT	Cluster_ARM_Neoverse-V2
ARMNeoverseV2CT.AMU	PVBusLogger
ARMNeoverseV2CT.AMU.mapper	PVBusMapper
ARMNeoverseV2CT.DAP	PVBusLogger
ARMNeoverseV2CT.DAP.mapper	PVBusMapper
ARMNeoverseV2CT.DSU	DSU
ARMNeoverseV2CT.DSU.PPU_cluster	PPUv1
ARMNeoverseV2CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMNeoverseV2CT.DSU.PPU_core0	PPUv1
ARMNeoverseV2CT.DSU.PPU_core0.busslave	PVBusSlave
ARMNeoverseV2CT.DSU.mpam_busslave	PVBusSlave
ARMNeoverseV2CT.DSU.shared_cache	PVCache

InstanceName	ComponentName
ARMNeoverseV2CT.DSU.shared_cache.upstream[0]	PVBusSlave
ARMNeoverseV2CT.DSU.shared_cache.upstream[1]	PVBusSlave
ARMNeoverseV2CT.DSU.shared_cache.upstream[2]	PVBusSlave
ARMNeoverseV2CT.DSU.shared_cache.upstream[3]	PVBusSlave
ARMNeoverseV2CT.DSU.utility_slave[0]	PVBusSlave
ARMNeoverseV2CT.MMAP	PVBusLogger
ARMNeoverseV2CT.MMAP.mapper	PVBusMapper
ARMNeoverseV2CT.RAS	PVBusLogger
ARMNeoverseV2CT.RAS.mapper	PVBusMapper
ARMNeoverseV2CT.cpu0	ARM_Neoverse-V2
ARMNeoverseV2CT.cpu0.UTLB	TLB
ARMNeoverseV2CT.cpu0.debug_rom	debug_rom
ARMNeoverseV2CT.cpu0.dtlb	TLB
ARMNeoverseV2CT.cpu0.l1dcache	PVCache
ARMNeoverseV2CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMNeoverseV2CT.cpu0.l1icache	PVCache
ARMNeoverseV2CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMNeoverseV2CT.cpu0.l2cache	PVCache
ARMNeoverseV2CT.cpu0.l2cache.upstream[0]	PVBusSlave
ARMNeoverseV2CT.cpu0.l2cache.upstream[1]	PVBusSlave
ARMNeoverseV2CT.default_CTM	EmbeddedCT
ARMNeoverseV2CT.ext_bus	PVBusLogger
ARMNeoverseV2CT.ext_bus.mapper	PVBusMapper
ARMNeoverseV2CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMNeoverseV2CT.global_debug_rom	debug_rom
ARMNeoverseV2CT.secondary_debug_rom	debug_rom
ARMNeoverseV2CT.sve	ScalableVectorExtension

This model has the following MTI trace components:

**Table 3-511: ARMNeoverseV2CT MTI instances**

InstanceName	ComponentName
ARMNeoverseV2CT.AMU	PVBusLogger
ARMNeoverseV2CT.AMU.mapper	PVBusMapper

ARMNeoverseV2CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMNeoverseV2CT.cpu0.l2cache	PVCache
ARMNeoverseV2CT.cpu0.l2cache.upstream[0]	PVBusSlave
ARMNeoverseV2CT.cpu0.l2cache.upstream[1]	PVBusSlave
ARMNeoverseV2CT.ext_bus	PVBusLogger
ARMNeoverseV2CT.ext_bus.mapper	PVBusMapper
ARMNeoverseV2CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

## Ports for ARMNeoverseV2CT

**Table 3-512: Ports**

Name	Protocol	Type	Description
acp_s	PVBus	Slave	AXI ACP slave port.
AEND0MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).

Name	Protocol	Type	Description
ASTART2MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	Signal	Slave	CHI defined pins.
broadcastcachemaint	Signal	Slave	ACE defined pins.
broadcastouter	Signal	Slave	ACE defined pins.
broadcastpersist	Signal	Slave	CHI defined pins.
cfgend[1]	Signal	Slave	This signal is for EE bit initialisation.
cfgsdisable	Signal	Slave	This signal disables write access to some secure Interrupt Controller registers.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsmp_channel	PChannel	Master	Cluster PCSM signal
cluster_powerdown_out	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the cluster power info
clusterid	Value	Slave	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.
clusterpmuirq	Signal	Master	DynamlQ pmu irq
CNTHPIRQ[1]	Signal	Master	Timer signals to SOC.
CNTHPSIRQ[1]	Signal	Master	Timer signals to SOC
CNTHVIRQ[1]	Signal	Master	Timer signals to SOC.
CNTHVSIRQ[1]	Signal	Master	Timer signals to SOC
CNTPNSIRQ[1]	Signal	Master	Timer signals to SOC.
CNTPSIRQ[1]	Signal	Master	Timer signals to SOC.
cntvalueb	CounterInterface	Slave	Interface to SoC level counter module.
CNTVIRQ[1]	Signal	Master	Timer signals to SOC.
commirq[1]	Signal	Master	Interrupt signal from debug communications channel.
core_clk_in[1]	ClockSignal	Slave	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.

Name	Protocol	Type	Description
core_pcs_m_pchannel[1]	PChannel	Master	Core PCSM signals
core_powerdown_out[1]	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the core power info
coreerrirq[1]	Signal	Master	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq[1]	Signal	Master	Fault indicator for a detected 1 or 2 bit ECC error
cryptodisable[1]	Signal	Slave	Disable cryptography extensions after reset.
cti[1]	v8EmbeddedCrossTrigger_controlprotocol	Master	Cross trigger matrix port.
ctidbgirq[1]	Signal	Master	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	Signal	Slave	External debug interface.
dbgnopwrdown[1]	Signal	Master	No power-down request.
dbgpwrupreq[1]	Signal	Master	Debug power up request.
defaultMP	Signal	Slave	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	PVBus	Slave	External debug interface.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
fiq[1]	Signal	Slave	This signal drives the CPUs fast-interrupt handling.
gicreset	Signal	Master	An output from PPU that can be used to reset GICCLK domain components
gicv3_redistributor_s[1]	GICv3Comms	Slave	GICv3 AXI-stream port.
irq[1]	Signal	Slave	This signal drives the CPUs interrupt handling.
memorymapped_debug_s	PVBus	Slave	External debug interface.
pmbirq[1]	Signal	Master	Interrupt signal from the statistical profiling unit.
pmuirq[1]	Signal	Master	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	Signal	Master	PPU cluster interrupt.
ppu_cluster_wakerequest	Signal	Slave	PPU cluster wake request signal.
ppu_core_irq[1]	Signal	Master	PPU core interrupt.
ppu_core_wakerequest[1]	Signal	Slave	PPU Core wake request signals.
presetdbg	Signal	Slave	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.

Name	Protocol	Type	Description
pvbus_m0	PVBus	Master	The core will generate bus requests on this port.
pvbus_periph_m	PVBus	Master	The core can generate peripheral bus request on this port.
rei[1]	Signal	Slave	Per core RAM Error Interrupt.
reset	Signal	Slave	Reset signal to cluster.
rvbaraddr[1]	Value_64	Slave	Reset vector base address.
sci_m	SystemCoherencyInterface	Master	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei[1]	Signal	Slave	Per core System Error physical pins.
spiden	Signal	Slave	External debug interface.
ticks[1]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq[1]	Signal	Master	Interrupt signal from the trace buffer unit.
utility_bus_s	PVBus	Slave	Utility bus slave
vcpumntirq[1]	Signal	Master	Interrupt signal for virtual CPU maintenance IRQ.
vfiq[1]	Signal	Slave	Virtualised FIQ.
virq[1]	Signal	Slave	Virtualised IRQ.
virtio_s	PVBus	Slave	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei[1]	Signal	Slave	Per core virtual System Error physical pins.

## Parameters for ARMNeoverseV2CT

### AEND0\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

### AEND1\_DEFAULT

#### Type

int

#### Default value

0x0

**Description**

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

**AEND2\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

**AEND3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

**ASTART0\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

**ASTART1\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

**ASTART2\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

**ASTART3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

**BROADCASTATOMIC****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

**BROADCASTCACHEMAINT****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

**BROADCASTOUTER****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

**BROADCASTPERSIST****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

**CLUSTER\_ID****Type**

int

**Default value**

0x0

**Description**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled****Type**

int

**Default value**

0x1

**Description**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. Changing this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain CMOs even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required .

**CPUCFR****Type**

int

**Default value**

0x0

**Description**

Value of CPU Configuration Register.

**GICDISABLE****Type**

bool

**Default value**

0x1

**Description**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

**NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores per cluster.

**bus\_type****Type**

int

**Default value**

0x0

**Description**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

**core\_power\_on\_by\_default****Type**

bool

**Default value**

0x0

**Description**

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPU which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

**`cpi_div`****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**`cpi_mul`****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**`cpuX.CFGEND`****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**`cpuX.CRYPTODISABLE`****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**`cpuX.RVBARADDR`****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**cpuX.force-fpsid****Type**

bool

**Default value**

0x1

**Description**

Override the FPSID value.

**cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**cpuX.l2cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-size****Type**

int

**Default value**

0x100000

**Description**

L2 Cache size in bytes.

**cpuX.l2cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**`cpuX.semihosting-T32_HLT`****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**`cpuX.semihosting-Thumb_SVC`****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**`cpuX.semihosting-cmd_line`****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**`cpuX.semihosting-cwd`****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**`cpuX.semihosting-enable`****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**dcache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when dcache-state\_modelled=true.

**dcache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size dcache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**dcache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. dcache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**dcache-size****Type**

int

**Default value**

0x8000

**Description**

L1 D-Cache size in bytes.

**dcache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**dcache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**default\_opmode****Type**

int

**Default value**

0x4

**Description**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

**diagnostics****Type**

bool

**Default value**

0x0

**Description**

Enable DynamIQ diagnostic messages.

**enable\_simulation\_performance\_optimizations****Type**

bool

**Default value**

0x1

**Description**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

**ete.CLAIMTAGS****Type**

int

**Default value**

0x20

**Description**

Number of claim tags.

**ete.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**ete.NumberOfRSPairs****Type**

int

**Default value**

0x8

**Description**

Number of resource selector pairs.

**ete.PIDR\_CM0D****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CM0D value.

**ete.PIDR\_REVAND****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVAND value.

**ete.PIDR\_REVISION****Type**

int

**Default value**

0x0

**Description**

TRCPIDR REVISION value.

**ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**ete.RETSTACK****Type**

int

**Default value**

0x3

**Description**

Return stack depth.

**ete.REVISION****Type**

int

**Default value**

0x0

**Description**

TRCIDR1 revision value.

**ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**ete.TRCSRSTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCSRSTA value for a forcibly traced exception.

**ext\_abort\_normal\_noncacheable\_read\_is\_sync****Type**

bool

**Default value**

0x1

**Description**

Synchronous reporting of normal noncacheable-read external aborts.

**ext\_abort\_so\_write\_ras\_type****Type**

int

**Default value**

0x2

**Description**

External Aborts are reported as RAS error type specified in this param. Values: 0 = NONE, 1 = UC, 2 = UEU, 3 = UEO, 4 = UER, 5 = CE.

**force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**force\_zero\_mpam\_partid\_and\_pmg****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance

of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

### **has\_coherent\_icache**

#### **Type**

bool

#### **Default value**

0x1

#### **Description**

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

### **has\_enhanced\_pan**

#### **Type**

int

#### **Default value**

0x2

#### **Description**

Implements Armv8.7 Enhanced PAN feature (FEAT\_PAN3) Possible values of this parameter are: - 1, feature is implemented if ARMv8.7 is enabled. - 2, feature is implemented.

### **has\_ete**

#### **Type**

bool

#### **Default value**

0x0

#### **Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

### **has\_external\_rndr**

#### **Type**

int

#### **Default value**

0x1

#### **Description**

Implement external random number generator module. When enabling this with has\_rndr enabled, the external random number generator will be used instead of internal random number generator.

**has\_large\_va****Type**

int

**Default value**

0x0

**Description**

Implement support for the extended 52-bit virtual addresses from ARMv8.2 (FEAT\_LVA). Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.2 is enabled. - 2, feature is implemented.

**has\_peripheral\_port****Type**

bool

**Default value**

0x0

**Description**

If true, an additional AXI peripheral port is configured.

**has\_rndr****Type**

int

**Default value**

0x1

**Description**

Implement random number instructions to read from RNDR and RNDRSS random number registers from ARMv8.5 (FEAT\_RNG).

**icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `icache-state_modelled=true`.

**`icache-miss_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `icache-state_modelled=true`.

**`icache-prefetch_enabled`****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when `icache-state_modelled=true`.

**`icache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

**`icache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

**`icache-size`****Type**

int

**Default value**

0x8000

**Description**

L1 I-Cache size in bytes.

**`icache-state_modelled`****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**`instruction_tlb_size`****Type**

int

**Default value**

0x0

**Description**

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

**`invalidate_code_cache_on_icache_cmo`****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE. Note: Enabling this parameter will reduce simulation performance.

**memory\_tagging\_support\_level****Type**

int

**Default value**

0x3

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

**mpam\_max\_partid****Type**

int

**Default value**

0x1ff

**Description**

MPAM Maximum PARTID Supported.

**mpam\_max\_vpmr****Type**

int

**Default value**

0x7

**Description**

MPAM Maximum VPMR Supported.

**mpmm\_accumulator\_multiplier****Type**

int

**Default value**

0x1

**Description**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator. A value of n means the accumulator will use (n \* accumulator value) to calculate the mpmm threshold (MPMM). This is provided as a fast model workaround to handle cases where execution of quantum in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

**pmu-num\_counters****Type**

int

**Default value**

0x6

**Description**

Number of PMU counters implemented.

**ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**rndr\_rndrrs\_seed****Type**

int

**Default value**

0x0

**Description**

Initial seed for random engine used in RNDR register.

**stage12\_tlb\_size****Type**

int

**Default value**

0x80

**Description**

Number of stage1+2 tlb entries.

**tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**trace\_physical\_registers\_when\_host\_virtualisation\_enabled****Type**

int

**Default value**

0x1

**Description**

When host virtualisation is enabled, trace sysreg accesses to physical register accessed (0=disabled, 1=Trace only ELR/SPSR\_EL1 as ELR/SPSR\_EL2, 2=Trace all redirected registers as physical registers.

**treat\_PAC\_as\_NOP****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter. Treat Pointer Authentication as NOP. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are NOP. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

**walk\_cache\_latency****Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

### 3.5.82 ARMNeoverseV3AECT

ARMNeoverseV3AECT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-513: IP revisions support**

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### About ARMNeoverseV3AECT

A DSU-120 DynamIQ cluster containing a single Neoverse-V3AE core configured for Direct connect.

The core supports the following optional features:

- Realm Management Extension
- Coherent instruction cache

The following DSU/CPU features will not be implemented:

- DynamIQ features that are irrelevant to the programmers' view simulation.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Snoop filtering.
- Cache stashing capability.
- Embedded Logic Analyzer (ELA).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

#### AE-specific features implemented

The only AE-specific features implemented in the model are Split-Lock and Lock-Step, with the following limitations:

- The implementation of Split-Lock and Lock-Step in the model is simply a halving of the number of cores available.
- Lock-step is implemented by a parameter that can be true or false for the entire execution only, rather than by a signal that can be enabled during execution.

As the model does not implement true Split-Lock functionality, the ports and parameters are contiguous. For example, for a 4-core CPU with Split-Lock enabled, `cpu0` and `cpu1` identify the available cores and associated ports, not `cpu0` and `cpu2`.

- Hybrid mode is not modeled in the DSU.

## Iris and MTI instances for ARMNeoverseV3AECT

This model has the following Iris instances:

**Table 3-514: ARMNeoverseV3AECT Iris instances**

InstanceName	ComponentName
ARMNeoverseV3AECT	Cluster_ARM_Neoverse-V3AE
ARMNeoverseV3AECT.AMU	PVBusLogger
ARMNeoverseV3AECT.AMU.mapper	PVBusMapper
ARMNeoverseV3AECT.DAP	PVBusLogger
ARMNeoverseV3AECT.DAP.mapper	PVBusMapper
ARMNeoverseV3AECT.DSU	DSU

## Ports for ARMNeoverseV3AECT

**Table 3-516: Ports**

Name	Protocol	Type	Description
acp_s[2]	PVBus	Slave	AXI ACP slave port.
AEND0MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART2MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	Signal	Slave	CHI defined pins.
broadcastcachemaint	Signal	Slave	ACE defined pins.
broadcastouter	Signal	Slave	ACE defined pins.
broadcastpersist	Signal	Slave	CHI defined pins.
cfgend[1]	Signal	Slave	This signal is for EE bit initialisation.
cfgsdisable	Signal	Slave	This signal disables write access to some secure Interrupt Controller registers.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsn_pchannel	PChannel	Master	Cluster PCSN signal

Name	Protocol	Type	Description
cluster_powerdown_out	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the cluster power info
clusterid	Value	Slave	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.
clusterpmuirq	Signal	Master	DynamlQ pmu irq
CNTHPIRQ[1]	Signal	Master	Timer signals to SOC.
CNTHPSIRQ[1]	Signal	Master	Timer signals to SOC
CNTHVIRQ[1]	Signal	Master	Timer signals to SOC.
CNTHVSIRQ[1]	Signal	Master	Timer signals to SOC
CNTPNSIRQ[1]	Signal	Master	Timer signals to SOC.
CNTPSIRQ[1]	Signal	Master	Timer signals to SOC.
cntvalueb	CounterInterface	Slave	Interface to SoC level counter module.
CNTVIRQ[1]	Signal	Master	Timer signals to SOC.
commirq[1]	Signal	Master	Interrupt signal from debug communications channel.
core_clk_in[1]	ClockSignal	Slave	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.
core_pcsmpchannel[1]	PChannel	Master	Core PCSM signals
core_powerdown_out[1]	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the core power info
coreerrirq[1]	Signal	Master	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq[1]	Signal	Master	Fault indicator for a detected 1 or 2 bit ECC error
cryptodisable[1]	Signal	Slave	Disable cryptography extensions after reset.
cti[1]	v8EmbeddedCrossTrigger_controlprotocol	Master	Cross trigger matrix port.
ctidbgirq[1]	Signal	Master	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	Signal	Slave	External debug interface.
dbgnopwrdown[1]	Signal	Master	No power-down request.
dbgpwrupreq[1]	Signal	Master	Debug power up request.

Name	Protocol	Type	Description
defaultMP	Signal	Slave	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	PVBus	Slave	External debug interface.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
fiq[1]	Signal	Slave	This signal drives the CPUs fast-interrupt handling.
gicreset	Signal	Master	An output from PPU that can be used to reset GICCLK domain components
gicv3_redistributor_s[1]	GICv3Comms	Slave	GICv3 AXI-stream port.
irq[1]	Signal	Slave	This signal drives the CPUs interrupt handling.
l0gptsz	Value	Slave	RME LOGPTSZ port
legacy_tz_en	Signal	Slave	RME LEGACY_TZ_EN port
memorymapped_debug_s	PVBus	Slave	External debug interface.
pmbirq[1]	Signal	Master	Interrupt signal from the statistical profiling unit.
pmuirq[1]	Signal	Master	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	Signal	Master	PPU cluster interrupt.
ppu_cluster_wakerequest	Signal	Slave	PPU cluster wake request signal.
ppu_core_irq[1]	Signal	Master	PPU core interrupt.
ppu_core_wakerequest[1]	Signal	Slave	PPU core wake request signal.
presetdbg	Signal	Slave	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	PVBus	Master	The core will generate bus requests on this port.
pvbus_periph_m	PVBus	Master	The core can generate peripheral bus request on this port.
rei[1]	Signal	Slave	Per core RAM Error Interrupt.
reset	Signal	Slave	Reset signal to cluster.
rlpiden	Signal	Slave	External debug interface.
rtpiden	Signal	Slave	External debug interface.
rvbaraddr[1]	Value_64	Slave	Reset vector base address.
sci_m	SystemCoherencyInterface	Master	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei[1]	Signal	Slave	Per core System Error physical pins.
spiden	Signal	Slave	External debug interface.

Name	Protocol	Type	Description
ticks[1]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq[1]	Signal	Master	Interrupt signal from the trace buffer unit.
utility_bus_s	PVBus	Slave	Utility bus slave
vcpumntirq[1]	Signal	Master	Interrupt signal for virtual CPU maintenance IRQ.
vfiq[1]	Signal	Slave	Virtualised FIQ.
virq[1]	Signal	Slave	Virtualised IRQ.
virtio_s	PVBus	Slave	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei[1]	Signal	Slave	Per core virtual System Error physical pins.

## Parameters for ARMNeoverseV3AECT

### AEND0\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

### AEND1\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

### AEND2\_DEFAULT

#### Type

int

#### Default value

0x0

**Description**

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

**AEND3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

**ASTART0\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

**ASTART1\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

**ASTART2\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

**ASTART3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

**BROADCASTATOMIC****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

**BROADCASTCACHEMAINT****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

**BROADCASTOUTER****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

**BROADCASTPERSIST****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

**CLUSTER\_ID****Type**

int

**Default value**

0x0

**Description**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled****Type**

int

**Default value**

0x1

**Description**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. Changing this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain CMOs even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required .

**CPUCFR****Type**

int

**Default value**

0x20

**Description**

Value of CPU Configuration Register.

**GICDISABLE****Type**

bool

**Default value**

0x1

**Description**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

**NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores per cluster.

**brbe\_log2\_num\_records****Type**

int

**Default value**

0x5

**Description**

Log2 of number of BRB records supported. 3 -> 8 records, ... 6 -> 64 records.

**bus\_type****Type**

int

**Default value**

0x0

**Description**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

**core\_power\_on\_by\_default****Type**

bool

**Default value**

0x0

**Description**

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPU which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

**`cpi_div`****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**`cpi_mul`****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**`cpuX.CFGEND`****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**`cpuX.CFGTE`****Type**

bool

**Default value**

0x0

**Description**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

**`cpuX.CRYPTODISABLE`****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**cpuX.crypto\_aes****Type**

int

**Default value**

0x2

**Description**

AES instructions supported (requires CryptoPlugin to be loaded). 0, not implemented. 2, AES and PMULL instructions implemented (FEAT\_AES, FEAT\_PMULL).

**cpuX.crypto\_sha3****Type**

int

**Default value**

0x2

**Description**

Implement ARMv8.4 SHA-3 instructions (requires CryptoPlugin to be loaded) (FEAT\_SHA3). Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.4 is enabled. - 2, feature is implemented.

**cpuX.crypto\_sha512****Type**

int

**Default value**

0x2

**Description**

Implement ARMv8.4 SHA-512 instructions (requires CryptoPlugin to be loaded) (FEAT\_SHA512). Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.4 is enabled. - 2, feature is implemented.

**cpuX.crypto\_sm3****Type**

int

**Default value**

0x2

**Description**

Implement ARMv8.4 SM-3 instructions (requires CryptoPlugin to be loaded) (FEAT\_SM3). Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.4 is enabled. - 2, feature is implemented.

**cpuX.crypto\_sm4****Type**

int

**Default value**

0x2

**Description**

Implement ARMv8.4 SM-4 instructions (requires CryptoPlugin to be loaded) (FEAT\_SM4). Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.4 is enabled. - 2, feature is implemented.

**cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

**cpuX.l2cache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-size****Type**

int

**Default value**

0x80000

**Description**

L2 Cache size in bytes.

**cpuX.l2cache-snoop\_data\_transfer\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-snoop\_issue\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-ways****Type**

int

**Default value**

0x8

**Description**

L2 Cache number of ways (sets are implicit from size).

**cpuX.l2cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**cpuX.semihosting-T32\_HLT****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**cpuX.semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**cpuX.semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**cpuX.semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**cpuX.semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**cpuX.semihosting-heap\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when `dcache-state_modelled=true`.

**`dcache-maintenance_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when `dcache-state_modelled=true`.

**`dcache-miss_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when `dcache-state_modelled=true`.

**`dcache-prefetch_enabled`****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

**`dcache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit

or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

### **`dcache-read_latency`**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

### **`dcache-size`**

#### **Type**

int

#### **Default value**

0x10000

#### **Description**

L1 D-Cache size in bytes.

### **`dcache-snoop_data_transfer_latency`**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

### **`dcache-state_modelled`**

#### **Type**

bool

#### **Default value**

0x0

#### **Description**

Set whether D-cache has stateful implementation.

**dcache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size dcache-write\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if dcache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**dcache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. dcache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**default\_opmode****Type**

int

**Default value**

0x4

**Description**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

**diagnostics****Type**

bool

**Default value**

0x0

**Description**

Enable DynamIQ diagnostic messages.

**ecv\_support\_level****Type**

int

**Default value**

0x2

**Description**

Implement Enhanced Counter Virtualization feature from ARMv8.6. 0, Not supported. 1, fully supported without CNTPOFF. 2, fully supported with CNTPOFF (FEAT\_ECV).

**enable\_simulation\_performance\_optimizations****Type**

bool

**Default value**

0x1

**Description**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

**ete.CLAIMTAGS****Type**

int

**Default value**

0x4

**Description**

Number of claim tags.

**ete.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**ete.NumberOfRSPairs****Type**

int

**Default value**

0x8

**Description**

Number of resource selector pairs.

**ete.PIDR\_CM0D****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CM0D value.

**ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**ete.RETSTACK****Type**

int

**Default value**

0x3

**Description**

Return stack depth.

**ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**ete.TRCRSRTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCRSR.TA value for a forcibly traced exception.

**ext\_abort\_so\_write\_ras\_type****Type**

int

**Default value**

0x2

**Description**

External Aborts are reported as RAS error type specified in this param. Values: 0 = NONE, 1 = UC, 2 = UEU, 3 = UEO , 4 = UER, 5 = CE.

**force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**force\_zero\_mpam\_partid\_and\_pmg****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect. 1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**has\_coherent\_icache****Type**

bool

**Default value**

0x1

**Description**

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

**has\_enhanced\_pan****Type**

int

**Default value**

0x2

**Description**

Implements Armv8.7 Enhanced PAN feature (FEAT\_PAN3) Possible values of this parameter are: - 1, feature is implemented if ARMv8.7 is enabled. - 2, feature is implemented.

**has\_ete****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**has\_peripheral\_port****Type**

bool

**Default value**

0x0

**Description**

If true, an additional AXI peripheral port is configured.

**has\_rndr****Type**

int

**Default value**

0x1

**Description**

Implement random number instructions to read from RNDR and RNDRSS random number registers from ARMv8.5 (FEAT\_RNG). Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.5 is enabled. - 2, feature is implemented.

**has\_statistical\_profiling****Type**

bool

**Default value**

0x1

**Description**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

**has\_v8\_7\_spe\_inverted\_filtering****Type**

bool

**Default value**

0x0

**Description**

Where FEAT\_SPEv1p2 is implemented, whether inverted filtering by events is implemented (represented by PMISDR.FnE).

**has\_v8\_7\_spe\_previous\_branch\_target****Type**

bool

**Default value**

0x0

**Description**

Where FEAT\_SPEv1p2 is implemented, whether the optional branch target feature is implemented (FEAT\_SPE\_PBT).

**icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

**icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state\_modelled=true.

**icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

**icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size icache-read\_bus\_width\_in\_bytes). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if icache-read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when icache-state\_modelled=true.

**icache-read\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. icache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when icache-state\_modelled=true.

**icache-size****Type**

int

**Default value**

0x10000

**Description**

L1 I-Cache size in bytes.

**icache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**instruction\_tlb\_size****Type**

int

**Default value**

0x0

**Description**

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

**invalidate\_code\_cache\_on\_icache\_cmo****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE.

Note: Enabling this parameter will reduce simulation performance.

**l3cache-ways****Type**

int

**Default value**

0x10

**Description**

L3 Cache number of ways (sets are implicit from size).

**log2\_trace\_buffer\_alignment****Type**

int

**Default value**

0x6

**Description**

Log2 of trace buffer alignment constraint for output buffer (0->1B ... 11->2Kib).

**memory\_tagging\_support\_level****Type**

int

**Default value**

0x3

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

**mpamidr\_has\_force\_ns****Type**

int

**Default value**

0x0

**Description**

Whether MPAMIDR\_EL1.HAS\_FORCE\_NS bit is set or clear. Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.6 is enabled. - 2, feature is implemented.

**mpamidr\_has\_sdeflt****Type**

int

**Default value**

0x1

**Description**

Whether MPAMIDR\_EL1.HAS\_SDEFLT bit is set or clear. Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.6 is enabled. - 2, feature is implemented.

**mpamidr\_has\_tidr****Type**

int

**Default value**

0x1

**Description**

Whether MPAMIDR\_EL1.HAS\_TIDR bit is set or clear. Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.6 is enabled. - 2, feature is implemented.

**mpmm\_accumulator\_multiplier****Type**

int

**Default value**

0x1

**Description**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator. A value of n means the accumulator will use (n \* accumulator value) to calculate the mpmm threshold (MPMM). This is provided as a fast model workaround to handle cases where execution of quantum in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

**num\_acp****Type**

int

**Default value**

0x0

**Description**

Number of ACP ports.

**ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**reported\_patch\_level****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**reported\_revision\_number****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**rme\_level0\_gpt\_size****Type**

int

**Default value**

0x0

**Description**

The range of address space protected by each entry in the level 0 GPT (0->1GB 1->16GB, 2->64GB, 3->512GB).

**rme\_support\_level****Type**

int

**Default value**

0x2

**Description**

0 -> Realm management extension not implemented, 1 -> LEGACY\_TZ\_EN mode i.e. RME register fields are stateful but only supports secure/non-secure states, 2 -> Realm management extension fully implemented (FEAT\_RME).

**`rndr_rndrrs_seed`****Type**

int

**Default value**

0x0

**Description**

Initial seed for random engine used in RNDR register.

**`stage12_tlb_size`****Type**

int

**Default value**

0x80

**Description**

Number of stage1+2 tlb entries.

**`tcr_txsz_undersize_should_fault`****Type**

bool

**Default value**

0x0

**Description**

If large VA is not supported, Whether undersized TxSZ value should generate translation fault.

**`tlb_latency`****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**tlbi\_stall\_enabled**

Type  
bool

Default value  
0x0

Description  
If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**treat\_PAC\_as\_NOP**

Type  
bool

Default value  
0x0

Description  
Non-architecture parameter. Treat Pointer Authentication as NOP. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are NOP. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

**walk\_cache\_latency**

Type  
int

Default value  
0x0

Description  
Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

3.5.83 ARMNeoverseV3CT

ARMNeoverseV3CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-517: IP revisions support

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

## About ARMNeoverseV3CT

A DSU-120 DynamIQ cluster containing a single Neoverse-V3 core configured for Direct connect.

The core supports the following optional features:

- Realm Management Extension
- Coherent instruction cache

The following DSU/CPU features will not be implemented:

- DynamIQ features that are irrelevant to the programmers' view simulation.
- 256-bit wide output transactions.
- ECC and parity schemes are hardware-specific so are not supported.
- Self-test features (MBIST).
- Snoop filtering.
- Cache stashing capability.
- Embedded Logic Analyzer (ELA).

This model supports the Armv8-A Cryptographic Extensions, which requires the crypto plug-in (`crypto.dll` or `crypto.so`) to be loaded. The crypto plug-in is available for download from the [Arm Developer website](#).

## Iris and MTI instances for ARMNeoverseV3CT

This model has the following Iris instances:

**Table 3-518: ARMNeoverseV3CT Iris instances**

InstanceName	ComponentName
ARMNeoverseV3CT	Cluster_ARM_Neoverse-V3
ARMNeoverseV3CT.AMU	PVBusLogger
ARMNeoverseV3CT.AMU.mapper	PVBusMapper
ARMNeoverseV3CT.DAP	PVBusLogger
ARMNeoverseV3CT.DAP.mapper	PVBusMapper
ARMNeoverseV3CT.DSU	DSU
ARMNeoverseV3CT.DSU.PPU_cluster	PPUv1
ARMNeoverseV3CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMNeoverseV3CT.DSU.PPU_core0	PPUv1
ARMNeoverseV3CT.DSU.PPU_core0.busslave	PVBusSlave
ARMNeoverseV3CT.DSU.mpam_busslave	PVBusSlave
ARMNeoverseV3CT.DSU.shared_cache	PVCache
ARMNeoverseV3CT.DSU.shared_cache.upstream[0]	PVBusSlave
ARMNeoverseV3CT.DSU.shared_cache.upstream[1]	PVBusSlave
ARMNeoverseV3CT.DSU.shared_cache.upstream[2]	PVBusSlave

InstanceName	ComponentName
ARMNeoverseV3CT.DSU.shared_cache.upstream[3]	PVBusSlave
ARMNeoverseV3CT.DSU.shared_cache.upstream[4]	PVBusSlave
ARMNeoverseV3CT.DSU.utility_slave[0]	PVBusSlave
ARMNeoverseV3CT.MMAP	PVBusLogger
ARMNeoverseV3CT.MMAP.mapper	PVBusMapper
ARMNeoverseV3CT.RAS	PVBusLogger
ARMNeoverseV3CT.RAS.mapper	PVBusMapper
ARMNeoverseV3CT.cpu0	ARM_Neoverse-V3
ARMNeoverseV3CT.cpu0.UTLB	TLB
ARMNeoverseV3CT.cpu0.debug_rom	debug_rom
ARMNeoverseV3CT.cpu0.dtlb	TLB
ARMNeoverseV3CT.cpu0.l1dcache	PVCache
ARMNeoverseV3CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMNeoverseV3CT.cpu0.l1icache	PVCache
ARMNeoverseV3CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMNeoverseV3CT.cpu0.l2cache	PVCache
ARMNeoverseV3CT.cpu0.l2cache.upstream[0]	PVBusSlave
ARMNeoverseV3CT.cpu0.l2cache.upstream[1]	PVBusSlave
ARMNeoverseV3CT.default_CTM	EmbeddedCT
ARMNeoverseV3CT.ext_bus	PVBusLogger
ARMNeoverseV3CT.ext_bus.mapper	PVBusMapper
ARMNeoverseV3CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder
ARMNeoverseV3CT.global_debug_rom	debug_rom
ARMNeoverseV3CT.secondary_debug_rom	debug_rom
ARMNeoverseV3CT.sve	ScalableVectorExtension

This model has the following MTI trace components:

**Table 3-519: ARMNeoverseV3CT MTI instances**

InstanceName	ComponentName
ARMNeoverseV3CT.AMU	PVBusLogger
ARMNeoverseV3CT.AMU.mapper	PVBusMapper
ARMNeoverseV3CT.DAP	PVBusLogger
ARMNeoverseV3CT.DAP.mapper	PVBusMapper
ARMNeoverseV3CT.DSU	DSU
ARMNeoverseV3CT.DSU.PPU_cluster	PPUv1
ARMNeoverseV3CT.DSU.PPU_cluster.busslave	PVBusSlave
ARMNeoverseV3CT.DSU.PPU_core0	PPUv1
ARMNeoverseV3CT.DSU.PPU_core0.busslave	PVBusSlave
ARMNeoverseV3CT.DSU.mpam_busslave	PVBusSlave

InstanceName	ComponentName
ARMNeoverseV3CT.DSU.shared_cache	PVCache
ARMNeoverseV3CT.DSU.shared_cache.upstream[0]	PVBusSlave

ARMNeoverseV3CT.DSU.utility_slave[0]	PVBusSlave
ARMNeoverseV3CT.MMAP	PVBusLogger
ARMNeoverseV3CT.MMAP.mapper	PVBusMapper
ARMNeoverseV3CT.RAS	PVBusLogger
ARMNeoverseV3CT.RAS.mapper	PVBusMapper
ARMNeoverseV3CT.cpu0	ARM_Neoverse-V3
ARMNeoverseV3CT.cpu0.UTLB	TLB
ARMNeoverseV3CT.cpu0.l1dcache	PVCache
ARMNeoverseV3CT.cpu0.l1dcache.upstream[0]	PVBusSlave
ARMNeoverseV3CT.cpu0.l1icache	PVCache
ARMNeoverseV3CT.cpu0.l1icache.upstream[0]	PVBusSlave
ARMNeoverseV3CT.cpu0.l2cache	PVCache
ARMNeoverseV3CT.cpu0.l2cache.upstream[0]	PVBusSlave
ARMNeoverseV3CT.cpu0.l2cache.upstream[1]	PVBusSlave
ARMNeoverseV3CT.ext_bus	PVBusLogger
ARMNeoverseV3CT.ext_bus.mapper	PVBusMapper
ARMNeoverseV3CT.gic_cpuif_decoder_cluster	GICv3CPUInterfaceDecoder

## Ports for ARMNeoverseV3CT

**Table 3-520: Ports**

Name	Protocol	Type	Description
acp_s[2]	PVBus	Slave	AXI ACP slave port.
AEND0MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND1MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND2MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
AEND3MP	Value_64	Slave	Port to obtain end address of valid peripheral address range (exclusive).
ASTART0MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART1MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).

Name	Protocol	Type	Description
ASTART2MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
ASTART3MP	Value_64	Slave	Port to obtain start address of valid peripheral address range (inclusive).
broadcastatomic	Signal	Slave	CHI defined pins.
broadcastcachemaint	Signal	Slave	ACE defined pins.
broadcastouter	Signal	Slave	ACE defined pins.
broadcastpersist	Signal	Slave	CHI defined pins.
cfgend[1]	Signal	Slave	This signal is for EE bit initialisation.
cfgsdisable	Signal	Slave	This signal disables write access to some secure Interrupt Controller registers.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the cluster level components run e.g cluster level timers, caches and pmu.
cluster_pcsmp_channel	PChannel	Master	Cluster PCSM signal
cluster_powerdown_out	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the cluster power info
clusterid	Value	Slave	The cluster ID maps to the affinity levels of the MPIDR_EL1 register and is evaluated based on the MPIDR_EL1 layout. If MPIDR_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR_EL1 supports 24-bit cluster affinity levels, bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.
clusterpmuirq	Signal	Master	DynamlQ pmu irq
CNTHPIRQ[1]	Signal	Master	Timer signals to SOC.
CNTHPSIRQ[1]	Signal	Master	Timer signals to SOC
CNTHVIRQ[1]	Signal	Master	Timer signals to SOC.
CNTHVSIRQ[1]	Signal	Master	Timer signals to SOC
CNTPNSIRQ[1]	Signal	Master	Timer signals to SOC.
CNTPSIRQ[1]	Signal	Master	Timer signals to SOC.
cntvalueb	CounterInterface	Slave	Interface to SoC level counter module.
CNTVIRQ[1]	Signal	Master	Timer signals to SOC.
commirq[1]	Signal	Master	Interrupt signal from debug communications channel.
core_clk_in[1]	ClockSignal	Slave	The clock signal connected to the core_clk_in port is used to determine the rate at which each core executes instructions.

Name	Protocol	Type	Description
core_pcsmpchannel[1]	PChannel	Master	Core PCSM signals
core_powerdown_out[1]	Signal	Master	DEPRECATED - An output from PPU that informs thermal controller of the core power info
coreerrirq[1]	Signal	Master	Error indicator for an ECC error that causes potential data corruption or loss of coherency
corefaultirq[1]	Signal	Master	Fault indicator for a detected 1 or 2 bit ECC error
cryptodisable[1]	Signal	Slave	Disable cryptography extensions after reset.
cti[1]	v8EmbeddedCrossTrigger_controlprotocol	Master	Cross trigger matrix port.
ctidbgirq[1]	Signal	Master	Cross Trigger Interface (CTI) interrupt trigger output.
dbgen	Signal	Slave	External debug interface.
dbgnopwrdown[1]	Signal	Master	No power-down request.
dbgpwrupreq[1]	Signal	Master	Debug power up request.
defaultMP	Signal	Slave	If DefaultMP is asserted, all the transactions go to peripheral ports except the configured address ranges. Configured address ranges are sent to main master interface ports.
dev_debug_s	PVBus	Slave	External debug interface.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE.
fiq[1]	Signal	Slave	This signal drives the CPUs fast-interrupt handling.
gicreset	Signal	Master	An output from PPU that can be used to reset GICCLK domain components
gicv3_redistributor_s[1]	GICv3Comms	Slave	GICv3 AXI-stream port.
irq[1]	Signal	Slave	This signal drives the CPUs interrupt handling.
l0gptsz	Value	Slave	RME LOGPTSZ port
legacy_tz_en	Signal	Slave	RME LEGACY_TZ_EN port
memorymapped_debug_s	PVBus	Slave	External debug interface.
pmbirq[1]	Signal	Master	Interrupt signal from the statistical profiling unit.
pmuirq[1]	Signal	Master	Interrupt signal from performance monitoring unit.
ppu_cluster_irq	Signal	Master	PPU cluster interrupt.
ppu_cluster_wakerequest	Signal	Slave	PPU cluster wake request signal.
ppu_core_irq[1]	Signal	Master	PPU core interrupt.
ppu_core_wakerequest[1]	Signal	Slave	PPU core wake request signal.

Name	Protocol	Type	Description
presetdbg	Signal	Slave	Initialize the shared debug APB, Cross Trigger Interface (CTI), and Cross Trigger Matrix (CTM) logic.
pvbus_m0	PVBus	Master	The core will generate bus requests on this port.
pvbus_periph_m	PVBus	Master	The core can generate peripheral bus request on this port.
rei[1]	Signal	Slave	Per core RAM Error Interrupt.
reset	Signal	Slave	Reset signal to cluster.
rlpiden	Signal	Slave	External debug interface.
rtpiden	Signal	Slave	External debug interface.
rvbaraddr[1]	Value_64	Slave	Reset vector base address.
sci_m	SystemCoherencyInterface	Master	System coherency interface port, which is used to take the whole cluster into/out-of coherency domain
sei[1]	Signal	Slave	Per core System Error physical pins.
spiden	Signal	Slave	External debug interface.
ticks[1]	InstructionCount	Master	This port should be connected to one of the two ticks ports on a 'visualisation' component, in order to display a running instruction count.
trbirq[1]	Signal	Master	Interrupt signal from the trace buffer unit.
utility_bus_s	PVBus	Slave	Utility bus slave
vcpumntirq[1]	Signal	Master	Interrupt signal for virtual CPU maintenance IRQ.
vfiq[1]	Signal	Slave	Virtualised FIQ.
virq[1]	Signal	Slave	Virtualised IRQ.
virtio_s	PVBus	Slave	The virtio coherent port, hooks directly into the L2 system and becomes coherent (assuming attributes are set correctly).
vsei[1]	Signal	Slave	Per core virtual System Error physical pins.

## Parameters for ARMNeoverseV3CT

### AEND0\_DEFAULT

#### Type

int

#### Default value

0x0

#### Description

Default end address for peripheral port 0 address range exclusive (corresponds to AENDMP0 input signal).

**AEND1\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default end address for peripheral port 1 address range exclusive (corresponds to AENDMP1 input signal).

**AEND2\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default end address for peripheral port 2 address range exclusive (corresponds to AENDMP2 input signal).

**AEND3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default end address for peripheral port 3 address range exclusive (corresponds to AENDMP3 input signal).

**ASTART0\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 0 address range inclusive (corresponds to ASTARTMP0 input signal).

**ASTART1\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 1 address range inclusive (corresponds to ASTARTMP1 input signal).

**ASTART2\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 2 address range inclusive (corresponds to ASTARTMP2 input signal).

**ASTART3\_DEFAULT****Type**

int

**Default value**

0x0

**Description**

Default start address for peripheral port 3 address range inclusive (corresponds to ASTARTMP3 input signal).

**BROADCASTATOMIC****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of atomic operation. The broadcastatomic signal will override this value if used.

**BROADCASTCACHEMAINT****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of cache maintenance operations to downstream caches. The broadcastcachemaint signal will override this value if used.

**BROADCASTOUTER****Type**

bool

**Default value**

0x0

**Description**

Enable broadcasting of Outer Shareable transactions. The broadcastouter signal will override this value if used.

**BROADCASTPERSIST****Type**

bool

**Default value**

0x1

**Description**

Enable broadcasting of cache clean to the point of persistence operations. The broadcastpersist signal will override this value if used.

**CLUSTER\_ID****Type**

int

**Default value**

0x0

**Description**

The Cluster ID maps to the affinity levels of the MPIDR\_EL1 register and is evaluated based on the MPIDR\_EL1 layout. If MPIDR\_EL1 supports 16-bit cluster affinity levels, bits [15:8] map to IDRAFF3, while bits [7:0] map to IDRAFF2. If MPIDR\_EL1 supports 24-bit cluster affinity levels, the bits [23:16] map to IDRAFF3, bits [15:8] map to IDRAFF2, and bits [7:0] map to IDRAFF1. This configuration also updates all relevant component DEVAFF registers and is used to set the MasterID and ManagerID64 of the core.

**CMO\_broadcast\_when\_cache\_state\_modelling\_disabled****Type**

int

**Default value**

0x1

**Description**

Skip broadcasting some cache maintenance operations (CMOs) when cache state modelling is disabled as a performance optimisation. Changing this value may affect performance of the simulation, but is required if the rest of the system is sensitive to certain CMOs even when cache state modelling is disabled. Possible values are: - 0 = All CMOs are broadcast if architecturally required - 1 = Data cache maintenance to the PoC or PoU are not broadcast when data cache state modelling is disabled. Otherwise all CMOs are broadcast if architecturally required .

**CPUCFR****Type**

int

**Default value**

0x20

**Description**

Value of CPU Configuration Register.

**GICDISABLE****Type**

bool

**Default value**

0x1

**Description**

Disable the new style GICv3 CPU interface in each core model. It can be set for the platform not having a GICv3 Interface (GICv3).

**NUM\_CORES****Type**

int

**Default value**

0x1

**Description**

Number of cores per cluster.

**brbe\_log2\_num\_records****Type**

int

**Default value**

0x5

**Description**

Log2 of number of BRB records supported. 3 -> 8 records, ... 6 -> 64 records.

**bus\_type****Type**

int

**Default value**

0x0

**Description**

Cosmetic change that changes reset value of L2ACTLR register. 0, ACE. 1, CHI. 2, AXI.

**core\_power\_on\_by\_default****Type**

bool

**Default value**

0x0

**Description**

If true, The cluster and cores will be powered on for v9 after reset. If this parameter is enabled, the powerdown signal from in-cluster PPU which is connected to cores and cluster reset signals will be cleared after reset and triggers the power on sequence in PPU.

**cpi\_div****Type**

int

**Default value**

0x1

**Description**

Divider for calculating CPI (Cycles Per Instruction).

**cpi\_mul****Type**

int

**Default value**

0x1

**Description**

Multiplier for calculating CPI (Cycles Per Instruction).

**cpuX.CFGEND****Type**

bool

**Default value**

0x0

**Description**

Endianness configuration at reset. 0, little endian. 1, big endian.

**cpuX.CFGTE****Type**

bool

**Default value**

0x0

**Description**

Instruction set state when resetting into AArch32. 0, A32. 1, T32.

**cpuX.CRYPTODISABLE****Type**

bool

**Default value**

0x0

**Description**

Disable cryptographic features.

**cpuX.RVBARADDR****Type**

int

**Default value**

0x0

**Description**

Value of RVBAR\_ELx register.

**cpuX.crypto\_aes****Type**

int

**Default value**

0x2

**Description**

AES instructions supported (requires CryptoPlugin to be loaded). 0, not implemented. 2, AES and PMULL instructions implemented (FEAT\_AES, FEAT\_PMULL).

**cpuX.crypto\_sha3****Type**

int

**Default value**

0x2

**Description**

Implement ARMv8.4 SHA-3 instructions (requires CryptoPlugin to be loaded) (FEAT\_SHA3). Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.4 is enabled. - 2, feature is implemented.

**cpuX.crypto\_sha512****Type**

int

**Default value**

0x2

**Description**

Implement ARMv8.4 SHA-512 instructions (requires CryptoPlugin to be loaded) (FEAT\_SHA512). Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.4 is enabled. - 2, feature is implemented.

**cpuX.crypto\_sm3****Type**

int

**Default value**

0x2

**Description**

Implement ARMv8.4 SM-3 instructions (requires CryptoPlugin to be loaded) (FEAT\_SM3). Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.4 is enabled. - 2, feature is implemented.

**cpuX.crypto\_sm4****Type**

int

**Default value**

0x2

**Description**

Implement ARMv8.4 SM-4 instructions (requires CryptoPlugin to be loaded) (FEAT\_SM4). Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.4 is enabled. - 2, feature is implemented.

**cpuX.enable\_trace\_special\_hlt\_imm16****Type**

bool

**Default value**

0x0

**Description**

Enable usage of parameter trace\_special\_hlt\_imm16.

**cpuX.l2cache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for read accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-

read\_latency is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when dcache-state\_modelled=true.

### **cpuX.l2cache-read\_latency**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

L2 Cache timing annotation latency for read accesses given in ticks per byte accessed. l2cache-read\_access\_latency must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when dcache-state\_modelled=true.

### **cpuX.l2cache-size**

#### **Type**

int

#### **Default value**

0x200000

#### **Description**

L2 Cache size in bytes.

### **cpuX.l2cache-snoop\_data\_transfer\_latency**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

L2 Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when dcache-state\_modelled=true.

### **cpuX.l2cache-snoop\_issue\_latency**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

L2 Cache timing annotation latency for snoop accesses issued by this cache in total ticks. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-ways****Type**

int

**Default value**

0x8

**Description**

L2 Cache number of ways (sets are implicit from size).

**cpuX.l2cache-write\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per access. If this parameter is non-zero, per-access latencies will be used instead of per-byte even if l2cache-write\_latency is set. This is only used when dcache-state\_modelled=true.

**cpuX.l2cache-write\_latency****Type**

int

**Default value**

0x0

**Description**

L2 Cache timing annotation latency for write accesses given in ticks per byte accessed. l2cache-write\_access\_latency must be set to 0 for per-byte latencies to be applied. This is only used when dcache-state\_modelled=true.

**cpuX.max\_code\_cache\_mb****Type**

int

**Default value**

0x100

**Description**

Maximum size of the simulation code cache (MiB). For platforms with more than 2 cores this limit will be scaled down. (e.g 1/8 for 16 or more cores).

**cpuX.min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

Force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**cpuX.semihosting-A32\_HLT****Type**

int

**Default value**

0xf000

**Description**

A32 HLT number for semihosting calls.

**cpuX.semihosting-A64\_HLT****Type**

int

**Default value**

0xf000

**Description**

A64 HLT number for semihosting calls.

**cpuX.semihosting-ARM\_SVC****Type**

int

**Default value**

0x123456

**Description**

A32 SVC number for semihosting calls.

**cpuX.semihosting-T32\_HLT****Type**

int

**Default value**

0x3c

**Description**

T32 HLT number for semihosting calls.

**cpuX.semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting calls.

**`cpuX.semihosting-cmd_line`****Type**

string

**Default value**

""

**Description**

Command line available to semihosting calls.

**`cpuX.semihosting-cwd`****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**`cpuX.semihosting-enable`****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC/HLT traps.

**`cpuX.semihosting-heap_base`****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**`cpuX.semihosting-heap_limit`****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of top of heap.

**cpuX.semihosting-stack\_base****Type**

int

**Default value**

0x10000000

**Description**

Virtual address of base of descending stack.

**cpuX.semihosting-stack\_limit****Type**

int

**Default value**

0xf000000

**Description**

Virtual address of stack limit.

**cpuX.trace\_special\_hlt\_imm16****Type**

int

**Default value**

0xf000

**Description**

For this HLT number, IF enable\_trace\_special\_hlt\_imm16=true, skip performing usual HLT execution but call MTI trace if registered.

**cpuX.vfp-enable\_at\_reset****Type**

bool

**Default value**

0x0

**Description**

Enable VFP in CPACR, CPPWR, NSACR at reset. Warning: Arm recommends going through the implementation's suggested VFP power-up sequence!.

**cpuX.vfp-present****Type**

bool

**Default value**

0x1

**Description**

Set whether the model has VFP support.

**dcache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when dcache-state\_modelled=true.

**dcache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when dcache-state\_modelled=true.

**dcache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when dcache-state\_modelled=true.

**dcache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of data cache prefetching. This is only used when `dcache-state_modelled=true`.

**`dcache-read_access_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per access (of size `dcache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `dcache-state_modelled=true`.

**`dcache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for read accesses given in ticks per byte accessed. `dcache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `dcache-state_modelled=true`.

**`dcache-size`****Type**

int

**Default value**

0x10000

**Description**

L1 D-Cache size in bytes.

**`dcache-snoop_data_transfer_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for received snoop accesses that perform a data transfer given in ticks per byte accessed. This is only used when `dcache-state_modelled=true`.

**`dcache-state_modelled`****Type**

bool

**Default value**

0x0

**Description**

Set whether D-cache has stateful implementation.

**`dcache-write_access_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per access (of size `dcache-write_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `dcache-write_latency` is set. This is only used when `dcache-state_modelled=true`.

**`dcache-write_latency`****Type**

int

**Default value**

0x0

**Description**

L1 D-Cache timing annotation latency for write accesses given in ticks per byte accessed. `dcache-write_access_latency` must be set to 0 for per-byte latencies to be applied. This is only used when `dcache-state_modelled=true`.

**`default_opmode`****Type**

int

**Default value**

0x4

**Description**

Operating mode of DynamIQ coming out of reset. 0: SFONLY ON, 1: 1/4 CACHE ON, 2: 1/2 CACHE ON, 3: 3/4 CACHE ON, 4: FULL CACHE ON.

**diagnostics****Type**

bool

**Default value**

0x0

**Description**

Enable DynamIQ diagnostic messages.

**ecv\_support\_level****Type**

int

**Default value**

0x2

**Description**

Implement Enhanced Counter Virtualization feature from ARMv8.6. 0, Not supported. 1, fully supported without CNTPOFF. 2, fully supported with CNTPOFF (FEAT\_ECV).

**enable\_simulation\_performance\_optimizations****Type**

bool

**Default value**

0x1

**Description**

With this option enabled, the model will run more quickly, but be less accurate to exact CPU behavior. The model will still be functionally accurate for software, but may increase differences seen between hardware behavior and model behavior for certain workloads (it changes the micro-architectural value of stage12\_tlb\_size parameter to 1024).

**ete.CLAIMTAGS****Type**

int

**Default value**

0x4

**Description**

Number of claim tags.

**ete.MAX\_INST\_PER\_Q****Type**

int

**Default value**

0x1

**Description**

Maximum limit for the number of instructions implied by a Q element.

**ete.NumberOfRSPairs****Type**

int

**Default value**

0x8

**Description**

Number of resource selector pairs.

**ete.PIDR\_CMOD****Type**

int

**Default value**

0x0

**Description**

TRCPIDR CMOD value.

**ete.Q\_CADENCE****Type**

int

**Default value**

0x1

**Description**

Number of instruction blocks traced between two Q elements.

**ete.RES0\_STATEFUL****Type**

bool

**Default value**

0x0

**Description**

Whether RES0 bits are stateful or RAZ/WI.

**ete.RETSTACK****Type**

int

**Default value**

0x3

**Description**

Return stack depth.

**ete.SIM\_OVERFLOW\_GRANULARITY****Type**

int

**Default value**

0x64

**Description**

Number of instruction blocks in each granule, for simulated overflow.

**ete.SIM\_OVERFLOW\_PERCENTAGE****Type**

int

**Default value**

0x0

**Description**

Percentage of instruction blocks lost in each granule, for simulated overflow.

**ete.SOURCE\_ADDRESS****Type**

bool

**Default value**

0x0

**Description**

Allow generation of source address elements.

**ete.TRACE\_OUTPUT****Type**

string

**Default value**

""

**Description**

File to which to write trace byte stream.

**ete.TRCRSRTA\_FORCED\_EXCEP****Type**

bool

**Default value**

0x0

**Description**

TRCRSR.TA value for a forcibly traced exception.

**ext\_abort\_so\_write\_ras\_type****Type**

int

**Default value**

0x2

**Description**

External Aborts are reported as RAS error type specified in this param. Values: 0 = NONE, 1 = UC, 2 = UEU, 3 = UEO , 4 = UER, 5 = CE.

**force\_mte\_tag\_access\_razwi\_and\_ignore\_tag\_checks****Type**

bool

**Default value**

0x0

**Description**

Force MTE tag accesses to RAZ/WI and also ignore tag checks irrespective of whether memory is tagged or not. This parameter doesn't affect non-load/store tag generation instructions like ADDG/GMI/IRG/SUBG. Please note that setting this parameter to true will also disable MTE tag access and tag check related traces.

**force\_zero\_PSTATE\_PAN****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter to force PSTATE.PAN to be 0.0: No effect. 1: PSTATE.PAN is always treated as 0. The parameter optimizes the performance of updating PSTATE.PAN.

**force\_zero\_mpam\_partid\_and\_pmg****Type**

int

**Default value**

0x0

**Description**

Non-architecture parameter to force MPAM PARTID, PMG and NS/SP to 0.0: No effect.  
1: PARTID and PMG are always treated as 0. The parameter optimizes the performance of updating the registers MPAM0\_EL1, MPAM1\_EL1, MPAM2\_EL2, MPAM3\_EL3, MPAMHCR\_EL2.

**has\_coherent\_icache****Type**

bool

**Default value**

0x1

**Description**

Whether icache invalidation to the point of unification is required for instruction to data coherence. true - Invalidate operations not required.

**has\_enhanced\_pan****Type**

int

**Default value**

0x2

**Description**

Implements Armv8.7 Enhanced PAN feature (FEAT\_PAN3) Possible values of this parameter are: - 1, feature is implemented if ARMv8.7 is enabled. - 2, feature is implemented.

**has\_ete****Type**

bool

**Default value**

0x0

**Description**

If true, implements the Embedded Trace Extension (FEAT\_ETE). This option is discarded if ete plugin is explicitly loaded (--plugin or -P).

**has\_peripheral\_port****Type**

bool

**Default value**

0x0

**Description**

If true, an additional AXI peripheral port is configured.

**has\_rndr****Type**

int

**Default value**

0x1

**Description**

Implement random number instructions to read from RNDR and RNDRSS random number registers from ARMv8.5 (FEAT\_RNG). Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.5 is enabled. - 2, feature is implemented.

**has\_statistical\_profiling****Type**

bool

**Default value**

0x1

**Description**

Whether Statistical Based Profiling is implemented (FEAT\_SPE).

**has\_v8\_7\_spe\_inverted\_filtering****Type**

bool

**Default value**

0x0

**Description**

Where FEAT\_SPEv1p2 is implemented, whether inverted filtering by events is implemented (represented by PMISDR.FnE).

**has\_v8\_7\_spe\_previous\_branch\_target****Type**

bool

**Default value**

0x0

**Description**

Where FEAT\_SPEv1p2 is implemented, whether the optional branch target feature is implemented (FEAT\_SPE\_PBT).

**icache-hit\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for hit. Intended to model the tag-lookup time. This is only used when icache-state\_modelled=true.

**icache-maintenance\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for cache maintenance operations given in total ticks. This is only used when icache-state\_modelled=true.

**icache-miss\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for miss. Intended to model the time for failed tag-lookup and allocation of intermediate buffers. This is only used when icache-state\_modelled=true.

**icache-prefetch\_enabled****Type**

bool

**Default value**

0x0

**Description**

Enable simulation of instruction cache prefetching. This is only used when icache-state\_modelled=true.

**icache-read\_access\_latency****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per access (of size `icache-read_bus_width_in_bytes`). If this parameter is non-zero, per-access latencies will be used instead of per-byte even if `icache-read_latency` is set. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus, this is only used when `icache-state_modelled=true`.

**`icache-read_latency`****Type**

int

**Default value**

0x0

**Description**

L1 I-Cache timing annotation latency for read accesses given in ticks per byte accessed. `icache-read_access_latency` must be set to 0 for per-byte latencies to be applied. This is in addition to the hit or miss latency, and intended to correspond to the time taken to transfer across the cache upstream bus. This is only used when `icache-state_modelled=true`.

**`icache-size`****Type**

int

**Default value**

0x10000

**Description**

L1 I-Cache size in bytes.

**`icache-state_modelled`****Type**

bool

**Default value**

0x0

**Description**

Set whether I-cache has stateful implementation.

**`instruction_tlb_size`****Type**

int

**Default value**

0x0

**Description**

Number of stage1+2 itlb entries (or 0 for unified ITLB+DTLB).

**`invalidate_code_cache_on_icache_cmo`****Type**

int

**Default value**

0x0

**Description**

If set, all PEs will invalidate simulation code cache when an I-side CMO is executed in a PE.  
Note: Enabling this parameter will reduce simulation performance.

**`l3cache-ways`****Type**

int

**Default value**

0x10

**Description**

L3 Cache number of ways (sets are implicit from size).

**`log2_trace_buffer_alignment`****Type**

int

**Default value**

0x6

**Description**

Log2 of trace buffer alignment constraint for output buffer (0->1B ... 11->2Kib).

**`memory_tagging_support_level`****Type**

int

**Default value**

0x3

**Description**

Specify the memory tagging extension support level: 0, not implemented.1, instructions and registers only are implemented (FEAT\_MTE).2, implemented (FEAT\_MTE2).3, implemented with asymmetric handling of exceptions (FEAT\_MTE3).

**mpamidr\_has\_force\_ns****Type**

int

**Default value**

0x0

**Description**

Whether MPAMIDR\_EL1.HAS\_FORCE\_NS bit is set or clear. Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.6 is enabled. - 2, feature is implemented.

**mpamidr\_has\_sdeflt****Type**

int

**Default value**

0x1

**Description**

Whether MPAMIDR\_EL1.HAS\_SDEFLT bit is set or clear. Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.6 is enabled. - 2, feature is implemented.

**mpamidr\_has\_tidr****Type**

int

**Default value**

0x1

**Description**

Whether MPAMIDR\_EL1.HAS\_TIDR bit is set or clear. Possible values of this parameter are: - 0, feature is not enabled. - 1, feature is implemented if ARMv8.6 is enabled. - 2, feature is implemented.

**mpmm\_accumulator\_multiplier****Type**

int

**Default value**

0x1

**Description**

Parameter for non-architectural behaviour to provide a multiplier for the MPMM accumulator. A value of n means the accumulator will use (n \* accumulator value) to calculate the mpmm threshold (MPMM). This is provided as a fast model workaround to handle cases where execution of quantum in SystemC does not result in an expected threshold in MPMM counters being reached at the anticipated time.

**num\_acp****Type**

int

**Default value**

0x0

**Description**

Number of ACP ports.

**ptw\_latency****Type**

int

**Default value**

0x0

**Description**

Page table walker latency for TA (Timing Annotation), expressed in simulation ticks.

**reported\_patch\_level****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic patch level value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**reported\_revision\_number****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic revision number value to be displayed from the ID registers. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**rme\_level0\_gpt\_size****Type**

int

**Default value**

0x0

**Description**

The range of address space protected by each entry in the level 0 GPT (0->1GB 1->16GB, 2->64GB, 3->512GB).

**rme\_support\_level****Type**

int

**Default value**

0x2

**Description**

0 -> Realm management extension not implemented, 1 -> LEGACY\_TZ\_EN mode i.e. RME register fields are stateful but only supports secure/non-secure states, 2 -> Realm management extension fully implemented (FEAT\_RME).

**rndr\_rndrrs\_seed****Type**

int

**Default value**

0x0

**Description**

Initial seed for random engine used in RNDR register.

**stage12\_tlb\_size****Type**

int

**Default value**

0x80

**Description**

Number of stage1+2 tlb entries.

**tcr\_txsz\_undersize\_should\_fault****Type**

bool

**Default value**

0x0

**Description**

If large VA is not supported, Whether undersized TxSZ value should generate translation fault.

**tlb\_latency****Type**

int

**Default value**

0x0

**Description**

TLB latency for TA (Timing Annotation), expressed in simulation ticks.

**tlbi\_stall\_enabled****Type**

bool

**Default value**

0x0

**Description**

If true, tlb invalidation broadcast requests will block the requesting PE until all the other PEs flush their TLBs.

**treat\_PAC\_as\_NOP****Type**

bool

**Default value**

0x0

**Description**

Non-architecture parameter. Treat Pointer Authentication as NOP. When the parameter is true behaviour of FEAT\_PAuth instructions changes as following PAC\* and AUT\* and XPAC\* instructions are NOP. Brach, load, return with authentication instructions do not check and change signature bits and ignore FEAT\_PAuth traps.

**walk\_cache\_latency****Type**

int

**Default value**

0x0

**Description**

Walk cache latency for TA (Timing Annotation), expressed in simulation ticks.

### 3.5.84 ARMSC000CT

ARMSC000CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-521: IP revisions support**

Revision	Quality level
r0p1	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### Differences between the model and the RTL

The model has the following limitations:

- It does not implement any security features.
- Only bit[0] of the Auxiliary Control Register is supported for read/write. No functionality is implemented.
- The Security Features Control Register read/write access is supported using `SECKEY`. No functionality is implemented.

#### Iris and MTI instances for ARMSC000CT

This model has the following Iris instances:

**Table 3-522: ARMSC000CT Iris instances**

InstanceName	ComponentName
ARMSC000CT	ARM_SC000
ARMSC000CT.acp_mapper	PVBusMapper
ARMSC000CT.ext_bus	PVBusLogger
ARMSC000CT.ext_bus.mapper	PVBusMapper
ARMSC000CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

**Table 3-523: ARMSC000CT MTI instances**

InstanceName	ComponentName
ARMSC000CT	ARM_SC000
ARMSC000CT.acp_mapper	PVBusMapper
ARMSC000CT.ext_bus	PVBusLogger
ARMSC000CT.ext_bus.mapper	PVBusMapper
ARMSC000CT.l2_flusher	AsyncCacheFlushUnit

## Ports for ARMSC000CT

Table 3-524: Ports

Name	Protocol	Type	Description
ahbd	PVBus	Slave	Debug AHB - core bus slave driven by the DAP.
bigend	Signal	Slave	Configure big endian data format.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
currpri	Value	Master	Current execution priority.
edbgrq	Signal	Slave	External debug request.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
intisr[32]	Signal	Slave	This signal array delivers signals to the NVIC.
intnmi	Signal	Slave	Configure non maskable interrupt.
io_port_in	PVBus	Slave	I/O port pair. See the documentation for the io_port_out port.
io_port_out	PVBus	Master	I/O port pair. Used if IOP is true. Transactions from io_port_out which do not "match" should be returned via io_port_in. For performance reasons, the I/O port interface is not modelled directly. Instead, a simple PVBus gasket is inserted at the point in the memory system where the I/O port would be. In hardware, a device would be attached to the port which would tell the CPU whether it would like to intercept each transaction, given its address. This can be modelled in a performant manner by connecting a PVBusMapper-based device to io_port_out which intercepts transactions of interest and passes other transactions back to the CPU via io_port_in. Your I/O port device model is also responsible for aborting transactions which would be aborted on hardware (e.g. exclusives) if necessary.
lockup	Signal	Master	Asserted when the processor is in lockup state.
poreset	Signal	Slave	Raising this signal will do a power-on reset of the core.
pv_ppbus_m	PVBus	Master	The core will generate External Private Peripheral Bus requests on this port.
pvbus_m	PVBus	Master	The core will generate bus requests on this port.
sleepdeep	Signal	Master	Asserted when the processor is in deep sleep.
sleeping	Signal	Master	Asserted when the processor is in sleep.
stcalib	Value	Slave	This is the calibration value for the SysTick timer.
stclk	ClockSignal	Slave	This is the reference clock for the SysTick timer.
sysreset	Signal	Slave	Raising this signal will put the core into reset mode (but does not reset the debug logic).
sysresetreq	Signal	Master	Asserted to indicate that a reset is required.
ticks	InstructionCount	Master	Port allowing the number of instructions since startup to be read from the CPU.

## Parameters for ARMSC000CT

**BIGENDINIT****Type**

bool

**Default value**

0x0

**Description**

Initialize processor to big endian mode.

**BKPT****Type**

int

**Default value**

0x4

**Description**

Number of breakpoint unit comparators implemented.

**DBG****Type**

bool

**Default value**

0x1

**Description**

Set whether debug extensions are implemented.

**IOP****Type**

bool

**Default value**

0x0

**Description**

Send all d-side transactions to the port, io\_port\_out. Transactions which do not match should be returned to the port, io\_port\_in.

**IRQDIS****Type**

int

**Default value**

0x0

**Description**

IRQ line disable mask. Bit n of this 32-bit parameter disables IRQ[n].

**NUM\_IRQ****Type**

int

**Default value**

0x20

**Description**

Number of user interrupts.

**NUM\_MPU\_REGION****Type**

int

**Default value**

0x0

**Description**

Number of MPU regions.

**SYST****Type**

bool

**Default value**

0x1

**Description**

Enable support for SysTick timer functionality.

**USER****Type**

bool

**Default value**

0x1

**Description**

Enable support for Unprivileged/Privileged Extension.

**VTOR****Type**

bool

**Default value**

0x1

**Description**

Include Vector Table Offset Register.

**WIC****Type**

bool

**Default value**

0x1

**Description**

Include support for WIC-mode deep sleep.

**WPT****Type**

int

**Default value**

0x2

**Description**

Number of watchpoint unit comparators implemented.

**cpi\_div****Type**

int

**Default value**

0x1

**Description**

divider for calculating CPI (Cycles Per Instruction).

**cpi\_mul****Type**

int

**Default value**

0x1

**Description**

multiplier for calculating CPI (Cycles Per Instruction).

**master\_id****Type**

int

**Default value**

0x0

**Description**

Master ID presented in bus transactions.

**min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**reported\_patch\_level****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic patch level value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**reported\_revision\_number****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic revision number value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting.

**semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting SVC calls.

**semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**semihosting-enable****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

**semihosting-heap\_base****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**semihosting-heap\_limit****Type**

int

**Default value**

0x20700000

**Description**

Virtual address of top of heap.

**semihosting-stack\_base****Type**

int

**Default value**

0x20800000

**Description**

Virtual address of base of descending stack.

**semihosting-stack\_limit****Type**

int

**Default value**

0x20700000

**Description**

Virtual address of stack limit.

### 3.5.85 ARMSC300CT

ARMSC300CT CPU component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-525: IP revisions support**

Revision	Quality level
r0p1	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**Differences between the model and the RTL**

The model has the following limitations:

- It does not implement any security features.
- The Trash Register is implemented as **RAZ/WI**.
- Only bit[0] of the Auxiliary Control Register is supported for read/write. No functionality is implemented.
- The Security Features Control Register read/write access is supported using **SECKEY**. No functionality is implemented.

**Implementation of ITM in M-class models**

This model has a parameter that enables partial support for Instrumentation Trace Macrocell (ITM). In hardware or RTL, trace data from ITM is sent in packets to the trace block serially using a single pin or wire. In the model, if it is enabled, the ITM trace data is output using an MTI trace source called ITM. The ITM trace source has an **ITM\_PACKET\_TYPE** field. The following table shows which packet types the model supports:

Field value	Description	Supported by model
ITM_SYNC	Synchronization packet	Not supported.
ITM_P_OVERFLOW	Protocol: Overflow packet	Not supported.

Field value	Description	Supported by model
ITM_P_LOCAL_TIMESTAMP	Protocol: Local timestamp packets	Not supported.
ITM_P_GLOBAL_TIMESTAMP	Protocol: Global timestamp packets	Not supported.
ITM_P_EXTEN	Protocol: Extension packet	Not supported.
ITM_S_INSTRUMENTATION	Source: Instrumentation packet	Supported.
ITM_S_DWT_EVENT_COUNTER	Hardware source: Event counter wrapping	Not supported.
ITM_S_DWT_EXCEPTION	Hardware source: Exception tracing	Supported.
ITM_S_DWT_PC_SAMPLING	Hardware source: PC sampling	Not supported.
ITM_S_DWT_DATA_PC_TRACE	Hardware source: DWT Data trace PC value	Supported.
ITM_S_DWT_DATA_ADDRESS_TRACE	Hardware source: DWT Data trace address value	Supported.
ITM_S_DWT_DATA_DATA_TRACE	Hardware source: DWT Data trace DATA value	Supported.

## Iris and MTI instances for ARMSC300CT

This model has the following Iris instances:

**Table 3-527: ARMSC300CT Iris instances**

InstanceName	ComponentName
ARMSC300CT	ARM_SC300
ARMSC300CT.acp_mapper	PVBusMapper
ARMSC300CT.ext_bus	PVBusLogger
ARMSC300CT.ext_bus.mapper	PVBusMapper
ARMSC300CT.l2_flusher	AsyncCacheFlushUnit

This model has the following MTI trace components:

**Table 3-528: ARMSC300CT MTI instances**

InstanceName	ComponentName
ARMSC300CT	ARM_SC300
ARMSC300CT.acp_mapper	PVBusMapper
ARMSC300CT.ext_bus	PVBusLogger
ARMSC300CT.ext_bus.mapper	PVBusMapper
ARMSC300CT.l2_flusher	AsyncCacheFlushUnit

## Ports for ARMSC300CT

**Table 3-529: Ports**

Name	Protocol	Type	Description
ahbd	PVBus	Slave	Debug AHB - core bus slave driven by the DAP.
auxfault	Value	Slave	This is wired to the Auxiliary Fault Status Register.
bigend	Signal	Slave	Configure big endian data format.
clk_in	ClockSignal	Slave	The clock signal connected to the clk_in port is used to determine the rate at which the core executes instructions.
currpri	Value	Master	Current execution priority.

Name	Protocol	Type	Description
edbgrq	Signal	Slave	External debug request.
event	Signal	Peer	This peer port of event input (and output) is for wakeup from WFE and corresponds to the RTL TXEV and RXEV signals.
intisr[240]	Signal	Slave	This signal array delivers signals to the NVIC.
intnmi	Signal	Slave	Configure non maskable interrupt.
lockup	Signal	Master	Asserted when the processor is in lockup state.
poreset	Signal	Slave	Raising this signal will do a power-on reset of the core.
pv_ppbus_m	PVBus	Master	The core will generate External Private Peripheral Bus requests on this port.
pvbus_m	PVBus	Master	The core will generate bus requests on this port.
sleepdeep	Signal	Master	Asserted when the processor is in deep sleep.
sleeping	Signal	Master	Asserted when the processor is in sleep.
stcalib	Value	Slave	This is the calibration value for the SysTick timer.
stclk	ClockSignal	Slave	This is the reference clock for the SysTick timer.
sysreset	Signal	Slave	Raising this signal will put the core into reset mode (but does not reset the debug logic).
sysresetreq	Signal	Master	Asserted to indicate that a reset is required.
ticks	InstructionCount	Master	Port allowing the number of instructions since startup to be read from the CPU.

## Parameters for ARMSC300CT

### BB\_PRESENT

#### Type

bool

#### Default value

0x1

#### Description

Enable bitbanding.

### BIGENDINIT

#### Type

bool

#### Default value

0x0

#### Description

Initialize processor to big endian mode.

### DBGLVL

#### Type

int

**Default value**

0x3

**Description**

0: No debug; 1: Minimal debug; 2: Full debug without DWT address matching; 3: Full debug support with DWT data-comparators.

**LVL\_WIDTH****Type**

int

**Default value**

0x3

**Description**

Number of bits of interrupt priority.

**NUM\_IRQ****Type**

int

**Default value**

0x10

**Description**

Number of user interrupts.

**NUM\_MPU\_REGION****Type**

int

**Default value**

0x8

**Description**

Number of MPU regions.

**TRACE\_LVL****Type**

int

**Default value**

0x1

**Description**

Level of instrumentation trace supported. 0: No trace, 1: Standard trace. ITM, TPIU and DWT triggers and counters present, 2: Full trace. ITM, TPIU, ETM and DWT triggers and counters present.

**WIC****Type**

bool

**Default value**

0x1

**Description**

Include support for WIC-mode deep sleep.

**cpi\_div****Type**

int

**Default value**

0x1

**Description**

divider for calculating CPI (Cycles Per Instruction).

**cpi\_mul****Type**

int

**Default value**

0x1

**Description**

multiplier for calculating CPI (Cycles Per Instruction).

**master\_id****Type**

int

**Default value**

0x0

**Description**

Master ID presented in bus transactions.

**min\_sync\_level****Type**

int

**Default value**

0x0

**Description**

force minimum syncLevel (0=off=default, 1=syncState, 2=postInsnIO, 3=postInsnAll).

**reported\_patch\_level****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic patch level value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**reported\_revision\_number****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Purely cosmetic revision number value to be displayed from the CPUID register. This value will not necessarily align with the model behaviour. The default value (-1) will see this parameter ignored.

**semihosting-Thumb\_SVC****Type**

int

**Default value**

0xab

**Description**

T32 SVC number for semihosting.

**semihosting-cmd\_line****Type**

string

**Default value**

""

**Description**

Command line available to semihosting SVC calls.

**semihosting-cwd****Type**

string

**Default value**

""

**Description**

Base directory for semihosting file access.

**`semihosting-enable`****Type**

bool

**Default value**

0x1

**Description**

Enable semihosting SVC traps. Applications that do not use semihosting must set this parameter to false.

**`semihosting-heap_base`****Type**

int

**Default value**

0x0

**Description**

Virtual address of heap base.

**`semihosting-heap_limit`****Type**

int

**Default value**

0x20700000

**Description**

Virtual address of top of heap.

**`semihosting-stack_base`****Type**

int

**Default value**

0x20800000

**Description**

Virtual address of base of descending stack.

**semihosting-stack\_limit**

**Type**  
int

**Default value**  
0x20700000

**Description**  
Virtual address of stack limit.

3.6 Media components

This section describes the Media components.

3.6.1 D71

ARM D71 Display Processor. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-530: IP revisions support

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

Changes in 11.29.19

Ports added:

- display\_trace

About D71

The model has the following limitations:

- No support for trusted layers.
- No support for image enhancements.
- No coprocessor support for HDR processing.
- No QoS support.
- The following configuration parameters are not available:
  - CONFIG\_MAX\_LINE\_SIZE
  - CONFIG\_DISPLAY\_TBU\_EN. TBUs are integrated separately using the given ports.
  - CONFIG\_AFBC\_DMA\_EN. The ADU is present. If it is not used, do not program it.

- Some image formats are unsupported. For details, see the next section, Supported image formats.

## Supported image formats

### ADU DS\_FORMAT

The `DS_FORMAT` register defines the image formats supported by the ADU DMA subsystem.

Support for the following image formats is implemented:

- All image formats supported.

### ADU AES\_FORMAT

The `AES_FORMAT` register defines the image formats supported by the ADU AFBC encoding subsystem.

Support for the following image formats is implemented:

- RGB\_888
- RGBA\_8888
- YUV\_420\_P2\_8

### LS\_FORMAT/LR\_FORMAT

The `LS_FORMAT` and `LR_FORMAT` registers define the image formats supported by the main pipeline's layer processing unit.

Support for uncompressed images in the following formats is implemented:

- ARGB\_2101010
- BGRA\_1010102
- ARGB\_8888
- ABGR\_8888
- RGBA\_8888
- BGRA\_8888
- XRGB\_8888
- XBGR\_8888
- RGBX\_8888
- BGRX\_8888
- RGB\_888
- BGR\_888
- RGBA\_5551
- ABGR\_1555
- RGB\_565
- BGR\_565

- VYUY\_422\_P1\_8
- YVYU\_422\_P1\_8
- YUV\_420\_P2\_8
- YUV\_420\_P3\_8
- YUV\_420\_P1\_10
- YUV\_420\_P2\_10

Support for compressed images in the following formats is implemented:

- ABGR\_2101010
- ABGR\_8888
- BGR\_888
- ABGR\_1555
- BGR\_565
- YUV\_422\_P2\_8
- YUV\_420\_P2\_8
- YUV\_420\_P2\_10

## LW\_FORMAT

The `LW_FORMAT` register defines the image formats supported by the memory-writeback scheme performed by the layer processing unit.

Support for the following image formats is implemented:

- ARGB\_2101010
- ABGR\_2101010
- RGBA\_1010102
- BGRA\_1010102
- ARGB\_8888
- ABGR\_8888
- RGBA\_8888
- BGRA\_8888
- XRGB\_8888
- XBGR\_8888
- RGBX\_8888
- BGRX\_8888
- RGB\_888
- BGR\_888
- YUV\_420\_P2\_8

## Iris and MTI instances for D71

This model has the following Iris instances:

**Table 3-531: D71 Iris instances**

InstanceName	ComponentName
D71	D71
D71.apb_slave_adu	PVBusSlave
D71.apb_slave_dpu	PVBusSlave

This model has the following MTI trace components:

**Table 3-532: D71 MTI instances**

InstanceName	ComponentName
D71	D71
D71.apb_slave_adu	PVBusSlave
D71.apb_slave_dpu	PVBusSlave

## Ports for D71

**Table 3-533: Ports**

Name	Protocol	Type	Description
apb_pvbus_s_adu	PVBus	Slave	Slave port for register access.
apb_pvbus_s_dpu	PVBus	Slave	-
axi_pvbus_adu_m	PVBus	Master	Master AXI port for the AFBC unit
axi_pvbus_lpu_m[2]	PVBus	Master	Master AXI ports for pipelines
display[2]	LCD	Master	LCD ports for display outputs
display_trace[2]	FrameTracingProtocol	Master	FrameTrace port
irq0_gcu_out	Signal	Master	Shared interrupt owned by the GCU
irq1_adu_out	Signal	Master	Interrupt signal for the ADU block
pixelclock_in[2]	ClockSignal	Slave	Pixel clock inputs for the display outputs
pvbus_tbu_m[2]	PVBus	Master	Master ports for connection to TBU (SMMUv3)
pvbus_tbu_s[2]	PVBus	Slave	Slave ports for loopback from TBU (SMMUv3)
reset_signal	Signal	Slave	Reset signal.

## Parameters for D71

### adu\_nprot\_nsaid

#### Type

int

#### Default value

0x0

**Description**

Non-protected NSAID for ADU transactions.

**adu\_nprot\_s2\_sid**

**Type**

int

**Default value**

0x2

**Description**

Stage 2 non-protected StreamID for ADU transactions.

**adu\_prot\_nsaaid**

**Type**

int

**Default value**

0x1

**Description**

Protected NSAID for ADU transactions.

**adu\_prot\_s2\_sid**

**Type**

int

**Default value**

0x5

**Description**

Stage 2 protected StreamID for ADU transactions.

**adu\_rd\_s1\_sid**

**Type**

int

**Default value**

0xa

**Description**

Stage 1 StreamID for ADU DMA read layer.

**adu\_wr\_s1\_sid**

**Type**

int

**Default value**

0xb

**Description**

Stage 1 StreamID for ADU AES write-back layer.

**display\_split\_en****Type**

int

**Default value**

0x0

**Description**

Display split enabled or not.

**force\_frame\_rate\_0****Type**

int

**Default value**

0x0

**Description**

If 0 PXLCLK0 is used, if >0 the model refreshes display output 0 at the rate per simulated second.

**force\_frame\_rate\_1****Type**

int

**Default value**

0x0

**Description**

If 0 PXLCLK1 is used, if >0 the model refreshes display output 1 at the rate per simulated second.

**lpu0\_l0\_s1\_sid****Type**

int

**Default value**

0x0

**Description**

Stage 1 StreamID for LPU0 read layer 0.

**lpu0\_l1\_s1\_sid****Type**

int

**Default value**

0x1

**Description**

Stage 1 StreamID for LPU0 read layer 1.

**lpu0\_l2\_s1\_sid****Type**

int

**Default value**

0x2

**Description**

Stage 1 StreamID for LPU0 read layer 2.

**lpu0\_l3\_s1\_sid****Type**

int

**Default value**

0x3

**Description**

Stage 1 StreamID for LPU0 read layer 3.

**lpu0\_nprot\_nsaaid****Type**

int

**Default value**

0x0

**Description**

Non-protected NSAID for LPU0 transactions.

**lpu0\_nprot\_s2\_sid****Type**

int

**Default value**

0x0

**Description**

Stage 2 non-protected StreamID for LPU0 transactions.

**lpu0\_prot\_nsaaid****Type**

int

**Default value**

0x1

**Description**

Protected NSAID for LPU0 transactions.

**lpu0\_prot\_s2\_sid****Type**

int

**Default value**

0x3

**Description**

Stage 2 protected StreamID for LPU0 transactions.

**lpu0\_wr\_s1\_sid****Type**

int

**Default value**

0x8

**Description**

Stage 1 StreamID for LPU0 write-back layer.

**lpu1\_l0\_s1\_sid****Type**

int

**Default value**

0x4

**Description**

Stage 1 StreamID for LPU1 read layer 0.

**lpu1\_l1\_s1\_sid****Type**

int

**Default value**

0x5

**Description**

Stage 1 StreamID for LPU1 read layer 1.

**lpu1\_l2\_s1\_sid****Type**

int

**Default value**

0x6

**Description**

Stage 1 StreamID for LPU1 read layer 2.

**lpu1\_l3\_s1\_sid****Type**

int

**Default value**

0x7

**Description**

Stage 1 StreamID for LPU1 read layer 3.

**lpu1\_nprot\_nsaid****Type**

int

**Default value**

0x0

**Description**

Non-protected NSAID for LPU1 transactions.

**lpu1\_nprot\_s2\_sid****Type**

int

**Default value**

0x1

**Description**

Stage 2 non-protected StreamID for LPU1 transactions.

**lpu1\_prot\_nsaid****Type**

int

**Default value**

0x1

**Description**

Protected NSAID for LPU1 transactions.

**lpu1\_prot\_s2\_sid****Type**

int

**Default value**

0x4

**Description**

Stage 2 protected StreamID for LPU1 transactions.

**lpul\_wr\_sl\_sid**

**Type**

int

**Default value**

0x9

**Description**

Stage 1 StreamID for LPU1 write-back layer.

**num\_rich\_layers**

**Type**

int

**Default value**

0x2

**Description**

Number of Rich layers in each Layer Processing Unit.

3.6.2 FrameTracingComponent

Frame Tracing Component. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-534: IP revisions support

Revision	Quality level
r0p0	Alpha support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

About FrameTracingComponent

You can add the FrameTracingComponent to a platform to intercept frame buffers on the way to the display, and perform an action based on the content of the frame buffer. This is expected to be used to test components in the display path, for example GPUs, ISPs, displays, and video.

Connect the FrameTracingComponent to an HDLCD or D71 component using its `frame_trace_s` port to receive copies of displayed frames through `FrameTracingProtocol`.

## Configuration

Configure the behavior of the `FrameTracingComponent` using a JSON input file. The configuration file defines a list of frames and a list of actions.

A frame is simply a string identifier and a path to a binary file containing the frame buffer content. Actions refer to frames by using the string identifier.

An action inspects frames passed using `FrameTracingProtocol` and calls specific procedures based on the content of these frames.

Each action takes different arguments. The `FrameTracingComponent` supports the following actions:

**Table 3-535: FrameTracingComponent actions**

Action	Description
EXIT	End the simulation on matching a trigger frame.
TIME	Record the wall clock time before a trigger frame or between two frames.
RECORD	Save frames to files for offline processing.

You can define an arbitrary number of frames and actions.

The following JSON contains an example defining some frames, and one of each action:

```
{
  "frames" : [
    {
      "id" : "idstring1",
      "path" : "filepath1"
    },
    {
      "id" : "idstringN",
      "path" : "filepathN"
    },
    <...>
  ],
  "actions" : [
    {
      "action" : "EXIT",
      "frame" : "idstring1",
      "delay" : N
    },
    {
      "action" : "TIME",
      "id" : "actionid",
      "start_frame" : "idstring2",
      "stop_frame" : "idstring3",
    },
    {
      "action" : "RECORD",
      "start_frame" : "idstring2",
      "stop_frame" : "idstring4",
      "prefix" : "output_file_prefix",
      "start_delay" : N,
      "stop_delay" : M
    },
    <...>
  ]
}
```

There are 6 types of parameter used in the JSON configuration:

#### Frame identifier

An arbitrary string that uniquely identifies a particular frame. In the `frames` array, the `id` parameter defines the identifier. Actions only refer to frame identifiers.

#### Action type

The `action` parameter in the `actions` array. Must contain a valid action type. These parameters are case-insensitive.

#### Action identifier

Identifier to distinguish multiple actions of the same type in the log file.

#### File path

May be absolute or relative. Relative paths are relative to the directory containing the configuration file.

#### Output file prefix

May include path components, but the directory must exist. Relative paths are relative to the directory containing the configuration file. A sequential index is appended to this string when saving frame buffers.

#### Integer frame count

A delay applied to an aspect of an action by a number of frames. When not set, these default to 0, meaning no delay.

When the `ignore_consecutive_duplicates` parameter is true, a duplicate frame is considered to be the same as the previous frame and is not considered for any actions.

**Table 3-536: Action types and parameters**

Action	Parameter	Type	Description
EXIT	<code>frame</code>	Frame identifier	On matching <code>frame</code> , exit the simulation after <code>delay</code> frames.
	<code>delay</code>	Frame count	If <code>frame</code> is not specified, exit after <code>delay</code> frames from the start of the simulation.
TIME	<code>start_frame</code>	Frame identifier	Record the wall clock time between seeing <code>start_frame</code> and <code>stop_frame</code> .
	<code>stop_frame</code>	Frame identifier	If <code>start_frame</code> is not specified, record from the first input frame until seeing <code>stop_frame</code> .
	<code>id</code>	Action identifier	Recorded time will be printed in the log along with the string passed via <code>id</code> parameter.

Action	Parameter	Type	Description
RECORD	start_frame	Frame identifier	Record frames to files for offline processing.
	stop_frame	Frame identifier	The recording starts <code>start_delay</code> frames after seeing <code>start_frame</code> .
	prefix	Output file prefix	If <code>start_frame</code> is not specified, recording starts <code>start_delay</code> frames after the start of the simulation.
	start_delay	Frame count	The recording terminates on receiving <code>stop_delay</code> frames after seeing <code>stop_frame</code> .
	stop_delay	Frame count	If <code>stop_frame</code> is not specified, the recording terminates <code>stop_delay</code> frames after the start of the recording.
			If <code>start_delay</code> or <code>stop_delay</code> are not specified, they are assumed to be 0.  Frames are saved to files with the common prefix <code>prefix</code> , and an incrementing identifier suffix.

## Limitations

The FrameTracingComponent does not try to handle frame buffer formats. It assumes that width, height, and bits-per-pixel are sufficient to describe the size of the expected buffer, and compares the full content of the buffers.

## Iris and MTI instances for FrameTracingComponent

This model has the following Iris instances:

**Table 3-537: FrameTracingComponent Iris instances**

InstanceName	ComponentName
FrameTracingComponent	FrameTracingComponent

## Ports for FrameTracingComponent

**Table 3-538: Ports**

Name	Protocol	Type	Description
frame_trace_s	FrameTracingProtocol	Slave	Connect to `frame_trace_m`, the manager FrameTracingProtocol port of the source component to receive frame buffers as they are produced.

## Parameters for FrameTracingComponent

### config\_path

#### Type

string

#### Default value

""

Path to a JSON file containing a description of what the FrameTracingComponent should do.

**enabled**

**Type**  
bool

**Default value**  
true

Enables the frame tracing component. When disabled, the config file is not read, and the component is inactive.

**ignore\_consecutive\_duplicates**

**Type**  
bool

**Default value**  
true

When `true` duplicate frames are considered to be the ‘same’ as the previous frame and are not considered for any actions. Set to `false` to consider each frame regardless of content. This relies on the source component to only send updated frames.

**log\_file**

**Type**  
string

**Default value**  
{}

File that records what the FrameTracingComponent has done. If empty nothing is recorded.

3.6.3 Mali\_C5x\_streaming\_sink

Arm® Mali™-C55 ISP streaming output capture example component. This component tests ISP's streaming output functionality and provides an example of how to develop components consuming frames from the Mali-C55 ISP streaming output. This implementation saves all the ISP output frames to host disk in the FRM file format which is defined as part of the ISP model specification. All the implementation code is placed in this LISA+ file. This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

Table 3-539: IP revisions support

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

## Iris and MTI instances for Mali\_C5x\_streaming\_sink

This model has the following Iris instances:

**Table 3-540: Mali\_C5x\_streaming\_sink Iris instances**

InstanceName	ComponentName
Mali_C5x_streaming_sink	Mali_C5x_streaming_sink
Mali_C5x_streaming_sink.bus_slave0	PVBusSlave
Mali_C5x_streaming_sink.bus_slave1	PVBusSlave
Mali_C5x_streaming_sink.bus_slave2	PVBusSlave

This model has the following MTI trace components:

**Table 3-541: Mali\_C5x\_streaming\_sink MTI instances**

InstanceName	ComponentName
Mali_C5x_streaming_sink.bus_slave0	PVBusSlave
Mali_C5x_streaming_sink.bus_slave1	PVBusSlave
Mali_C5x_streaming_sink.bus_slave2	PVBusSlave

## Ports for Mali\_C5x\_streaming\_sink

**Table 3-542: Ports**

Name	Protocol	Type	Description
data_s[3]	PVBus	Slave	Pixels consumer ports; receive pixels as 16-bit values (and optional debug metadata).
hsync_s	Signal	Slave	Horizontal sync port; defines input image's line begin and end for all three data ports.
vsync_s	Signal	Slave	Vertical sync port; defines the input frame's begin and end for all three data ports.

## Parameters for Mali\_C5x\_streaming\_sink

### do\_capture

#### Type

bool

#### Default value

0x1

#### Description

Saving captured frames on/off.

### fn\_prefix

#### Type

string

#### Default value

"isp\_out\_"

**Description**

Saved filenames prefix.

### 3.6.4 Mali\_C7x\_streaming\_sink

Arm® Mali™-C71/C78 ISP streaming output capture example component. This component tests ISP's streaming output functionality and provides an example of how to develop components consuming frames from the Mali-C7x ISP streaming output. This implementation saves all the ISP output frames to host disk in the FRM file format which is defined as a part of the ISP model specification. All the implementation code is placed in this LISA+ file. This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-543: IP revisions support**

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**Iris and MTI instances for Mali\_C7x\_streaming\_sink**

This model has the following Iris instances:

**Table 3-544: Mali\_C7x\_streaming\_sink Iris instances**

InstanceName	ComponentName
Mali_C7x_streaming_sink	Mali_C7x_streaming_sink
Mali_C7x_streaming_sink.bus_slave0	PVBusSlave
Mali_C7x_streaming_sink.bus_slave1	PVBusSlave
Mali_C7x_streaming_sink.bus_slave2	PVBusSlave

This model has the following MTI trace components:

**Table 3-545: Mali\_C7x\_streaming\_sink MTI instances**

InstanceName	ComponentName
Mali_C7x_streaming_sink.bus_slave0	PVBusSlave
Mali_C7x_streaming_sink.bus_slave1	PVBusSlave
Mali_C7x_streaming_sink.bus_slave2	PVBusSlave

**Ports for Mali\_C7x\_streaming\_sink****Table 3-546: Ports**

Name	Protocol	Type	Description
data_s[3]	PVBus	Slave	Pixels consumer ports; receive pixels as 16-bit values (and optional debug metadata).
hsync_s[3]	Signal	Slave	Horizontal sync ports; defines input image's line begin and end for the corresponding data ports.
vsync_s[3]	Signal	Slave	Vertical sync ports; define input frame's begin and end for the corresponding data port.

Parameters for Mali\_C7x\_streaming\_sink

do\_capture

Type  
bool

Default value  
0x1

Description  
Saving captured frames on/off.

fn\_prefix

Type  
string

Default value  
"isp\_out\_"

Description  
Saved filenames prefix.

3.6.5 Mali\_C55

Arm® Mali™ C55 ISP. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-547: IP revisions support

Revision	Quality level
r0p0	Preliminary support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

Limitations

- Streaming input and output interfaces are supported but the protocol differs slightly from the real hardware. See Mali\_Cxx\_streaming\_camera.lisa and Mali\_C5x\_streaming\_sink.lisa for details on how to use them.
- Video monitor output and DMA monitor interface are not supported.
- Error conditions (IRQ bits 2, 3, 19, 20, 22) are not supported.
- It does not expose any targets for CADI or Iris-enabled debuggers to connect to, so debug access to its registers through CADI or Iris is not supported.

Iris and MTI instances for Mali\_C55

This model has the following Iris instances:

**Table 3-548: Mali\_C55 Iris instances**

InstanceName	ComponentName
Mali_C55	Mali_C55
Mali_C55.apb_slave	PVBusSlave
Mali_C55.bus_slave0	PVBusSlave
Mali_C55.bus_slave1	PVBusSlave
Mali_C55.bus_slave2	PVBusSlave

This model has the following MTI trace components:

**Table 3-549: Mali\_C55 MTI instances**

InstanceName	ComponentName
Mali_C55.apb_slave	PVBusSlave
Mali_C55.bus_slave0	PVBusSlave
Mali_C55.bus_slave1	PVBusSlave
Mali_C55.bus_slave2	PVBusSlave

## Ports for Mali\_C55

**Table 3-550: Ports**

Name	Protocol	Type	Description
ds_data_out_m[3]	PVBus	Master	-
ds_hsync_out_m	Signal	Master	-
ds_uv_valid_out_m	Signal	Master	-
ds_vsync_out_m	Signal	Master	-
fr_data_out_m[3]	PVBus	Master	Metadata + pixels, 16 bit, (RGB or YUV)
fr_hsync_out_m	Signal	Master	Horizontal sync / blanking (set at the beginning of a line; cleared at the end)
fr_uv_valid_out_m	Signal	Master	UV valid (set if both U and V pixels are valid)
fr_vsync_out_m	Signal	Master	Vertical sync / blanking (set at the beginning of a frame; cleared at the end)
irq	Signal	Master	Shared interrupt
pvbus_m	PVBus	Master	Master AXI port for RAM access
pvbus_s	PVBus	Slave	Slave port for register access
reset_s	Signal	Slave	Reset signal
stream_data_in_s[3]	PVBus	Slave	Metadata + pixels, 20 bit
stream_hsync_in_s	Signal	Slave	Horizontal sync / blanking (set at the beginning of a line; cleared at the end)
stream_vsync_in_s	Signal	Slave	Vertical sync / blanking (set at the beginning of a frame; cleared at the end)

## Parameters for Mali\_C55

### CNR\_FITTED

#### Type

int

**Default value**

0x1

**Description**

Color Noise Reduction (CNR) and the square and square root for CNR: 0 - absent, 1 - present.

**COMPRESSION\_FITTED****Type**

int

**Default value**

0x1

**Description**

Temper compression logic: 0 - absent, 1 - present.

**DSPIPE\_FITTED****Type**

int

**Default value**

0x1

**Description**

Downscaled pipeline branch: 0 - absent, 1 - present.

**FRSCALER\_FITTED****Type**

int

**Default value**

0x1

**Description**

Rull Resolution pipeline RGB scaler: 0 - absent, 1 - present.

**IRIDIX\_GTM\_FITTED****Type**

int

**Default value**

0x0

**Description**

Iridix(TM) global tone-mapping logic: 0 - absent, 1 - present. NOTE: Must be 1 if IRIDIX\_LTM\_FITTED == 0.

**IRIDIX\_LTM\_FITTED****Type**

int

**Default value**

0x1

**Description**

Iridix(TM) local tone-mapping logic: 0 - absent, 1 - present.

**PONG\_CONFIG\_FITTED****Type**

int

**Default value**

0x1

**Description**

Pong configuration space: 0 - absent, 1 - present.

**SCALER\_COEF\_SETS****Type**

int

**Default value**

0x8

**Description**

Number of scaler coefficient sets (8 or 16).

**SINTER\_FITTED****Type**

int

**Default value**

0x1

**Description**

Sinter block: 0 - absent, 1 - present.

**SINTER\_LITE****Type**

int

**Default value**

0x0

**Description**

Sinter version: 0 - full, 1 - lite.

**TEMPER\_FITTED****Type**

int

**Default value**

0x1

**Description**

Temper, DMA, or merge: 0 - absent, 1 - present.

**WDR\_FITTED****Type**

int

**Default value**

0x1

**Description**

Wide Dynamic Range (WDR) frame stitch, offset, and gain: 0 - absent, 1 - present.

**ext\_mode****Type**

int

**Default value**

0x0

**Description**

Reserved for future use. Use it with instructions from Arm Technical Support (support-esl@arm.com).

**verbosity****Type**

int

**Default value**

0x0

**Description**

Messages verbosity level: -1 - print ERROR messages only, 0 - print ERROR and WARNING messages, 1 - print INFO messages, 2 - print DEBUG messages.

## 3.6.6 Mali\_C71

Arm® Mali™ C71 ISP. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-551: IP revisions support**

Revision	Quality level
r1p2	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

### Limitations

- Streaming input and output interfaces are supported but the protocol differs slightly from the real hardware.
- Fault Interface is not supported (except double interrupt).
- It does not expose any targets for CADI or Iris-enabled debuggers to connect to, so debug access to its registers through CADI or Iris is not supported.

### Iris and MTI instances for Mali\_C71

This model has the following Iris instances:

**Table 3-552: Mali\_C71 Iris instances**

InstanceName	ComponentName
Mali_C71	Mali_C71
Mali_C71.apb_slave	PVBusSlave
Mali_C71.bus_slave0	PVBusSlave
Mali_C71.bus_slave1	PVBusSlave
Mali_C71.bus_slave2	PVBusSlave
Mali_C71.bus_slave3	PVBusSlave

This model has the following MTI trace components:

**Table 3-553: Mali\_C71 MTI instances**

InstanceName	ComponentName
Mali_C71.apb_slave	<a href="#">PVBusSlave</a>
Mali_C71.bus_slave0	<a href="#">PVBusSlave</a>
Mali_C71.bus_slave1	<a href="#">PVBusSlave</a>
Mali_C71.bus_slave2	<a href="#">PVBusSlave</a>
Mali_C71.bus_slave3	<a href="#">PVBusSlave</a>

### Ports for Mali\_C71

**Table 3-554: Ports**

Name	Protocol	Type	Description
fault	<a href="#">Signal</a>	Master	Fault output interface
irq[4]	<a href="#">Signal</a>	Master	Shared interrupts
pvbus_m	<a href="#">PVBus</a>	Master	Master AXI port for RAM access
pvbus_s	<a href="#">PVBus</a>	Slave	Slave port for register access

Name	Protocol	Type	Description
reset_s	Signal	Slave	Reset signal.
stream_data_in_s[4]	PVBus	Slave	Metadata + pixels
stream_data_out_m[3]	PVBus	Master	Metadata + pixels
stream_hsync_in_s[4]	Signal	Slave	Horizontal sync / blanking (set at the beginning of a line; cleared at the end)
stream_hsync_out_m[3]	Signal	Master	Horizontal sync / blanking (set at the beginning of a line; cleared at the end)
stream_tag_in_s[4]	Value	Slave	Source stream tag Can change between lines (while hsync is Clear) if several frames are multiplexed.
stream_tag_out_m[3]	Value	Master	Source stream tag (changes while vsync is Clear)
stream_vsync_in_s[4]	Signal	Slave	Vertical sync / blanking (set at the beginning of a frame; cleared at the end)
stream_vsync_out_m[3]	Signal	Master	Vertical sync / blanking (set at the beginning of a frame; cleared at the end)

## Parameters for Mali\_C71

### verbosity

#### Type

int

#### Default value

0x0

#### Description

Messages verbosity level: -1 - print ERROR messages only, 0 - print ERROR and WARNING messages, 1 - print INFO messages, 2 - print DEBUG messages.

## 3.6.7 Mali\_C78

Arm® Mali™ C78 ISP. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-555: IP revisions support**

Revision	Quality level
r1p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

### Limitations

- Streaming input and output interfaces are supported but the protocol differs slightly from the real hardware.
- Fault Interface is not supported (except double interrupt).
- It does not expose any targets for CADI or Iris-enabled debuggers to connect to, so debug access to its registers through CADI or Iris is not supported.

## Iris and MTI instances for Mali\_C78

This model has the following Iris instances:

**Table 3-556: Mali\_C78 Iris instances**

InstanceName	ComponentName
Mali_C78	Mali_C78
Mali_C78.apb_slave	PVBusSlave
Mali_C78.bus_slave0	PVBusSlave
Mali_C78.bus_slave1	PVBusSlave
Mali_C78.bus_slave2	PVBusSlave
Mali_C78.bus_slave3	PVBusSlave

This model has the following MTI trace components:

**Table 3-557: Mali\_C78 MTI instances**

InstanceName	ComponentName
Mali_C78.apb_slave	PVBusSlave
Mali_C78.bus_slave0	PVBusSlave
Mali_C78.bus_slave1	PVBusSlave
Mali_C78.bus_slave2	PVBusSlave
Mali_C78.bus_slave3	PVBusSlave

## Ports for Mali\_C78

**Table 3-558: Ports**

Name	Protocol	Type	Description
fault	Signal	Master	Fault output interface
irq[4]	Signal	Master	Shared interrupts
pvbus_m	PVBus	Master	Master AXI port for RAM access
pvbus_s	PVBus	Slave	Slave port for register access
reset_s	Signal	Slave	Reset signal.
stream_data_in_s[4]	PVBus	Slave	Metadata + pixels
stream_data_out_m[3]	PVBus	Master	Metadata + pixels
stream_hsync_in_s[4]	Signal	Slave	Horizontal sync / blanking (set at the beginning of a line; cleared at the end)
stream_hsync_out_m[3]	Signal	Master	Horizontal sync / blanking (set at the beginning of a line; cleared at the end)
stream_tag_in_s[4]	Value	Slave	Source stream tag Can change between lines (while hsync is Clear) if several frames are multiplexed.
stream_tag_out_m[3]	Value	Master	Source stream tag (changes while vsync is Clear)
stream_vsync_in_s[4]	Signal	Slave	Vertical sync / blanking (set at the beginning of a frame; cleared at the end)
stream_vsync_out_m[3]	Signal	Master	Vertical sync / blanking (set at the beginning of a frame; cleared at the end)

## Parameters for Mali\_C78

### verbosity

#### Type

int

#### Default value

0x0

#### Description

Messages verbosity level: -1 - print ERROR messages only, 0 - print ERROR and WARNING messages, 1 - print INFO messages, 2 - print DEBUG messages.

## 3.6.8 Mali\_Cxx\_streaming\_camera

Simple streaming camera to connect to Mali ISP (C55, C71, or C78) streaming inputs. This component tests ISP's streaming input functionality and provides an example of how to develop camera-like components streaming frames to a Mali-Cxx ISP. All the implementation code is placed in this LISA+ file. This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-559: IP revisions support**

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

### Iris and MTI instances for Mali\_Cxx\_streaming\_camera

This model has the following Iris instances:

**Table 3-560: Mali\_Cxx\_streaming\_camera Iris instances**

InstanceName	ComponentName
Mali_Cxx_streaming_camera	Mali_Cxx_streaming_camera
Mali_Cxx_streaming_camera.bus_master_data	PVBusMaster
Mali_Cxx_streaming_camera.bus_slave_config	PVBusSlave

This model has the following MTI trace components:

**Table 3-561: Mali\_Cxx\_streaming\_camera MTI instances**

InstanceName	ComponentName
Mali_Cxx_streaming_camera.bus_master_data	PVBusMaster
Mali_Cxx_streaming_camera.bus_slave_config	PVBusSlave

## Ports for Mali\_Cxx\_streaming\_camera

**Table 3-562: Ports**

Name	Protocol	Type	Description
config_s	PVBus	Slave	Access to the camera config register(s) (8 bit): 0x00 - output mode: 0 - no output, 1 - stream one frame and auto-reset to 0
data_m	PVBus	Master	Output frames port; sends pixels as 32-bit values (and debug metadata).
hsync_m	Signal	Master	Horizontal sync; set at the beginning of a line, cleared at the end.
vsync_m	Signal	Master	Vertical sync; set at the beginning of a frame, cleared at the end.

## Parameters for Mali\_Cxx\_streaming\_camera

### image\_file

#### Type

string

#### Default value

""

#### Description

A file containing one or more frames to stream in the ISP model's FRM format.

## 3.6.9 Mali\_G71

ARM Mali-G71 GPU. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-563: IP revisions support**

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

### Limitations

- The model does not support Armv8-style page tables.
- The model does not execute GPU shader programs.
- The model does not validate all register values or job descriptors.
- The model does not implement the CNTVALUEB port, and the GPU timestamp does not align with the A-Profile CNTPCT\_ELO system register.

This model outputs values for all Mali PMU hardware counters. These values are not meaningful. Their purpose is to enable you to use the model early in the development process to check that your system is correctly configured to support performance analysis tools, for instance Streamline.

The counter is a 32-bit bitfield, with the following bit assignments:

- [31:28]  
Identifies which Mali GPU instance generated this value, typically zero for a system with a single GPU.
- [27:24]  
Identifies which hardware block is the source of the counter. It can have one of the following values:  

0

Job manager.

1

Tiler.

2

L2Cache/Memory system.

3+

Shader core.
- [23:16]  
The counter number within the block.
- [15:0]  
Sawtooth counter that counts from 0 to 0xffff and then resets to 0. This value ensures that consecutive captures show different values and allows you to check that counter values are changing over time.

Note

- These counter values might change in future.
- The model always generates counter values, even if the GPU is idle.
- Streamline does not display the precise values that the model outputs because it needs to correct them for sampling frequency and other profiling effects. However, their size relative to each other is correct. For example, counters from the job manager are always smaller than those from the memory system.

Iris and MTI instances for Mali\_G71

This model has the following Iris instances:

Table 3-564: Mali\_G71 Iris instances

InstanceName	ComponentName
Mali_G71	Mali_G71
Mali_G71.busmaster	PVBusMaster
Mali_G71.busslave	PVBusSlave

This model has the following MTI trace components:

**Table 3-565: Mali\_G71 MTI instances**

InstanceName	ComponentName
Mali_G71	Mali_G71
Mali_G71.busmaster	PVBusMaster
Mali_G71.busslave	PVBusSlave

## Ports for Mali\_G71

**Table 3-566: Ports**

Name	Protocol	Type	Description
gpu_reset	Signal	Slave	Resets the GPU at the input Set. The available inputs are Set and Clear.
irq_gpu	Signal	Master	The interrupt signal generated from the GPU.
irq_job	Signal	Master	The interrupt signal generated from the Job Manager on the GPU.
irq_mmu	Signal	Master	The interrupt signal generated from the MMU on the GPU.
prot_mode_m0	Signal	Master	Indicates the current state of the GPU. When it outputs: Set: The GPU is in protected mode. Clear: The GPU is in normal mode. Typically, connect this signal to the LabellerForGPUProtMode component. This enables the labeller to add a Non-Secure Access ID to the outgoing transaction on the labeller's pvbus_m port.
pvbus_m	PVBus	Master	The interface for the GPU to access external memory.
pvbus_s	PVBus	Slave	The interface for the CPU to access the GPU registers.

## Parameters for Mali\_G71

### revision

#### Type

string

#### Default value

"r0p0"

#### Description

Revision of the RTL that the model represents. Valid values: r0p0.

## 3.6.10 Mali\_G76

ARM Mali-G76 GPU. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-567: IP revisions support**

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

## Limitations

- The model does not support Armv8-style page tables.
- The model does not execute GPU shader programs.
- The model does not validate all register values or job descriptors.
- The model does not implement the CNTVALUEB port, and the GPU timestamp does not align with the A-Profile CNTPCT\_ELO system register.

This model outputs values for all Mali PMU hardware counters. These values are not meaningful. Their purpose is to enable you to use the model early in the development process to check that your system is correctly configured to support performance analysis tools, for instance Streamline.

The counter is a 32-bit bitfield, with the following bit assignments:

### [31:28]

Identifies which Mali GPU instance generated this value, typically zero for a system with a single GPU.

### [27:24]

Identifies which hardware block is the source of the counter. It can have one of the following values:

**0**

Job manager.

**1**

Tiler.

**2**

L2Cache/Memory system.

**3+**

Shader core.

### [23:16]

The counter number within the block.

### [15:0]

Sawtooth counter that counts from 0 to 0xffff and then resets to 0. This value ensures that consecutive captures show different values and allows you to check that counter values are changing over time.

- These counter values might change in future versions.
- The model always generates counter values, even if the GPU is idle.
- Streamline does not display the precise values that the model outputs because it needs to correct them for sampling frequency and other profiling effects. However, their size relative to each other is correct. For example, counters from the job manager are always smaller than those from the memory system.

## Iris and MTI instances for Mali\_G76

This model has the following Iris instances:

**Table 3-568: Mali\_G76 Iris instances**

InstanceName	ComponentName
Mali_G76	Mali_G76
Mali_G76.busmaster	PVBusMaster
Mali_G76.busslave	PVBusSlave

This model has the following MTI trace components:

InstanceName	ComponentName
Mali_G76	Mali_G76
Mali_G76.busmaster	PVBusMaster
Mali_G76.busslave	PVBusSlave

## Ports for Mali\_G76

**Table 3-570: Ports**

Name	Protocol	Type	Description
gpu_reset	Signal	Slave	Resets the GPU at the input Set. The available inputs are Set and Clear.
irq_gpu	Signal	Master	The interrupt signal generated from the GPU.
irq_job	Signal	Master	The interrupt signal generated from the Job Manager on the GPU.
irq_mmu	Signal	Master	The interrupt signal generated from the MMU on the GPU.
prot_mode_m0	Signal	Master	Indicates the current state of the GPU. When it outputs: Set: The GPU is in protected mode. Clear: The GPU is in normal mode. Typically, connect this signal to the LabellerForGPUProtMode component. This enables the labeller to add a Non-Secure Access ID to the outgoing transaction on the labeller's pvbus_m port.
pvbus_m	PVBus	Master	The interface for the GPU to access external memory.
pvbus_s	PVBus	Slave	The interface for the CPU to access the GPU registers.

## Parameters for Mali\_G76

### revision

#### Type

string

#### Default value

"rOp0"

#### Description

Revision of the RTL that the model represents. Valid values: rOp0.

### 3.6.11 Mali\_G78AE

Arm® Mali™-G78AE. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-571: IP revisions support**

Revision	Quality level
r0p0 r0p1 r0p2	Preliminary support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### About Mali\_G78AE

The Mali\_G78AE component models the Arm Mali G78AE, which implements the Valhall architecture, and is the first Mali GPU designed specifically to target automotive use cases.

The model implements the Partition Manager, enabling up to 4 independent partitions running workloads at the same time, while being accessed by up to 16 virtual machines.

The Mali\_G78AE model is functional, capable of executing GPU shader programs and producing graphical or compute outputs. It requires a clock input running at around 500MHz to keep the CPU and GPU performance aligned, and to avoid software timeouts during slow-running GPU operations.

With this model, and the implemented functionality of the Partition Manager, you can:

- Simulate the entire graphics software stack, including the user space and kernel space driver components of the Arm Mali DDK, and an application that uses a graphics API.
- Verify the integration of the Mali G78AE GPU into the rest of the platform. A complex use case example of this is a system running multiple kernels in Virtual Machines under a Hypervisor, all submitting workloads to the GPU at the same time.

To configure the reference Mali driver for use with the model, we recommend you make some adjustments to the timing parameters of the Mali driver. This is because of timing differences between the real hardware and the Fast Model. Which parameters work best depend on your system, but if you are using the reference Arm implementation of the arbiter from the DDK, one possibility is:

```
insmod mali_kbase.ko gpu_req_timeout=1000
insmod mali_arbiter.ko request_timeout=200 yield_timeout=30
```

#### Test applications

The tests have been carried out using the r40p0 release of the Mali DDK. The following applications have been tested and confirmed to work:

- A selection of the Mali DDK integration tests in `product/build-<wsi>/install/bin/â€`
  - mali\_gles\_integration\_suite
  - mali\_cl\_simple\_example

- A selection of lightweight Vulkan examples hosted on [GitHub](#):
  - gears
  - computeparticles, at small particle count
  - texture3d
- A selection of ComputeLibrary examples hosted on [GitHub](#):
  - graph\_lenet
  - graph\_mobilenet\_v2

All of these applications have been successfully tested in a non-virtualised system, on Debian Buster running Linux 4.19.

A subset of these examples have been tested in the following virtualised systems:

- Xen Hypervisor 4.14.1-pre
- Privileged Debian Buster running Linux kernel 4.19, controlling the configuration of partitions, and running the Mali DDK reference arbiter implementation
- Two unprivileged virtual machines, both running Debian Buster, Linux 4.19, both running various applications listed in this section at the same time

## Limitations

- The model does not support debug access to registers through CADI or Iris-enabled debuggers.
- It is not supported on Windows hosts.
- It is a functional model and does not simulate performance differences for partitions of different sizes.
- It does not implement the protection \*CHK signals.
- It does not implement Parity/DCLS/CRC faults and fault fingerprints.
- It does not implement different error response modes configurable through the SYSTEM page.
- The model does not implement the CNTVALUEB port, and the GPU timestamp does not align with the A-Profile CNTPCT\_ELO system register.

## Iris and MTI instances for Mali\_G78AE

This model has the following Iris instances:

**Table 3-572: Mali\_G78AE Iris instances**

InstanceName	ComponentName
Mali_G78AE	Mali_G78AE
Mali_G78AE.AccessControl	PVBusMapper

This model has the following MTI trace components:

**Table 3-573: Mali\_G78AE MTI instances**

InstanceName	ComponentName
Mali_G78AE	Mali_G78AE
Mali_G78AE.AccessControl	PVBusMapper

### Ports for Mali\_G78AE

**Table 3-574: Ports**

Name	Protocol	Type	Description
clk_in	ClockSignal	Slave	-
gpu_reset	Signal	Slave	Reset signals
gpu_reset_recovery	Signal	Slave	-
irq_deferred_error	Signal	Master	-
irq_groups[4]	Signal	Master	-
irq_partitions[4]	Signal	Master	Partition Manager irqs
irq_uncorrected_error	Signal	Master	-
irq_windows[16]	Signal	Master	-
pvbus_m	PVBus	Master	Output to board from GPU
pvbus_s[3]	PVBus	Slave	Slave bus ports (AXI-A through C).
sys_assign_enable	Value	Slave	System configuration access control for different ports

### Parameters for Mali\_G78AE

#### labeller\_encoding\_spec

##### Type

string

##### Default value

"MasterID[31:0]=StreamID[31:0]"

##### Description

Specification of how the StreamID is encoded into transaction attributes.

#### revision

##### Type

string

##### Default value

"r0p0"

##### Description

Hardware revision. Changing this parameter aligns the behaviour of the model with the hardware of specified revision.

### 3.6.12 Mali\_G710

Arm® Mali™ G710 GPU. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-575: IP revisions support**

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### About Mali\_G710

The Mali\_G710 and Mali\_G715 components model the Arm Mali G710 and G715 GPUs respectively, which implement the Valhall architecture. They are among the first Mali GPUs to implement a Command Stream Frontend (CSF), which is a combination of hardware and firmware that helps to offload work from the Mali driver that is running on the CPU.

With the Mali G710 and G715 Fast Models, you can simulate:

- User space and kernel space driver components of the Arm Mali Driver Development kit (Mali DDK), when built to target Mali G710 or G715 under Android and Linux graphics stacks.
- Mali G710 or G715 firmware binaries.

These are functional models that do not attempt to execute GPU shader programs. They are sufficient to simulate a Mali driver, but rather than deliver fully rendered images to memory, they write a randomly-generated color gradient pattern to the framebuffer.

The changing frames can be used to prove that the graphics stack is correctly configured to allow the Mali GPU to write to a user-visible framebuffer.

#### Configuring the driver for use with the model

To account for timing differences between real hardware and the Fast Model, it is necessary to modify the following runtime settings in the Mali driver:

##### **csf\_firmware\_boot\_timeout\_ms**

Overrides the minimum timeout value for loading firmware into the model.

##### **Type**

Kernel module parameter

##### **Recommended value**

10000

##### **reset\_timeout**

Overrides the minimum timeout when waiting for operations on the GPU to finish.

##### **Type**

Sysfs parameter

**Recommended value**

1000000

**fw\_timeout**

Overrides the minimum timeout when waiting for operations on the GPU to finish.

**Type**

Sysfs parameter

**Recommended value**

1000000

The following commands are a snippet from an Android RC file that is an example of how a filesystem can be configured to correctly load the Mali driver when running on a Fast Models platform:

```
insmod /vendor/lib/modules/mali_kbase.ko csf_firmware_boot_timeout_ms=100000
wait /dev/mali0
chmod 0666 /dev/mali0
wait /sys/class/misc/mali0/device/reset_timeout
write /sys/class/misc/mali0/device/reset_timeout 1000000
write /sys/class/misc/mali0/device/fw_timeout 1000000
```

**Limitations**

- The model does not support debug access to registers through CADI or Iris-enabled debuggers.
- The timing data observed from the model does not correspond in any way to real hardware.
- The model does not expose any MTI targets.
- The model is not supported on Windows hosts.
- The model does not implement the CNTVALUEB port, and the GPU timestamp does not align with the A-Profile CNTPCT\_ELO system register.

**Iris and MTI instances for Mali\_G710**

This model has the following Iris instances:

**Table 3-576: Mali\_G710 Iris instances**

InstanceName	ComponentName
Mali_G710	Mali_G710
Mali_G710.busmaster	PVBusMaster
Mali_G710.busslave	PVBusSlave

This model has the following MTI trace components:

**Table 3-577: Mali\_G710 MTI instances**

InstanceName	ComponentName
Mali_G710	Mali_G710
Mali_G710.busmaster	PVBusMaster

InstanceName	ComponentName
Mali_G710.busslave	PVBusSlave

## Ports for Mali\_G710

**Table 3-578: Ports**

Name	Protocol	Type	Description
gpu_reset	Signal	Slave	Resets the GPU at the input Set. The available inputs are Set and Clear.
irq_gpu	Signal	Master	The interrupt signal generated from the GPU.
irq_job	Signal	Master	The interrupt signal generated from the Job Manager on the GPU.
irq_mmu	Signal	Master	The interrupt signal generated from the MMU on the GPU.
prot_mode_m0	Signal	Master	Indicates the current state of the GPU. When it outputs: Set: The GPU is in protected mode. Clear: The GPU is in normal mode. Typically, connect this signal to the LabellerForGPUProtMode component. This enables the labeller to add a Non-Secure Access ID to the outgoing transaction on the labeller's pvbus_m port.
pvbus_m	PVBus	Master	The interface for the GPU to access external memory.
pvbus_s	PVBus	Slave	The interface for the CPU to access the GPU registers.

3.6.13 Mali\_G715

Arm® Mali™ G715 GPU. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-579: IP revisions support

Revision	Quality level
r0p0 r0p1 r1p0 r1p1 r1p2 r1p3	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

About Mali\_G715

The Mali\_G710 and Mali\_G715 components model the Arm Mali G710 and G715 GPUs respectively, which implement the Valhall architecture. They are among the first Mali GPUs to implement a Command Stream Frontend (CSF), which is a combination of hardware and firmware that helps to offload work from the Mali driver that is running on the CPU.

With the Mali G710 and G715 Fast Models, you can simulate:

- User space and kernel space driver components of the Arm Mali Driver Development kit (Mali DDK), when built to target Mali G710 or G715 under Android and Linux graphics stacks.
- Mali G710 or G715 firmware binaries.

These are functional models that do not attempt to execute GPU shader programs. They are sufficient to simulate a Mali driver, but rather than deliver fully rendered images to memory, they write a randomly-generated color gradient pattern to the framebuffer.

The changing frames can be used to prove that the graphics stack is correctly configured to allow the Mali GPU to write to a user-visible framebuffer.

## Configuring the driver for use with the model

To account for timing differences between real hardware and the Fast Model, it is necessary to modify the following runtime settings in the Mali driver:

### **csf\_firmware\_boot\_timeout\_ms**

Overrides the minimum timeout value for loading firmware into the model.

#### **Type**

Kernel module parameter

#### **Recommended value**

10000

### **reset\_timeout**

Overrides the minimum timeout when waiting for operations on the GPU to finish.

#### **Type**

Sysfs parameter

#### **Recommended value**

1000000

### **fw\_timeout**

Overrides the minimum timeout when waiting for operations on the GPU to finish.

#### **Type**

Sysfs parameter

#### **Recommended value**

1000000

The following commands are a snippet from an Android RC file that is an example of how a filesystem can be configured to correctly load the Mali driver when running on a Fast Models platform:

```
insmod /vendor/lib/modules/mali_kbase.ko csf_firmware_boot_timeout_ms=100000
wait /dev/mali0
chmod 0666 /dev/mali0
wait /sys/class/misc/mali0/device/reset_timeout
write /sys/class/misc/mali0/device/reset_timeout 1000000
write /sys/class/misc/mali0/device/fw_timeout 1000000
```

## Limitations

- The model does not support debug access to registers through CADI or Iris-enabled debuggers.
- The timing data observed from the model does not correspond in any way to real hardware.
- The model does not expose any MTI targets.
- The model is not supported on Windows hosts.
- The model does not implement the CNTVALUEB port, and the GPU timestamp does not align with the A-Profile CNTPCT\_ELO system register.

3.6.14 Mali\_G720

Arm® Mali™ G720 GPU. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-583: IP revisions support

Revision	Quality level
r0p0 r0p1	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

Changes in 11.29.19

Ports added:

- cntvalueb

## About Mali\_G720

This model is the first of a new generation of fully-functional GPU models that generate correct output without the assistance of Generic Graphics Accelerator (GGA).

It supports x86\_64 and AArch64 hosts running a supported version of Linux, as listed in Requirements for Fast Models in the [Fast Models User Guide](#). It does not support Windows hosts.

`$(PVLIB_HOME)/LISA/Mali_G720.lisa` requires a clock input running at around 500MHz to keep CPU and GPU performance aligned. This avoids software timeouts during slow-running GPU operations.

From a Fast Models perspective, the differences between Arm Mali-G720, Arm Immortalis-G720, and Mali-G620 are minor. The Fast Model does not model the caches and the core count is transparent to the user. Ray tracing is not currently modeled.

## Limitations

- The model does not support debug access to registers through CADI or Iris-enabled debuggers.
- The timing data observed from the model does not correspond in any way to real hardware.
- The model is not supported on Windows hosts.

## Iris and MTI instances for Mali\_G720

This model has the following Iris instances:

**Table 3-584: Mali\_G720 Iris instances**

InstanceName	ComponentName
Mali_G720	Mali_G720
Mali_G720.busmaster	PVBusMaster
Mali_G720.busslave	PVBusSlave

This model has the following MTI trace components:

**Table 3-585: Mali\_G720 MTI instances**

InstanceName	ComponentName
Mali_G720	Mali_G720
Mali_G720.busmaster	PVBusMaster
Mali_G720.busslave	PVBusSlave

## Ports for Mali\_G720

**Table 3-586: Ports**

Name	Protocol	Type	Description
clk_in	ClockSignal	Slave	-

Name	Protocol	Type	Description
cntvalueb	CounterInterface	Slave	Interface to the SoC-level Generic Counter module that is used to source the global system timestamp value. When the GPU component is integrated into an A-Profile compliant system, this port must be connected for the GPU and CPU timestamps to be synchronized. Without the connection, the GPU timestamp remains constant. In this case, it is recommended to configure the GPU to use its own internal clock as the reference.
gpu_reset	Signal	Slave	Resets the GPU at the input Set. The available inputs are Set and Clear.
irq_gpu	Signal	Master	The interrupt signal generated from the GPU.
irq_job	Signal	Master	The interrupt signal generated from the Job Manager on the GPU.
irq_mmu	Signal	Master	The interrupt signal generated from the MMU on the GPU.
prot_mode_m0	Signal	Master	Indicates the current state of the GPU. When it outputs: Set: The GPU is in protected mode. Clear: The GPU is in normal mode. Typically, connect this signal to the LabellerForGPUProtMode component. This enables the labeller to add a Non-Secure Access ID to the outgoing transaction on the labeller's pvbus_m port.
pvbus_m	PVBus	Master	The interface for the GPU to access external memory.
pvbus_s	PVBus	Slave	The interface for the CPU to access the GPU registers.

Parameters removed:

- turbo\_threads

About Mali\_G725

This component is a model of the Arm Mali-G725 GPU, fully capable of executing shaders and producing graphical or compute outputs.

It supports x86\_64 and AArch64 hosts running a supported version of Linux, as listed in Requirements for Fast Models in the [Fast Models User Guide](#). It does not support Windows hosts.

`$(PVLIB_HOME)/LISA/Mali_G725.lisa` requires a clock input running at around 500MHz to keep CPU and GPU performance aligned. This avoids software timeouts during slow-running GPU operations.

From a Fast Models perspective, the differences between Mali-G725, Arm Immortalis-G925, and Mali-G625 are minor. The Fast Model does not model the caches and the core count is transparent to the user. Ray tracing is not currently modeled.

## Limitations

- The model does not support debug access to registers through CADI or Iris-enabled debuggers.
- The timing data observed from the model does not correspond in any way to real hardware.
- The model is not supported on Windows hosts.

## Iris and MTI instances for Mali\_G725

This model has the following Iris instances:

Typically, connect this signal to the LabellerForGPUProtMode component. This enables the labeller to add a Non-Secure Access ID to the outgoing transaction on the labeller's pvbuss_m port.
pvbuss_m	PVBus	Master	The interface for the GPU to access external memory.
pvbuss_s	PVBus	Slave	The interface for the CPU to access the GPU registers.

## Parameters for Mali\_T624

### revision

#### Type

string

#### Default value

"r0p0"

#### Description

Revision of the RTL that the model represents. Valid values: r0p0.

## 3.6.17 V61

Arm® Mali™-V61 Video Processor. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-595: IP revisions support**

Revision	Quality level
r0p1	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

### About V61

The model requires an external OpenMAX (OMX) IL implementation for codec functionality. By default, V61 looks for `ffomaxil.dll` on Windows or `libffomaxil.so` on Linux in the model binary's directory or in the Fast Models installation. The default library path can be overridden using the `omx-library-path` parameter.

FFomaxIL is an OMX IL implementation provided by Arm in the TPIP package for convenience. Refer to the TPIP package for more details on FFomaxIL. It is available on [Product Download Hub](#)

When querying the OMX core, V61 searches for the following roles in the list of OpenMAX components:

#### H.264 decode

"video\_decoder.avc"

**JPEG decode**`"video_decoder.mjpeg"`**MPEG2 decode**`"video_decoder.mpeg2"`**MPEG4 decode**`"video_decoder.mpeg4"`**VC1 decode**`"video_decoder.vc1"`**VP8 decode**`"video_decoder.vp8"`**VP8 encode**`"video_encoder.vp8"`**Note**

To build example platforms containing V61, you must either install the TPIP package, or remove the dependency on FFmpeg and libvpx from the platform's `sgproj` file, by removing the line containing `v5xx.sgrepo`.

**Limitations**

- No support for HEVC, VP9 and RealVideo decoders.
- No support for 10-bit video output.
- No support for RGB or AFBC input for encoding.
- No profiling support.
- No QoS support.
- Power/Test modes are modeled only as register state changes.

**Iris and MTI instances for V61**

This model has the following Iris instances:

**Table 3-596: V61 Iris instances**

InstanceName	ComponentName
V61	V61
V61.BusModifier.LSID0	PVBusMapper
V61.BusModifier.LSID1	PVBusMapper
V61.BusModifier.LSID2	PVBusMapper
V61.BusModifier.LSID3	PVBusMapper
V61.apb_slave[0]	PVBusSlave

This model has the following MTI trace components:

**Table 3-597: V61 MTI instances**

V61	V61
V61.BusModifier.LSID0	PVBusMapper
V61.BusModifier.LSID1	PVBusMapper
V61.BusModifier.LSID2	PVBusMapper
V61.BusModifier.LSID3	PVBusMapper
V61.apb_slave[0]	PVBusSlave

## Ports for V61

**Table 3-598: Ports**

Name	Protocol	Type	Description
apb_s	PVBus	Slave	APB Slave port for register access.
axi_m	PVBus	Master	AXI master bus for memory accesses.
clk	ClockSignal	Slave	Master clock, typically 300MHz.
irq	Signal	Master	IRQ signal to host CPU.
reset	Signal	Slave	Reset signal.

## Parameters for V61

### AXI-data-width

#### Type

int

#### Default value

0x4

#### Description

AXI data width, logarithmic byte notation (3-&gt;64bit, 4-&gt;128 bit).

### enable-frame-rate-limiting

#### Type

bool

#### Default value

0x0

#### Description

enable output rate control via the CLK port.

### fuse-disable-AFBC

#### Type

bool

**Default value**

0x0

**Description**

disable AFBC support by fuse.

**`fuse-disable-HEVC`****Type**

bool

**Default value**

0x0

**Description**

disable HEVC support by fuse.

**`fuse-disable-Real`****Type**

bool

**Default value**

0x0

**Description**

disable RealVideo support by fuse.

**`fuse-disable-VPX`****Type**

bool

**Default value**

0x0

**Description**

disable VP8 support by fuse.

**`ncores`****Type**

int

**Default value**

0x1

**Description**

Number of cores in the component.

**`omx-library-path`****Type**

string

**Default value**

""

**Description**

path to a user-provided OMX library; leave blank to use FFomaxIL.

**supports-10bit****Type**

bool

**Default value**

0x1

**Description**

component supports 10-bit content decoding.

**supports-64byte-ref-bursts****Type**

bool

**Default value**

0x1

**Description**

component supports 64-byte bursts for reference pixel data.

**supports-encoding****Type**

bool

**Default value**

0x1

**Description**

component supports encoding.

## 3.7 Peripheral components

This section describes the Peripheral components.

### 3.7.1 Ashbrook\_SoC\_SCC

Ashbrook SoC Simple Configuration Controller IP Block. This model is written in C++.

#### Iris and MTI instances for Ashbrook\_SoC\_SCC

This model has the following Iris instances:

**Table 3-599: Ashbrook\_SoC\_SCC Iris instances**

InstanceName	ComponentName
Ashbrook_SoC_SCC	Ashbrook_SoC_SCC
Ashbrook_SoC_SCC.pvbuslave	PVBusSlave

**Table 3-600: Ashbrook\_SoC\_SCC MTI instances**

InstanceName	ComponentName
Ashbrook_SoC_SCC.pvbuslave	PVBusSlave

### Ports for Ashbrook\_SoC\_SCC

**Table 3-601: Ports**

Name	Protocol	Type	Description
cluster_temperature[16]	ValueState	Slave	-
pvbus_s	PVBus	Slave	-

### Parameters for Ashbrook\_SoC\_SCC

#### diagnostics

##### Type

int

##### Default value

0x0

##### Description

Diagnostics.

#### gpr0

##### Type

int

##### Default value

0x0

##### Description

General Purpose Register 0.

#### gpr1

##### Type

int

##### Default value

0x0

**Description**

General Purpose Register 1.

**gpr10****Type**

int

**Default value**

0x0

**Description**

General Purpose Register 10.

**gpr11****Type**

int

**Default value**

0x0

**Description**

General Purpose Register 11.

**gpr12****Type**

int

**Default value**

0x0

**Description**

General Purpose Register 12.

**gpr13****Type**

int

**Default value**

0x0

**Description**

General Purpose Register 13.

**gpr14****Type**

int

**Default value**

0x0

**Description**

General Purpose Register 14.

**gpr15****Type**

int

**Default value**

0x0

**Description**

General Purpose Register 15.

**gpr2****Type**

int

**Default value**

0x0

**Description**

General Purpose Register 2.

**gpr3****Type**

int

**Default value**

0x0

**Description**

General Purpose Register 3.

**gpr4****Type**

int

**Default value**

0x0

**Description**

General Purpose Register 4.

**gpr5****Type**

int

**Default value**

0x0

**Description**

General Purpose Register 5.

**gpr6****Type**

int

**Default value**

0x0

**Description**

General Purpose Register 6.

**gpr7****Type**

int

**Default value**

0x0

**Description**

General Purpose Register 7.

**gpr8****Type**

int

**Default value**

0x0

**Description**

General Purpose Register 8.

**gpr9****Type**

int

**Default value**

0x0

**Description**

General Purpose Register 9.

**num\_clusters****Type**

int

**Default value**

0xc

**Description**  
Number of AP clusters in the platform.

**version**

**Type**  
int

**Default value**  
0x0

**Description**  
Version number of the platform.

3.7.2 AudioOut\_File

File based Audio Output for PL041\_AACI. This model is written in LISA+.

**About AudioOut\_File**  
This component implements an audio output that is suitable for use with the PL041\_AACI component. It writes raw 16-bit 48KHz stereo audio data to a user-specified file.  
  
We expect this component to have little effect on the performance of PV systems. AudioOut\_File drains audio data at the rate that would be expected by software running in the simulation.

**Iris and MTI instances for AudioOut\_File**  
This model has the following Iris instances:

Table 3-602: AudioOut\_File Iris instances

InstanceName	ComponentName
AudioOut_File	AudioOut_File

Ports for AudioOut\_File

Table 3-603: Ports

Name	Protocol	Type	Description
audio	AudioControl	Slave	Audio input for a connection to a component such as the PL041_AACI.

Parameters for AudioOut\_File

**fname**  
**Type**  
string  
**Default value**  
""

**Description**

Filename.

### 3.7.3 AudioOut\_SDL

SDL based Audio Output for PL041\_AACI. This model is written in LISA+.

**About AudioOut\_SDL**

AudioOut\_SDL outputs audio using the host features of the Simple DirectMedia Layer (SDL) library.

This component results in SDL audio callbacks and might have a small impact on PV systems containing the component. It attempts to drain audio data at whatever rate is required to maintain smooth sound playback on the host PC. This might not match the data rate expected by applications running on the simulation.

**Iris and MTI instances for AudioOut\_SDL**

This model has the following Iris instances:

**Table 3-604: AudioOut\_SDL Iris instances**

InstanceName	ComponentName
AudioOut_SDL	AudioOut_SDL

**Ports for AudioOut\_SDL****Table 3-605: Ports**

Name	Protocol	Type	Description
audio	AudioControl	Slave	Audio input for a connection to a component such as the PL041_AACI.

### 3.7.4 Base\_PowerController

Base Platforms Power Controller. This model is written in LISA+.

**Iris and MTI instances for Base\_PowerController**

This model has the following Iris instances:

**Table 3-606: Base\_PowerController Iris instances**

InstanceName	ComponentName
Base_PowerController	Base_PowerController
Base_PowerController.busslave	PVBusSlave
Base_PowerController.timer_ppu_transition	ClockTimerThread
Base_PowerController.timer_ppu_transition.timer	ClockTimerThread64
Base_PowerController.timer_ppu_transition.timer.thread	SchedulerThread
Base_PowerController.timer_ppu_transition.timer.thread_event	SchedulerThreadEvent

InstanceName	ComponentName
Base_PowerController.timer_reset	ClockTimerThread
Base_PowerController.timer_reset.timer	ClockTimerThread64
Base_PowerController.timer_reset.timer.thread	SchedulerThread
Base_PowerController.timer_reset.timer.thread_event	SchedulerThreadEvent
Base_PowerController.timer_sys_reset_request	ClockTimerThread
Base_PowerController.timer_sys_reset_request.timer	ClockTimerThread64
Base_PowerController.timer_sys_reset_request.timer.thread	SchedulerThread
Base_PowerController.timer_sys_reset_request.timer.thread_event	SchedulerThreadEvent
Base_PowerController.utility_bus0	PVBusMaster
Base_PowerController.utility_bus1	PVBusMaster
Base_PowerController.utility_bus2	PVBusMaster
Base_PowerController.utility_bus3	PVBusMaster

This model has the following MTI trace components:

**Table 3-607: Base\_PowerController MTI instances**

InstanceName	ComponentName
Base_PowerController	Base_PowerController
Base_PowerController.busslave	PVBusSlave
Base_PowerController.utility_bus0	PVBusMaster
Base_PowerController.utility_bus1	PVBusMaster
Base_PowerController.utility_bus2	PVBusMaster
Base_PowerController.utility_bus3	PVBusMaster

### Ports for Base\_PowerController

**Table 3-608: Ports**

Name	Protocol	Type	Description
cpuporeset[42]	Signal	Master	-
dbgnopwrdown[42]	Signal	Slave	-
l2reset[4]	Signal	Master	-
pchannel_m[42]	PChannel	Master	-
pvbus_s	PVBus	Slave	-
standbywfi[42]	Signal	Slave	-
standbywfi12[4]	Signal	Slave	-
system_reset	Signal	Master	-
system_reset_req	Signal	Slave	-
utility_bus_m[4]	PVBus	Master	-
wakerequest[42]	Signal	Slave	-

## Parameters for Base\_PowerController

### **Affinity-shifted**

**Type**

bool

**Default value**

0x0

**Description**

Whether core number is reflected in Affinity1 instead of Affinity0.

### **CPU-affinities**

**Type**

string

**Default value**

"0.0.0.0"

**Description**

Definition of which cores are attached to the control pins, as a comma separated list of affinity dotted quads.

### **CPU-available-mask**

**Type**

int

**Default value**

0xffffffffffffffffffff

**Description**

One bit per entry in CPU-affinities list, set zero if a CPU is wired up but actually not available.

### **enable\_lock\_step**

**Type**

bool

**Default value**

0x0

**Description**

If lock step is enabled, the number of available cores get reduced to half.

### **startup**

**Type**

string

**Default value**

"0.0.0.\*"

**Description**

Comma-separated list of cores (wildcards allowed) to be powered up at startup or system reset.

**use\_in\_cluster\_ppu****Type**

bool

**Default value**

0x0

**Description**

Set this to true if base power controller is connected to V9 core where in-cluster PPU is used, false, otherwise.

**use\_pchannel\_for\_threads****Type**

bool

**Default value**

0x0

**Description**

Set this to true if the pchannel is connected to cpus with thread support.

### 3.7.5 CMSDK\_Timer

ARM Timer Module. This model is written in C++.

**Iris and MTI instances for CMSDK\_Timer**

This model has the following Iris instances:

**Table 3-609: CMSDK\_Timer Iris instances**

InstanceName	ComponentName
CMSDK_Timer	CMSDK_Timer
CMSDK_Timer.busslave	PVBusSlave
CMSDK_Timer.clk_div	ClockDivider
CMSDK_Timer.counter	CounterModule

This model has the following MTI trace components:

**Table 3-610: CMSDK\_Timer MTI instances**

InstanceName	ComponentName
CMSDK_Timer.busslave	<a href="#">PVBusSlave</a>
CMSDK_Timer.clk_div	<a href="#">ClockDivider</a>

## Ports for CMSDK\_Timer

Table 3-611: Ports

Name	Protocol	Type	Description
clock	<a href="#">ClockSignal</a>	Slave	-
irq_out	<a href="#">Signal</a>	Master	-
pvbuss	<a href="#">PVBuss</a>	Slave	-

## Parameters for CMSDK\_Timer

**clk\_div.div****Type**

int

**Default value**

0x1

**Description**

Clock Rate Divider. This parameter is not exposed via CADI and can only be set in LISA.

**clk\_div.mul****Type**

int

**Default value**

0x1

**Description**

Clock Rate Multiplier. This parameter is not exposed via CADI and can only be set in LISA.

**counter.diagnostics****Type**

int

**Default value**

0x2

**Description**

Diagnostics.

**diagnostics****Type**

int

**Default value**

0x2

**Description**

Diagnostics.

### 3.7.6 Clock\_Multiplexer

Clock Multiplexer. This model is written in C++.

#### Iris and MTI instances for Clock\_Multiplexer

This model has the following Iris instances:

**Table 3-612: Clock\_Multiplexer Iris instances**

InstanceName	ComponentName
Clock_Multiplexer	Clock_Multiplexer

#### Ports for Clock\_Multiplexer

**Table 3-613: Ports**

Name	Protocol	Type	Description
cur_clkssel	Value	Master	-
input[16]	ClockSignal	Slave	-
output	ClockSignal	Master	-
selector	Value	Slave	-
stopclk_nominal	Value	Slave	-

#### Parameters for Clock\_Multiplexer

##### diagnostics

##### Type

int

##### Default value

0x2

##### Description

Diagnostics 0-4 (0:FATAL 1:ERROR 2:WARNING 3:INFO 4:DEBUG - DEFAULT==2).

### 3.7.7 Cluster\_Temperature\_Sensor

Component to calculate the temperature value of all cores in a cluster. This model is written in C++.

#### Iris and MTI instances for Cluster\_Temperature\_Sensor

This model has the following Iris instances:

**Table 3-614: Cluster\_Temperature\_Sensor Iris instances**

InstanceName	ComponentName
Cluster_Temperature_Sensor	Cluster_Temperature_Sensor

## Ports for Cluster\_Temperature\_Sensor

Table 3-615: Ports

Name	Protocol	Type	Description
cluster_powerdown_in	Signal	Slave	-
core_powerdown_in[16]	Signal	Slave	-
core_state_in[16]	ValueState	Slave	-
core_ticks_in[16]	InstructionCount	Slave	-
freq_in	ValueState	Slave	-
temperature_out	ValueState	Master	-

## Parameters for Cluster\_Temperature\_Sensor

**MAX\_FREQ**

## Type

int

## Default value

0x77359400

## Description

Maximum frequency (in Hz) at which each core can run.

**NUM\_CORES**

## Type

int

## Default value

0x4

## Description

Number of cores per cluster.

**diagnostics**

## Type

int

## Default value

0x0

## Description

Diagnostics.

**tempCoeff\_A**

## Type

string

**Default value**  
"0.5"

**Description**  
Temperature Coefficient.

**tempCoeff\_B**

**Type**  
string

**Default value**  
"0.5"

**Description**  
Temperature Coefficient.

**tempCoeff\_K**

**Type**  
int

**Default value**  
0x32

**Description**  
Temperature Coefficient.

**tempCoeff\_TAMB**

**Type**  
int

**Default value**  
0x14

**Description**  
Temperature Coefficient.

3.7.8 CombinedMessagingUnit

CMU - Combined MHU monolithic block. This model is written in LISA+.

Iris and MTI instances for CombinedMessagingUnit

This model has the following Iris instances:

Table 3-616: CombinedMessagingUnit Iris instances

InstanceName	ComponentName
CombinedMessagingUnit	CombinedMessagingUnit
CombinedMessagingUnit.host_to_local	MessageHandlingUnit

InstanceName	ComponentName
CombinedMessagingUnit.host_to_local.a_to_b_v2	MessageHandlingUnitV2
CombinedMessagingUnit.host_to_local.a_to_b_v3	MessageHandlingUnitV3
CombinedMessagingUnit.host_to_local.version_mapper_a_to_b_rec	PVBusMapper
CombinedMessagingUnit.host_to_local.version_mapper_a_to_b_snd	PVBusMapper
CombinedMessagingUnit.host_to_local_rcv_log	PVBusLogger
CombinedMessagingUnit.host_to_local_rcv_log.mapper	PVBusMapper
CombinedMessagingUnit.host_to_local_snd_log	PVBusLogger
CombinedMessagingUnit.host_to_local_snd_log.mapper	PVBusMapper
CombinedMessagingUnit.irq_rcv_combined_host_log	SignalLogger
CombinedMessagingUnit.irq_rcv_combined_local_log	SignalLogger
CombinedMessagingUnit.irq_snd_combined_host_log	SignalLogger
CombinedMessagingUnit.irq_snd_combined_local_log	SignalLogger
CombinedMessagingUnit.local_to_host	MessageHandlingUnit
CombinedMessagingUnit.local_to_host.a_to_b_v2	MessageHandlingUnitV2
CombinedMessagingUnit.local_to_host.a_to_b_v3	MessageHandlingUnitV3
CombinedMessagingUnit.local_to_host.version_mapper_a_to_b_rec	PVBusMapper
CombinedMessagingUnit.local_to_host.version_mapper_a_to_b_snd	PVBusMapper
CombinedMessagingUnit.local_to_host_rcv_log	PVBusLogger
CombinedMessagingUnit.local_to_host_rcv_log.mapper	PVBusMapper
CombinedMessagingUnit.local_to_host_snd_log	PVBusLogger
CombinedMessagingUnit.local_to_host_snd_log.mapper	PVBusMapper

This model has the following MTI trace components:

**Table 3-617: CombinedMessagingUnit MTI instances**

InstanceName	ComponentName
CombinedMessagingUnit.host_to_local.a_to_b_v2	MessageHandlingUnitV2
CombinedMessagingUnit.host_to_local.a_to_b_v3	MessageHandlingUnitV3
CombinedMessagingUnit.host_to_local.version_mapper_a_to_b_rec	PVBusMapper
CombinedMessagingUnit.host_to_local.version_mapper_a_to_b_snd	PVBusMapper
CombinedMessagingUnit.host_to_local_rcv_log	PVBusLogger
CombinedMessagingUnit.host_to_local_rcv_log.mapper	PVBusMapper
CombinedMessagingUnit.host_to_local_snd_log	PVBusLogger
CombinedMessagingUnit.host_to_local_snd_log.mapper	PVBusMapper
CombinedMessagingUnit.irq_rcv_combined_host_log	SignalLogger
CombinedMessagingUnit.irq_rcv_combined_local_log	SignalLogger
CombinedMessagingUnit.irq_snd_combined_host_log	SignalLogger
CombinedMessagingUnit.irq_snd_combined_local_log	SignalLogger
CombinedMessagingUnit.local_to_host.a_to_b_v2	MessageHandlingUnitV2
CombinedMessagingUnit.local_to_host.a_to_b_v3	MessageHandlingUnitV3

InstanceName	ComponentName
CombinedMessagingUnit.local_to_host.version_mapper_a_to_b_rec	PVBusMapper
CombinedMessagingUnit.local_to_host.version_mapper_a_to_b_snd	PVBusMapper
CombinedMessagingUnit.local_to_host_rcv_log	PVBusLogger
CombinedMessagingUnit.local_to_host_rcv_log.mapper	PVBusMapper
CombinedMessagingUnit.local_to_host_snd_log	PVBusLogger
CombinedMessagingUnit.local_to_host_snd_log.mapper	PVBusMapper

## Ports for CombinedMessagingUnit

**Table 3-618: Ports**

Name	Protocol	Type	Description
irq_rcv_combined_host	Signal	Master	-
irq_rcv_combined_local	Signal	Master	-
irq_snd_combined_host	Signal	Master	-
irq_snd_combined_local	Signal	Master	-
pvbus_s_rcv_host	PVBus	Slave	-
pvbus_s_rcv_local	PVBus	Slave	-
pvbus_s_snd_host	PVBus	Slave	-
pvbus_s_snd_local	PVBus	Slave	-
reset_in	Signal	Slave	-

## Parameters for CombinedMessagingUnit

### NUM\_DB\_CH

#### Type

int

#### Default value

0x1

#### Description

Number of doorbell channels.

### NUM\_FAST\_CH

#### Type

int

#### Default value

0x1

#### Description

Number of fast channels.

**diagnostics****Type**

int

**Default value**

0x2

**Description**

Diagnostics 0==FATAL\_ERROR -&gt; 4==DEBUG.

**fast\_ch\_group\_int\_enable****Type**

bool

**Default value**

0x0

**Description**

Fast Channel group interrupts enable, default=false.

**fast\_ch\_n\_per\_group****Type**

int

**Default value**

0x1

**Description**

Fast Channel num channels per group, default=1.

**fast\_ch\_num\_groups****Type**

int

**Default value**

0x1

**Description**

Fast Channel num of groups, default=1.

**fast\_ch\_word\_size****Type**

int

**Default value**

0x20

**Description**

Fast Channel word size 32bit or 64bit, default=32.

**host\_to\_local.a\_to\_b\_v3.NUM\_FIFO\_CH****Type**

int

**Default value**

0x1

**Description**

Number of FIFO Channels, default=1.

**host\_to\_local.a\_to\_b\_v3.auto\_op\_full****Type**

bool

**Default value**

0x0

**Description**

AutoOp mode - AutoOp(min) == false, AutoOp(full) == true - default: AutoOp(min).

**host\_to\_local.a\_to\_b\_v3.fast\_ch\_group\_int\_enable****Type**

bool

**Default value**

0x0

**Description**

Fast Channel group interrupts enable, default=false.

**host\_to\_local.a\_to\_b\_v3.fifo\_depth****Type**

int

**Default value**

0x4

**Description**

Depth of the FIFO = fifo\_depth + 1.

**host\_to\_local.a\_to\_b\_v3.m16ba\_spt****Type**

bool

**Default value**

0x0

**Description**

Mailbox 16 bit access support to FIFO registers.

**host\_to\_local.a\_to\_b\_v3.m32ba\_spt****Type**

bool

**Default value**

0x1

**Description**

Mailbox 32 bit access support to FIFO registers.

**host\_to\_local.a\_to\_b\_v3.m64ba\_spt****Type**

bool

**Default value**

0x0

**Description**

Mailbox 64 bit access support to FIFO registers.

**host\_to\_local.a\_to\_b\_v3.m8ba\_spt****Type**

bool

**Default value**

0x0

**Description**

Mailbox 8 bit access support to FIFO registers.

**host\_to\_local.a\_to\_b\_v3.monolithic****Type**

bool

**Default value**

0x1

**Description**

Monolithic or Distributed MHU - default: monolithic(true).

**host\_to\_local.a\_to\_b\_v3.p16ba\_spt****Type**

bool

**Default value**

0x0

**Description**

Postbox 16 bit access support to FIFO registers.

**host\_to\_local.a\_to\_b\_v3.p32ba\_spt****Type**

bool

**Default value**

0x1

**Description**

Postbox 32 bit access support to FIFO registers.

**host\_to\_local.a\_to\_b\_v3.p64ba\_spt****Type**

bool

**Default value**

0x0

**Description**

Postbox 64 bit access support to FIFO registers.

**host\_to\_local.a\_to\_b\_v3.p8ba\_spt****Type**

bool

**Default value**

0x0

**Description**

Postbox 8 bit access support to FIFO registers.

**host\_to\_local.fast\_ch\_group\_int\_enable****Type**

bool

**Default value**

0x0

**Description**

Fast Channel group interrupts enable, default=false.

**host\_to\_local\_rcv\_log.trace\_snoops****Type**

bool

**Default value**

0x0

**Description**

Enable tracing of ACE snoop requests.

**host\_to\_local\_snd\_log.trace\_snoops****Type**

bool

**Default value**

0x0

**Description**

Enable tracing of ACE snoop requests.

**irq\_rcv\_combined\_host\_log.forward\_signal****Type**

bool

**Default value**

0x1

**Description**

If true, trace signal and forward signal from 'in' to 'out'. If false, trace signal only without driving 'out' port.

**irq\_rcv\_combined\_local\_log.forward\_signal****Type**

bool

**Default value**

0x1

**Description**

If true, trace signal and forward signal from 'in' to 'out'. If false, trace signal only without driving 'out' port.

**irq\_snd\_combined\_host\_log.forward\_signal****Type**

bool

**Default value**

0x1

**Description**

If true, trace signal and forward signal from 'in' to 'out'. If false, trace signal only without driving 'out' port.

**irq\_snd\_combined\_local\_log.forward\_signal****Type**

bool

**Default value**

0x1

**Description**

If true, trace signal and forward signal from 'in' to 'out'. If false, trace signal only without driving 'out' port.

**local\_to\_host.a\_to\_b\_v3.NUM\_FIFO\_CH****Type**

int

**Default value**

0x1

**Description**

Number of FIFO Channels, default=1.

**local\_to\_host.a\_to\_b\_v3.auto\_op\_full****Type**

bool

**Default value**

0x0

**Description**

AutoOp mode - AutoOp(min) == false, AutoOp(full) == true - default: AutoOp(min).

**local\_to\_host.a\_to\_b\_v3.fast\_ch\_group\_int\_enable****Type**

bool

**Default value**

0x0

**Description**

Fast Channel group interrupts enable, default=false.

**local\_to\_host.a\_to\_b\_v3.fifo\_depth****Type**

int

**Default value**

0x4

**Description**

Depth of the FIFO = fifo\_depth + 1.

**local\_to\_host.a\_to\_b\_v3.m16ba\_spt****Type**

bool

**Default value**

0x0

**Description**

Mailbox 16 bit access support to FIFO registers.

**local\_to\_host.a\_to\_b\_v3.m32ba\_spt****Type**

bool

**Default value**

0x1

**Description**

Mailbox 32 bit access support to FIFO registers.

**local\_to\_host.a\_to\_b\_v3.m64ba\_spt****Type**

bool

**Default value**

0x0

**Description**

Mailbox 64 bit access support to FIFO registers.

**local\_to\_host.a\_to\_b\_v3.m8ba\_spt****Type**

bool

**Default value**

0x0

**Description**

Mailbox 8 bit access support to FIFO registers.

**local\_to\_host.a\_to\_b\_v3.monolithic****Type**

bool

**Default value**

0x1

**Description**

Monolithic or Distributed MHU - default: monolithic(true).

**local\_to\_host.a\_to\_b\_v3.p16ba\_spt****Type**

bool

**Default value**

0x0

**Description**

Postbox 16 bit access support to FIFO registers.

**local\_to\_host.a\_to\_b\_v3.p32ba\_spt****Type**

bool

**Default value**

0x1

**Description**

Postbox 32 bit access support to FIFO registers.

**local\_to\_host.a\_to\_b\_v3.p64ba\_spt****Type**

bool

**Default value**

0x0

**Description**

Postbox 64 bit access support to FIFO registers.

**local\_to\_host.a\_to\_b\_v3.p8ba\_spt****Type**

bool

**Default value**

0x0

**Description**

Postbox 8 bit access support to FIFO registers.

**local\_to\_host.fast\_ch\_group\_int\_enable****Type**

bool

**Default value**

0x0

**Description**

Fast Channel group interrupts enable, default=false.

**local\_to\_host\_rcv\_log.trace\_snoops****Type**

bool

**Default value**

0x0

**Description**

Enable tracing of ACE snoop requests.

**local\_to\_host\_snd\_log.trace\_snoops****Type**

bool

**Default value**

0x0

**Description**

Enable tracing of ACE snoop requests.

**major\_version****Type**

int

**Default value**

0x2

**Description**

MHU major version (default=2).

**mhu\_arch\_beta01****Type**

bool

**Default value**

0x0

**Description**

true = Aligns to MHUv3.beta01; false = Aligns to MHUv3.2.

**minor\_version****Type**

int

**Default value**

0x1

**Description**

MHU minor version (default=1).

**product\_id****Type**

int

**Default value**

0x0

**Description**

MHU part number.

### 3.7.9 CombinedMessagingUnitAE

CMU AE - Combined MHU320AE monolithic block. This model is written in LISA+.

#### Iris and MTI instances for CombinedMessagingUnitAE

This model has the following Iris instances:

**Table 3-619: CombinedMessagingUnitAE Iris instances**

InstanceName	ComponentName
CombinedMessagingUnitAE	CombinedMessagingUnitAE
CombinedMessagingUnitAE.host_to_local	MHU320AE
CombinedMessagingUnitAE.host_to_local.MHU320AE FMU	mhu320ae_fmu
CombinedMessagingUnitAE.host_to_local_rcv_log	PVBusLogger
CombinedMessagingUnitAE.host_to_local_rcv_log.mapper	PVBusMapper
CombinedMessagingUnitAE.host_to_local_snd_log	PVBusLogger
CombinedMessagingUnitAE.host_to_local_snd_log.mapper	PVBusMapper
CombinedMessagingUnitAE.irq_rcv_combined_host_log	SignalLogger
CombinedMessagingUnitAE.irq_rcv_combined_local_log	SignalLogger

irq_snd_combined_host	Signal	Master	-
irq_snd_combined_local	Signal	Master	-
pvbus_s_rcv_host	PVBus	Slave	-
pvbus_s_rcv_local	PVBus	Slave	-
pvbus_s_snd_fmu_host	PVBus	Slave	-
pvbus_s_snd_fmu_local	PVBus	Slave	-
pvbus_s_snd_host	PVBus	Slave	-
pvbus_s_snd_local	PVBus	Slave	-
reset_in	Signal	Slave	-

## Parameters for CombinedMessagingUnitAE

### NUM\_DB\_CH

#### Type

int

#### Default value

0x1

#### Description

Number of doorbell channels.

**NUM\_FAST\_CH****Type**

int

**Default value**

0x1

**Description**

Number of fast channels.

**diagnostics****Type**

int

**Default value**

0x2

**Description**

Diagnostics 0==FATAL\_ERROR -&gt; 4==DEBUG.

**fast\_ch\_group\_int\_enable****Type**

bool

**Default value**

0x0

**Description**

Fast Channel group interrupts enable, default=false.

**fast\_ch\_n\_per\_group****Type**

int

**Default value**

0x1

**Description**

Fast Channel num channels per group, default=1.

**fast\_ch\_num\_groups****Type**

int

**Default value**

0x1

**Description**

Fast Channel num of groups, default=1.

**fast\_ch\_word\_size****Type**

int

**Default value**

0x20

**Description**

Fast Channel word size 32bit or 64bit, default=32.

**host\_to\_local.NUM\_FIFO\_CH****Type**

int

**Default value**

0x1

**Description**

Number of FIFO Channels, default=1.

**host\_to\_local.auto\_op\_full****Type**

bool

**Default value**

0x0

**Description**

AutoOp mode - AutoOp(min) == false, AutoOp(full) == true - default: AutoOp(min).

**host\_to\_local.fast\_ch\_group\_int\_enable****Type**

bool

**Default value**

0x0

**Description**

Fast Channel group interrupts enable, default=false.

**host\_to\_local.fifo\_depth****Type**

int

**Default value**

0x4

**Description**

Depth of the FIFO = fifo\_depth + 1.

**host\_to\_local.fmu\_location****Type**

int

**Default value**

0x2

**Description**

fmu\_location 0-2 (0:SENDER 1:RECEIVER 2:BOTH).

**host\_to\_local.m16ba\_spt****Type**

bool

**Default value**

0x0

**Description**

Mailbox 16 bit access support to FIFO registers.

**host\_to\_local.m32ba\_spt****Type**

bool

**Default value**

0x1

**Description**

Mailbox 32 bit access support to FIFO registers.

**host\_to\_local.m64ba\_spt****Type**

bool

**Default value**

0x0

**Description**

Mailbox 64 bit access support to FIFO registers.

**host\_to\_local.m8ba\_spt****Type**

bool

**Default value**

0x0

**Description**

Mailbox 8 bit access support to FIFO registers.

**host\_to\_local.monolithic****Type**

bool

**Default value**

0x1

**Description**

Monolithic or Distributed MHU - default: monolithic(true).

**host\_to\_local.p16ba\_spt****Type**

bool

**Default value**

0x0

**Description**

Postbox 16 bit access support to FIFO registers.

**host\_to\_local.p32ba\_spt****Type**

bool

**Default value**

0x1

**Description**

Postbox 32 bit access support to FIFO registers.

**host\_to\_local.p64ba\_spt****Type**

bool

**Default value**

0x0

**Description**

Postbox 64 bit access support to FIFO registers.

**host\_to\_local.p8ba\_spt****Type**

bool

**Default value**

0x0

**Description**

Postbox 8 bit access support to FIFO registers.

**host\_to\_local\_rcv\_log.trace\_snoops****Type**

bool

**Default value**

0x0

**Description**

Enable tracing of ACE snoop requests.

**host\_to\_local\_snd\_log.trace\_snoops****Type**

bool

**Default value**

0x0

**Description**

Enable tracing of ACE snoop requests.

**irq\_rcv\_combined\_host\_log.forward\_signal****Type**

bool

**Default value**

0x1

**Description**

If true, trace signal and forward signal from 'in' to 'out'. If false, trace signal only without driving 'out' port.

**irq\_rcv\_combined\_local\_log.forward\_signal****Type**

bool

**Default value**

0x1

**Description**

If true, trace signal and forward signal from 'in' to 'out'. If false, trace signal only without driving 'out' port.

**irq\_snd\_combined\_host\_log.forward\_signal****Type**

bool

**Default value**

0x1

**Description**

If true, trace signal and forward signal from 'in' to 'out'. If false, trace signal only without driving 'out' port.

**irq\_snd\_combined\_local\_log.forward\_signal****Type**

bool

**Default value**

0x1

**Description**

If true, trace signal and forward signal from 'in' to 'out'. If false, trace signal only without driving 'out' port.

**local\_to\_host.NUM\_FIFO\_CH****Type**

int

**Default value**

0x1

**Description**

Number of FIFO Channels, default=1.

**local\_to\_host.auto\_op\_full****Type**

bool

**Default value**

0x0

**Description**

AutoOp mode - AutoOp(min) == false, AutoOp(full) == true - default: AutoOp(min).

**local\_to\_host.fast\_ch\_group\_int\_enable****Type**

bool

**Default value**

0x0

**Description**

Fast Channel group interrupts enable, default=false.

**local\_to\_host.fifo\_depth****Type**

int

**Default value**

0x4

**Description**

Depth of the FIFO = ffo\_depth + 1.

**local\_to\_host.fmu\_location****Type**

int

**Default value**

0x2

**Description**

fmu\_location 0-2 (0:SENDER 1:RECEIVER 2:BOTH).

**local\_to\_host.m16ba\_spt****Type**

bool

**Default value**

0x0

**Description**

Mailbox 16 bit access support to FIFO registers.

**local\_to\_host.m32ba\_spt****Type**

bool

**Default value**

0x1

**Description**

Mailbox 32 bit access support to FIFO registers.

**local\_to\_host.m64ba\_spt****Type**

bool

**Default value**

0x0

**Description**

Mailbox 64 bit access support to FIFO registers.

**local\_to\_host.m8ba\_spt****Type**

bool

**Default value**

0x0

**Description**

Mailbox 8 bit access support to FIFO registers.

**local\_to\_host.monolithic****Type**

bool

**Default value**

0x1

**Description**

Monolithic or Distributed MHU - default: monolithic(true).

**local\_to\_host.p16ba\_spt****Type**

bool

**Default value**

0x0

**Description**

Postbox 16 bit access support to FIFO registers.

**local\_to\_host.p32ba\_spt****Type**

bool

**Default value**

0x1

**Description**

Postbox 32 bit access support to FIFO registers.

**local\_to\_host.p64ba\_spt****Type**

bool

**Default value**

0x0

**Description**

Postbox 64 bit access support to FIFO registers.

**local\_to\_host.p8ba\_spt****Type**

bool

**Default value**  
0x0

**Description**  
Postbox 8 bit access support to FIFO registers.

**local\_to\_host\_rcv\_log.trace\_snoops**

**Type**  
bool

**Default value**  
0x0

**Description**  
Enable tracing of ACE snoop requests.

**local\_to\_host\_snd\_log.trace\_snoops**

**Type**  
bool

**Default value**  
0x0

**Description**  
Enable tracing of ACE snoop requests.

3.7.10 DebugAccessPort

This model is written in C++.

Iris and MTI instances for DebugAccessPort

This model has the following Iris instances:

Table 3-622: DebugAccessPort Iris instances

InstanceName	ComponentName
DebugAccessPort	dap

Ports for DebugAccessPort

Table 3-623: Ports

Name	Protocol	Type	Description
ap_pvbus_m[2]	PVBus	Master	-
clock	ClockSignal	Slave	-
paddrdbg31	Signal	Master	-

## Parameters for DebugAccessPort

### **ap0\_has\_debug\_rom**

#### Type

bool

#### Default value

0x0

#### Description

Whether AP0 has a Debug ROM.

### **ap0\_rom\_base\_address**

#### Type

int

#### Default value

0x0

#### Description

ROM base address for AP 0.

### **ap0\_set\_paddrdbg31**

#### Type

bool

#### Default value

0x0

#### Description

Set paddrdbg31 signal during accesses on AP0.

### **ap1\_has\_debug\_rom**

#### Type

bool

#### Default value

0x0

#### Description

Whether AP1 has a Debug ROM.

### **ap1\_rom\_base\_address**

#### Type

int

#### Default value

0x0

**Description**

ROM base address for AP 1.

**ap1\_set\_paddrdbg31**

**Type**

bool

**Default value**

0x0

**Description**

Set paddrdbg31 signal during accesses on AP1.

3.7.11 DebugROM

This model is written in C++.

**Changes in 11.29.19**

Parameters added:

- ROMDEVID
- ROMPIDR
- ROMPRIDR0

**About DebugRom**

Debug ROM complying to an ADiv5-like interface

**Iris and MTI instances for DebugROM**

This model has the following Iris instances:

Table 3-624: DebugROM Iris instances

InstanceName	ComponentName
DebugROM	debug_rom

Ports for DebugROM

Table 3-625: Ports

Name	Protocol	Type	Description
paddrdbg31	Signal	Master	Signal port for paddrdbg to recognize an external access
pvbuss_s	PVBus	Slave	Bus slave port for accessing registers

## Parameters for DebugROM

### **ROMDEVID**

**Type**

int

**Default value**

0x0

**Description**

Initial value of Debug Rom Device Identification Register.

### **ROMPIDR**

**Type**

int

**Default value**

0x4000bb000

**Description**

Initial value of Debug Rom Peripheral Identification Register. Setting this parameter would make manufacturer\_revision\_number, customer\_modified, revision, and part\_number parameters take no effect.

### **ROMPRIDR0**

**Type**

int

**Default value**

0x1

**Description**

Initial value of Debug ROM Power RequestID Register.

### **customer\_modified**

**Type**

int

**Default value**

0x0

**Description**

### **entry\_0**

**Type**

int

**Default value**

0x0

**Description**

Offset of component 0.

**entry\_1****Type**

int

**Default value**

0x0

**Description**

Offset of component 1.

**entry\_10****Type**

int

**Default value**

0x0

**Description**

Offset of component 10.

**entry\_11****Type**

int

**Default value**

0x0

**Description**

Offset of component 11.

**entry\_12****Type**

int

**Default value**

0x0

**Description**

Offset of component 12.

**entry\_13****Type**

int

**Default value**

0x0

**Description**

Offset of component 13.

**entry\_14****Type**

int

**Default value**

0x0

**Description**

Offset of component 14.

**entry\_15****Type**

int

**Default value**

0x0

**Description**

Offset of component 15.

**entry\_16****Type**

int

**Default value**

0x0

**Description**

Offset of component 16.

**entry\_17****Type**

int

**Default value**

0x0

**Description**

Offset of component 17.

**entry\_18****Type**

int

**Default value**

0x0

**Description**

Offset of component 18.

**entry\_19****Type**

int

**Default value**

0x0

**Description**

Offset of component 19.

**entry\_2****Type**

int

**Default value**

0x0

**Description**

Offset of component 2.

**entry\_20****Type**

int

**Default value**

0x0

**Description**

Offset of component 20.

**entry\_21****Type**

int

**Default value**

0x0

**Description**

Offset of component 21.

**entry\_22****Type**

int

**Default value**

0x0

**Description**

Offset of component 22.

**entry\_23****Type**

int

**Default value**

0x0

**Description**

Offset of component 23.

**entry\_24****Type**

int

**Default value**

0x0

**Description**

Offset of component 24.

**entry\_25****Type**

int

**Default value**

0x0

**Description**

Offset of component 25.

**entry\_26****Type**

int

**Default value**

0x0

**Description**

Offset of component 26.

**entry\_27****Type**

int

**Default value**

0x0

**Description**

Offset of component 27.

**entry\_28****Type**

int

**Default value**

0x0

**Description**

Offset of component 28.

**entry\_29****Type**

int

**Default value**

0x0

**Description**

Offset of component 29.

**entry\_3****Type**

int

**Default value**

0x0

**Description**

Offset of component 3.

**entry\_30****Type**

int

**Default value**

0x0

**Description**

Offset of component 30.

**entry\_31****Type**

int

**Default value**

0x0

**Description**

Offset of component 31.

**entry\_32****Type**

int

**Default value**

0x0

**Description**

Offset of component 32.

**entry\_33****Type**

int

**Default value**

0x0

**Description**

Offset of component 33.

**entry\_34****Type**

int

**Default value**

0x0

**Description**

Offset of component 34.

**entry\_35****Type**

int

**Default value**

0x0

**Description**

Offset of component 35.

**entry\_36****Type**

int

**Default value**

0x0

**Description**

Offset of component 36.

**entry\_37****Type**

int

**Default value**

0x0

**Description**

Offset of component 37.

**entry\_38****Type**

int

**Default value**

0x0

**Description**

Offset of component 38.

**entry\_39****Type**

int

**Default value**

0x0

**Description**

Offset of component 39.

**entry\_4****Type**

int

**Default value**

0x0

**Description**

Offset of component 4.

**entry\_40****Type**

int

**Default value**

0x0

**Description**

Offset of component 40.

**entry\_41****Type**

int

**Default value**

0x0

**Description**

Offset of component 41.

**entry\_42****Type**

int

**Default value**

0x0

**Description**

Offset of component 42.

**entry\_43****Type**

int

**Default value**

0x0

**Description**

Offset of component 43.

**entry\_44****Type**

int

**Default value**

0x0

**Description**

Offset of component 44.

**entry\_45****Type**

int

**Default value**

0x0

**Description**

Offset of component 45.

**entry\_46****Type**

int

**Default value**

0x0

**Description**

Offset of component 46.

**entry\_47****Type**

int

**Default value**

0x0

**Description**

Offset of component 47.

**entry\_48****Type**

int

**Default value**

0x0

**Description**

Offset of component 48.

**entry\_49****Type**

int

**Default value**

0x0

**Description**

Offset of component 49.

**entry\_5****Type**

int

**Default value**

0x0

**Description**

Offset of component 5.

**entry\_50****Type**

int

**Default value**

0x0

**Description**

Offset of component 50.

**entry\_51****Type**

int

**Default value**

0x0

**Description**

Offset of component 51.

**entry\_52****Type**

int

**Default value**

0x0

**Description**

Offset of component 52.

**entry\_53****Type**

int

**Default value**

0x0

**Description**

Offset of component 53.

**entry\_54****Type**

int

**Default value**

0x0

**Description**

Offset of component 54.

**entry\_55****Type**

int

**Default value**

0x0

**Description**

Offset of component 55.

**entry\_56****Type**

int

**Default value**

0x0

**Description**

Offset of component 56.

**entry\_57****Type**

int

**Default value**

0x0

**Description**

Offset of component 57.

**entry\_58****Type**

int

**Default value**

0x0

**Description**

Offset of component 58.

**entry\_59****Type**

int

**Default value**

0x0

**Description**

Offset of component 59.

**entry\_6****Type**

int

**Default value**

0x0

**Description**

Offset of component 6.

**entry\_60****Type**

int

**Default value**

0x0

**Description**

Offset of component 60.

**entry\_61****Type**

int

**Default value**

0x0

**Description**

Offset of component 61.

**entry\_62****Type**

int

**Default value**

0x0

**Description**

Offset of component 62.

**entry\_63****Type**

int

**Default value**

0x0

**Description**

Offset of component 63.

**entry\_7****Type**

int

**Default value**

0x0

**Description**

Offset of component 7.

**entry\_8****Type**

int

**Default value**

0x0

**Description**

Offset of component 8.

**entry\_9****Type**

int

**Default value**

0x0

**Description**

Offset of component 9.

**manufacturer\_revision\_number****Type**

int

**Default value**

0x0

**Description****part\_number****Type**

int

**Default value**

0x0

**Description****revision****Type**

int

**Default value**

## Parameters for DualClusterSystemConfigurationBlock

### CFG\_ACTIVECLUSTER

#### Type

int

#### Default value

0x1

#### Description

Select which cluster will come out of reset coming out of power-on: bit[0] for primary cluster (Cortex-A15), bit[1] for secondary cluster (Cortex-A7). Value 0 is not allowed as it will hold both clusters in reset indefinitely!.

### Cluster0IdOnPOReset

#### Type

int

#### Default value

0x0

**Description**

ClusterId for primary cluster (Cortex-A15) on power-on reset.

**Cluster1IdOnPOReset****Type**

int

**Default value**

0x1

**Description**

ClusterId for secondary cluster (Cortex-A7) on power-on reset.

**DCSCB\_PERIPHBASE****Type**

int

**Default value**

0x1e000000

**Description**

PERIPHBASE.

**DCS\_AID****Type**

int

**Default value**

0x0

**Description**

DCS\_AID is the Auxiliary ID Register.

**DCS\_ID****Type**

int

**Default value**

0x41120000

**Description**

The value returned by the DCS\_ID register.

**DCS\_ID\_BUILD\_NUMBER****Type**

int

**Default value**

0x1

**Description**

DCS\_ID build number.

**DCS\_LEDS****Type**

int

**Default value**

0x0

**Description**

DCS\_LEDS represents eight LEDs on the board that form an 8-bit value that can be r/w from the Dual Cluster System Configuration Block.

**DCS\_SW****Type**

int

**Default value**

0x0

**Description**

DCS\_SW represents eight switches on the board that form an 8-bit value that can be read from the Dual Cluster System Configuration Block.

**FlipVGICWiringForCluster0AndCluster1****Type**

bool

**Default value**

0x0

**Description**

Flip the VGIC wiring round for cluster0 and cluster1. With this false, then cpu0 of cluster0 is cpu interface 0 on the VGIC. If this is true then cpu0 of cluster1 becomes cpu interface 0 on the VGIC.

**INTGEN\_INTS****Type**

int

**Default value**

0x3

**Description**

Number of custom IRQs controlled by interrupt generator is  $\text{INTGEN\_INTS} * 32 + 32$ .

**NumberOfCoresInCluster0****Type**

int

**Default value**

0x2

**Description**

The number of cores in the primary cluster.

**NumberOfCoresInCluster1****Type**

int

**Default value**

0x2

**Description**

The number of cores in the secondary cluster.

**ResetValueOfDaughterUserSwitches****Type**

int

**Default value**

0x0

**Description**

Reset value of the user switches on the daughterboard.

**stop\_on\_sequence\_id****Type**

int

**Default value**

0x0

**Description**

If non-zero the sequence\_id of the SW trace mechanism on which to halt the simulator.

### 3.7.13 DummyAPB

DummyAPB. This model is written in LISA+.

**About DummyAPB**

Use this dummy **RAZ/WI** APB device component to ensure that software does not receive aborts for accesses to devices that should be part of the system, but are not modeled.

For validation purposes it is useful to have dummy devices that are mostly **RAZ/WI** but return the correct value when you read ID registers. You can do that with this component in the following ways:

- Specify `periphid_24` for peripherals that follow the Arm pattern of having 12 ID registers at the top of an APB frame. For example:

```
periphid_24="04000000c2b00b000df005b1"
```

You also must set `periph_framesize` to 4 or 64, depending on whether the peripheral has its registers in a 4 KB or 64 KB frame.

- Give a space-separated list of offset:value pairs in the `periphid_generic` parameter to define read-only values from particular offsets. For example:

```
periphid_generic="000:02468ace 1fc:13579bdf"
```

The number of hex digits used to specify the address is used to define the width of the address mask used. For example, `bc:02468ace` returns `02468ace` at reads from any address ending `bc`.

- Give a space-separated list of offset:default-value pairs in the `ram_generic` parameter to construct RAM. That is, the register at the relevant offset returns the default-value, but if changed, it returns the value that it is changed to.

Iris and MTI instances for DummyAPB

This model has the following Iris instances:

Table 3-629: DummyAPB Iris instances

InstanceName	ComponentName
DummyAPB	DummyAPB
DummyAPB.pvbusslave	PVBusSlave

This model has the following MTI trace components:

Table 3-630: DummyAPB MTI instances

InstanceName	ComponentName
DummyAPB.pvbusslave	PVBusSlave

Ports for DummyAPB

Table 3-631: Ports

Name	Protocol	Type	Description
pvbus_s	PVBus	Slave	Bus slave interface.

## Parameters for DummyAPB

### **fail**

#### Type

bool

#### Default value

0x0

#### Description

Abort all accesses.

### **failmsg**

#### Type

string

#### Default value

""

#### Description

String to print when 'fail'=true and access occurred.

### **periph\_framesize**

#### Type

int

#### Default value

0xffffffffffffffff

#### Description

Size of frame (4/64, indicating if ID is at xFD0 or xFFD0).

### **periphid\_24**

#### Type

string

#### Default value

""

#### Description

24 hex digits for the 12 bytes of peripheral ID.

### **periphid\_generic**

#### Type

string

#### Default value

""

**Description**

Set of space-separated offset:value pairs for dwords of ID.

**ram\_generic****Type**

string

**Default value**

""

**Description**

Set of space-separated offset:default pairs for writable dwords.

**warn\_once****Type**

bool

**Default value**

0x1

**Description**

Warn once for the invalid read and write access.

### 3.7.14 ElfLoader

ELF loader component. This model is written in LISA+.

**About ElfLoader**

ElfLoader provides an alternative method of loading ELF files into the system. It can load files in either of the following formats, or in gzip-compressed versions of them:

- ELF
- Motorola S-Record

**Load file format**

ElfLoader optionally uses a load file to load code and data in an ELF file to any address in the physical address space before the simulation starts.

Specify the ELF file to load using the `elf` parameter and the load file using the `lfile` parameter. The load file contains an entry for each section in the ELF file. An entry has the following format:

```
<Section name>, <VA>, <PA>, <Offset>, <Size>, <PAS>, <MECID>
```

Where:

**Section name**

The name of a segment of continuous code and data to be preloaded. It must match a segment name in the ELF file. It can only contain alphanumeric characters a - z, A - Z, 0 - 9, and underscores (\_).

**VA**

The Virtual Address of the code and data in hexadecimal. This is the same as the address of the segment in the ELF file.

**PA**

The Physical Address in hexadecimal to which the code and data will be preloaded in memory.

**Offset**

Must be set to 0x0. Reserved for future use.

**Size**

The size of the data to be preloaded at the Physical Address (PA) in hexadecimal. It is the sum of the sizes of the individual ELF sections belonging to the same segment. It should match the `memsz` field of the corresponding segment in the ELF file.

**PAS**

The Physical Address Space to which the code and data will be preloaded. The possible values are:

**S**

Secure PAS

**NS**

Non-secure PAS

**RL**

Realm PAS

**RT**

Root PAS

**MECID**

Memory Encryption Context ID (optional). It can be specified for any PAS.

The following rules apply to the load file:

- The load file definition starts with the line:

```
** ELF_SECTION_RELOC_START **
```

and ends with the line:

```
** ELF_SECTION_RELOC_END **
```

- Lines within the load file definition that begin with # and all lines outside the definition are treated as comments.

- The hexadecimal values in the VA and PA fields must begin with 0x.
- Fields are separated by a comma and all whitespace characters are ignored.
- Blank lines within the load file definition are ignored.

### Example load file

This example load file shows a segment of size 15 KB with a start address in VA space of 0x500000. It is preloaded to address 0x600000 in non-secure physical memory:

```
** ELF_SECTION_RELOC_START **
# Section relocation for Code Segment 1
PRELOAD_TEST_1, 0x500000, 0x600000, 0x0, 0x3C00, NS
** ELF_SECTION_RELOC_END **
```

### ns\_copy, realm\_copy, and root\_copy parameters

The boolean parameters `ns_copy`, `realm_copy`, and `root_copy` are alternatives to `lfile`. If `lfile` is also specified, it takes precedence over them.

If you enable any of these boolean parameters, the ELF file is loaded to both Secure PAS and to the PAS in the parameter name. So, for example, enabling all three parameters loads the ELF file to all four PASes.

If you do not specify `lfile` and do not enable any of the `<PAS>_copy` parameters, the file is loaded to Secure PAS only.

Use `lfile` instead of the `<PAS>_copy` parameters if you want control over:

- Where different segments in the ELF file are loaded to
- Whether to load the ELF file to Secure PAS
- The PA to load to and the MECID to use

### Iris and MTI instances for ElfLoader

This model has the following Iris instances:

**Table 3-632: ElfLoader Iris instances**

InstanceName	ComponentName
ElfLoader	ElfLoader
ElfLoader.pvbus_busmaster	PVBusMaster

This model has the following MTI trace components:

**Table 3-633: ElfLoader MTI instances**

InstanceName	ComponentName
ElfLoader.pvbus_busmaster	PVBusMaster

Ports for ElfLoader

Table 3-634: Ports

Name	Protocol	Type	Description
pvbus_m	PVBus	Master	Master port for all memory accesses.
start_address	Value_64	Master	Provides a value reflecting the entry point of the last ELF image to be loaded.

Parameters for ElfLoader

**elf**

Type

string

Default value

""

Description

ELF file.

**impdef\_copy**

Type

bool

Default value

0x0

Description

DEPRECATED: Use realm\_copy or root\_copy parameters. load ELF file to implementation defined memory spaces, if load file is not specified.

**lfile**

Type

string

Default value

""

Description

load file for large address mapping.

**ns\_copy**

Type

bool

Default value

0x1

Description

copy whole file to NS memory space.

**output\_attributes\_parameter\_of\_core**

**Type**  
string

**Default value**  
"ExtendedID[54:39]=MPAM\_PARTID, ExtendedID[38]=MPAM\_SP[0],  
ExtendedID[37]=MPAM\_SP[1], UserFlags[31:16]=IMPDEF2"

**Description**  
Encoding of various attributes on the bus.

**realm\_copy**

**Type**  
bool

**Default value**  
0x0

**Description**  
load ELF file to REALM memory spaces, if load file is not specified.

**root\_copy**

**Type**  
bool

**Default value**  
0x0

**Description**  
load ELF file to ROOT memory spaces, if load file is not specified.

3.7.15 FlashLoader

A device that can preload a gzipped image into flash at startup. This model is written in C++.

About FlashLoader

This component complements the IntelStrataFlashJ3 component by providing a means to initialize the contents of up to four Flash components in sequence from a single host flash image file.

Iris and MTI instances for FlashLoader

This model has the following Iris instances:

Table 3-635: FlashLoader Iris instances

InstanceName	ComponentName
FlashLoader	FlashLoader

## Ports for FlashLoader

**Table 3-636: Ports**

Name	Protocol	Type	Description
flash_device0	FlashLoaderPort	Master	Used to program a flash device.
flash_device1	FlashLoaderPort	Master	Used to program a flash device.
flash_device2	FlashLoaderPort	Master	Used to program a flash device.
flash_device3	FlashLoaderPort	Master	Used to program a flash device.
warm_reset	Signal	Slave	Reset signal from external master.

## Parameters for FlashLoader

### Diagnostics

#### Type

int

#### Default value

0x0

#### Description

Diagnostics.

### fname

#### Type

string

#### Default value

"(none)"

#### Description

Filename (Default '(none)' means: Do not load any file. An empty string will cause a warning.).

### fnameWrite

#### Type

string

#### Default value

"(none)"

#### Description

FilenameWrite (Default '(none)' means: Do not save any file. An empty string will cause a warning.).

### write\_flash\_after\_reset

#### Type

bool

**Default value**

0x0

**Description**

write\_flash\_after\_reset.

3.7.16 GICv3CommsLogger

Traces GICv3Comms activity. This model is written in LISA+.

**Iris and MTI instances for GICv3CommsLogger**

This model has the following Iris instances:

Table 3-637: GICv3CommsLogger Iris instances

InstanceName	ComponentName
GICv3CommsLogger	GICv3CommsLogger

This model has the following MTI trace components:

Table 3-638: GICv3CommsLogger MTI instances

InstanceName	ComponentName
GICv3CommsLogger	GICv3CommsLogger

**Ports for GICv3CommsLogger**

Table 3-639: Ports

Name	Protocol	Type	Description
to_cpu	GICv3Comms	Master	To connect to CPU.
to_gic	GICv3Comms	Slave	To connect to GIC.

**Parameters for GICv3CommsLogger**

**verbose**

**Type**

bool

**Default value**

0x0

**Description**

Print tracing information to attached debugger in addition to via MTI.

### 3.7.17 GICv3CommsPVBUS

GICv3 Component for conversion between GICv3Comms protocol and PVBUS. This model is written in C++.

#### Iris and MTI instances for GICv3CommsPVBUS

This model has the following Iris instances:

**Table 3-640: GICv3CommsPVBUS Iris instances**

InstanceName	ComponentName
GICv3CommsPVBUS	GICv3CommsPVBUS
GICv3CommsPVBUS.bus_slave	PVBUSSlave

This model has the following MTI trace components:

**Table 3-641: GICv3CommsPVBUS MTI instances**

InstanceName	ComponentName
GICv3CommsPVBUS	GICv3CommsPVBUS
GICv3CommsPVBUS.bus_slave	PVBUSSlave

#### Ports for GICv3CommsPVBUS

**Table 3-642: Ports**

Name	Protocol	Type	Description
axi_master_id_s[256]	Value	Slave	-
distributor_s[256]	GICv3Comms	Slave	-
pvbuss_m	PVBUS	Master	-
pvbuss_s	PVBUS	Slave	-

### 3.7.18 GICv3ProtocolChecker

GICv3 Component for command protocol checking. This model is written in C++.

#### Iris and MTI instances for GICv3ProtocolChecker

This model has the following Iris instances:

**Table 3-643: GICv3ProtocolChecker Iris instances**

InstanceName	ComponentName
GICv3ProtocolChecker	GICv3ProtocolChecker

This model has the following MTI trace components:

**Table 3-644: GICv3ProtocolChecker MTI instances**

InstanceName	ComponentName
GICv3ProtocolChecker	GICv3ProtocolChecker

### Ports for GICv3ProtocolChecker

**Table 3-645: Ports**

Name	Protocol	Type	Description
cpu_comms	GICv3Comms	Master	Master GICv3Comms port.
gicv3_comms	GICv3Comms	Slave	Slave GICv3Comms port.

### Parameters for GICv3ProtocolChecker

#### **cpu\_interface\_id**

##### Type

int

##### Default value

0x0

##### Description

Cpu interface id to which this component is connected.

#### **enable\_protocol\_checking**

##### Type

bool

##### Default value

0x1

##### Description

Enable/disable the protocol checking.

## 3.7.19 GUIPoll

Component providing a real-time periodic callback for GUI refresh. This model is written in C++.

### About GUIPoll

An external subcomponent that encapsulates support for generating a real-time callback signal that can be used to poll the event queue of a visualisation GUI.

The `gui_callback()` method of the callback port is invoked periodically, at approximately the rate determined by the `delay_ms` parameter.

This callback is real-time, not simulation-time. Also, callbacks will continue even while the simulation is paused. Because of this, the client code should not implement a callback behavior that can modify the state of the simulation.

### Ports for GUIPoll

Table 3-646: Ports

Name	Protocol	Type	Description
gui_callback	GUIPollCallback	Master	Sends callback requests to the visualization component.

### Parameters for GUIPoll

**delay\_ms**

Type

int

Default value

0x32

Description

GUI update period in ms.

**has\_gui**

Type

bool

Default value

0x1

Description

GUI is enabled.

## 3.7.20 HostBridge

Host Socket Interface Component. This model is written in C++.

### About HostBridge

This component acts as a networking proxy for target NIC device models, to forward and receive ethernet packets to and from the host. Two kinds of proxy backend are integrated into this component:

- A host TAP/TUN-like network device, which is an ordinary TAP or MacVTap. This is the default.
- User-mode networking, which emulates a built-in IP router and DHCP server to route traffic using the host user-mode socket layer. To enable user-mode networking, set the `userNetworking` parameter to true.

HostBridge requires the following initialization sequence:

```
hostbridge.state.setValue(HostBridge::STATUS);  
hostbridge.state.setValue(HostBridge::S_UP);
```

To enable tracing of user-mode networking, which can help to debug networking issues, set the FASTSIM\_USERNET\_DUMP environment variable to any or all of the following values:

```
arpin,arpout,udpin,udpout,etherin,etherout,ipv4in,ipv4out,  
ipv4fragin,ipv4fragout,tcpin,tcpout,dhcpv4in,dhcpv4out
```

See also

- [User mode networking](#)

Iris and MTI instances for HostBridge

This model has the following Iris instances:

Table 3-647: HostBridge Iris instances

InstanceName	ComponentName
HostBridge	HostBridge

Ports for HostBridge

Table 3-648: Ports

Name	Protocol	Type	Description
eth	VirtualEthernet	Slave	-
state	ValueState_64	Slave	-

Parameters for HostBridge

**interfaceName**

Type

string

Default value

""

Description

Host Interface.

**userNetOptions**

Type

string

**Default value**

""

**Description**

Control options for UserNet TCP/IP (for internal use only, please do not use).

**userNetPorts**

**Type**

string

**Default value**

""

**Description**

Listening ports to expose in user-mode networking.

**userNetSubnet**

**Type**

string

**Default value**

"172.20.51.0/24"

**Description**

Virtual subnet for user-mode networking.

**userNetworking**

**Type**

bool

**Default value**

0x0

**Description**

Enable user-mode networking.

**3.7.21 HostSerialInterface**

Component which provides access to the host serial interface. This model is written in LISA+.

**Iris and MTI instances for HostSerialInterface**

This model has the following Iris instances:

**Table 3-649: HostSerialInterface Iris instances**

InstanceName	ComponentName
HostSerialInterface	HostSerialInterface

## Ports for HostSerialInterface

**Table 3-650: Ports**

Name	Protocol	Type	Description
SerialData	<a href="#">SerialData</a>	Slave	Serial data connection to export to host machine.

### Parameters for HostSerialInterface

#### **baud\_rate**

##### Type

int

##### Default value

0x0

##### Description

Baud rate override.

#### **device**

##### Type

string

##### Default value

"/dev/ttyS0"

##### Description

HW device to use.

## 3.7.22 IntelStrataFlashJ3

Intel Strata Flash J3 model. This model is written in C++.

### About IntelStrataFlashJ3

This component is an efficient implementation of a NOR flash memory type device, an Intel StrataFlash Memory (J3). For information about Intel StrataFlash Memory (J3), see [Intel Download Center, Intel StrataFlash Memory \(J3\) datasheet](#).

In normal usage, the device acts as Read Only Memory (ROM) whose contents can be determined either by programming using the flashloader port or by using standard flash programming software running on the model, such as the Arm Firmware Suite.

The implementation of this component is approximately that of the Intel part in the VE development board. The component is effectively organized as a bank of two 16-bit Intel Flash components forming a 32-bit component that can be read or programmed in parallel. The component supports all hardware behavior except for:

- Protection register.
- Enhanced configuration register.

- Unique device identifier.
- One time programmable cells.
- Suspend/resume, which is silently ignored.
- Status interrupt line.

All block operations are atomic. This means that the status register state machine status bit always reads 1, ready.

In normal operation, this component has no user-visible registers, but you can read from it as if it is memory.

Programming it or changing the configuration requires a sequence of special write operations, see general flash programming documentation. The component supports Common Flash Interface query operations, which allow drivers to determine the properties of the flash memory.

The model interprets all writes as requests to the programming state machine, and there are many state-machine states that do not support subsequent reads and return 0xdeaddead for them. Therefore, when simulating a ROM, use the `trapwrite=true` option.

---

Use the `diagnostics` parameter to select the level of diagnostic output:

#### Level 0

None.

#### Level 1

Report probable driver error operations:

- Unaligned operations that fault.
- Accesses that the state machine does not expect.
- Transitions of the state machine to unknown states.
- Writes to locked blocks and illegal lock commands.

#### Level 2

Report unimplemented and therefore ignored operations, and log lock commands.

#### Level 3

Warn if a flash write attempts to set bits. The write works if `unphysical_writes=true`.

#### Level 4

Log every read and write.

### Iris and MTI instances for IntelStrataFlashJ3

This model has the following Iris instances:

**Table 3-651: IntelStrataFlashJ3 Iris instances**

InstanceName	ComponentName
IntelStrataFlashJ3	IntelStrataFlashJ3
IntelStrataFlashJ3.map	PVBusMapper
IntelStrataFlashJ3.mbs	PVBusSlave
IntelStrataFlashJ3.rmbs	PVBusSlave

This model has the following MTI trace components:

**Table 3-652: IntelStrataFlashJ3 MTI instances**

InstanceName	ComponentName
IntelStrataFlashJ3.map	PVBusMapper
IntelStrataFlashJ3.mbs	PVBusSlave
IntelStrataFlashJ3.rmbs	PVBusSlave

### Ports for IntelStrataFlashJ3

**Table 3-653: Ports**

Name	Protocol	Type	Description
flashloader	FlashLoaderPort	Slave	-
mem_port	PVDevice	Slave	-
pvbus	PVBus	Slave	-

### Parameters for IntelStrataFlashJ3

#### **diagnostics**

##### Type

int

##### Default value

0x0

##### Description

Diagnostic level.

#### **enable\_read\_status\_logic**

##### Type

bool

##### Default value

0x0

##### Description

Enables logic to handle the status register reads as per the '3 Volt Intel StrataFlash Memory' specification.

**model\_blocklock****Type**

bool

**Default value**

0x0

**Description**

Model per-block locking and set all the blocks to locked state on reset.

**size****Type**

int

**Default value**

0x40000

**Description**

Memory Size.

**trapwrite****Type**

bool

**Default value**

0x0

**Description**

Generate abort on write.

**unphysical\_writes****Type**

bool

**Default value**

0x1

**Description**

Writes to flash are overwrite not AND.

### 3.7.23 Interrupt\_Router

Interrupt Router Registers. This model is written in C++.

#### Ports for Interrupt\_Router

**Table 3-654: Ports**

Name	Protocol	Type	Description
lockdown	Signal	Slave	-
out_interrupts0[64]	Signal	Master	-
out_interrupts1[64]	Signal	Master	-
out_interrupts10[64]	Signal	Master	-
out_interrupts11[64]	Signal	Master	-
out_interrupts12[64]	Signal	Master	-
out_interrupts13[64]	Signal	Master	-
out_interrupts14[64]	Signal	Master	-
out_interrupts15[64]	Signal	Master	-
out_interrupts2[64]	Signal	Master	-
out_interrupts3[64]	Signal	Master	-
out_interrupts4[64]	Signal	Master	-
out_interrupts5[64]	Signal	Master	-
out_interrupts6[64]	Signal	Master	-
out_interrupts7[64]	Signal	Master	-
out_interrupts8[64]	Signal	Master	-
out_interrupts9[64]	Signal	Master	-
pvbus_s	PVBus	Slave	-
reset_signal	Signal	Slave	-
shared_interrupt[428]	Signal	Slave	-
tamper_interrupt	Signal	Master	-

#### Parameters for Interrupt\_Router

##### diagnostics

##### Type

int

##### Default value

0x0

##### Description

Diagnostics to indicate debug level.

**ici\_dst****Type**

string

**Default value**

3,3,3,7,7,7,7,7,7,6,6,0

**Description**

Interrupt Controller Destination The values range from 0 to  $(2^{16} - 1)$ . The bit representation of these values indicate the ICIs possible for each indexed shared interrupt to be routed to.

**ici\_en****Type**

string

**Default value**

1,1,1,1,1,1,1,1,1,1,0

**Description**

Interrupt Controller Enable The values range from 0 to  $(2^{16} - 1)$ . The bit representation of these values indicate the ICIs to which each indexed shared interrupt are routed to.

**lde\_lvl****Type**

int

**Default value**

0x2

**Description**

Lockdown Extension Level 0x0 - LDE.0 is implemented. 0x1 - LDE.1 is implemented. 0x2 - LDE.2 is implemented. All other values are Reserved.

**num\_ici****Type**

int

**Default value**

0x3

**Description**

Number of Interrupt Controllers Interrupt interface.

**num\_shd\_int****Type**

int

**Default value**

0x1

**Description**  
Number of shared interrupts supported.

**ro\_access**

**Type**  
int

**Default value**  
0x0

**Description**  
Stream ID of master.

**rw\_access**

**Type**  
int

**Default value**  
0x0

**Description**  
Stream ID of master with Read Write access.

3.7.24 IoTSS3\_ManagerSecurityController

IoT Subsystem SIE-300 Manager (Master) Security Controller. This model is written in C++.

Iris and MTI instances for IoTSS3\_ManagerSecurityController

This model has the following Iris instances:

Table 3-655: IoTSS3\_ManagerSecurityController Iris instances

InstanceName	ComponentName
IoTSS3_ManagerSecurityController	IoTSS3_ManagerSecurityController
IoTSS3_ManagerSecurityController.pvbusmodifier	PVBusMapper

This model has the following MTI trace components:

irq	StateSignal	Master	-
pvbus_m	PVBus	Master	-
pvbus_s	PVBus	Slave	-

## Parameters for IoTSS3\_ManagerSecurityController

### IRQ\_ENABLE\_RD

#### Type

bool

#### Default value

0x1

#### Description

Interrupt enable read.

### IRQ\_ENABLE\_WR

#### Type

bool

#### Default value

0x1

#### Description

Interrupt enable write.

### diagnostics

#### Type

int

#### Default value

0x0

#### Description

Diagnostics.

## 3.7.25 IoTSS3\_MemoryProtectionController

IoT Subsystem SIE-300 Memory Protection Controller. This model is written in C++.

### Iris and MTI instances for IoTSS3\_MemoryProtectionController

This model has the following Iris instances:

**Table 3-658: IoTSS3\_MemoryProtectionController Iris instances**

InstanceName	ComponentName
IoTSS3_MemoryProtectionController	IoTSS3_MemoryProtectionController
IoTSS3_MemoryProtectionController.bus_mapper	PVBusMapper

Name	Protocol	Type	Description
cfg_init_value	ValueState	Slave	-
cfg_sec_resp	ValueState	Slave	-
config_pvbus_s	PVBus	Slave	-
idau_invalidate_region	Value_64	Slave	-
mpc_irq	StateSignal	Master	-
pvbus_m	PVBus	Master	-
pvbus_s	PVBus	Slave	-
reset_in	Signal	Slave	-

### Parameters for IoTSS3\_MemoryProtectionController

#### **BLK\_MAX**

##### Type

int

##### Default value

0xffff

##### Description

Maximum block index configuration.

#### **BLK\_SIZE**

##### Type

int

##### Default value

0x3

**Description**

Block size configuration.

**GATE\_PRESENT****Type**

bool

**Default value**

0x1

**Description**

Memory gating logic present/not.

**IRQ\_ENABLE\_RD****Type**

bool

**Default value**

0x1

**Description**

Interrupt enable read.

**IRQ\_ENABLE\_WR****Type**

bool

**Default value**

0x1

**Description**

Interrupt enable write.

**diagnostics****Type**

int

**Default value**

0x0

**Description**

Diagnostics.

### 3.7.26 IoTSS3\_SecureAccessConfig

IoTSS3 Secure Control Register Block. This model is written in C++.

#### Iris and MTI instances for IoTSS3\_SecureAccessConfig

This model has the following Iris instances:

**Table 3-661: IoTSS3\_SecureAccessConfig Iris instances**

InstanceName	ComponentName
IoTSS3_SecureAccessConfig	IoTSS3_SecureAccessConfig
IoTSS3_SecureAccessConfig.bus_mapper	PVBusMapper

periphpppc0	ValueState	Master	-
periphpppc1	ValueState	Master	-
periphpppcexp[4]	ValueState	Master	-
ppc_in[32]	StateSignal	Slave	-
ppc_out	Signal	Master	-
pvbus_nonsecure	PVBus	Slave	-
pvbus_secure	PVBus	Slave	-
reset_in	Signal	Slave	-
security_resp	ValueState	Master	-

## Parameters for IoTSS3\_SecureAccessConfig

### **CODENSC**

#### Type

bool

#### Default value

0x0

#### Description

Whether 0x10000000..0x1FFFFFFF is non-secure-callable.

### **DISABLE\_GATING**

#### Type

bool

#### Default value

0x0

#### Description

Disable Memory gating logic.

### **IGNORE\_MEM\_MAP**

#### Type

bool

#### Default value

0x0

**Description**

Ignore Memory mapping logic.

**MAINPPCEXP\_DIS0****Type**

int

**Default value**

0x0

**Description**

Disables support for individual bits on the MAINNSPPCEXP0 and MAINPPPCEXP0 buses.

**MAINPPCEXP\_DIS1****Type**

int

**Default value**

0x0

**Description**

Disables support for individual bits on the MAINNSPPCEXP1 and MAINPPPCEXP1 buses.

**MAINPPCEXP\_DIS2****Type**

int

**Default value**

0x0

**Description**

Disables support for individual bits on the MAINNSPPCEXP2 and MAINPPPCEXP2 buses.

**MAINPPCEXP\_DIS3****Type**

int

**Default value**

0x0

**Description**

Disables support for individual bits on the MAINNSPPCEXP3 and MAINPPPCEXP3 buses.

**PERIPHPPCEXP\_DIS0****Type**

int

**Default value**

0x0

**Description**

Disables support for individual bits on the PERIPHNSPPCEXP0 and PERIPHPPPCEXP0 buses.

**PERIPHPPPCEXP\_DIS1****Type**

int

**Default value**

0x0

**Description**

Disables support for individual bits on the PERIPHNSPPCEXP1 and PERIPHPPPCEXP1 buses.

**PERIPHPPPCEXP\_DIS2****Type**

int

**Default value**

0x0

**Description**

Disables support for individual bits on the PERIPHNSPPCEXP2 and PERIPHPPPCEXP2 buses.

**PERIPHPPPCEXP\_DIS3****Type**

int

**Default value**

0x0

**Description**

Disables support for individual bits on the PERIPHNSPPCEXP3 and PERIPHPPPCEXP3 buses.

**RAMNSC****Type**

bool

**Default value**

0x0

**Description**

Whether 0x30000000..0x3FFFFFFF is non-secure-callable.

**diagnostics****Type**

int

**Default value**

0x0

**Description**

Diagnostics.

### 3.7.27 Juno\_sysregs

IOFPGA system register unit. This model is written in C++.

**Iris and MTI instances for Juno\_sysregs**

This model has the following Iris instances:

**Table 3-664: Juno\_sysregs Iris instances**

InstanceName	ComponentName
Juno_sysregs	Juno_sysregs
Juno_sysregs.pvbuslave	PVBusSlave

This model has the following MTI trace components:

**Table 3-665: Juno\_sysregs MTI instances**

InstanceName	ComponentName
Juno_sysregs.pvbuslave	PVBusSlave

**Ports for Juno\_sysregs****Table 3-666: Ports**

Name	Protocol	Type	Description
clock_100Hz	ClockSignal	Slave	-
clock_24Mhz	ClockSignal	Slave	-
ethernet_irq	Signal	Master	-
mmc_presence	StateSignal	Slave	-
pb_irq	Signal	Master	-
pvbus	PVBus	Slave	-
rtcc_irq	Signal	Master	-
tile1_irq	Signal	Master	-
usb_irq	Signal	Master	-

Parameters for Juno\_sysregs

**diagnostics**

**Type**  
int

**Default value**  
0x0

**Description**  
Diagnostics.

**pcie\_mac**

**Type**  
int

**Default value**  
0x2f7000001

**Description**  
PCIe MAC address.

**rev**

**Type**  
int

**Default value**  
0x0

**Description**  
Board revision.

3.7.28 Kits2\_Timer

Kits2 Timer. This model is written in C++.

Iris and MTI instances for Kits2\_Timer

This model has the following Iris instances:

Table 3-667: Kits2\_Timer Iris instances

InstanceName	ComponentName
Kits2_Timer	Kits2_Timer
Kits2_Timer.clk_div	ClockDivider
Kits2_Timer.counter	CounterModule

This model has the following MTI trace components:

**Table 3-668: Kits2\_Timer MTI instances**

InstanceName	ComponentName
Kits2_Timer.clk_div	ClockDivider

**Ports for Kits2\_Timer****Table 3-669: Ports**

Name	Protocol	Type	Description
clock	ClockSignal	Slave	-
enable	Signal	Slave	-
irq_out	Signal	Master	-
timer_freq	ClockRateControl	Slave	-
timer_value	ValueState	Slave	-

**Parameters for Kits2\_Timer****clk\_div.div****Type**

int

**Default value**

0x1

**Description**

Clock Rate Divider. This parameter is not exposed via CADI and can only be set in LISA.

**clk\_div.mul****Type**

int

**Default value**

0x1

**Description**

Clock Rate Multiplier. This parameter is not exposed via CADI and can only be set in LISA.

**counter.diagnostics****Type**

int

**Default value**

0x2

**Description**

Diagnostics.

**diagnostics**

**Type**  
int

**Default value**  
0x0

**Description**  
Diagnostics.

**timer\_interval**

**Type**  
int

**Default value**  
0x0

**Description**  
Timer ticks to count before firing interrupt.

3.7.29 LS64TestingFIFO

FIFO peripheral supporting LS64 accesses for testing purposes. This model is written in LISA+.

About LD64TestingFIFO

LS64TestingFIFO is a LISA component for testing the FEAT\_LS64 architectural feature. It accepts ST64B instructions and places the supplied data into a configurable buffer. LD64B instructions can then read this data out of the FIFO. The value returned can configurably be bitwise inverted.

It also supports the ST64BV variants where success and failure are reported by a return result rather than by transaction success and failure.

Iris and MTI instances for LS64TestingFIFO

This model has the following Iris instances:

Table 3-670: LS64TestingFIFO Iris instances

InstanceName	ComponentName
LS64TestingFIFO	LS64TestingFIFO
LS64TestingFIFO.pvbusslave	PVBusSlave

This model has the following MTI trace components:

Table 3-671: LS64TestingFIFO MTI instances

InstanceName	ComponentName
LS64TestingFIFO.pvbusslave	PVBusSlave

## Ports for LS64TestingFIFO

**Table 3-672: Ports**

Name	Protocol	Type	Description
pvbus_s	PVBus	Slave	Bus subordinate interface.

## Parameters for LS64TestingFIFO

### buffer\_size

#### Type

int

#### Default value

0x2

#### Description

The number of 64-byte slots in the FIFO.

### op\_type

#### Type

int

#### Default value

0x1

#### Description

The operation performed on the 64-byte transaction data 0 - None, 1 - Bitwise Negate.

## 3.7.30 LabellerIdauSecurity

This model is written in C++.

### Iris and MTI instances for LabellerIdauSecurity

This model has the following Iris instances:

**Table 3-673: LabellerIdauSecurity Iris instances**

InstanceName	ComponentName
LabellerIdauSecurity	LabellerIdauSecurity
LabellerIdauSecurity.idau_busmaster	PVBusMaster
LabellerIdauSecurity.pvbusmodifier	PVBusMapper
LabellerIdauSecurity.remap_busmaster	PVBusMaster

This model has the following MTI trace components:

**Table 3-674: LabellerIdauSecurity MTI instances**

InstanceName	ComponentName
LabellerIdauSecurity.idau_busmaster	PVBusMaster
LabellerIdauSecurity.pvbusmodifier	PVBusMapper
LabellerIdauSecurity.remap_busmaster	PVBusMaster

### Ports for LabellerIdauSecurity

**Table 3-675: Ports**

Name	Protocol	Type	Description
idau	PVBus	Master	-
idau_invalidate_region	Value_64	Slave	-
pvbus_m	PVBus	Master	-
pvbus_s	PVBus	Slave	-

### Parameters for LabellerIdauSecurity

#### diagnostics

##### Type

int

##### Default value

0x0

##### Description

Diagnostics.

## 3.7.31 MemoryMappedGenericTimer

ARM Generic Timer. This model is written in C++.

### Iris and MTI instances for MemoryMappedGenericTimer

This model has the following Iris instances:

**Table 3-676: MemoryMappedGenericTimer Iris instances**

InstanceName	ComponentName
MemoryMappedGenericTimer	MemoryMappedGenericTimer
MemoryMappedGenericTimer.busbase0	PVBusSlave
MemoryMappedGenericTimer.busbase1	PVBusSlave
MemoryMappedGenericTimer.busbase10	PVBusSlave
MemoryMappedGenericTimer.busbase11	PVBusSlave
MemoryMappedGenericTimer.busbase12	PVBusSlave
MemoryMappedGenericTimer.busbase13	PVBusSlave
MemoryMappedGenericTimer.busbase14	PVBusSlave

InstanceName	ComponentName
MemoryMappedGenericTimer.busbase15	PVBusSlave
MemoryMappedGenericTimer.busbase2	PVBusSlave
MemoryMappedGenericTimer.busbase3	PVBusSlave
MemoryMappedGenericTimer.busbase4	PVBusSlave
MemoryMappedGenericTimer.busbase5	PVBusSlave
MemoryMappedGenericTimer.busbase6	PVBusSlave
MemoryMappedGenericTimer.busbase7	PVBusSlave
MemoryMappedGenericTimer.busbase8	PVBusSlave
MemoryMappedGenericTimer.busbase9	PVBusSlave
MemoryMappedGenericTimer.busctlbase	PVBusSlave

This model has the following MTI trace components:

**Table 3-677: MemoryMappedGenericTimer MTI instances**

InstanceName	ComponentName
MemoryMappedGenericTimer.busbase0	PVBusSlave
MemoryMappedGenericTimer.busbase1	PVBusSlave
MemoryMappedGenericTimer.busbase10	PVBusSlave
MemoryMappedGenericTimer.busbase11	PVBusSlave
MemoryMappedGenericTimer.busbase12	PVBusSlave
MemoryMappedGenericTimer.busbase13	PVBusSlave
MemoryMappedGenericTimer.busbase14	PVBusSlave
MemoryMappedGenericTimer.busbase15	PVBusSlave
MemoryMappedGenericTimer.busbase2	PVBusSlave
MemoryMappedGenericTimer.busbase3	PVBusSlave
MemoryMappedGenericTimer.busbase4	PVBusSlave
MemoryMappedGenericTimer.busbase5	PVBusSlave
MemoryMappedGenericTimer.busbase6	PVBusSlave
MemoryMappedGenericTimer.busbase7	PVBusSlave
MemoryMappedGenericTimer.busbase8	PVBusSlave
MemoryMappedGenericTimer.busbase9	PVBusSlave
MemoryMappedGenericTimer.busctlbase	PVBusSlave

## Ports for MemoryMappedGenericTimer

**Table 3-678: Ports**

Name	Protocol	Type	Description
cntpsirq[8]	Signal	Master	-
cntvalueb	CounterInterface	Slave	-
pvbus_base_s[8]	PVBus	Slave	-
pvbus_ctlbase_s	PVBus	Slave	-

Name	Protocol	Type	Description
pvbus_el0base_s[8]	PVBus	Slave	-
timer_reset	Signal	Slave	-

## Parameters for MemoryMappedGenericTimer

### bypass\_ctlbase

#### Type

bool

#### Default value

0x0

#### Description

Bypass CNTBase Access Control. Enable if only timer frame feature is required without CNTBase access control.

### cntel0acr\_implemented

#### Type

int

#### Default value

0x0

#### Description

A bit-field of 8 bits, where bit {n} enables CNTELOACR for timer frame {n}.

### diagnostics

#### Type

int

#### Default value

0x0

#### Description

Diagnostics.

### frame\_security

#### Type

string

#### Default value

""

#### Description

Hard-wired/configurable security for frames (N/S/X, one character per timer frame).

**num\_timers****Type**

int

**Default value**

0x1

**Description**

Number of timer frames.

### 3.7.32 MemoryMappedGenericWatchdog

ARM Generic Watchdog. This model is written in C++.

#### About MemoryMappedGenericWatchdog

This is a high-level watchdog that generates two interrupts rather than an interrupt followed by a reset.

#### Iris and MTI instances for MemoryMappedGenericWatchdog

This model has the following Iris instances:

**Table 3-679: MemoryMappedGenericWatchdog Iris instances**

InstanceName	ComponentName
MemoryMappedGenericWatchdog	MemoryMappedGenericWatchdog
MemoryMappedGenericWatchdog.busctlbase	PVBusSlave
MemoryMappedGenericWatchdog.busrefbase	PVBusSlave

This model has the following MTI trace components:

**Table 3-680: MemoryMappedGenericWatchdog MTI instances**

InstanceName	ComponentName
MemoryMappedGenericWatchdog.busctlbase	PVBusSlave
MemoryMappedGenericWatchdog.busrefbase	PVBusSlave

#### Ports for MemoryMappedGenericWatchdog

**Table 3-681: Ports**

Name	Protocol	Type	Description
cntvalueb	CounterInterface	Slave	-
ctl_pvbus_s	PVBus	Slave	-
ref_pvbus_s	PVBus	Slave	-
reset_in	Signal	Slave	-
WS0	Signal	Master	-
WS1	Signal	Master	-

## Parameters for MemoryMappedGenericWatchdog

### **NONSECURE**

**Type**

bool

**Default value**

0x0

**Description**

Non-Secure.

### **arch\_version**

**Type**

int

**Default value**

0x0

**Description**

Architecture version. Available 0 and 1.

### **diagnostics**

**Type**

int

**Default value**

0x0

**Description**

Diagnostics.

### **product\_id**

**Type**

int

**Default value**

0x0

**Description**

Product Identifier.

## 3.7.33 NonVolatileCounter

Trusted Non-Volatile Counter unit. This model is written in C++.

### **Iris and MTI instances for NonVolatileCounter**

This model has the following Iris instances:

**Table 3-682: NonVolatileCounter Iris instances**

InstanceName	ComponentName
NonVolatileCounter	NonVolatileCounter
NonVolatileCounter.pvbusslave	PVBusSlave

This model has the following MTI trace components:

**Table 3-683: NonVolatileCounter MTI instances**

InstanceName	ComponentName
NonVolatileCounter.pvbusslave	PVBusSlave

### Ports for NonVolatileCounter

**Table 3-684: Ports**

Name	Protocol	Type	Description
pvbus_s	PVBus	Slave	-

### Parameters for NonVolatileCounter

#### **diagnostics**

##### Type

int

##### Default value

0x0

##### Description

Diagnostics.

#### **rst\_non\_tz\_fw\_cnt**

##### Type

int

##### Default value

0x0

##### Description

Value of NON\_TZ\_FW\_CNT at reset.

#### **rst\_tz\_fw\_cnt**

##### Type

int

##### Default value

0x0

##### Description

Value of TZ\_FW\_CNT at reset.

**secure**

**Type**

int

**Default value**

0x1

**Description**

Instantiate model as Secure (1) or NS (0).

**version**

**Type**

string

**Default value**

"r0"

**Description**

Version of the model functionality. Valid values are r0 and r1.

3.7.34 PCIeATC

This model is written in C++.

About PCIeATC

This component is for validation only. It is not directly suitable for use as an ATC. It is used for testing the ATC implementation of `pcie_atc_if` produced by `make_PCIeATC_v0()`.

Iris and MTI instances for PCIeATC

This model has the following Iris instances:

Table 3-685: PCIeATC Iris instances

InstanceName	ComponentName
PCIeATC	validation_atc
PCIeATC.ExportTest.PCIeATC.mapper	PVBusMapper
PCIeATC.pvbus_id_routed_s[0]	PVBusSlave

This model has the following MTI trace components:

Table 3-686: PCIeATC MTI instances

InstanceName	ComponentName
PCIeATC	atc
PCIeATC.ExportTest.PCIeATC.mapper	PVBusMapper
PCIeATC.pvbus_id_routed_s[0]	PVBusSlave

## Ports for PCIeATC

**Table 3-687: Ports**

Name	Protocol	Type	Description
atc	PCIeATC_get_if	Slave	-
disable_PRI_and_set_RF	Signal	Master	This is pulsed (set, then clear) when a condition occurs that causes a Response Failure. The correct response of the PCIe device is to disable PRI and to set the RF bit in the PRI header.
identify	SMMUv3AEMIdentifyProtocol	Master	The user has a chance to determine how the substreamid is extracted from the transactions received on pvbus_s by using this port. If it is unimplemented then the ATC will use the default policy identified in SMMUv3_FOR_PCIE.lisa <201601041554/>
pvbus_id_routed_s	PVBus	Slave	-
pvbus_m	PVBus	Master	-
pvbus_s	PVBus	Slave	-
uprgi	Signal	Master	This is pulsed (set, then clear) when an Unrecognised PRG Index is received. In a real PCIe device this would set the UPRGI bit in the PRI header.

## Parameters for PCIeATC

### atc\_size

#### Type

int

#### Default value

0x0

#### Description

The maximum number of ATC entries. 0 is effectively a large number.

### seed

#### Type

int

#### Default value

0x12345678

#### Description

Seed for a random number generator.

## 3.7.35 PLLClockControl

Clock Rate Control. This model is written in C++.

### Iris and MTI instances for PLLClockControl

This model has the following Iris instances:

**Table 3-688: PLLClockControl Iris instances**

InstanceName	ComponentName
PLLClockControl	PLLClockControl
PLLClockControl.clock_ctl	ClockDivider
PLLClockControl.pllclk_div	ClockDivider

This model has the following MTI trace components:

**Table 3-689: PLLClockControl MTI instances**

InstanceName	ComponentName
PLLClockControl.clock_ctl	ClockDivider
PLLClockControl.pllclk_div	ClockDivider

## Ports for PLLClockControl

**Table 3-690: Ports**

Name	Protocol	Type	Description
clk_en	Signal	Slave	-
clk_in	ClockSignal	Slave	-
clk_out	ClockSignal	Master	-
clk_rate	ClockRateControl	Slave	-
clk_sel	Value	Slave	-
dvfs_freq_in	ValueState	Slave	-
lock	Signal	Master	-
refclk_in	ClockSignal	Slave	-
unlock	Signal	Master	-

## Parameters for PLLClockControl

### diagnostics

#### Type

int

#### Default value

0x0

#### Description

Diagnostics.

### 3.7.36 PPUMultiThreadModeSwitch

PPU mode switch between single-thread mode and multi-thread mode. Support up to 8 cores and thread number per core is no more than 2. This model is written in C++.

#### Ports for PPUMultiThreadModeSwitch

**Table 3-691: Ports**

Name	Protocol	Type	Description
pchannel_from_ppu_s[8]	PChannel	Slave	-
pchannel_to_cpu_m[8]	PChannel	Master	-
wakerequest_from_gic_s[16]	Signal	Slave	-
wakerequest_to_ppu_m[8]	Signal	Master	-

#### Parameters for PPUMultiThreadModeSwitch

##### mt\_mode

##### Type

bool

##### Default value

0x0

##### Description

Multi-threaded mode.

### 3.7.37 PS2Keyboard

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050\_KMI component. This model is written in LISA+.

#### Iris and MTI instances for PS2Keyboard

This model has the following Iris instances:

**Table 3-692: PS2Keyboard Iris instances**

InstanceName	ComponentName
PS2Keyboard	PS2Keyboard
PS2Keyboard.ps2_clocktimer	ClockTimerThread
PS2Keyboard.ps2_clocktimer.timer	ClockTimerThread64
PS2Keyboard.ps2_clocktimer.timer.thread	SchedulerThread
PS2Keyboard.ps2_clocktimer.timer.thread_event	SchedulerThreadEvent

## Ports for PS2Keyboard

**Table 3-693: Ports**

Name	Protocol	Type	Description
clk_in	<a href="#">ClockSignal</a>	Slave	Clock signal to rate at which PS2Data signals are generated.
keyboard	<a href="#">KeyboardStatus</a>	Slave	Receives keyboard input from, for example, the Visualisation component.
ps2	<a href="#">PS2Data</a>	Master	Connection to the PS/2 controller, for example, the PL050_KMI.

### 3.7.38 PS2Mouse

Interface component, which takes the keypress/release signals from the Visualisation component and translates them into clocked PS2Data signals which can be routed to a PL050\_KMI component. This model is written in C++.

#### Iris and MTI instances for PS2Mouse

This model has the following Iris instances:

**Table 3-694: PS2Mouse Iris instances**

InstanceName	ComponentName
PS2Mouse	PS2Mouse

## Ports for PS2Mouse

**Table 3-695: Ports**

Name	Protocol	Type	Description
clk_in	<a href="#">ClockSignal</a>	Slave	-
mouse	<a href="#">MouseStatus</a>	Slave	-
ps2	<a href="#">PS2Data</a>	Master	-

### 3.7.39 PVBUSGICv3Comms

GICv3 Component for conversion between GICv3Comms protocol and PVBUS. This model is written in C++.

#### Iris and MTI instances for PVBUSGICv3Comms

This model has the following Iris instances:

**Table 3-696: PVBUSGICv3Comms Iris instances**

InstanceName	ComponentName
PVBUSGICv3Comms	PVBUSGICv3Comms
PVBUSGICv3Comms.bus_slave	PVBUSSlave

This model has the following MTI trace components:

**Table 3-697: PVBUSGICv3Comms MTI instances**

InstanceName	ComponentName
PVBUSGICv3Comms	PVBUSGICv3Comms
PVBUSGICv3Comms.bus_slave	PVBUSSlave

### Ports for PVBUSGICv3Comms

**Table 3-698: Ports**

Name	Protocol	Type	Description
axi_master_id_m[256]	Value	Master	-
distributor_m[256]	GICv3Comms	Master	-
pvbuss_m	PVBUS	Master	-
pvbuss_s	PVBUS	Slave	-

## 3.7.40 PVMetaDataController

A simulation-only (not in hardware) component that can service metadata requests for transactions on PVBUS. This model is written in C++.

### About PVMetaDataController

This component represents an entity in a memory system that responds to requests for manipulating metadata during a bus transaction and/or as part of Armv8.5-A instruction execution.

This component is intended to be an `sg::Component` which can be instantiated and connected in a platform.

MetaDataController is a `pv::RemapTransactionIntermediary` as it needs to intercept bus transactions to apply metadata operations and set up DMI to metadata memory, that is, assign `MetaDataPayload_t.set_dmi()`.

By being a `pv::RemapTransactionIntermediary` and using DMIs for data and metadata, it has a very small impact on simulation speed.

Note

The Armv8.5-A specification mentions that Colour-Check, which is a certain kind of metadata operation, happens in the physical memory system and a Processing Element (PE) only cares about the result of such an operation.

However, doing this for all memory accesses drastically slows down the simulation. While the first memory access of a `MetaDataPage_t` comes to `MetaDataController`, the rest of the accesses for addresses in this page are made through `MetaDataDMI_t`. This essentially means that Colour-Check is done in this class only once for every `MetaDataPage_t`. On other occasions, the intention is that the checks are done by the holder of `MetaDataDMI_t`.

## Iris and MTI instances for PVMetaDataController

This model has the following Iris instances:

**Table 3-699: PVMetaDataController Iris instances**

InstanceName	ComponentName
PVMetaDataController	MetaDataController

## Ports for PVMetaDataController

**Table 3-700: Ports**

Name	Protocol	Type	Description
pvbus_m	PVBus	Master	-
pvbus_s	PVBus	Slave	-

## Parameters for PVMetaDataController

### init\_value

#### Type

int

#### Default value

0xd

#### Description

Initialize metadata memory with this value. If one of init\_values\_json or init\_values\_json\_file is specified, this value applies only to any metadata not specified in the JSON.

### init\_values\_json

#### Type

string

#### Default value

""

A JSON value describing initial metadata values. Mutually exclusive with init\_values\_json\_file .

The format is as follows:

```
{ "regions": [{ "begin": 0x0,
                "end": 0x10000,
                "mte_tag": 0xa},
               { "begin": 0x20000,
                "end": 0x50000,
                "mte_tag": 0xc}]
}
```

**init\_values\_json\_file****Type**

string

**Default value**

""

Path to a JSON file with initial metadata values. Mutually exclusive with `init_values_json`. The format is as follows:

```
{ "regions": [{ "begin": 0x0,
                "end": 0x10000,
                "mte_tag": 0xa},
               { "begin": 0x20000,
                "end": 0x50000,
                "mte_tag": 0xc}]
}
```

**is\_enabled****Type**

bool

**Default value**

0x0

**Description**

If false, disables the MetaData controller functionality, and makes the component invisible to passing transactions.

**mte\_tag\_carveout\_json****Type**

string

**Default value**

""

JSON string that specifies the PA range of the tag carveout regions and the beginning of the PA range for which they provide tag storage.

If `pa_regions_with_metadata_storage` defines which regions can have metadata, the tag carveout regions cannot overlap them, and each tagged region must be entirely covered by one of them.

The block size must be  $\geq 64$  bytes and a power of 2, defaulting to 4KiB. The maximum block size supported is 4KiB.

The carveout region size must be  $\geq 4\text{KiB}$  and a power of 2, and determines the size of the corresponding tagged region.

```
{ "regions": [{ "begin": 0x0,      "tag_carveout_region":
[0xffffffff00000, 0xffffffff00fff]},
    { "begin": 0x20000, "tag_carveout_region":
[0xffffffff01000, 0xffffffff01fff], "block_size": 0x100},
    { "begin": 0x100000, "tag_carveout_region":
[0xffffffff08000, 0xffffffff0Bfff], "block_size": 0x2000}]}
```

### **mte\_tag\_carveout\_json\_file**

#### **Type**

string

#### **Default value**

""

Path to a file which contains the JSON string that specifies the PA range of the tag carveout regions and the beginning of the PA range for which they provide tag storage.

If `pa_regions_with_metadata_storage` defines which regions can have metadata, the tag carveout regions cannot overlap them, and each tagged region must be entirely covered by one of them.

The block size must be  $\geq 64$  bytes and a power of 2, defaulting to  $4\text{KiB}$ . The maximum block size supported is  $4\text{KiB}$ .

The carveout region size must be  $\geq 4\text{KiB}$  and a power of 2, and determines the size of the corresponding tagged region.

```
{ "regions": [{ "begin": 0x0,      "tag_carveout_region":
[0xffffffff00000, 0xffffffff00fff]},
    { "begin": 0x20000, "tag_carveout_region":
[0xffffffff01000, 0xffffffff01fff], "block_size": 0x100},
    { "begin": 0x100000, "tag_carveout_region":
[0xffffffff08000, 0xffffffff0Bfff], "block_size": 0x2000}]}
```

Only one of `mte_tag_carveout_json` and `mte_tag_carveout_json_file` can be used.

### **mte\_tag\_carveout\_tag\_order**

#### **Type**

string

#### **Default value**

"little-endian"

**Description**

Order of the tags within the MTE tag carveout blocks. This can be little-endian (same order as the corresponding tagged data) or big-endian (reverse order). The parameter accepts both '-' and '\_', so 'little-endian', 'big-endian', 'little\_endian' and 'big\_endian' are all valid. .

**pa\_regions\_with\_metadata\_storage**

**Type**

string

**Default value**

""

Specify the address region where the metadata storage is available for each PAS in a JSON format.

If the PAS does not have a region specified, the PAS has metadata storage for all of the space.

The regions are defined by begin and end\_incl addresses. Example:

```
{ "ns": [0xa0000000, 0xa0000fff],  
  "s" : [0xb0000000, 0xb0000fff],  
  "rl": [0xc0000000, 0xc0000fff],  
  "rt": [0xd0000000, 0xd0000fff]}
```

ns: non-secure, s: secure, rl: realm, rt: root

**3.7.41 PchannelListener**

Provides a dummy PChannel device to accept all request. This model is written in C++.

**Ports for PchannelListener**

Table 3-701: Ports

Name	Protocol	Type	Description
dev_pchannel_s	PChannel	Slave	-

**Parameters for PchannelListener**

**diagnostics**

**Type**

int

**Default value**

0x0

**Description**

Diagnostics.

### 3.7.42 PowerStateGate

Power State Gate to filter the access to SYSTOP domain. This model is written in C++.

#### Iris and MTI instances for PowerStateGate

This model has the following Iris instances:

**Table 3-702: PowerStateGate Iris instances**

InstanceName	ComponentName
PowerStateGate	PowerStateGate
PowerStateGate.filter	PVBusMapper

This model has the following MTI trace components:

**Table 3-703: PowerStateGate MTI instances**

InstanceName	ComponentName
PowerStateGate.filter	PVBusMapper

#### Ports for PowerStateGate

**Table 3-704: Ports**

Name	Protocol	Type	Description
powerdown	Signal	Slave	-
pdbus_m	PVBus	Master	-
pdbus_s	PVBus	Slave	-

#### Parameters for PowerStateGate

##### diagnostics

###### Type

int

###### Default value

0x0

###### Description

Diagnostics.

##### gate\_behaviour

###### Type

int

###### Default value

0x0

**Description**  
Gate behaviour when power is down, 0=abort, 1=ignore.

3.7.43 RAMDevice

RAM device, can be dynamic or static ram. This model is written in LISA+.

**About RAMDevice**  
As a generic device, this component does not have a hardware revision code.

**Iris and MTI instances for RAMDevice**  
This model has the following Iris instances:

Table 3-705: RAMDevice Iris instances

InstanceName	ComponentName
RAMDevice	RAMDevice
RAMDevice.bus_slave	PVBusSlave

This model has the following MTI trace components:

Table 3-706: RAMDevice MTI instances

InstanceName	ComponentName
RAMDevice.bus_slave	<a href="#">PVBusSlave</a>

Ports for RAMDevice

Table 3-707: Ports

Name	Protocol	Type	Description
pvbus	<a href="#">PVBus</a>	Slave	Bus slave interface.

Parameters for RAMDevice

**enable\_atomic\_ops**  
Type  
bool  
Default value  
0x0  
Description  
Supports Atomic Operations.

**fill11**  
Type  
int

**Default value**

0x0

**Description**

Fill pattern 1, initialise memory at start of simulation with alternating fill1, fill2 pattern.

**fill2****Type**

int

**Default value**

0x0

**Description**

Fill pattern 2, initialise memory at start of simulation with alternating fill1, fill2 pattern.

**read\_latency****Type**

int

**Default value**

0x0

**Description**

Memory read latency (ps/byte).

**size****Type**

int

**Default value**

0x100000000

**Description**

Memory Size.

**write\_latency****Type**

int

**Default value**

0x0

**Description**

Memory write latency (ps/byte).

## 3.7.44 ROM

Simple ROM device. This model is written in LISA+.

### Iris and MTI instances for ROM

This model has the following Iris instances:

**Table 3-708: ROM Iris instances**

InstanceName	ComponentName
ROM	ROM
ROM.bus_mapper	PVBusMapper
ROM.bus_slave	PVBusSlave

This model has the following MTI trace components:

**Table 3-709: ROM MTI instances**

InstanceName	ComponentName
ROM.bus_mapper	PVBusMapper
ROM.bus_slave	PVBusSlave

### Ports for ROM

**Table 3-710: Ports**

Name	Protocol	Type	Description
parity_error_out	Signal	Master	-
pvbus	PVBus	Slave	-

### Parameters for ROM

#### **abort\_writes**

##### Type

bool

##### Default value

0x0

##### Description

Abort writes instead of ignoring them.

#### **log2\_size**

##### Type

int

##### Default value

0x14

**Description**

Log2 size (bytes) e.g. 20 is 1 MiB.

**parity\_enabled**

**Type**

bool

**Default value**

0x0

**Description**

Parity Check Enabled on ROM data: If this parameter is enabled, Model assumes that ROM binary will have data + parity.

**raw\_image**

**Type**

string

**Default value**

""

**Description**

Raw image file to load at init time.

3.7.45 RSE\_Integ\_Regs

RSE Integration Layer Registers. This model is written in C++.

Iris and MTI instances for RSE\_Integ\_Regs

This model has the following Iris instances:

Table 3-711: RSE\_Integ\_Regs Iris instances

InstanceName	ComponentName
RSE_Integ_Regs	RSE_Integration_Registers
RSE_Integ_Regs.ClockDivider	ClockDivider
RSE_Integ_Regs.PVBusSlave	PVBusSlave

This model has the following MTI trace components:

Table 3-712: RSE\_Integ\_Regs MTI instances

InstanceName	ComponentName
RSE_Integ_Regs.ClockDivider	ClockDivider
RSE_Integ_Regs.PVBusSlave	PVBusSlave

## Ports for RSE\_Integ\_Regs

Table 3-713: Ports

Name	Protocol	Type	Description
EXTMCPRESETn	Signal	Master	-
EXTSCPRESETn	Signal	Master	-
MCP_ATU_AP	Signal	Master	-
MCP_RAS_ERR_CLEAR	Signal	Master	-
pvbus_s	PVBus	Slave	-
REFCLK	ClockSignal	Slave	-
reset_in	Signal	Slave	-
RSECORECLK	ClockSignal	Master	-
SCP_ATU_AP	Signal	Master	-
SCP_RAS_ERR_CLEAR	Signal	Master	-
SYSPLLCLK	ClockSignal	Slave	-

## Parameters for RSE\_Integ\_Regs

**chip\_id****Type**

int

**Default value**

0x0

**Description**

RSE Integration Register Chip ID.

**diagnostics****Type**

int

**Default value**

0x0

**Description**

RSE Integration Registers Diagnostics.

**multichip\_mode****Type**

bool

**Default value**

0x0

**Description**

RSE Integration Register multichip mode.

### 3.7.46 RandomNumberGenerator

Random Number Generator unit. This model is written in C++.

#### Iris and MTI instances for RandomNumberGenerator

This model has the following Iris instances:

**Table 3-714: RandomNumberGenerator Iris instances**

InstanceName	ComponentName
RandomNumberGenerator	RandomNumberGenerator
RandomNumberGenerator.pvbuslave	PVBusSlave

This model has the following MTI trace components:

**Table 3-715: RandomNumberGenerator MTI instances**

InstanceName	ComponentName
RandomNumberGenerator.pvbuslave	PVBusSlave

#### Ports for RandomNumberGenerator

**Table 3-716: Ports**

Name	Protocol	Type	Description
pvbus_s	PVBus	Slave	Bus slave interface.
RNG_intr	Signal	Master	Interrupt output.

#### Parameters for RandomNumberGenerator

##### diagnostics

###### Type

int

###### Default value

0x0

###### Description

Diagnostics.

##### seed

###### Type

int

###### Default value

0x0

###### Description

Random number seed.

### 3.7.47 RealTimeLimiter

Real Time Limiter. This model is written in LISA+.

#### Iris and MTI instances for RealTimeLimiter

This model has the following Iris instances:

Table 3-717: RealTimeLimiter Iris instances

InstanceName	ComponentName
RealTimeLimiter	RealTimeLimiter
RealTimeLimiter.divider	ClockDivider

This model has the following MTI trace components:

Table 3-718: RealTimeLimiter MTI instances

InstanceName	ComponentName
RealTimeLimiter.divider	ClockDivider

#### Ports for RealTimeLimiter

Table 3-719: Ports

Name	Protocol	Type	Description
clk_in	ClockSignal	Slave	Clock input.

#### Parameters for RealTimeLimiter

##### ENABLE

Type

bool

Default value

0x0

Description

Rate limit simulation.

##### RELATIVE\_SPEED

Type

int

Default value

0x64

Description

Rate limit to at most this percentage of real time (100: limit to wall clock rate).

**divider.div**

**Type**

int

**Default value**

0x1

**Description**

Clock Rate Divider. This parameter is not exposed via CADI and can only be set in LISA.

**3.7.48 RealtimeClockTimer**

Host Time Based Timer Module for Generic Timers. This model is written in C++.

**Ports for RealtimeClockTimer**

Table 3-720: Ports

Name	Protocol	Type	Description
set_frequency	Value_64	Slave	-
timer_callback	TimerCallback64	Master	-
timer_control	TimerControl64	Slave	-

**3.7.49 RemapDecoder**

The component that provides support for dynamically remappable regions of memory. This model is written in LISA+.

**Iris and MTI instances for RemapDecoder**

This model has the following Iris instances:

Table 3-721: RemapDecoder Iris instances

InstanceName	ComponentName
RemapDecoder	RemapDecoder
RemapDecoder.bus_switch	TZSwitch
RemapDecoder.bus_switch.pvbus_mapper	PVBusMapper

This model has the following MTI trace components:

Table 3-722: RemapDecoder MTI instances

InstanceName	ComponentName
RemapDecoder.bus_switch.pvbus_mapper	PVBusMapper

## Ports for RemapDecoder

**Table 3-723: Ports**

Name	Protocol	Type	Description
control	TZSwitchControl	Broadcast	-
input	PVBus	Slave	Incoming bus transactions (connected straight to TZSwitch).
output_remap_clear	PVBus	Master	Outgoing bus transactions when remap is clear.
output_remap_set	PVBus	Master	Outgoing bus transactions when remap is set.
remap	StateSignal	Slave	Remapping control.

## Parameters for RemapDecoder

### **bus\_switch.normal**

#### Type

int

#### Default value

0x2

#### Description

Normal Port.

### **bus\_switch.secure**

#### Type

int

#### Default value

0x1

#### Description

Secure Port.

## 3.7.50 RootKeyStorage

Trusted Root-Key Storage unit. This model is written in C++.

### Iris and MTI instances for RootKeyStorage

This model has the following Iris instances:

**Table 3-724: RootKeyStorage Iris instances**

InstanceName	ComponentName
RootKeyStorage	RootKeyStorage
RootKeyStorage.pvbusslave	PVBusSlave

This model has the following MTI trace components:

Table 3-725: RootKeyStorage MTI instances

InstanceName	ComponentName
RootKeyStorage.pvbuslave	PVBusSlave

Ports for RootKeyStorage

Table 3-726: Ports

Name	Protocol	Type	Description
pvbus_s	PVBus	Slave	-

Parameters for RootKeyStorage

diagnostics

Type

int

Default value

0x0

Description

Diagnostics.

hw\_unique\_key

Type

string

Default value

"00000000 00000000 00000000 00000000"

Description

Hardware Unique Key (128-bit, 4 std::hex words).

hw\_unique\_key\_hex

Type

string

Default value

""

Description

Hardware Unique Key (128-bit, little-endian std::hex byte stream).

private\_key

Type

string

Default value

"00000000 00000000 00000000 00000000 00000000 00000000 00000000 00000000"

**Description**

Private Endorsement Key (256-bit, 8 std::hex words).

**private\_key\_hex****Type**

string

**Default value**

""

**Description**

Private Key (256-bit, little-endian std::hex byte stream).

**public\_key****Type**

string

**Default value**

"00000000 00000000 00000000 00000000 00000000 00000000 00000000 00000000"

**Description**

Public Key (256-bit, 8 std::hex words).

**public\_key\_hex****Type**

string

**Default value**

""

**Description**

Public Key (256-bit, little-endian std::hex byte stream).

**ss\_key****Type**

string

**Default value**

"00000000 00000000 00000000 00000000"

**Description**

Secret Symmetric Key (128-bit, 4 std::hex words).

**ss\_key\_hex****Type**

string

**Default value**

""

**Description**  
Secret Symmetric Key (128-bit, little-endian std::hex byte stream).

**version**

**Type**  
string

**Default value**  
"r1"

**Description**  
Version of the model functionality. Valid values are r0 and r1.

3.7.51 SI\_System\_Ctrl\_Regs

Safety Island System Control Registers. This model is written in C++.

Iris and MTI instances for SI\_System\_Ctrl\_Regs

This model has the following Iris instances:

Table 3-727: SI\_System\_Ctrl\_Regs Iris instances

InstanceName	ComponentName
SI_System_Ctrl_Regs	SI_System_Control_Registers
SI_System_Ctrl_Regs.pvbusslave	PVBusSlave

This model has the following MTI trace components:

Table 3-728: SI\_System\_Ctrl\_Regs MTI instances

InstanceName	ComponentName
SI_System_Ctrl_Regs.pvbusslave	PVBusSlave

Ports for SI\_System\_Ctrl\_Regs

Table 3-729: Ports

Name	Protocol	Type	Description
cpuhalt_m[7]	Signal	Master	-
pvbus_s	PVBus	Slave	-
reset_in	Signal	Slave	-
rvbar_cl0[1]	Value_64	Master	-
rvbar_cl1[2]	Value_64	Master	-
rvbar_cl2[4]	Value_64	Master	-

## Parameters for SI\_System\_Ctrl\_Regs

### **c10\_c0\_cfgrvbaraddr**

#### **Type**

int

#### **Default value**

0x120000000

#### **Description**

CL0\_C0\_CFGRVBARADDR.

### **c11\_c0\_cfgrvbaraddr**

#### **Type**

int

#### **Default value**

0x140000000

#### **Description**

CL1\_C0\_CFGRVBARADDR.

### **c11\_c1\_cfgrvbaraddr**

#### **Type**

int

#### **Default value**

0x140002000

#### **Description**

CL1\_C1\_CFGRVBARADDR.

### **c12\_c0\_cfgrvbaraddr**

#### **Type**

int

#### **Default value**

0x160000000

#### **Description**

CL2\_C0\_CFGRVBARADDR.

### **c12\_c1\_cfgrvbaraddr**

#### **Type**

int

#### **Default value**

0x160002000

**Description**

CL2\_C1\_CFGRVBARADDR.

**c12\_c2\_cfgrvbaraddr****Type**

int

**Default value**

0x160004000

**Description**

CL2\_C2\_CFGRVBARADDR.

**c12\_c3\_cfgrvbaraddr****Type**

int

**Default value**

0x160008000

**Description**

CL2\_C3\_CFGRVBARADDR.

**cpuhalt\_reset****Type**

int

**Default value**

0x0

**Description**

CPU HALT Reset value.

**diagnostics****Type**

int

**Default value**

0x0

**Description**

Diagnostics.

### 3.7.52 SMCF

System Monitoring Control Framework (SMCF). This model is written in C++.

#### Iris and MTI instances for SMCF

This model has the following Iris instances:

**Table 3-730: SMCF Iris instances**

InstanceName	ComponentName
SMCF	SMCF

#### Ports for SMCF

**Table 3-731: Ports**

Name	Protocol	Type	Description
mgi_clk_in	ClockSignal	Slave	Clock input
mgi_irq_out	Signal	Master	Interrupt signal output
mgi_pvbus_m	PVBus	Master	For DMA or memory mapped data write
mgi_reg_pvbus_s	PVBus	Slave	To access MGI register
mgi_reset_in	Signal	Slave	Reset signal input
mgi_tag_in[4]	Value	Slave	Tag value from external hardware
mgi_trigger_in	Signal	Slave	To trigger the start of a sample by external hardware
mgi_trigger_out	Signal	Master	Signal to external hardware to indicate that an event has occurred in an MGI
mli_hsp_enable_ack_in[32]	Signal	Slave	Acknowledgement signal for enable signal in hsp.
mli_hsp_enable_out[32]	Signal	Master	Signal to enable Ring Oscillators in hsp.
mli_powerdown_in[32]	Signal	Slave	It gives info about AP is power OFF or not
mli_temperature_in[32]	ValueState	Slave	It will be connected to temperature sensor to fetch the temperature value
smcf_mli_pvbus_m[32]	PVBus	Master	manager port to read/write the AMU or HSP register value

#### Parameters for SMCF

##### ALERT\_NUM\_CFG

###### Type

int

###### Default value

0x0

###### Description

Specifies the number of alerts present A value of 0 means that no alerts are present.

##### ALT\_ADDR\_CFG

###### Type

int

**Default value**

0x0

**Description**

Specifies where monitor data is read from, it is either: 0: The MGI\_DATA<n> registers. 1: The address specified in MGI\_RADDR0/1.

**ALT\_DELTA\_CFG****Type**

int

**Default value**

0x0

**Description**

Specifies the presence of alert rising and falling delta functions 0: The rising and falling delta functions are not present 1: The rising and falling delta functions are present.

**DATA\_PER\_MON\_CFG****Type**

int

**Default value**

0x0

**Description**

Specifies the number of data values(DATA\_PER\_MON\_CFG+1) generated from each monitor.

**DEF\_CFG\_IRQ\_MASK****Type**

int

**Default value**

0x1

**Description**

Specifies the default value of the configuration interrupt event mask. Sets the reset value of MGI\_IRQ\_MASK.CFG\_IRQ\_MASK.

**DEF\_CFG\_TRIG\_MASK****Type**

int

**Default value**

0x1

**Description**

Specifies the default value of the configuration trigger event mask. Sets the reset value of MGI\_TRG\_MASK.CFG\_TRIG\_MASK.

**DEF\_RADDR\_CFG****Type**

int

**Default value**

0x0

**Description**

Specifies the default alternate read address. This sets the default value for MGI\_RADDR0/MGI\_RADDR1.

**DEF\_WADDR\_CFG****Type**

int

**Default value**

0x0

**Description**

Specifies the default write address for the DMA interface. This sets the default value for MGI\_WADDR0/MGI\_WADDR1. Only required if DMA\_IF\_CFG = 1. This value must be 32-bit aligned.

**DMA\_IF\_CFG****Type**

int

**Default value**

0x0

**Description**

Specifies the presence of the DMA interface 0: DMA interface is not present 1: DMA interface is present.

**END\_COMPONENT****Type**

int

**Default value**

0x0

**Description**

Based on this parameter value sampling value will be fetched from the respective model 0: Temperature sensor 1: Monitor unit (AMU) 2: Fake sensor/monitor 3: HSP (Hot Spot Profiler) 4: DTSV2(Distributed Thermal Sensor V2) 5: DTS(Digital Distributed Temperature Sensor).

**FAKE\_SENSOR\_MAX\_LIMIT****Type**

int

**Default value**

0xffff

**Description**

Maximum value limit for the fake sensor/monitor.

**FAKE\_SENSOR\_MIN\_LIMIT****Type**

int

**Default value**

0x0

**Description**

Minimum value limit for the fake sensor/monitor.

**GRP\_ID\_CFG****Type**

int

**Default value**

0x0

**Description**

Specifies a unique identifier for an MGI.

**MGI\_AIDR\_RESET\_VALUE****Type**

int

**Default value**

0x10

**Description**

Reset value for MGI\_AIDR register.

**MGI\_IIDR\_RESET\_VALUE****Type**

int

**Default value**

0x8d00043b

**Description**

Reset value for MGI\_IIDR register.

**MLI\_QUANTITY****Type**

int

**Default value**

0x1

**Description**

Specifies the number of MLI.

**MODE\_LEN\_CFG****Type**

int

**Default value**

0x1f

**Description**

Specifies the bit width of each MGI\_MODE\_REQ/STAT. The number of bits is MODE\_LEN\_CFG+1.

**MODE\_REG\_CFG****Type**

int

**Default value**

0x0

**Description**

Specifies the number of MGI\_MODE\_REQ/STAT pairs. A value of 0 means that no MGI\_MODE\_REQ/STAT pairs are present.

**MONITOR\_SAMPLE\_TIME****Type**

int

**Default value**

0x13fff

**Description**

Time that monitor takes to perform the sampling (essentially the time from MGI sending the sample\_start command to the MGI receiving all the sample data).

**MON\_BASE\_ADDRESS****Type**

string

**Default value**

"0x00000000"

**Description**

base address used for sampling the sensors. It is used for configuration writes and data read bursts.

**MON\_DATA\_WIDTH\_CFG****Type**

int

**Default value**

0x1f

**Description**

Specifies the bit width(MON\_DATA\_WIDTH\_CFG+1) of each monitor data value.

**MON\_DISCON\_CFG****Type**

int

**Default value**

0x0

**Description**

Specifies if each monitor supports being disconnected. For example, bit 0 represents monitor 0, and bit 3 represents monitor 3. 0b0: Monitor does not support being disconnected. It is reset to connected. 0b1: Monitor supports being disconnected. It is reset to disconnected.

**MON\_NUM\_CFG****Type**

int

**Default value**

0x0

**Description**

Specifies the number of monitors(MON\_NUM\_CFG+1) in an MGI.

**NUM\_OF\_RSP\_CONNECTED****Type**

int

**Default value**

0x9

**Description**

Number of maximum RSPs can be connected to the DTSV2.

**PACKED\_CFG****Type**

int

**Default value**

0x0

**Description**

Specifies if monitor data is packed 0: Data is not packed 1: Data is packed.

**PER\_TIMER\_CFG****Type**

int

**Default value**

0x0

**Description**

Specifies the presence of the periodic timer 0: The periodic timer is not present 1: The periodic timer is present.

**SINGLE\_MON\_MODE\_CFG****Type**

int

**Default value**

0x0

**Description**

Specifies that each monitor is a single type and all monitors will have the same mode setting.

**SMP\_DLY\_LEN\_CFG****Type**

int

**Default value**

0x0

**Description**

Specifies the bit width of MGI\_SMP\_DLY. The number of bits in SMP\_DLY\_LEN\_CFG. A value of 0 means this register is not present and the feature is not supported.

**TAG\_IN\_CFG****Type**

int

**Default value**

0x1

**Description**

Specifies the presence of the tag input 0: The tag input is not present 1: The tag input is present.

**TAG\_LEN\_CFG****Type**

int

**Default value**

0x1f

**Description**

Specifies the bit width of the tag input The tag bit width is TAG\_LEN\_CFG+1.

**TRIG\_IN\_CFG****Type**

int

**Default value**

0x1

**Description**

Specifies the presence of the input trigger interface 0: The trigger in interface is not present 1: The trigger in interface is present.

**TRIG\_OUT\_CFG****Type**

int

**Default value**

0x1

**Description**

Specifies the presence of the output trigger interface 0: The trigger out interface is not present 1: The trigger out interface is present.

**USER\_DEF\_CMD\_CFG****Type**

int

**Default value**

0x0

**Description**

Specifies if an MGI supports User-Defined commands. 0: User-Defined commands are not supported. 1: User-Defined commands are supported.

**diagnostics****Type**

int

**Default value**

0x2

**Description**

Diagnostics 0-4 (0:FATAL 1:ERROR 2:WARNING 3:INFO 4:DEBUG - DEFAULT==2).

### 3.7.53 SMMUv3TestEngine

Test Engine used for testing SMMUv3. This model is written in C++.

**Iris and MTI instances for SMMUv3TestEngine**

This model has the following Iris instances:

**Table 3-732: SMMUv3TestEngine Iris instances**

InstanceName	ComponentName
SMMUv3TestEngine	SMMUv3TestEngine
SMMUv3TestEngine.register_file[0]	PVBusSlave

This model has the following MTI trace components:

**Table 3-733: SMMUv3TestEngine MTI instances**

InstanceName	ComponentName
SMMUv3TestEngine	SMMUv3TestEngine
SMMUv3TestEngine.register_file[0]	PVBusSlave

**Ports for SMMUv3TestEngine****Table 3-734: Ports**

Name	Protocol	Type	Description
client_s	PCIDevice2ClientProtocol	Slave	-
clk_in	ClockSignal	Slave	-
identify	SMMUv3AEMIdentifyProtocol	Slave	-
pvbus_control_s	PVBus	Slave	-
pvbus_m[64]	PVBus	Master	-
reset_in	Signal	Slave	-

## Parameters for SMMUv3TestEngine

### **bandwidth\_per\_transaction\_in\_bytes\_per\_tick**

**Type**

int

**Default value**

0x64

**Description**

The bandwidth of the device for each in-flight transaction, in bytes/tick of clk\_in. This is only a rough guess. If you are uninterested in trying to run cores and the engine simultaneously then set this to a large number.

### **max\_number\_of\_inflight\_transactions**

**Type**

int

**Default value**

0xa

**Description**

The maximum number of in-flight transactions allowed.

### **output\_attribute\_transform**

**Type**

string

**Default value**

""

**Description**

How to pack the stream identification information into the transaction attributes. This is:- \* <empty> or "default" \* "pcie" the de-facto standard for the PCIe subsystem in FastModels The <empty> or "default" is equivalent to:- ExtendedID[63]=nSEC\_SID, ExtendedID[55:24]=StreamID, ExtendedID[20]=nSSV, ExtendedID[19:0]=SubstreamID The "pcie" option is equivalent to:- ExtendedID[63]=SEC\_SID, ExtendedID[62]=SSV, ExtendedID[51:32]=SubstreamID, ExtendedID[31:0]=StreamID .

### **seed**

**Type**

int

**Default value**

0x12345678

**Description**

The seed to use for initialising the random number generators.

### 3.7.54 STLBusGasket

STLBusGasket allows a debugger or emulated T32 code to force the results of system-register reads by writing an address to the ADDR register then 32-bit values to the VALUE register, which are placed in a fifo associated with that address. A PVBUS transaction into pvbus\_in goes unchanged to pvbus\_out, unless its address matches that associated with a non-empty fifo, in which case: writes are ignored, non-word reads abort, and word reads take values from that fifo. This model is written in LISA+.

#### Iris and MTI instances for STLBusGasket

This model has the following Iris instances:

Table 3-735: STLBusGasket Iris instances

InstanceName	ComponentName
STLBusGasket	STLBusGasket
STLBusGasket.busmapper	PVBusMapper

This model has the following MTI trace components:

Table 3-736: STLBusGasket MTI instances

InstanceName	ComponentName
STLBusGasket.busmapper	PVBusMapper

#### Ports for STLBusGasket

Table 3-737: Ports

Name	Protocol	Type	Description
pvbus_in	PVBus	Slave	-
pvbus_out	PVBus	Master	-

#### Parameters for STLBusGasket

**function**

Type

int

Default value

0x0

Description

Function: 0-none, 1-STL value-forcing.

**reg\_base**

Type

int

**Default value**

0xe001e820

**Description**

Base Address of STL control regs (ADDR,VAL at offsets 0,4).

**verbose**

**Type**

int

**Default value**

0x0

**Description**

Verbosity : 0-none, 1-some.

3.7.55 SerialCrossover

Implement an equivalent to a null-modem cable, swapping over serial transmit and receive signals. This model is written in C++.

**About SerialCrossover**

This component implements two SerialData slave ports and can connect two SerialData master ports, such as from PL011\_Uart components. Data received on one port is buffered in a FIFO until it is read from the other port. Signals received on one port are latched and available to be read by the other port.

**Ports for SerialCrossover**

Table 3-738: Ports

Name	Protocol	Type	Description
port_a	SerialData	Slave	Slave port for connecting to a SerialData master.
port_b	SerialData	Slave	Slave port for connecting to a SerialData master.

3.7.56 Signal\_Multiplexer

Signal Multiplexer. This model is written in C++.

**Iris and MTI instances for Signal\_Multiplexer**

This model has the following Iris instances:

Table 3-739: Signal\_Multiplexer Iris instances

InstanceName	ComponentName
Signal_Multiplexer	Signal_Multiplexer

## Ports for Signal\_Multiplexer

**Table 3-740: Ports**

Name	Protocol	Type	Description
input[16]	Signal	Slave	-
output	Signal	Master	-
selector	Value	Slave	-

## Parameters for Signal\_Multiplexer

### diagnostics

#### Type

int

#### Default value

0x2

#### Description

Diagnostics 0-4 (0:FATAL 1:ERROR 2:WARNING 3:INFO 4:DEBUG - DEFAULT==2).

## 3.7.57 SoC\_SOR

System Override Registers unit. This model is written in C++.

### Iris and MTI instances for SoC\_SOR

This model has the following Iris instances:

**Table 3-741: SoC\_SOR Iris instances**

InstanceName	ComponentName
SoC_SOR	SoC_SOR
SoC_SOR.hdlcd0_override	PVBusMapper
SoC_SOR.hdlcd1_override	PVBusMapper
SoC_SOR.pvbusslave	PVBusSlave

This model has the following MTI trace components:

**Table 3-742: SoC\_SOR MTI instances**

InstanceName	ComponentName
SoC_SOR.hdlcd0_override	PVBusMapper
SoC_SOR.hdlcd1_override	PVBusMapper
SoC_SOR.pvbusslave	PVBusSlave

Ports for SoC\_SOR

Table 3-743: Ports

Name	Protocol	Type	Description
hdlcd0_pvbus_s	PVBus	Slave	-
hdlcd1_pvbus_s	PVBus	Slave	-
hdlcd_pvbus_m	PVBus	Master	-
pvbus_s	PVBus	Slave	-

Parameters for SoC\_SOR

diagnostics

Type

int

Default value

0x0

Description

Diagnostics.

gpr0

Type

int

Default value

0x0

Description

General Purpose Register 0.

gpr1

Type

int

Default value

0x0

Description

General Purpose Register 1.

### 3.7.58 SoC\_Temperature

System On-Chip Temperature component which provides averaged out temperature of Application Processors. This model is written in C++.

#### Iris and MTI instances for SoC\_Temperature

This model has the following Iris instances:

**Table 3-744: SoC\_Temperature Iris instances**

InstanceName	ComponentName
SoC_Temperature	SoC_Temperature
SoC_Temperature.target	PVBusSlave

This model has the following MTI trace components:

**Table 3-745: SoC\_Temperature MTI instances**

InstanceName	ComponentName
SoC_Temperature.target	PVBusSlave

#### Ports for SoC\_Temperature

**Table 3-746: Ports**

Name	Protocol	Type	Description
pvbus_reg_s	PVBus	Slave	-
temperature_in[16]	ValueState	Slave	-

#### Parameters for SoC\_Temperature

##### diagnostics

###### Type

int

###### Default value

0x0

###### Description

Diagnostics.

##### num\_cores

###### Type

int

###### Default value

0x1

###### Description

Number of AP cores in the system.

### 3.7.59 SystemIdUnit

System ID Unit. This model is written in C++.

#### Iris and MTI instances for SystemIdUnit

This model has the following Iris instances:

Table 3-747: SystemIdUnit Iris instances

InstanceName	ComponentName
SystemIdUnit	SystemIdUnit
SystemIdUnit.pvbuslave	PVBusSlave

This model has the following MTI trace components:

Table 3-748: SystemIdUnit MTI instances

InstanceName	ComponentName
SystemIdUnit.pvbuslave	PVBusSlave

#### Ports for SystemIdUnit

Table 3-749: Ports

Name	Protocol	Type	Description
pvbus_s	PVBus	Slave	-

#### Parameters for SystemIdUnit

##### chip\_id

###### Type

int

###### Default value

0x0

###### Description

the ID for the node/chip when there are multiple SoCs.

##### chiplet\_type

###### Type

bool

###### Default value

0x0

###### Description

Specifies Compute Chiplet (CC) or Specialization Chiplet (SC). 0 - CC, 1 - SC.

**diagnostics****Type**

int

**Default value**

0x2

**Description**

Diagnostics.

**multi\_chip\_mode****Type**

bool

**Default value**

0x0

**Description**

Multi chip mode?.

**platform\_type****Type**

int

**Default value**

0x0

**Description**

the type of the subsystem: 0=mobile, 1=InfraSysDesign4.x, 2=InfraSysDesign5.x, 3=InfraSysDesign6.x, 4=SafetyIsland, 5=Client.

**soc\_id****Type**

int

**Default value**

0x0

**Description**

the ID for the SoC that integrates the subsystem.

**system\_cfg****Type**

int

**Default value**

0x0

**Description**

the ID for the subsystem configuration.

**system\_id****Type**

int

**Default value**

0x0

**Description**

the version ID for the subsystem.

### 3.7.60 TC25\_SecureAccessConfig

Secure Control Register Block for TC25. This model is written in C++.

#### Iris and MTI instances for TC25\_SecureAccessConfig

This model has the following Iris instances:

**Table 3-750: TC25\_SecureAccessConfig Iris instances**

InstanceName	ComponentName
TC25_SecureAccessConfig	TC25_SecureAccessConfig
TC25_SecureAccessConfig.bus_mapper	PVBusMapper
TC25_SecureAccessConfig.busslave_ns	PVBusSlave
TC25_SecureAccessConfig.busslave_s	PVBusSlave
TC25_SecureAccessConfig.idau_busmaster	PVBusMaster
TC25_SecureAccessConfig.p_ahb_bus_mapper	PVBusMapper

This model has the following MTI trace components:

**Table 3-751: TC25\_SecureAccessConfig MTI instances**

InstanceName	ComponentName
TC25_SecureAccessConfig.bus_mapper	PVBusMapper
TC25_SecureAccessConfig.busslave_ns	PVBusSlave
TC25_SecureAccessConfig.busslave_s	PVBusSlave
TC25_SecureAccessConfig.idau_busmaster	PVBusMaster
TC25_SecureAccessConfig.p_ahb_bus_mapper	PVBusMapper

#### Ports for TC25\_SecureAccessConfig

**Table 3-752: Ports**

Name	Protocol	Type	Description
acc_waitn	ValueState	Master	-

Name	Protocol	Type	Description
brg_in[32]	StateSignal	Slave	-
brg_out	Signal	Master	-
idau	PVBus	Master	-

ppc_out	Signal	Master	-
pvbus_nonsecure	PVBus	Slave	-
pvbus_secure	PVBus	Slave	-
reset_in	Signal	Slave	-
security_resp	ValueState	Master	-

## Parameters for TC25\_SecureAccessConfig

### CODENSC

#### Type

bool

#### Default value

0x0

#### Description

Whether 0x10000000..0x1FFFFFFF is non-secure-callable.

**DISABLE\_GATING****Type**

bool

**Default value**

0x0

**Description**

Disable Memory gating logic.

**IGNORE\_MEM\_MAP****Type**

bool

**Default value**

0x0

**Description**

Ignore Memory mapping logic.

**MAINPPCEXP\_DIS0****Type**

int

**Default value**

0x0

**Description**

Disables support for individual bits on the MAINNSPPCEXP0 and MAINPPPCEXP0 buses.

**MAINPPCEXP\_DIS1****Type**

int

**Default value**

0x0

**Description**

Disables support for individual bits on the MAINNSPPCEXP1 and MAINPPPCEXP1 buses.

**MAINPPCEXP\_DIS2****Type**

int

**Default value**

0x0

**Description**

Disables support for individual bits on the MAINNSPPCEXP2 and MAINPPPCEXP2 buses.

**MAINPPCEXP\_DIS3****Type**

int

**Default value**

0x0

**Description**

Disables support for individual bits on the MAINNSPPCEXP3 and MAINPPPCEXP3 buses.

**PERIPHPPCEXP\_DIS0****Type**

int

**Default value**

0x0

**Description**

Disables support for individual bits on the PERIPHNSPPCEXP0 and PERIPHPPPCEXP0 buses.

**PERIPHPPCEXP\_DIS1****Type**

int

**Default value**

0x0

**Description**

Disables support for individual bits on the PERIPHNSPPCEXP1 and PERIPHPPPCEXP1 buses.

**PERIPHPPCEXP\_DIS2****Type**

int

**Default value**

0x0

**Description**

Disables support for individual bits on the PERIPHNSPPCEXP2 and PERIPHPPPCEXP2 buses.

**PERIPHPPCEXP\_DIS3****Type**

int

**Default value**

0x0

**Description**  
Disables support for individual bits on the PERIPHNSPPCEXP3 and PERIPHPPPCEXP3 buses.

**RAMNSC**

**Type**  
bool

**Default value**  
0x0

**Description**  
Whether 0x30000000..0x3FFFFFFF is non-secure-callable.

**diagnostics**

**Type**  
int

**Default value**  
0x0

**Description**  
Diagnostics.

3.7.61 TRNG

True Random Number Generator. This model is written in C++.

Iris and MTI instances for TRNG

This model has the following Iris instances:

Table 3-753: TRNG Iris instances

InstanceName	ComponentName
TRNG	TRNG
TRNG.pvbusslave	PVBusSlave

This model has the following MTI trace components:

Table 3-754: TRNG MTI instances

InstanceName	ComponentName
TRNG.pvbusslave	PVBusSlave

## Ports for TRNG

**Table 3-755: Ports**

Name	Protocol	Type	Description
cc_host_int_req	Signal	Master	-
pvbus_s	PVBus	Slave	-
rng_clk	ClockSignal	Slave	-
rst_n	Signal	Slave	-
scanmode	Signal	Slave	-

## Parameters for TRNG

### diagnostics

#### Type

int

#### Default value

0x0

#### Description

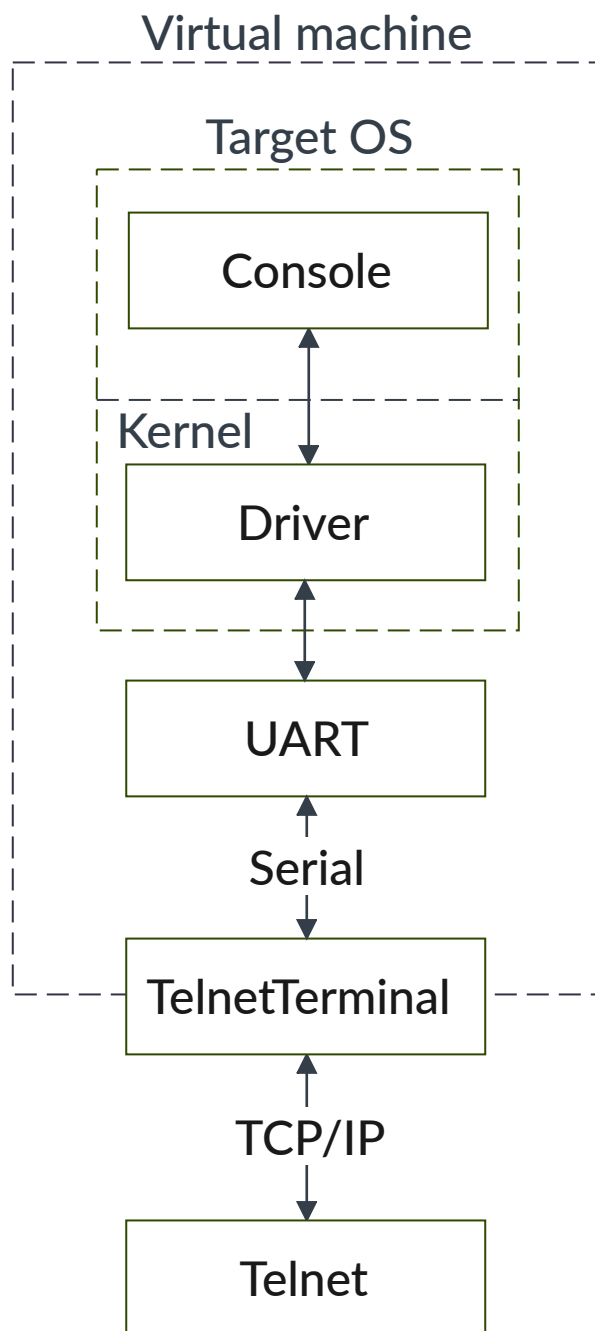

Diagnostics.

## 3.7.62 TelnetTerminal

A host interface onto a serial port: exposes the two way serial data channel over a TCP/IP interface, and automatically opens a telnet application connected to the network socket, unless a user application connects first. This model is written in C++.

### Using TelnetTerminal

The following figure shows a block diagram of one possible relationship between the target and host through the TelnetTerminal component. The TelnetTerminal block is what you configure when you define Terminal component parameters. The Virtual Machine is an FVP.

**Figure 3-2: Terminal block diagram**

On the target side, the console process that is invoked by your target OS relies on a suitable driver being present. Such drivers are normally part of the OS kernel. The driver passes serial data

through a UART, for example [3.10.74 PL011\\_Uart](#) on page 4909. The data is forwarded to the TelnetTerminal component. When the simulation is started and the TelnetTerminal component is enabled, the component opens a server (listening) socket on a TCP/IP port. This is port 5000 by default. This port can be connected to by, for example, a Telnet process on the host.

When data becomes available on the network socket, the TelnetTerminal component buffers the data, which can then be read from SerialData.

If there is no connection to the network socket when the first data access is made, and the `start_telnet` parameter is true, a host Telnet session is started automatically. Prior to this first access, you can connect a client of your choice to the network socket.

If the connection between the TelnetTerminal component and the client is broken at any time, for example by closing a client Telnet session, the port is re-opened on the host, permitting you to make another client connection. This could have a different port number if the original one is no longer available.

The port number of a particular TelnetTerminal instance can be defined when your model system starts. The actual value of the port used by each TelnetTerminal is declared when it starts or restarts, and might not be the value that you specified if the port is already in use. If you are using Model Shell, the port numbers are displayed in the host window in which you started the model.

Note

Microsoft Windows 10 disables the Telnet client by default. Follow these steps to enable it:

1. Select **Start > Settings**.
2. In the search box, type **Turn Windows features on or off**. The **Windows Features** dialog opens.
3. Select the **Telnet Client** check box and click **OK**. The installation might take several minutes to complete.

## TelnetTerminal parameters

To set the parameters, the syntax to use in a configuration file or on the command line is:

```
motherboard.terminal_x.parameter=value
```

where *x* is the terminal identifier and can be 0, 1, 2, or 3.

You can start the TelnetTerminal component in either of the following modes, depending on the `mode` parameter:

### telnet

In Telnet mode, the terminal component supports a subset of the RFC 854 protocol. This means that the terminal participates in negotiations between the host and client concerning what is and is not supported, but there is no flow control.

**raw**

In raw mode the byte stream passes unmodified between the host and the target. The terminal does not participate in initial capability negotiations between the host and client. Instead it acts as a TCP/IP port. You can use this feature to directly connect to your target through the TelnetTerminal component. This permits a debugger connection, for example, to connect a gdb client to a gdbserver running on the target operating system.

The `terminal_command` parameter specifies the command line used to launch a terminal application and connect to the opened TCP port. The TelnetTerminal component replaces the keywords `%port` and `%title`, if specified, with the opened port number and component name, respectively. After replacing `%port` and `%title`, the command line is executed verbatim.

An empty string, which is the default, launches `xterm` on Linux or `telnet.exe` on Windows.

**Note**

If you specify a non-empty string, it must include `%port`, but `%title` is optional.

For example:

```
fvp_mps2.telnetterminal0.terminal_command="putty.exe -telnet localhost %port"
```

**Iris and MTI instances for TelnetTerminal**

This model has the following Iris instances:

**Table 3-756: TelnetTerminal Iris instances**

InstanceName	ComponentName
TelnetTerminal	TelnetTerminal

**Ports for TelnetTerminal**

**Table 3-757: Ports**

Name	Protocol	Type	Description
serial	SerialData	Slave	Slave port for connecting to a SerialData master.

**Parameters for TelnetTerminal**

**mode**

**Type**

string

**Default value**

"telnet"

**Description**

Terminal initialisation mode.

**quiet****Type**

bool

**Default value**

0x0

**Description**

Avoid output on stdout/stderr.

**start\_port****Type**

int

**Default value**

0x1388

**Description**

Telnet TCP Port Number.

**start\_telnet****Type**

bool

**Default value**

0x1

**Description**

Start telnet if nothing connected.

**terminal\_command****Type**

string

**Default value**

""

**Description**

Commandline to launch a terminal application and connect to the opened TCP port. Keywords %port and %title will be replaced with the opened port number and component name respectively. An empty string (default behaviour) will launch xterm (Linux) or telnet.exe (Windows).

### 3.7.63 Temperature

Component to synthesis the temperature value of the connected core. This model is written in C++.

#### Iris and MTI instances for Temperature

This model has the following Iris instances:

**Table 3-758: Temperature Iris instances**

InstanceName	ComponentName
Temperature	Temperature

#### Ports for Temperature

**Table 3-759: Ports**

Name	Protocol	Type	Description
cluster_powerdown	Signal	Slave	-
core_powerdown[8]	Signal	Slave	-
freq_changed	ValueState	Slave	-
temperature	ValueState	Master	-

#### Parameters for Temperature

##### **core\_coefficient**

###### Type

int

###### Default value

0x0

###### Description

Temperature Coefficient.

##### **diagnostics**

###### Type

int

###### Default value

0x0

###### Description

Diagnostics.

##### **num\_cores**

###### Type

int

**Default value**

0x4

**Description**

Number of cores.

3.7.64 TestbedGPIOConnector

Tool for receiving GPIO signals and reporting test success/failure. This model is written in C++.

**Iris and MTI instances for TestbedGPIOConnector**

This model has the following Iris instances:

Table 3-760: TestbedGPIOConnector Iris instances

InstanceName	ComponentName
TestbedGPIOConnector	TestbedGPIOConnector

Ports for TestbedGPIOConnector

Table 3-761: Ports

Name	Protocol	Type	Description
from_gpio0	Value	Slave	-
from_gpio1	Value	Slave	-

Parameters for TestbedGPIOConnector

**active**

**Type**

bool

**Default value**

0x1

**Description**

Actually stop the simulator when testbench running in it reports results over GPIO.

**diagnostics**

**Type**

int

**Default value**

0x0

**Description**

Diagnostic level.

### 3.7.65 UnusedPrimeCell

A dummy component. It can be used to represent any unimplemented PrimeCell components. This model is written in LISA+.

#### Iris and MTI instances for UnusedPrimeCell

This model has the following Iris instances:

**Table 3-762: UnusedPrimeCell Iris instances**

InstanceName	ComponentName
UnusedPrimeCell	UnusedPrimeCell
UnusedPrimeCell.busslave	PVBusSlave

This model has the following MTI trace components:

**Table 3-763: UnusedPrimeCell MTI instances**

InstanceName	ComponentName
UnusedPrimeCell.busslave	PVBusSlave

#### Ports for UnusedPrimeCell

**Table 3-764: Ports**

Name	Protocol	Type	Description
pvbus	PVBus	Slave	Bus slave interface.

### 3.7.66 Value\_Multiplexer

Signal Multiplexer. This model is written in C++.

#### Iris and MTI instances for Value\_Multiplexer

This model has the following Iris instances:

**Table 3-765: Value\_Multiplexer Iris instances**

InstanceName	ComponentName
Value_Multiplexer	Value_Multiplexer

#### Ports for Value\_Multiplexer

**Table 3-766: Ports**

Name	Protocol	Type	Description
input[16]	Value	Slave	-
output	Value	Master	-
selector	Value	Slave	-

## Parameters for Value\_Multiplexer

### diagnostics

#### Type

int

#### Default value

0x2

#### Description

Diagnostics 0-4 (0:FATAL 1:ERROR 2:WARNING 3:INFO 4:DEBUG - DEFAULT==2).

## 3.7.67 VirtioBlockDevice

virtio block device. This model is written in C++.

### About VirtioBlockDevice

VirtioBlockDevice implements a block device that can be accessed from the simulated OS if it has an appropriate driver. Similarly to the VirtioP9Device, this component is targeted primarily at Linux, which has a built-in virtio block driver. VirtioBlockDevice allows you to use a file on the host that you specify using the `image_path` parameter, as a hard drive in the simulated OS.

VirtioBlockDevice supports the legacy OASIS virtio specification.

Unlike the VirtioP9Device, you should not need to carry out any special setup to use VirtioBlockDevice on VE or Base platforms, because it is usually already included in the device trees. Set the `image_path` parameter to point to your image, and then on Linux it is available as a block device, usually `/dev/vda`, which you then use like any other hard drive.

### Iris and MTI instances for VirtioBlockDevice

This model has the following Iris instances:

**Table 3-767: VirtioBlockDevice Iris instances**

InstanceName	ComponentName
VirtioBlockDevice	VirtioBlockDevice
VirtioBlockDevice.register_slave	PVBusSlave
VirtioBlockDevice.virtio_master	PVBusMaster

This model has the following MTI trace components:

**Table 3-768: VirtioBlockDevice MTI instances**

InstanceName	ComponentName
VirtioBlockDevice	VirtioBlockDevice
VirtioBlockDevice.register_slave	PVBusSlave
VirtioBlockDevice.virtio_master	PVBusMaster

Ports for VirtioBlockDevice

Table 3-769: Ports

Name	Protocol	Type	Description
intr	Signal	Master	Virtio device sets interrupt to signal completion.
pvbus	PVBus	Slave	Virtio MMIO control/config/status registers.
virtio_m	PVBus	Master	Virtio device performs DMA accesses via master.

Parameters for VirtioBlockDevice

**image\_path**

Type

string

Default value

""

Description

image file path.

**quiet**

Type

bool

Default value

0x0

Description

Don't print warnings on malformed commands/descriptors.

**read\_only**

Type

bool

Default value

0x0

Description

Only allow device to be read.

**secure\_accesses**

Type

bool

Default value

0x0

Description

Make device generate transactions with NS=0.

**transaction\_attributes**

**Type**

int

**Default value**

0x0

**Description**

Transaction attributes used by device. 0x0 - inner-shared real access. 0x1 - outer-shared real access. 0x2 - outer-shared debug access.

3.7.68 VirtioBlockDeviceMMIO

Virtio v1.0 Block device over MMIO transport. This model is written in C++.

About VirtioBlockDeviceMMIO

VirtioBlockDeviceMMIO supports both the legacy and v1.0 OASIS virtio specifications.

VirtioBlockDeviceMMIO is an evolution of [VirtioBlockDevice](#), which is also MMIO-based and has the same ports, but only supports the legacy OASIS virtio specification.

Iris and MTI instances for VirtioBlockDeviceMMIO

This model has the following Iris instances:

Table 3-770: VirtioBlockDeviceMMIO Iris instances

InstanceName	ComponentName
VirtioBlockDeviceMMIO	VirtioBlockMMIO
VirtioBlockDeviceMMIO.dma_master	PVBusMaster

This model has the following MTI trace components:

Table 3-771: VirtioBlockDeviceMMIO MTI instances

InstanceName	ComponentName
VirtioBlockDeviceMMIO.dma_master	PVBusMaster

Ports for VirtioBlockDeviceMMIO

Table 3-772: Ports

Name	Protocol	Type	Description
intr	Signal	Master	Virtio device sets interrupt to signal completion.
pvbus	PVBus	Slave	Virtio MMIO control/config/status registers.
virtio_m	PVBus	Master	Virtio device performs DMA accesses via master.

## Parameters for VirtioBlockDeviceMMIO

### **enabled**

#### Type

bool

#### Default value

0x0

#### Description

Enable or disable device. If disabled, device can be accessed, but will not be activated.

### **image\_path**

#### Type

string

#### Default value

""

#### Description

Image file path.

### **quiet**

#### Type

bool

#### Default value

0x0

#### Description

Don't print info or warnings (e.g. on malformed commands/descriptors).

### **read\_only**

#### Type

bool

#### Default value

0x0

#### Description

Only allow device to be read. If that parameter is set to false and the image file cannot be opened in RW mode, the model will try to work around it by opening the file in RO mode.

### **secure\_accesses**

#### Type

bool

#### Default value

0x0

**Description**

Make device generate transactions with NS=0.

**transaction\_attributes****Type**

int

**Default value**

0x0

**Description**

Transaction attributes used by device. 0x0 - inner-shared real access. 0x1 - outer-shared real access. 0x2 - outer-shared debug access.

**transport****Type**

string

**Default value**

"modern"

**Description**

Choose legacy or modern virtio transport, if not specified, modern transport is used.

### 3.7.69 VirtioNetMMIO

Virtio net device over MMIO transport. This model is written in C++.

**About VirtioNetMMIO**

This is a model of a virtual Ethernet virtio device over MMIO transport, supporting both the legacy and v1.0 OASIS virtio specifications. It provides much better network performance than the SMSC\_91C111 component, because it features host-assisted network acceleration. This means that it can offload packet processing operations from the simulated OS on the target, to the host side. These operations include:

- Checksum computation
- TX packet segmentation
- RX packet combination

If the target simulated Linux or Linux-derived OS has an appropriate virtio net driver, Arm recommends you use VirtioNetMMIO instead of SMSC\_91C111.

Unlike SMSC\_91C111, which must work with an external HostBridge component, VirtioNetMMIO has a built-in HostBridge sub-component. The parameters to control the HostBridge are described in the VirtioNetMMIO parameters table, with the `hostbridge` parameter sub-namespace.

To enable tracing of user-mode networking, which can help to debug networking issues, set the `FASTSIM_USERNET_DUMP` environment variable to any or all of the following values:

```
arpin,arpout,udpin,udpout,etherin,etherout,ipv4in,ipv4out,
ipv4fragin,ipv4fragout,tcpin,tcpout,dhcpv4in,dhcpv4out
```

Take the following steps to set up this component in a virtual platform:

- Use a version of Linux that contains a virtio network driver.
- Add the following option to the Linux kernel configuration:

```
CONFIG_VIRTIO_NET=y
```

- Update the device tree to include the VirtioNetMMIO component, or specify it on the kernel command line, for example

```
virtio_mmio.device=0x10000@0x1c150000:76
```

The address range for both VE and Base platforms is 0x1C150000-0x1C15FFFF. The interrupt number is 44, or IRQ 76, for both VE and Base platforms.

- Select the hostbridge that you want to use to communicate with the host in the model:

```
virtio_net.hostbridge.userNetworking=true/false (User mode or TAP/TUN networking)
```

- Configure the networking environment, as described in [Configuring the networking environment for Linux](#).

## Example entries for DTS files

- Add this entry next to the corresponding `virtio_block` or `virtio_p9` entry:

```
virtio_net@0150000 {
    compatible = "virtio,mmio";
    reg = <0x150000 0x1000>;
    interrupts = <0x2c>;
};
```

- Add this entry to the interrupt map:

```
<0 0 44 &gic 0 44 4>;
```

## See also

- [Configuring the networking environment for Linux](#)

## Iris and MTI instances for VirtioNetMMIO

This model has the following Iris instances:

**Table 3-773: VirtioNetMMIO Iris instances**

InstanceName	ComponentName
VirtioNetMMIO	VirtioNetMMIO
VirtioNetMMIO.dma_master	PVBusMaster
VirtioNetMMIO.hostbridge	HostBridge

This model has the following MTI trace components:

**Table 3-774: VirtioNetMMIO MTI instances**

InstanceName	ComponentName
VirtioNetMMIO.dma_master	PVBusMaster

## Ports for VirtioNetMMIO

**Table 3-775: Ports**

Name	Protocol	Type	Description
intr	Signal	Master	Virtio device sets interrupt to signal completion.
pvbus	PVBus	Slave	Virtio MMIO control/config/status registers.
virtio_m	PVBus	Master	Virtio device performs DMA accesses via master.

## Parameters for VirtioNetMMIO

### checksum

#### Type

string

#### Default value

""

#### Description

For checksum-offloaded packets, if 'tx' is specified, outgoings will be checksummed by VirtioNet device; 'rx' is specified for incomings; 'all' for both.

### enabled

#### Type

bool

#### Default value

0x1

#### Description

Enable or disable device. If disabled, device can be accessed, but will not be activated.

### hostbridge.interfaceName

#### Type

string

**Default value**

""

**Description**

Host Interface.

**hostbridge.userNetOptions****Type**

string

**Default value**

""

**Description**

Control options for UserNet TCP/IP (for internal use only, please do not use).

**hostbridge.userNetPorts****Type**

string

**Default value**

""

**Description**

Listening ports to expose in user-mode networking.

**hostbridge.userNetSubnet****Type**

string

**Default value**

"172.20.51.0/24"

**Description**

Virtual subnet for user-mode networking.

**hostbridge.userNetworking****Type**

bool

**Default value**

0x1

**Description**

Enable user-mode networking.

**mac\_address****Type**

string

**Default value**

""

**Description**

Device MAC address, if not specified, a random MAC address is generated.

**offload****Type**

string

**Default value**

"gso, gro"

**Description**

Offload TCP/UDP segmentation/receiving operations to host.

**secure\_accesses****Type**

bool

**Default value**

0x0

**Description**

Make device generate transactions with NS=0.

**transport****Type**

string

**Default value**

"modern"

**Description**

Choose legacy or modern virtio transport, if not specified, modern transport is used.

### 3.7.70 VirtioP9Device

virtio P9 server. This model is written in C++.

**About VirtioP9Device**

This component implements a subset of the Plan 9 file protocol over a virtio transport. It enables you to access a directory on the host's filesystem within Linux, or another operating system that implements the protocol, running on a platform model.

It supports the legacy OASIS virtio specification.

## Limitations

VirtioP9Device implements a subset of the Linux 9P2000.L protocol. It has the following limitations:

- You can mount only one host directory per instance of the component.
- It supports a subset of 9P2000.L message types:
  - Tversion
  - Tlopen
  - Tlcreate
  - Tgetattr
  - Tsetattr
  - Treaddir
  - Tmkdir
  - Tattach
  - Twalk
  - Tread
  - Twrite
  - Tclunk
  - Tremove
  - Trename
  - On Linux hosts, it also supports Treadlink and Tsymlink.
- On Windows hosts:
  - It ignores Unix permissions when writing files.
  - It performs a simple mapping from Windows to Unix permissions when reading.
  - Symbolic links appear as regular files.
  - It does not perform writing, deleting, or renaming operations on a file that another process has open.

## Setting up the VirtioP9Device component

Take the following steps to set up this component:

- Use a version of Linux that supports v9fs over virtio and virtio-mmio devices.
- Update the device tree to include the VirtioP9Device component, or specify it on the kernel command-line, as shown below. The address range for both VE and Base platforms is 0x1C140000-0x1C14FFFF. The interrupt number is 43, or IRQ 75, for both VE and Base platforms.
- Set the following parameter to the directory on the host that you want to mount in the model:

### VE

```
motherboard.virtiop9device.root_path
```

**Base**

```
bp.virtio_p9device.root_path
```

- On Linux, mount the host directory by using the following command in the model:

```
$ mount -t 9p -o trans=virtio,version=9p2000.L FM <mount point>
```

Example kernel command-line argument:

```
virtio_mmio.device=0x10000@0x1c140000:75
```

Example entry for DTS files, to add next to the corresponding virtio\_block entry:

```
virtio_p9@0140000 {
    compatible = "virtio,mmio";
    reg = <0x0 0x1c140000 0x0 0x1000>;
    interrupts = <0x0 0x2b 0x4>;
};
```

**Iris and MTI instances for VirtioP9Device**

This model has the following Iris instances:

**Table 3-776: VirtioP9Device Iris instances**

InstanceName	ComponentName
VirtioP9Device	VirtioP9Device
VirtioP9Device.mmio_slave	PVBusSlave
VirtioP9Device.virtio_master	PVBusMaster

This model has the following MTI trace components:

**Table 3-777: VirtioP9Device MTI instances**

InstanceName	ComponentName
VirtioP9Device.mmio_slave	PVBusSlave
VirtioP9Device.virtio_master	PVBusMaster

**Ports for VirtioP9Device****Table 3-778: Ports**

Name	Protocol	Type	Description
intr	Signal	Master	Virtio device sets interrupt to signal completion.
pvbus	PVBus	Slave	Virtio MMIO control/config/status registers.
virtio_m	PVBus	Master	Virtio device performs DMA accesses via master.

## Parameters for VirtioP9Device

### **mount\_tag**

#### **Type**

string

#### **Default value**

"FM"

#### **Description**

mount tag.

### **quiet**

#### **Type**

bool

#### **Default value**

0x0

#### **Description**

Don't print warnings on malformed commands/descriptors.

### **root\_path**

#### **Type**

string

#### **Default value**

""

#### **Description**

root directory path.

### **secure\_accesses**

#### **Type**

bool

#### **Default value**

0x0

#### **Description**

Make device generate transactions with NS=0.

### 3.7.71 VirtioPCIBlockDevice

virtio block device with PCI transport. This model is written in C++.

#### About VirtioPCIBlockDevice

VirtioPCIBlockDevice is similar to VirtioBlockDevice, except it is PCI-based instead of MMIO-based. It supports the legacy OASIS virtio specification.

This device requires:

- The following BARs in rising order:
  - A Bar of 4K for Config accesses
  - A Bar of 4K for the MSI-X table
  - A Bar of 4K for the MSI-X PBA
- Conventional interrupts to be supported
- An `msix_table_size` of 2

#### Iris and MTI instances for VirtioPCIBlockDevice

This model has the following Iris instances:

**Table 3-779: VirtioPCIBlockDevice Iris instances**

InstanceName	ComponentName
VirtioPCIBlockDevice	VirtioPCIBlockDevice
VirtioPCIBlockDevice.register_slave	PVBusSlave
VirtioPCIBlockDevice.virtio_master	PVBusMaster

This model has the following MTI trace components:

**Table 3-780: VirtioPCIBlockDevice MTI instances**

InstanceName	ComponentName
VirtioPCIBlockDevice	VirtioPCIBlockDevice
VirtioPCIBlockDevice.register_slave	PVBusSlave
VirtioPCIBlockDevice.virtio_master	PVBusMaster

#### Ports for VirtioPCIBlockDevice

**Table 3-781: Ports**

Name	Protocol	Type	Description
client_s	PCIDevice2ClientProtocol	Slave	Interrupts for MSI-X table entries.
intr	Signal	Master	Virtio device sets interrupt to signal completion.
pvbus	PVBus	Slave	Virtio pci/control/config/status registers.
virtio_m	PVBus	Master	Virtio device performs DMA accesses via master.

## Parameters for VirtioPCIBlockDevice

### **image\_path**

#### Type

string

#### Default value

""

#### Description

image file path.

### **quiet**

#### Type

bool

#### Default value

0x0

#### Description

Don't print warnings on malformed commands/descriptors.

### **read\_only**

#### Type

bool

#### Default value

0x0

#### Description

Only allow device to be read.

### **secure\_accesses**

#### Type

bool

#### Default value

0x0

#### Description

Make device generate transactions with NS=0.

### **transaction\_attributes**

#### Type

int

#### Default value

0x0

## Description

Transaction attributes used by device. 0x0 - inner-shared real access. 0x1 - outer-shared real access. 0x2 - outer-shared debug access.

## 3.7.72 VirtioRNG

virtio rng - Entropy device. This model is written in C++.

### About VirtioRNG

VirtioRNG models a virtio entropy device as defined in the [Virtio 1.0 Specification](#). A virtual platform might need to integrate a VirtioRNG component to generate random numbers when:

- Linux or Android needs to generate kernel entropy. Hardware might do this using a timer, but this is not possible in the model because timers are not updated quickly enough.
- Security features are required, such as ssh.

### Integrate VirtioRNG into a platform

Integrate the VirtioRNG component by instantiating it in your board's LISA file and connecting it to the SoC virtio master bus and interrupt signal as follows:

```
// Instantiate components
composition {
...
    virtio_rng : VirtioRNG();
...
}

connection {
...
    // Find a suitable address space and connect it to the SoC's virtio_m bus
    busdecoder.pvbus_m_range[0x001C190000..0x001C19ffff] => virtio_rng.pvbus;
    virtio_rng.virtio_m => self.virtio_m;

    // Connect the IRQ to the GIC IRQ
    virtio_rng.intr => gic400.irqs[101];
...
}
```

To configure Linux or Android for VirtioRNG, use the following build parameters:

#### Linux:

- CONFIG\_VIRTIO\_MMIO=y
- CONFIG\_HW\_RANDOM=y
- CONFIG\_HW\_RANDOM\_VIRTIO=y

#### Android:

- --enable CONFIG\_VIRTIO\_MMIO
- --enable CONFIG\_HW\_RANDOM
- --enable CONFIG\_HW\_RANDOM\_VIRTIO

Use the following device tree parameters:

```
virtio_rng@1c190000 {
    compatible = "virtio,mmio";
    reg = <0x0 0x1c190000 0x0 0x200>;
    interrupts = <GIC_SPI 101 IRQ_TYPE_LEVEL_HIGH>;
};
```

Configure VirtioRNG using model parameters, for example:

```
-C "board.virtio_rng.enabled=1" \
-C "board.virtio_rng.seed=0" \
-C "board.virtio_rng.generator=2" \
-C "board.virtio_rng.diagnostics=4" \ # Optional
```

Use the following guest command line to test the integration:

```
// Generate random numbers
console/> cat /dev/hwrng
```

Iris and MTI instances for VirtioRNG

This model has the following Iris instances:

Table 3-782: VirtioRNG Iris instances

InstanceName	ComponentName
VirtioRNG	VirtioEntropyMMIO
VirtioRNG.dma_master	PVBusMaster

This model has the following MTI trace components:

Table 3-783: VirtioRNG MTI instances

InstanceName	ComponentName
VirtioRNG.dma_master	PVBusMaster

Ports for VirtioRNG

Table 3-784: Ports

Name	Protocol	Type	Description
intr	Signal	Master	Virtio device sets interrupt to signal completion.
pvbus	PVBus	Slave	Virtio control/config/status registers.
virtio_m	PVBus	Master	Virtio device performs DMA accesses via master.

Parameters for VirtioRNG

diagnostics

Type

int

**Default value**

0x0

**Description**

Prints debug information: 0 = disabled; 1 = generated seed and device; 4 = generated seed, device and generated numbers.

**enabled****Type**

bool

**Default value**

0x0

**Description**

Enable or disable device. If disabled, device can be accessed, but will not be activated.

**generator****Type**

int

**Default value**

0x0

**Description**

User-defined generator: 0 = xorshiftstar; 1 = rand48; 2 = mersenne.

**secure\_accesses****Type**

bool

**Default value**

0x0

**Description**

Make device generate transactions with NS=0.

**seed****Type**

int

**Default value**

0x0

**Description**

User-defined seed: 0 = uses a random seed; > 0 = user-defined fixed seed value.

**transport****Type**

string

**Default value**

"modern"

**Description**

Choose legacy or modern virtio transport, if not specified, modern transport is used.

### 3.7.73 VirtualEthernetCrossover

Ethernet Crossover Cable. This model is written in LISA+.

**About VirtualEthernetCrossover**

This component implements two VirtualEthernet slave ports and enables you to connect two VirtualEthernet master ports. It forwards data received on one port to the other port without delay.

**Iris and MTI instances for VirtualEthernetCrossover**

This model has the following Iris instances:

**Table 3-785: VirtualEthernetCrossover Iris instances**

InstanceName	ComponentName
VirtualEthernetCrossover	VirtualEthernetCrossover

This model has the following MTI trace components:

**Table 3-786: VirtualEthernetCrossover MTI instances**

InstanceName	ComponentName
VirtualEthernetCrossover	VirtualEthernetCrossover

**Ports for VirtualEthernetCrossover****Table 3-787: Ports**

Name	Protocol	Type	Description
deva	VirtualEthernet	Slave	Slave port for connecting to a VirtualEthernet master.
devb	VirtualEthernet	Slave	Slave port for connecting to a VirtualEthernet master.

### 3.7.74 VirtualEthernetHub3

3 Port Ethernet Hub. This model is written in LISA+.

**Iris and MTI instances for VirtualEthernetHub3**

This model has the following Iris instances:

**Table 3-788: VirtualEthernetHub3 Iris instances**

InstanceName	ComponentName
VirtualEthernetHub3	VirtualEthernetHub3

### Ports for VirtualEthernetHub3

**Table 3-789: Ports**

Name	Protocol	Type	Description
deva	VirtualEthernet	Slave	Slave port for connecting to a VirtualEthernet master.
devb	VirtualEthernet	Slave	Slave port for connecting to a VirtualEthernet master.
devc	VirtualEthernet	Slave	Slave port for connecting to a VirtualEthernet master.

## 3.7.75 VisEventRecorder

Event recorder component for visualisation component. It allows you to play back and record interactive GUI sessions. This model is written in LISA+.

### Recording

The following command creates an ASCII file `rec.txt` and enables recording. This file can directly be used for playback.

```
./isim_system -a image.axf -C visualisation.recorder.recordingFileName=rec.txt
```

You can select the time base for the time stamps of the recorded events. The default is a 100MHz counter (10ns simulated time resolution) which usually works for all systems. To be able to correlate timestamps to the instruction counter, set the time base to the clock frequency of the CPU, but this is not necessary for an exact recording or playback. The time base should be higher than CPU frequency / 100 (typical quantum size). To set the recording time base set the `recordingTimeBase` parameter.

### Playback

The following command enables the playback of all GUI input events previously recorded in file `rec.txt`. The time base of the timestamps is always taken from the file (see T record). Interactive user input is still possible and interactive events and recorded events are mixed.

```
./isim_system -a image.axf -C visualisation.recorder.playbackFileName=rec.txt
```

**Note**

It is possible to enable recording and playback at the same time. This makes it possible to check whether a playback session is reproducible or to extend a previously recorded session by appending events. To do this, remove the QUIT

event at the end. This is also useful to check the timing accuracy of the playback/recording timestamps.

```
./isim system -a image.axf -C
visualisation.recorder.playbackFileName=rec.txt -C
visualisation.recorder.playbackFileName=rec.txt
```

To enable verbose messages, use the `verbose` parameter with the following values:

- 1  
Print all events while they are recorded/played back.
- 2  
Print also maintenance information of the internal ClockTimers. The default is disabled (0).

To disable instruction count checking (message 'instruction count differs'), set parameter `checkInstructionCount` to 0. The default is enabled.

## Integration

This component is intended to be a subcomponent of a visualisation component, for example a component that instantiates a Visualisation object using `createVisualisation()`. The integration is pretty light weight:

- Wire up the `control` and `ticks` ports.
- Use `control.registerVisRegion(regionPointer, regionName)` to register all relevant VisRegion pointers. You only need to register the regions that are used in the `processMessages()` function to identify a region by pointer.
- Call `control.putEvent()` for all `visEvents` as they come in regardless of where they come from, usually from `processMessages()`.
- Call `control.getEvent()` to retrieve recorded events (always called directly or indirectly by the callback (master) behavior `control.processEvents()`).

## Iris and MTI instances for VisEventRecorder

This model has the following Iris instances:

**Table 3-790: VisEventRecorder Iris instances**

InstanceName	ComponentName
VisEventRecorder	VisEventRecorder
VisEventRecorder.playbackDivider	ClockDivider
VisEventRecorder.playbackTimer	ClockTimerThread
VisEventRecorder.playbackTimer.timer	ClockTimerThread64
VisEventRecorder.playbackTimer.timer.thread	SchedulerThread
VisEventRecorder.playbackTimer.timer.thread_event	SchedulerThreadEvent
VisEventRecorder.recordingDivider	ClockDivider

This model has the following MTI trace components:

**Table 3-791: VisEventRecorder MTI instances**

InstanceName	ComponentName
VisEventRecorder.playbackDivider	ClockDivider
VisEventRecorder.recordingDivider	ClockDivider

### Ports for VisEventRecorder

**Table 3-792: Ports**

Name	Protocol	Type	Description
control	VisEventRecorderProtocol	Slave	The visualisation component controls the recorder through this port.
ticks	InstructionCount	Slave	Allow VisEventRecorder to get tick count from a core.

### Parameters for VisEventRecorder

#### checkInstructionCount

##### Type

bool

##### Default value

0x1

##### Description

check instruction count in recording file against actual instruction count during playback.

#### playbackDivider.div

##### Type

int

##### Default value

0x1

##### Description

Clock Rate Divider. This parameter is not exposed via CADI and can only be set in LISA.

#### playbackFileName

##### Type

string

##### Default value

""

##### Description

playback filename (empty string disables playback).

#### recordingDivider.div

##### Type

int

**Default value**

0x1

**Description**

Clock Rate Divider. This parameter is not exposed via CADl and can only be set in LISA.

**recordingFileName****Type**

string

**Default value**

""

**Description**

recording filename (empty string disables recording).

**recordingTimeBase****Type**

int

**Default value**

0x5f5e100

**Description**

timebase in 1/s (relative to the master clock (e.g. 100000000 means 10 nanoseconds resolution simulated time for a 1Hz master clock)) to be used for recording (higher values -> higher time resolution, playback time base is always taken from the playback file).

**verbose****Type**

int

**Default value**

0x0

**Description**

enable verbose messages (1=normal, 2=even more).

### 3.7.76 Visualisation\_sdl2

Display window for VE using sdl2 Visualisation library. This model is written in C++.

**Iris and MTI instances for Visualisation\_sdl2**

This model has the following Iris instances:

**Table 3-793: Visualisation\_sdl2 Iris instances**

InstanceName	ComponentName
Visualisation_sdl2	Visualisation_sdl2
Visualisation_sdl2.recorder	VisEventRecorder
Visualisation_sdl2.recorder.playbackDivider	ClockDivider
Visualisation_sdl2.recorder.playbackTimer	ClockTimerThread
Visualisation_sdl2.recorder.playbackTimer.timer	ClockTimerThread64
Visualisation_sdl2.recorder.playbackTimer.timer.thread	SchedulerThread
Visualisation_sdl2.recorder.playbackTimer.timer.thread_event	SchedulerThreadEvent
Visualisation_sdl2.recorder.recordingDivider	ClockDivider

This model has the following MTI trace components:

""

**Description**

Cluster8 name.

**cluster9\_name****Type**

string

**Default value**

""

**Description**

Cluster9 name.

**css\_spec****Type**

string

**Default value**

"Columbus mid"

**Description**

Platform specification displayed in window title.

**diagnostics****Type**

int

**Default value**

0x0

**Description**

Diagnostics.

**disable\_visualisation****Type**

bool

**Default value**

0x0

**Description**

Enable/disable visualisation.

**display\_object****Type**

int

**Default value**

0x0

**Description**

Display objects: LCD only (1), status only (2), or both (0).

**display\_poreset\_button****Type**

bool

**Default value**

0x0

**Description**

Display power-on reset button.

**idler.delay\_ms****Type**

int

**Default value**

0x32

**Description**

GUI update period in ms.

**idler.has\_gui****Type**

bool

**Default value**

0x1

**Description**

GUI is enabled.

**is\_heterogeneous\_cluster****Type**

bool

**Default value**

0x0

**Description**

Is Heterogeneous cluster.

**lcd\_height\_param****Type**

int

**Default value**

0x258

**Description**

LCD Height.

**lcd\_width\_param****Type**

int

**Default value**

0x320

**Description**

LCD Width.

**mcp\_name****Type**

string

**Default value**  
"MCP: Cortex-M7"

**Description**  
MCP name.

**num\_cps**

**Type**  
int

**Default value**  
0x1

**Description**  
Number of Control Processors.

**per\_core\_clock**

**Type**  
bool

**Default value**  
0x0

**Description**  
Per-core clock connection.

**platform\_name**

**Type**  
string

**Default value**  
"Application Processors"

**Description**  
Platform Name.

**rate\_limit-enable**

**Type**  
bool

**Default value**  
0x0

**Description**  
Rate limit simulation.

**recorder.checkInstructionCount**

**Type**  
bool

**Default value**

0x1

**Description**

check instruction count in recording file against actual instruction count during playback.

**`recorder.playbackDivider.div`****Type**

int

**Default value**

0x1

**Description**

Clock Rate Divider. This parameter is not exposed via CADI and can only be set in LISA.

**`recorder.playbackDivider.mul`****Type**

int

**Default value**

0x1

**Description**

Clock Rate Multiplier. This parameter is not exposed via CADI and can only be set in LISA.

**`recorder.playbackFileName`****Type**

string

**Default value**

""

**Description**

playback filename (empty std::string disables playback).

**`recorder.recordingDivider.div`****Type**

int

**Default value**

0x1

**Description**

Clock Rate Divider. This parameter is not exposed via CADI and can only be set in LISA.

**`recorder.recordingDivider.mul`****Type**

int

**Default value**

0x1

**Description**

Clock Rate Multiplier. This parameter is not exposed via CADL and can only be set in LISA.

**recorder.recordingFileName****Type**

string

**Default value**

""

**Description**

recording filename (empty std::string disables recording).

**recorder.recordingTimeBase****Type**

int

**Default value**

0x5f5e100

**Description**

timebase in 1/s (relative to the master clock (e.g. 100000000 means 10 nanoseconds resolution simulated time for a 1Hz master clock)) to be used for recording (higher values -> higher time resolution, playback time base is always taken from the playback file).

**recorder.verbose****Type**

int

**Default value**

0x0

**Description**

enable verbose messages (1=normal, 2=even more).

**scp\_name****Type**

string

**Default value**

"SCP: Cortex-M7"

**Description**

SCP name.

**shutdown\_pixel\_enable****Type**

bool

**Default value**

0x0

**Description**

Shutdown pixel enable. Use to trigger simulation shutdown when a specific pixel reaches the given target RGB value.

**shutdown\_pixel\_rgb****Type**

int

**Default value**

0xffffffff

**Description**

Shutdown pixel target RGB value 0xRRGGBB.

**shutdown\_pixel\_x****Type**

int

**Default value**

0x0

**Description**

Shutdown pixel X co-ordinate (0 is left).

**shutdown\_pixel\_y****Type**

int

**Default value**

0x0

**Description**

Shutdown pixel Y co-ordinate (0 is top).

**trap\_key****Type**

int

**Default value**

0x4a

**Description**  
Trap key that works with left Ctrl to toggle mouse display.

**window\_title**

**Type**  
string

**Default value**  
"Fast Models - %cpu%"

**Description**  
Window title(%cpu% will be replaced by css\_spec).

3.7.77 WarningMemory

Memory that prints warnings, and RAZ/WIs or aborts. This model is written in C++.

**Iris and MTI instances for WarningMemory**  
This model has the following Iris instances:

Table 3-796: WarningMemory Iris instances

InstanceName	ComponentName
WarningMemory	WarningMemory

Ports for WarningMemory

Table 3-797: Ports

Name	Protocol	Type	Description
pvbust	PVBus	Slave	Bus slave interface

Parameters for WarningMemory

**abort\_on\_reads**  
**Type**  
bool

**Default value**  
0x0

**Description**  
Generate Abort on reads.

**abort\_on\_writes**  
**Type**  
bool

**Default value**

0x0

**Description**

Generate Abort on writes.

**read\_data****Type**

int

**Default value**

0x0

**Description**

Data to return on reads, if not aborting.

**warn\_on\_reads****Type**

bool

**Default value**

0x1

**Description**

Generate Warn on reads.

**warn\_on\_writes****Type**

bool

**Default value**

0x1

**Description**

Generate Warn on writes.

**warning****Type**

string

**Default value**

"Invalid access"

**Description**

Warning string.

### 3.7.78 v8EmbeddedCrossTrigger\_Matrix

v8 Embedded Cross Trigger Matrix. This model is written in C++.

#### About v8EmbeddedCrossTrigger\_Matrix

This is a model of a platform-level Cross Trigger Matrix (CTM) for connection to the Cross Trigger Interface (CTI) ports provided on Armv8-A processors in Fast Models. The combination of the CTI and the CTM provides an architectural model of the Coresight embedded triggering system.

A single instance of the v8EmbeddedCrossTrigger\_Matrix component supports up to four clusters, each containing four cores. For example:

```
cluster0.cti[0] => v8ect.cti[0];
cluster0.cti[1] => v8ect.cti[1];
cluster0.cti[2] => v8ect.cti[2];
cluster0.cti[3] => v8ect.cti[3];
...
cluster3.cti[0] => v8ect.cti[12];
cluster3.cti[1] => v8ect.cti[13];
cluster3.cti[2] => v8ect.cti[14];
cluster3.cti[3] => v8ect.cti[15];
```

#### Iris and MTI instances for v8EmbeddedCrossTrigger\_Matrix

This model has the following Iris instances:

Table 3-798: v8EmbeddedCrossTrigger\_Matrix Iris instances

InstanceName	ComponentName
v8EmbeddedCrossTrigger_Matrix	EmbeddedCT

#### Ports for v8EmbeddedCrossTrigger\_Matrix

Table 3-799: Ports

Name	Protocol	Type	Description
cti[36]	v8EmbeddedCrossTrigger_controlprotocol	Slave	-

#### Parameters for v8EmbeddedCrossTrigger\_Matrix

##### has\_CTIAUTHSTATUS

###### Type

bool

###### Default value

0x1

###### Description

Has the optional CTIAUTHSTATUS register.

**has\_CTIDEVID\_INOUT****Type**

bool

**Default value**

0x1

**Description**

Has the option of input gate in cross trigger matrix.

**number-of-channels****Type**

int

**Default value**

0x4

**Description**

Number of channels in cross trigger matrix.

## 3.8 Scheduler components

This section describes the Scheduler components.

### 3.8.1 AsyncSignal

This model is written in C++.

#### About AsyncSignal

This component provides the means to cleanly schedule events from non-simulation threads onto the simulation thread.

#### Ports for AsyncSignal

**Table 3-800: Ports**

Name	Protocol	Type	Description
async_callback	<a href="#">AsyncSignalCallback</a>	Master	This port emits a call to <code>signal()</code> on the simulation thread asynchronously after <code>async_control.signal()</code> has been called.
async_control	<a href="#">AsyncSignalControl</a>	Slave	Non-simulation threads call <code>signal()</code> on this port in order to schedule an event: a call to <code>async_callback.signal()</code> on the simulation thread.

### 3.8.2 SchedulerInterface

A SchedulerInterface instance allows access to the Fast Models scheduler. This model is written in LISA+.

#### Iris and MTI instances for SchedulerInterface

This model has the following Iris instances:

**Table 3-801: SchedulerInterface Iris instances**

InstanceName	ComponentName
SchedulerInterface	SchedulerInterface

#### Ports for SchedulerInterface

**Table 3-802: Ports**

Name	Protocol	Type	Description
clk_in	<a href="#">ClockSignal</a>	Slave	Clock frequency for waitTicks() function.
control	<a href="#">SchedulerInterfaceControl</a>	Slave	Scheduler interface. Allows to: - wait for time

### 3.8.3 SchedulerThread

A SchedulerThread instance represents a co-routine thread in the simulation. This model is written in LISA+.

#### Iris and MTI instances for SchedulerThread

This model has the following Iris instances:

**Table 3-803: SchedulerThread Iris instances**

InstanceName	ComponentName
SchedulerThread	SchedulerThread

#### Ports for SchedulerThread

**Table 3-804: Ports**

Name	Protocol	Type	Description
clk_in	<a href="#">ClockSignal</a>	Slave	Clock frequency for waitTicks() function.
control	<a href="#">SchedulerThreadControl</a>	Slave	SchedulerThread control. Masters use this to: - control the thread (wait etc) - implement the actual thread function threadProc()

### 3.8.4 SchedulerThreadEvent

A SchedulerThreadEvent instance is an auto-reset boolean condition variable other threads can wait on. This model is written in LISA+.

#### Iris and MTI instances for SchedulerThreadEvent

This model has the following Iris instances:

**Table 3-805: SchedulerThreadEvent Iris instances**

InstanceName	ComponentName
SchedulerThreadEvent	SchedulerThreadEvent

#### Ports for SchedulerThreadEvent

**Table 3-806: Ports**

Name	Protocol	Type	Description
control	<a href="#">SchedulerThreadEventControl</a>	Slave	SchedulerThreadEvent control. Masters use this to: - wait for this event - notify waiters that the event happened

## 3.9 Signals components

This section describes the Signals components.

### 3.9.1 AndGate

And Gate. This model is written in LISA+.

#### About AndGate

This component implements a logical AND of two signal input ports to generate a single output signal. For example, you can use it to combine two interrupt signals.

#### Iris and MTI instances for AndGate

This model has the following Iris instances:

**Table 3-807: AndGate Iris instances**

InstanceName	ComponentName
AndGate	AndGate

#### Ports for AndGate

**Table 3-808: Ports**

Name	Protocol	Type	Description
input[2]	<a href="#">Signal</a>	Slave	2 input signals to be AND'ed.
output	<a href="#">Signal</a>	Master	AND'ed output signal.

### 3.9.2 FrequencyProbe

Clock Frequency observer. This model is written in C++.

#### Iris and MTI instances for FrequencyProbe

This model has the following Iris instances:

**Table 3-809: FrequencyProbe Iris instances**

InstanceName	ComponentName
FrequencyProbe	FrequencyProbe

#### Ports for FrequencyProbe

**Table 3-810: Ports**

Name	Protocol	Type	Description
clk_in	<a href="#">ClockSignal</a>	Slave	-
freq_changed	<a href="#">ValueState</a>	Master	-

#### Parameters for FrequencyProbe

##### diagnostics

##### Type

int

##### Default value

0x0

##### Description

Diagnostics.

### 3.9.3 LabellerMasterIdExtendedIdUserFlag

Allows the modification of MasterID, ExtendedID and UserFlags attributes of PVBUS transactions. This model is written in LISA+.

#### Iris and MTI instances for LabellerMasterIdExtendedIdUserFlag

This model has the following Iris instances:

**Table 3-811: LabellerMasterIdExtendedIdUserFlag Iris instances**

InstanceName	ComponentName
LabellerMasterIdExtendedIdUserFlag	LabellerMasterIdExtendedIdUserFlag
LabellerMasterIdExtendedIdUserFlag.pvbuslogger	PVBusLogger
LabellerMasterIdExtendedIdUserFlag.pvbuslogger.mapper	PVBusMapper
LabellerMasterIdExtendedIdUserFlag.pvbusmodifier	PVBusMapper

This model has the following MTI trace components:

**Table 3-812: LabellerMasterIdExtendedIdUserFlag MTI instances**

InstanceName	ComponentName
LabellerMasterIdExtendedIdUserFlag.pvbuslogger	PVBusLogger
LabellerMasterIdExtendedIdUserFlag.pvbuslogger.mapper	PVBusMapper
LabellerMasterIdExtendedIdUserFlag.pvbusmodifier	PVBusMapper

### Ports for LabellerMasterIdExtendedIdUserFlag

**Table 3-813: Ports**

Name	Protocol	Type	Description
pvbus_m	PVBus	Master	Output with modified properties.
pvbus_s	PVBus	Slave	Unmodified input.

### Parameters for LabellerMasterIdExtendedIdUserFlag

#### **extendedid**

##### Type

int

##### Default value

0x0

##### Description

ExtendedID value to be applied to transactions.

#### **extendedid\_mask**

##### Type

int

##### Default value

0x0

##### Description

Mask used to determine which bits of extendedid parameter to be set in the transactions ExtendedID attribute. 0xFFFFFFFFFFFFFFFF will overwrite all the incoming ExtendedID bits with the value of the extendedid parameter, 0x0 will overwrite none.

#### **extendedmanagerid**

##### Type

int

##### Default value

0x0

##### Description

ExtendedManagerID value to be applied to transactions.

**extendedmanagerid\_mask****Type**

int

**Default value**

0x0

**Description**

Mask used to determine which bits of extendedmanagerid parameter to be set in the transactions ExtendedManagerID attribute. 0xFFFFFFFF will overwrite all the incoming ExtendedManagerID bits with the value of the extendedmanagerid parameter, 0x0 will overwrite none.

**masterid****Type**

int

**Default value**

0x0

**Description**

MasterID value to be applied to transactions.

**masterid\_mask****Type**

int

**Default value**

0x0

**Description**

Mask used to determine which bits of masterid parameter to be set in the transactions MasterID attribute. 0xFFFFFFFF will overwrite all the incoming MasterID bits with the value of the masterid parameter, 0x0 will overwrite none.

**pvbuslogger.trace\_debug****Type**

bool

**Default value**

0x0

**Description**

Enable tracing of debug transactions.

**pvbuslogger.trace\_snoops****Type**

bool

**Default value**

0x0

**Description**

Enable tracing of ACE snoop requests.

**userflags**

**Type**

int

**Default value**

0x0

**Description**

UserFlags value to be applied to transactions.

**userflags\_mask**

**Type**

int

**Default value**

0x0

**Description**

Mask used to determine which bits of userflags parameter to be set in the transactions UserFlags attribute. 0xFFFFFFFF will overwrite all the incoming UserFlags bits with the value of the userflags parameter, 0x0 will overwrite none.

3.9.4 LabellerUserSignals

This model is written in LISA+.

Iris and MTI instances for LabellerUserSignals

This model has the following Iris instances:

Table 3-814: LabellerUserSignals Iris instances

InstanceName	ComponentName
LabellerUserSignals	LabellerUserSignals
LabellerUserSignals.pvbuslogger	PVBusLogger
LabellerUserSignals.pvbuslogger.mapper	PVBusMapper
LabellerUserSignals.pvbusmodifier	PVBusMapper

This model has the following MTI trace components:

**Table 3-815: LabellerUserSignals MTI instances**

InstanceName	ComponentName
LabellerUserSignals.pvbuslogger	PVBusLogger
LabellerUserSignals.pvbuslogger.mapper	PVBusMapper
LabellerUserSignals.pvbusmodifier	PVBusMapper

### Ports for LabellerUserSignals

**Table 3-816: Ports**

Name	Protocol	Type	Description
pvbus_m	PVBus	Master	Output with modified UserFlags.
pvbus_s	PVBus	Slave	Unmodified input.

### Parameters for LabellerUserSignals

#### **pvbuslogger.trace\_debug**

##### Type

bool

##### Default value

0x0

##### Description

Enable tracing of debug transactions.

#### **pvbuslogger.trace\_snoops**

##### Type

bool

##### Default value

0x0

##### Description

Enable tracing of ACE snoop requests.

#### **user**

##### Type

int

##### Default value

0x0

##### Description

User signal to be applied to transactions.

### 3.9.5 OrGate

Or Gate. This model is written in LISA+.

#### About OrGate

This component implements a logical OR of two signal input ports to generate a single output signal. For example, you can use this component to combine two interrupt signals.

#### Iris and MTI instances for OrGate

This model has the following Iris instances:

**Table 3-817: OrGate Iris instances**

InstanceName	ComponentName
OrGate	OrGate

#### Ports for OrGate

**Table 3-818: Ports**

Name	Protocol	Type	Description
input[16]	Signal	Slave	16 input signals to be OR'ed.
output	Signal	Master	OR'ed output signal.

### 3.9.6 SGSignalBuffer

Buffer to synchronise SystemGenerator Signal setValue() calls. This model is written in LISA+.

#### About SGSignalBuffer

This component buffers changes to its input signal, outputting the new values at the next clock tick. This is useful in SystemC export situations as the output signal is driven from an SC\_THREAD whereas the input could have come from an SC\_METHOD. This avoids issues if a downstream component calls `sc_wait()`.

Note

There are variants of the buffer with different port array sizes.

#### Iris and MTI instances for SGSignalBuffer

This model has the following Iris instances:

**Table 3-819: SGSignalBuffer Iris instances**

InstanceName	ComponentName
SGSignalBuffer	SGSignalBuffer

## Ports for SGSignalBuffer

**Table 3-820: Ports**

Name	Protocol	Type	Description
clk_in	<a href="#">ClockSignal</a>	Slave	Clock rate to release buffered signals.
in	<a href="#">Signal</a>	Slave	Signal in.
out	<a href="#">Signal</a>	Master	Buffered signal out.

## 3.9.7 SignalDriver

Drives signal port based on parameter, register or bus slave port. This model is written in LISA+.

### Iris and MTI instances for SignalDriver

This model has the following Iris instances:

**Table 3-821: SignalDriver Iris instances**

InstanceName	ComponentName
SignalDriver	SignalDriver
SignalDriver.pvbuslave	PVBusSlave

This model has the following MTI trace components:

**Table 3-822: SignalDriver MTI instances**

InstanceName	ComponentName
SignalDriver	<a href="#">SignalDriver</a>
SignalDriver.pvbuslave	<a href="#">PVBusSlave</a>

## Ports for SignalDriver

**Table 3-823: Ports**

Name	Protocol	Type	Description
pvbus_s	<a href="#">PVBus</a>	Slave	-
signal_out	<a href="#">Signal</a>	Master	-

## Parameters for SignalDriver

### param\_input

#### Type

bool

#### Default value

0x0

#### Description

Drive signal\_out port with this parameter value.

### 3.9.8 SignalInverter

This model is written in C++.

#### Iris and MTI instances for SignalInverter

This model has the following Iris instances:

**Table 3-824: SignalInverter Iris instances**

InstanceName	ComponentName
SignalInverter	SignalInverter

#### Ports for SignalInverter

**Table 3-825: Ports**

Name	Protocol	Type	Description
sig_in	Signal	Slave	-
sig_out	Signal	Master	-
sig_out_invert	Signal	Master	-

### 3.9.9 SignalLogger

Traces signal activity. This model is written in LISA+.

#### Iris and MTI instances for SignalLogger

This model has the following Iris instances:

**Table 3-826: SignalLogger Iris instances**

InstanceName	ComponentName
SignalLogger	SignalLogger

This model has the following MTI trace components:

**Table 3-827: SignalLogger MTI instances**

InstanceName	ComponentName
SignalLogger	SignalLogger
