
#### Ports for SignalLogger

**Table 3-828: Ports**

Name	Protocol	Type	Description
in	Signal	Slave	Input signal port.
out	Signal	Master	Output signal port.

## Parameters for SignalLogger

### **forward\_signal**

#### Type

bool

#### Default value

0x1

#### Description

If true, trace signal and forward signal from 'in' to 'out'. If false, trace signal only without driving 'out' port.

## 3.9.10 Value64Logger

Traces value activity. This model is written in LISA+.

### Iris and MTI instances for Value64Logger

This model has the following Iris instances:

**Table 3-829: Value64Logger Iris instances**

InstanceName	ComponentName
Value64Logger	Value64Logger

This model has the following MTI trace components:

**Table 3-830: Value64Logger MTI instances**

InstanceName	ComponentName
Value64Logger	Value64Logger

## Ports for Value64Logger

**Table 3-831: Ports**

Name	Protocol	Type	Description
in	Value_64	Slave	Input signal port.
out	Value_64	Master	Output signal port.

## 3.9.11 ValueLogger

Traces value activity. This model is written in LISA+.

### Iris and MTI instances for ValueLogger

This model has the following Iris instances:

**Table 3-832: ValueLogger Iris instances**

InstanceName	ComponentName
ValueLogger	ValueLogger

This model has the following MTI trace components:

InstanceName	ComponentName
ValueLogger	ValueLogger

### Ports for ValueLogger

**Table 3-834: Ports**

Name	Protocol	Type	Description
in	Value	Slave	Input signal port.
out	Value	Master	Output signal port.

## 3.9.12 WideAndGate

And Gate with up to 8 inputs. This model is written in C++.

### Iris and MTI instances for WideAndGate

This model has the following Iris instances:

**Table 3-835: WideAndGate Iris instances**

InstanceName	ComponentName
WideAndGate	WideAndGate

### Ports for WideAndGate

**Table 3-836: Ports**

Name	Protocol	Type	Description
input[8]	Signal	Slave	-
output	Signal	Master	-

### Parameters for WideAndGate

#### diagnostics

##### Type

int

##### Default value

0x0

**Description**

Diagnostics.

**3.9.13 WideOrGate**

Or Gate with up to 8 inputs. This model is written in C++.

**Iris and MTI instances for WideOrGate**

This model has the following Iris instances:

**Table 3-837: WideOrGate Iris instances**

InstanceName	ComponentName
WideOrGate	WideOrGate

**Ports for WideOrGate**

**Table 3-838: Ports**

Name	Protocol	Type	Description
input[8]	Signal	Slave	-
output	Signal	Master	-

**Parameters for WideOrGate**

**diagnostics**

**Type**

int

**Default value**

0x0

**Description**

Diagnostics.

**3.9.14 WideOrGate\_12x4**

Or Gate with up to 48 inputs and support to num\_cores. This model is written in C++.

**Iris and MTI instances for WideOrGate\_12x4**

This model has the following Iris instances:

**Table 3-839: WideOrGate\_12x4 Iris instances**

InstanceName	ComponentName
WideOrGate_12x4	WideOrGate_12x4

## Ports for WideOrGate\_12x4

Table 3-840: Ports

Name	Protocol	Type	Description
input[96]	Signal	Slave	-
output1	Signal	Master	-
output2	Signal	Master	-
output3	Signal	Master	-

## Parameters for WideOrGate\_12x4

**diagnostics****Type**

int

**Default value**

0x0

**Description**

Diagnostics.

**max\_cores\_per\_cluster****Type**

int

**Default value**

0x4

**Description**

Max number of cores per cluster.

**num\_cores****Type**

int

**Default value**

0x4

**Description**

Number of cores in cluster.

## 3.10 SystemIP components

This section describes the SystemIP components.

The major SystemIP components are:

- Input/output devices.
- Memory, including flash.
- Ethernet controller.
- Interrupt controllers.
- Static and dynamic memory controllers.
- Audio interface.
- Programmable clock generators.

These components are software implementations of specific hardware functionality.

### 3.10.1 AHCI\_SATA

AHCI controller with attached SATA disks and PCIe interface. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-841: IP revisions support**

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### About AHCI\_SATA

This component implements an AHCI controller including attached SATA disks. It connects as a PCIe end-point device to a PCIe framework.

#### Iris and MTI instances for AHCI\_SATA

This model has the following Iris instances:

**Table 3-842: AHCI\_SATA Iris instances**

InstanceName	ComponentName
AHCI_SATA	AHCI_SATA
AHCI_SATA.ahci_master	PVBusMaster
AHCI_SATA.register_slave	PVBusSlave

This model has the following MTI trace components:

**Table 3-843: AHCI\_SATA MTI instances**

InstanceName	ComponentName
AHCI_SATA	<a href="#">ExportTestAHCI_SATA</a>
AHCI_SATA.ahci_master	<a href="#">PVBusMaster</a>
AHCI_SATA.register_slave	<a href="#">PVBusSlave</a>

## Ports for AHCI\_SATA

**Table 3-844: Ports**

Name	Protocol	Type	Description
ahci_dma_m	PVBus	Master	AHCI device performs DMA accesses via master
client_s	PCIDevice2ClientProtocol	Slave	PCIDevice client slave port, used for MSI-X
pvbus	PVBus	Slave	AHCI pci/control/config/status registers

## Parameters for AHCI\_SATA

### **force\_mode**

#### Type

string

#### Default value

"NCQ"

#### Description

Force disk to report support for at most PIO/DMA/NCQ mode (only for testing/bring-up purposes). PIO mode is always supported. Use NCQ for maximum performance (default).

### **image\_path**

#### Type

string

#### Default value

""

#### Description

Comma separated list of zero or more disk images (up to 32). Each image represents one SATA disk which is connected to one port of the AHCI controller. Empty list elements are allowed and result in a SATA port which has no disk attached. Empty string (default) means: One SATA port with no disk attached. Use 'truncate -s 4T disk.img' to create a 4 TByte sparse image. Use 'dd if=/dev/zero of=disk.img bs=1M count=42' to create a 42 MByte non-sparse image.

### **run\_async**

#### Type

bool

#### Default value

0x0

#### Description

Do host I/O in a background thread asynchronously. Enabling this makes the simulation non-deterministic and may or may not improve performance. Default is 'false' (do all disk accesses synchronously).

### 3.10.2 AddressTranslationUnit

Address Translator Unit. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-845: IP revisions support**

Revision	Quality level
0.5	Alpha support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### Changes in 11.29.19

Parameters added:

- `DEBUG_disable_translation`

#### Iris and MTI instances for AddressTranslationUnit

This model has the following Iris instances:

**Table 3-846: AddressTranslationUnit Iris instances**

InstanceName	ComponentName
AddressTranslationUnit	AddressTranslationUnit
AddressTranslationUnit.ATU_BusMapper	PVBusMapper
AddressTranslationUnit.apb	PVBusSlave

This model has the following MTI trace components:

**Table 3-847: AddressTranslationUnit MTI instances**

InstanceName	ComponentName
AddressTranslationUnit.ATU_BusMapper	<a href="#">PVBusMapper</a>
AddressTranslationUnit.apb	<a href="#">PVBusSlave</a>

#### Ports for AddressTranslationUnit

**Table 3-848: Ports**

Name	Protocol	Type	Description
apb	<a href="#">PVBus</a>	Slave	-
irq_out	<a href="#">Signal</a>	Master	-
pdbus_m	<a href="#">PVBus</a>	Master	-
pdbus_s	<a href="#">PVBus</a>	Slave	-
reset_in	<a href="#">Signal</a>	Slave	-

## Parameters for AddressTranslationUnit

### **ATUNTR**

#### Type

int

#### Default value

0x5

#### Description

Number of translation regions (1=2, 2=4, 3=8, 4=16, and 5=32).

### **ATUPAW**

#### Type

int

#### Default value

0x5

#### Description

Physical address width (0=32, 1=36, 2=40, 3=44, 4=48, 5=52, 6=56, 7=64 bits). No impact on the PVBUS transactions.

### **ATUPS**

#### Type

int

#### Default value

0xd

#### Description

Selects the page size granularity in bytes (0xC=4096, 0xD=8192, and 0xE=16384) (Default=0xD).

### **DEBUG\_disable\_translation**

#### Type

bool

#### Default value

0x0

#### Description

A model-only parameter to disable any remapping by the ATU, despite register configuration. For debug/test only.

### **diagnostics**

#### Type

int

**Default value**

0x0

**Description**

Diagnostics 0-4 (0:FATAL 1:ERROR 2:WARNING 3:INFO 4:DEBUG - DEFAULT==2).

### 3.10.3 BP141\_TZMA

PrimeCell Infrastructure AMBA 3 AXI TrustZone Memory Adapter. This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-849: IP revisions support**

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**About BP141\_TZMA**

BP141\_TZMA permits a single physical memory cell of up to 2 MB to be shared between a secure and non-secure storage area. The partitioning between these areas is flexible.

This component routes transactions according to the following:

- The memory region that they are attempting to access.
- The security mode of the transaction.

The BP141\_TZMA fixes the base address of the secure region to the base address of the decode space. It uses the R0SIZE [9:0] input to configure the size of the secure region in 4 KB increments up to a maximum of 2 MB.

TZMEMSIZE is the maximum addressing range of the memory as defined by that parameter. By default, TZMEMSIZE is set to 2 MB. In the following table, AxADDR is the offset address that the transactions want to access:

**Table 3-850: BP141\_TZMA security control**

AxADDR	Memory Region	Non-secure Transfer	Secure Transfer
AxADDR < R0Size	Secure, R0	Illegal	Legal
R0SIZE <= AxADDR and AxADDR < TZMEMSIZE	Non-secure, R1	Legal	Legal
AxADDR => TZMEMSIZE	No access	Illegal	Illegal

**Iris and MTI instances for BP141\_TZMA**

This model has the following Iris instances:

**Table 3-851: BP141\_TZMA Iris instances**

InstanceName	ComponentName
BP141_TZMA	BP141_TZMA
BP141_TZMA.pvbusrange_0	PVBusRange
BP141_TZMA.pvbusrange_0.pvbus_mapper	PVBusMapper
BP141_TZMA.tzswitch_0	TZSwitch
BP141_TZMA.tzswitch_0.pvbus_mapper	PVBusMapper

This model has the following MTI trace components:

**Table 3-852: BP141\_TZMA MTI instances**

InstanceName	ComponentName
BP141_TZMA.pvbusrange_0.pvbus_mapper	PVBusMapper
BP141_TZMA.tzswitch_0.pvbus_mapper	PVBusMapper

## Ports for BP141\_TZMA

**Table 3-853: Ports**

Name	Protocol	Type	Description
pv_output	PVBus	Master	Routed PVBus output
pvbus	PVBus	Slave	Bus slave interface.
R0Size	Value	Slave	A software interface that is driven from the TrustZone Protection Controller (TZPC), setting the secure region size by bits[9:0].

## Parameters for BP141\_TZMA

### TZMEMSIZE

#### Type

int

#### Default value

0x200000

#### Description

Addressable range of device.

### TZSECROMSIZE

#### Type

int

#### Default value

0x200

#### Description

Default secure size.

**TZSEGSIZE**

**Type**  
int

**Default value**  
0x1000

**Description**  
Segment size.

**pvbusrange\_0.range**

**Type**  
int

**Default value**  
0x0

**Description**  
Addressable range routed to pvbus\_port\_a.

3.10.4 BP147\_TZPC

TrustZone Protection Controller. This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

Table 3-854: IP revisions support

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

About BP147\_TZPC

BP147\_TZPC provides a software interface to the protection bits in a secure system in a TrustZone design.

Iris and MTI instances for BP147\_TZPC

This model has the following Iris instances:

Table 3-855: BP147\_TZPC Iris instances

InstanceName	ComponentName
BP147_TZPC	BP147_TZPC
BP147_TZPC.busslave	PVBusSlave

This model has the following MTI trace components:

**Table 3-856: BP147\_TZPC MTI instances**

InstanceName	ComponentName
BP147_TZPC.busslave	PVBusSlave

### Ports for BP147\_TZPC

**Table 3-857: Ports**

Name	Protocol	Type	Description
bus_in_s	PVBus	Slave	Slave port for register access.
TZPCDECPROT0	Value	Master	Output decode protection 0 status.
TZPCDECPROT1	Value	Master	Output decode protection 1 status.
TZPCDECPROT2	Value	Master	Output decode protection 2 status.
TZPCR0SIZE	Value	Master	Output secure RAM region size.

## 3.10.5 CCI400

Cache Coherent Interconnect for AXI4 ACE. This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-858: IP revisions support**

Revision	Quality level
rOp0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

### About CCI400

If you disable the `cache_state_modelled` parameter, this component has negligible performance impact. If you enable `cache_state_modelled`, it adds significant cost to throughput for coherent transactions.

This model implements the slave interface Shareable Override Register, which can be read and written, but it has no functionality.

### ACE limitation

AXI Coherency Extensions (ACE) are extensions to AXI4 that support system-level cache coherency between multiple clusters. The ACE cache models in the Arm Cortex-A15 and Cortex-A7, and the ACE support in the CCI-400 have the limitation that they only process one transaction at a time. Normally, the simulation processes each transaction to completion before allowing any master to generate another transaction.

However, in the following situation the simulation might fail. If a SystemC bus slave calls `wait()` while it is processing a transaction, this call might allow another master to issue another transaction that passes through the CCI-400 or the Cortex-A15 or Cortex-A7 caches. This situation could

happen if a SystemC bus master running in another thread is connected to one of the ACE-lite ports on the CCI-400.

### Iris and MTI instances for CCI400

This model has the following Iris instances:

**Table 3-859: CCI400 Iris instances**

InstanceName	ComponentName
CCI400	CCI400
CCI400.cciinterconnect	PVCache
CCI400.cciregisters	CCIRegisters
CCI400.cciregisters.clocktimer	ClockTimerThread
CCI400.cciregisters.clocktimer.timer	ClockTimerThread64
CCI400.cciregisters.clocktimer.timer.thread	SchedulerThread
CCI400.cciregisters.clocktimer.timer.thread_event	SchedulerThreadEvent

This model has the following MTI trace components:

**Table 3-860: CCI400 MTI instances**

InstanceName	ComponentName
CCI400	CCI400

### Ports for CCI400

**Table 3-861: Ports**

Name	Protocol	Type	Description
acchannelen	Value	Slave	For each upstream port, determine if it is enabled or not with respect to snoop requests.
barrierterminate	Value	Slave	For each downstream port, determine if barriers are terminated at that port.
broadcastcachemain	Value	Slave	For each downstream port, determine if broadcast cache maintenance operations are forwarded down that port. A three bit signal but as the model only have a single downstream port, setting any of the bits will make it work.
bufferableoverride	Value	Slave	For each downstream port, determine if all transactions are forced to non-bufferable (AWCACHE[0] is forced to 0).
clk_in	ClockSignal	Slave	Clock signal for cciregisters
errorirq	Signal	Master	A signal stating that the imprecise error register is nonzero.
evntcntoverflow[5]	Signal	Master	When an event counter overflows, it sets the corresponding signal.
lint_ace_3_reset_state	Signal	Slave	This port can be connected to the reset signals of the system attached to the pvbus_s_ace_3 port.
lint_ace_4_reset_state	Signal	Slave	This port can be connected to the reset signals of the system attached to the pvbus_s_ace_4 port.
periphbase	Value_64	Slave	This port sets the base address of the private peripheral region.
pvbus_m	PVBus	Master	Master port for all downstream memory accesses.
pvbus_s_ace_3	PVBus	Slave	ACE-capable slave ports.

Name	Protocol	Type	Description
pvbus_s_ace_4	PVBus	Slave	ACE-capable slave ports.
pvbus_s_ace_lite_plus_dvm_0	PVBus	Slave	Memory bus interface that implements ACE lite and DVM protocol.
pvbus_s_ace_lite_plus_dvm_1	PVBus	Slave	Memory bus interface that implements ACE lite and DVM protocol.
pvbus_s_ace_lite_plus_dvm_2	PVBus	Slave	Memory bus interface that implements ACE lite and DVM protocol.
reset_in	Signal	Slave	Signal to reset the CCI.
reset_state_of_ace_lite_ports[3]	Signal	Slave	This port can be connected to the reset signals of the system attached to ACE-Lite ports 0,1,2

## Parameters for CCI400

### **acchannelen**

#### Type

int

#### Default value

0x1f

#### Description

For each upstream port, determine if it is enabled or not w.r.t. snoop requests.

### **barrierterminate**

#### Type

int

#### Default value

0x7

#### Description

For each downstream port, determine if barriers will be terminated at that port.

### **broadcastcachemain**

#### Type

int

#### Default value

0x0

#### Description

For each downstream port a bit determines if broadcast cache maintenance operations are forwarded down that port.

### **bufferableoverride**

#### Type

int

**Default value**

0x0

**Description**

For each downstream port, determine if all transactions will be forced to non-bufferable.

**cache\_state\_modelled****Type**

bool

**Default value**

0x1

**Description**

Model the cache state.

**force\_on\_from\_start****Type**

bool

**Default value**

false

Enables snooping on upstream ports from the start of simulation.

The CCI will normally start up with snooping disabled, however, using this parameter we allow the model to start with snooping enabled without SW drivers programming the CCI.

This is only setup at simulation reset and not at signal reset.

If the upstreams can ever be held in reset then you *must* connect:

- `reset_state_of_ace_lite_ports[]`
- `lint_ace_3_reset_state`
- `lint_ace_4_reset_state`

so that it knows when to disable snoops to the upstream systems.

Otherwise, the upstream system will receive snoop messages whilst in reset and complain that it 'received a snoop request whilst it was in reset'.

**is\_downstream\_domain\_boundary\_for\_far\_atomic****Type**

bool

**Default value**

0x0

**Description**

This interconnect is at the last stage of the domain boundary.

**log\_enabled****Type**

int

**Default value**

1

Enable log messages from the CCI register file.

**0**

do not print anything

**1**

print only access violations

**2**

also print writes

**3**

print reads as well.

**periphbase****Type**

int

**Default value**

0x2c000000

**Description**

Value for PERIPHBASE. Only bits [39:16] are used. This value may be overridden by an input on the periphbase port.

**revision****Type**

string

**Default value**

"rOp0"

**Description**

Revision of the CCI400.

### 3.10.6 CCI500

Cache Coherent Interconnect. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-862: IP revisions support**

Revision	Quality level
r0p0	Full support
r0p2	Full support
r1p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### About CCI500

The LISA file declares seven upstream ports. You can configure these ports with `num_ace_ports` and `num_ace_lite_ports`:

- The bottom `num_ace_lite_ports` are ACE-Lite+DVM.
- The next `num_ace_ports` are ACE.
- Any remaining ports are ignored. If transactions are made on them, then warnings are produced.

For example, if `num_ace_ports = 1` and `num_ace_lite_ports = 1` then

- `pvbus_s[1]` is ACE
- `pvbus_s[0]` is ACE-Lite+DVM
- `pvbus_s[6-2]` are considered not to exist.

#### Differences between the model and the RTL

##### Address Decoder

- Only supports striping down to 4KiB.
- If the address decoder aborts the access, returns `SLVERR` rather than `DECERR`.

##### Interfaces

- The model does not implement the Q-Channel and P-Channel interfaces.

##### Performance Monitoring Unit

- PMU counters recognize only a few event sources:
  - Slave interface events:

**3**

ReadOnce.

**4**

ReadClean, ReadShared, ReadNotSharedDirty, ReadUnique.

5

MakeUnique, CleanUnique.

6

CleanInvalid, CleanShared, MakeInvalid.

7

DVM transaction received from upstream.

9

Read data that is satisfied by a snoop request.

- No events are implemented for the global events or for the master events.
- The PMU does not implement the event bus (EVNTBUS).

### Register access

- The register file only supports 32-bit accesses to its registers. Later versions of the CCI500 hardware support full write strobes to the register file. This limitation means that byte and halfword accesses work on the hardware but not on this version of the component.

### Snoop filter RAMs

- Snoop filter RAMs are not modeled. The Status Register fields that relate to the power state of the Snoop filter RAMs are undefined.

### Iris and MTI instances for CCI500

This model has the following Iris instances:

**Table 3-863: CCI500 Iris instances**

InstanceName	ComponentName
CCI500	CCI500
CCI500.pvbus_register_file_s[0]	PVBusSlave
CCI500.upstream[0]	PVBusSlave
CCI500.upstream[1]	PVBusSlave
CCI500.upstream[2]	PVBusSlave
CCI500.upstream[3]	PVBusSlave
CCI500.upstream[4]	PVBusSlave
CCI500.upstream[5]	PVBusSlave
CCI500.upstream[6]	PVBusSlave

This model has the following MTI trace components:

**Table 3-864: CCI500 MTI instances**

InstanceName	ComponentName
CCI500	CCI500
CCI500.pvbus_register_file_s[0]	PVBusSlave
CCI500.upstream[0]	PVBusSlave

InstanceName	ComponentName
CCI500.upstream[1]	PVBusSlave
CCI500.upstream[2]	PVBusSlave
CCI500.upstream[3]	PVBusSlave
CCI500.upstream[4]	PVBusSlave
CCI500.upstream[5]	PVBusSlave
CCI500.upstream[6]	PVBusSlave

## Ports for CCI500

**Table 3-865: Ports**

Name	Protocol	Type	Description
acchannelensx[7]	Value	Slave	ACCHANNELENSx represents the ports ACCHANNELENS0..ACCHANNELENS7 on the RTL (assuming there are seven upstream ports). * each upstream ACE port 'y' (pvbus_s[y]) has a two bit ACCHANNELENSx * bit 0 == 0 -- DVM messages are disabled from being sent to this interface * bit 1 == 0 -- Snoop messages are disabled from being sent to this interface * each upstream ACE-Lite port 'z' (pvbus_s[z]) has a one bit ACCHANNELENSx * bit 0 == 0 -- DVM messages are disabled from being sent to this interface In the model, as we support a variety of configurations with a single LISA file then each port will behave as though it is one bit or two bit as appropriate. If you send a value that cannot be represented, given the width of the port, then the CCI model will halt and produce a fatal error. The assumed values of these are set by parameters until they are driven, so you need not drive them if they are constant. In the RTL, these signals are sampled at reset. Due to ordering issues w.r.t. reset() on different components then we cannot do that. Instead the signals are sampled at first transaction. Thus any controller that is producing these signals has to hold them constant for long enough. AC channel enables.
address_decoder	CCI500_AddressDecoderProtocol	Master	An address decoder can be attached to the address_decoder port to choose which pvbus_s port a downstream transaction will go out of. If you do not connect an address decoder then all transactions will go out of port 0.
dbgen	Signal	Slave	Invasive debug enable.
errirq	Signal	Master	Indicates that an error response, DECERR or SLVERR, is received on the RRESP, BRESP, or CRRESP input signals, and it cannot be signaled precisely.
evntcntoverflow[8]	Signal	Master	Overflow flags for the PMU clock and counters.
niden	Signal	Slave	Non-invasive debug enable.
pvbus_m[6]	PVBus	Master	Bus master ports.
pvbus_register_file_s	PVBus	Slave	The slave port of the register file.
pvbus_s[7]	PVBus	Slave	Bus slave ports.
reset_in	Signal	Slave	Reset the interconnect.

Name	Protocol	Type	Description
reset_state_of_upstream_port[7]	Signal	Slave	Tell the interconnect the reset state of the upstream ports, this can be used by the interconnect to check some aspects of the reset sequencing. If you are using force_on_from_start then you <u>must</u> connect these pins.
spiden	Signal	Slave	Secure invasive debug enable.
spniden	Signal	Slave	Secure privileged non-invasive debug enable.

## Parameters for CCI500

### acchannelens0

#### Type

uint64\_t

#### Default value

0x0

For upstream port `pvtbus_s[0]`, if `bit[0] == 0` then DVM messages are permanently disabled from being sent.

If this is an ACE port, then if `bit[1] == 0` then snoop messages are permanently disabled from being sent.

This parameter can be overridden by the signal `acchannelensx[0]`.

For an ACE-Lite port then `bit[1]` is ignored from the parameter, allowing the default value of 0x3 create a functional system without excessive configuration.

### acchannelens1

#### Type

uint64\_t

#### Default value

0x0

For upstream port `pvtbus_s[1]`, if `bit[0] == 0` then DVM messages are permanently disabled from being sent.

If this is an ACE port, then if `bit[1] == 0` then snoop messages are permanently disabled from being sent.

This parameter can be overridden by the signal `acchannelensx[1]`.

For an ACE-Lite port then `bit[1]` is ignored from the parameter, allowing the default value of 0x3 create a functional system without excessive configuration.

**acchannelens2****Type**

uint64\_t

**Default value**

0x0

For upstream port `pvbuss[2]`, if `bit[0] == 0` then DVM messages are permanently disabled from being sent.

If this is an ACE port, then if `bit[1] == 0` then snoop messages are permanently disabled from being sent.

This parameter can be overridden by the signal `acchannelensx[2]`.

For an ACE-Lite port then `bit[1]` is ignored from the parameter, allowing the default value of `0x3` create a functional system without excessive configuration.

**acchannelens3****Type**

uint64\_t

**Default value**

0x0

For upstream port `pvbuss[3]`, if `bit[0] == 0` then DVM messages are permanently disabled from being sent.

If this is an ACE port, then if `bit[1] == 0` then snoop messages are permanently disabled from being sent.

This parameter can be overridden by the signal `acchannelensx[3]`.

For an ACE-Lite port then `bit[1]` is ignored from the parameter, allowing the default value of `0x3` create a functional system without excessive configuration.

**acchannelens4****Type**

uint64\_t

**Default value**

0x0

For upstream port `pvbuss[4]`, if `bit[0] == 0` then DVM messages are permanently disabled from being sent.

If this is an ACE port, then if `bit[1] == 0` then snoop messages are permanently disabled from being sent.

This parameter can be overridden by the signal `acchannelensx[4]`.

For an ACE-Lite port then `bit[1]` is ignored from the parameter, allowing the default value of `0x3` create a functional system without excessive configuration.

### **acchannelens5**

#### **Type**

`uint64_t`

#### **Default value**

`0x0`

For upstream port `pvtbus_s[5]`, if `bit[0] == 0` then DVM messages are permanently disabled from being sent.

If this is an ACE port, then if `bit[1] == 0` then snoop messages are permanently disabled from being sent.

This parameter can be overridden by the signal `acchannelensx[5]`.

For an ACE-Lite port then `bit[1]` is ignored from the parameter, allowing the default value of `0x3` create a functional system without excessive configuration.

### **acchannelens6**

#### **Type**

`uint64_t`

#### **Default value**

`0x0`

For upstream port `pvtbus_s[6]`, if `bit[0] == 0` then DVM messages are permanently disabled from being sent.

If this is an ACE port, then if `bit[1] == 0` then snoop messages are permanently disabled from being sent.

This parameter can be overridden by the signal `acchannelensx[6]`.

For an ACE-Lite port then `bit[1]` is ignored from the parameter, allowing the default value of `0x3` create a functional system without excessive configuration.

### **addr\_width**

#### **Type**

`int`

#### **Default value**

`0x28`

**Description**

The bit-width of the address that the CCI can accept.

**cache\_state\_modelled****Type**

bool

**Default value**

0x1

**Description**

Model the cache state.

**dbgen****Type**

bool

**Default value**

0x1

**Description**

Invasive debug enable. If true, enables the counting of PMU events.

**enable\_logger****Type**

bool

**Default value**

0x0

**Description**

Enable PVBUSLoggers for the downstream ports in the CCI model.

**force\_on\_from\_start****Type**

bool

**Default value**

false

Enables snooping on upstream ports from the start of simulation.

The interconnect will normally start up with snooping/DVM disabled. This parameter enables the upstream system of a port to be snooped if the upstream is not in reset and if ACCHANNELENSx allows it.

No software driver for the interconnect is needed.

Any port that could go into reset must have `reset_state_of_upstream_port[]` reflect the reset state of that upstream system.

Otherwise, the upstream system may receive snoop/DVM messages whilst in reset and may complain that it 'received a snoop request whilst it was in reset'.

Do not use if software is directly controlling the interconnect.

This option does not remove the responsibility of the upstream system to clean any shared dirty data from its caches before going into reset.

### **niden**

#### **Type**

bool

#### **Default value**

0x1

#### **Description**

Whether non-secure events are allowed to be counted in the performance monitor.

### **num\_ace\_lite\_ports**

#### **Type**

int

#### **Default value**

0x5

#### **Description**

The bottom `num_ace_lite_ports` are ACE-Lite+DVM.

### **num\_ace\_ports**

#### **Type**

int

#### **Default value**

0x2

#### **Description**

The top `num_ace_ports` are ACE and support full coherency.

### **number\_of\_phantom\_entries**

#### **Type**

uint64\_t

#### **Default value**

0x0000000000000020

“Number of phantom entries in the cache. Phantom entries are used by certain cache operations to hold temporary data. Usually this should be left at the default value which is safe for all systems containing up to 32 masters.

**qos\_threshold\_upper****Type**

int

**Default value**

0xc

**Description**

Reset value for the QoS threshold register.

**reentrancy\_support****Type**

string

**Default value**

“env”

Must be one of:

**on**

hazard checking per cache line (normal mode)

**off**

no hazard checking (use only for single master systems)

**cacheglobal**

hazard checking globally for cache (not per cache line, testing feature, provokes more hazards than necessary)

**env**take value from `FM_REENTRANCY_SUPPORT` env var, if this is not set use ‘on’**spiden****Type**

bool

**Default value**

true

Secure invasive debug enable. If both `SPIDEN` and `DBGEN` are high, enables the counting of both Non-secure and Secure events.

**spniden****Type**

bool

**Default value**

true

Whether secure and non-secure events are allowed to be counted in the performance monitor

**version**

**Type**

string

**Default value**

«»

The version of the interconnect.

Allowed versions are:

- r0p0
- r0p2
- r1p0

3.10.7 CCI550

Cache Coherent Interconnect for AXI4 ACE. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-866: IP revisions support

Revision	Quality level
r0p0	Full support
r1p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

Differences between the model and the RTL

Address Decoder

- Only supports striping down to 4KiB.
- If the address decoder aborts the access, returns SLVERR rather than DECERR.

Interfaces

- The model does not implement the Q-Channel and P-Channel interfaces.

Performance Monitoring Unit

- PMU counters recognize only a few event sources:
  - Slave interface events:

- 3      ReadOnce.
- 4      ReadClean, ReadShared, ReadNotSharedDirty, ReadUnique.
- 5      MakeUnique, CleanUnique.
- 6      CleanInvalid, CleanShared, MakeInvalid.
- 7      DVM transaction received from upstream.
- 9      Read data that is satisfied by a snoop request.

- No events are implemented for the global events or for the master events.
- The PMU does not implement the event bus (EVNTBUS).

### Reset signal sampling

- The configuration ports `acchannelensx[]` are sampled in the hardware when coming out of reset. In the model, these ports are sampled at the first transaction to a `pvbus_s` port or to the register file.

### Status Register, change-pending, and DVM messages

- The Status Register provides information on when the last transaction that could have observed an old value of a snoop or DVM enable has finished in the upstream system. Therefore a port that has been disabled can now have the system upstream of that port turned off. The model does not track DVM messages in the upstream system.

### Snoop filter RAMs

- The CCI-550 hardware has a snoop filter that reduces the number of snoop requests that the interconnect has to make. The model does not have a snoop filter and could make more snoop requests than the hardware would. This difference has no programmer-visible effect.
- The Status Register fields that relate to the power state of the Snoop filter RAMs are undefined.

### Registers

- The following registers provide storage but have no effect on the model.
  - QoS registers.
  - Interface monitor registers. These registers are intended for silicon debug.

### Iris and MTI instances for CCI550

This model has the following Iris instances:

**Table 3-867: CCI550 Iris instances**

InstanceName	ComponentName
CCI550	CCI550
CCI550.pvbus_register_file_s[0]	PVBusSlave
CCI550.upstream[0]	PVBusSlave
CCI550.upstream[1]	PVBusSlave
CCI550.upstream[2]	PVBusSlave
CCI550.upstream[3]	PVBusSlave
CCI550.upstream[4]	PVBusSlave
CCI550.upstream[5]	PVBusSlave
CCI550.upstream[6]	PVBusSlave

This model has the following MTI trace components:

**Table 3-868: CCI550 MTI instances**

InstanceName	ComponentName
CCI550	CCI550
CCI550.pvbus_register_file_s[0]	PVBusSlave
CCI550.upstream[0]	PVBusSlave
CCI550.upstream[1]	PVBusSlave
CCI550.upstream[2]	PVBusSlave
CCI550.upstream[3]	PVBusSlave
CCI550.upstream[4]	PVBusSlave
CCI550.upstream[5]	PVBusSlave
CCI550.upstream[6]	PVBusSlave

## Ports for CCI550

**Table 3-869: Ports**

Name	Protocol	Type	Description
acchannelensx[7]	Value	Slave	The acchannelensx[N] pins are used to tell the interconnect if the upstream system will accept snoops and/or DVM messages.
address_decoder	CCI500_AddressDecoderProtocol	Master	An address decoder can be attached to the address_decoder port to choose which pvbus_s port a downstream transaction will go out of. If you do not connect an address decoder then all transactions will go out of port 0.
dbgen	Signal	Slave	Invasive debug enable.
errirq	Signal	Master	Some async error was detected.
evntcntoverflow[8]	Signal	Master	The output interrupts of the event counters.
niden	Signal	Slave	Non-invasive debug enable.
pvbus_m[7]	PVBus	Master	The downstream master ports.

Name	Protocol	Type	Description
pvbus_register_file_s	PVBus	Slave	The slave port of the register file.
pvbus_s[7]	PVBus	Slave	Bus slave ports.
reset_in	Signal	Slave	Reset the interconnect.
reset_state_of_upstream_port[7]	Signal	Slave	Tell the interconnect the reset state of the upstream ports, this can be used by the interconnect to check some aspects of the reset sequencing. If you are using force_on_from_start then you _must_ connect these pins.
sci_s[7]	SystemCoherencyInterface	Slave	The System Coherency Interface bus. For those upstream ports that have a corresponding bit set in the bitmap of si_system_coherency_interface then the corresponding sci_m port can be used to move the upstream system into and out of the coherency domain.
spiden	Signal	Slave	Secure privileged invasive debug enable.
spniden	Signal	Slave	Secure privileged non-invasive debug enable.

## Parameters for CCI550

### acchannelens0

#### Type

int

#### Default value

0x0

#### Description

For upstream port 0 determine if it is enabled or not w.r.t. snoop requests.

### acchannelens1

#### Type

int

#### Default value

0x0

#### Description

For upstream port 1 determine if it is enabled or not w.r.t. snoop requests.

### acchannelens2

#### Type

int

#### Default value

0x0

#### Description

For upstream port 2 determine if it is enabled or not w.r.t. snoop requests.

**acchannelens3****Type**

int

**Default value**

0x0

**Description**

For upstream port 3 determine if it is enabled or not w.r.t. snoop requests.

**acchannelens4****Type**

int

**Default value**

0x0

**Description**

For upstream port 4 determine if it is enabled or not w.r.t. snoop requests.

**acchannelens5****Type**

int

**Default value**

0x0

**Description**

For upstream port 5 determine if it is enabled or not w.r.t. snoop requests.

**acchannelens6****Type**

int

**Default value**

0x0

**Description**

For upstream port 6 determine if it is enabled or not w.r.t. snoop requests.

**addr\_width****Type**

int

**Default value**

0x28

**Description**

The bit-width of the address that the CCI can accept.

**cache\_state\_modelled****Type**

bool

**Default value**

0x1

**Description**

Model the cache state.

**dbgen****Type**

bool

**Default value**

0x1

**Description**

Invasive debug enable. If true, enables the counting of PMU events.

**enable\_logger****Type**

bool

**Default value**

0x0

**Description**

Enable PVBUSLoggers for the downstream ports in the CCI model.

**force\_on\_from\_start****Type**

bool

**Default value**

false

The interconnect will normally start up with snooping/DVM disabled.

The parameter `si_system_coherency_interface` determines which connections are managed by the System Coherency Interface (SCI).

For connections that are managed by SCI, then this parameter has no effect.

For all other connections, this parameter enables the upstream system of a port to be snooped if the upstream is not in reset and if `ACCHANNELSENSx` allows it.

No software driver for the interconnect is needed.

Any non-SCI port that could go into reset must have `reset_state_of_upstream_port[]` reflect the reset state of that upstream.

Otherwise, the upstream system may receive snoop/DVM messages whilst in reset and may complain that it 'received a snoop request whilst it was in reset'.

Do not use if software is directly controlling the interconnect. This option does not disavow responsibility of the upstream system to clean any shared dirty data from its caches before going into reset.

### **niden**

#### **Type**

bool

#### **Default value**

0x1

#### **Description**

Whether non-secure events are allowed to be counted in the performance monitor.

### **num\_ace\_lite\_ports**

#### **Type**

uint64\_t

#### **Default value**

0x0000000000000005

The bottom `num_ace_lite_ports` are ACE-Lite+DVM.

### **num\_ace\_ports**

#### **Type**

uint64\_t

#### **Default value**

0x0000000000000002

The top `num_ace_ports` are ACE and support full coherency.

### **number\_of\_phantom\_entries**

#### **Type**

uint64\_t

#### **Default value**

0x0000000000000020

Number of phantom entries in the cache. Phantom entries are used by certain cache operations to hold temporary data. Usually this should be left at the default value which is safe for all systems containing up to 32 masters.

**qos\_threshold\_upper****Type**

int

**Default value**

0xc

**Description**

Reset value for the QoS threshold register.

**reentrancy\_support****Type**

string

**Default value**

"env"

Must be one of:

**on**

hazard checking per cache line (normal mode)

**off**

no hazard checking (use only for single master systems)

**cacheglobal**

hazard checking globally for cache (not per cache line, testing feature, provokes more hazards than necessary)

**env**take value from `FM_REENTRANCY_SUPPORT` env var, if this is not set use 'on'**si0\_qos\_bw\_regulator****Type**

bool

**Default value**

0x0

**Description**

For upstream port 0 determine if it has a BW regulator. The effect of QoS is not modelled and this parameter only alters some registers.

**si1\_qos\_bw\_regulator****Type**

bool

**Default value**

0x0

**Description**

For upstream port 1 determine if it has a BW regulator. The effect of QoS is not modelled and this parameter only alters some registers.

**si2\_qos\_bw\_regulator****Type**

bool

**Default value**

0x0

**Description**

For upstream port 2 determine if it has a BW regulator. The effect of QoS is not modelled and this parameter only alters some registers.

**si3\_qos\_bw\_regulator****Type**

bool

**Default value**

0x0

**Description**

For upstream port 3 determine if it has a BW regulator. The effect of QoS is not modelled and this parameter only alters some registers.

**si4\_qos\_bw\_regulator****Type**

bool

**Default value**

0x0

**Description**

For upstream port 4 determine if it has a BW regulator. The effect of QoS is not modelled and this parameter only alters some registers.

**si5\_qos\_bw\_regulator****Type**

bool

**Default value**

0x0

**Description**

For upstream port 5 determine if it has a BW regulator. The effect of QoS is not modelled and this parameter only alters some registers.

**si6\_qos\_bw\_regulator****Type**

bool

**Default value**

0x0

**Description**

For upstream port 6 determine if it has a BW regulator. The effect of QoS is not modelled and this parameter only alters some registers.

**si\_system\_coherency\_interface****Type**

uint64\_t

**Default value**

0x0000000000000000

This parameter tells the interconnect which upstream ports should be controlled by the System Coherency Interface.

Each bit corresponds to an upstream port, bit 0 to upstream port 0, etc.

If the SCI port is connected but `si_system_coherency_interface` disables its use then messages from the upstream will be ignored and software must manage the upstream system's entrance and exit of the coherency domain.

**spiden****Type**

bool

**Default value**

true

Secure invasive debug enable.

If both `SPIDEN` and `DBGEN` are high, enables the counting of both Non-secure and Secure events.

**spniden****Type**

bool

**Default value**

true

Whether secure and non-secure events are allowed to be counted in the performance monitor

**version**

**Type**  
string

**Default value**  
"0"

The version of the interconnect. Allowed versions are:

- r0p0
- r1p0

3.10.8 CCN502

CCN502 Interconnect Fast Model. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-870: IP revisions support

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

About CCN502

CCN502 can be used for connecting components using the ACE and ACE-Lite interfaces. It has an L3 cache that can provide coherency between up to four fully-coherent ACE clusters and nine I/O coherent masters. It can connect up to two memory elements to drive transaction requests. This interconnect can be configured to support six or eight crosspoints, both of which are implemented in the model.

CCN502 has three or five downstream ports, depending on the number of crosspoints:

- Two or four SN-F ports for the memory controller
- One Acelite port (HNI)

The CCN502 parameters are not exposed through CADI, but can be seen in `ccn502.lisa`. Some useful parameters are:

- `cache_state_modelled`
- `cache_size_in_kbytes`
- `systemaddrmap`
- `variant_name`

CCN-502 supports up to 4 SN-Fs. To enable 4 SN-Fs in the model, set the `variant_name` parameter to `CCN502_8XP`, which means the 8XP/4HNF configuration.

## Limitations

The model has the following limitations:

- No support for 3 SN stripping.
- If there are multiple SN-Fs, the distribution of addresses to each SN-F is not guaranteed to match the hardware.
- The parameters for the CCNCache subcomponent are not accessible in System Canvas.

## Iris and MTI instances for CCN502

This model has the following Iris instances:

**Table 3-871: CCN502 Iris instances**

InstanceName	ComponentName
CCN502	CCN5XX
CCN502.bus_slave_ocm	PVBusSlave
CCN502.ccn502_hni_exclusive_monitor_0	PVBusExclusiveMonitor

## Ports for CCN502

**Table 3-873: Ports**

Name	Protocol	Type	Description
pvbus_m_hni[1]	PVBus	Master	HNI downstream port.
pvbus_m_snf[4]	PVBus	Master	SNF downstream ports.
pvbus_s_rnf[4]	PVBus	Slave	RNF upstream ports.
pvbus_s_rni[9]	PVBus	Slave	RNI upstream ports
reset_in	Signal	Slave	Reset signal.

## Parameters for CCN502

### **acchannelen\_rnf**

#### Type

int

#### Default value

0xf

#### Description

For each upstream port, determine if it is enabled or not w.r.t. snoop requests.

### **acchannelen\_rni**

#### Type

int

#### Default value

0x1ff

#### Description

For each upstream port, determine if it is enabled or not w.r.t. dvm requests.

**cache\_size\_in\_kbytes****Type**

int

**Default value**

0x1000

**Description**

Number of kilo bytes in cache.

**cache\_state\_modelled****Type**

bool

**Default value**

0x1

**Description**

Model the cache state.

**ccn\_cache.acchannelen\_rnf****Type**

int

**Default value**

0xf

**Description**

For each upstream port, determine if it is enabled or not w.r.t. snoop requests.

**ccn\_cache.acchannelen\_rni****Type**

int

**Default value**

0xffff

**Description**

For each upstream port, determine if it is enabled or not w.r.t. dvm requests.

**ccn\_cache.cache\_size\_kb****Type**

int

**Default value**

0x2000

**Description**

Number of kilo bytes in cache.

**ccn\_cache.cache\_state\_modelled****Type**

bool

**Default value**

0x1

**Description**

Model the cache state.

**ccn\_cache.force\_on\_from\_start****Type**

bool

**Default value**

0x0

**Description**

Enables snooping on upstream ports from the start of simulation. The CCI will normally start up with snooping disabled, however, using this parameter we allow the model to start with snooping enabled without having to program it. This is only setup at simulation reset and not at signal reset. If the upstreams can ever be held in reset then you *\*must\** connect the `reset_state_of_upstream_port_3` and `reset_state_of_upstream_port_4` so that it knows when to disable snoops to the upstream systems. Otherwise, the upstream system will receive snoop messages whilst in reset and it will complain that it 'received a snoop request whilst it was in reset'.

**ccn\_cache.number\_of\_phantom\_entries****Type**

int

**Default value**

0x20

**Description**

Number of phantom entries in the cache. Phantom entries are used by certain cache operations to hold temporary data. Usually this should be left at the default value which is safe for all systems containing up to 32 masters.

**ccn\_cache.periphbase****Type**

int

**Default value**

0x2c000000

**Description**

Value for PERIPHBASE. Only bits [43:24] are used.

**ccn\_cache.reentrancy\_support****Type**

string

**Default value**

env

**Description**

Must be one of: on/off/cacheglobal/env: 'on': hazard checking per cache line (normal mode), 'off': no hazard checking (use only for single master systems), 'cacheglobal': hazard checking globally for cache (not per cache line, testing feature, provokes more hazards than necessary), 'env' (or empty string): take value from FM\_REENTRANCY\_SUPPORT env var, if this is not set use 'on', default is 'env'.

**ccn\_cache.sbas\_bridge\_present****Type**

bool

**Default value**

0x1

**Description**

For each upstream port, determine if it is enabled or not w.r.t. dvm requests.

**ccn\_cache.sbsx\_bridge\_present****Type**

bool

**Default value**

0x1

**Description**

For each upstream port, determine if it is enabled or not w.r.t. dvm requests.

**enable\_logger****Type**

bool

**Default value**

0x0

**Description**

Enable PVBUSLogger for downstream ports.

**force\_on\_from\_start****Type**

bool

**Default value**

false

Enables snooping on upstream ports from the start of simulation.

The CCN502 will normally start up with snooping disabled. However, using this parameter allows the model to start with snooping enabled without having to program it. This is only setup at simulation reset and not at signal reset

**number\_of\_snf****Type**

int

**Default value**

0x2

**Description**

Number of SNF nodes present.

**periphbase****Type**

int

**Default value**

0x2c000000

**Description**

Value for PERIPHBASE. Only bits [43:24] are used.

**sbsx\_bridge\_present****Type**

bool

**Default value**

0x1

**Description**

For each upstream port, determine if it is enabled or not w.r.t. dvm requests.

**systemaddrmap****Type**

int

**Default value**

0x0

**Description**

Bitmap for 20 regions in CCN Interconnect. Every two bits describes the region type for corresponding region.

**variant\_name**

**Type**

string

**Default value**

"CCN502\_6XP"

**Description**

Can be either CCN502\_6XP or CCN502\_8XP.

3.10.9 CCN504

CCN504 Interconnect Fast Model. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-874: IP revisions support

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

About CCN504

CCN504 has three downstream ports:

- Two SNF ports for the memory controller
- One Acelite port (HNI)

The parameters for the ccncache subcomponent are not accessible in System Canvas.

Iris and MTI instances for CCN504

This model has the following Iris instances:

Table 3-875: CCN504 Iris instances

InstanceName	ComponentName

## Ports for CCN504

**Table 3-877: Ports**

Name	Protocol	Type	Description
pvbus_m_hni[1]	PVBus	Master	HNI downstream port.
pvbus_m_snf[2]	PVBus	Master	SNF downstream ports.
pvbus_s_rnf[4]	PVBus	Slave	RNF upstream ports.
pvbus_s_rni[18]	PVBus	Slave	RNI upstream ports.
reset_in	Signal	Slave	Reset signal.

## Parameters for CCN504

### **acchannelen\_rnf**

**Type**

int

**Default value**

0xf

**Description**

For each upstream port, determine if it is enabled or not w.r.t. snoop requests.

### **acchannelen\_rni**

**Type**

int

**Default value**

0x3ffff

**Description**

For each upstream port, determine if it is enabled or not w.r.t. dvm requests.

### **cache\_size\_in\_mbytes**

**Type**

int

**Default value**

0x8

**Description**

Number of mega bytes in cache.

### **cache\_state\_modelled**

**Type**

bool

**Default value**

0x1

**Description**

Model the cache state.

### **ccn\_cache.acchannelen\_rnf**

**Type**

int

**Default value**

0xf

**Description**

For each upstream port, determine if it is enabled or not w.r.t. snoop requests.

**ccn\_cache.acchannelen\_rni**

**Type**

int

**Default value**

0xffff

**Description**

For each upstream port, determine if it is enabled or not w.r.t. dvm requests.

**ccn\_cache.cache\_size\_kb**

**Type**

int

**Default value**

0x2000

**Description**

Number of kilo bytes in cache.

**ccn\_cache.cache\_state\_modelled**

**Type**

bool

**Default value**

0x1

**Description**

Model the cache state.

**ccn\_cache.force\_on\_from\_start**

**Type**

bool

**Default value**

0x0

**Description**

Enables snooping on upstream ports from the start of simulation. The CCI will normally start up with snooping disabled, however, using this parameter we allow the model to start with snooping enabled without having to program it. This is only setup at simulation reset and not at signal reset. If the upstreams can ever be held in reset then you *\*must\** connect the `reset_state_of_upstream_port_3` and `reset_state_of_upstream_port_4` so that it knows when to disable snoops to the upstream systems. Otherwise, the upstream system will receive snoop messages whilst in reset and it will complain that it 'received a snoop request whilst it was in reset'.

**ccn\_cache.number\_of\_phantom\_entries****Type**

int

**Default value**

0x20

**Description**

Number of phantom entries in the cache. Phantom entries are used by certain cache operations to hold temporary data. Usually this should be left at the default value which is safe for all systems containing up to 32 masters.

**ccn\_cache.periphbase****Type**

int

**Default value**

0x2c000000

**Description**

Value for PERIPHBASE. Only bits [43:24] are used.

**ccn\_cache.reentrancy\_support****Type**

string

**Default value**

env

**Description**

Must be one of: on/off/cacheglobal/env: 'on': hazard checking per cache line (normal mode), 'off': no hazard checking (use only for single master systems), 'cacheglobal': hazard checking globally for cache (not per cache line, testing feature, provokes more hazards than necessary), 'env' (or empty string): take value from FM\_REENTRANCY\_SUPPORT env var, if this is not set use 'on', default is 'env'.

**ccn\_cache.sbas\_bridge\_present****Type**

bool

**Default value**

0x1

**Description**

For each upstream port, determine if it is enabled or not w.r.t. dvm requests.

**ccn\_cache.sbsx\_bridge\_present****Type**

bool

**Default value**

0x1

**Description**

For each upstream port, determine if it is enabled or not w.r.t. dvm requests.

**disable\_hni\_cacheable\_error****Type**

bool

**Default value**

0x0

**Description**

Disable sending error response when HNI receives cacheable access.

**enable\_logger****Type**

bool

**Default value**

0x0

**Description**

Enable PVBUSLoggers for the downstream ports in the CCN model.

**force\_on\_from\_start****Type**

bool

**Default value**

false

Enables snooping on upstream ports from the start of simulation.

The CCN504 will normally start up with snooping disabled. However, using this parameter allows the model to start with snooping enabled without having to program it. This is only setup at simulation reset and not at signal reset.

**number\_of\_snf****Type**

int

**Default value**

0x2

**Description**

Number of SNF nodes present.

**periphbase****Type**

int

**Default value**

0x2c000000

**Description**

Value for PERIPHBASE. Only bits [43:24] are used.

**sbas\_bridge\_present****Type**

bool

**Default value**

0x1

**Description**

For each upstream port, determine if it is enabled or not w.r.t. dvm requests.

**sbsx\_bridge\_present****Type**

bool

**Default value**

0x1

**Description**

For each upstream port, determine if it is enabled or not w.r.t. dvm requests.

**systemaddrmap****Type**

int

**Default value**

0x0

**Description**

Bitmap for 20 regions in CCN Interconnect. Every two bits describes the region type for corresponding region.

### 3.10.10 CCN508

CCN508 Interconnect Fast Model. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-878: IP revisions support**

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### About CCN508

CCN508 has six downstream ports:

- Four SNF ports for the memory controller.
- Two Acelite ports (HNI).

Note

The parameters for the CCNCache subcomponent are not accessible in System Canvas.

pdbus_s_rnf[8]	PVBus	Slave	RNF upstream ports.
pdbus_s_rni[24]	PVBus	Slave	RNI upstream ports.
reset_in	Signal	Slave	Reset signal.

## Parameters for CCN508

### acchannelen\_rnf

#### Type

int

**Default value**

0xf

**Description**

For each upstream port, determine if it is enabled or not w.r.t. snoop requests.

**acchannelen\_rni****Type**

int

**Default value**

0x3ffff

**Description**

For each upstream port, determine if it is enabled or not w.r.t. dvm requests.

**cache\_size\_in\_mbytes****Type**

int

**Default value**

0x8

**Description**

Number of mega bytes in cache.

**cache\_state\_modelled****Type**

bool

**Default value**

0x1

**Description**

Model the cache state.

**ccn\_cache.acchannelen\_rnf****Type**

int

**Default value**

0xf

**Description**

For each upstream port, determine if it is enabled or not w.r.t. snoop requests.

**ccn\_cache.acchannelen\_rni****Type**

int

**Default value**

0xffff

**Description**

For each upstream port, determine if it is enabled or not w.r.t. dvm requests.

**ccn\_cache.cache\_size\_kb****Type**

int

**Default value**

0x2000

**Description**

Number of kilo bytes in cache.

**ccn\_cache.cache\_state\_modelled****Type**

bool

**Default value**

0x1

**Description**

Model the cache state.

**ccn\_cache.force\_on\_from\_start****Type**

bool

**Default value**

0x0

**Description**

Enables snooping on upstream ports from the start of simulation. The CCI will normally start up with snooping disabled, however, using this parameter we allow the model to start with snooping enabled without having to program it. This is only setup at simulation reset and not at signal reset. If the upstreams can ever be held in reset then you *\*must\** connect the reset\_state\_of\_upstream\_port\_3 and reset\_state\_of\_upstream\_port\_4 so that it knows when to disable snoops to the upstream systems. Otherwise, the upstream system will receive snoop messages whilst in reset and it will complain that it 'received a snoop request whilst it was in reset'.

**ccn\_cache.number\_of\_phantom\_entries****Type**

int

**Default value**

0x20

**Description**

Number of phantom entries in the cache. Phantom entries are used by certain cache operations to hold temporary data. Usually this should be left at the default value which is safe for all systems containing up to 32 masters.

**ccn\_cache.periphbase****Type**

int

**Default value**

0x2c000000

**Description**

Value for PERIPHBASE. Only bits [43:24] are used.

**ccn\_cache.reentrancy\_support****Type**

string

**Default value**

env

**Description**

Must be one of: on/off/cacheglobal/env: 'on': hazard checking per cache line (normal mode), 'off': no hazard checking (use only for single master systems), 'cacheglobal': hazard checking globally for cache (not per cache line, testing feature, provokes more hazards than necessary), 'env' (or empty string): take value from FM\_REENTRANCY\_SUPPORT env var, if this is not set use 'on', default is 'env'.

**ccn\_cache.sbas\_bridge\_present****Type**

bool

**Default value**

0x1

**Description**

For each upstream port, determine if it is enabled or not w.r.t. dvm requests.

**ccn\_cache.sbsx\_bridge\_present****Type**

bool

**Default value**

0x1

**Description**

For each upstream port, determine if it is enabled or not w.r.t. dvm requests.

**disable\_hni\_cacheable\_error****Type**

bool

**Default value**

0x0

**Description**

Disable sending error response when HNI receives cacheable access.

**enable\_logger****Type**

bool

**Default value**

0x0

**Description**

Enable PVBUSLoggers for the downstream ports in the CCN model.

**force\_on\_from\_start****Type**

bool

**Default value**

false

Enables snooping on upstream ports from the start of simulation.

The CCN508 will normally start up with snooping disabled. However, using this parameter allows the model to start with snooping enabled without having to program it. This is only setup at simulation reset and not at signal reset.

**number\_of\_snf****Type**

int

**Default value**

0x2

**Description**

Number of SNF nodes present.

**periphbase****Type**

int

**Default value**

0x2c000000

**Description**  
Value for PERIPHBASE. Only bits [43:24] are used.

**sbas\_bridge\_present**

**Type**  
bool

**Default value**  
0x1

**Description**  
For each upstream port, determine if it is enabled or not w.r.t. dvm requests.

**sbsx\_bridge\_present**

**Type**  
bool

**Default value**  
0x1

**Description**  
For each upstream port, determine if it is enabled or not w.r.t. dvm requests.

**systemaddrmap**

**Type**  
int

**Default value**  
0x0

**Description**  
Bitmap for 20 regions in CCN Interconnect. Every two bits describes the region type for corresponding region.

3.10.11 CCN512

CCN512 Interconnect Fast Model. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-882: IP revisions support

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

## About CCN512

CCN512 has an L3 cache that can provide coherency between up to 12 fully-coherent ACE clusters and 24 I/O coherent masters. It can connect up to four memory elements to drive transaction requests.

CCN512 has six downstream ports:

- Four SNF ports for the memory controller
- Two Acelite ports (HNI)

Some useful parameters are:

- `cache_state_modelled`
- `cache_size_in_mbytes`
- `systemaddrmap`

## Limitations

The model has the following limitations:

- No support for 3 SN striping.
- If there are multiple SN-Fs, the distribution of addresses to each SN-F is not guaranteed to match the hardware.
- The parameters for the CCNCache subcomponent are not accessible in System Canvas.

## Iris and MTI instances for CCN512

This model has the following Iris instances:

**Table 3-883: CCN512 Iris instances**

InstanceName	ComponentName
CCN512	CCN5XX

## Ports for CCN512

**Table 3-885: Ports**

Name	Protocol	Type	Description
pdbus_m_hni[2]	PVBus	Master	HNI downstream ports.
pdbus_m_snf[4]	PVBus	Master	SNF downstream ports.
pdbus_s_rnf[12]	PVBus	Slave	RNF upstream ports.
pdbus_s_rni[24]	PVBus	Slave	RNI upstream ports.
reset_in	Signal	Slave	Reset signal.

## Parameters for CCN512

### **acchannelen\_rnf**

**Type**

int

**Default value**

0xfff

**Description**

For each upstream port, determine if it is enabled or not w.r.t. snoop requests.

### **acchannelen\_rni**

**Type**

int

**Default value**

0xffffffff

**Description**

For each upstream port, determine if it is enabled or not w.r.t. dvm requests.

### **cache\_size\_in\_mbytes**

**Type**

int

**Default value**

0x8

**Description**

Number of mega bytes in cache.

### **cache\_state\_modelled**

**Type**

bool

**Default value**

0x1

**Description**

Model the cache state.

### **ccn\_cache.acchannelen\_rnf**

**Type**

int

**Default value**

0xf

**Description**

For each upstream port, determine if it is enabled or not w.r.t. snoop requests.

**ccn\_cache.acchannelen\_rni**

**Type**

int

**Default value**

0xffff

**Description**

For each upstream port, determine if it is enabled or not w.r.t. dvm requests.

**ccn\_cache.cache\_size\_kb**

**Type**

int

**Default value**

0x2000

**Description**

Number of kilo bytes in cache.

**ccn\_cache.cache\_state\_modelled**

**Type**

bool

**Default value**

0x1

**Description**

Model the cache state.

**ccn\_cache.force\_on\_from\_start**

**Type**

bool

**Default value**

0x0

**Description**

Enables snooping on upstream ports from the start of simulation. The CCI will normally start up with snooping disabled, however, using this parameter we allow the model to start with snooping enabled without having to program it. This is only setup at simulation reset and not at signal reset. If the upstreams can ever be held in reset then you *\*must\** connect the reset\_state\_of\_upstream\_port\_3 and reset\_state\_of\_upstream\_port\_4 so that it knows when to disable snoops to the upstream systems. Otherwise, the upstream system will receive snoop messages whilst in reset and it will complain that it 'received a snoop request whilst it was in reset'.

**ccn\_cache.number\_of\_phantom\_entries****Type**

int

**Default value**

0x20

**Description**

Number of phantom entries in the cache. Phantom entries are used by certain cache operations to hold temporary data. Usually this should be left at the default value which is safe for all systems containing up to 32 masters.

**ccn\_cache.periphbase****Type**

int

**Default value**

0x2c000000

**Description**

Value for PERIPHBASE. Only bits [43:24] are used.

**ccn\_cache.reentrancy\_support****Type**

string

**Default value**

env

**Description**

Must be one of: on/off/cacheglobal/env: 'on': hazard checking per cache line (normal mode), 'off': no hazard checking (use only for single master systems), 'cacheglobal': hazard checking globally for cache (not per cache line, testing feature, provokes more hazards than necessary), 'env' (or empty string): take value from FM\_REENTRANCY\_SUPPORT env var, if this is not set use 'on', default is 'env'.

**ccn\_cache.sbas\_bridge\_present****Type**

bool

**Default value**

0x1

**Description**

For each upstream port, determine if it is enabled or not w.r.t. dvm requests.

**ccn\_cache.sbsx\_bridge\_present****Type**

bool

**Default value**

0x1

**Description**

For each upstream port, determine if it is enabled or not w.r.t. dvm requests.

**enable\_logger****Type**

bool

**Default value**

0x0

**Description**

Enbale PVBusLogger for downstream ports.

**force\_on\_from\_start****Type**

bool

**Default value**

false

Enables snooping on upstream ports from the start of simulation.

The CCN512 will normally start up with snooping disabled. However, using this parameter allows the model to start with snooping enabled without having to program it. This is only setup at simulation reset and not at signal reset.

**number\_of\_snf****Type**

int

**Default value**

0x2

**Description**

Number of SNF nodes present.

**periphbase****Type**

int

**Default value**

0x2c000000

**Description**  
Value for PERIPHBASE. Only bits [43:24] are used.

**sbsx\_bridge\_present**

**Type**  
bool

**Default value**  
0x1

**Description**  
For each upstream port, determine if it is enabled or not w.r.t. dvm requests.

**systemaddrmap**

**Type**  
int

**Default value**  
0x0

**Description**  
Bitmap for 20 regions in CCN Interconnect. Every two bits describes the region type for corresponding region.

3.10.12 CHBCR

CXL Host Bridge Component Registers. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-886: IP revisions support

Revision	Quality level
0.0	Alpha support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

Iris and MTI instances for CHBCR

This model has the following Iris instances:

Table 3-887: CHBCR Iris instances

InstanceName	ComponentName
CHBCR	CHBCR

## Ports for CHBCR

**Table 3-888: Ports**

Name	Protocol	Type	Description
apb_bus_s	PVBus	Slave	-
chbcr_map_interrupt_out	Signal	Master	-

## Parameters for CHBCR

### **diagnostics**

#### **Type**

int

#### **Default value**

0x2

#### **Description**

Diagnostics 0-4 (0:FATAL 1:ERROR 2:WARNING 3:INFO 4:DEBUG - DEFAULT==2).

### **num\_decoders**

#### **Type**

int

#### **Default value**

0x10

#### **Description**

Number of Decoders.

### **num\_ports**

#### **Type**

int

#### **Default value**

0x4

#### **Description**

Number of target ports.

## 3.10.13 CI700

CI700 Interconnect Fast Model. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-889: IP revisions support**

Revision	Quality level
r2p0	Full support
r1p0	Full support
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

## About CI700

- Major IP revisions (rX) are modeled and are controlled by the `version` parameter in the topology file. If topology doesn't contain this parameter, then model param 'revision' is used.
- Minor IP revisions (pY) are not modeled. There are no functional differences in the model between pY revisions, with the exception of the `periph_id2` register.
- To configure the model, you must have installed Arm Socrates. The `mesh_config_file` parameter defines the mesh placement of the CHI nodes. Set it to the name of the yaml configuration file emitted by Socrates. You must use version r1p6-00rel0 or later of Socrates to generate the file. For more information about Socrates, see [Arm Socrates](#) on Arm Developer. To download it, contact Arm Technical Support.
- Interconnect models are based on the TRM description and do not typically model RTL defects.

The model supports the following features:

- `rnf`, `rni/rnd`, `hni`, and `snf/sbsx` interface ports. The mapping between the port number and `NodeId` is based on the `NodeId` index. For example, `RNF2` controls `pvbuss_s_rnf[2]`. Its index is specified in the `node_info` register as `logical_id`. Similar behavior can be expected for `HN-I`.

If both `RN-D` and `RN-I` nodes are present, then all starting `rni` ports are mapped to `RN-D` nodes and then the `RN-I` nodes. For example, with two `RN-D` nodes, one `RN-I` node, and given each `RN-I` or `RN-D` node controls three interface ports, `pvbuss_s_rni[0-2]` maps to `RND0`, `pvbuss_s_rni[3-5]` maps to `RND1` and `pvbuss_s_rni[6-8]` maps to `RNI0`.

Similarly, `SN-F` and `SBSX` nodes are mapped to `pvbuss_m_snf[]` ports where starting ports are mapped to `SN-F` and then `SBSX` nodes.

- Mapping `HN*_SLC_SIZE_PARAM` values to cache sizes:

-8

OKB where `HN*_SLC_NUM_WAYS_PARAM=16`

Note

This value is not supported by the model.

-2

128KB where `HN*_SLC_NUM_WAYS_PARAM=16`

**-1**256KB where `HN*_SLC_NUM_WAYS_PARAM=16`**0**512KB where `HN*_SLC_NUM_WAYS_PARAM=16`**1**1MB where `HN*_SLC_NUM_WAYS_PARAM=16`**2**2MB where `HN*_SLC_NUM_WAYS_PARAM=16`**3**3MB where `HN*_SLC_NUM_WAYS_PARAM=12`**3**4MB where `HN*_SLC_NUM_WAYS_PARAM=16`

- The Address Based Flush (ABF) feature is available. After it has started, the ABF completes instantly. The ABF implementation has the following limitations:
  - In the Fast Model, any HN-F in the interconnect can perform an ABF on any address range even if that range is not part of the System Cache Group (SCG) that the HN-F belongs to.
  - Clearing the OCM with an ABF is not supported. A trace has been added to highlight this.
  - When `HNF_ABF_PR.abf_mode` is Reserved and `HNF_ABF_PR.abf_enable` is set, an error is printed and the ABF status register is set to complete successfully, but no operation takes place.
  - Because an ABF completes instantly, the `SF_PM_TRANSITION_ABORT` state cannot be reached. Contact Arm Technical Support with questions about support for this error condition.
  - The optional interrupt `INTREQPPU` is not supported.

## Model limitations

- Out of scope:
  - PMU counters are not supported. Counter registers are implemented as **RAZ**.
  - QoS is not supported and all related registers are **RAZ/WI**.
  - Error injection and error generation are not supported. All error registers are **RAZ/WI**.
  - Power, clock, and interrupt signals are not supported.

The P-channel (power) signals `PREQ_LOGIC`, `PSTATE_LOGIC`, `PACCEPT_LOGIC`, `PDENY_LOGIC`, and `PACTIVE_LOGIC`, are not implemented. The model behaves as if `PSTATE_LOGIC` is 5'b00000. So the initial power state of the HN-F nodes is NOSFSLC/OFF. This is reflected in the reset values of `por_hnf_ppu_pwpr`. Software must write the `*_ppu_pwpr` registers to change the power state. Both HAM and FAM power states enable all of the SLC ways.

- Protocol credits and flit buffers are not supported.
- Snoop filtering is not supported.
- Prefetch Target operations are not supported.

- Non-XY routing behavior is not supported.
- The MTE feature has been minimally tested and the functionality cannot be guaranteed. MTE error injection and detection are not supported.
- An access to a reserved or nonexistent register does not abort. It returns `pv::Tx_Data::TX_OK` and is **RAZ/WI**.
- Topologies with three I/O masters connected through an RN-I bridge device have been tested. Configurations where multiple I/O masters share a single ACE-lite port have not been tested.
- RNSAMs external to the mesh network are not functionally supported.

Model parameter `force_rnsam_internal` is true by default. If this parameter is set to false and the topology has an RNFx (non-ESAM), the external bit (bit[31]) of the RNSAM children pointer is enabled. This bit is the only functionality governed by this parameter.

- By default, HN-F hashing uses the address [MAX:12] instead of the actual address [MAX:6], due to the DMI mechanism in the model. Enable the parameter `enable_rnsam_to_hnf_wider_hash` to make hashing logic use the actual address [MAX:6], but this might reduce the simulation speed of the model.
- OKB SLC data RAM and tag RAM are not supported.
- Source-based SLC cache partitioning is not supported.
- Way-based SLC cache partitioning is not supported.
- SLC/LCC partitioning dynamic allocation is not supported.
- Remote chip addresses incorrectly allocate a line in the SLC when `cache_state_modelled=true`. This can cause unexpected cache behavior that does not match the RTL, exhausting the SLC earlier or extra evictions.
- The fields in the `mvp_device_port_connect_info` register corresponding to the number of device credit slices and the number of CAL credit slices are not supported.
- SN-F hashing in HNSAM is not supported. HNSAM SN-F hashing is a single memory range mapped to multiple SN-Fs. Example HNFSAM\_Mem\_Map:

```
0x00000001000 - 0x00000002000 SNF0 SNF1
```

The model supports mapping HN-F to a single SN-F. Example HNFSAM\_Mem\_Map:

```
0x00000001000 - 0x00000002000 SNF0
0x00000002000 - 0x00000003000 SNF1
```

- HN-Fs with different SLC sizes in the same configuration are not supported.
- Transactions to addresses unused by Device registers in the Configuration Register Space are always routed to the Configuration Space even when the SAM is configured to use those addresses.
- GIC communication over A4S ports is not supported.

- MPAM features are not supported in the model, and the configuration-dependent register reset values do not match the RTL. Some of the registers (`por_hnf_mpam_idr` to `por_hnf_mpam_mbwumon_idr`) shared between security modes are not present in MPAM\_S.
- The MPAM reset values described in `por_hnf_mpam_ns_por_hnf_mpam_idr[31:24]` default to the not-supported state. The model parameter `hnf_mpam_idr_override` can be used to override this but does not implement any of the functionality.
- MPAM\_S `secure_register_groups_override` is not supported.
- MTU `secure_register_groups_override` is not supported.
- No specific Debug Trace (DT) node functionality is supported. See [Plug-ins for Fast Models](#) for information about using plug-ins for trace.
- For Power State Transition related flush/disable of the SLC due to HNF\_PPU\_PWPR register, only the Operational Mode field (bits[7:4]) is considered. The Power Policy field (bits[3:0]) is ignored.
- Setting HAM mode for the Operational Mode field (bits[7:4]) of the HNF\_PPU\_PWPR is equivalent to FAM mode. The SLCH2 is neither flushed nor disabled according to the Power Policy field (bits[3:0]).
- Only hashing granularities of 4096B and above are supported.
- The OCM does not keep track of the total memory used across the S/NS security world and does not perform any eviction either. It is up to the software to make sure it does not oversubscribe the OCM.
- All RNs are assumed to have the same HN mapping. Programming RNSAMs differently between RNs is not supported.
- RNSAM cannot be programmed with the same HN-F target in a hashed and non-hashed memory region.
- `RNSAM_STATUS.default_target_type` and `RNSAM_STATUS.default_nodeid` are used as the default target only when `RNSAM_STATUS.use_default_node=1`. Otherwise, when a txn is sent into the model that does not belong to any of the address regions programmed in the RNSAM, it is routed to the HN-D irrespective of what is programmed in the `RNSAM_STATUS.default_target_type` and `RNSAM_STATUS.default_nodeid` fields.
- Address bit masking is not supported in RNSAM or HN-F SAM.
- For an SCG, the model does not consider the secondary region if the primary region is not valid.
- HN-D is only permitted on device port P2 in a single-MXP configuration.
- No support for RAS.
- Only the last RN-F in the mesh, which is the one with the highest logical id, can be controlled by `mxp_p[0-5]_syscoreq_ctl` registers. Also, incorrectly, it can be controlled from any XP.
- HN-F SAM limitations:
  - Address masking in default hash regions in HN-F SAM is not supported.
  - Hashing in default hash regions in HN-F SAM is not supported. However, trace `SNF_HASHING_Target_SNF` displays the target SNF as if 3SN/6SN hashing were enabled.

**Note**

The transaction is always routed to the SNO nodeid programmed in the SAM\_CONTROL register.

- Re-programming regions in HN-F SAM is not tested.
- POR\_MTU\_TAG\_ADDR\_CTL.memory\_map\_mode=3'b000 (Pass-through) is the only supported behavior. Other values for this field are not supported.
- For RN-D nodes, when software writes SYSCOREQ, DVM propagation gets enabled but SYSCOACK is not set.

### About the debug\_force\_snoop parameter

The interconnect model normally starts up with snooping disabled.

The parameters `rnf_sci_enable` and `rni_sci_enable` determine which connections are managed by the System Coherency Interface. Connections that are managed by the System Coherency Interface look after themselves for entering and leaving the coherency domain and `debug_force_snoop` has no effect on those ports.

However, for connections that are not managed by the System Coherency Interface, `debug_force_snoop` enables the system upstream of a port to be snooped if the upstream is not in reset and if `acchannelen_rnf` allows it.

Therefore, software does not need to know how to turn snoops in the interconnect on and off. The reset state of the upstream `rnf` ports is determined by the `rnf_upstream_reset_state[]` signals and must be connected for any port that could go into reset and you want managed by `debug_force_snoop`.

If the connection is managed by SCI or can never go into reset then you need not connect this and the interconnect assumes that the upstream system is not in reset and will always enable the snoops if `ACCHANNELENSx` allows it.

If you fail to connect `rnf_upstream_reset_state[]` correctly, then the upstream system might receive snoop messages while in reset and it will complain that it received a snoop request while it was in reset.

If software overrides the enables then the next change to `rnf_upstream_reset_state[]` or the interconnect reset will overwrite the software values.

Using this operation along with software controlling the enables could confuse the software. This option does not remove the responsibility of the upstream system to clean any shared dirty data from its caches before going into reset.

This parameter is for debug purposes only. Do not use it instead of correctly configuring the model.

## Iris and MTI instances for CI700

This model has the following Iris instances:

**Table 3-890: CI700 Iris instances**

InstanceName	ComponentName
CI700	CI700
CI700.bus_slave_ocm_NS	PVBusSlave
CI700.bus_slave_ocm_S	PVBusSlave
CI700.ci700_tag_cache	CMN_TAG_CACHE
CI700.ci700_tag_cache.metadata_controller0	MetaDataController
CI700.ci700_tag_cache.metadata_controller0.MetaDataMapper	PVBusMapper
CI700.ci700_tag_cache.metadata_controller1	MetaDataController
CI700.ci700_tag_cache.metadata_controller1.MetaDataMapper	PVBusMapper
CI700.ci700_tag_cache.metadata_controller10	MetaDataController
CI700.ci700_tag_cache.metadata_controller10.MetaDataMapper	PVBusMapper
CI700.ci700_tag_cache.metadata_controller100	MetaDataController
CI700.ci700_tag_cache.metadata_controller100.MetaDataMapper	PVBusMapper
CI700.ci700_tag_cache.metadata_controller101	MetaDataController
CI700.ci700_tag_cache.metadata_controller101.MetaDataMapper	PVBusMapper
CI700.ci700_tag_cache.metadata_controller102	MetaDataController

## Ports for CI700

Table 3-892: Ports

Name	Protocol	Type	Description
event_clusters	Signal	Peer	CPU event communication signal from the clusters.
pvbuss_m_hni[4]	PVBus	Master	HNI downstream ports.
pvbuss_m_snf[8]	PVBus	Master	SNF downstream port.
pvbuss_s_apb	PVBus	Slave	APB interface port.
pvbuss_s_rnf[8]	PVBus	Slave	RNF upstream ports.
pvbuss_s_rni[24]	PVBus	Slave	RNI upstream ports.
reset_in	Signal	Slave	Reset signal.
rnf_sci_s[8]	SystemCoherencyInterface	Slave	System Coherency port to move the RN-F in and out of the coherency domain.
rnf_upstream_reset_in[8]	Signal	Slave	Used by the interconnect to determine the reset state of the RNF manager to check an aspect of reset sequencing. If debug_force_snoop is used, this port must be connected.
rni_sci_s[24]	SystemCoherencyInterface	Slave	System Coherency port to move the RN-D in and out of the coherency domain.
rni_upstream_reset_in[24]	Signal	Slave	Used by the interconnect to determine the reset state of the RNI manager to check an aspect of reset sequencing. If debug_force_snoop is used, this port must be connected.

## Parameters for CI700

**acchannelen\_rnf****Type**

string

**Default value**

"0"

**Note**

DEPRECATED: Will be removed after FM 11.18. Use `rnf_sci_enable` instead.

For each rnf port, indicates if the port is populated with a snoop responding device or not.

The input value is a string, for example `0xffff` or `ffff`

**acchannelen\_rni****Type**

string

**Default value**

"0"

**Note**

DEPRECATED: Will be removed after FM 11.18. Use `rni_sci_enable` instead.

For each `rni` port, indicates if the port is populated with a dvm responding device or not.

The input value is a string, for example `0xffff` or `ffff`

### **bypass\_tag\_cache**

#### **Type**

bool

#### **Default value**

0x0

#### **Description**

If true, CI700 will bypass the tag cache component which provides the MTE support.

### **cache\_state\_modelled**

#### **Type**

bool

#### **Default value**

0x0

#### **Description**

Model the cache state.

### **ci700\_tag\_cache.metadata\_controller.init\_value**

#### **Type**

int

#### **Default value**

0xd

#### **Description**

Initialize metadata memory with this value. If one of `init_values_json` or `init_values_json_file` is specified, this value applies only to any metadata not specified in the JSON.

### **ci700\_tag\_cache.metadata\_controller.init\_values\_json**

#### **Type**

string

#### **Default value**

""

**Description**

A JSON value describing initial metadata values. Mutually exclusive with `init_values_json_file`. The format is as follows: `{"regions": [{ "begin": 0x0, "end": 0x10000, "mte_tag": 0xa }, {"begin": 0x20000, "end": 0x50000, "mte_tag": 0xc }]}`.

**`ci700_tag_cache.metadata_controller.init_values_json_file`****Type**

string

**Default value**

""

**Description**

Path to a JSON file with initial metadata values. Mutually exclusive with `init_values_json`. The format is as follows: `{"regions": [{ "begin": 0x0, "end": 0x10000, "mte_tag": 0xa }, {"begin": 0x20000, "end": 0x50000, "mte_tag": 0xc }]}`.

**`ci700_tag_cache.metadata_controller.is_enabled`****Type**

bool

**Default value**

0x0

**Description**

If false, disables the MetaData controller functionality, and makes the component invisible to passing transactions.

**`ci700_tag_cache.metadata_controller.mte_tag_carveout_json`****Type**

string

**Default value**

""

**Description**

JSON string that specifies the PA range of the tag carveout regions and the beginning of the PA range for which they provide tag storage. If `pa_regions_with_metadata_storage` defines which regions can have metadata, the tag carveout regions cannot overlap them, and each tagged region must be entirely covered by one of them. The block size must be  $\geq 64$  bytes and a power of 2, defaulting to 4KiB. The maximum block size supported is 4KiB. The carveout region size must be  $\geq 4$ KiB and a power of 2, and determines the size of the corresponding tagged region. `{ "regions": [ { "begin": 0x0, "tag_carveout_region": [0xfffff00000, 0xfffff00fff] }, { "begin": 0x20000, "tag_carveout_region": [0xfffff01000, 0xfffff01fff], "block_size": 0x100 }, { "begin": 0x100000, "tag_carveout_region": [0xfffff08000, 0xfffff0Bfff], "block_size": 0x2000 } ] }`.

**ci700\_tag\_cache.metadata\_controller.mte\_tag\_carveout\_json\_file****Type**

string

**Default value**

""

**Description**

Path to a JSON file that specifies the PA range of the tag carveout regions with the same format as mte\_tag\_carveout\_json. Only one of mte\_tag\_carveout\_json and mte\_tag\_carveout\_json\_file can be used. .

**ci700\_tag\_cache.metadata\_controller.mte\_tag\_carveout\_tag\_order****Type**

string

**Default value**

little-endian

**Description**

Order of the tags within the MTE tag carveout blocks. This can be little-endian (same order as the corresponding tagged data) or big-endian (reverse order). The parameter accepts both '-' and '\_', so 'little-endian', 'big-endian', 'little\_endian' and 'big\_endian' are all valid. .

**ci700\_tag\_cache.metadata\_controller.pa\_regions\_with\_metadata\_storage****Type**

string

**Default value**

""

**Description**

Specify the address region where the metadata storage is available for each PAS in a JSON format. If the PAS does not have a region specified, the PAS has metadata storage for all of the space. The regions are defined by begin and end\_incl addresses. Example: { "ns": [0xa0000000, 0xa0000fff], "s": [0xb0000000, 0xb0000fff], "rl": [0xc0000000, 0xc0000fff], "rt": [0xd0000000, 0xd0000fff] } ns: non-secure, s: secure, rl: realm, rt: root.

**debug\_force\_snoop****Type**

bool

**Default value**

false

The CI700 interconnect will normally start with snooping disabled.

The parameter `rnf_sci_enable` and `rni_sci_enable` determines which connections are managed by the System Coherency Interface.

For connections that are managed by the System Coherency Interface, then they will look after themselves for entering and leaving the coherency domain and this parameter has no effect for those ports.

However, for connections that are *not* managed by the System Coherency Interface, this parameter enables the upstream system of a port to be snooped if the upstream is not in reset and if `acchannelen_rnf` allows it.

**Note**

This parameter is for debug purpose only

Do not use this parameter instead of correctly configuring CMN.

---

### **`enable_logger`**

#### **Type**

bool

#### **Default value**

0x0

#### **Description**

Enable PVBUSLoggers for the downstream ports in the CMN model.

### **`enable_rnsam_to_hnf_wider_hash`**

#### **Type**

bool

#### **Default value**

false

Enable support of wider hash for the RNSAM to HNF communication.

If this variable enabled, then `bits[47:6]` from PA used in hashing function.

By default it is `[47:12]`.

### **`force_rnsam_internal`**

#### **Type**

bool

#### **Default value**

0x1

#### **Description**

Force all RNSAMs to be internal independently of the mesh topology.

**hnf\_mpam\_idr\_override****Type**

uint64\_t

**Default value**

0

Set to override hnf\_mpam\_idr[31:24] value. Bit[28] is Reserved and is ignored.

**mesh\_config\_file****Type**

string

**Default value**

""

**Description**

Name of a file containing mesh placement of CI700 components.

**periphbase****Type**

uint64\_t

**Default value**

0x20000000

Value for PERIPHBASE. Bits [27:0] are treated 0

**print\_cmn\_ccix\_config****Type**

bool

**Default value**

0x0

**Description**

Print information about the CCIX configuration.

**print\_cmn\_config****Type**

bool

**Default value**

0x0

**Description**

Print the mesh topology and children pointers acquired from the YML file.

**revision****Type**

string

**Default value**

"r0p0"

Component revision.

Currently supports r2p0, r1p0, r0p0.

**rnf\_sci\_enable****Type**

string

**Default value**

"0x0"

For each rnf port, indicates if the port is managed by System Coherency Interface for coherency domain entry/exit

**1**

Managed by SCI

**0**

Managed by Software

The input value is a string, for example 0xffff or ffff

**rni\_sci\_enable****Type**

string

**Default value**

"0x0"

For each rni port, indicates if the port is managed by System Coherency Interface for coherency domain entry/exit

**1**

Managed by SCI

**0**

Managed by Software

The input value is a string, for example 0xffff or ffff

**show\_banner****Type**

uint64\_t

**Default value**

2

Show component banner:

**0**

supress entire banner

**1**

suppress config file

**2+**

show full banner

**skip\_cmn\_config\_check****Type**

bool

**Default value**

0x0

**Description**

Skip any topology configuration checks. The maximum number of devices per type not verified.

**use\_yaml\_periphbase****Type**

bool

**Default value**

false

Use yaml param CFGM\_PERIPHBASE\_PARAM to specify periphbase address.

If false, model parameter periphbase will be used.

**yaml\_has\_node\_addresses****Type**

bool

**Default value**

0x0

**Description**

Does the top-level YAML file describe node-addresses ?.

### 3.10.14 CMN600

CMN600 Interconnect Fast Model. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-893: IP revisions support**

Revision	Quality level
r1p1	Full support
r3p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### About CMN600

- Major IP revisions (rX) are modeled and are controlled by the `revision` parameter.
- Minor IP revisions (pY) are not modeled. There are no functional differences in the model between pY revisions, with the exception of the `periph_id2` register.
- To configure the model, you must have installed Arm Socrates. The `mesh_config_file` parameter defines the mesh placement of the CHI nodes. Set it to the name of the yml configuration file emitted by Socrates. You must use version r1p4-01rel0 or later of Socrates to generate the file. For more information about Socrates, see [Arm Socrates](#) on Arm Developer. To download it, contact Arm Technical Support.
- Interconnect models are based on the TRM description and do not typically model RTL defects.

The model supports the following features:

- `rnf`, `rni/rnd`, `hni`, and `snf/sbsx` interface ports. The mapping between the port number and `nodeId` is based on the `nodeId` index. For example, RNF2 controls `pvbuss_s_rnf[2]`. Its index is specified in the `node_info` register as `logical_id`. Similar behavior can be expected for HN-I.

If both RN-D and RN-I nodes are present, then all starting `rni` ports are mapped to RN-D nodes and then the RN-I nodes. For example, for CMN600 with two RN-D nodes, one RN-I node, and given each RN-I or RN-D node controls three interface ports, `pvbuss_s_rni[0-2]` maps to RND0, `pvbuss_s_rni[3-5]` maps to RND1 and `pvbuss_s_rni[6-8]` maps to RNI0.

Similarly, SN-F and SBSX nodes are mapped to `pvbuss_m_snf[]` ports where starting ports are mapped to SN-F and then SBSX nodes.

- Mapping HN\*\_SLC\_SIZE\_PARAM values to cache sizes:

-8

OKB where HN\*\_SLC\_NUM\_WAYS\_PARAM=16

**Note**

This value is not supported by the model.

**-2**128KB where `HN*_SLC_NUM_WAYS_PARAM=16`**-1**256KB where `HN*_SLC_NUM_WAYS_PARAM=16`**0**512KB where `HN*_SLC_NUM_WAYS_PARAM=16`**1**1MB where `HN*_SLC_NUM_WAYS_PARAM=16`**2**2MB where `HN*_SLC_NUM_WAYS_PARAM=16`**3**3MB where `HN*_SLC_NUM_WAYS_PARAM=12`**3**4MB where `HN*_SLC_NUM_WAYS_PARAM=16`

- The Address Based Flush (ABF) feature is available. After it has started, the ABF completes instantly. The ABF implementation has the following limitations:
  - In the Fast Model, any HN-F in the interconnect can perform an ABF on any address range even if that range is not part of the System Cache Group (SCG) that the HN-F belongs to.
  - Clearing the OCM with an ABF is not supported. A trace has been added to highlight this.
  - When `HNF_ABF_PR.abf_mode` is Reserved and `HNF_ABF_PR.abf_enable` is set, an error is printed and the ABF status register is set to complete successfully, but no operation takes place.
  - Because an ABF completes instantly, the `SF_PM_TRANSITION_ABORT` state cannot be reached. Contact Arm Technical Support with questions about support for this error condition.
  - The optional interrupt `INTREQPPU` is not supported.

## Model limitations

- Out of scope:
  - PMU counters are not supported. Counter registers are implemented as **RAZ**.
  - QoS is not supported and all related registers are **RAZ/WI**.
  - Error injection and error generation are not supported. All error registers are **RAZ/WI**.
  - Power, clock, and interrupt signals are not supported.

The P-channel (power) signals `PREQ_LOGIC`, `PSTATE_LOGIC`, `PACCEPT_LOGIC`, `PDENY_LOGIC`, and `PACTIVE_LOGIC`, are not implemented. The model behaves as if `PSTATE_LOGIC` is 5'b00000. So the initial power state of the HN-F nodes is NOSFSLC/OFF. This is reflected in the reset values of `cmn_hns_ppu_pwpr`, which was named `por_hnf_ppu_pwpr` in earlier IP revisions. Software must write the `*_ppu_pwpr` registers to change the power state. Both HAM and FAM power states enable all of the SLC ways.

- Protocol credits and flit buffers are not supported.

- Snoop filtering is not supported.
- Prefetch Target operations are not supported.
- The MTE feature has been minimally tested and the functionality cannot be guaranteed. MTE error injection and detection are not supported.
- An access to a reserved or nonexistent register does not abort. It returns `pv::Tx_Data::TX_OK` and is **RAZ/WI**.
- Topologies with three I/O masters connected through an RN-I bridge device have been tested. Configurations where multiple I/O masters share a single ACE-lite port have not been tested.
- RNSAMs external to the mesh network are not functionally supported.

Model parameter `force_rnsam_internal` is true by default. If this parameter is set to false and the topology has an RNFx (non-ESAM), the external bit (bit[31]) of the RNSAM children pointer is enabled. This bit is the only functionality governed by this parameter.

- By default, HN-F hashing uses the address [MAX:12] instead of the actual address [MAX:6], due to the DMI mechanism in the model. Enable the parameter `enable_rnsam_to_hnf_wider_hash` to make hashing logic use the actual address [MAX:6], but this might reduce the simulation speed of the model.
- OKB SLC data RAM and tag RAM are not supported.
- Source-based SLC cache partitioning is not supported.
- Way-based SLC cache partitioning is not supported.
- SLC/LCC partitioning dynamic allocation is not supported.
- Remote chip addresses incorrectly allocate a line in the SLC when `cache_state_modelled=true`. This can cause unexpected cache behavior that does not match the RTL, exhausting the SLC earlier or extra evictions.
- The fields in the `mxp_device_port_connect_info` register corresponding to the number of device credit slices and the number of CAL credit slices are not supported.
- SN-F hashing in HNSAM is not supported. HNSAM SN-F hashing is a single memory range mapped to multiple SN-Fs. Example HNFSAM\_Mem\_Map:

```
0x00000001000 - 0x00000002000 SNF0 SNF1
```

The model supports mapping HN-F to a single SN-F. Example HNFSAM\_Mem\_Map:

```
0x00000001000 - 0x00000002000 SNF0
0x00000002000 - 0x00000003000 SNF1
```

- HN-Fs with different SLC sizes in the same configuration are not supported.
- Transactions to addresses unused by Device registers in the Configuration Register Space are always routed to the Configuration Space even when the SAM is configured to use those addresses.

- GIC communication over A4S ports is not supported.
- CAL (Component Aggregation Layer) r2 and r3 features are supported. These features have limited testing.
- No specific Debug Trace (DT) node functionality is supported. See [Plug-ins for Fast Models](#) for information about using plug-ins for trace.
- For Power State Transition related flush/disable of the SLC due to HNF\_PPU\_PWPR register, only the Operational Mode field (bits[7:4]) is considered. The Power Policy field (bits[3:0]) is ignored.
- Setting HAM mode for the Operational Mode field (bits[7:4]) of the HNF\_PPU\_PWPR is equivalent to FAM mode. The SLCH2 is neither flushed nor disabled according to the Power Policy field (bits[3:0]).
- Only hashing granularities of 4096B and above are supported.
- All RNs are assumed to have the same HN mapping. Programming RNSAMs differently between RNs is not supported.
- RNSAM cannot be programmed with the same HN-F target in a hashed and non-hashed memory region.
- Address bit masking is not supported in RNSAM or HN-F SAM.
- The OCM does not keep track of the total memory used across the S/NS security world and does not perform any eviction either. It is up to the software to make sure it does not oversubscribe the OCM.
- In revision r3p0, for an HTG/SCG, the model does not consider the secondary region if the primary region is not valid.
- There is no support for RAS.
- The following limitations apply to System Cache Groups and Hash Target Groups:
  - A mix of local and remote HN-F targets is not supported.
  - CCG/CXRH target IDs in the HN target ID table are not supported (`sys_cache_grp_hn_nodeid_reg`).
  - The `hashed_target_grp_hnp_nodeid_reg` which is used for CCG/HN-P target IDs is not supported.
  - System/Hash Target Groups only support HN-Fs.
  - AXID hashing across HN-P/CCGs is not supported.
- HN-F SAM:
  - Address masking in default hash regions in HN-F SAM is not supported.
  - Hashing in default hash regions in HN-F SAM is not supported. However, trace `SNF_HASHING_Target_SNF` displays the target SNF as if 3SN/6SN hashing were enabled.

The transaction is always routed to the SN0 nodeid programmed in the SAM\_CONTROL register.

- Re-programming regions in HN-F SAM is not tested.
- Hashing across CCGs in HN-F SAM is not supported.
- For RN-D nodes, when software writes SYSCOREQ, DVM propagation gets enabled but SYSCOACK is not set.

### About the `debug_force_snoop` parameter

The CMN interconnect normally starts up with snooping disabled.

The parameters `rnf_sci_enable` and `rni_sci_enable` determine which connections are managed by the System Coherency Interface. Connections that are managed by the System Coherency Interface look after themselves for entering and leaving the coherency domain and `debug_force_snoop` has no effect on those ports.

However, for connections that are not managed by the System Coherency Interface, `debug_force_snoop` enables the system upstream of a port to be snooped if the upstream is not in reset and if `acchannelen_rnf` allows it.

Therefore, software does not need to know how to turn snoops in the interconnect on and off. The reset state of the upstream `rnf` ports is determined by the `rnf_upstream_reset_state[]` signals and must be connected for any port that could go into reset and you want managed by `debug_force_snoop`.

If the connection is managed by SCI or can never go into reset then you need not connect this and the interconnect assumes that the upstream system is not in reset and will always enable the snoops if `ACCHANNELENSx` allows it.

If you fail to connect `rnf_upstream_reset_state[]` correctly, then the upstream system might receive snoop messages while in reset and it will complain that it received a snoop request while it was in reset.

If software overrides the enables then the next change to `rnf_upstream_reset_state[]` or the interconnect reset will overwrite the software values.

Using this operation along with software controlling the enables could confuse the software. This option does not remove the responsibility of the upstream system to clean any shared dirty data from its caches before going into reset.

This parameter is for debug purposes only. Do not use it instead of correctly configuring CMN.

---

### Iris and MTI instances for CMN600

This model has the following Iris instances:

**Table 3-894: CMN600 Iris instances**

InstanceName	ComponentName
CMN600	CMN600
CMN600.bus_slave_ocm_NS	PVBusSlave
CMN600.bus_slave_ocm_S	PVBusSlave
CMN600.cmn600_cache	CMN600Cache
CMN600.cmn600_cache.upstream[0]	PVBusSlave
CMN600.cmn600_cache.upstream[10]	PVBusSlave
CMN600.cmn600_cache.upstream[11]	PVBusSlave
CMN600.cmn600_cache.upstream[12]	PVBusSlave
CMN600.cmn600_cache.upstream[13]	PVBusSlave
CMN600.cmn600_cache.upstream[14]	PVBusSlave
CMN600.cmn600_cache.upstream[15]	PVBusSlave
CMN600.cmn600_cache.upstream[16]	PVBusSlave
CMN600.cmn600_cache.upstream[17]	PVBusSlave
CMN600.cmn600_cache.upstream[1]	PVBusSlave
CMN600.cmn600_cache.upstream[2]	PVBusSlave
CMN600.cmn600_cache.upstream[3]	PVBusSlave
CMN600.cmn600_cache.upstream[4]	PVBusSlave
CMN600.cmn600_cache.upstream[5]	PVBusSlave
CMN600.cmn600_cache.upstream[6]	PVBusSlave
CMN600.cmn600_cache.upstream[7]	PVBusSlave

## Ports for CMN600

**Table 3-896: Ports**

Name	Protocol	Type	Description
event_clusters	Signal	Peer	CPU event communication signal from the clusters.
event_downstream_link_signal[6]	Signal	Master	CPU event communication signal to the CMLHub. Event from the CMN towards the Hub NOTE that these are virtual "links" on underlying PCIe hardware bus.
event_upstream_link_signal[6]	Signal	Slave	Event from the Hub towards the CMN
pvbus_m_cml	PVBus	Master	CML downstream ports
pvbus_m_cml_cfg	PVBus	Master	CML downstream hub configuration port
pvbus_m_hni[8]	PVBus	Master	HNI downstream ports.
pvbus_m_snf[16]	PVBus	Master	SNF downstream port.

Name	Protocol	Type	Description
pvbuss_s_cml	PVBus	Slave	CML upstream ports
pvbuss_s_rnf[64]	PVBus	Slave	RNF upstream ports.
pvbuss_s_rni[96]	PVBus	Slave	RNI upstream ports.
reset_in	Signal	Slave	Reset signal.
rnf_sci_s[64]	SystemCoherencyInterface	Slave	System Coherency port to move the RN-F in and out of the coherency domain.
rnf_upstream_reset_in[64]	Signal	Slave	Used by the interconnect to determine the reset state of the RNF manager to check an aspect of reset sequencing. If debug_force_snoop is used, this port must be connected.
rni_sci_s[96]	SystemCoherencyInterface	Slave	System Coherency port to move the RN-D in and out of the coherency domain.
rni_upstream_reset_in[96]	Signal	Slave	Used by the interconnect to determine the reset state of the RNI manager to check an aspect of reset sequencing. If debug_force_snoop is used, this port must be connected.

## Parameters for CMN600

### **acchannelen\_rnf**

#### Type

string

#### Default value

"0"

DEPRECATED: Will be removed after FM 11.18. Use `rnf_sci_enable` instead.

For each rnf port, indicates if the port is populated with a snoop responding device or not.

The input value is a string, for example `0xffff` or `ffff`

### **acchannelen\_rni**

#### Type

string

#### Default value

"0"

DEPRECATED: Will be removed after FM 11.18. Use `rni_sci_enable` instead.

For each `rni` port, indicates if the port is populated with a dvm responding device or not.

The input value is a string, for example `0xffff` or `fff`

### **cache\_state\_modelled**

#### **Type**

bool

#### **Default value**

0x0

#### **Description**

Model the cache state.

### **debug\_force\_snoop**

#### **Type**

bool

#### **Default value**

false

The CMN600 interconnect will normally start with snooping disabled.

The parameter `rnf_sci_enable` and `rni_sci_enable` determines which connections are managed by the System Coherency Interface.

For connections that are managed by the System Coherency Interface, then they will look after themselves for entering and leaving the coherency domain and this parameter has no effect for those ports.

However, for connections that are *not* managed by the System Coherency Interface, this parameter enables the upstream system of a port to be snooped if the upstream is not in reset and if `acchannelen_rnf` allows it.

This parameter is for debug purpose only

Do not use this parameter instead of correctly configuring CMN.

---

### **disable\_CML\_port**

#### **Type**

bool

#### **Default value**

0x0

**Description**

If true the model won't connect the CML port when there are nodes which support the CML feature (ie CXG nodes).

**enable\_logger****Type**

bool

**Default value**

0x0

**Description**

Enable PVBusLoggers for the downstream ports in the CMN model.

**enable\_rnsam\_to\_hnf\_wider\_hash****Type**

bool

**Default value**

false

Enable support of wider hash for the RNSAM to HNF communication.

If this variable enabled, then `bits[47:6]` from PA used in hashing function.

By default it is `[47:12]`.

**force\_rnsam\_internal****Type**

bool

**Default value**

0x1

**Description**

Force all RNSAMs to be internal independently of the mesh topology.

**mesh\_config\_file****Type**

string

**Default value**

""

**Description**

Name of a file containing mesh placement of CMN600 components.

**periphbase****Type**

uint64\_t

**Default value**

0x20000000

Value for PERIPHBASE. Bits [25:0] are treated 0

**print\_cmn\_ccix\_config****Type**

bool

**Default value**

0x0

**Description**

Print information about the CCIX configuration.

**print\_cmn\_config****Type**

bool

**Default value**

0x0

**Description**

Print the mesh topology and children pointers acquired from the YAML file.

**revision****Type**

string

**Default value**

"r1p1"

Component revision.

Currently supports r1p1, r3p0.

**rnf\_sci\_enable****Type**

string

**Default value**

"0x0"

For each rnf port, indicates if the port is managed by System Coherency Interface for coherency domain entry/exit

**1**

Managed by SCI

**0**

Managed by Software

The input value is a string, for example 0xffff or ffff

### **rni\_sci\_enable**

#### **Type**

string

#### **Default value**

"0x0"

For each rni port, indicates if the port is managed by System Coherency Interface for coherency domain entry/exit

**1**

Managed by SCI

**0**

Managed by Software

The input value is a string, for example 0xffff or ffff

### **show\_banner**

#### **Type**

uint64\_t

#### **Default value**

2

Show component banner:

**0**

suppress entire banner

**1**

suppress config file

**2+**

show full banner

### **skip\_cmn\_config\_check**

#### **Type**

bool

**Default value**

0x0

**Description**

Skip any topology configuration checks. The maximum number of devices per type not verified.

**use\_yaml\_periphbase**

**Type**

bool

**Default value**

false

Use yaml param CFGM\_PERIPHBASE\_PARAM to specify periphbase address.

If false, model parameter periphbase will be used.

3.10.15 CMN600AE

CMN600AE Interconnect Fast Model. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-897: IP revisions support

Revision	Quality level
r1p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

About CMN600AE

- Major IP revisions (rX) are modeled and are controlled by the revision parameter.
- Minor IP revisions (pY) are not modeled. There are no functional differences in the model between pY revisions, with the exception of the periph\_id2 register.
- To configure the model, you must have installed Arm Socrates. The mesh\_config\_file parameter defines the mesh placement of the CHI nodes. Set it to the name of the yaml configuration file emitted by Socrates. You must use version r1p4-01rel0 or later of Socrates to generate the file. For more information about Socrates, see [Arm Socrates](#) on Arm Developer. To download it, contact Arm Technical Support.
- Interconnect models are based on the TRM description and do not typically model RTL defects.

The CMN600AE model supports the following features:

- rnf, rni/rnd, hni, and snf/sbsx interface ports. The mapping between the port number and NodeId is based on the NodeId index. For example, RNF2 controls pvbuss\_rnf[2]. Its index is specified in the node\_info register as logical\_id. Similar behavior can be expected for HN-I.

If both RN-D and RN-I nodes are present, then all starting rni ports are mapped to RN-D nodes and then the RN-I nodes. For example, for CMN600AE with two RN-D nodes, one RN-I node, and given each RN-I or RN-D node controls three interface ports, `pvbuss_s_rni[0-2]` maps to RND0, `pvbuss_s_rni[3-5]` maps to RND1 and `pvbuss_s_rni[6-8]` maps to RNI0. Similarly, SN-F and SBSX nodes are mapped to `pvbuss_m_snf[]` ports where starting ports are mapped to SN-F and then SBSX nodes.

- Mapping HN\*\_SLC\_SIZE\_PARAM values to cache sizes:

**-8**

0KB when HN\*\_SLC\_NUM\_WAYS\_PARAM=16

Note

This value is not supported by the model.

**-2**

128KB when HN\*\_SLC\_NUM\_WAYS\_PARAM=16

**-1**

256KB when HN\*\_SLC\_NUM\_WAYS\_PARAM=16

**0**

512KB when HN\*\_SLC\_NUM\_WAYS\_PARAM=16

**1**

1MB when HN\*\_SLC\_NUM\_WAYS\_PARAM=16

**2**

2MB when HN\*\_SLC\_NUM\_WAYS\_PARAM=16

**3**

3MB when HN\*\_SLC\_NUM\_WAYS\_PARAM=12

**3**

4MB when HN\*\_SLC\_NUM\_WAYS\_PARAM=16

- Maximum number of nodes that have been verified are:
  - 7 RN-Fs
  - 2 RN-Ds
  - 3 RN-Is
  - 1 HN-I
  - 4 HN-Fs
  - 1 SN-F
- The Address Based Flush (ABF) feature is available. After it has started, the ABF completes instantly. The ABF implementation has the following limitations:
  - In the Fast Model, any HN-F in the interconnect can perform an ABF on any address range even if that range is not part of the System Cache Group (SCG) that the HN-F belongs to.

- Clearing the OCM with an ABF is not supported. A trace has been added to highlight this.
- When `HNF_ABF_PR.abf_mode` is Reserved and `HNF_ABF_PR.abf_enable` is set, an error is printed and the ABF status register is set to complete successfully, but no operation takes place.
- Because an ABF completes instantly, the `SF_PM_TRANSITION_ABORT` state cannot be reached. Contact Arm Technical Support with questions about support for this error condition.
- The optional interrupt `INTREQPPU` is not supported.
- This model implements the following AE-specific features:
  - Memory Protection Unit (MPU), with limitations listed in the Model limitations section.
  - FuSa error logging and reporting using a Fault Management Unit (FMU) and Fault Detection and Control (FDC).
  - Dedicated APB interface into FMU for fault diagnostics and control.

## Model limitations

- Out of scope:
    - PMU counters are not supported. Counter registers are implemented as **RAZ**.
    - QoS is not supported and all related registers are **RAZ/WI**.
    - Error injection and error generation are not supported. All error registers are **RAZ/WI**.
    - Power, clock, and interrupt signals are not supported.
- The P-channel (power) signals `PREQ_LOGIC`, `PSTATE_LOGIC`, `PACCEPT_LOGIC`, `PDENY_LOGIC`, and `PACTIVE_LOGIC`, are not implemented. The model behaves as if `PSTATE_LOGIC` is 5'b00000. So the initial power state of the HN-F nodes is NOSFSLC/OFF. This is reflected in the reset values of `cmn_hns_ppu_pwpr`, which was named `por_hnf_ppu_pwpr` in earlier IP revisions. Software must write the `*_ppu_pwpr` registers to change the power state. Both HAM and FAM power states enable all of the SLC ways.
- Protocol credits and flit buffers are not supported.
  - Snoop filtering is not supported.
  - Prefetch Target operations are not supported.
  - The MTE feature has been minimally tested and the functionality cannot be guaranteed. MTE error injection and detection are not supported.
  - An access to a reserved or nonexistent register does not abort. It returns `pv::Tx_Data::TX_OK` and is **RAZ/WI**.
  - Topologies with three I/O masters connected through an RN-I bridge device have been tested. Configurations where multiple I/O masters share a single ACE-Lite port have not been tested.
  - RNSAMs external to the mesh network are not functionally supported.

Note

Model parameter `force_rnsam_internal` is true by default. If this parameter is set to false and the topology has an RNFx (non-ESAM), the external bit (bit[31])

of the RNSAM children pointer is enabled. This bit is the only functionality governed by this parameter.

- By default, HN-F hashing uses the address [MAX:12] instead of the actual address [MAX:6], due to the DMI mechanism in the model. Enable the parameter `enable_rnsam_to_hnf_wider_hash` to make hashing logic use the actual address [MAX:6], but this might reduce the simulation speed of the model.
- OKB SLC data RAM and tag RAM are not supported.
- Source-based SLC cache partitioning is not supported.
- Way-based SLC cache partitioning is not supported.
- SLC/LCC partitioning dynamic allocation is not supported.
- Remote chip addresses incorrectly allocate a line in the SLC when `cache_state_modelled=true`. This can cause unexpected cache behavior that does not match the RTL, exhausting the SLC earlier or extra evictions.
- The fields in the `mvp_device_port_connect_info` register corresponding to the number of device credit slices and CAL credit slices are not supported.
- SN-F hashing in HNSAM is not supported. HNSAM SN-F hashing is a single memory range mapped to multiple SN-Fs. Example HNFSAM\_Mem\_Map:

```
0x00000001000 - 0x00000002000 SNF0 SNF1
```

The model supports mapping HN-F to a single SN-F. Example HNFSAM\_Mem\_Map:

```
0x00000001000 - 0x00000002000 SNF0
0x00000002000 - 0x00000003000 SNF1
```

- HN-Fs with different SLC sizes in the same configuration are not supported.
- Transactions to addresses unused by Device registers in the Configuration Register Space are always routed to the Configuration Space even when the SAM is configured to use those addresses.
- GIC communication over A4S ports is not supported.
- MPU with data coherency is not supported.
- MPU located in CXRH is not supported.
- No specific Debug Trace (DT) node functionality is supported. See [Plug-ins for Fast Models](#) for information about using plug-ins for trace.
- For Power State Transition related flush/disable of the SLC due to HNF\_PPU\_PWPR register, only the Operational Mode field (bits[7:4]) is considered. The Power Policy field (bits[3:0]) is ignored.
- Setting HAM mode for the Operational Mode field (bits[7:4]) of the HNF\_PPU\_PWPR is equivalent to FAM mode. The SLCH2 is neither flushed nor disabled according to the Power Policy field (bits[3:0]).
- Only hashing granularities of 4096B and above are supported.

- All RNs are assumed to have the same HN mapping. Programming RNSAMs differently between RNs is not supported.
- RNSAM cannot be programmed with the same HN-F target in a hashed and non-hashed memory region.
- Address bit masking is not supported in RNSAM or HN-F SAM.
- The OCM does not keep track of the total memory used across the S/NS security world and does not perform any eviction either. It is up to the software to make sure it does not oversubscribe the OCM.
- There is no support for RAS.
- The following limitations apply to System Cache Groups and Hash Target Groups:
  - A mix of local and remote HN-F targets are not supported.
  - CCG/CXRH target IDs in the HN target ID table are not supported (`sys_cache_grp_hn_nodeid_reg`).
  - The `hashed_target_grp_hnp_nodeid_reg` which is used for CCG/HN-P target IDs is not supported.
  - System/Hash Target Groups only support HN-Fs.
  - AXID hashing across HN-P/CCGs is not supported.
- For RN-D nodes, when software writes SYSCOREQ, DVM propagation gets enabled but SYSCOACK is not set.

### About the `debug_force_snoop` parameter

The CMN interconnect normally starts up with snooping disabled.

The parameters `rnf_sci_enable` and `rni_sci_enable` determine which connections are managed by the System Coherency Interface. Connections that are managed by the System Coherency Interface look after themselves for entering and leaving the coherency domain and `debug_force_snoop` has no effect on those ports.

However, for connections that are not managed by the System Coherency Interface, `debug_force_snoop` enables the system upstream of a port to be snooped if the upstream is not in reset and if `acchannelen_rnf` allows it.

Therefore, software does not need to know how to turn snoops in the interconnect on and off. The reset state of the upstream rnf ports is determined by the `rnf_upstream_reset_state[]` signals and must be connected for any port that could go into reset and you want managed by `debug_force_snoop`.

If the connection is managed by SCI or can never go into reset then you need not connect this and the interconnect assumes that the upstream system is not in reset and will always enable the snoops if `ACCHANNELENSx` allows it.

If you fail to connect `rnf_upstream_reset_state[]` correctly, then the upstream system might receive snoop messages while in reset and it will complain that it received a snoop request while it was in reset.

If software overrides the enables then the next change to `rnf_upstream_reset_state[]` or the interconnect reset will overwrite the software values.

Using this operation along with software controlling the enables could confuse the software. This option does not remove the responsibility of the upstream system to clean any shared dirty data from its caches before going into reset.

This parameter is for debug purposes only. Do not use it instead of correctly configuring CMN.

## Iris and MTI instances for CMN600AE

This model has the following Iris instances:

**Table 3-898: CMN600AE Iris instances**

InstanceName	ComponentName
CMN600AE	CMN600AE
CMN600AE.bus_slave_ocm_NS	PVBusSlave
CMN600AE.bus_slave_ocm_S	PVBusSlave
CMN600AE.cmn600_cache	PVCache
CMN600AE.cmn600_cache.upstream[0]	PVBusSlave
CMN600AE.cmn600_cache.upstream[10]	PVBusSlave
CMN600AE.cmn600_cache.upstream[11]	PVBusSlave
CMN600AE.cmn600_cache.upstream[12]	PVBusSlave
CMN600AE.cmn600_cache.upstream[13]	PVBusSlave
CMN600AE.cmn600_cache.upstream[14]	PVBusSlave
CMN600AE.cmn600_cache.upstream[15]	PVBusSlave
CMN600AE.cmn600_cache.upstream[16]	PVBusSlave
CMN600AE.cmn600_cache.upstream[17]	PVBusSlave
CMN600AE.cmn600_cache.upstream[18]	PVBusSlave
CMN600AE.cmn600_cache.upstream[1]	PVBusSlave
CMN600AE.cmn600_cache.upstream[2]	PVBusSlave
CMN600AE.cmn600_cache.upstream[3]	PVBusSlave
CMN600AE.cmn600_cache.upstream[4]	PVBusSlave

## Ports for CMN600AE

**Table 3-900: Ports**

Name	Protocol	Type	Description
event_clusters	Signal	Peer	CPU event communication signal from the clusters.
event_downstream_link_signal[2]	Signal	Master	CPU event communication signal to the CMLHub. Event from the CMN towards the Hub NOTE that these are virtual "links" on underlying PCIe hardware bus.
event_upstream_link_signal[2]	Signal	Slave	Event from the Hub towards the CMN
fmu_eri	Signal	Master	FMU signal for critical errors
fmu_fhi	Signal	Master	FMU signal for non-critical errors
pvbus_m_cml	PVBus	Master	CML downstream ports
pvbus_m_cml_cfg	PVBus	Master	CML downstream hub configuration port
pvbus_m_hni[4]	PVBus	Master	HNI downstream ports.
pvbus_m_snf[4]	PVBus	Master	SNF downstream port.
pvbus_s_apb	PVBus	Slave	APB interface port.
pvbus_s_cml	PVBus	Slave	CML upstream ports
pvbus_s_rnf[8]	PVBus	Slave	RNF upstream ports.
pvbus_s_rni[24]	PVBus	Slave	RNI upstream ports.
reset_in	Signal	Slave	Reset signal.
rnf_sci_s[8]	SystemCoherencyInterface	Slave	System Coherency port to move the RN-F in and out of the coherency domain.
rnf_upstream_reset_in[8]	Signal	Slave	Used by the interconnect to determine the reset state of the RNF manager to check an aspect of reset sequencing. If debug_force_snoop is used, this port must be connected.
rni_sci_s[24]	SystemCoherencyInterface	Slave	System Coherency port to move the RN-D in and out of the coherency domain.
rni_upstream_reset_in[24]	Signal	Slave	Used by the interconnect to determine the reset state of the RNI manager to check an aspect of reset sequencing. If debug_force_snoop is used, this port must be connected.

## Parameters for CMN600AE

### **acchannelen\_rnf**

**Type**

string

**Default value**

"0"

**Note**

DEPRECATED: Will be removed after FM 11.18. Use `rnf_sci_enable` instead.

---

For each `rnf` port, indicates if the port is populated with a snoop responding device or not.

The input value is a string, for example `0xffff` or `ffff`

### **acchannelen\_rni**

**Type**

string

**Default value**

"0"

**Note**

DEPRECATED: Will be removed after FM 11.18. Use `rni_sci_enable` instead.

---

For each `rni` port, indicates if the port is populated with a dvm responding device or not.

The input value is a string, for example `0xffff` or `ffff`

### **cache\_state\_modelled**

**Type**

bool

**Default value**

0x0

**Description**

Model the cache state.

**debug\_force\_snoop****Type**

bool

**Default value**

false

The CMN600AE interconnect will normally start with snooping disabled.

The parameter `rnf_sci_enable` and `rni_sci_enable` determines which connections are managed by the System Coherency Interface.

For connections that are managed by the System Coherency Interface, then they will look after themselves for entering and leaving the coherency domain and this parameter has no effect for those ports.

However, for connections that are *not* managed by the System Coherency Interface, this parameter enables the upstream system of a port to be snooped if the upstream is not in reset and if `acchannelen_rnf` allows it.

This parameter is for debug purpose only

Do not use this parameter instead of correctly configuring CMN.

---

**disable\_CML\_port****Type**

bool

**Default value**

0x0

**Description**

If true the model won't connect the CML port when there are nodes which support the CML feature (ie CXG nodes).

**enable\_logger****Type**

bool

**Default value**

0x0

**Description**

Enable PVBUSLoggers for the downstream ports in the CMN model.

**enable\_rnsam\_to\_hnf\_wider\_hash****Type**

bool

**Default value**

false

Enable support of wider hash for the RNSAM to HNF communication.

If this variable enabled, then `bits[47:6]` from PA used in hashing function.

By default it is `[47:12]`.

**fdc\_key****Type**

uint8\_t

**Default value**

0

`por_fdc_key` register value is checked against this key.

**fm\_u\_key****Type**

uint8\_t

**Default value**

0

`por_fm_u_key` register value is checked against this key.

**force\_rnsam\_internal****Type**

bool

**Default value**

0x1

**Description**

Force all RNSAMs to be internal independently of the mesh topology.

**mesh\_config\_file****Type**

string

**Default value**

""

**Description**

Name of a file containing mesh placement of CMN600AE components.

**number\_of\_mpu\_programmable\_regions****Type**

uint32\_t

**Default value**

32

Number of MPU programmable regions.

Valid values are 0, 8, 16 and 32.

**periphbase****Type**

uint64\_t

**Default value**

0x20000000

Value for PERIPHBASE. Bits [25:0] are treated 0

**print\_cmn\_ccix\_config****Type**

bool

**Default value**

0x0

**Description**

Print information about the CCIX configuration.

**print\_cmn\_config****Type**

bool

**Default value**

0x0

**Description**

Print the mesh topology and children pointers acquired from the YAML file.

**revision****Type**

string

**Default value**

"r1p0"

Component revision.

Currently supports r1p0.

**rnf\_sci\_enable****Type**

string

**Default value**

"0x0"

For each rnf port, indicates if the port is managed by System Coherency Interface for coherency domain entry/exit

**1**

Managed by SCI

**0**

Managed by Software

The input value is a string, for example 0xffff or ffff

**rni\_sci\_enable****Type**

string

**Default value**

"0x0"

For each rni port, indicates if the port is managed by System Coherency Interface for coherency domain entry/exit

**1**

Managed by SCI

**0**

Managed by Software

The input value is a string, for example 0xffff or ffff

**show\_banner****Type**

uint64\_t

**Default value**

2

Show component banner:

- 0
- supress entire banner
- 1
- suppress config file
- 2+
- show full banner

**skip\_cmn\_config\_check**

**Type**

bool

**Default value**

0x0

**Description**

Skip any topology configuration checks. The maximum number of devices per type not verified.

**use\_yaml\_periphbase**

**Type**

bool

**Default value**

false

Use yaml param CFGM\_PERIPHBASE\_PARAM to specify periphbase address.

If false, model parameter periphbase will be used.

3.10.16 CMN600CMLHub

CMN600 CML Interconnect Hub Fast Model. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-901: IP revisions support

Revision	Quality level
N/A	Preliminary support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**Iris and MTI instances for CMN600CMLHub**

This model has the following Iris instances:

**Table 3-902: CMN600CMLHub Iris instances**

InstanceName	ComponentName
CMN600CMLHub	CMN600CMLHub
CMN600CMLHub.CMN600CMLHubCache	PVCache
CMN600CMLHub.CMN600CMLHubCache.upstream[0]	PVBusSlave

CMN600CMLHub.cache_downstream_exclusive_monitor0	PVBusExclusiveMonitor
CMN600CMLHub.cache_downstream_exclusive_monitor0.bus_mapper	PVBusMapper
CMN600CMLHub.cache_downstream_exclusive_monitor1	PVBusExclusiveMonitor
CMN600CMLHub.cache_downstream_exclusive_monitor1.bus_mapper	PVBusMapper
CMN600CMLHub.cache_downstream_exclusive_monitor2	PVBusExclusiveMonitor
CMN600CMLHub.cache_downstream_exclusive_monitor2.bus_mapper	PVBusMapper
CMN600CMLHub.cache_downstream_exclusive_monitor3	PVBusExclusiveMonitor
CMN600CMLHub.cache_downstream_exclusive_monitor3.bus_mapper	PVBusMapper

This model has the following MTI trace components:

**Table 3-903: CMN600CMLHub MTI instances**

InstanceName	ComponentName
CMN600CMLHub	CMN600CML
CMN600CMLHub.CMN600CMLHubCache	PVCache
CMN600CMLHub.CMN600CMLHubCache.upstream[0]	PVBusSlave
CMN600CMLHub.CMN600CMLHubCache.upstream[1]	PVBusSlave
CMN600CMLHub.CMN600CMLHubCache.upstream[2]	PVBusSlave
CMN600CMLHub.CMN600CMLHubCache.upstream[3]	PVBusSlave
CMN600CMLHub.bus_s_cfg	PVBusSlave
CMN600CMLHub.cache_downstream_exclusive_monitor0	PVBusExclusiveMonitor
CMN600CMLHub.cache_downstream_exclusive_monitor0.bus_mapper	PVBusMapper
CMN600CMLHub.cache_downstream_exclusive_monitor1	PVBusExclusiveMonitor
CMN600CMLHub.cache_downstream_exclusive_monitor1.bus_mapper	PVBusMapper
CMN600CMLHub.cache_downstream_exclusive_monitor2	PVBusExclusiveMonitor
CMN600CMLHub.cache_downstream_exclusive_monitor2.bus_mapper	PVBusMapper
CMN600CMLHub.cache_downstream_exclusive_monitor3	PVBusExclusiveMonitor
CMN600CMLHub.cache_downstream_exclusive_monitor3.bus_mapper	PVBusMapper

## Ports for CMN600CMLHub

**Table 3-904: Ports**

Name	Protocol	Type	Description
event_downstream_link_signal[4]	Signal	Slave	CPU downstream event communication signal.
event_upstream_link_signal[4]	Signal	Master	CPU upstream event communication signal.
pvbust_m[4]	PVBus	Master	Downstream CCIX port.
pvbust_s[4]	PVBus	Slave	Upstream CCIX ports.
pvbust_s_cfg[4]	PVBus	Slave	Upstream config ports.
reset_signal	Signal	Slave	Reset signal.

## Parameters for CMN600CMLHub

### cache\_state\_modelled

#### Type

bool

#### Default value

0x0

#### Description

Model the cache state.

### enable\_logger

#### Type

bool

#### Default value

0x0

#### Description

Enable PVBusLoggers for the downstream ports in the CMN model.

## 3.10.17 CMN650

CMN650 Interconnect Fast Model. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-905: IP revisions support**

Revision	Quality level
r1p1	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

## About CMN650

- Major IP revisions (rX) are modeled and are controlled by the `revision` parameter.
- Minor IP revisions (pY) are not modeled. There are no functional differences in the model between pY revisions, with the exception of the `periph_id2` register.
- To configure the model, you must have installed Arm Socrates. The `mesh_config_file` parameter defines the mesh placement of the CHI nodes. Set it to the name of the yml configuration file emitted by Socrates. You must use version r1p4-01rel0 or later of Socrates to generate the file. For more information about Socrates, see [Arm Socrates](#) on Arm Developer. To download it, contact Arm Technical Support.
- Interconnect models are based on the TRM description and do not typically model RTL defects.

The model supports the following features:

- `rnf`, `rni/rnd`, `hni`, and `snf/sbsx` interface ports. The mapping between the port number and `NodeId` is based on the `NodeId` index. For example, RNF2 controls `pvtbus_s_rnf[2]`. Its index is specified in the `node_info` register as `logical_id`. Similar behavior can be expected for HN-I.

If both RN-D and RN-I nodes are present, then all starting `rni` ports are mapped to RN-D nodes and then the RN-I nodes. For example, for CMN650 with two RN-D nodes, one RN-I node, and given each RN-I or RN-D node controls three interface ports, `pvtbus_s_rni[0-2]` maps to RND0, `pvtbus_s_rni[3-5]` maps to RND1 and `pvtbus_s_rni[6-8]` maps to RNI0.

Similarly, SN-F and SBSX nodes are mapped to `pvtbus_m_snf[]` ports where starting ports are mapped to SN-F and then SBSX nodes.

- Mapping HN\*\_SLC\_SIZE\_PARAM values to cache sizes:

-8

OKB where HN\*\_SLC\_NUM\_WAYS\_PARAM=16

Note

This value is not supported by the model.

-2

128KB where HN\*\_SLC\_NUM\_WAYS\_PARAM=16

-1

256KB where HN\*\_SLC\_NUM\_WAYS\_PARAM=16

0

512KB where HN\*\_SLC\_NUM\_WAYS\_PARAM=16

1

1MB where HN\*\_SLC\_NUM\_WAYS\_PARAM=16

2

2MB where HN\*\_SLC\_NUM\_WAYS\_PARAM=16

**3**

3MB where `HN*_SLC_NUM_WAYS_PARAM=12`

**3**

4MB where `HN*_SLC_NUM_WAYS_PARAM=16`

- The Address Based Flush (ABF) feature is available. After it has started, the ABF completes instantly. The ABF implementation has the following limitations:
  - In the Fast Model, any HN-F in the interconnect can perform an ABF on any address range even if that range is not part of the System Cache Group (SCG) that the HN-F belongs to.
  - Clearing the OCM with an ABF is not supported. A trace has been added to highlight this.
  - When `HN*_ABF_PR.abf_mode` is Reserved and `HN*_ABF_PR.abf_enable` is set, an error is printed and the ABF status register is set to complete successfully, but no operation takes place.
  - Because an ABF completes instantly, the `SF_PM_TRANSITION_ABORT` state cannot be reached. Contact Arm Technical Support with questions about support for this error condition.
  - The optional interrupt `INTREQPPU` is not supported.

## Model limitations

- Out of scope:
  - PMU counters are not supported. Counter registers are implemented as **RAZ**.
  - QoS is not supported and all related registers are **RAZ/WI**.
  - Error injection and error generation are not supported. All error registers are **RAZ/WI**.
  - Power, clock, and interrupt signals are not supported.

The P-channel (power) signals `PREQ_LOGIC`, `PSTATE_LOGIC`, `PACCEPT_LOGIC`, `PDENY_LOGIC`, and `PACTIVE_LOGIC`, are not implemented. The model behaves as if `PSTATE_LOGIC` is 5'b00000. So the initial power state of the HN-F nodes is NOSFSLC/OFF. This is reflected in the reset values of `cmn_hns_ppu_pwpr`, which was named `por_hnf_ppu_pwpr` in earlier IP revisions. Software must write the `*_ppu_pwpr` registers to change the power state. Both HAM and FAM power states enable all of the SLC ways.

- Protocol credits and flit buffers are not supported.
- Snoop filtering is not supported.
- Prefetch Target operations are not supported.
- Non-XY routing behavior is not supported.
- The MTE feature has been minimally tested and the functionality cannot be guaranteed. MTE error injection and detection are not supported.
- An access to a reserved or nonexistent register does not abort. It returns `pv::Tx_Data::TX_OK` and is **RAZ/WI**.
- Topologies with three I/O masters connected through an RN-I bridge device have been tested. Configurations where multiple I/O masters share a single ACE-lite port have not been tested.
- RNSAMs external to the mesh network are not functionally supported.

Model parameter `force_rnsam_internal` is true by default. If this parameter is set to false and the topology has an RNFx (non-ESAM), the external bit (bit[31]) of the RNSAM children pointer is enabled. This bit is the only functionality governed by this parameter.

- By default, HN-F hashing uses the address [MAX:12] instead of the actual address [MAX:6], due to the DMI mechanism in the model. Enable the parameter `enable_rnsam_to_hnf_wider_hash` to make hashing logic use the actual address [MAX:6], but this might reduce the simulation speed of the model.
- OKB SLC data RAM and tag RAM are not supported.
- Source-based SLC cache partitioning is not supported.
- Way-based SLC cache partitioning is not supported.
- SLC/LCC partitioning dynamic allocation is not supported.
- Remote chip addresses incorrectly allocate a line in the SLC when `cache_state_modelled=true`. This can cause unexpected cache behavior that does not match the RTL, exhausting the SLC earlier or extra evictions.
- The fields in the `mvp_device_port_connect_info` register corresponding to the number of device credit slices and the number of CAL credit slices are not supported.
- SN-F hashing in HNSAM is not supported. HNSAM SN-F hashing is a single memory range mapped to multiple SN-Fs. Example HNFSAM\_Mem\_Map:

```
0x00000001000 - 0x00000002000 SNF0 SNF1
```

The model supports mapping HN-F to a single SN-F. Example HNFSAM\_Mem\_Map:

```
0x00000001000 - 0x00000002000 SNF0
0x00000002000 - 0x00000003000 SNF1
```

- HN-Fs with different SLC sizes in the same configuration are not supported.
- Transactions to addresses unused by Device registers in the Configuration Register Space are always routed to the Configuration Space even when the SAM is configured to use those addresses.
- GIC communication over A4S ports is not supported.
- MPAM features are not supported in the model, and the configuration-dependent register reset values do not match the RTL. Some of the registers (`por_hnf_mpam_idr` to `por_hnf_mpam_mbwumon_idr`) shared between security modes are not present in MPAM\_S.
- The following limitations apply to System Cache Groups and Hash Target Groups:
  - A mix of local and remote HN-F targets is not supported.
  - CCG/CXRH target IDs in the HN target ID table are not supported (`sys_cache_grp_hn_nodeid_reg`).

- The `hashed_target_grp_hnp_nodeid_reg` which is used for CCG/HN-P target IDs is not supported.
- System/Hash Target Groups only support HN-Fs.
- AXID hashing across HN-P/CCGs is not supported.
- The MPAM reset values described in `por_hnf_mpam_ns_por_hnf_mpam_idr[31:24]` default to the not-supported state. The model parameter `hnf_mpam_idr_override` can be used to override this but does not implement any of the functionality.
- MPAM\_S `secure_register_groups_override` is not supported.
- No specific Debug Trace (DT) node functionality is supported. See [Plug-ins for Fast Models](#) for information about using plug-ins for trace.
- For Power State Transition related flush/disable of the SLC due to HNF\_PPU\_PWPR register, only the Operational Mode field (bits[7:4]) is considered. The Power Policy field (bits[3:0]) is ignored.
- Setting HAM mode for the Operational Mode field (bits[7:4]) of the HNF\_PPU\_PWPR is equivalent to FAM mode. The SLCH2 is neither flushed nor disabled according to the Power Policy field (bits[3:0]).
- Only hashing granularities of 4096B and above are supported.
- The OCM does not keep track of the total memory used across the S/NS security world and does not perform any eviction either. It is up to the software to make sure it does not oversubscribe the OCM.
- All RNs are assumed to have the same HN mapping. Programming RNSAMs differently between RNs is not supported.
- RNSAM cannot be programmed with the same HN-F target in a hashed and non-hashed memory region.
- `RNSAM_STATUS.default_target_type` and `RNSAM_STATUS.default_nodeid` are used as the default target only when `RNSAM_STATUS.use_default_node=1`. Otherwise, when a `txn` is sent into the model that does not belong to any of the address regions programmed in the RNSAM, it is routed to the HN-D irrespective of what is programmed in the `RNSAM_STATUS.default_target_type` and `RNSAM_STATUS.default_nodeid` fields.
- Address bit masking is not supported in RNSAM or HN-F SAM.
- HN-F SAM limitations:
  - Address masking in default hash regions in HN-F SAM is not supported.
  - Hashing in default hash regions in HN-F SAM is not supported. However, trace `SNF_HASHING_Target_SNF` displays the target SNF as if 3SN/6SN hashing were enabled.

The transaction is always routed to the SNO nodeid programmed in the SAM\_CONTROL register.

- 
- Re-programming regions in HN-F SAM is not tested.
  - Hashing across CCGs in HN-F SAM is not supported.

- For an HTG/SCG, the model does not consider the secondary region if the primary region is not valid.
- There is no support for RAS.
- For RN-D nodes, when software writes SYSCOREQ, DVM propagation gets enabled but SYSCOACK is not set.

### About the `debug_force_snoop` parameter

The CMN interconnect normally starts up with snooping disabled.

The parameters `rnf_sci_enable` and `rni_sci_enable` determine which connections are managed by the System Coherency Interface. Connections that are managed by the System Coherency Interface look after themselves for entering and leaving the coherency domain and `debug_force_snoop` has no effect on those ports.

However, for connections that are not managed by the System Coherency Interface, `debug_force_snoop` enables the system upstream of a port to be snooped if the upstream is not in reset and if `acchannelen_rnf` allows it.

Therefore, software does not need to know how to turn snoops in the interconnect on and off. The reset state of the upstream rnf ports is determined by the `rnf_upstream_reset_state[]` signals and must be connected for any port that could go into reset and you want managed by `debug_force_snoop`.

If the connection is managed by SCI or can never go into reset then you need not connect this and the interconnect assumes that the upstream system is not in reset and will always enable the snoops if `ACCHANNELENSx` allows it.

If you fail to connect `rnf_upstream_reset_state[]` correctly, then the upstream system might receive snoop messages while in reset and it will complain that it received a snoop request while it was in reset.

If software overrides the enables then the next change to `rnf_upstream_reset_state[]` or the interconnect reset will overwrite the software values.

Using this operation along with software controlling the enables could confuse the software. This option does not remove the responsibility of the upstream system to clean any shared dirty data from its caches before going into reset.

Note

This parameter is for debug purposes only. Do not use it instead of correctly configuring CMN.

---

### Iris and MTI instances for CMN650

This model has the following Iris instances:

**Table 3-906: CMN650 Iris instances**

InstanceName	ComponentName
CMN650	CMN650
CMN650.bus_slave_ocm_NS	PVBusSlave
CMN650.bus_slave_ocm_S	PVBusSlave
CMN650.cmn600_cache	PVCache
CMN650.cmn600_cache.upstream[0]	PVBusSlave
CMN650.cmn600_cache.upstream[10]	PVBusSlave
CMN650.cmn600_cache.upstream[11]	PVBusSlave
CMN650.cmn600_cache.upstream[12]	PVBusSlave
CMN650.cmn600_cache.upstream[13]	PVBusSlave
CMN650.cmn600_cache.upstream[14]	PVBusSlave
CMN650.cmn600_cache.upstream[15]	PVBusSlave
CMN650.cmn600_cache.upstream[16]	PVBusSlave

## Ports for CMN650

**Table 3-908: Ports**

Name	Protocol	Type	Description
event_clusters	Signal	Peer	CPU event communication signal from the clusters.
event_downstream_link_signal[10]	Signal	Master	CPU event communication signal to the CMLHub. Event from the CMN towards the Hub NOTE that these are virtual "links" on underlying PCIe hardware bus.
event_upstream_link_signal[10]	Signal	Slave	Event from the Hub towards the CMN
pvbus_m_cml	PVBus	Master	CML downstream ports
pvbus_m_cml_cfg	PVBus	Master	CML downstream hub configuration port
pvbus_m_hni[16]	PVBus	Master	HNI downstream ports.

Name	Protocol	Type	Description
pvbus_m_snf[40]	PVBus	Master	SNF downstream port.
pvbus_s_apb	PVBus	Slave	APB interface port.
pvbus_s_cml	PVBus	Slave	CML upstream ports
pvbus_s_rnf[64]	PVBus	Slave	RNF upstream ports.
pvbus_s_rni[96]	PVBus	Slave	RNI upstream ports.
reset_in	Signal	Slave	Reset signal.
rnf_sci_s[64]	SystemCoherencyInterface	Slave	System Coherency port to move the RN-F in and out of the coherency domain.
rnf_upstream_reset_in[64]	Signal	Slave	Used by the interconnect to determine the reset state of the RNF manager to check an aspect of reset sequencing. If debug_force_snoop is used, this port must be connected.
rni_sci_s[96]	SystemCoherencyInterface	Slave	System Coherency port to move the RN-D in and out of the coherency domain.
rni_upstream_reset_in[96]	Signal	Slave	Used by the interconnect to determine the reset state of the RNI manager to check an aspect of reset sequencing. If debug_force_snoop is used, this port must be connected.

## Parameters for CMN650

### acchannelen\_rnf

#### Type

string

#### Default value

"0"

DEPRECATED: Will be removed after FM 11.18. Use `rnf_sci_enable` instead.

For each rnf port, indicates if the port is populated with a snoop responding device or not.

The input value is a string, for example `0xffff` or `ffff`

### acchannelen\_rni

#### Type

string

#### Default value

"0"

**Note**

DEPRECATED: Will be removed after FM 11.18. Use `rni_sci_enable` instead.

---

For each `rni` port, indicates if the port is populated with a dvm responding device or not.

The input value is a string, for example `0xffff` or `ffff`

### **cache\_state\_modelled**

#### **Type**

bool

#### **Default value**

0x0

#### **Description**

Model the cache state.

### **debug\_force\_snoop**

#### **Type**

bool

#### **Default value**

false

The CMN650 interconnect will normally start with snooping disabled.

The parameter `rnf_sci_enable` and `rni_sci_enable` determines which connections are managed by the System Coherency Interface.

For connections that are managed by the System Coherency Interface, then they will look after themselves for entering and leaving the coherency domain and this parameter has no effect for those ports.

However, for connections that are *not* managed by the System Coherency Interface, this parameter enables the upstream system of a port to be snooped if the upstream is not in reset and if `acchannelen_rnf` allows it.

**Note**

This parameter is for debug purpose only

Do not use this parameter instead of correctly configuring CMN.

---

### **disable\_CML\_port**

#### **Type**

bool

**Default value**

0x0

**Description**

If true the model won't connect the CML port when there are nodes which support the CML feature (ie CXG nodes).

**enable\_logger****Type**

bool

**Default value**

0x0

**Description**

Enable PVBUSLoggers for the downstream ports in the CMN model.

**enable\_rnsam\_to\_hnf\_wider\_hash****Type**

bool

**Default value**

false

Enable support of wider hash for the RNSAM to HNF communication.

If this variable enabled, then `bits[47:6]` from PA used in hashing function.

By default it is `[47:12]`.

**force\_rnsam\_internal****Type**

bool

**Default value**

0x1

**Description**

Force all RNSAMs to be internal independently of the mesh topology.

**hnf\_mpam\_idr\_override****Type**

uint64\_t

**Default value**

0

Set to override `hnf_mpam_idr[31:24]` value. Bit[28] is Reserved and is ignored.

**mesh\_config\_file****Type**

string

**Default value**

""

**Description**

Name of a file containing mesh placement of CMN650 components.

**periphbase****Type**

uint64\_t

**Default value**

0x20000000

Value for PERIPHBASE. Bits [27:0] are treated 0

**print\_cmn\_ccix\_config****Type**

bool

**Default value**

0x0

**Description**

Print information about the CCIX configuration.

**print\_cmn\_config****Type**

bool

**Default value**

0x0

**Description**

Print the mesh topology and children pointers acquired from the YAML file.

**revision****Type**

string

**Default value**

"r1p1"

Component revision.

Currently supports r1p1.

**rnf\_sci\_enable****Type**

string

**Default value**

"0x0"

For each rnf port, indicates if the port is managed by System Coherency Interface for coherency domain entry/exit

**1**

Managed by SCI

**0**

Managed by Software

The input value is a string, for example 0xffff or ffff

**rni\_sci\_enable****Type**

string

**Default value**

"0x0"

For each rni port, indicates if the port is managed by System Coherency Interface for coherency domain entry/exit

**1**

Managed by SCI

**0**

Managed by Software

The input value is a string, for example 0xffff or ffff

**show\_banner****Type**

uint64\_t

**Default value**

2

Show component banner:

**0**

supress entire banner

**1**

suppress config file

2+  
show full banner

**skip\_cmn\_config\_check**

Type  
bool

Default value  
0x0

Description  
Skip any topology configuration checks. The maximum number of devices per type not verified.

**use\_yaml\_periphbase**

Type  
bool

Default value  
false

Use yaml param CFGM\_PERIPHBASE\_PARAM to specify periphbase address.

If false, model parameter periphbase will be used.

3.10.18 CMN650R2

CMN650R2 Interconnect Fast Model. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-909: IP revisions support

Revision	Quality level
r2p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

About CMN650R2

- Major IP revisions (rX) are modeled and are controlled by the revision parameter.
- Minor IP revisions (pY) are not modeled. There are no functional differences in the model between pY revisions, with the exception of the periph\_id2 register.
- To configure the model, you must have installed Arm Socrates. The mesh\_config\_file parameter defines the mesh placement of the CHI nodes. Set it to the name of the yaml configuration file emitted by Socrates. You must use version r1p4-01rel0 or later of Socrates to generate the file. For more information about Socrates, see [Arm Socrates](#) on Arm Developer. To download it, contact Arm Technical Support.

- Interconnect models are based on the TRM description and do not typically model RTL defects.

The model supports the following features:

- `rnf`, `rni/rnd`, `hni`, and `snf/sbsx` interface ports. The mapping between the port number and `nodeId` is based on the `nodeId` index. For example, `RNF2` controls `pvbuss_s_rnf[2]`. Its index is specified in the `node_info` register as `logical_id`. Similar behavior can be expected for `HN-I`.

If both `RN-D` and `RN-I` nodes are present, then all starting `rni` ports are mapped to `RN-D` nodes and then the `RN-I` nodes. For example, for `CMN650` with two `RN-D` nodes, one `RN-I` node, and given each `RN-I` or `RN-D` node controls three interface ports, `pvbuss_s_rni[0-2]` maps to `RND0`, `pvbuss_s_rni[3-5]` maps to `RND1` and `pvbuss_s_rni[6-8]` maps to `RNI0`.

Similarly, `SN-F` and `SBSX` nodes are mapped to `pvbuss_m_snf[]` ports where starting ports are mapped to `SN-F` and then `SBSX` nodes.

- Mapping `HN*_SLC_SIZE_PARAM` values to cache sizes:

-8

OKB where `HN*_SLC_NUM_WAYS_PARAM=16`

Note

This value is not supported by the model.

-2

128KB where `HN*_SLC_NUM_WAYS_PARAM=16`

-1

256KB where `HN*_SLC_NUM_WAYS_PARAM=16`

0

512KB where `HN*_SLC_NUM_WAYS_PARAM=16`

1

1MB where `HN*_SLC_NUM_WAYS_PARAM=16`

2

2MB where `HN*_SLC_NUM_WAYS_PARAM=16`

3

3MB where `HN*_SLC_NUM_WAYS_PARAM=12`

3

4MB where `HN*_SLC_NUM_WAYS_PARAM=16`

- The Address Based Flush (ABF) feature is available. After it has started, the ABF completes instantly. The ABF implementation has the following limitations:
  - In the Fast Model, any `HN-F` in the interconnect can perform an ABF on any address range even if that range is not part of the System Cache Group (SCG) that the `HN-F` belongs to.
  - Clearing the OCM with an ABF is not supported. A trace has been added to highlight this.

- When `HN_F_AB_F_PR.abf_mode` is Reserved and `HN_F_AB_F_PR.abf_enable` is set, an error is printed and the ABF status register is set to complete successfully, but no operation takes place.
- Because an ABF completes instantly, the `SF_PM_TRANSITION_ABORT` state cannot be reached. Contact Arm Technical Support with questions about support for this error condition.
- The optional interrupt `INTREQ_PPU` is not supported.

## Model limitations

- Out of scope:
  - PMU counters are not supported. Counter registers are implemented as **RAZ**.
  - QoS is not supported and all related registers are **RAZ/WI**.
  - Error injection and error generation are not supported. All error registers are **RAZ/WI**.
  - Power, clock, and interrupt signals are not supported.

The P-channel (power) signals `PREQ_LOGIC`, `PSTATE_LOGIC`, `PACCEPT_LOGIC`, `PDENY_LOGIC`, and `PACTIVE_LOGIC`, are not implemented. The model behaves as if `PSTATE_LOGIC` is 5'b00000. So the initial power state of the HN-F nodes is NOSFSLC/OFF. This is reflected in the reset values of `cmn_hns_ppu_pwpr`, which was named `por_hnf_ppu_pwpr` in earlier IP revisions. Software must write the `*_ppu_pwpr` registers to change the power state. Both HAM and FAM power states enable all of the SLC ways.

- Protocol credits and flit buffers are not supported.
- Snoop filtering is not supported.
- Prefetch Target operations are not supported.
- Non-XY routing behavior is not supported.
- The MTE feature has been minimally tested and the functionality cannot be guaranteed. MTE error injection and detection are not supported.
- An access to a reserved or nonexistent register does not abort. It returns `pv::Tx_Data::TX_OK` and is **RAZ/WI**.
- Topologies with three I/O masters connected through an RN-I bridge device have been tested. Configurations where multiple I/O masters share a single ACE-lite port have not been tested.
- RNSAMs external to the mesh network are not functionally supported.

Note

Model parameter `force_rnsam_internal` is true by default. If this parameter is set to false and the topology has an RNFx (non-ESAM), the external bit (bit[31]) of the RNSAM children pointer is enabled. This bit is the only functionality governed by this parameter.

- By default, HN-F hashing uses the address [MAX:12] instead of the actual address [MAX:6], due to the DMI mechanism in the model. Enable the parameter `enable_rnsam_to_hnf_wider_hash` to make hashing logic use the actual address [MAX:6], but this might reduce the simulation speed of the model.
- OKB SLC data RAM and tag RAM are not supported.

- Source-based SLC cache partitioning is not supported.
- Way-based SLC cache partitioning is not supported.
- SLC/LCC partitioning dynamic allocation is not supported.
- Remote chip addresses incorrectly allocate a line in the SLC when `cache_state_modelled=true`. This can cause unexpected cache behavior that does not match the RTL, exhausting the SLC earlier or extra evictions.
- The fields in the `mvp_device_port_connect_info` register corresponding to the number of device credit slices and the number of CAL credit slices are not supported.
- SN-F hashing in HNSAM is not supported. HNSAM SN-F hashing is a single memory range mapped to multiple SN-Fs. Example HNFSAM\_Mem\_Map:

```
0x00000001000 - 0x00000002000 SNF0 SNF1
```

The model supports mapping HN-F to a single SN-F. Example HNFSAM\_Mem\_Map:

```
0x00000001000 - 0x00000002000 SNF0
0x00000002000 - 0x00000003000 SNF1
```

- HN-Fs with different SLC sizes in the same configuration are not supported.
- Transactions to addresses unused by Device registers in the Configuration Register Space are always routed to the Configuration Space even when the SAM is configured to use those addresses.
- GIC communication over A4S ports is not supported.
- MPAM features are not supported in the model, and the configuration-dependent register reset values do not match the RTL. Some of the registers (`por_hnf_mpam_idr` to `por_hnf_mpam_mbwumon_idr`) shared between security modes are not present in MPAM\_S.
- The following limitations apply to System Cache Groups and Hash Target Groups:
  - A mix of local and remote HN-F targets is not supported.
  - CCG/CXRH target IDs in the HN target ID table are not supported (`sys_cache_grp_hn_nodeid_reg`).
  - The `hashed_target_grp_hnp_nodeid_reg` which is used for CCG/HN-P target IDs is not supported.
  - System/Hash Target Groups only support HN-Fs.
  - AXID hashing across HN-P/CCGs is not supported.
- The MPAM reset values described in `por_hnf_mpam_ns_por_hnf_mpam_idr[31:24]` default to the not-supported state. The model parameter `hnf_mpam_idr_override` can be used to override this but does not implement any of the functionality.
- MPAM\_S `secure_register_groups_override` is not supported.
- No specific Debug Trace (DT) node functionality is supported. See [Plug-ins for Fast Models](#) for information about using plug-ins for trace.

- For Power State Transition related flush/disable of the SLC due to HNF\_PPU\_PWPR register, only the Operational Mode field (bits[7:4]) is considered. The Power Policy field (bits[3:0]) is ignored.
- Setting HAM mode for the Operational Mode field (bits[7:4]) of the HNF\_PPU\_PWPR is equivalent to FAM mode. The SLCH2 is neither flushed nor disabled according to the Power Policy field (bits[3:0]).
- Only hashing granularities of 4096B and above are supported.
- The OCM does not keep track of the total memory used across the S/NS security world and does not perform any eviction either. It is up to the software to make sure it does not oversubscribe the OCM.
- All RNs are assumed to have the same HN mapping. Programming RNSAMs differently between RNs is not supported.
- RNSAM cannot be programmed with the same HN-F target in a hashed and non-hashed memory region.
- `RNSAM_STATUS.default_target_type` and `RNSAM_STATUS.default_nodeid` are used as the default target only when `RNSAM_STATUS.use_default_node=1`. Otherwise, when a txn is sent into the model that does not belong to any of the address regions programmed in the RNSAM, it is routed to the HN-D irrespective of what is programmed in the `RNSAM_STATUS.default_target_type` and `RNSAM_STATUS.default_nodeid` fields.
- Address bit masking is not supported in RNSAM or HN-F SAM.
- HN-F SAM limitations:
  - Address masking in default hash regions in HN-F SAM is not supported.
  - Hashing in default hash regions in HN-F SAM is not supported. However, trace `SNF_HASHING_Target_SNF` displays the target SNF as if 3SN/6SN hashing were enabled.

Note

The transaction is always routed to the SNO nodeid programmed in the `SAM_CONTROL` register.

- Re-programming regions in HN-F SAM is not tested.
- Hashing across CCGs in HN-F SAM is not supported.
- CAL2 support for HN-P and RN-D is not tested.
- The maximum number of 256 RN-Fs is not verified. 74 is the largest number tested.
- The maximum number of 40 SNs is not verified. 20 is the largest number tested.
- The maximum number of 36 RN-Is is not verified. 16 is the largest number tested.
- The maximum number of 16 HN-Is is not verified. 5 is the largest number tested.
- Early DVM completion is not supported.
- CCIX port to port forwarding is not supported.
- No support for up to 512 CXRAs with no RAID aliasing and 256 RN-Fs on a single chip.

- Each HN-F can support tracking of up to 512 logical processors for exclusive operations. However, the value of the RO field `num_excl` in the HN-F unit info register cannot exceed 255.
- For RN-D nodes, when software writes `SYSCOREQ`, DVM propagation gets enabled but `SYSCOACK` is not set.

### About the `debug_force_snoop` parameter

The CMN interconnect normally starts up with snooping disabled.

The parameters `rnf_sci_enable` and `rni_sci_enable` determine which connections are managed by the System Coherency Interface. Connections that are managed by the System Coherency Interface look after themselves for entering and leaving the coherency domain and `debug_force_snoop` has no effect on those ports.

However, for connections that are not managed by the System Coherency Interface, `debug_force_snoop` enables the system upstream of a port to be snooped if the upstream is not in reset and if `acchannelen_rnf` allows it.

Therefore, software does not need to know how to turn snoops in the interconnect on and off. The reset state of the upstream rnf ports is determined by the `rnf_upstream_reset_state[]` signals and must be connected for any port that could go into reset and you want managed by `debug_force_snoop`.

If the connection is managed by SCI or can never go into reset then you need not connect this and the interconnect assumes that the upstream system is not in reset and will always enable the snoops if `ACCHANNELENSx` allows it.

If you fail to connect `rnf_upstream_reset_state[]` correctly, then the upstream system might receive snoop messages while in reset and it will complain that it received a snoop request while it was in reset.

If software overrides the enables then the next change to `rnf_upstream_reset_state[]` or the interconnect reset will overwrite the software values.

Using this operation along with software controlling the enables could confuse the software. This option does not remove the responsibility of the upstream system to clean any shared dirty data from its caches before going into reset.

This parameter is for debug purposes only. Do not use it instead of correctly configuring CMN.

---

### Iris and MTI instances for CMN650R2

This model has the following Iris instances:

**Table 3-910: CMN650R2 Iris instances**

InstanceName	ComponentName
CMN650R2	CMN650R2
CMN650R2.bus_slave_ocm_NS	PVBusSlave
CMN650R2.bus_slave_ocm_S	PVBusSlave
CMN650R2.cmn600_cache	PVCache
CMN650R2.cmn600_cache.upstream[0]	PVBusSlave

## Ports for CMN650R2

**Table 3-912: Ports**

Name	Protocol	Type	Description
event_clusters	Signal	Peer	CPU event communication signal from the clusters.
event_downstream_link_signal[10]	Signal	Master	CPU event communication signal to the CMLHub. Event from the CMN towards the Hub NOTE that these are virtual "links" on underlying PCIe hardware bus.
event_upstream_link_signal[10]	Signal	Slave	Event from the Hub towards the CMN
pvbus_m_cml	PVBus	Master	CML downstream ports
pvbus_m_cml_cfg	PVBus	Master	CML downstream hub configuration port
pvbus_m_hni[16]	PVBus	Master	HNI downstream ports.

Name	Protocol	Type	Description
pvbus_m_snf[40]	PVBus	Master	SNF downstream port.
pvbus_s_apb	PVBus	Slave	APB interface port.
pvbus_s_cml	PVBus	Slave	CML upstream ports
pvbus_s_rnf[256]	PVBus	Slave	RNF upstream ports.
pvbus_s_rni[108]	PVBus	Slave	RNI upstream ports.
reset_in	Signal	Slave	Reset signal.
rnf_sci_s[256]	SystemCoherencyInterface	Slave	System Coherency port to move the RN-F in and out of the coherency domain.
rnf_upstream_reset_in[256]	Signal	Slave	Used by the interconnect to determine the reset state of the RNF manager to check an aspect of reset sequencing. If debug_force_snoop is used, this port must be connected.
rni_sci_s[108]	SystemCoherencyInterface	Slave	System Coherency port to move the RN-D in and out of the coherency domain.
rni_upstream_reset_in[108]	Signal	Slave	Used by the interconnect to determine the reset state of the RNI manager to check an aspect of reset sequencing. If debug_force_snoop is used, this port must be connected.

## Parameters for CMN650R2

### **acchannelen\_rnf**

#### Type

string

#### Default value

"0"

DEPRECATED: Will be removed after FM 11.18. Use `rnf_sci_enable` instead.

For each rnf port, indicates if the port is populated with a snoop responding device or not.

The input value is a string, for example `0xffff` or `ffff`

### **acchannelen\_rni**

#### Type

string

#### Default value

"0"

**Note**

DEPRECATED: Will be removed after FM 11.18. Use `rni_sci_enable` instead.

---

For each `rni` port, indicates if the port is populated with a dvm responding device or not.

The input value is a string, for example `0xffff` or `ffff`

### **cache\_state\_modelled**

#### **Type**

bool

#### **Default value**

0x0

#### **Description**

Model the cache state.

### **debug\_force\_snoop**

#### **Type**

bool

#### **Default value**

false

The CMN650R2 interconnect will normally start with snooping disabled.

The parameter `rnf_sci_enable` and `rni_sci_enable` determines which connections are managed by the System Coherency Interface.

For connections that are managed by the System Coherency Interface, then they will look after themselves for entering and leaving the coherency domain and this parameter has no effect for those ports.

However, for connections that are *not* managed by the System Coherency Interface, this parameter enables the upstream system of a port to be snooped if the upstream is not in reset and if `acchannelen_rnf` allows it.

**Note**

This parameter is for debug purpose only

Do not use this parameter instead of correctly configuring CMN.

---

### **disable\_CML\_port**

#### **Type**

bool

**Default value**

0x0

**Description**

If true the model won't connect the CML port when there are nodes which support the CML feature (ie CXG nodes).

**enable\_logger****Type**

bool

**Default value**

0x0

**Description**

Enable PVBUSLoggers for the downstream ports in the CMN model.

**enable\_rnsam\_to\_hnf\_wider\_hash****Type**

bool

**Default value**

false

Enable support of wider hash for the RNSAM to HNF communication.

If this variable enabled, then `bits[47:6]` from PA used in hashing function.

By default it is `[47:12]`.

**force\_rnsam\_internal****Type**

bool

**Default value**

0x1

**Description**

Force all RNSAMs to be internal independently of the mesh topology.

**hnf\_mpam\_idr\_override****Type**

uint64\_t

**Default value**

0

Set to override `hnf_mpam_idr[31:24]` value. Bit[28] is Reserved and is ignored.

**mesh\_config\_file****Type**

string

**Default value**

""

**Description**

Name of a file containing mesh placement of CMN650R2 components.

**periphbase****Type**

uint64\_t

**Default value**

0x20000000

Value for PERIPHBASE. Bits [27:0] are treated 0

**print\_cmn\_ccix\_config****Type**

bool

**Default value**

0x0

**Description**

Print information about the CCIX configuration.

**print\_cmn\_config****Type**

bool

**Default value**

0x0

**Description**

Print the mesh topology and children pointers acquired from the YAML file.

**revision****Type**

string

**Default value**

"r2p0"

Component revision.

Currently supports r2p0.

**rnf\_sci\_enable****Type**

string

**Default value**

"0x0"

For each rnf port, indicates if the port is managed by System Coherency Interface for coherency domain entry/exit

**1**

Managed by SCI

**0**

Managed by Software

The input value is a string, for example 0xffff or ffff

**rni\_sci\_enable****Type**

string

**Default value**

"0x0"

For each rni port, indicates if the port is managed by System Coherency Interface for coherency domain entry/exit

**1**

Managed by SCI

**0**

Managed by Software

The input value is a string, for example 0xffff or ffff

**show\_banner****Type**

uint64\_t

**Default value**

2

Show component banner:

**0**

supress entire banner

**1**

suppress config file

2+  
show full banner

**skip\_cmn\_config\_check**

Type  
bool

Default value  
0x0

Description  
Skip any topology configuration checks. The maximum number of devices per type not verified.

**use\_yaml\_periphbase**

Type  
bool

Default value  
false

Use yaml param CFGM\_PERIPHBASE\_PARAM to specify periphbase address.

If false, model parameter periphbase will be used.

3.10.19 CMN700

CMN700 Interconnect Fast Model. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-913: IP revisions support

Revision	Quality level
r0p0	Full support
r1p0	Full support
r2p0	Full support
r3p0	Full support
r3p3	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

Changes in 11.29.19

Ports added:

- pvbus\_m\_dmc\_axu
- pvbus\_m\_dsu\_axu

Parameters added:

- `dmc_periphbase`
- `dsu_periphbase`

## About CMN700

- Major IP revisions (rX) are modeled and are controlled by the `revision` parameter or the topology file.
- Minor IP revisions (pY) are not modeled. There are no functional differences in the model between pY revisions, with the exception of the `periph_id2` register.
- To configure the model, you must have installed Arm Socrates. The `mesh_config_file` parameter defines the mesh placement of the CHI nodes. Set it to the name of the yml configuration file emitted by Socrates. You must use version SYSOC-BN-00001 r1p6-02lac1 of Socrates to generate the file. For more information about Socrates, see [Arm Socrates](#) on Arm Developer. To download it, contact Arm Technical Support.
- Interconnect models are based on the TRM description and do not typically model RTL defects.
- The maximum mesh size supported is X=12, Y=12.
- The mapping between the port number for `rnf`, `rni/rnd`, `hni`, and `snf/sbsx` interface ports and `NodeId` is based on the `NodeId` index. For example, RNF2 controls `pvbuss_s_rnf[2]`. Its index is specified in the `node_info` register as `logical_id`. Similar behavior can be expected for HN-I.

If both RN-D and RN-I nodes are present, then all starting `rni` ports are mapped to RN-D nodes and then the RN-I nodes. For example, for CMN700 with two RN-D nodes, one RN-I node, and given each RN-I or RN-D node controls three interface ports, `pvbuss_s_rni[0-2]` maps to `RND0`, `pvbuss_s_rni[3-5]` maps to `RND1` and `pvbuss_s_rni[6-8]` maps to `RNI0`.

Similarly, SN-F and SBSX nodes are mapped to `pvbuss_m_snf[]` ports where starting ports are mapped to SN-F and then SBSX nodes.

- See the CMN700r3 TRM for the `HN*_SLC_SIZE_PARAM` values.
- There is limited support for RNSAMs external to the CMN. See the Model limitations section for more information.
- CCG device id is CCG id + 1 when `CAL2` and `PCIE_ENABLE` are set for port 1.
- CXL Type-3 (CXL.mem) devices can be connected to the `pvbuss_m_cxs[]` ports. The CXRH nodes, if any, are connected to `pvbuss_m_cxs[0]` ... followed by the CCG nodes, if any.
- The Address Based Flush (ABF) feature is available. After it has started, the ABF completes instantly. The ABF implementation has the following limitations:
  - In the Fast Model, any HN-F in the interconnect can perform an ABF on any address range even if that range is not part of the System Cache Group (SCG) that the HN-F belongs to.
  - Clearing the OCM with an ABF is not supported. A trace has been added to highlight this.
  - When `HN*_ABF_PR.abf_mode` is Reserved and `HN*_ABF_PR.abf_enable` is set, an error is printed and the ABF status register is set to complete successfully, but no operation takes place.

- Because an ABF completes instantly, the `SF_PM_TRANSITION_ABORT` state cannot be reached. Contact Arm Technical Support with questions about support for this error condition.
- The optional interrupt `INTREQFPU` is not supported.
- There is limited support for RAS:
  - Error logging and reporting functionality for HN-I, SBSX, XP, and MTU are supported.
  - RAS-related interrupts (`INTREQERRS`, `INTREQFAULTS`, `INTREQFAULTNS`, `INTREQERRNS`) have been added.
  - Central RAS interrupt-handling functionality of HN-D is supported.

Enabling RAS can impact performance. To avoid this, RAS is disabled by default in the CMN700 model. To enable RAS, set the `enable_ras` parameter to true.

- There is support for A4S Multichip routing, with limitations:
  - When the `enable_a4s` parameter is false, top-level model ports are terminated with abort handlers.
  - Set `enable_a4s` parameter to true to opt into the feature.
  - The model routes A4S transactions from the `ic_dr_a4s` port to `tx_cxs_a4s` ports according to A4S LDIDs.
  - There is 1 A4S tx/rx port for each CCG up to a maximum of 32 CCGs.
  - When the remote transaction arrives at the receiving remote CMN on `rx_cxs_a4s` ports, it is routed to the GIC A4S port (`ic_rd_a4s`).
  - The A4S LDID for the CCGs can be found by reading the `ccg_RA.unit_info` register or through model parameter `print_cmn_config`.

A4S support limitations are listed in the Model Limitations section.

There is support for DSU AXU and DMC AXU interfaces:

- The DSU AXU and DMC AXU memory regions' start address are with the `dsu_periphbase` and `dmc_periphbase` parameters respectively.

The following list describes the level of support in the CMN700 model for different revision-specific features of the IP:

- r1p0, second release

#### **CXLv2.0 host-side support for CXL.mem and CXL.io protocols for Type-3 memory expansion devices**

Model supports Type-3 connections using PVBUS

#### **32 CCG or CXG gateway nodes**

Supported

**Non power-of-2 hashing of HN-Fs with  $2N * \{1, 3, \text{or } 5\}$  up to 64 HN-Fs or 128 HN-Fs with CAL**

Supported

- r2p0, third release

**Remote PCIe streaming support**

Not in scope

**1.5MB SLC support**

Supported, SLC\_SIZE=2, NUM\_WAYS=12

**90 RN-I support**

Only 40 supported (3 AXI port each)

**128 SN-F/SBSX support**

Only 80 supported

**AXID based for port aggregation across chip**

Not supported

**RNSAM support for 4 chip flat hashing configuration**

Supported

- r3p0, fourth release

**AXU port on MXPs**

Not supported

**512 RN-I requests support**

Not in scope

**16-bit REQ RSVDC support**

Width reported in info\_global register; RSVDC not in scope

**Configurable write cancel threshold in RN-I and RN-D**

Not in scope

**Remote DVM sync collapsing**

Not in scope

**CPAG MOD-3 hashing**

CPAG hashing not supported

**PCIe write streaming improvements**

Not in scope

- r3p3, fifth release

**Performance optimization guideline improvements for RN-I and RN-D**

Not in scope

**HN-P and HN-I AxID Encoding improvements**

Not in scope

**HCAL2 Discovery supported**

Feature available, but not tested for cmn700

## Model limitations

- Out of scope:
  - PMU counters are not supported. Counter registers are implemented as **RAZ**.
  - QoS is not supported and all related registers are **RAZ/WI**.
  - Error injection and error generation are not supported. All error registers are **RAZ/WI**.
  - Power, clock, and interrupt signals are not supported, but RAS-related interrupts are supported.

The P-channel (power) signals `PREQ_LOGIC`, `PSTATE_LOGIC`, `PACCEPT_LOGIC`, `PDENY_LOGIC`, and `PACTIVE_LOGIC`, are not implemented. The model behaves as if `PSTATE_LOGIC` is 5'b00000. So the initial power state of the HN-F nodes is NOSFSLC/OFF. This is reflected in the reset values of `cmn_hns_ppu_pwpr`, which was named `por_hnf_ppu_pwpr` in earlier IP revisions. Software must write the `*_ppu_pwpr` registers to change the power state. Both HAM and FAM power states enable all of the SLC ways.

- Protocol credits and flit buffers are not supported.
- Snoop filtering is not supported.
- Prefetch target operations are not supported.
- Non-XY routing behavior is not supported.
- The MTE feature has been minimally tested and the functionality cannot be guaranteed. MTE error injection and detection are not supported.
- An access to a reserved or nonexistent register does not abort. It returns `pv::Tx_Data::TX_OK` and is **RAZ/WI**.
- Topologies with three I/O masters connected through an RN-I bridge device have been tested. Configurations where multiple I/O masters share a single ACE-lite port have not been tested.
- RNSAMs external to the mesh network are not functionally supported.

Note

Model parameter `force_rnsam_internal` is true by default. If this parameter is set to false and the topology has an RNFx (non-ESAM), the external bit (bit[31]) of the RNSAM children pointer is enabled. This bit is the only functionality governed by this parameter.

- By default, HN-F hashing uses the address [MAX:12] instead of the actual address [MAX:6], due to the DMI mechanism in the model. Enable the parameter `enable_rnsam_to_hnf_wider_hash` to make hashing logic use the actual address [MAX:6], but this might reduce the simulation speed of the model.
- OKB SLC data RAM and tag RAM are not supported.
- Source-based SLC cache partitioning is not supported.
- Way-based SLC cache partitioning is not supported.
- SLC/LCC partitioning dynamic allocation is not supported.

- Remote chip addresses incorrectly allocate a line in the SLC when `cache_state_modelled=true`. This can cause unexpected cache behavior that does not match the RTL, exhausting the SLC earlier or extra evictions.
- The fields in the `mxp_device_port_connect_info` register corresponding to the number of device credit slices and the number of CAL credit slices are not supported.
- HN-Fs with different SLC sizes in the same configuration are not supported.
- GIC communication over A4S ports is not supported.
- No support or updates for the following parameters:
  - `POR_RSVDC_STRONGNC_EN_PARAM`
  - `POR_HNSAM_CUSTOM_REGS_PARAM`
- No updates for a new bit in `CMN_HNS_CFG_CTL` to disable HNS stashing snoop (`hnf_stash_snp_dis`).
- HND-APB registers not supported.
- HN-P nodes are not supported as hashed target from the RNSAM.
- There is limited support for CXL Type-3. It only supports a single device connection (`sa_ports_cnt`).
- For `CMN700R1`, `por_hnf_cfg_ctl` follows the `CMN700R0` write mask and reset value.
- For `CMN700R1` and later, stash snooping is not supported.
- The model cannot activate both CCG APB register access traces and CMN register access traces simultaneously. Use the parameter `register_traces_for_ccg_apb_accesses` to enable CCG APB register access traces. By default, CMN register access traces are available for activation.
- MPAM features are not supported in the model, and the configuration-dependent register reset values do not match the RTL. Some of the registers (`por_hnf_mpam_idr` to `por_hnf_mpam_mbwumon_idr`) shared between security modes are not present in `MPAM_S`.
- The MPAM reset values described in `por_hnf_mpam_ns_por_hnf_mpam_idr[31:24]` default to the not-supported state. The model parameter `hnf_mpam_idr_override` can be used to override this but does not implement any of the functionality.
- The following limitations apply to System Cache Groups and Hash Target Groups:
  - The `hashed_target_grp_hnp_nodeid_reg` which is used for CCG/HN-P target IDs is not supported.
  - AXID hashing across HN-P/CCGs is not supported.
  - HTGs containing targets across multi-chips are not supported.
- `MPAM_S` `secure_register_groups_override` is not supported.
- No specific Debug Trace (DT) node functionality is supported. See [Plug-ins for Fast Models](#) for information about using plug-ins for trace.
- For Power State Transition related flush/disable of the SLC due to `HNF_PPU_PWPR` register, only the Operational Mode field (bits[7:4]) is considered. The Power Policy field (bits[3:0]) is ignored.

- Setting HAM mode for the Operational Mode field (bits[7:4]) of the HNF\_PPU\_PWPR is equivalent to FAM mode. The SLCH2 is neither flushed nor disabled according to the Power Policy field (bits[3:0]).
- Only hashing granularities of 4096B and above are supported.
- All RNs are assumed to have the same HN mapping. Programming RNSAMs differently between RNs is not supported.
- RNSAM cannot be programmed with the same HN-F target in a hashed and non-hashed memory region.
- `RNSAM_STATUS.default_target_type` and `RNSAM_STATUS.default_nodeid` are used as the default target only when `RNSAM_STATUS.use_default_node=1`. Otherwise, when a txn is sent into the model that does not belong to any of the address regions programmed in the RNSAM, it is routed to the HN-D irrespective of what is programmed in the `RNSAM_STATUS.default_target_type` and `RNSAM_STATUS.default_nodeid` fields.
- Address bit masking is not supported in RNSAM or HN-F SAM.
- The OCM does not keep track of the total memory used across the S/NS security world and does not perform any eviction either. It is up to the software to make sure it does not oversubscribe the OCM.
- RSVDC StrongNC and its associated functionality is not supported.
- User-defined hashing mechanism in an SCG is not supported.
- The CXSA mode has limited support. Currently, it only supports one aggregated device.
- The model does not display any register traces.
- GenericTrace for the CMN700 Fast Model, incorrectly mentions “CMN600” in logs.
- CCG node addresses do not match RTL node addresses if not using node addresses from yml.
- The following limitations are specific to revision r2p0:
  - The model does not support the RA\_PRESENT configurable option. RAs are always present in CCG.
  - Maximum number of RN-D supported is 40.
- The following limitations apply to revisions r2p0 and r3p0:
  - No support for RWL (ReadWriteLock).
  - Maximum number of RN-I supported is 40.
  - Maximum combined number of RN-I and RN-D is 40.
  - SN-Fs on CAL4 are not supported.
  - Maximum number of SN interfaces supported is 80.
- The following limitations are specific to revision r3p0:
  - Maximum RAID of 1024 is not supported.
  - Direct Subordinate Access (DSA) CCG inbound request bypass of HN-F is not supported.
  - CXL v2.0 device support for various types is not supported or verified.
  - CXL v2.0 host support for various types is not supported or verified.

- There is no support for CPAG MOD-3 hashing.
- AXU Limitations:
  - There is no support for AXU on MXPs.
  - There is no support for APB accesses on AXU interfaces.
  - The `dsu_apb_only` and `dmc_axu_only` fields are not supported.
- RAS feature limitations:
  - Error logging and reporting functionality for CCG, HN-F, and CXHA are not supported.
  - Single-bit error injection for MTU is not supported as there is no ECC checker or register present to support it.
  - NDE response and Poison error check are not supported.
  - Flit parity and Data check errors are not supported.
  - The information that is captured as source ID, target ID, and logical ID in the ERRMISC register might not be correct or match the hardware.
  - HN-D Illegal Configuration check does not check that the access is of device type.
  - HN-D Illegal Configuration check does not check the access security mode.
  - SN-F RAS errors are treated as SBSX errors.
- A4S support limitations:
  - GIC\_DESTID input strap is not supported. Incoming transactions from remote chip are always routed to IC\_RD.
  - The model assumes the presence of 1x A4S port for GIC without regard for the actual number of a4s interfaces in `themesh_config_file` topology.
  - The model does not require user software at runtime to enable the CMN to route multichip A4S transactions between chips.
  - Limited performance testing has been performed.
  - There is no support for the use of “id\_map” file specified by CMN Configuration Integration Manual (CIM) to configure the model for reset.
- Model behavior does not reflect errata notice 2732981. The model behaves as r3p1. See the errata for details.
- For an HTG/SCG, the model does not consider the secondary region if the primary region is not valid.
- HN-D is only permitted on device port P2 in a single-MXP configuration.
- Only the last RN-F in the mesh, which is the one with the highest logical id, can be controlled by `mvp_p[0-5]_syscoreq_ctl` registers. Also, incorrectly, it can be controlled from any XP.
- HNSAM only supports two non-hashed memory regions. Memory regions programmed using `cmn_hns_sam_nonhash_cfg[1|2]_memregion2-63` registers are ignored.
- The Hierarchical hashing fields  
`HASHED_TARGET_GRP_HASH_CNTL_REG.htg_region#{index}_hier_enable_address_stripping`  
 and `HASHED_TARGET_GRP_HASH_CNTL_REG.htg_region#{index}_hier_cluster_mask` are not supported.

- The `HNSAM_DEF_HASHED_GRP_EN` yml parameter is not supported and HN-F SAM legacy mode is always enabled.
- The `HNSAM_NUM_HTG` yml parameter is not supported.
- When both `POR_CCLA_ULL_CTL.u11_to_u11_en` and `POR_CCLA_ULL_CTL.send_vd_init` bits are set then both `POR_CCLA_ULL_STATUS.tx_state` and `POR_CCLA_ULL_STATUS.rx_state` are set. The other side of the link is not consulted to set `POR_CCLA_ULL_STATUS.rx_state`.
- HN-F SAM:
  - Address masking in default hash regions in HN-F SAM is not supported.
  - Hashing in default hash regions in HN-F SAM is not supported. However, trace `SNF_HASHING_Target_SNF` displays the target SN-F as if 3SN/6SN hashing were enabled.

Note

The transaction is always routed to the SN0 nodeid programmed in the `SAM_CONTROL` register.

- Re-programming regions in HN-F SAM is not tested.
- Hashing across CCGs in HN-F SAM is not supported.
- Address compare hashed regions in HN-F SAM do not support non-power of 2 hashing. When non-power of 2 hashing is enabled, the first SN in the HTG (SN0) is used as the target.
- `HNSAM_DEF_HASHED_GRP_EN` yml parameter is not supported.
- CMN700 r1p0 supports only 8 hashed regions in HN-F SAM. CMN700 r2p0 and r3p0 support 16 hashed regions.
- Default hash regions in HN-F SAM have limited support.  
`cmn_hns_sam_cfg1_def_hashed_region` and `cmn_hns_sam_cfg2_def_hashed_region` are not supported.
- Hashing across SN-F on CAL2 in HN-F SAM is not supported.
- Remote chip addresses are incorrectly allocating a line in the SLC when `cache_state_modelled=true`. This can cause unexpected cache behavior that does not match the RTL, exhausting the SLC earlier or extra evictions.
- Model does not support APB registers.
- `POR_MTU_TAG_ADDR_CTL.memory_map_mode=3'b000` (Pass-through) is the only supported behavior. Other values for this field are not supported.
- For RN-D nodes, when software writes `SYSCOREQ`, DVM propagation gets enabled but `SYSCOACK` is not set.
- Functionality behind 'dn\_domain' yml param is abstracted away and the model forwards the DVM message to all upstream ports irrespective of 'dn\_domain' value. Reading `rnsam_status.dn_nodeid` does not reflect what `dn_domain` the node is in.

### About the `debug_force_snoop` parameter

The CMN interconnect normally starts up with snooping disabled.

The parameters `rnf_sci_enable` and `rni_sci_enable` determine which connections are managed by the System Coherency Interface. Connections that are managed by the System Coherency Interface look after themselves for entering and leaving the coherency domain and `debug_force_snoop` has no effect on those ports.

However, for connections that are not managed by the System Coherency Interface, `debug_force_snoop` enables the system upstream of a port to be snooped if the upstream is not in reset and if `acchannelen_rnf` allows it.

Therefore, software does not need to know how to turn snoops in the interconnect on and off. The reset state of the upstream rnf ports is determined by the `rnf_upstream_reset_state[]` signals and must be connected for any port that could go into reset and you want managed by `debug_force_snoop`.

If the connection is managed by SCI or can never go into reset then you need not connect this and the interconnect assumes that the upstream system is not in reset and will always enable the snoops if `ACCHANNELENSx` allows it.

If you fail to connect `rnf_upstream_reset_state[]` correctly, then the upstream system might receive snoop messages while in reset and it will complain that it received a snoop request while it was in reset.

If software overrides the enables then the next change to `rnf_upstream_reset_state[]` or the interconnect reset will overwrite the software values.

Using this operation along with software controlling the enables could confuse the software. This option does not remove the responsibility of the upstream system to clean any shared dirty data from its caches before going into reset.

Note

This parameter is for debug purposes only. Do not use it instead of correctly configuring CMN.

## Iris and MTI instances for CMN700

This model has the following Iris instances:

**Table 3-914: CMN700 Iris instances**

InstanceName	ComponentName
CMN700	CMN700
CMN700.bus_slave_ocm_NS	PVBusSlave
CMN700.bus_slave_ocm_S	PVBusSlave
CMN700.cmn600_cache	PVCache
CMN700.cmn600_cache.upstream[0]	PVBusSlave
CMN700.cmn600_cache.upstream[10]	PVBusSlave
CMN700.cmn600_cache.upstream[11]	PVBusSlave

InstanceName	ComponentName
CMN700.cmn600_cache.upstream[12]	PVBusSlave
CMN700.cmn600_cache.upstream[13]	PVBusSlave
CMN700.cmn600_cache.upstream[14]	PVBusSlave
CMN700.cmn600_cache.upstream[15]	PVBusSlave
CMN700.cmn600_cache.upstream[16]	PVBusSlave
CMN700.cmn600_cache.upstream[17]	PVBusSlave
CMN700.cmn600_cache.upstream[18]	PVBusSlave
CMN700.cmn600_cache.upstream[19]	PVBusSlave
CMN700.cmn600_cache.upstream[1]	PVBusSlave
CMN700.cmn600_cache.upstream[20]	PVBusSlave
CMN700.cmn600_cache.upstream[21]	PVBusSlave
CMN700.cmn600_cache.upstream[22]	PVBusSlave

## Ports for CMN700

**Table 3-916: Ports**

Name	Protocol	Type	Description
event_clusters	Signal	Peer	CPU event communication signal from the clusters.
event_downstream_link_signal[32]	Signal	Master	CPU event communication signal to the CMLHub. Event from the CMN towards the Hub NOTE that these are virtual "links" on underlying PCIe hardware bus.
event_upstream_link_signal[32]	Signal	Slave	Event from the Hub towards the CMN
ic_dr_a4s	PVBus	Slave	Interrupt Controller Distributor-to-Remote AXI4Stream port.
ic_rd_a4s	PVBus	Master	Interrupt Controller Remote-to-Distributor AXI4Stream port.
intreqerrns_irq_out	Signal	Master	Interrupt signal
intreqerrs_irq_out	Signal	Master	Interrupt signal

Name	Protocol	Type	Description
intreqfaultns_irq_out	Signal	Master	Interrupt signal
intreqfaults_irq_out	Signal	Master	Interrupt signal
pvbus_m_cml	PVBus	Master	CML downstream ports
pvbus_m_cml_cfg	PVBus	Master	CML downstream hub configuration port
pvbus_m_cxs[32]	PVBus	Master	CXS downstream ports
pvbus_m_dmc_axu[16]	PVBus	Master	DMC AXU ports
pvbus_m_dsu_axu[256]	PVBus	Master	DSU AXU ports
pvbus_m_hni[32]	PVBus	Master	HNI downstream ports.
pvbus_m_snf[128]	PVBus	Master	SNF downstream port.
pvbus_s_apb	PVBus	Slave	APB interface port.
pvbus_s_ccg_apb[32]	PVBus	Slave	CCG APB interface port.
pvbus_s_cml	PVBus	Slave	CML upstream ports
pvbus_s_rnf[256]	PVBus	Slave	RNF upstream ports.
pvbus_s_rni[270]	PVBus	Slave	RNI upstream ports. NOTE the upper 150 ports are only used in r2/r3.
reset_in	Signal	Slave	Reset signal.
rnf_sci_s[256]	SystemCoherencyInterface	Slave	System Coherency port to move the RN-F in and out of the coherency domain.
rnf_upstream_reset_in[256]	Signal	Slave	Used by the interconnect to determine the reset state of the RNF manager to check an aspect of reset sequencing. If debug_force_snoop is used, this port must be connected.
rni_sci_s[120]	SystemCoherencyInterface	Slave	System Coherency port to move the RN-D in and out of the coherency domain.
rni_upstream_reset_in[270]	Signal	Slave	Used by the interconnect to determine the reset state of the RNI manager to check an aspect of reset sequencing. If debug_force_snoop is used, this port must be connected. NOTE the upper 150 ports are only used in r2/r3.
rx_cxs_a4s[32]	PVBus	Slave	Receive channel of A4S packets from a remote CMN.
tx_cxs_a4s[32]	PVBus	Master	Transmit channel of A4S packets to a remote CMN.

## Parameters for CMN700

### a4s\_logicalid

#### Type

string

#### Default value

0

A4S ID mapping of the GIC destination component connected through a CCG port.

Specify the `CCG_NODE_ID` and the destination A4S Logical ID of the GIC component connected by using a decimal number format like:

```
<CCG_NODEID0>=<A4S_LID0>,<CCG_NODEID1>=<A4S_LID1>
```

For example for CCG Node ID 54 with A4S ID 12 - 54=12.

All of the CCG nodes must be specified.

The parameter is only valid when the `enable_a4s` is also enabled. The default behavior without this parameter is to automatically assign an incrementing A4S ID

### **acchannelen\_rnf**

#### **Type**

string

#### **Default value**

"0"

Note

DEPRECATED: Will be removed after FM 11.18. Use `rnf_sci_enable` instead.

For each `rnf` port, indicates if the port is populated with a snoop responding device or not.

The input value is a string, for example `0xffff` or `ffff`

### **acchannelen\_rni**

#### **Type**

string

#### **Default value**

"0"

Note

DEPRECATED: Will be removed after FM 11.18. Use `rni_sci_enable` instead.

For each `rni` port, indicates if the port is populated with a dvm responding device or not.

The input value is a string, for example `0xffff` or `ffff`

**cache\_state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Model the cache state.

**cmn700\_tag\_cache.metadata\_controller.init\_value****Type**

int

**Default value**

0xd

**Description**

Initialize metadata memory with this value. If one of init\_values\_json or init\_values\_json\_file is specified, this value applies only to any metadata not specified in the JSON.

**cmn700\_tag\_cache.metadata\_controller.init\_values\_json****Type**

string

**Default value**

""

**Description**

A JSON value describing initial metadata values. Mutually exclusive with init\_values\_json\_file. The format is as follows: {"regions": [{ "begin": 0x0, "end": 0x10000, "mte\_tag": 0xa }, {"begin": 0x20000, "end": 0x50000, "mte\_tag": 0xc }]}.

**cmn700\_tag\_cache.metadata\_controller.init\_values\_json\_file****Type**

string

**Default value**

""

**Description**

Path to a JSON file with initial metadata values. Mutually exclusive with init\_values\_json. The format is as follows: {"regions": [{ "begin": 0x0, "end": 0x10000, "mte\_tag": 0xa }, {"begin": 0x20000, "end": 0x50000, "mte\_tag": 0xc }]}.

**cmn700\_tag\_cache.metadata\_controller.is\_enabled****Type**

bool

**Default value**

0x0

**Description**

If false, disables the MetaData controller functionality, and makes the component invisible to passing transactions.

**cmn700\_tag\_cache.metadata\_controller.mte\_tag\_carveout\_json****Type**

string

**Default value**

""

**Description**

JSON string that specifies the PA range of the tag carveout regions and the beginning of the PA range for which they provide tag storage. If `pa_regions_with_metadata_storage` defines which regions can have metadata, the tag carveout regions cannot overlap them, and each tagged region must be entirely covered by one of them. The block size must be  $\geq 64$  bytes and a power of 2, defaulting to 4KiB. The maximum block size supported is 4KiB. The carveout region size must be  $\geq 4$ KiB and a power of 2, and determines the size of the corresponding tagged region. { "regions": [ { "begin": 0x0, "tag\_carveout\_region": [0xfffff00000, 0xfffff00fff]}, { "begin": 0x20000, "tag\_carveout\_region": [0xfffff01000, 0xfffff01fff], "block\_size": 0x100}, { "begin": 0x100000, "tag\_carveout\_region": [0xfffff08000, 0xfffff0Bfff], "block\_size": 0x2000}]}.

**cmn700\_tag\_cache.metadata\_controller.mte\_tag\_carveout\_json\_file****Type**

string

**Default value**

""

**Description**

Path to a JSON file that specifies the PA range of the tag carveout regions with the same format as `mte_tag_carveout_json`. Only one of `mte_tag_carveout_json` and `mte_tag_carveout_json_file` can be used. .

**cmn700\_tag\_cache.metadata\_controller.mte\_tag\_carveout\_tag\_order****Type**

string

**Default value**

little-endian

**Description**

Order of the tags within the MTE tag carveout blocks. This can be little-endian (same order as the corresponding tagged data) or big-endian (reverse order). The parameter accepts both '-' and '\_', so 'little-endian', 'big-endian', 'little\_endian' and 'big\_endian' are all valid. .

**cmn700\_tag\_cache.metadata\_controller.pa\_regions\_with\_metadata\_storage****Type**

string

**Default value**

""

**Description**

Specify the address region where the metadata storage is available for each PAS in a JSON format. If the PAS does not have a region specified, the PAS has metadata storage for all of the space. The regions are defined by begin and end\_incl addresses. Example: { "ns": [0xa0000000, 0xa0000fff], "s": [0xb0000000, 0xb0000fff], "rl": [0xc0000000, 0xc0000fff], "rt": [0xd0000000, 0xd0000fff] } ns: non-secure, s: secure, rl: realm, rt: root.

**debug\_force\_snoop****Type**

bool

**Default value**

false

The CMN700 interconnect will normally start with snooping disabled.

The parameter `rnf_sci_enable` and `rni_sci_enable` determines which connections are managed by the System Coherency Interface.

For connections that are managed by the System Coherency Interface, then they will look after themselves for entering and leaving the coherency domain and this parameter has no effect for those ports.

However, for connections that are *not* managed by the System Coherency Interface, this parameter enables the upstream system of a port to be snooped if the upstream is not in reset and if `acchannelen_rnf` allows it.

This parameter is for debug purpose only

Do not use this parameter instead of correctly configuring CMN.

---

**disable\_CML\_port****Type**

bool

**Default value**

0x0

**Description**

If true the model won't connect the CML port when there are nodes which support the CML feature (ie CXG nodes).

**dmc\_periphbase****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Value for DMC\_PERIPHBASE.

**dsu\_periphbase****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Value for DSU\_PERIPHBASE.

**enable\_a4s****Type**

bool

**Default value**

0x0

**Description**

Enables A4S ports for GIC multi-chip routing.

**enable\_logger****Type**

bool

**Default value**

0x0

**Description**

Enable PVBusLoggers for the downstream ports in the CMN model.

**enable\_ras****Type**

bool

**Default value**

0x0

**Description**

Enables RAS. There is an impact on performance when RAS is enabled.

**`enable_rnsam_to_hnf_wider_hash`****Type**

bool

**Default value**

false

Enable support of wider hash for the RNSAM to HNF communication.

If this variable enabled, then `bits[47:6]` from PA used in hashing function.

By default it is `[47:12]`.

**`force_rnsam_internal`****Type**

bool

**Default value**

0x1

**Description**

Force all RNSAMs to be internal independently of the mesh topology.

**`hnf_mpam_idr_override`****Type**

uint64\_t

**Default value**

0

Set to override `hnf_mpam_idr[31:24]` value. Bit[28] is Reserved and is ignored.

**`mesh_config_file`****Type**

string

**Default value**

""

**Description**

Name of a file containing mesh placement of CMN700 components.

**periphbase**

**Type**  
uint64\_t

**Default value**  
0x20000000

Value for PERIPHBASE. Bits [27:0] are treated 0

**print\_cmn\_ccix\_config**

**Type**  
bool

**Default value**  
0x0

**Description**  
Print information about the CCIX configuration.

**print\_cmn\_config**

**Type**  
bool

**Default value**  
0x0

**Description**  
Print the mesh topology and children pointers acquired from the YML file.

**register\_traces\_for\_ccg\_apb\_accesses**

**Type**  
bool

**Default value**  
false

Will be removed when enhancement SDDKW-74284 is done.

---

Intended for use with trace plugins.

**true**  
registers traces to CCG register accesses through CCG APB interface.

**false**  
registers traces to CMN register accesses through all other interfaces (eg RN nodes).

**revision****Type**

string

**Default value**

"r0p0"

Component revision.

Currently supports r0p0, r1p0, r2p0, r3p0, r3p3.

**rnf\_sci\_enable****Type**

string

**Default value**

"0x0"

For each rnf port, indicates if the port is managed by System Coherency Interface for coherency domain entry/exit

**1**

Managed by SCI

**0**

Managed by Software

The input value is a string, for example 0xffff or ffff

**rni\_sci\_enable****Type**

string

**Default value**

"0x0"

For each rni port, indicates if the port is managed by System Coherency Interface for coherency domain entry/exit

**1**

Managed by SCI

**0**

Managed by Software

The input value is a string, for example 0xffff or ffff

**show\_banner****Type**

uint64\_t

**Default value**

2

Show component banner:

**0**

supress entire banner

**1**

suppress config file

**2+**

show full banner

**skip\_cmn\_config\_check****Type**

bool

**Default value**

0x0

**Description**

Skip any topology configuration checks. The maximum number of devices per type not verified.

**use\_yaml\_periphbase****Type**

bool

**Default value**

false

Use yaml param CFGM\_PERIPHBASE\_PARAM to specify periphbase address.

If false, model parameter periphbase will be used.

**yaml\_has\_node\_addresses****Type**

bool

**Default value**

0x0

**Description**

Does the top-level YAML file describe node-addresses ?.

### 3.10.20 CMN\_S3

CMN\_S3 Interconnect Fast Model. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-917: IP revisions support**

Revision	Quality level
r0p0	Preliminary support
r0p1	Preliminary support
r2p0	Preliminary support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### Changes in 11.29.19

Ports added:

- `pvbus_m_dmc_axu`
- `pvbus_m_dsu_axu`
- `pvbus_m_mxp_axu`
- `pvbus_s_cxs`

Ports removed:

- `pvbus_m_cml`
- `pvbus_m_cml_cfg`
- `pvbus_s_cml`
- `pvc2c_m`
- `pvc2c_s`

Parameters added:

- `dmc_periphbase`
- `dsu_periphbase`
- `mxp_axu_periphbase`

Parameters removed:

- `disable_CML_port`

#### About CMN\_S3

- Major IP revisions (rX) are modeled and are controlled by the `version` parameter in the topology file.

- Minor IP revisions (pY) are not modeled. There are no functional differences in the model between pY revisions, with the exception of the `periph_id2` register.
- To configure the model, you must have installed Arm Socrates. The `mesh_config_file` parameter defines the mesh placement of CHI nodes. Set it to the name of the yml configuration file emitted by Socrates. You must use r1p7-06 version of Socrates to generate the file. For more information about Socrates, see [Arm Socrates](#) on Arm Developer. To download it, contact Arm Technical Support.
- Interconnect models are based on the TRM description and do not typically model RTL defects.

The following functionality is supported:

- CHI Issue F Realm Management Extension (RME) with `LEGACY_TZ_EN`.
  - `LEGACY_TZ_EN` is controlled by a model parameter.
    - RCR registers are **RAZ/WI**.
    - Does not prevent REALM/ROOT transactions from flowing through interconnect.
- HNS device isolation.
- Hybrid CAL3 for discovery only.
- CPA groups including multi CPA groups.
- Large systems can be built by connecting multiple CMNs (Coherent Mesh Networks) using their CCG components. These are referred to as “multi-chip” systems. In real hardware the CCG components communicate using the CXS protocol. The CMN Fast Models do not implement CXS, but PVBUS can be used to represent CCG connections.
  - `pvbus_m_cxs` and `pvbus_s_cxs` ports represent the CCG ports
  - Connecting `cmnA.pvbus_m_cxs[a]` to `cmnB.pvbus_s_cxs[b]`, represents connecting `cmnA.CCGa` to `cmnB.CCGB`; the reverse connection should also be made: `cmnB.pvbus_m_cxs[b]` to `cmnA.pvbus_s_cxs[a]`.
  - Caching functionality (and consequently snooping) is not supported in multichip platforms.
  - DVM's work correctly only in systems where all CMN's are connected to all other CMN's in the system.
  - `pvbus_m_cxs` ports can also be used to connect to CXL Type-3 devices.
  - No support for the CMLHub to model multi-chip systems.
- MXP AXU interfaces are supported.
  - The base address for accesses on these interfaces must be specified through the `mxp_axu_periphbase` parameter.

## Model limitations

Issues listed in this section have identifiers of the form [SDDKW-x]. These are Arm internal references only.

- [SDDKW-82504] CMN700 Fast Model limitations apply to CMN\_S3 model as well, in addition to those listed below. See [CMN700](#) for limitations.
- RAS functionality is not supported.
- Features not supported:
  - CHI C2C is not supported.
  - Direct Subordinate Access (DSA)
  - MTSX
  - Port to Port Forwarding for CML SMP
  - Memory Protection Engine (MPE) for CXL-Type Host
- Out of scope features:
  - Datasource handling
- [SDDKW-81128] HNS device isolation:
  - Hashed target groups are checked for disabled nodes at the time the RNSAM is programmed and ready (`rnsam_status.nstall_req=1'b1`). Disabling HNS devices after RNSAM programming is a no-op.
  - Having disabled HNS nodes in a hash target group is a non-fatal error. Model displays an error message and behaves the same as if the node was enabled.
  - The default scenario is not supported, i.e. disabling only one device of a CAL2 pair in a hash target group triggers a non-fatal error message for that specific device of the CAL2 pair. The error message does not affect the other device behind CAL2.
  - `por_mxp_child_pointer_0-31`'s bit 30 does not indicate if the node is isolated or not. This is applicable to `r2p0` and above.
- [SDDKW-82529] OCM does not support RL/RT PAS
- [SDDKW-79584] `por_cfgm_periph_id_0_periph_id_1` has the value `0x000000b40000003e` which may not match RTL
- [SDDKW-76061] Model does not support global secure overrides for root registers.
- [SDDKW-76516] Model does not support RCR (root override register) for the following nodes:
  - DT
  - DN
  - MTU
  - APB
- [SDDKW-80175] DSU HNI region in RNSAM is not supported.
- [SDDKW-79842] Increased maximum HN-I limit to 48. Maximum tested is 46.
- [SDDKW-85869] `RNSAM_STATUS.default_target_type` and `RNSAM_STATUS.default_nodeid` is used as the default target only when `RNSAM_STATUS.use_default_node=1`. Otherwise, when a `txn` is sent into the model which does not belong to any of the address regions programmed in the RNSAM, it is routed to the HND irrespective of what is programmed in the `RNSAM_STATUS.default_target_type` and `RNSAM_STATUS.default_nodeid` fields

- [SDDKW-85945]  
HASHED\_TARGET\_GRP\_HASH\_CNTL\_REG0-31.htg\_region#{index}\_hier\_enable\_address\_stripping and HASHED\_TARGET\_GRP\_HASH\_CNTL\_REG0-31.htg\_region#{index}\_hier\_cluster\_mask are not supported.
- Hybrid CAL
  - [SDDKW-90932] CAL2 has not been tested.
  - [SDDKW-90932] CAL3 functionality beyond discovery has not been tested.
- [SDDKW-85839] Register bitfields with W1S are treated as RW.
- HNP on CAL4 are not supported.
- HNS on CAL4 are not tested.
- [SDDKW-91300] HCAL3 is not supported.
- NUM\_EXCL\_CHIPS and MAX\_EXCL\_ALL\_CHIPS parameter values are not reflected in register por\_info\_global\_1.
- LCNSAM\_NUM\_HTG, LCNSAM\_NUM\_NONHASHGROUP parameter values are not reflected in register cmn\_hns\_unit\_info\_1.
- NUM\_VMF parameter value is not reflected in por\_dn\_build\_info.
- AXU
  - APB accesses on MXP AXU interfaces are not supported.
  - The mxp\_axu\_only field is not supported.

### Iris and MTI instances for CMN\_S3

This model has the following Iris instances:

**Table 3-918: CMN\_S3 Iris instances**

InstanceName	ComponentName
CMN_S3	CMN700
CMN_S3.bus_slave_ocm_NS	PVBusSlave
CMN_S3.bus_slave_ocm_S	PVBusSlave
CMN_S3.cmn600_cache	PVCache
CMN_S3.cmn600_cache.upstream[0]	PVBusSlave
CMN_S3.cmn600_cache.upstream[100]	PVBusSlave
CMN_S3.cmn600_cache.upstream[101]	PVBusSlave
CMN_S3.cmn600_cache.upstream[102]	PVBusSlave
CMN_S3.cmn600_cache.upstream[103]	PVBusSlave
CMN_S3.cmn600_cache.upstream[104]	PVBusSlave
CMN_S3.cmn600_cache.upstream[105]	PVBusSlave
CMN_S3.cmn600_cache.upstream[106]	PVBusSlave
CMN_S3.cmn600_cache.upstream[107]	PVBusSlave

## Ports for CMN\_S3

**Table 3-920: Ports**

Name	Protocol	Type	Description
event_clusters	Signal	Peer	CPU event communication signal from the clusters.
event_downstream_link_signal[44]	Signal	Master	CPU event communication signal to the CMLHub. Event from the CMN towards the Hub NOTE that these are virtual "links" on underlying PCIe hardware bus.

Name	Protocol	Type	Description
event_upstream_link_signal[44]	Signal	Slave	Event from the Hub towards the CMN
ic_dr_a4s	PVBus	Slave	Interrupt Controller Distributor-to-Remote AXI4Stream port.
ic_rd_a4s	PVBus	Master	Interrupt Controller Remote-to-Distributor AXI4Stream port.
intreqerrns_irq_out	Signal	Master	Interrupt signal
intreqerrs_irq_out	Signal	Master	Interrupt signal
intreqfaultns_irq_out	Signal	Master	Interrupt signal
intreqfaults_irq_out	Signal	Master	Interrupt signal
pvbus_m_cxs[44]	PVBus	Master	CXS downstream ports
pvbus_m_dmc_axu[16]	PVBus	Master	DMC AXU ports
pvbus_m_dsu_axu[256]	PVBus	Master	DSU AXU ports
pvbus_m_hni[256]	PVBus	Master	HNI downstream ports.
pvbus_m_mxp_axu[144]	PVBus	Master	MPX AXU ports
pvbus_m_snf[179]	PVBus	Master	SNF downstream port.
pvbus_s_apb	PVBus	Slave	APB interface port.
pvbus_s_ccg_apb[44]	PVBus	Slave	CCG APB interface port.
pvbus_s_cxs[44]	PVBus	Slave	CXS upstream ports
pvbus_s_rnf[296]	PVBus	Slave	RNF upstream ports.
pvbus_s_rni[270]	PVBus	Slave	RNI upstream ports.
reset_in	Signal	Slave	Reset signal.
rnf_sci_s[296]	SystemCoherencyInterface	Slave	System Coherency port to move the RN-F in and out of the coherency domain.
rnf_upstream_reset_in[296]	Signal	Slave	Used by the interconnect to determine the reset state of the RNF manager to check an aspect of reset sequencing. If debug_force_snoop is used, this port must be connected.
rni_sci_s[120]	SystemCoherencyInterface	Slave	System Coherency port to move the RN-D in and out of the coherency domain.
rni_upstream_reset_in[270]	Signal	Slave	Used by the interconnect to determine the reset state of the RNI manager to check an aspect of reset sequencing. If debug_force_snoop is used, this port must be connected.
rx_cxs_a4s[44]	PVBus	Slave	Receive channel of A4S packets from a remote CMN.
tx_cxs_a4s[44]	PVBus	Master	Transmit channel of A4S packets to a remote CMN.

## Parameters for CMN\_S3

### a4s\_logicalid

#### Type

string

#### Default value

0

A4S ID mapping of the GIC destination component connected through a CCG port.

Specify the `ccg_node_id` and the destination A4S Logical ID of the GIC component connected by using a decimal number format like:

```
<CCG_NODEID0>=<A4S_LID0>,<CCG_NODEID1>=<A4S_LID1>
```

For example for CCG Node ID 54 with A4S ID 12 - 54=12.

All of the CCG nodes must be specified.

The parameter is only valid when the `enable_a4s` is also enabled. The default behavior without this parameter is to automatically assign an incrementing A4S ID

### **acchannelen\_rnf**

#### **Type**

string

#### **Default value**

"0"

Note

DEPRECATED: Will be removed after FM 11.18. Use `rnf_sci_enable` instead.

For each `rnf` port, indicates if the port is populated with a snoop responding device or not.

The input value is a string, for example `0xffff` or `ffff`

### **acchannelen\_rni**

#### **Type**

string

#### **Default value**

"0"

Note

DEPRECATED: Will be removed after FM 11.18. Use `rni_sci_enable` instead.

For each `rni` port, indicates if the port is populated with a dvm responding device or not.

The input value is a string, for example `0xffff` or `ffff`

**cache\_state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Model the cache state.

**cmn\_s3\_tag\_cache.metadata\_controller.init\_value****Type**

int

**Default value**

0xd

**Description**

Initialize metadata memory with this value. If one of init\_values\_json or init\_values\_json\_file is specified, this value applies only to any metadata not specified in the JSON.

**cmn\_s3\_tag\_cache.metadata\_controller.init\_values\_json****Type**

string

**Default value**

""

**Description**

A JSON value describing initial metadata values. Mutually exclusive with init\_values\_json\_file. The format is as follows: {"regions": [{ "begin": 0x0, "end": 0x10000, "mte\_tag": 0xa }, {"begin": 0x20000, "end": 0x50000, "mte\_tag": 0xc }]}.

**cmn\_s3\_tag\_cache.metadata\_controller.init\_values\_json\_file****Type**

string

**Default value**

""

**Description**

Path to a JSON file with initial metadata values. Mutually exclusive with init\_values\_json. The format is as follows: {"regions": [{ "begin": 0x0, "end": 0x10000, "mte\_tag": 0xa }, {"begin": 0x20000, "end": 0x50000, "mte\_tag": 0xc }]}.

**cmn\_s3\_tag\_cache.metadata\_controller.is\_enabled****Type**

bool

**Default value**

0x0

**Description**

If false, disables the MetaData controller functionality, and makes the component invisible to passing transactions.

**cmn\_s3\_tag\_cache.metadata\_controller.mte\_tag\_carveout\_json****Type**

string

**Default value**

""

**Description**

JSON string that specifies the PA range of the tag carveout regions and the beginning of the PA range for which they provide tag storage. If `pa_regions_with_metadata_storage` defines which regions can have metadata, the tag carveout regions cannot overlap them, and each tagged region must be entirely covered by one of them. The block size must be  $\geq 64$  bytes and a power of 2, defaulting to 4KiB. The maximum block size supported is 4KiB. The carveout region size must be  $\geq 4$ KiB and a power of 2, and determines the size of the corresponding tagged region. { "regions": [ { "begin": 0x0, "tag\_carveout\_region": [0xfffff00000, 0xfffff00fff]}, { "begin": 0x20000, "tag\_carveout\_region": [0xfffff01000, 0xfffff01fff], "block\_size": 0x100}, { "begin": 0x100000, "tag\_carveout\_region": [0xfffff08000, 0xfffff0Bfff], "block\_size": 0x2000}]}.

**cmn\_s3\_tag\_cache.metadata\_controller.mte\_tag\_carveout\_json\_file****Type**

string

**Default value**

""

**Description**

Path to a JSON file that specifies the PA range of the tag carveout regions with the same format as `mte_tag_carveout_json`. Only one of `mte_tag_carveout_json` and `mte_tag_carveout_json_file` can be used. .

**cmn\_s3\_tag\_cache.metadata\_controller.mte\_tag\_carveout\_tag\_order****Type**

string

**Default value**

little-endian

**Description**

Order of the tags within the MTE tag carveout blocks. This can be little-endian (same order as the corresponding tagged data) or big-endian (reverse order). The parameter accepts both '-' and '\_', so 'little-endian', 'big-endian', 'little\_endian' and 'big\_endian' are all valid. .

**cmn\_s3\_tag\_cache.metadata\_controller.pa\_regions\_with\_metadata\_storage****Type**

string

**Default value**

""

**Description**

Specify the address region where the metadata storage is available for each PAS in a JSON format. If the PAS does not have a region specified, the PAS has metadata storage for all of the space. The regions are defined by begin and end\_incl addresses. Example: { "ns": [0xa0000000, 0xa0000fff], "s": [0xb0000000, 0xb0000fff], "rl": [0xc0000000, 0xc0000fff], "rt": [0xd0000000, 0xd0000fff] } ns: non-secure, s: secure, rl: realm, rt: root.

**debug\_force\_snoop****Type**

bool

**Default value**

false

The CMN\_S3 interconnect will normally start with snooping disabled.

The parameter `rnf_sci_enable` and `rni_sci_enable` determines which connections are managed by the System Coherency Interface.

For connections that are managed by the System Coherency Interface, then they will look after themselves for entering and leaving the coherency domain and this parameter has no effect for those ports.

However, for connections that are *not* managed by the System Coherency Interface, this parameter enables the upstream system of a port to be snooped if the upstream is not in reset and if `acchannelen_rnf` allows it.

This parameter is for debug purpose only

Do not use this parameter instead of correctly configuring CMN.

---

**dmc\_periphbase****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Value for DMC\_PERIPHBASE.

**dsu\_periphbase****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Value for DSU\_PERIPHBASE.

**enable\_a4s****Type**

bool

**Default value**

0x0

**Description**

Enables A4S ports for GIC multi-chip routing.

**enable\_logger****Type**

bool

**Default value**

0x0

**Description**

Enable PVBUSLoggers for the downstream ports in the CMN model.

**enable\_ras****Type**

bool

**Default value**

0x0

**Description**

Enables RAS. There is an impact on performance when RAS is enabled.

**enable\_rnsam\_to\_hnf\_wider\_hash****Type**

bool

**Default value**

false

Enable support of wider hash for the RNSAM to HNF communication.

If this variable enabled, then `bits[47:6]` from PA used in hashing function.

By default it is `[47:12]`.

### **`force_rnsam_internal`**

#### **Type**

`bool`

#### **Default value**

`0x1`

#### **Description**

Force all RNSAMs to be internal independently of the mesh topology.

### **`hnf_mpam_idr_override`**

#### **Type**

`uint64_t`

#### **Default value**

`0`

Set to override `hnf_mpam_idr[31:24]` value. Bit[28] is Reserved and is ignored.

### **`legacy_tz_en`**

#### **Type**

`bool`

#### **Default value**

`false`

When set: Root registers accessible from Secure.

Realm Registers accessible from Non-Secure.

RCR are **RAZ/WI**.

### **`mesh_config_file`**

#### **Type**

`string`

#### **Default value**

`""`

#### **Description**

Name of a file containing mesh placement of CMN\_S3 components.

**mxp\_axu\_periphbase****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Value for MXP\_AXU\_PERIPHBASE.

**partner\_param0****Type**

int

**Default value**

0x0

**Description**

Partner Param.

**periphbase****Type**

uint64\_t

**Default value**

0x20000000

Value for PERIPHBASE. Bits [27:0] are treated 0

**print\_cmn\_ccix\_config****Type**

bool

**Default value**

0x0

**Description**

Print information about the CCIX configuration.

**print\_cmn\_config****Type**

bool

**Default value**

0x0

**Description**

Print the mesh topology and children pointers acquired from the YAML file.

**register\_traces\_for\_ccg\_apb\_accesses**

**Type**  
bool

**Default value**  
false

Will be removed when enhancement SDDKW-74284 is done.

---

Intended for use with trace plugins.

**true**  
registers traces to CCG register accesses through CCG APB interface.

**false**  
registers traces to CMN register accesses through all other interfaces (eg RN nodes).

**revision**

**Type**  
string

**Default value**  
"r0p0"

Component revision.

Currently supports r0p0, r0p1, r2p0.

**rnf\_sci\_enable**

**Type**  
string

**Default value**  
"0x0"

For each rnf port, indicates if the port is managed by System Coherency Interface for coherency domain entry/exit

- 1**  
Managed by SCI
- 0**  
Managed by Software

The input value is a string, for example 0xffff or ffff

**rni\_sci\_enable****Type**

string

**Default value**

"0x0"

For each rni port, indicates if the port is managed by System Coherency Interface for coherency domain entry/exit

**1**

Managed by SCI

**0**

Managed by Software

The input value is a string, for example 0xffff or ffff

**show\_banner****Type**

uint64\_t

**Default value**

2

Show component banner:

**0**

supress entire banner

**1**

suppress config file

**2+**

show full banner

**skip\_cmn\_config\_check****Type**

bool

**Default value**

0x0

**Description**

Skip any topology configuration checks. The maximum number of devices per type not verified.

**use\_yaml\_periphbase****Type**

bool

**Default value**

false

Use yml param `CFGM_PERIPHBASE_PARAM` to specify periphbase address.

If false, model parameter `periphbase` will be used.

**yml\_has\_node\_addresses****Type**

bool

**Default value**

0x0

**Description**

Does the top-level YML file describe node-addresses ?.

### 3.10.21 DCSU

Diagnostic Control and Status Unit. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-921: IP revisions support**

Revision	Quality level
0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**Iris and MTI instances for DCSU**

This model has the following Iris instances:

**Table 3-922: DCSU Iris instances**

InstanceName	ComponentName
DCSU	DCSU

**Ports for DCSU****Table 3-923: Ports**

Name	Protocol	Type	Description
apb_pvbus_s	PVBus	Slave	-
dcsu_irq_out	Signal	Master	-
diag_dma_gpo_ch_in[16]	Value	Slave	-
diag_lcs_in	Value	Slave	-
diag_lcs_valid_in	Signal	Slave	-

Name	Protocol	Type	Description
diag_psi_dcu_en0_in[96]	Signal	Slave	-
diag_psi_dcu_en1_in[6]	Signal	Slave	-
diag_psi_gppc_in[16]	Signal	Slave	-
diag_psi_psi_status_in[32]	Signal	Slave	-
diag_psi_sam_in[64]	Signal	Slave	-
die_id_out	Value	Master	-
poreset	Signal	Slave	-
post_code_out	Value	Master	-

## Parameters for DCSU

### diagnostics

#### Type

int

#### Default value

0x2

#### Description

Diagnostics 0-4 (0:FATAL 1:ERROR 2:WARNING 3:INFO 4:DEBUG - DEFAULT==2).

### die\_id

#### Type

int

#### Default value

0x0

#### Description

DIE ID register and port value.

## 3.10.22 DMA350

This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-924: IP revisions support**

Revision	Quality level
r0p0	Preliminary support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

## About DMA350

This model supports the following functionality:

- 1-8 DMA channels
- 1D memory copy including increments, auto-reload, and command linking
- Interrupt capability for each channel
- 2D memory copy
- 1DWRAP and 2DWRAP support
- Template-based pack and unpack capability
- Security settings per channel
- Trigger input and output ports selectable for each channel
- General Purpose Output (GPO) per channel
- Streaming input and output interfaces per channel
- ADDR\_WIDTH and DATA\_WIDTH can be 32 bits or 64 bits

## Iris and MTI instances for DMA350

This model has the following Iris instances:

**Table 3-925: DMA350 Iris instances**

InstanceName	ComponentName
DMA350	DMA350
DMA350.pvbus_m0_bus_master	PVBusMaster
DMA350.pvbus_m1_bus_master	PVBusMaster
DMA350.pvbus_s_bus_slave	PVBusSlave
DMA350.pvbus_stream_in_bus_slave_ch_0	PVBusSlave
DMA350.pvbus_stream_in_bus_slave_ch_1	PVBusSlave
DMA350.pvbus_stream_in_bus_slave_ch_10	PVBusSlave
DMA350.pvbus_stream_in_bus_slave_ch_11	PVBusSlave
DMA350.pvbus_stream_in_bus_slave_ch_12	PVBusSlave
DMA350.pvbus_stream_in_bus_slave_ch_13	PVBusSlave
DMA350.pvbus_stream_in_bus_slave_ch_14	PVBusSlave
DMA350.pvbus_stream_in_bus_slave_ch_15	PVBusSlave
DMA350.pvbus_stream_in_bus_slave_ch_2	PVBusSlave
DMA350.pvbus_stream_in_bus_slave_ch_3	PVBusSlave
DMA350.pvbus_stream_in_bus_slave_ch_4	PVBusSlave
DMA350.pvbus_stream_in_bus_slave_ch_5	PVBusSlave
DMA350.pvbus_stream_in_bus_slave_ch_6	PVBusSlave
DMA350.pvbus_stream_in_bus_slave_ch_7	PVBusSlave
DMA350.pvbus_stream_in_bus_slave_ch_8	PVBusSlave
DMA350.pvbus_stream_in_bus_slave_ch_9	PVBusSlave

InstanceName	ComponentName
DMA350.pvbus_stream_out_bus_master_ch_0	PVBusMaster
DMA350.pvbus_stream_out_bus_master_ch_1	PVBusMaster
DMA350.pvbus_stream_out_bus_master_ch_10	PVBusMaster
DMA350.pvbus_stream_out_bus_master_ch_11	PVBusMaster
DMA350.pvbus_stream_out_bus_master_ch_12	PVBusMaster
DMA350.pvbus_stream_out_bus_master_ch_13	PVBusMaster
DMA350.pvbus_stream_out_bus_master_ch_14	PVBusMaster
DMA350.pvbus_stream_out_bus_master_ch_15	PVBusMaster
DMA350.pvbus_stream_out_bus_master_ch_2	PVBusMaster
DMA350.pvbus_stream_out_bus_master_ch_3	PVBusMaster
DMA350.pvbus_stream_out_bus_master_ch_4	PVBusMaster
DMA350.pvbus_stream_out_bus_master_ch_5	PVBusMaster
DMA350.pvbus_stream_out_bus_master_ch_6	PVBusMaster
DMA350.pvbus_stream_out_bus_master_ch_7	PVBusMaster
DMA350.pvbus_stream_out_bus_master_ch_8	PVBusMaster
DMA350.pvbus_stream_out_bus_master_ch_9	PVBusMaster

This model has the following MTI trace components:

**Table 3-926: DMA350 MTI instances**

InstanceName	ComponentName
DMA350	DMA350
DMA350.pvbus_m0_bus_master	PVBusMaster
DMA350.pvbus_m1_bus_master	PVBusMaster
DMA350.pvbus_s_bus_slave	PVBusSlave
DMA350.pvbus_stream_in_bus_slave_ch_0	PVBusSlave
DMA350.pvbus_stream_in_bus_slave_ch_1	PVBusSlave
DMA350.pvbus_stream_in_bus_slave_ch_10	PVBusSlave
DMA350.pvbus_stream_in_bus_slave_ch_11	PVBusSlave
DMA350.pvbus_stream_in_bus_slave_ch_12	PVBusSlave
DMA350.pvbus_stream_in_bus_slave_ch_13	PVBusSlave
DMA350.pvbus_stream_in_bus_slave_ch_14	PVBusSlave
DMA350.pvbus_stream_in_bus_slave_ch_15	PVBusSlave
DMA350.pvbus_stream_in_bus_slave_ch_2	PVBusSlave
DMA350.pvbus_stream_in_bus_slave_ch_3	PVBusSlave
DMA350.pvbus_stream_in_bus_slave_ch_4	PVBusSlave
DMA350.pvbus_stream_in_bus_slave_ch_5	PVBusSlave
DMA350.pvbus_stream_in_bus_slave_ch_6	PVBusSlave
DMA350.pvbus_stream_in_bus_slave_ch_7	PVBusSlave
DMA350.pvbus_stream_in_bus_slave_ch_8	PVBusSlave

InstanceName	ComponentName
DMA350.pvbus_stream_in_bus_slave_ch_9	PVBusSlave
DMA350.pvbus_stream_out_bus_master_ch_0	PVBusMaster
DMA350.pvbus_stream_out_bus_master_ch_1	PVBusMaster
DMA350.pvbus_stream_out_bus_master_ch_10	PVBusMaster
DMA350.pvbus_stream_out_bus_master_ch_11	PVBusMaster
DMA350.pvbus_stream_out_bus_master_ch_12	PVBusMaster
DMA350.pvbus_stream_out_bus_master_ch_13	PVBusMaster
DMA350.pvbus_stream_out_bus_master_ch_14	PVBusMaster

DMA350.pvbus_stream_out_bus_master_ch_5	PVBusMaster
DMA350.pvbus_stream_out_bus_master_ch_6	PVBusMaster
DMA350.pvbus_stream_out_bus_master_ch_7	PVBusMaster
DMA350.pvbus_stream_out_bus_master_ch_8	PVBusMaster
DMA350.pvbus_stream_out_bus_master_ch_9	PVBusMaster

## Ports for DMA350

**Table 3-927: Ports**

Name	Protocol	Type	Description
allch_pause_ack_nonsec	Signal	Master	-
allch_pause_ack_sec	Signal	Master	-
allch_pause_req_nonsec	Signal	Slave	Channel pause req/ack for all nonsecure channels
allch_pause_req_sec	Signal	Slave	Channel pause req/ack for all secure channels
allch_stop_ack_nonsec	Signal	Master	-
allch_stop_ack_sec	Signal	Master	-
allch_stop_req_nonsec	Signal	Slave	Channel stop req/ack for all nonsecure channels
allch_stop_req_sec	Signal	Slave	Channel stop req/ack for all secure channels
boot_addr	Value_64	Slave	Address when boot_en is enabled
boot_en	Signal	Slave	Enables channel 0 to load first command after reset from boot_addr
boot_memattr	Value	Slave	Memory attribute setting for the boot_addr
boot_shareattr	Value	Slave	Shareability attribute for the boot_attr
ch_enabled[16]	Signal	Master	Enable status indicator per channel
ch_err[16]	Signal	Master	Error status indicator per channel
ch_nonsec[16]	Signal	Master	Nonsecure status indicator per channel
ch_paused[16]	Signal	Master	Paused status indicator per channel
ch_priv[16]	Signal	Master	Privilege status indicator per channel

Name	Protocol	Type	Description
ch_stopped[16]	Signal	Master	Stopped status indicator per channel
clk_in	ClockSignal	Slave	Ada DMA clock
gpo_ch[16]	Value	Master	MISC signals General purpose output for channels 0-15 Index refers to the channel
irq_channel[16]	Signal	Master	Channel IRQ Signals
irq_comb_nonsec	Signal	Master	Nonsecure IRQ Signal
irq_comb_nonsec_err	Signal	Master	Nonsecure error IRQ Signal
irq_comb_sec	Signal	Master	Secure IRQ Signal
irq_comb_sec_err	Signal	Master	Secure error IRQ Signal
irq_sec_viol_err	Signal	Master	Security violation IRQ Signal
pvbus_m0	PVBus	Master	AXI5 Master 0 Interface
pvbus_m1	PVBus	Master	AXI5 Master 1 Interface
pvbus_s	PVBus	Slave	APB4 Slave Interface
pvbus_stream_in[16]	PVBus	Slave	AXI-Stream In Interface
pvbus_stream_out[16]	PVBus	Master	AXI-Stream Out Interface
reset_in	Signal	Slave	Ada DMA asynchronous reset
trig_in_ack[32]	Signal	Master	Trigger In Acknowledgement Interface
trig_in_ack_type[32]	Value	Master	-
trig_in_req[32]	Signal	Slave	Trigger In Request Interface
trig_in_req_type[32]	Value	Slave	-
trig_out_ack[32]	Signal	Slave	Trigger Out Acknowledgement Interface
trig_out_req[32]	Signal	Master	Trigger Out Request Interface

## Parameters for DMA350

### ADDR\_WIDTH

#### Type

int

#### Default value

0x20

#### Description

Address width of the bus interface.

### AXI5\_M1\_ADDRESS\_RANGES

#### Type

string

#### Default value

""

**Description**

Address ranges for AXI5 M1 interface in the format e.g. [{"begin":0x40000000, "size":0x1000}, {"begin":0x80000000, "size":0x2000}]. Default when not specified uses AXI5 M0 interface.

**AXI5\_M1\_PRESENT****Type**

bool

**Default value**

0x0

**Description**

Enables an additional master port. When set the m1 master port is present on the top level port list and additional include file can be used with a System Verilog function that defines which address ranges are mapped to the m1 interface.

**CHID\_WIDTH****Type**

int

**Default value**

0x0

**Description**

Width of the configurable channel ID user signal. When set to 0, then the archid and awchid ports are not present on the module.

**CH\_0\_FIFO\_DEPTH****Type**

int

**Default value**

0x2

**Description**

Sets the FIFO DEPTH the channels <N> can send for a transaction. N goes from 0 to NUM\_CHANNELS-1. This relates to the maximum burst size a channel can support which can be calculated as  $\min(16, (\text{FIFO\_DEPTH}+1)/2)$ . This setting needs to be aligned with the bandwidth requirements of the selected channel. This parameter highly affects the area of the design.

**CH\_1\_FIFO\_DEPTH****Type**

int

**Default value**

0x2

**Description**

Sets the FIFO DEPTH the channels <N> can send for a transaction. N goes from 0 to NUM\_CHANNELS-1. This relates to the maximum burst size a channel can support which can be calculated as  $\min(16, (\text{FIFO\_DEPTH}+1)/2)$ . This setting needs to be aligned with the bandwidth requirements of the selected channel. This parameter highly affects the area of the design.

**CH\_2\_FIFO\_DEPTH****Type**

int

**Default value**

0x2

**Description**

Sets the FIFO DEPTH the channels <N> can send for a transaction. N goes from 0 to NUM\_CHANNELS-1. This relates to the maximum burst size a channel can support which can be calculated as  $\min(16, (\text{FIFO\_DEPTH}+1)/2)$ . This setting needs to be aligned with the bandwidth requirements of the selected channel. This parameter highly affects the area of the design.

**CH\_3\_FIFO\_DEPTH****Type**

int

**Default value**

0x2

**Description**

Sets the FIFO DEPTH the channels <N> can send for a transaction. N goes from 0 to NUM\_CHANNELS-1. This relates to the maximum burst size a channel can support which can be calculated as  $\min(16, (\text{FIFO\_DEPTH}+1)/2)$ . This setting needs to be aligned with the bandwidth requirements of the selected channel. This parameter highly affects the area of the design.

**CH\_4\_FIFO\_DEPTH****Type**

int

**Default value**

0x2

**Description**

Sets the FIFO DEPTH the channels <N> can send for a transaction. N goes from 0 to NUM\_CHANNELS-1. This relates to the maximum burst size a channel can support which can be calculated as  $\min(16, (\text{FIFO\_DEPTH}+1)/2)$ . This setting needs to be aligned with the bandwidth requirements of the selected channel. This parameter highly affects the area of the design.

**CH\_5\_FIFO\_DEPTH****Type**

int

**Default value**

0x2

**Description**

Sets the FIFO DEPTH the channels <N> can send for a transaction. N goes from 0 to NUM\_CHANNELS-1. This relates to the maximum burst size a channel can support which can be calculated as  $\min(16, (\text{FIFO\_DEPTH}+1)/2)$ . This setting needs to be aligned with the bandwidth requirements of the selected channel. This parameter highly affects the area of the design.

**CH\_6\_FIFO\_DEPTH****Type**

int

**Default value**

0x2

**Description**

Sets the FIFO DEPTH the channels <N> can send for a transaction. N goes from 0 to NUM\_CHANNELS-1. This relates to the maximum burst size a channel can support which can be calculated as  $\min(16, (\text{FIFO\_DEPTH}+1)/2)$ . This setting needs to be aligned with the bandwidth requirements of the selected channel. This parameter highly affects the area of the design.

**CH\_7\_FIFO\_DEPTH****Type**

int

**Default value**

0x2

**Description**

Sets the FIFO DEPTH the channels <N> can send for a transaction. N goes from 0 to NUM\_CHANNELS-1. This relates to the maximum burst size a channel can support which can be calculated as  $\min(16, (\text{FIFO\_DEPTH}+1)/2)$ . This setting needs to be aligned with the bandwidth requirements of the selected channel. This parameter highly affects the area of the design.

**CH\_EXT\_FEAT\_EN****Type**

bool

**Default value**

0x1

**Description**

Enabling the extended feature set for each channel. The extension contains 2D, WRAP, TMPLT features. Default value enables it for the number of channels.

**CH\_GPO\_EN****Type**

bool

**Default value**

0x1

**Description****CH\_GPO\_MASK****Type**

int

**Default value**

0x0

**Description**

A bitmask for enabling the GPO port for each channel. The width of the bitmask is NUM\_CHANNELS-1. When bit n is set to 1 then the GPO is enabled for channel n and the gpo\_ch\_n[GPO\_WIDTH-1:0] port appears on the module.

**CH\_STREAM\_EN****Type**

bool

**Default value**

0x1

**Description****CH\_STREAM\_MASK****Type**

int

**Default value**

0x0

**Description**

A bitmask for enabling the stream interfaces for each channel. The width of the bitmask is NUM\_CHANNELS-1. When bit n is set to 1 then the stream interfaces are enabled for channel n and the relevant ports appears on the module. NOTE: When streaming interface is enabled the actual FIFO size of the channel will be the double of CH\_<N>\_FIFO\_DEPTH.

**DATA\_WIDTH****Type**

int

**Default value**

0x40

**Description**

Data width of the bus interface.

**DISABLE\_DEVICE****Type**

bool

**Default value**

0x0

**Description**

Disable device and ignore all interfaces.

**DUMP\_CONFIG****Type**

bool

**Default value**

0x0

**Description**

Display DMA-350 DMAC parameters.

**GPO\_WIDTH****Type**

int

**Default value**

0x1

**Description**

Width of GPO output for every channel. When multiple channels have GPOs then the width must be set to the maximum number of GPOs a channel can have, and unused GPO ports need to be left unconnected. When all bits of CH\_GPO\_MASK is 0, this parameter is not relevant.

**NUM\_CHANNELS****Type**

int

**Default value**

0x2

**Description**  
Number of configurable DMA channels.

**NUM\_TRIGGER\_IN**

**Type**  
int

**Default value**  
0x2

**Description**  
Number of trigger input ports.

**NUM\_TRIGGER\_OUT**

**Type**  
int

**Default value**  
0x2

**Description**  
Number of trigger output ports.

**SECEXT\_PRESENT**

**Type**  
bool

**Default value**  
0x1

**Description**  
Enables Trustzone security support.

3.10.23 DMC500

ARM Dynamic Memory Controller(DMC500). This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-928: IP revisions support

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

## About DMC500

A platform can have multiple instances of this component. For example:

```
//LISA instantiation
composition
{
    // Memory controllers
    dmc0      : DMC500("default_region_attributes"=dmc_default_region_attributes,
                      "default_region_id_access"=dmc_default_region_id_access,
                      "passthrough_debug_access"=true);
    dmc1      : DMC500("default_region_attributes"=dmc_default_region_attributes,
                      "default_region_id_access"=dmc_default_region_id_access,
                      "passthrough_debug_access"=true);
}
```

## Differences between the model and the RTL

The model has the following limitations:

- It does not support address striping.
- It works with linear addresses and not in rank,bank,row,column form.
- It does not include any mechanism for error injection or detection.
- Scrubbing functionality is only provided from the interface point of view.
- It does not implement direct read or write commands.
- It does not implement any performance counters.
- All OR'd interrupt signals are missing from this release of the model. Users can connect the failed access interrupt as a substitute.
- The model combines separate failed access interrupts for system interfaces 1 and 2 into a single failed access interrupt.
- DMC-500 has three separate reset signals whereas this model has a single reset signal which supports the combined assertion of three resets. This model does not support separate reset signals.

## Iris and MTI instances for DMC500

This model has the following Iris instances:

**Table 3-929: DMC500 Iris instances**

InstanceName	ComponentName
DMC500	DMC500
DMC500.busslave	PVBusSlave

This model has the following MTI trace components:

**Table 3-930: DMC500 MTI instances**

InstanceName	ComponentName
DMC500	DMC-500
DMC500.busslave	PVBusSlave

## Ports for DMC500

**Table 3-931: Ports**

Name	Protocol	Type	Description
apb_pvbus_s	PVBus	Slave	Programmers interface to program and control the DMC-500.
failed_access_interrupt_signal	Signal	Master	The DMC has detected a system request that has failed a permissions check and a previously detected assertion was not cleared.
filter_pvbus_m	PVBus	Master	DMC master port from System Interface 0 to memory.
filter_pvbus_s	PVBus	Slave	System interface 0. Generally, Non-coherent Interface.
reset_signal	Signal	Slave	DMC reset.
si1_filter_pvbus_m	PVBus	Master	DMC master port from System Interface 1 to memory.
si1_filter_pvbus_s	PVBus	Slave	System interface 1. Generally, Coherent Interface.

## Parameters for DMC500

### **default\_region\_attributes**

#### Type

int

#### Default value

0x1

#### Description

Default Region Secure attributes. Only bits 31,30 set Secure RD/WR enable.

### **default\_region\_id\_access**

#### Type

int

#### Default value

0x0

#### Description

Default Region NSAID permissions. Bits 31-16 set non-secure WR enable and bits 15-0 set non-secure RD enable.

### **passthrough\_debug\_access**

#### Type

bool

#### Default value

0x0

#### Description

Always allow debug access to memory.

### 3.10.24 DMC520

ARM Dynamic Memory Controller(DMC520). This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-932: IP revisions support**

Revision	Quality level
r1p1	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### About DMC520

A platform can have multiple instances of this component. For example:

```
//LISA instantiation
composition
{
    // Memory controllers
    dmc520_0      : DMC520("passthrough_debug_access"=true);
    dmc520_1      : DMC520("passthrough_debug_access"=true);
}
```

#### Limitations

- The model does not support address striping.
- It works with linear addresses and not in rank, bank, row, column form.
- It does not include any mechanism for error injection or detection.
- Scrubbing functionality is only provided from the interface point of view.
- It does not implement direct read or write commands.
- It does not implement any performance counters.

#### Differences between the model and the RTL

The DMC520 and DMC620 models have different interfaces to those in the hardware due to the level of abstraction of memory in Fast Models. These are the differences:

- Like the hardware, the model has a slave port for configuring register accesses, `apb_pvbuss`, and an AXI interface for incoming memory transactions that are attempting to access memory that is managed by the DMC.
- The hardware component translates incoming transactions on the AXI interface to a format that is conducive to accessing DRAM chips. The model performs TrustZone access control and models the DMC readiness state, but does not translate the transactions. If allowed, the model forwards incoming transactions to be handled by a memory storage handling component that works at the transaction level.

#### Iris and MTI instances for DMC520

This model has the following Iris instances:

**Table 3-933: DMC520 Iris instances**

InstanceName	ComponentName
DMC520	DMC520
DMC520.busslave	PVBusSlave

This model has the following MTI trace components:

**Table 3-934: DMC520 MTI instances**

InstanceName	ComponentName
DMC520	DMC-520
DMC520.busslave	PVBusSlave

## Ports for DMC520

**Table 3-935: Ports**

Name	Protocol	Type	Description
all_or_interrupt_signal	Signal	Master	A combined interrupt that is the logical OR of the other interrupts.
apb_pvbus_s	PVBus	Slave	Programmers interface to program and control the DMC-520.
arch_fsm_interrupt_signal	Signal	Master	The DMC has detected a change in the architectural state.
failed_access_interrupt_signal	Signal	Master	The DMC has detected a system request that has failed a permissions check and a previously detected assertion was not cleared.
filter_pvbus_m	PVBus	Master	DMC master port to memory.
filter_pvbus_s	PVBus	Slave	System interface.
reset_signal	Signal	Slave	DMC reset.
scrub_event_in[8]	Signal	Slave	Scrub event n trigger.
scrub_event_out[8]	Signal	Master	Scrub event n triggered.

## Parameters for DMC520

### **override\_default\_config**

#### Type

bool

#### Default value

0x0

#### Description

Override default block-all behavior of DMC. Allow access to memory.

### **passthrough\_debug\_access**

#### Type

bool

**Default value**

0x0

**Description**

Always allow debug access to memory.

**3.10.25 DMC620**

ARM Dynamic Memory Controller(DMC620). This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-936: IP revisions support**

Revision	Quality level
r1p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**Limitations**

- It does not support address striping.
- It works with linear addresses and not in rank,bank,row,column form.
- It includes error injection and detection mechanisms and syndrome registers support only for RAS error types 4 (ECC single-bit SRAM error) and 5 (ECC double-bit SRAM error).
- Scrubbing functionality is not provided.
- It does not implement direct read or write commands.
- It does not implement any performance counters.

**Differences between the model and the RTL**

The DMC520 and DMC620 models have different interfaces to those in the hardware due to the level of abstraction of memory in Fast Models. These are the differences:

- Like the hardware, the model has a slave port for configuring register accesses, `apb_pvbuss_s`, and an AXI interface for incoming memory transactions that are attempting to access memory that is managed by the DMC.
- The hardware component translates incoming transactions on the AXI interface to a format that is conducive to accessing DRAM chips. The model performs TrustZone access control and models the DMC readiness state, but does not translate the transactions. If allowed, the model forwards incoming transactions to be handled by a memory storage handling component that works at the transaction level.

**Iris and MTI instances for DMC620**

This model has the following Iris instances:

**Table 3-937: DMC620 Iris instances**

InstanceName	ComponentName
DMC620	DMC620
DMC620.busslave	PVBusSlave

This model has the following MTI trace components:

**Table 3-938: DMC620 MTI instances**

InstanceName	ComponentName
DMC620	DMC-620
DMC620.busslave	PVBusSlave

## Ports for DMC620

**Table 3-939: Ports**

Name	Protocol	Type	Description
all_or_interrupt_signal	Signal	Master	A combined interrupt that is the logical OR of the other interrupts.
apb_pvbus_s	PVBus	Slave	Programmers interface to program and control the DMC-620.
arch_fsm_interrupt_signal	Signal	Master	The DMC has detected a change in the architectural state.
failed_access_interrupt_signal	Signal	Master	The DMC has detected a system request that has failed a permissions check and a previously detected assertion was not cleared.
filter_pvbus_m	PVBus	Master	DMC master port to memory.
filter_pvbus_s	PVBus	Slave	System interface.
interrupt_cfh_master	Signal	Master	The DMC has detected and corrected a single bit error on the RAM access.
interrupt_combined_oflow_master	Signal	Master	The DMC has detected a counter overflow.
interrupt_fh_master	Signal	Master	The DMC has detected a double bit error on the RAM access.
reset_signal	Signal	Slave	DMC reset.

## Parameters for DMC620

### **override\_default\_config**

#### Type

bool

#### Default value

0x0

#### Description

Override default block-all behavior of DMC. Allow access to memory.

**passthrough\_debug\_access**

**Type**

bool

**Default value**

0x0

**Description**

Always allow debug access to memory.

**3.10.26 DMC\_400**

ARM PrimeCell Dynamic Memory Controller(DMC400). This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-940: IP revisions support**

Revision	Quality level
r0p1	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**About DMC\_400**

The configuration of this model by setting the registers does not generally affect accesses to main memory.

This component has no timing information, so changing the values of the timing registers has no effect on behavior. The memory models do not attach to the component, and error checking does not update registers because the model does not include the possibility of errors.

**Iris and MTI instances for DMC\_400**

This model has the following Iris instances:

**Table 3-941: DMC\_400 Iris instances**

InstanceName	ComponentName
DMC_400	DMC_400
DMC_400.apb_slave	PVBusSlave
DMC_400.ex_mon0	PVBusMapper
DMC_400.ex_mon1	PVBusMapper
DMC_400.ex_mon2	PVBusMapper
DMC_400.ex_mon3	PVBusMapper

This model has the following MTI trace components:

Table 3-942: DMC\_400 MTI instances

InstanceName	ComponentName
DMC_400.apb_slave	PVBusSlave
DMC_400.ex_mon0	PVBusMapper
DMC_400.ex_mon1	PVBusMapper
DMC_400.ex_mon2	PVBusMapper
DMC_400.ex_mon3	PVBusMapper

Ports for DMC\_400

Table 3-943: Ports

Name	Protocol	Type	Description
apb_interface	PVBus	Slave	Slave bus interface for register access.
axi_if_in[4]	PVBus	Slave	Slave bus for connecting to bus decoder.
axi_if_out[4]	PVBus	Master	Master to connect to DRAM.
clr_ex_mon	Signal	Master	Indicates when global monitors state is cleared.
user_status_ext	Value	Slave	Allow user status to be set from outside.

Parameters for DMC\_400

ECC\_SUPPORT

Type

bool

Default value

0x1

Description

Does the controller support ECC?.

IF\_CHIP0

Type

int

Default value

0xffffffffffffffffffff

Description

Set this parameter to 0 if memory is connected.

IF\_CHIP1

Type

int

Default value

0xffffffffffffffffffff

**Description**

Set this parameter to 0 if memory is connected.

**IF\_CHIP2****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Set this parameter to 0 if memory is connected.

**IF\_CHIP3****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Set this parameter to 0 if memory is connected.

**MEMORY\_WIDTH****Type**

int

**Default value**

0x20

**Description**

Valid widths are 16, 32 or 64 bits.

**diagnostics****Type**

int

**Default value**

0x0

**Description**

Diagnostics.

**revision\_string****Type**

string

**Default value**

"rOp1"

**Description**

Revision.

### 3.10.27 EthosU55

Arm Ethos-U55 microNPU. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-944: IP revisions support**

Revision	Quality level
r2p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**About EthosU55**

- The EthosU55 model does not expose its registers through CADI or Iris.
- The `resetn_in` signal is active-LOW.

**Iris and MTI instances for EthosU55**

This model has the following Iris instances:

**Table 3-945: EthosU55 Iris instances**

InstanceName	ComponentName
EthosU55	EthosU55
EthosU55.pvbusmaster0	PVBusMaster
EthosU55.pvbusmaster1	PVBusMaster
EthosU55.pvbusslave	PVBusSlave

This model has the following MTI trace components:

**Table 3-946: EthosU55 MTI instances**

InstanceName	ComponentName
EthosU55.pvbusmaster0	<a href="#">PVBusMaster</a>
EthosU55.pvbusmaster1	<a href="#">PVBusMaster</a>
EthosU55.pvbusslave	<a href="#">PVBusSlave</a>

**Ports for EthosU55****Table 3-947: Ports**

Name	Protocol	Type	Description
clk_in	<a href="#">ClockSignal</a>	Slave	NPU clock signal
irq_out	<a href="#">Signal</a>	Master	Sends interrupt requests to the external host application processor

Name	Protocol	Type	Description
popl_in	Signal	Slave	The Power-On-Reset Privilege Level (PORPL). LOW means User level. HIGH means Privileged level
posl_in	Signal	Slave	The Power-On-Reset Security Level (PORSL). LOW means Secure. HIGH means Non-secure.
pvbuss_m0	PVBus	Master	Port 0 for NPU to access external memory
pvbuss_m1	PVBus	Master	Port 1 for NPU to access external memory
pvbuss_s	PVBus	Slave	Port to access NPU control registers
resetsn_in	Signal	Slave	NPU reset signal

## Parameters for EthosU55

### diagnostics

#### Type

int

#### Default value

0x0

#### Description

Enables extra information messages from the component about the NPU configuration and the PORPL/PORSL port values. Use any nonzero integer to enable all messages or 0 to disable them.

### extra\_args

#### Type

string

#### Default value

""

#### Description

To activate fast processing mode, which significantly improves the performance of the model, set this parameter to "--fast". In fast mode, NPU performance counters are not representative of counters on real hardware. We recommend you do not use any other value without instructions from Arm Technical Support.

### num\_macs

#### Type

int

#### Default value

0x80

#### Description

Number of 8x8 MACs performed per cycle (32, 64, 128, or 256).

### 3.10.28 EthosU65

Arm Ethos-U65 microNPU. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-948: IP revisions support**

Revision	Quality level
r0p1	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### About EthosU65

- The EthosU65 model does not expose its registers through CADI or Iris.
- The `resetn_in` signal is active-LOW.

#### Iris and MTI instances for EthosU65

This model has the following Iris instances:

**Table 3-949: EthosU65 Iris instances**

InstanceName	ComponentName
EthosU65	EthosU65
EthosU65.pvbusmaster0	PVBusMaster
EthosU65.pvbusmaster1	PVBusMaster
EthosU65.pvbusslave	PVBusSlave

This model has the following MTI trace components:

**Table 3-950: EthosU65 MTI instances**

InstanceName	ComponentName
EthosU65.pvbusmaster0	PVBusMaster
EthosU65.pvbusmaster1	PVBusMaster
EthosU65.pvbusslave	PVBusSlave

#### Ports for EthosU65

**Table 3-951: Ports**

Name	Protocol	Type	Description
clk_in	<a href="#">ClockSignal</a>	Slave	NPU clock signal
irq_out	<a href="#">Signal</a>	Master	Sends interrupt requests to the external host application processor
popl_in	<a href="#">Signal</a>	Slave	The Power-On-Reset Privilege Level (PORPL). LOW means User level. HIGH means Privileged level
posl_in	<a href="#">Signal</a>	Slave	The Power-On-Reset Security Level (PORSL). LOW means Secure. HIGH means Non-secure.
pvbus_m0	<a href="#">PVBus</a>	Master	Port 0 for NPU to access external memory
pvbus_m1	<a href="#">PVBus</a>	Master	Port 1 for NPU to access external memory

Name	Protocol	Type	Description
pvbuss_s	PVBus	Slave	Port to access NPU control registers
resetrn_in	Signal	Slave	NPU reset signal

## Parameters for EthosU65

### diagnostics

#### Type

int

#### Default value

0x0

#### Description

Enables extra information messages from the component about the NPU configuration and the PORPL/PORSL port values. Use any nonzero integer to enable all messages or 0 to disable them.

### extra\_args

#### Type

string

#### Default value

""

#### Description

To activate fast processing mode, which significantly improves the performance of the model, set this parameter to "--fast". In fast mode, NPU performance counters are not representative of counters on real hardware. We recommend you do not use any other value without instructions from Arm Technical Support.

### num\_macs

#### Type

int

#### Default value

0x100

#### Description

Number of 8x8 MACs performed per cycle (256 or 512).

## 3.10.29 EthosU85

Arm EthosU85 microNPU. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-952: IP revisions support**

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

### About EthosU85

- The EthosU85 model does not expose its registers through CADI or Iris.
- The `resetrn_in` signal is active-LOW.

### Iris and MTI instances for EthosU85

This model has the following Iris instances:

**Table 3-953: EthosU85 Iris instances**

InstanceName	ComponentName
EthosU85	EthosU85
EthosU85.pvbusmaster0	PVBusMaster
EthosU85.pvbusmaster1	PVBusMaster
EthosU85.pvbusslave	PVBusSlave

This model has the following MTI trace components:

**Table 3-954: EthosU85 MTI instances**

InstanceName	ComponentName
EthosU85.pvbusmaster0	<a href="#">PVBusMaster</a>
EthosU85.pvbusmaster1	<a href="#">PVBusMaster</a>
EthosU85.pvbusslave	<a href="#">PVBusSlave</a>

### Ports for EthosU85

**Table 3-955: Ports**

Name	Protocol	Type	Description
cfgextcap_in	<a href="#">Value</a>	Slave	The configuration of capabilities for DRAM AXI ports (32 bits). Sampled with soft and hard reset.
cfgexthash0_in	<a href="#">Value_64</a>	Slave	The configuration of hash function for selecting among EXT ports (40 bits). Used to set the hash for AXI DRAM ports 0 and 1 if they are present. Sampled with soft and hard reset.
cfgsramcap_in	<a href="#">Value</a>	Slave	The configuration of capabilities for SRAM AXI ports (32 bits). Sampled with soft and hard reset.
cfgsramhash0_in	<a href="#">Value_64</a>	Slave	The configuration of hash function for selecting among SRAM ports (40 bits). Used to set the hash for AXI SRAM ports 0 and 1. Sampled with soft and hard reset.
cfgsramhash1_in	<a href="#">Value_64</a>	Slave	The configuration of hash function for selecting among SRAM ports (40 bits). Used to set the hash for AXI SRAM ports 2 and 3 if they are present. Sampled with soft and hard reset.
clk_in	<a href="#">ClockSignal</a>	Slave	NPU clock signal

Name	Protocol	Type	Description
irq_out	Signal	Master	Sends interrupt requests to the external host application processor, level triggered when HIGH.
popl_in	Signal	Slave	The Power-On-Reset Privilege Level (PORPL). LOW means User level. HIGH means Privileged level
posl_in	Signal	Slave	The Power-On-Reset Security Level (PORSL). LOW means Secure. HIGH means Non-secure.
pvbus_m0	PVBus	Master	Port 0 for NPU to access external memory
pvbus_m1	PVBus	Master	Port 1 for NPU to access external memory
pvbus_s	PVBus	Slave	Port to access NPU control registers
resetn_in	Signal	Slave	NPU reset signal (active-LOW)

## Parameters for EthosU85

### diagnostics

#### Type

int

#### Default value

0x0

#### Description

Enables extra information messages from the component about the NPU configuration and the PORPL/PORSL port values. Use any nonzero integer to enable all messages or 0 to disable them.

### extra\_args

#### Type

string

#### Default value

""

#### Description

To activate fast processing mode, which significantly improves the performance of the model, set this parameter to "--fast". In fast mode, NPU performance counters are not representative of counters on real hardware. We recommend you do not use any other value without instructions from Arm Technical Support.

### num\_macs

#### Type

int

#### Default value

0x80

#### Description

Number of 8x8 MACs performed per cycle (128, 256, 512, 1024, or 2048).

### 3.10.30 Firewall

Firewall IP. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-956: IP revisions support**

Revision	Quality level
rOp0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### Iris and MTI instances for Firewall

This model has the following Iris instances:

## Ports for Firewall

**Table 3-959: Ports**

Name	Protocol	Type	Description
irq_signal	Signal	Master	-
irq_signal_tamper	Signal	Master	-
lockdown	Signal	Slave	-
pvbus_component_m[31]	PVBus	Master	-
pvbus_component_s[31]	PVBus	Slave	-
pvbus_program_iface	PVBus	Slave	-
reset_signal	Signal	Slave	-

## Parameters for Firewall

### ADDR\_WIDTH

#### Type

string

To use the GIC500 component, you must configure some parameters. For example:

```
gic500: GIC500(
    "num_clusters" = 2,
    "cpus_per_cluster_0" = 4,
    "cpus_per_cluster_1" = 4,
    "reg-base" = 0x2c200000,
    "SPI-count" = 256
);
```

Note

- To print to stderr the memory map of any GICv3 or later models that are included in the platform, set the `FASTSIM_GIC_MEMORY_MAP` environment variable to 1.
- For writes to `GITS_TRANSLATE64R`, the MSIRewriter component can be used to create the correct data transactions based on the device ID. For more details about `GITS_TRANSLATE64R`, see the [MSIRewriter](#) component.

## MasterID, ExtendedID, and UserFlags

This table shows how this model encodes information in the `MasterID`, `ExtendedID`, and `UserFlags` bus attributes:

**Table 3-961: MasterID, ExtendedID, and UserFlags**

PVBus attribute	Bits used	Property encoded	Notes
MasterID	31:0	Master ID that invoked the register access	–
ExtendedID	–	–	Not used
UserFlags	–	–	Not used

Note

The `pvbus_m` port does not use `MasterID`, `ExtendedID`, or `UserFlags`.

## Iris and MTI instances for GIC500

This model has the following Iris instances:

**Table 3-962: GIC500 Iris instances**

InstanceName	ComponentName
GIC500	GIC_IRI
GIC500.ITS0	GICv3InterruptTranslationService
GIC500.rd_0	GICv3RedistributorInternal
GIC500.rd_0_0	GICv3RedistributorInternal
GIC500.rd_0_0_0	GICv3RedistributorInternal
GIC500.rd_0_0_0_0	GICv3Redistributor
GIC500.rd_tl	GICv3Distributor

This model has the following MTI trace components:

**Table 3-963: GIC500 MTI instances**

InstanceName	ComponentName
GIC500.ITS0	GICv3InterruptTranslationService
GIC500.rd_0	GICv3RedistributorInternal
GIC500.rd_0_0	GICv3RedistributorInternal
GIC500.rd_0_0_0	GICv3RedistributorInternal
GIC500.rd_0_0_0_0	GICv3Redistributor
GIC500.rd_t1	GICv3Distributor

## Ports for GIC500

**Table 3-964: Ports**

Name	Protocol	Type	Description
cfgsdisable	Signal	Slave	Disable some SPIs signal.
cpu_active_0[8]	Signal	Slave	cpu_active pins of cluster 0.
cpu_active_1[8]	Signal	Slave	cpu_active pins of cluster 1.
cpu_active_10[8]	Signal	Slave	cpu_active pins of cluster 10.
cpu_active_11[8]	Signal	Slave	cpu_active pins of cluster 11.
cpu_active_12[8]	Signal	Slave	cpu_active pins of cluster 12.
cpu_active_13[8]	Signal	Slave	cpu_active pins of cluster 13.
cpu_active_14[8]	Signal	Slave	cpu_active pins of cluster 14.
cpu_active_15[8]	Signal	Slave	cpu_active pins of cluster 15.
cpu_active_16[8]	Signal	Slave	cpu_active pins of cluster 16.
cpu_active_17[8]	Signal	Slave	cpu_active pins of cluster 17.
cpu_active_18[8]	Signal	Slave	cpu_active pins of cluster 18.
cpu_active_19[8]	Signal	Slave	cpu_active pins of cluster 19.
cpu_active_2[8]	Signal	Slave	cpu_active pins of cluster 2.
cpu_active_20[8]	Signal	Slave	cpu_active pins of cluster 20.
cpu_active_21[8]	Signal	Slave	cpu_active pins of cluster 21.
cpu_active_22[8]	Signal	Slave	cpu_active pins of cluster 22.
cpu_active_23[8]	Signal	Slave	cpu_active pins of cluster 23.
cpu_active_24[8]	Signal	Slave	cpu_active pins of cluster 24.
cpu_active_25[8]	Signal	Slave	cpu_active pins of cluster 25.
cpu_active_26[8]	Signal	Slave	cpu_active pins of cluster 26.
cpu_active_27[8]	Signal	Slave	cpu_active pins of cluster 27.
cpu_active_28[8]	Signal	Slave	cpu_active pins of cluster 28.
cpu_active_29[8]	Signal	Slave	cpu_active pins of cluster 29.
cpu_active_3[8]	Signal	Slave	cpu_active pins of cluster 3.
cpu_active_30[8]	Signal	Slave	cpu_active pins of cluster 30.

Name	Protocol	Type	Description
cpu_active_31[8]	Signal	Slave	cpu_active pins of cluster 31.
cpu_active_4[8]	Signal	Slave	cpu_active pins of cluster 4.
cpu_active_5[8]	Signal	Slave	cpu_active pins of cluster 5.
cpu_active_6[8]	Signal	Slave	cpu_active pins of cluster 6.
cpu_active_7[8]	Signal	Slave	cpu_active pins of cluster 7.
cpu_active_8[8]	Signal	Slave	cpu_active pins of cluster 8.
cpu_active_9[8]	Signal	Slave	cpu_active pins of cluster 9.
po_reset	Signal	Slave	Power on reset.
ppi16_in_0[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 0.
ppi16_in_1[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 1.
ppi16_in_10[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 10.
ppi16_in_11[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 11.
ppi16_in_12[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 12.
ppi16_in_13[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 13.
ppi16_in_14[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 14.
ppi16_in_15[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 15.
ppi16_in_16[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 16.
ppi16_in_17[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 17.
ppi16_in_18[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 18.
ppi16_in_19[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 19.
ppi16_in_2[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 2.
ppi16_in_20[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 20.
ppi16_in_21[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 21.
ppi16_in_22[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 22.
ppi16_in_23[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 23.
ppi16_in_24[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 24.
ppi16_in_25[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 25.
ppi16_in_26[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 26.
ppi16_in_27[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 27.
ppi16_in_28[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 28.
ppi16_in_29[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 29.
ppi16_in_3[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 3.
ppi16_in_30[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 30.
ppi16_in_31[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 31.
ppi16_in_4[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 4.
ppi16_in_5[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 5.
ppi16_in_6[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 6.
ppi16_in_7[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 7.
ppi16_in_8[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 8.

Name	Protocol	Type	Description
ppi16_in_9[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 9.
ppi17_in_0[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 0.
ppi17_in_1[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 1.
ppi17_in_10[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 10.
ppi17_in_11[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 11.
ppi17_in_12[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 12.
ppi17_in_13[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 13.
ppi17_in_14[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 14.
ppi17_in_15[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 15.
ppi17_in_16[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 16.
ppi17_in_17[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 17.
ppi17_in_18[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 18.
ppi17_in_19[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 19.
ppi17_in_2[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 2.
ppi17_in_20[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 20.
ppi17_in_21[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 21.
ppi17_in_22[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 22.
ppi17_in_23[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 23.
ppi17_in_24[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 24.
ppi17_in_25[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 25.
ppi17_in_26[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 26.
ppi17_in_27[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 27.
ppi17_in_28[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 28.
ppi17_in_29[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 29.
ppi17_in_3[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 3.
ppi17_in_30[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 30.
ppi17_in_31[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 31.
ppi17_in_4[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 4.
ppi17_in_5[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 5.
ppi17_in_6[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 6.

Name	Protocol	Type	Description
ppi20_in_27[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 27.
ppi20_in_28[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 28.
ppi20_in_29[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 29.
ppi20_in_3[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 3.
ppi20_in_30[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 30.
ppi20_in_31[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 31.
ppi20_in_4[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 4.
ppi20_in_5[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 5.
ppi20_in_6[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 6.
ppi20_in_7[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 7.
ppi20_in_8[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 8.
ppi20_in_9[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 9.
ppi21_in_0[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 0.
ppi21_in_1[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 1.
ppi21_in_10[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 10.
ppi21_in_11[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 11.
ppi21_in_12[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 12.
ppi21_in_13[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 13.
ppi21_in_14[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 14.
ppi21_in_15[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 15.
ppi21_in_16[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 16.
ppi21_in_17[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 17.
ppi21_in_18[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 18.
ppi21_in_19[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 19.
ppi21_in_2[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 2.
ppi21_in_20[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 20.
ppi21_in_21[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 21.
ppi21_in_22[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 22.
ppi21_in_23[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 23.
ppi21_in_24[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 24.
ppi21_in_25[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 25.
ppi21_in_26[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 26.
ppi21_in_27[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 27.
ppi21_in_28[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 28.
ppi21_in_29[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 29.
ppi21_in_3[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 3.
ppi21_in_30[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 30.
ppi21_in_31[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 31.
ppi21_in_4[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 4.

Name	Protocol	Type	Description
ppi21_in_5[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 5.
ppi21_in_6[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 6.
ppi21_in_7[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 7.
ppi21_in_8[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 8.
ppi21_in_9[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 9.
ppi22_in_0[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 0.
ppi22_in_1[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 1.
ppi22_in_10[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 10.
ppi22_in_11[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 11.
ppi22_in_12[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 12.
ppi22_in_13[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 13.
ppi22_in_14[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 14.
ppi22_in_15[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 15.
ppi22_in_16[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 16.
ppi22_in_17[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 17.
ppi22_in_18[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 18.
ppi22_in_19[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 19.
ppi22_in_2[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 2.
ppi22_in_20[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 20.
ppi22_in_21[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 21.
ppi22_in_22[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 22.
ppi22_in_23[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 23.
ppi22_in_24[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 24.
ppi22_in_25[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 25.
ppi22_in_26[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 26.

Name	Protocol	Type	Description
ppi22_in_27[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 27.
ppi22_in_28[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 28.
ppi22_in_29[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 29.
ppi22_in_3[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 3.
ppi22_in_30[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 30.
ppi22_in_31[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 31.
ppi22_in_4[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 4.
ppi22_in_5[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 5.
ppi22_in_6[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 6.
ppi22_in_7[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 7.
ppi22_in_8[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 8.
ppi22_in_9[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 9.
ppi23_in_0[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 0.
ppi23_in_1[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 1.
ppi23_in_10[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 10.
ppi23_in_11[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 11.
ppi23_in_12[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 12.
ppi23_in_13[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 13.
ppi23_in_14[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 14.
ppi23_in_15[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 15.
ppi23_in_16[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 16.
ppi23_in_17[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 17.
ppi23_in_18[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 18.

Name	Protocol	Type	Description
ppi23_in_19[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 19.
ppi23_in_2[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 2.
ppi23_in_20[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 20.
ppi23_in_21[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 21.
ppi23_in_22[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 22.
ppi23_in_23[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 23.
ppi23_in_24[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 24.
ppi23_in_25[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 25.
ppi23_in_26[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 26.
ppi23_in_27[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 27.
ppi23_in_28[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 28.
ppi23_in_29[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 29.
ppi23_in_3[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 3.
ppi23_in_30[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 30.
ppi23_in_31[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 31.
ppi23_in_4[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 4.
ppi23_in_5[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 5.
ppi23_in_6[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 6.
ppi23_in_7[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 7.
ppi23_in_8[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 8.
ppi23_in_9[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 9.
ppi24_in_0[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 0.
ppi24_in_1[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 1.

Name	Protocol	Type	Description
ppi24_in_10[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 10.
ppi24_in_11[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 11.
ppi24_in_12[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 12.
ppi24_in_13[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 13.
ppi24_in_14[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 14.
ppi24_in_15[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 15.
ppi24_in_16[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 16.
ppi24_in_17[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 17.
ppi24_in_18[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 18.
ppi24_in_19[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 19.
ppi24_in_2[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 2.
ppi24_in_20[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 20.
ppi24_in_21[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 21.
ppi24_in_22[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 22.
ppi24_in_23[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 23.
ppi24_in_24[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 24.
ppi24_in_25[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 25.
ppi24_in_26[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 26.
ppi24_in_27[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 27.
ppi24_in_28[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 28.
ppi24_in_29[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 29.
ppi24_in_3[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 3.
ppi24_in_30[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 30.

Name	Protocol	Type	Description
ppi24_in_31[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 31.
ppi24_in_4[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 4.
ppi24_in_5[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 5.
ppi24_in_6[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 6.
ppi24_in_7[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 7.
ppi24_in_8[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 8.
ppi24_in_9[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 9.
ppi25_in_0[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 0.
ppi25_in_1[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 1.
ppi25_in_10[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 10.
ppi25_in_11[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 11.
ppi25_in_12[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 12.
ppi25_in_13[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 13.
ppi25_in_14[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 14.
ppi25_in_15[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 15.
ppi25_in_16[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 16.
ppi25_in_17[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 17.
ppi25_in_18[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 18.
ppi25_in_19[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 19.
ppi25_in_2[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 2.
ppi25_in_20[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 20.
ppi25_in_21[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 21.
ppi25_in_22[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 22.

Name	Protocol	Type	Description
ppi25_in_23[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 23.
ppi25_in_24[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 24.
ppi25_in_25[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 25.
ppi25_in_26[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 26.
ppi25_in_27[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 27.
ppi25_in_28[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 28.
ppi25_in_29[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 29.
ppi25_in_3[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 3.
ppi25_in_30[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 30.
ppi25_in_31[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 31.
ppi25_in_4[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 4.
ppi25_in_5[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 5.
ppi25_in_6[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 6.
ppi25_in_7[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 7.
ppi25_in_8[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 8.
ppi25_in_9[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 9.
ppi26_in_0[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 0.
ppi26_in_1[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 1.
ppi26_in_10[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 10.
ppi26_in_11[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 11.
ppi26_in_12[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 12.
ppi26_in_13[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 13.
ppi26_in_14[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 14.
ppi26_in_15[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 15.
ppi26_in_16[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 16.
ppi26_in_17[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 17.
ppi26_in_18[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 18.
ppi26_in_19[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 19.

Name	Protocol	Type	Description
ppi26_in_2[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 2.
ppi26_in_20[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 20.
ppi26_in_21[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 21.
ppi26_in_22[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 22.
ppi26_in_23[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 23.
ppi26_in_24[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 24.
ppi26_in_25[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 25.
ppi26_in_26[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 26.
ppi26_in_27[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 27.
ppi26_in_28[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 28.
ppi26_in_29[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 29.
ppi26_in_3[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 3.
ppi26_in_30[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 30.
ppi26_in_31[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 31.
ppi26_in_4[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 4.
ppi26_in_5[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 5.
ppi26_in_6[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 6.
ppi26_in_7[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 7.
ppi26_in_8[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 8.
ppi26_in_9[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 9.
ppi27_in_0[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 0.
ppi27_in_1[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 1.
ppi27_in_10[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 10.
ppi27_in_11[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 11.
ppi27_in_12[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 12.
ppi27_in_13[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 13.
ppi27_in_14[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 14.
ppi27_in_15[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 15.
ppi27_in_16[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 16.
ppi27_in_17[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 17.
ppi27_in_18[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 18.
ppi27_in_19[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 19.
ppi27_in_2[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 2.
ppi27_in_20[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 20.
ppi27_in_21[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 21.
ppi27_in_22[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 22.
ppi27_in_23[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 23.
ppi27_in_24[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 24.
ppi27_in_25[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 25.

Name	Protocol	Type	Description
ppi27_in_26[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 26.
ppi27_in_27[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 27.
ppi27_in_28[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 28.
ppi27_in_29[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 29.
ppi27_in_3[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 3.
ppi27_in_30[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 30.
ppi27_in_31[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 31.
ppi27_in_4[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 4.
ppi27_in_5[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 5.
ppi27_in_6[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 6.
ppi27_in_7[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 7.
ppi27_in_8[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 8.
ppi27_in_9[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 9.
ppi28_in_0[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 0.
ppi28_in_1[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 1.
ppi28_in_10[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 10.
ppi28_in_11[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 11.
ppi28_in_12[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 12.
ppi28_in_13[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 13.
ppi28_in_14[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 14.
ppi28_in_15[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 15.
ppi28_in_16[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 16.
ppi28_in_17[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 17.
ppi28_in_18[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 18.
ppi28_in_19[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 19.
ppi28_in_2[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 2.
ppi28_in_20[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 20.
ppi28_in_21[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 21.
ppi28_in_22[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 22.
ppi28_in_23[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 23.
ppi28_in_24[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 24.
ppi28_in_25[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 25.
ppi28_in_26[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 26.
ppi28_in_27[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 27.
ppi28_in_28[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 28.
ppi28_in_29[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 29.
ppi28_in_3[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 3.
ppi28_in_30[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 30.
ppi28_in_31[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 31.

Name	Protocol	Type	Description
ppi28_in_4[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 4.
ppi28_in_5[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 5.
ppi28_in_6[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 6.
ppi28_in_7[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 7.
ppi28_in_8[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 8.
ppi28_in_9[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 9.
ppi29_in_0[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 0.
ppi29_in_1[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 1.
ppi29_in_10[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 10.
ppi29_in_11[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 11.
ppi29_in_12[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 12.
ppi29_in_13[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 13.
ppi29_in_14[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 14.
ppi29_in_15[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 15.
ppi29_in_16[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 16.
ppi29_in_17[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 17.
ppi29_in_18[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 18.
ppi29_in_19[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 19.
ppi29_in_2[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 2.
ppi29_in_20[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 20.
ppi29_in_21[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 21.
ppi29_in_22[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 22.
ppi29_in_23[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 23.
ppi29_in_24[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 24.
ppi29_in_25[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 25.
ppi29_in_26[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 26.
ppi29_in_27[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 27.
ppi29_in_28[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 28.
ppi29_in_29[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 29.
ppi29_in_3[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 3.
ppi29_in_30[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 30.
ppi29_in_31[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 31.
ppi29_in_4[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 4.
ppi29_in_5[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 5.
ppi29_in_6[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 6.
ppi29_in_7[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 7.
ppi29_in_8[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 8.
ppi29_in_9[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 9.

Name	Protocol	Type	Description
ppi30_in_0[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 0.
ppi30_in_1[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 1.
ppi30_in_10[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 10.
ppi30_in_11[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 11.
ppi30_in_12[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 12.
ppi30_in_13[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 13.
ppi30_in_14[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 14.
ppi30_in_15[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 15.
ppi30_in_16[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 16.
ppi30_in_17[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 17.
ppi30_in_18[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 18.
ppi30_in_19[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 19.
ppi30_in_2[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 2.
ppi30_in_20[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 20.
ppi30_in_21[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 21.
ppi30_in_22[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 22.
ppi30_in_23[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 23.
ppi30_in_24[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 24.
ppi30_in_25[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 25.
ppi30_in_26[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 26.
ppi30_in_27[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 27.
ppi30_in_28[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 28.
ppi30_in_29[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 29.

Name	Protocol	Type	Description
ppi30_in_3[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 3.
ppi30_in_30[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 30.
ppi30_in_31[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 31.
ppi30_in_4[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 4.
ppi30_in_5[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 5.
ppi30_in_6[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 6.
ppi30_in_7[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 7.
ppi30_in_8[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 8.
ppi30_in_9[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 9.
ppi31_in_0[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 0.
ppi31_in_1[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 1.
ppi31_in_10[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 10.
ppi31_in_11[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 11.
ppi31_in_12[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 12.
ppi31_in_13[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 13.
ppi31_in_14[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 14.
ppi31_in_15[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 15.
ppi31_in_16[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 16.
ppi31_in_17[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 17.
ppi31_in_18[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 18.
ppi31_in_19[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 19.
ppi31_in_2[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 2.
ppi31_in_20[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 20.
ppi31_in_21[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 21.
ppi31_in_22[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 22.
ppi31_in_23[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 23.
ppi31_in_24[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 24.
ppi31_in_25[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 25.
ppi31_in_26[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 26.
ppi31_in_27[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 27.
ppi31_in_28[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 28.
ppi31_in_29[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 29.
ppi31_in_3[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 3.

Name	Protocol	Type	Description
ppi31_in_30[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 30.
ppi31_in_31[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 31.
ppi31_in_4[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 4.
ppi31_in_5[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 5.
ppi31_in_6[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 6.
ppi31_in_7[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 7.
ppi31_in_8[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 8.
ppi31_in_9[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 9.
pvbus_m	PVBus	Master	Memory bus out: transactions generated by the IRI.
pvbus_s	PVBus	Slave	Memory bus in: memory-mapped register accesses are accepted on this interface.
redistributor_m[256]	GICv3Comms	Master	Input from and output to CPU interface.
reset	Signal	Slave	Reset.
spi_in[988]	Signal	Slave	Shared peripheral interrupts.
wake_request_0[8]	Signal	Master	Power management outputs of cluster 0.
wake_request_1[8]	Signal	Master	Power management outputs of cluster 1.
wake_request_10[8]	Signal	Master	Power management outputs of cluster 10.
wake_request_11[8]	Signal	Master	Power management outputs of cluster 11.
wake_request_12[8]	Signal	Master	Power management outputs of cluster 12.
wake_request_13[8]	Signal	Master	Power management outputs of cluster 13.
wake_request_14[8]	Signal	Master	Power management outputs of cluster 14.
wake_request_15[8]	Signal	Master	Power management outputs of cluster 15.
wake_request_16[8]	Signal	Master	Power management outputs of cluster 16.
wake_request_17[8]	Signal	Master	Power management outputs of cluster 17.
wake_request_18[8]	Signal	Master	Power management outputs of cluster 18.
wake_request_19[8]	Signal	Master	Power management outputs of cluster 19.
wake_request_2[8]	Signal	Master	Power management outputs of cluster 2.
wake_request_20[8]	Signal	Master	Power management outputs of cluster 20.
wake_request_21[8]	Signal	Master	Power management outputs of cluster 21.
wake_request_22[8]	Signal	Master	Power management outputs of cluster 22.
wake_request_23[8]	Signal	Master	Power management outputs of cluster 23.
wake_request_24[8]	Signal	Master	Power management outputs of cluster 24.
wake_request_25[8]	Signal	Master	Power management outputs of cluster 25.
wake_request_26[8]	Signal	Master	Power management outputs of cluster 26.
wake_request_27[8]	Signal	Master	Power management outputs of cluster 27.
wake_request_28[8]	Signal	Master	Power management outputs of cluster 28.
wake_request_29[8]	Signal	Master	Power management outputs of cluster 29.
wake_request_3[8]	Signal	Master	Power management outputs of cluster 3.
wake_request_30[8]	Signal	Master	Power management outputs of cluster 30.
wake_request_31[8]	Signal	Master	Power management outputs of cluster 31.

Name	Protocol	Type	Description
wake_request_4[8]	Signal	Master	Power management outputs of cluster 4.
wake_request_5[8]	Signal	Master	Power management outputs of cluster 5.
wake_request_6[8]	Signal	Master	Power management outputs of cluster 6.
wake_request_7[8]	Signal	Master	Power management outputs of cluster 7.
wake_request_8[8]	Signal	Master	Power management outputs of cluster 8.
wake_request_9[8]	Signal	Master	Power management outputs of cluster 9.

## Parameters for GIC500

### GICD\_ITARGETSR-RAZWI

#### Type

bool

#### Default value

0x0

#### Description

If true, the GICD\_ITARGETS registers are RAZ/WI.

### ITS-count

#### Type

int

#### Default value

0x1

#### Description

Number of Interrupt Translation Services to be instantiated (0=none).

### ITS-device-bits

#### Type

int

#### Default value

0x10

#### Description

Number of bits supported for ITS device IDs.

### ITS-threaded-command-queue

#### Type

bool

#### Default value

0x1

**Description**

Enable execution of ITS commands in a separate thread which is sometimes required for cosimulation.

**SPI-count****Type**

int

**Default value**

0xe0

**Description**

Number of SPIs that are implemented.

**clear-ISPENDR-bit-for-level-sensitive-interrupt-when-acknowledged****Type**

bool

**Default value**

0x0

**Description**

If true, acknowledgement of a level sensitive interrupt clears the corresponding bit in the ISPENDR register.

**cpus\_per\_cluster\_0****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 0.

**cpus\_per\_cluster\_1****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 1.

**cpus\_per\_cluster\_10****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 10.

**cpus\_per\_cluster\_11****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 11.

**cpus\_per\_cluster\_12****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 12.

**cpus\_per\_cluster\_13****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 13.

**cpus\_per\_cluster\_14****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 14.

**cpus\_per\_cluster\_15****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 15.

**cpus\_per\_cluster\_16****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 16.

**cpus\_per\_cluster\_17****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 17.

**cpus\_per\_cluster\_18****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 18.

**cpus\_per\_cluster\_19****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 19.

**cpus\_per\_cluster\_2****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 2.

**cpus\_per\_cluster\_20****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 20.

**cpus\_per\_cluster\_21****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 21.

**cpus\_per\_cluster\_22****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 22.

**cpus\_per\_cluster\_23****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 23.

**cpus\_per\_cluster\_24****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 24.

**cpus\_per\_cluster\_25****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 25.

**cpus\_per\_cluster\_26****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 26.

**cpus\_per\_cluster\_27****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 27.

**cpus\_per\_cluster\_28****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 28.

**cpus\_per\_cluster\_29****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 29.

**cpus\_per\_cluster\_3****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 3.

**cpus\_per\_cluster\_30****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 30.

**cpus\_per\_cluster\_31****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 31.

**cpus\_per\_cluster\_4****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 4.

**cpus\_per\_cluster\_5****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 5.

**cpus\_per\_cluster\_6****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 6.

**cpus\_per\_cluster\_7****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 7.

**cpus\_per\_cluster\_8****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 8.

**cpus\_per\_cluster\_9****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 9.

**delay-ITS-accesses****Type**

bool

**Default value**

0x1

**Description**

Delay accesses from the ITS until GICR\_SYNCRR is read.

**delay-redistributor-accesses****Type**

bool

**Default value**

0x1

**Description**

Delay memory accesses from the redistributor until GICR\_SYNCRR is read.

**enable\_protocol\_checking****Type**

bool

**Default value**

0x0

**Description**

Enable/disable protocol checking at cpu interface.

**enabled****Type**

bool

**Default value**

0x1

**Description**

Enable GICv3 functionality; when false the component is inactive.

**has-two-security-states****Type**

bool

**Default value**

0x1

**Description**

If true, has two security states.

**num\_clusters****Type**

int

**Default value**

0x1

**Description**

Number of implemented affinity level1 clusters.

**print-memory-map****Type**

bool

**Default value**

0x0

**Description**

Print memory map to stdout.

**redistributor-threaded-sync****Type**

bool

**Default value**

0x1

**Description**

Enable execution of redistributor delayed transactions in a separate thread which is sometimes required for cosimulation.

**reg-base****Type**

int

**Default value**

0x10000000

**Description**

GIC500 base address.

**using-generated-memorymap****Type**

bool

**Default value**

0x1

**Description**

Use the generated memorymap for the GIC500 and warn if superfluous parameters are passed.

**wakeup-on-reset****Type**

bool

**Default value**

0x0

**Description**

Go against specification and start redistributors in woken-up state at reset. This allows software that was written for previous versions of the GICv3 specification to work correctly. This should not be used for production code or when the distributor is used separately from the core fast model.

### 3.10.32 GIC500\_ClusterPorts

GIC500 Component for distribution of interrupts. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-965: IP revisions support**

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**About GIC500\_ClusterPorts**

An alternate version of GIC500, identical to the above except for the CPUIF ports being exposed as an array per cluster

**Iris and MTI instances for GIC500\_ClusterPorts**

This model has the following Iris instances:

**Table 3-966: GIC500\_ClusterPorts Iris instances**

InstanceName	ComponentName
GIC500_ClusterPorts	GIC_IRI
GIC500_ClusterPorts.ITS0	GICv3InterruptTranslationService
GIC500_ClusterPorts.rd_0	GICv3RedistributorInternal
GIC500_ClusterPorts.rd_0_0	GICv3RedistributorInternal
GIC500_ClusterPorts.rd_0_0_0	GICv3RedistributorInternal
GIC500_ClusterPorts.rd_0_0_0_0	GICv3Redistributor
GIC500_ClusterPorts.rd_tl	GICv3Distributor

This model has the following MTI trace components:

**Table 3-967: GIC500\_ClusterPorts MTI instances**

InstanceName	ComponentName
GIC500_ClusterPorts.ITS0	GICv3InterruptTranslationService
GIC500_ClusterPorts.rd_0	GICv3RedistributorInternal
GIC500_ClusterPorts.rd_0_0	GICv3RedistributorInternal
GIC500_ClusterPorts.rd_0_0_0	GICv3RedistributorInternal
GIC500_ClusterPorts.rd_0_0_0_0	GICv3Redistributor
GIC500_ClusterPorts.rd_tl	GICv3Distributor

**Ports for GIC500\_ClusterPorts****Table 3-968: Ports**

Name	Protocol	Type	Description
cfgsdisable	Signal	Slave	Disable some SPLs signal.
cpu_active_0[8]	Signal	Slave	cpu_active pins of cluster 0.
cpu_active_1[8]	Signal	Slave	cpu_active pins of cluster 1.
cpu_active_10[8]	Signal	Slave	cpu_active pins of cluster 10.
cpu_active_11[8]	Signal	Slave	cpu_active pins of cluster 11.
cpu_active_12[8]	Signal	Slave	cpu_active pins of cluster 12.
cpu_active_13[8]	Signal	Slave	cpu_active pins of cluster 13.
cpu_active_14[8]	Signal	Slave	cpu_active pins of cluster 14.
cpu_active_15[8]	Signal	Slave	cpu_active pins of cluster 15.
cpu_active_16[8]	Signal	Slave	cpu_active pins of cluster 16.
cpu_active_17[8]	Signal	Slave	cpu_active pins of cluster 17.
cpu_active_18[8]	Signal	Slave	cpu_active pins of cluster 18.
cpu_active_19[8]	Signal	Slave	cpu_active pins of cluster 19.
cpu_active_2[8]	Signal	Slave	cpu_active pins of cluster 2.
cpu_active_20[8]	Signal	Slave	cpu_active pins of cluster 20.
cpu_active_21[8]	Signal	Slave	cpu_active pins of cluster 21.
cpu_active_22[8]	Signal	Slave	cpu_active pins of cluster 22.
cpu_active_23[8]	Signal	Slave	cpu_active pins of cluster 23.
cpu_active_24[8]	Signal	Slave	cpu_active pins of cluster 24.
cpu_active_25[8]	Signal	Slave	cpu_active pins of cluster 25.
cpu_active_26[8]	Signal	Slave	cpu_active pins of cluster 26.
cpu_active_27[8]	Signal	Slave	cpu_active pins of cluster 27.
cpu_active_28[8]	Signal	Slave	cpu_active pins of cluster 28.
cpu_active_29[8]	Signal	Slave	cpu_active pins of cluster 29.
cpu_active_3[8]	Signal	Slave	cpu_active pins of cluster 3.
cpu_active_30[8]	Signal	Slave	cpu_active pins of cluster 30.
cpu_active_31[8]	Signal	Slave	cpu_active pins of cluster 31.
cpu_active_4[8]	Signal	Slave	cpu_active pins of cluster 4.

Name	Protocol	Type	Description
cpu_active_5[8]	Signal	Slave	cpu_active pins of cluster 5.
cpu_active_6[8]	Signal	Slave	cpu_active pins of cluster 6.
cpu_active_7[8]	Signal	Slave	cpu_active pins of cluster 7.
cpu_active_8[8]	Signal	Slave	cpu_active pins of cluster 8.
cpu_active_9[8]	Signal	Slave	cpu_active pins of cluster 9.
po_reset	Signal	Slave	Power on reset.
ppi16_in_0[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 0.
ppi16_in_1[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 1.
ppi16_in_10[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 10.
ppi16_in_11[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 11.
ppi16_in_12[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 12.
ppi16_in_13[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 13.
ppi16_in_14[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 14.
ppi16_in_15[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 15.
ppi16_in_16[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 16.
ppi16_in_17[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 17.
ppi16_in_18[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 18.
ppi16_in_19[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 19.
ppi16_in_2[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 2.
ppi16_in_20[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 20.
ppi16_in_21[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 21.
ppi16_in_22[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 22.
ppi16_in_23[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 23.
ppi16_in_24[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 24.
ppi16_in_25[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 25.
ppi16_in_26[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 26.
ppi16_in_27[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 27.
ppi16_in_28[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 28.
ppi16_in_29[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 29.
ppi16_in_3[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 3.
ppi16_in_30[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 30.
ppi16_in_31[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 31.
ppi16_in_4[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 4.
ppi16_in_5[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 5.
ppi16_in_6[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 6.
ppi16_in_7[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 7.
ppi16_in_8[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 8.
ppi16_in_9[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 9.
ppi17_in_0[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 0.

Name	Protocol	Type	Description
ppi17_in_1[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 1.
ppi17_in_10[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 10.
ppi17_in_11[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 11.
ppi17_in_12[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 12.
ppi17_in_13[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 13.
ppi17_in_14[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 14.
ppi17_in_15[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 15.
ppi17_in_16[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 16.
ppi17_in_17[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 17.
ppi17_in_18[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 18.
ppi17_in_19[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 19.
ppi17_in_2[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 2.
ppi17_in_20[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 20.
ppi17_in_21[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 21.
ppi17_in_22[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 22.
ppi17_in_23[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 23.
ppi17_in_24[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 24.
ppi17_in_25[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 25.
ppi17_in_26[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 26.
ppi17_in_27[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 27.
ppi17_in_28[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 28.
ppi17_in_29[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 29.
ppi17_in_3[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 3.
ppi17_in_30[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 30.
ppi17_in_31[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 31.
ppi17_in_4[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 4.
ppi17_in_5[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 5.
ppi17_in_6[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 6.
ppi17_in_7[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 7.
ppi17_in_8[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 8.
ppi17_in_9[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 9.
ppi18_in_0[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 0.
ppi18_in_1[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 1.
ppi18_in_10[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 10.
ppi18_in_11[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 11.
ppi18_in_12[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 12.
ppi18_in_13[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 13.
ppi18_in_14[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 14.
ppi18_in_15[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 15.

Name	Protocol	Type	Description
ppi18_in_16[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 16.
ppi18_in_17[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 17.
ppi18_in_18[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 18.
ppi18_in_19[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 19.
ppi18_in_2[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 2.
ppi18_in_20[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 20.
ppi18_in_21[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 21.
ppi18_in_22[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 22.
ppi18_in_23[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 23.
ppi18_in_24[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 24.
ppi18_in_25[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 25.
ppi18_in_26[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 26.
ppi18_in_27[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 27.
ppi18_in_28[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 28.
ppi18_in_29[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 29.
ppi18_in_3[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 3.
ppi18_in_30[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 30.
ppi18_in_31[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 31.
ppi18_in_4[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 4.
ppi18_in_5[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 5.
ppi18_in_6[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 6.
ppi18_in_7[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 7.
ppi18_in_8[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 8.
ppi18_in_9[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 9.
ppi19_in_0[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 0.
ppi19_in_1[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 1.
ppi19_in_10[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 10.
ppi19_in_11[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 11.
ppi19_in_12[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 12.
ppi19_in_13[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 13.
ppi19_in_14[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 14.
ppi19_in_15[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 15.
ppi19_in_16[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 16.
ppi19_in_17[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 17.
ppi19_in_18[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 18.
ppi19_in_19[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 19.
ppi19_in_2[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 2.
ppi19_in_20[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 20.
ppi19_in_21[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 21.

Name	Protocol	Type	Description
ppi19_in_22[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 22.
ppi19_in_23[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 23.
ppi19_in_24[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 24.
ppi19_in_25[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 25.
ppi19_in_26[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 26.
ppi19_in_27[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 27.
ppi19_in_28[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 28.
ppi19_in_29[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 29.
ppi19_in_3[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 3.
ppi19_in_30[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 30.
ppi19_in_31[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 31.
ppi19_in_4[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 4.
ppi19_in_5[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 5.
ppi19_in_6[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 6.
ppi19_in_7[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 7.
ppi19_in_8[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 8.
ppi19_in_9[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 9.
ppi20_in_0[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 0.
ppi20_in_1[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 1.
ppi20_in_10[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 10.
ppi20_in_11[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 11.
ppi20_in_12[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 12.
ppi20_in_13[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 13.
ppi20_in_14[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 14.
ppi20_in_15[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 15.
ppi20_in_16[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 16.
ppi20_in_17[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 17.
ppi20_in_18[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 18.
ppi20_in_19[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 19.
ppi20_in_2[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 2.
ppi20_in_20[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 20.
ppi20_in_21[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 21.
ppi20_in_22[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 22.
ppi20_in_23[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 23.
ppi20_in_24[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 24.
ppi20_in_25[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 25.
ppi20_in_26[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 26.
ppi20_in_27[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 27.
ppi20_in_28[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 28.

Name	Protocol	Type	Description
ppi20_in_29[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 29.
ppi20_in_3[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 3.
ppi20_in_30[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 30.
ppi20_in_31[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 31.
ppi20_in_4[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 4.
ppi20_in_5[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 5.
ppi20_in_6[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 6.
ppi20_in_7[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 7.
ppi20_in_8[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 8.
ppi20_in_9[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 9.
ppi21_in_0[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 0.
ppi21_in_1[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 1.
ppi21_in_10[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 10.
ppi21_in_11[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 11.
ppi21_in_12[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 12.
ppi21_in_13[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 13.
ppi21_in_14[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 14.
ppi21_in_15[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 15.
ppi21_in_16[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 16.
ppi21_in_17[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 17.
ppi21_in_18[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 18.
ppi21_in_19[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 19.
ppi21_in_2[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 2.
ppi21_in_20[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 20.
ppi21_in_21[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 21.
ppi21_in_22[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 22.
ppi21_in_23[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 23.
ppi21_in_24[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 24.
ppi21_in_25[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 25.
ppi21_in_26[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 26.
ppi21_in_27[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 27.
ppi21_in_28[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 28.
ppi21_in_29[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 29.
ppi21_in_3[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 3.
ppi21_in_30[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 30.
ppi21_in_31[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 31.
ppi21_in_4[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 4.
ppi21_in_5[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 5.
ppi21_in_6[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 6.

Name	Protocol	Type	Description
ppi21_in_7[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 7.
ppi21_in_8[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 8.
ppi21_in_9[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 9.
ppi22_in_0[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 0.
ppi22_in_1[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 1.
ppi22_in_10[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 10.
ppi22_in_11[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 11.
ppi22_in_12[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 12.
ppi22_in_13[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 13.
ppi22_in_14[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 14.
ppi22_in_15[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 15.
ppi22_in_16[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 16.
ppi22_in_17[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 17.
ppi22_in_18[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 18.
ppi22_in_19[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 19.
ppi22_in_2[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 2.
ppi22_in_20[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 20.
ppi22_in_21[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 21.
ppi22_in_22[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 22.
ppi22_in_23[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 23.
ppi22_in_24[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 24.
ppi22_in_25[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 25.
ppi22_in_26[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 26.
ppi22_in_27[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 27.

Name	Protocol	Type	Description
ppi22_in_28[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 28.
ppi22_in_29[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 29.
ppi22_in_3[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 3.
ppi22_in_30[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 30.
ppi22_in_31[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 31.
ppi22_in_4[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 4.
ppi22_in_5[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 5.
ppi22_in_6[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 6.
ppi22_in_7[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 7.
ppi22_in_8[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 8.
ppi22_in_9[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 9.
ppi23_in_0[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 0.
ppi23_in_1[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 1.
ppi23_in_10[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 10.
ppi23_in_11[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 11.
ppi23_in_12[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 12.
ppi23_in_13[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 13.
ppi23_in_14[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 14.
ppi23_in_15[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 15.
ppi23_in_16[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 16.
ppi23_in_17[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 17.
ppi23_in_18[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 18.
ppi23_in_19[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 19.

Name	Protocol	Type	Description
ppi23_in_2[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 2.
ppi23_in_20[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 20.
ppi23_in_21[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 21.
ppi23_in_22[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 22.
ppi23_in_23[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 23.
ppi23_in_24[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 24.
ppi23_in_25[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 25.
ppi23_in_26[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 26.
ppi23_in_27[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 27.
ppi23_in_28[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 28.
ppi23_in_29[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 29.
ppi23_in_3[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 3.
ppi23_in_30[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 30.
ppi23_in_31[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 31.
ppi23_in_4[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 4.
ppi23_in_5[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 5.
ppi23_in_6[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 6.
ppi23_in_7[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 7.
ppi23_in_8[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 8.
ppi23_in_9[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 9.
ppi24_in_0[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 0.
ppi24_in_1[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 1.
ppi24_in_10[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 10.

Name	Protocol	Type	Description
ppi24_in_11[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 11.
ppi24_in_12[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 12.
ppi24_in_13[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 13.
ppi24_in_14[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 14.
ppi24_in_15[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 15.
ppi24_in_16[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 16.
ppi24_in_17[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 17.
ppi24_in_18[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 18.
ppi24_in_19[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 19.
ppi24_in_2[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 2.
ppi24_in_20[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 20.
ppi24_in_21[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 21.
ppi24_in_22[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 22.
ppi24_in_23[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 23.
ppi24_in_24[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 24.
ppi24_in_25[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 25.
ppi24_in_26[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 26.
ppi24_in_27[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 27.
ppi24_in_28[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 28.
ppi24_in_29[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 29.
ppi24_in_3[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 3.
ppi24_in_30[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 30.
ppi24_in_31[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 31.

Name	Protocol	Type	Description
ppi24_in_4[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 4.
ppi24_in_5[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 5.
ppi24_in_6[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 6.
ppi24_in_7[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 7.
ppi24_in_8[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 8.
ppi24_in_9[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 9.
ppi25_in_0[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 0.
ppi25_in_1[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 1.
ppi25_in_10[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 10.
ppi25_in_11[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 11.
ppi25_in_12[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 12.
ppi25_in_13[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 13.
ppi25_in_14[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 14.
ppi25_in_15[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 15.
ppi25_in_16[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 16.
ppi25_in_17[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 17.
ppi25_in_18[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 18.
ppi25_in_19[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 19.
ppi25_in_2[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 2.
ppi25_in_20[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 20.
ppi25_in_21[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 21.
ppi25_in_22[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 22.
ppi25_in_23[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 23.

Name	Protocol	Type	Description
ppi25_in_24[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 24.
ppi25_in_25[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 25.
ppi25_in_26[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 26.
ppi25_in_27[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 27.
ppi25_in_28[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 28.
ppi25_in_29[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 29.
ppi25_in_3[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 3.
ppi25_in_30[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 30.
ppi25_in_31[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 31.
ppi25_in_4[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 4.
ppi25_in_5[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 5.
ppi25_in_6[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 6.
ppi25_in_7[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 7.
ppi25_in_8[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 8.
ppi25_in_9[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 9.
ppi26_in_0[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 0.
ppi26_in_1[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 1.
ppi26_in_10[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 10.
ppi26_in_11[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 11.
ppi26_in_12[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 12.
ppi26_in_13[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 13.
ppi26_in_14[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 14.
ppi26_in_15[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 15.
ppi26_in_16[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 16.
ppi26_in_17[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 17.
ppi26_in_18[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 18.
ppi26_in_19[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 19.
ppi26_in_2[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 2.
ppi26_in_20[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 20.

Name	Protocol	Type	Description
ppi26_in_21[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 21.
ppi26_in_22[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 22.
ppi26_in_23[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 23.
ppi26_in_24[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 24.
ppi26_in_25[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 25.
ppi26_in_26[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 26.
ppi26_in_27[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 27.
ppi26_in_28[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 28.
ppi26_in_29[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 29.
ppi26_in_3[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 3.
ppi26_in_30[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 30.
ppi26_in_31[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 31.
ppi26_in_4[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 4.
ppi26_in_5[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 5.
ppi26_in_6[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 6.
ppi26_in_7[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 7.
ppi26_in_8[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 8.
ppi26_in_9[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 9.
ppi27_in_0[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 0.
ppi27_in_1[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 1.
ppi27_in_10[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 10.
ppi27_in_11[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 11.
ppi27_in_12[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 12.
ppi27_in_13[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 13.
ppi27_in_14[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 14.
ppi27_in_15[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 15.
ppi27_in_16[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 16.
ppi27_in_17[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 17.
ppi27_in_18[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 18.
ppi27_in_19[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 19.
ppi27_in_2[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 2.
ppi27_in_20[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 20.
ppi27_in_21[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 21.
ppi27_in_22[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 22.
ppi27_in_23[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 23.
ppi27_in_24[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 24.
ppi27_in_25[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 25.
ppi27_in_26[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 26.
ppi27_in_27[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 27.

Name	Protocol	Type	Description
ppi27_in_28[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 28.
ppi27_in_29[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 29.
ppi27_in_3[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 3.
ppi27_in_30[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 30.
ppi27_in_31[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 31.
ppi27_in_4[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 4.
ppi27_in_5[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 5.
ppi27_in_6[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 6.
ppi27_in_7[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 7.
ppi27_in_8[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 8.
ppi27_in_9[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 9.
ppi28_in_0[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 0.
ppi28_in_1[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 1.
ppi28_in_10[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 10.
ppi28_in_11[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 11.
ppi28_in_12[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 12.
ppi28_in_13[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 13.
ppi28_in_14[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 14.
ppi28_in_15[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 15.
ppi28_in_16[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 16.
ppi28_in_17[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 17.
ppi28_in_18[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 18.
ppi28_in_19[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 19.
ppi28_in_2[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 2.
ppi28_in_20[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 20.
ppi28_in_21[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 21.
ppi28_in_22[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 22.
ppi28_in_23[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 23.
ppi28_in_24[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 24.
ppi28_in_25[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 25.
ppi28_in_26[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 26.
ppi28_in_27[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 27.
ppi28_in_28[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 28.
ppi28_in_29[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 29.
ppi28_in_3[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 3.
ppi28_in_30[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 30.
ppi28_in_31[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 31.
ppi28_in_4[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 4.
ppi28_in_5[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 5.

Name	Protocol	Type	Description
ppi28_in_6[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 6.
ppi28_in_7[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 7.
ppi28_in_8[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 8.
ppi28_in_9[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 9.
ppi29_in_0[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 0.
ppi29_in_1[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 1.
ppi29_in_10[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 10.
ppi29_in_11[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 11.
ppi29_in_12[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 12.
ppi29_in_13[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 13.
ppi29_in_14[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 14.
ppi29_in_15[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 15.
ppi29_in_16[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 16.
ppi29_in_17[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 17.
ppi29_in_18[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 18.
ppi29_in_19[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 19.
ppi29_in_2[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 2.
ppi29_in_20[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 20.
ppi29_in_21[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 21.
ppi29_in_22[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 22.
ppi29_in_23[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 23.
ppi29_in_24[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 24.
ppi29_in_25[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 25.
ppi29_in_26[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 26.
ppi29_in_27[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 27.
ppi29_in_28[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 28.
ppi29_in_29[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 29.
ppi29_in_3[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 3.
ppi29_in_30[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 30.
ppi29_in_31[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 31.
ppi29_in_4[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 4.
ppi29_in_5[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 5.
ppi29_in_6[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 6.
ppi29_in_7[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 7.
ppi29_in_8[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 8.
ppi29_in_9[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 9.
ppi30_in_0[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 0.
ppi30_in_1[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 1.

Name	Protocol	Type	Description
ppi30_in_10[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 10.
ppi30_in_11[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 11.
ppi30_in_12[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 12.
ppi30_in_13[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 13.
ppi30_in_14[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 14.
ppi30_in_15[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 15.
ppi30_in_16[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 16.
ppi30_in_17[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 17.
ppi30_in_18[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 18.
ppi30_in_19[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 19.
ppi30_in_2[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 2.
ppi30_in_20[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 20.
ppi30_in_21[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 21.
ppi30_in_22[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 22.
ppi30_in_23[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 23.
ppi30_in_24[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 24.
ppi30_in_25[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 25.
ppi30_in_26[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 26.
ppi30_in_27[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 27.
ppi30_in_28[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 28.
ppi30_in_29[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 29.
ppi30_in_3[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 3.
ppi30_in_30[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 30.

Name	Protocol	Type	Description
ppi30_in_31[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 31.
ppi30_in_4[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 4.
ppi30_in_5[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 5.
ppi30_in_6[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 6.
ppi30_in_7[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 7.
ppi30_in_8[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 8.
ppi30_in_9[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 9.
ppi31_in_0[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 0.
ppi31_in_1[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 1.
ppi31_in_10[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 10.
ppi31_in_11[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 11.
ppi31_in_12[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 12.
ppi31_in_13[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 13.
ppi31_in_14[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 14.
ppi31_in_15[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 15.
ppi31_in_16[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 16.
ppi31_in_17[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 17.
ppi31_in_18[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 18.
ppi31_in_19[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 19.
ppi31_in_2[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 2.
ppi31_in_20[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 20.
ppi31_in_21[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 21.
ppi31_in_22[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 22.
ppi31_in_23[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 23.
ppi31_in_24[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 24.
ppi31_in_25[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 25.
ppi31_in_26[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 26.
ppi31_in_27[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 27.
ppi31_in_28[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 28.
ppi31_in_29[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 29.
ppi31_in_3[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 3.
ppi31_in_30[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 30.
ppi31_in_31[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 31.
ppi31_in_4[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 4.

Name	Protocol	Type	Description
ppi31_in_5[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 5.
ppi31_in_6[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 6.
ppi31_in_7[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 7.
ppi31_in_8[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 8.
ppi31_in_9[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 9.
pvbus_m	PVBus	Master	Memory bus out: transactions generated by the IRI.
pvbus_s	PVBus	Slave	Memory bus in: memory-mapped register accesses are accepted on this interface.
redistributor_0[8]	GICv3Comms	Master	Input from and output to CPU interface for cluster 0
redistributor_1[8]	GICv3Comms	Master	Input from and output to CPU interface for cluster 1.
redistributor_10[8]	GICv3Comms	Master	Input from and output to CPU interface for cluster 10.
redistributor_11[8]	GICv3Comms	Master	Input from and output to CPU interface for cluster 11.
redistributor_12[8]	GICv3Comms	Master	Input from and output to CPU interface for cluster 12.
redistributor_13[8]	GICv3Comms	Master	Input from and output to CPU interface for cluster 13.
redistributor_14[8]	GICv3Comms	Master	Input from and output to CPU interface for cluster 14.
redistributor_15[8]	GICv3Comms	Master	Input from and output to CPU interface for cluster 15.
redistributor_16[8]	GICv3Comms	Master	Input from and output to CPU interface for cluster 16.
redistributor_17[8]	GICv3Comms	Master	Input from and output to CPU interface for cluster 17.
redistributor_18[8]	GICv3Comms	Master	Input from and output to CPU interface for cluster 18.
redistributor_19[8]	GICv3Comms	Master	Input from and output to CPU interface for cluster 19.
redistributor_2[8]	GICv3Comms	Master	Input from and output to CPU interface for cluster 2.
redistributor_20[8]	GICv3Comms	Master	Input from and output to CPU interface for cluster 20
redistributor_21[8]	GICv3Comms	Master	Input from and output to CPU interface for cluster 21.
redistributor_22[8]	GICv3Comms	Master	Input from and output to CPU interface for cluster 22.
redistributor_23[8]	GICv3Comms	Master	Input from and output to CPU interface for cluster 23
redistributor_24[8]	GICv3Comms	Master	Input from and output to CPU interface for cluster 24.
redistributor_25[8]	GICv3Comms	Master	Input from and output to CPU interface for cluster 25.
redistributor_26[8]	GICv3Comms	Master	Input from and output to CPU interface for cluster 26.
redistributor_27[8]	GICv3Comms	Master	Input from and output to CPU interface for cluster 27.
redistributor_28[8]	GICv3Comms	Master	Input from and output to CPU interface for cluster 28.
redistributor_29[8]	GICv3Comms	Master	Input from and output to CPU interface for cluster 29.
redistributor_3[8]	GICv3Comms	Master	Input from and output to CPU interface for cluster 3.
redistributor_30[8]	GICv3Comms	Master	Input from and output to CPU interface for cluster 30.
redistributor_31[8]	GICv3Comms	Master	Input from and output to CPU interface for cluster 31.
redistributor_4[8]	GICv3Comms	Master	Input from and output to CPU interface for cluster 4.
redistributor_5[8]	GICv3Comms	Master	Input from and output to CPU interface for cluster 5.
redistributor_6[8]	GICv3Comms	Master	Input from and output to CPU interface for cluster 6.
redistributor_7[8]	GICv3Comms	Master	Input from and output to CPU interface for cluster 7.
redistributor_8[8]	GICv3Comms	Master	Input from and output to CPU interface for cluster 8.
redistributor_9[8]	GICv3Comms	Master	Input from and output to CPU interface for cluster 9.

Name	Protocol	Type	Description
reset	Signal	Slave	Reset.
spi_in[988]	Signal	Slave	Shared peripheral interrupts.
wake_request_0[8]	Signal	Master	Power management outputs of cluster 0.
wake_request_1[8]	Signal	Master	Power management outputs of cluster 1.
wake_request_10[8]	Signal	Master	Power management outputs of cluster 10.
wake_request_11[8]	Signal	Master	Power management outputs of cluster 11.
wake_request_12[8]	Signal	Master	Power management outputs of cluster 12.
wake_request_13[8]	Signal	Master	Power management outputs of cluster 13.
wake_request_14[8]	Signal	Master	Power management outputs of cluster 14.
wake_request_15[8]	Signal	Master	Power management outputs of cluster 15.
wake_request_16[8]	Signal	Master	Power management outputs of cluster 16.
wake_request_17[8]	Signal	Master	Power management outputs of cluster 17.
wake_request_18[8]	Signal	Master	Power management outputs of cluster 18.
wake_request_19[8]	Signal	Master	Power management outputs of cluster 19.
wake_request_2[8]	Signal	Master	Power management outputs of cluster 2.
wake_request_20[8]	Signal	Master	Power management outputs of cluster 20.
wake_request_21[8]	Signal	Master	Power management outputs of cluster 21.
wake_request_22[8]	Signal	Master	Power management outputs of cluster 22.
wake_request_23[8]	Signal	Master	Power management outputs of cluster 23.
wake_request_24[8]	Signal	Master	Power management outputs of cluster 24.
wake_request_25[8]	Signal	Master	Power management outputs of cluster 25.
wake_request_26[8]	Signal	Master	Power management outputs of cluster 26.
wake_request_27[8]	Signal	Master	Power management outputs of cluster 27.
wake_request_28[8]	Signal	Master	Power management outputs of cluster 28.
wake_request_29[8]	Signal	Master	Power management outputs of cluster 29.
wake_request_3[8]	Signal	Master	Power management outputs of cluster 3.
wake_request_30[8]	Signal	Master	Power management outputs of cluster 30.
wake_request_31[8]	Signal	Master	Power management outputs of cluster 31.
wake_request_4[8]	Signal	Master	Power management outputs of cluster 4.
wake_request_5[8]	Signal	Master	Power management outputs of cluster 5.
wake_request_6[8]	Signal	Master	Power management outputs of cluster 6.
wake_request_7[8]	Signal	Master	Power management outputs of cluster 7.
wake_request_8[8]	Signal	Master	Power management outputs of cluster 8.
wake_request_9[8]	Signal	Master	Power management outputs of cluster 9.

## Parameters for GIC500\_ClusterPorts

### GICD\_ITARGETSR-RAZWI

#### Type

bool

**Default value**

0x0

**Description**

If true, the GICD\_ITARGETS registers are RAZ/WI.

**ITS-count****Type**

int

**Default value**

0x1

**Description**

Number of Interrupt Translation Services to be instantiated (0=none).

**ITS-device-bits****Type**

int

**Default value**

0x10

**Description**

Number of bits supported for ITS device IDs.

**ITS-threaded-command-queue****Type**

bool

**Default value**

0x1

**Description**

Enable execution of ITS commands in a separate thread which is sometimes required for cosimulation.

**SPI-count****Type**

int

**Default value**

0xe0

**Description**

Number of SPIs that are implemented.

**clear-ISPENDR-bit-for-level-sensitive-interrupt-when-acknowledged****Type**

bool

**Default value**

0x0

**Description**

If true, acknowledgement of a level sensitive interrupt clears the corresponding bit in the ISPENDR register.

**cpus\_per\_cluster\_0****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 0.

**cpus\_per\_cluster\_1****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 1.

**cpus\_per\_cluster\_10****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 10.

**cpus\_per\_cluster\_11****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 11.

**cpus\_per\_cluster\_12****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 12.

**cpus\_per\_cluster\_13****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 13.

**cpus\_per\_cluster\_14****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 14.

**cpus\_per\_cluster\_15****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 15.

**cpus\_per\_cluster\_16****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 16.

**`cpus_per_cluster_17`****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 17.

**`cpus_per_cluster_18`****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 18.

**`cpus_per_cluster_19`****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 19.

**`cpus_per_cluster_2`****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 2.

**`cpus_per_cluster_20`****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 20.

**cpus\_per\_cluster\_21****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 21.

**cpus\_per\_cluster\_22****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 22.

**cpus\_per\_cluster\_23****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 23.

**cpus\_per\_cluster\_24****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 24.

**cpus\_per\_cluster\_25****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 25.

**cpus\_per\_cluster\_26****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 26.

**cpus\_per\_cluster\_27****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 27.

**cpus\_per\_cluster\_28****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 28.

**cpus\_per\_cluster\_29****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 29.

**cpus\_per\_cluster\_3****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 3.

**cpus\_per\_cluster\_30****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 30.

**cpus\_per\_cluster\_31****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 31.

**cpus\_per\_cluster\_4****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 4.

**cpus\_per\_cluster\_5****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 5.

**cpus\_per\_cluster\_6****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 6.

**cpus\_per\_cluster\_7****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 7.

**cpus\_per\_cluster\_8****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 8.

**cpus\_per\_cluster\_9****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 9.

**delay-ITS-accesses****Type**

bool

**Default value**

0x1

**Description**

Delay accesses from the ITS until GICR\_SYNCRR is read.

**delay-redistributor-accesses****Type**

bool

**Default value**

0x1

**Description**

Delay memory accesses from the redistributor until GICR\_SYNCR is read.

**enable\_protocol\_checking****Type**

bool

**Default value**

0x0

**Description**

Enable/disable protocol checking at cpu interface.

**enabled****Type**

bool

**Default value**

0x1

**Description**

Enable GICv3 functionality; when false the component is inactive.

**has-two-security-states****Type**

bool

**Default value**

0x1

**Description**

If true, has two security states.

**num\_clusters****Type**

int

**Default value**

0x1

**Description**

Number of implemented affinity level1 clusters.

**print-memory-map****Type**

bool

**Default value**

0x0

**Description**

Print memory map to stdout.

**redistributor-threaded-sync****Type**

bool

**Default value**

0x1

**Description**

Enable execution of redistributor delayed transactions in a separate thread which is sometimes required for cosimulation.

**reg-base****Type**

int

**Default value**

0x10000000

**Description**

GIC500 base address.

**using-generated-memorymap****Type**

bool

**Default value**

0x1

**Description**

Use the generated memorymap for the GIC500 and warn if superfluous parameters are passed.

**wakeup-on-reset****Type**

bool

**Default value**

0x0

**Description**

Go against specification and start redistributors in woken-up state at reset. This allows software that was written for previous versions of the GICv3 specification to work correctly. This should not be used for production code or when the distributor is used separately from the core fast model.

### 3.10.33 GIC500\_Filter

GIC500 Component for distribution of interrupts, filtering version for validation. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-969: IP revisions support**

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### About GIC500\_Filter

This is a single-component implementation of the GICv3 architecture with support for 256 cores. You can configure the model to support a maximum of 32 clusters with 8 cores per cluster. Use it with an Armv8-A core to deliver interrupts. It supports a single Interrupt Translation Service for message-based interrupts. It supports the architectural features, but does not support the implementation defined features.

Note

- Set the `FASTSIM_GIC_MEMORY_MAP` environment variable to 1 to print to stderr the memory map of any GICv3 or later models that are included in the platform being run.
- For writes to `GITS_TRANSLATE64R`, the MSIRewriter component can be used to create the correct data transactions based on the device ID. For more details about `GITS_TRANSLATE64R`, see [MSIRewriter](#).

#### MasterID, ExtendedID, and UserFlags

This table shows how this model encodes information in the `MasterID`, `ExtendedID`, and `UserFlags` bus attributes:

**Table 3-970: MasterID, ExtendedID, and UserFlags**

PVBus attribute	Bits used	Property encoded	Notes
MasterID	31:0	Master ID that invoked the register access	–
ExtendedID	–	–	Not used
UserFlags	–	–	Not used

Note

The `pvbus_m` port does not use `MasterID`, `ExtendedID`, or `UserFlags`.

#### Iris and MTI instances for GIC500\_Filter

This model has the following Iris instances:

**Table 3-971: GIC500\_Filter Iris instances**

InstanceName	ComponentName
GIC500_Filter	GIC_IRI
GIC500_Filter.ITS0	GICv3InterruptTranslationService
GIC500_Filter.rd_0	GICv3RedistributorInternal
GIC500_Filter.rd_0_0	GICv3RedistributorInternal
GIC500_Filter.rd_0_0_0	GICv3RedistributorInternal
GIC500_Filter.rd_0_0_0_0	GICv3Redistributor
GIC500_Filter.rd_tl	GICv3Distributor

This model has the following MTI trace components:

**Table 3-972: GIC500\_Filter MTI instances**

InstanceName	ComponentName
GIC500_Filter.ITS0	GICv3InterruptTranslationService
GIC500_Filter.rd_0	GICv3RedistributorInternal
GIC500_Filter.rd_0_0	GICv3RedistributorInternal
GIC500_Filter.rd_0_0_0	GICv3RedistributorInternal
GIC500_Filter.rd_0_0_0_0	GICv3Redistributor
GIC500_Filter.rd_tl	GICv3Distributor

### Ports for GIC500\_Filter

**Table 3-973: Ports**

Name	Protocol	Type	Description
cfgsdisable	Signal	Slave	Disable some SPIs signal.
cpu_active_0[8]	Signal	Slave	cpu_active pins of cluster 0.
cpu_active_1[8]	Signal	Slave	cpu_active pins of cluster 1.
cpu_active_10[8]	Signal	Slave	cpu_active pins of cluster 10.
cpu_active_11[8]	Signal	Slave	cpu_active pins of cluster 11.
cpu_active_12[8]	Signal	Slave	cpu_active pins of cluster 12.
cpu_active_13[8]	Signal	Slave	cpu_active pins of cluster 13.
cpu_active_14[8]	Signal	Slave	cpu_active pins of cluster 14.
cpu_active_15[8]	Signal	Slave	cpu_active pins of cluster 15.
cpu_active_16[8]	Signal	Slave	cpu_active pins of cluster 16.
cpu_active_17[8]	Signal	Slave	cpu_active pins of cluster 17.
cpu_active_18[8]	Signal	Slave	cpu_active pins of cluster 18.
cpu_active_19[8]	Signal	Slave	cpu_active pins of cluster 19.
cpu_active_2[8]	Signal	Slave	cpu_active pins of cluster 2.
cpu_active_20[8]	Signal	Slave	cpu_active pins of cluster 20.
cpu_active_21[8]	Signal	Slave	cpu_active pins of cluster 21.
cpu_active_22[8]	Signal	Slave	cpu_active pins of cluster 22.

Name	Protocol	Type	Description
cpu_active_23[8]	Signal	Slave	cpu_active pins of cluster 23.
cpu_active_24[8]	Signal	Slave	cpu_active pins of cluster 24.
cpu_active_25[8]	Signal	Slave	cpu_active pins of cluster 25.
cpu_active_26[8]	Signal	Slave	cpu_active pins of cluster 26.
cpu_active_27[8]	Signal	Slave	cpu_active pins of cluster 27.
cpu_active_28[8]	Signal	Slave	cpu_active pins of cluster 28.
cpu_active_29[8]	Signal	Slave	cpu_active pins of cluster 29.
cpu_active_3[8]	Signal	Slave	cpu_active pins of cluster 3.
cpu_active_30[8]	Signal	Slave	cpu_active pins of cluster 30.
cpu_active_31[8]	Signal	Slave	cpu_active pins of cluster 31.
cpu_active_4[8]	Signal	Slave	cpu_active pins of cluster 4.
cpu_active_5[8]	Signal	Slave	cpu_active pins of cluster 5.
cpu_active_6[8]	Signal	Slave	cpu_active pins of cluster 6.
cpu_active_7[8]	Signal	Slave	cpu_active pins of cluster 7.
cpu_active_8[8]	Signal	Slave	cpu_active pins of cluster 8.
cpu_active_9[8]	Signal	Slave	cpu_active pins of cluster 9.
po_reset	Signal	Slave	Power on reset.
ppi16_in_0[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 0.
ppi16_in_1[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 1.
ppi16_in_10[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 10.
ppi16_in_11[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 11.
ppi16_in_12[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 12.
ppi16_in_13[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 13.
ppi16_in_14[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 14.
ppi16_in_15[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 15.
ppi16_in_16[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 16.
ppi16_in_17[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 17.
ppi16_in_18[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 18.
ppi16_in_19[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 19.
ppi16_in_2[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 2.
ppi16_in_20[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 20.
ppi16_in_21[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 21.
ppi16_in_22[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 22.
ppi16_in_23[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 23.
ppi16_in_24[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 24.
ppi16_in_25[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 25.
ppi16_in_26[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 26.
ppi16_in_27[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 27.
ppi16_in_28[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 28.

Name	Protocol	Type	Description
ppi16_in_29[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 29.
ppi16_in_3[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 3.
ppi16_in_30[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 30.
ppi16_in_31[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 31.
ppi16_in_4[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 4.
ppi16_in_5[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 5.
ppi16_in_6[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 6.
ppi16_in_7[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 7.
ppi16_in_8[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 8.
ppi16_in_9[8]	Signal	Slave	Private peripheral interrupts interrupts (ID16) of cluster 9.
ppi17_in_0[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 0.
ppi17_in_1[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 1.
ppi17_in_10[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 10.
ppi17_in_11[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 11.
ppi17_in_12[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 12.
ppi17_in_13[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 13.
ppi17_in_14[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 14.
ppi17_in_15[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 15.
ppi17_in_16[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 16.
ppi17_in_17[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 17.
ppi17_in_18[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 18.
ppi17_in_19[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 19.
ppi17_in_2[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 2.
ppi17_in_20[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 20.
ppi17_in_21[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 21.
ppi17_in_22[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 22.
ppi17_in_23[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 23.
ppi17_in_24[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 24.
ppi17_in_25[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 25.
ppi17_in_26[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 26.
ppi17_in_27[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 27.
ppi17_in_28[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 28.
ppi17_in_29[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 29.
ppi17_in_3[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 3.
ppi17_in_30[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 30.
ppi17_in_31[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 31.
ppi17_in_4[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 4.
ppi17_in_5[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 5.
ppi17_in_6[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 6.

Name	Protocol	Type	Description
ppi17_in_7[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 7.
ppi17_in_8[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 8.
ppi17_in_9[8]	Signal	Slave	Private peripheral interrupts interrupts (ID17) of cluster 9.
ppi18_in_0[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 0.
ppi18_in_1[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 1.
ppi18_in_10[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 10.
ppi18_in_11[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 11.
ppi18_in_12[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 12.
ppi18_in_13[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 13.
ppi18_in_14[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 14.
ppi18_in_15[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 15.
ppi18_in_16[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 16.
ppi18_in_17[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 17.
ppi18_in_18[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 18.
ppi18_in_19[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 19.
ppi18_in_2[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 2.
ppi18_in_20[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 20.
ppi18_in_21[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 21.
ppi18_in_22[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 22.
ppi18_in_23[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 23.
ppi18_in_24[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 24.
ppi18_in_25[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 25.
ppi18_in_26[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 26.
ppi18_in_27[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 27.
ppi18_in_28[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 28.
ppi18_in_29[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 29.
ppi18_in_3[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 3.
ppi18_in_30[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 30.
ppi18_in_31[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 31.
ppi18_in_4[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 4.
ppi18_in_5[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 5.
ppi18_in_6[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 6.
ppi18_in_7[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 7.
ppi18_in_8[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 8.
ppi18_in_9[8]	Signal	Slave	Private peripheral interrupts interrupts (ID18) of cluster 9.
ppi19_in_0[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 0.
ppi19_in_1[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 1.
ppi19_in_10[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 10.
ppi19_in_11[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 11.

Name	Protocol	Type	Description
ppi19_in_12[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 12.
ppi19_in_13[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 13.
ppi19_in_14[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 14.
ppi19_in_15[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 15.
ppi19_in_16[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 16.
ppi19_in_17[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 17.
ppi19_in_18[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 18.
ppi19_in_19[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 19.
ppi19_in_2[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 2.
ppi19_in_20[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 20.
ppi19_in_21[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 21.
ppi19_in_22[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 22.
ppi19_in_23[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 23.
ppi19_in_24[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 24.
ppi19_in_25[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 25.
ppi19_in_26[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 26.
ppi19_in_27[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 27.
ppi19_in_28[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 28.
ppi19_in_29[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 29.
ppi19_in_3[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 3.
ppi19_in_30[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 30.
ppi19_in_31[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 31.
ppi19_in_4[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 4.
ppi19_in_5[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 5.
ppi19_in_6[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 6.
ppi19_in_7[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 7.
ppi19_in_8[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 8.
ppi19_in_9[8]	Signal	Slave	Private peripheral interrupts (ID19) of cluster 9.
ppi20_in_0[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 0.
ppi20_in_1[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 1.
ppi20_in_10[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 10.
ppi20_in_11[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 11.
ppi20_in_12[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 12.
ppi20_in_13[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 13.
ppi20_in_14[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 14.
ppi20_in_15[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 15.
ppi20_in_16[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 16.
ppi20_in_17[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 17.
ppi20_in_18[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 18.

Name	Protocol	Type	Description
ppi20_in_19[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 19.
ppi20_in_2[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 2.
ppi20_in_20[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 20.
ppi20_in_21[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 21.
ppi20_in_22[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 22.
ppi20_in_23[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 23.
ppi20_in_24[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 24.
ppi20_in_25[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 25.
ppi20_in_26[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 26.
ppi20_in_27[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 27.
ppi20_in_28[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 28.
ppi20_in_29[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 29.
ppi20_in_3[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 3.
ppi20_in_30[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 30.
ppi20_in_31[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 31.
ppi20_in_4[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 4.
ppi20_in_5[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 5.
ppi20_in_6[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 6.
ppi20_in_7[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 7.
ppi20_in_8[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 8.
ppi20_in_9[8]	Signal	Slave	Private peripheral interrupts (ID20) of cluster 9.
ppi21_in_0[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 0.
ppi21_in_1[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 1.
ppi21_in_10[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 10.
ppi21_in_11[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 11.
ppi21_in_12[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 12.
ppi21_in_13[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 13.
ppi21_in_14[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 14.
ppi21_in_15[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 15.
ppi21_in_16[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 16.
ppi21_in_17[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 17.
ppi21_in_18[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 18.
ppi21_in_19[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 19.
ppi21_in_2[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 2.
ppi21_in_20[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 20.
ppi21_in_21[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 21.
ppi21_in_22[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 22.
ppi21_in_23[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 23.
ppi21_in_24[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 24.

Name	Protocol	Type	Description
ppi21_in_25[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 25.
ppi21_in_26[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 26.
ppi21_in_27[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 27.
ppi21_in_28[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 28.
ppi21_in_29[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 29.
ppi21_in_3[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 3.
ppi21_in_30[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 30.
ppi21_in_31[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 31.
ppi21_in_4[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 4.
ppi21_in_5[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 5.
ppi21_in_6[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 6.
ppi21_in_7[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 7.
ppi21_in_8[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 8.
ppi21_in_9[8]	Signal	Slave	Private peripheral interrupts (ID21) of cluster 9.
ppi22_in_0[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 0.
ppi22_in_1[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 1.
ppi22_in_10[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 10.
ppi22_in_11[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 11.
ppi22_in_12[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 12.
ppi22_in_13[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 13.
ppi22_in_14[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 14.
ppi22_in_15[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 15.
ppi22_in_16[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 16.
ppi22_in_17[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 17.
ppi22_in_18[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 18.
ppi22_in_19[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 19.
ppi22_in_2[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 2.
ppi22_in_20[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 20.
ppi22_in_21[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 21.

Name	Protocol	Type	Description
ppi22_in_22[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 22.
ppi22_in_23[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 23.
ppi22_in_24[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 24.
ppi22_in_25[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 25.
ppi22_in_26[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 26.
ppi22_in_27[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 27.
ppi22_in_28[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 28.
ppi22_in_29[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 29.
ppi22_in_3[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 3.
ppi22_in_30[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 30.
ppi22_in_31[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 31.
ppi22_in_4[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 4.
ppi22_in_5[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 5.
ppi22_in_6[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 6.
ppi22_in_7[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 7.
ppi22_in_8[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 8.
ppi22_in_9[8]	Signal	Slave	Private peripheral interrupts (ID22, typically the Debug Communications Channel (DCC) interrupt) of cluster 9.
ppi23_in_0[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 0.
ppi23_in_1[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 1.
ppi23_in_10[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 10.
ppi23_in_11[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 11.
ppi23_in_12[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 12.
ppi23_in_13[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 13.

Name	Protocol	Type	Description
ppi23_in_14[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 14.
ppi23_in_15[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 15.
ppi23_in_16[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 16.
ppi23_in_17[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 17.
ppi23_in_18[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 18.
ppi23_in_19[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 19.
ppi23_in_2[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 2.
ppi23_in_20[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 20.
ppi23_in_21[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 21.
ppi23_in_22[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 22.
ppi23_in_23[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 23.
ppi23_in_24[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 24.
ppi23_in_25[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 25.
ppi23_in_26[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 26.
ppi23_in_27[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 27.
ppi23_in_28[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 28.
ppi23_in_29[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 29.
ppi23_in_3[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 3.
ppi23_in_30[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 30.
ppi23_in_31[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 31.
ppi23_in_4[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 4.
ppi23_in_5[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 5.
ppi23_in_6[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 6.

Name	Protocol	Type	Description
ppi23_in_7[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 7.
ppi23_in_8[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 8.
ppi23_in_9[8]	Signal	Slave	Private peripheral interrupts (ID23, typically the Performance Counter (PMU) overflow interrupt) of cluster 9.
ppi24_in_0[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 0.
ppi24_in_1[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 1.
ppi24_in_10[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 10.
ppi24_in_11[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 11.
ppi24_in_12[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 12.
ppi24_in_13[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 13.
ppi24_in_14[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 14.
ppi24_in_15[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 15.
ppi24_in_16[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 16.
ppi24_in_17[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 17.
ppi24_in_18[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 18.
ppi24_in_19[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 19.
ppi24_in_2[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 2.
ppi24_in_20[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 20.
ppi24_in_21[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 21.
ppi24_in_22[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 22.
ppi24_in_23[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 23.
ppi24_in_24[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 24.
ppi24_in_25[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 25.
ppi24_in_26[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 26.

Name	Protocol	Type	Description
ppi24_in_27[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 27.
ppi24_in_28[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 28.
ppi24_in_29[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 29.
ppi24_in_3[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 3.
ppi24_in_30[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 30.
ppi24_in_31[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 31.
ppi24_in_4[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 4.
ppi24_in_5[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 5.
ppi24_in_6[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 6.
ppi24_in_7[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 7.
ppi24_in_8[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 8.
ppi24_in_9[8]	Signal	Slave	Private peripheral interrupts (ID24, typically the Cross Trigger Interface (CTI) interrupt) of cluster 9.
ppi25_in_0[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 0.
ppi25_in_1[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 1.
ppi25_in_10[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 10.
ppi25_in_11[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 11.
ppi25_in_12[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 12.
ppi25_in_13[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 13.
ppi25_in_14[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 14.
ppi25_in_15[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 15.
ppi25_in_16[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 16.
ppi25_in_17[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 17.
ppi25_in_18[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 18.

Name	Protocol	Type	Description
ppi25_in_19[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 19.
ppi25_in_2[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 2.
ppi25_in_20[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 20.
ppi25_in_21[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 21.
ppi25_in_22[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 22.
ppi25_in_23[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 23.
ppi25_in_24[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 24.
ppi25_in_25[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 25.
ppi25_in_26[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 26.
ppi25_in_27[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 27.
ppi25_in_28[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 28.
ppi25_in_29[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 29.
ppi25_in_3[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 3.
ppi25_in_30[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 30.
ppi25_in_31[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 31.
ppi25_in_4[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 4.
ppi25_in_5[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 5.
ppi25_in_6[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 6.
ppi25_in_7[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 7.
ppi25_in_8[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 8.
ppi25_in_9[8]	Signal	Slave	Private peripheral interrupts (ID25, typically the virtual CPU interface maintenance interrupt) of cluster 9.
ppi26_in_0[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 0.
ppi26_in_1[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 1.
ppi26_in_10[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 10.
ppi26_in_11[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 11.

Name	Protocol	Type	Description
ppi26_in_12[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 12.
ppi26_in_13[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 13.
ppi26_in_14[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 14.
ppi26_in_15[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 15.
ppi26_in_16[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 16.
ppi26_in_17[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 17.
ppi26_in_18[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 18.
ppi26_in_19[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 19.
ppi26_in_2[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 2.
ppi26_in_20[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 20.
ppi26_in_21[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 21.
ppi26_in_22[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 22.
ppi26_in_23[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 23.
ppi26_in_24[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 24.
ppi26_in_25[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 25.
ppi26_in_26[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 26.
ppi26_in_27[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 27.
ppi26_in_28[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 28.
ppi26_in_29[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 29.
ppi26_in_3[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 3.
ppi26_in_30[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 30.
ppi26_in_31[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 31.
ppi26_in_4[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 4.
ppi26_in_5[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 5.
ppi26_in_6[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 6.
ppi26_in_7[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 7.
ppi26_in_8[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 8.
ppi26_in_9[8]	Signal	Slave	Private peripheral interrupts (ID26, typically the hypervisor timer) of cluster 9.
ppi27_in_0[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 0.
ppi27_in_1[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 1.
ppi27_in_10[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 10.
ppi27_in_11[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 11.
ppi27_in_12[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 12.
ppi27_in_13[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 13.
ppi27_in_14[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 14.
ppi27_in_15[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 15.
ppi27_in_16[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 16.
ppi27_in_17[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 17.
ppi27_in_18[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 18.

Name	Protocol	Type	Description
ppi27_in_19[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 19.
ppi27_in_2[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 2.
ppi27_in_20[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 20.
ppi27_in_21[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 21.
ppi27_in_22[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 22.
ppi27_in_23[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 23.
ppi27_in_24[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 24.
ppi27_in_25[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 25.
ppi27_in_26[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 26.
ppi27_in_27[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 27.
ppi27_in_28[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 28.
ppi27_in_29[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 29.
ppi27_in_3[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 3.
ppi27_in_30[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 30.
ppi27_in_31[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 31.
ppi27_in_4[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 4.
ppi27_in_5[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 5.
ppi27_in_6[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 6.
ppi27_in_7[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 7.
ppi27_in_8[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 8.
ppi27_in_9[8]	Signal	Slave	Private peripheral interrupts (ID27, typically the virtual timer) of cluster 9.
ppi28_in_0[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 0.
ppi28_in_1[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 1.
ppi28_in_10[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 10.
ppi28_in_11[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 11.
ppi28_in_12[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 12.
ppi28_in_13[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 13.
ppi28_in_14[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 14.
ppi28_in_15[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 15.
ppi28_in_16[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 16.
ppi28_in_17[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 17.
ppi28_in_18[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 18.
ppi28_in_19[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 19.
ppi28_in_2[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 2.
ppi28_in_20[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 20.
ppi28_in_21[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 21.
ppi28_in_22[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 22.
ppi28_in_23[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 23.
ppi28_in_24[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 24.

Name	Protocol	Type	Description
ppi28_in_25[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 25.
ppi28_in_26[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 26.
ppi28_in_27[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 27.
ppi28_in_28[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 28.
ppi28_in_29[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 29.
ppi28_in_3[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 3.
ppi28_in_30[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 30.
ppi28_in_31[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 31.
ppi28_in_4[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 4.
ppi28_in_5[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 5.
ppi28_in_6[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 6.
ppi28_in_7[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 7.
ppi28_in_8[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 8.
ppi28_in_9[8]	Signal	Slave	Private peripheral interrupts (ID28) of cluster 9.
ppi29_in_0[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 0.
ppi29_in_1[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 1.
ppi29_in_10[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 10.
ppi29_in_11[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 11.
ppi29_in_12[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 12.
ppi29_in_13[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 13.
ppi29_in_14[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 14.
ppi29_in_15[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 15.
ppi29_in_16[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 16.
ppi29_in_17[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 17.
ppi29_in_18[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 18.
ppi29_in_19[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 19.
ppi29_in_2[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 2.
ppi29_in_20[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 20.
ppi29_in_21[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 21.
ppi29_in_22[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 22.
ppi29_in_23[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 23.
ppi29_in_24[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 24.
ppi29_in_25[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 25.
ppi29_in_26[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 26.
ppi29_in_27[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 27.
ppi29_in_28[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 28.
ppi29_in_29[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 29.
ppi29_in_3[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 3.
ppi29_in_30[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 30.

Name	Protocol	Type	Description
ppi29_in_31[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 31.
ppi29_in_4[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 4.
ppi29_in_5[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 5.
ppi29_in_6[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 6.
ppi29_in_7[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 7.
ppi29_in_8[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 8.
ppi29_in_9[8]	Signal	Slave	Private peripheral interrupts (ID29, typically the Secure physical timer) of cluster 9.
ppi30_in_0[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 0.
ppi30_in_1[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 1.
ppi30_in_10[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 10.
ppi30_in_11[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 11.
ppi30_in_12[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 12.
ppi30_in_13[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 13.
ppi30_in_14[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 14.
ppi30_in_15[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 15.
ppi30_in_16[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 16.
ppi30_in_17[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 17.
ppi30_in_18[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 18.
ppi30_in_19[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 19.
ppi30_in_2[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 2.
ppi30_in_20[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 20.
ppi30_in_21[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 21.
ppi30_in_22[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 22.
ppi30_in_23[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 23.
ppi30_in_24[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 24.
ppi30_in_25[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 25.

Name	Protocol	Type	Description
ppi30_in_26[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 26.
ppi30_in_27[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 27.
ppi30_in_28[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 28.
ppi30_in_29[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 29.
ppi30_in_3[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 3.
ppi30_in_30[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 30.
ppi30_in_31[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 31.
ppi30_in_4[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 4.
ppi30_in_5[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 5.
ppi30_in_6[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 6.
ppi30_in_7[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 7.
ppi30_in_8[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 8.
ppi30_in_9[8]	Signal	Slave	Private peripheral interrupts (ID30, typically the Non-secure physical timer) of cluster 9.
ppi31_in_0[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 0.
ppi31_in_1[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 1.
ppi31_in_10[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 10.
ppi31_in_11[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 11.
ppi31_in_12[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 12.
ppi31_in_13[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 13.
ppi31_in_14[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 14.
ppi31_in_15[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 15.
ppi31_in_16[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 16.
ppi31_in_17[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 17.
ppi31_in_18[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 18.
ppi31_in_19[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 19.
ppi31_in_2[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 2.
ppi31_in_20[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 20.
ppi31_in_21[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 21.
ppi31_in_22[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 22.
ppi31_in_23[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 23.

Name	Protocol	Type	Description
ppi31_in_24[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 24.
ppi31_in_25[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 25.
ppi31_in_26[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 26.
ppi31_in_27[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 27.
ppi31_in_28[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 28.
ppi31_in_29[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 29.
ppi31_in_3[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 3.
ppi31_in_30[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 30.
ppi31_in_31[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 31.
ppi31_in_4[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 4.
ppi31_in_5[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 5.
ppi31_in_6[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 6.
ppi31_in_7[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 7.
ppi31_in_8[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 8.
ppi31_in_9[8]	Signal	Slave	Private peripheral interrupts (ID31) of cluster 9.
pvbus_filtermiss_m	PVBus	Master	passthrough for transactions not targetting one of the pages associated with the IRI.
pvbus_m	PVBus	Master	Memory bus out: transactions generated by the IRI.
pvbus_s	PVBus	Slave	Memory bus in: memory-mapped register accesses are accepted on this interface.
redistributor_m[256]	GICv3Comms	Master	Input from and output to CPU interface.
reset	Signal	Slave	Reset.
spi_in[988]	Signal	Slave	Shared peripheral interrupts.
wake_request_0[8]	Signal	Master	Power management outputs of cluster 0.
wake_request_1[8]	Signal	Master	Power management outputs of cluster 1.
wake_request_10[8]	Signal	Master	Power management outputs of cluster 10.
wake_request_11[8]	Signal	Master	Power management outputs of cluster 11.
wake_request_12[8]	Signal	Master	Power management outputs of cluster 12.
wake_request_13[8]	Signal	Master	Power management outputs of cluster 13.
wake_request_14[8]	Signal	Master	Power management outputs of cluster 14.
wake_request_15[8]	Signal	Master	Power management outputs of cluster 15.
wake_request_16[8]	Signal	Master	Power management outputs of cluster 16.
wake_request_17[8]	Signal	Master	Power management outputs of cluster 17.
wake_request_18[8]	Signal	Master	Power management outputs of cluster 18.
wake_request_19[8]	Signal	Master	Power management outputs of cluster 19.
wake_request_2[8]	Signal	Master	Power management outputs of cluster 2.
wake_request_20[8]	Signal	Master	Power management outputs of cluster 20.
wake_request_21[8]	Signal	Master	Power management outputs of cluster 21.
wake_request_22[8]	Signal	Master	Power management outputs of cluster 22.
wake_request_23[8]	Signal	Master	Power management outputs of cluster 23.
wake_request_24[8]	Signal	Master	Power management outputs of cluster 24.

Name	Protocol	Type	Description
wake_request_25[8]	Signal	Master	Power management outputs of cluster 25.
wake_request_26[8]	Signal	Master	Power management outputs of cluster 26.
wake_request_27[8]	Signal	Master	Power management outputs of cluster 27.
wake_request_28[8]	Signal	Master	Power management outputs of cluster 28.
wake_request_29[8]	Signal	Master	Power management outputs of cluster 29.
wake_request_3[8]	Signal	Master	Power management outputs of cluster 3.
wake_request_30[8]	Signal	Master	Power management outputs of cluster 30.
wake_request_31[8]	Signal	Master	Power management outputs of cluster 31.
wake_request_4[8]	Signal	Master	Power management outputs of cluster 4.
wake_request_5[8]	Signal	Master	Power management outputs of cluster 5.
wake_request_6[8]	Signal	Master	Power management outputs of cluster 6.
wake_request_7[8]	Signal	Master	Power management outputs of cluster 7.
wake_request_8[8]	Signal	Master	Power management outputs of cluster 8.
wake_request_9[8]	Signal	Master	Power management outputs of cluster 9.

## Parameters for GIC500\_Filter

### **GICD\_ITARGETSR-RAZWI**

#### Type

bool

#### Default value

0x0

#### Description

If true, the GICD\_ITARGETS registers are RAZ/WI.

### **ITS-count**

#### Type

int

#### Default value

0x1

#### Description

Number of Interrupt Translation Services to be instantiated (0=none).

### **ITS-device-bits**

#### Type

int

#### Default value

0x10

**Description**

Number of bits supported for ITS device IDs.

**ITS-threaded-command-queue****Type**

bool

**Default value**

0x1

**Description**

Enable execution of ITS commands in a separate thread which is sometimes required for cosimulation.

**SPI-count****Type**

int

**Default value**

0xe0

**Description**

Number of SPIs that are implemented.

**clear-ISPENDR-bit-for-level-sensitive-interrupt-when-acknowledged****Type**

bool

**Default value**

0x0

**Description**

If true, acknowledgement of a level sensitive interrupt clears the corresponding bit in the ISPENDR register.

**cpus\_per\_cluster\_0****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 0.

**cpus\_per\_cluster\_1****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 1.

**cpus\_per\_cluster\_10****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 10.

**cpus\_per\_cluster\_11****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 11.

**cpus\_per\_cluster\_12****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 12.

**cpus\_per\_cluster\_13****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 13.

**cpus\_per\_cluster\_14****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 14.

**cpus\_per\_cluster\_15****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 15.

**cpus\_per\_cluster\_16****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 16.

**cpus\_per\_cluster\_17****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 17.

**cpus\_per\_cluster\_18****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 18.

**cpus\_per\_cluster\_19****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 19.

**cpus\_per\_cluster\_2****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 2.

**cpus\_per\_cluster\_20****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 20.

**cpus\_per\_cluster\_21****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 21.

**cpus\_per\_cluster\_22****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 22.

**cpus\_per\_cluster\_23****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 23.

**cpus\_per\_cluster\_24****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 24.

**cpus\_per\_cluster\_25****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 25.

**cpus\_per\_cluster\_26****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 26.

**cpus\_per\_cluster\_27****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 27.

**cpus\_per\_cluster\_28****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 28.

**cpus\_per\_cluster\_29****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 29.

**cpus\_per\_cluster\_3****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 3.

**cpus\_per\_cluster\_30****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 30.

**cpus\_per\_cluster\_31****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 31.

**cpus\_per\_cluster\_4****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 4.

**cpus\_per\_cluster\_5****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 5.

**cpus\_per\_cluster\_6****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 6.

**cpus\_per\_cluster\_7****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 7.

**cpus\_per\_cluster\_8****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 8.

**cpus\_per\_cluster\_9****Type**

int

**Default value**

0x1

**Description**

Number of cores within cluster 9.

**delay-ITS-accesses****Type**

bool

**Default value**

0x1

**Description**

Delay accesses from the ITS until GICR\_SYNCNR is read.

**delay-redistributor-accesses****Type**

bool

**Default value**

0x1

**Description**

Delay memory accesses from the redistributor until GICR\_SYNCNR is read.

**enable\_protocol\_checking****Type**

bool

**Default value**

0x0

**Description**

Enable/disable protocol checking at cpu interface.

**enabled****Type**

bool

**Default value**

0x1

**Description**

Enable GICv3 functionality; when false the component is inactive.

**has-two-security-states****Type**

bool

**Default value**

0x1

**Description**

If true, has two security states.

**num\_clusters****Type**

int

**Default value**

0x1

**Description**

Number of implemented affinity level1 clusters.

**print-memory-map****Type**

bool

**Default value**

0x0

**Description**

Print memory map to stdout.

**redistributor-threaded-sync****Type**

bool

**Default value**

0x1

**Description**

Enable execution of redistributor delayed transactions in a separate thread which is sometimes required for cosimulation.

**reg-base****Type**

int

**Default value**

0x10000000

**Description**

GIC500 base address.

**using-generated-memorymap**

**Type**  
bool

**Default value**  
0x1

**Description**  
Use the generated memorymap for the GIC500 and warn if superfluous parameters are passed.

**wakeup-on-reset**

**Type**  
bool

**Default value**  
0x0

**Description**  
Go against specification and start redistributors in woken-up state at reset. This allows software that was written for previous versions of the GICv3 specification to work correctly. This should not be used for production code or when the distributor is used separately from the core fast model.

3.10.34 GIC600

GIC-600 IRI implementation: Single chip validation/filter component variant limited to 265 PE. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-974: IP revisions support

Revision	Quality level
r1p6	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

About GIC600

GIC600 and GIC600\_Filter are minimal models of an Arm GIC-600 Generic Interrupt Controller, suitable for single-chip or multichip systems, where multichip operation has been tested, with the following exceptions:

- LPI/LPI command is implemented but untested.
- Power operation is unimplemented.

They provide a simple configuration interface that allows designers to introduce GIC600-like functionality to their systems, while only implementing the architectural behavior, as defined by the GICv3 architecture.

All implementation-specific registers and functionality are implemented.

As with the other GIC components, there are two variants of the model with slightly different memory interfaces. Both GIC600 and GIC600\_Filter have a `pvbus_s` port for register accesses and a `pvbus_m` port for the LPI-related traffic from redistributors and the ITS. The `pvbus_m` port is also used to compose multichip operation.

In addition, the GIC600\_Filter variant has a `pvbus_filtermiss_m` port, to which any transactions on the `pvbus_s` port and not directed to a 4K page used by the GIC are forwarded unmodified. Such transactions are terminated in the component when using the GIC600 variant.

It is recommended to use the GIC600 variant in most cases.

Also, the RAS register is implemented and various RAS errors are reported through status registers. Not all the RAS errors are available because Fast Models does not model errors that can cause ECC errors. Fast Models supports error record 0 and error record 13+.

Note

- Set the `FASTSIM_GIC_MEMORY_MAP` environment variable to 1 to print to stderr the memory map of any GICv3 or later models that are included in the platform being run.
- For writes to `GITS_TRANSLATE64R`, the MSIRewriter component can be used to create the correct data transactions based on the device ID. For more details about `GITS_TRANSLATE64R`, see [MSIRewriter](#).

## MasterID, ExtendedID, and UserFlags

This table shows how this model encodes information in the `MasterID`, `ExtendedID`, and `UserFlags` bus attributes:

**Table 3-975: MasterID, ExtendedID, and UserFlags**

PVBus attribute	Bits used	Property encoded	Notes
MasterID	31:0	Master ID that invoked the register access	–
ExtendedID	–	–	Not used
UserFlags	–	–	Not used

Note

The `pvbus_m` port does not use `MasterID`, `ExtendedID`, or `UserFlags`.

## Iris and MTI instances for GIC600

This model has the following Iris instances:

**Table 3-976: GIC600 Iris instances**

InstanceName	ComponentName
GIC600	GIC_IRI
GIC600.GICV3_ProtocolChecker	GICv3ProtocolChecker
GIC600.ITS0	GICv3InterruptTranslationService
GIC600.rd_0	GICv3RedistributorInternal
GIC600.rd_0_0	GICv3RedistributorInternal
GIC600.rd_0_0_0	GICv3RedistributorInternal
GIC600.rd_0_0_0_0	GICv3Redistributor
GIC600.rd_t1	GICv3Distributor

This model has the following MTI trace components:

**Table 3-977: GIC600 MTI instances**

InstanceName	ComponentName
GIC600.GICV3_ProtocolChecker	<a href="#">GICv3ProtocolChecker</a>
GIC600.ITS0	<a href="#">GICv3InterruptTranslationService</a>
GIC600.rd_0	<a href="#">GICv3RedistributorInternal</a>
GIC600.rd_0_0	<a href="#">GICv3RedistributorInternal</a>
GIC600.rd_0_0_0	<a href="#">GICv3RedistributorInternal</a>
GIC600.rd_0_0_0_0	<a href="#">GICv3Redistributor</a>
GIC600.rd_t1	<a href="#">GICv3Distributor</a>

## Ports for GIC600

**Table 3-978: Ports**

Name	Protocol	Type	Description
chip_id	<a href="#">Value</a>	Slave	chip_id port which is valid from GIC600 r1p2. Writing to this port for prior GIC600 version will be ignored.
cpu_active_s[256]	<a href="#">Signal</a>	Slave	CPUActive pins.
po_reset	<a href="#">Signal</a>	Slave	Resets.
ppi_in_0[16]	<a href="#">Signal</a>	Slave	Private peripheral interrupts (ID16-ID31) for cpu 0.
ppi_in_1[16]	<a href="#">Signal</a>	Slave	Private peripheral interrupts (ID16-ID31) for cpu 1.
ppi_in_10[16]	<a href="#">Signal</a>	Slave	Private peripheral interrupts (ID16-ID31) for cpu 10.
ppi_in_100[16]	<a href="#">Signal</a>	Slave	Private peripheral interrupts (ID16-ID31) for cpu 100.
ppi_in_101[16]	<a href="#">Signal</a>	Slave	Private peripheral interrupts (ID16-ID31) for cpu 101.
ppi_in_102[16]	<a href="#">Signal</a>	Slave	Private peripheral interrupts (ID16-ID31) for cpu 102.
ppi_in_103[16]	<a href="#">Signal</a>	Slave	Private peripheral interrupts (ID16-ID31) for cpu 103.
ppi_in_104[16]	<a href="#">Signal</a>	Slave	Private peripheral interrupts (ID16-ID31) for cpu 104.
ppi_in_105[16]	<a href="#">Signal</a>	Slave	Private peripheral interrupts (ID16-ID31) for cpu 105.
ppi_in_106[16]	<a href="#">Signal</a>	Slave	Private peripheral interrupts (ID16-ID31) for cpu 106.
ppi_in_107[16]	<a href="#">Signal</a>	Slave	Private peripheral interrupts (ID16-ID31) for cpu 107.

Name	Protocol	Type	Description
ppi_in_108[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 108.
ppi_in_109[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 109.
ppi_in_11[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 11.
ppi_in_110[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 110.
ppi_in_111[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 111.
ppi_in_112[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 112.
ppi_in_113[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 113.
ppi_in_114[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 114.
ppi_in_115[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 115.
ppi_in_116[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 116.
ppi_in_117[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 117.
ppi_in_118[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 118.
ppi_in_119[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 119.
ppi_in_12[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 12.
ppi_in_120[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 120.
ppi_in_121[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 121.
ppi_in_122[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 122.
ppi_in_123[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 123.
ppi_in_124[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 124.
ppi_in_125[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 125.
ppi_in_126[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 126.
ppi_in_127[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 127.
ppi_in_128[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 128.
ppi_in_129[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 129.
ppi_in_13[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 13.
ppi_in_130[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 130.
ppi_in_131[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 131.
ppi_in_132[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 132.
ppi_in_133[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 133.
ppi_in_134[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 134.
ppi_in_135[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 135.
ppi_in_136[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 136.
ppi_in_137[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 137.
ppi_in_138[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 138.
ppi_in_139[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 139.
ppi_in_14[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 14.
ppi_in_140[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 140.
ppi_in_141[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 141.
ppi_in_142[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 142.

Name	Protocol	Type	Description
ppi_in_143[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 143.
ppi_in_144[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 144.
ppi_in_145[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 145.
ppi_in_146[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 146.
ppi_in_147[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 147.
ppi_in_148[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 148.
ppi_in_149[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 149.
ppi_in_15[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 15.
ppi_in_150[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 150.
ppi_in_151[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 151.
ppi_in_152[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 152.
ppi_in_153[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 153.
ppi_in_154[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 154.
ppi_in_155[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 155.
ppi_in_156[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 156.
ppi_in_157[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 157.
ppi_in_158[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 158.
ppi_in_159[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 159.
ppi_in_16[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 16.
ppi_in_160[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 160.
ppi_in_161[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 161.
ppi_in_162[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 162.
ppi_in_163[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 163.
ppi_in_164[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 164.
ppi_in_165[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 165.
ppi_in_166[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 166.
ppi_in_167[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 167.
ppi_in_168[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 168.
ppi_in_169[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 169.
ppi_in_17[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 17.
ppi_in_170[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 170.
ppi_in_171[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 171.
ppi_in_172[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 172.
ppi_in_173[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 173.
ppi_in_174[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 174.
ppi_in_175[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 175.
ppi_in_176[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 176.
ppi_in_177[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 177.
ppi_in_178[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 178.

Name	Protocol	Type	Description
ppi_in_179[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 179.
ppi_in_18[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 18.
ppi_in_180[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 180.
ppi_in_181[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 181.
ppi_in_182[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 182.
ppi_in_183[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 183.
ppi_in_184[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 184.
ppi_in_185[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 185.
ppi_in_186[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 186.
ppi_in_187[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 187.
ppi_in_188[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 188.
ppi_in_189[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 189.
ppi_in_19[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 19.
ppi_in_190[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 190.
ppi_in_191[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 191.
ppi_in_192[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 192.
ppi_in_193[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 193.
ppi_in_194[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 194.
ppi_in_195[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 195.
ppi_in_196[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 196.
ppi_in_197[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 197.
ppi_in_198[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 198.
ppi_in_199[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 199.
ppi_in_2[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 2.
ppi_in_20[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 20.
ppi_in_200[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 200.
ppi_in_201[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 201.
ppi_in_202[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 202.
ppi_in_203[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 203.
ppi_in_204[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 204.
ppi_in_205[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 205.
ppi_in_206[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 206.
ppi_in_207[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 207.
ppi_in_208[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 208.
ppi_in_209[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 209.
ppi_in_21[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 21.
ppi_in_210[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 210.
ppi_in_211[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 211.
ppi_in_212[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 212.

Name	Protocol	Type	Description
ppi_in_213[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 213.
ppi_in_214[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 214.
ppi_in_215[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 215.
ppi_in_216[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 216.
ppi_in_217[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 217.
ppi_in_218[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 218.
ppi_in_219[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 219.
ppi_in_22[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 22.
ppi_in_220[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 220.
ppi_in_221[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 221.
ppi_in_222[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 222.
ppi_in_223[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 223.
ppi_in_224[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 224.
ppi_in_225[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 225.
ppi_in_226[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 226.
ppi_in_227[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 227.
ppi_in_228[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 228.
ppi_in_229[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 229.
ppi_in_23[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 23.
ppi_in_230[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 230.
ppi_in_231[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 231.
ppi_in_232[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 232.
ppi_in_233[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 233.
ppi_in_234[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 234.
ppi_in_235[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 235.
ppi_in_236[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 236.
ppi_in_237[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 237.
ppi_in_238[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 238.
ppi_in_239[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 239.
ppi_in_24[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 24.
ppi_in_240[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 240.
ppi_in_241[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 241.
ppi_in_242[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 242.
ppi_in_243[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 243.
ppi_in_244[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 244.
ppi_in_245[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 245.
ppi_in_246[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 246.
ppi_in_247[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 247.
ppi_in_248[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 248.

Name	Protocol	Type	Description
ppi_in_249[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 249.
ppi_in_25[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 25.
ppi_in_250[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 250.
ppi_in_251[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 251.
ppi_in_252[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 252.
ppi_in_253[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 253.
ppi_in_254[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 254.
ppi_in_255[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 255.
ppi_in_26[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 26.
ppi_in_27[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 27.
ppi_in_28[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 28.
ppi_in_29[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 29.
ppi_in_3[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 3.
ppi_in_30[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 30.
ppi_in_31[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 31.
ppi_in_32[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 32.
ppi_in_33[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 33.
ppi_in_34[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 34.
ppi_in_35[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 35.
ppi_in_36[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 36.
ppi_in_37[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 37.
ppi_in_38[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 38.
ppi_in_39[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 39.
ppi_in_4[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 4.
ppi_in_40[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 40.
ppi_in_41[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 41.
ppi_in_42[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 42.
ppi_in_43[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 43.
ppi_in_44[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 44.
ppi_in_45[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 45.
ppi_in_46[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 46.
ppi_in_47[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 47.
ppi_in_48[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 48.
ppi_in_49[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 49.
ppi_in_5[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 5.
ppi_in_50[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 50.
ppi_in_51[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 51.
ppi_in_52[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 52.
ppi_in_53[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 53.

Name	Protocol	Type	Description
ppi_in_54[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 54.
ppi_in_55[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 55.
ppi_in_56[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 56.
ppi_in_57[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 57.
ppi_in_58[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 58.
ppi_in_59[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 59.
ppi_in_6[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 6.
ppi_in_60[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 60.
ppi_in_61[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 61.
ppi_in_62[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 62.
ppi_in_63[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 63.
ppi_in_64[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 64.
ppi_in_65[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 65.
ppi_in_66[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 66.
ppi_in_67[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 67.
ppi_in_68[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 68.
ppi_in_69[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 69.
ppi_in_7[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 7.
ppi_in_70[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 70.
ppi_in_71[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 71.
ppi_in_72[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 72.
ppi_in_73[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 73.
ppi_in_74[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 74.
ppi_in_75[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 75.
ppi_in_76[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 76.
ppi_in_77[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 77.
ppi_in_78[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 78.
ppi_in_79[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 79.
ppi_in_8[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 8.
ppi_in_80[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 80.
ppi_in_81[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 81.
ppi_in_82[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 82.
ppi_in_83[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 83.
ppi_in_84[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 84.
ppi_in_85[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 85.
ppi_in_86[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 86.
ppi_in_87[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 87.
ppi_in_88[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 88.
ppi_in_89[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 89.

Name	Protocol	Type	Description
ppi_in_9[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 9.
ppi_in_90[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 90.
ppi_in_91[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 91.
ppi_in_92[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 92.
ppi_in_93[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 93.
ppi_in_94[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 94.
ppi_in_95[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 95.
ppi_in_96[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 96.
ppi_in_97[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 97.
ppi_in_98[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 98.
ppi_in_99[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 99.
pvbus_m	PVBus	Master	Memory bus out: transactions generated by the IRI.
pvbus_s	PVBus	Slave	Memory bus in: memory-mapped register accesses are accepted on this interface.
redistributor_m[256]	GICv3Comms	Master	Input from and output to CPU interface.
reset	Signal	Slave	Resets.
spi_in[960]	Signal	Slave	Shared peripheral interrupts.
wake_request[256]	Signal	Master	Power management outputs.

## Parameters for GIC600

### CPU-affinities

#### Type

string

#### Default value

0.0.0.0

#### Description

A comma separated list of dotted quads containing the affinities of all PEs connected to this IRI. If CPU-affinities-file is specified, this parameter is ignored.

### CPU-affinities-file

#### Type

string

#### Default value

""

#### Description

A file containing comma separated list of dotted quads containing the affinities of all PEs connected to this IRI. If this parameter is specified, CPU-affinities parameter will be ignored even when it is given.

**DS-behaviour****Type**

int

**Default value**

2

GICD\_CTLR.DS field behaviour

0 :RAZ/WI

1 :RAO/WI

2 :RW

**IIDR****Type**

int

**Default value**

0x201743b

**Description**

GICD\_IIDR and GICR\_IIDR value. Defaults to the latest revision.

**ITS-ID-bits****Type**

int

**Default value**

0x10

**Description**

Number of interrupt bits supported by ITS.

**ITS-collection-ID-bits****Type**

int

**Default value**

0x8

**Description**

Number of collection bits supported by ITS (optional parameter, 0 =&gt; 16bits support and GITS\_TYPER.CIL=0).

**ITS-count****Type**

int

**Default value**

0x1

**Description**

Number of Interrupt Translation Services to be instantiated (0=none).

**ITS-device-bits****Type**

int

**Default value**

0x10

**Description**

Number of bits supported for ITS device IDs.

**PPI-count****Type**

int

**Default value**

16

Selects the number of PPI available for each PE:

**8**

id22-27,29,30

**12**

id 20-31

**16**

id 16-31

**RAS-CFI-support****Type**

bool

**Default value**

0x0

**Description**

If true, fault handling interrupt for corrected errors is supported. Not supported otherwise.

**RAS-FI-support****Type**

bool

**Default value**

0x0

**Description**

If true, fault handling interrupt is supported. Not supported otherwise.

**RAS-UE-support****Type**

bool

**Default value**

0x0

**Description**

If true, In-band uncorrected error reporting is supported. Not supported otherwise.

**RAS-UI-support****Type**

bool

**Default value**

0x0

**Description**

If true, error recovery interrupt for uncorrected errors is supported. Not supported otherwise.

**SPI-blocks****Type**

int

**Default value**

0x1e

**Description**

Number of SPI blocks supported by the IRI, each block contains 32 SPIs.

**affinity-width****Type**

string

**Default value**

"4.8.8.8"

**Description**

A dotted quad indicating the bitwidth of fields at each affinity level.

**chip-id****Type**

int

**Default value**

0x0

**Description**

Chip ID when multichip operation is enabled.

**chip-select-affinity-level****Type**

int

**Default value**

0x3

**Description**

Affinity level 2 or 3 can be used for chip select.

**clear-ISPENDR-bit-for-level-sensitive-interrupt-when-acknowledged****Type**

bool

**Default value**

0x0

**Description**

If true, acknowledgement of a level sensitive interrupt clears the corresponding bit in the ISPENDR register.

**direct-lpi-support****Type**

bool

**Default value**

0x0

**Description**

Enable support for LPI operations through GICR registers.

**enable-multichip-operation****Type**

bool

**Default value**

0x0

**Description**

Enables multi-chip operation between Distributors in distributed GIC IRI.

**enabled****Type**

bool

**Default value**

0x1

**Description**

Enable GICv3 functionality; when false the component is inactive.

**gicp-allow-ns-reset****Type**

bool

**Default value**

0x1

**Description**

If true, non-secure read/write access to GICP register is allowed at reset. Not allowed otherwise. This emulates gicp\_allow\_ns tie-off signal.

**gict-allow-ns-reset****Type**

bool

**Default value**

0x1

**Description**

If true, non-secure read/write access to GICT register is allowed at reset. Not allowed otherwise. This emulates gict\_allow\_ns tie-off signal.

**max-cores-supported-by-GCI****Type**

int

**Default value**

0x8

**Description**

GCI can support 1-64 cores. Maximum supported cores in GCI is configurable by device.

**max-pe-on-chip****Type**

int

**Default value**

0x4

**Description**

Maximum number of cores on any single chip. This will be used to identify the target chip and core when multichip operation is enabled.

**multichip-threaded-dgi****Type**

bool

**Default value**

0x1

**Description**

Enable sending multichip DGI messages in a separate thread. This parameter is valid only if enable-multichip-operation is set.

**print-memory-map****Type**

bool

**Default value**

0x0

**Description**

Print memory map to stdout.

**redistributor-group****Type**

string

**Default value**

-

Redistributor grouping information with affinity as JSON :

```
{
  "0": [
    "0.0.0.0",
    "0.0.0.1"
  ],
  "1": [
    "0.0.1.0",
    "0.0.1.1"
  ]
}
```

where RD with quad 0.0.0.0 and 0.0.0.1 belongs to RD group 0. All the RDs belong to one group when this parameter is not given.

### **redistributor-group-file**

#### **Type**

string

#### **Default value**

-

File path to redistributor grouping information with affinity as JSON.

The file uses the same format as `redistributor-group` parameter.

### **redistributor-power-managed-by-pwrr**

#### **Type**

bool

#### **Default value**

0x1

#### **Description**

GIC600 dedistributor power management is done by updating GICR\_PWRR register.

### **reg-base**

#### **Type**

int

#### **Default value**

0x2c010000

#### **Description**

GIC-600 base address.

### **reg-base-per-redistributor**

#### **Type**

string

#### **Default value**

{}

Base address for each redistributor in the form:

```
0.0.0.0=0x2c010000, 0.0.0.1=0x2c020000
```

All redistributors must be specified and this overrides the `reg-base` parameter (except that `reg-base` will still be used for the top-level redistributor). If `reg-base-per-redistributor-file` is specified, this parameter is ignored.

### 3.10.35 GIC600AE

GIC-600AE IRI implementation: Single chip validation/filter component variant limited to 265 PE. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-979: IP revisions support**

Revision	Quality level
r0p2	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### About GIC600AE

GIC600AE and GIC600AE\_Filter are minimal models of an Arm GIC-600AE Generic Interrupt Controller, suitable for single-chip or multichip systems, where multichip operation has been tested, with the following exceptions:

- LPI/LPI command is implemented but untested.
- Power operation is unimplemented.

They provide a simple configuration interface that allows designers to introduce GIC600AE-like functionality to their systems, while only implementing the architectural behavior, as defined by the GICv3 architecture.

All implementation-specific registers and functionality are implemented.

As with the other GIC components, there are two variants of the model with slightly different memory interfaces. Both GIC600AE and GIC600AE\_Filter have a `pvbuss_s` port for register accesses and a `pvbuss_m` port for the LPI-related traffic from redistributors and the ITS. The `pvbuss_m` port is also used to compose multichip operation.

In addition, the GIC600AE\_Filter variant has a `pvbuss_filtermiss_m` port, to which any transactions on the `pvbuss_s` port and not directed to a 4 KB page used by the GIC are forwarded unmodified. Such transactions are terminated in the component when using the GIC600AE variant.

It is recommended to use the GIC600AE variant in most cases.

Also, the RAS register is implemented and various RAS errors are reported through status registers. Not all the RAS errors are available because Fast Models does not model errors that can cause ECC errors. Fast Models supports error record 0 and error record 13+. FMU registers are also implemented and are accessible by software.

**Note**

- Set the `FASTSIM_GIC_MEMORY_MAP` environment variable to 1 to print to stderr the memory map of any GICv3 or later models that are included in the platform being run.

- For writes to GITS\_TRANSLATE64R, the MSIRewriter component can be used to create the correct data transactions based on the device ID. For more details about GITS\_TRANSLATE64R, see [MSIRewriter](#).

## MasterID, ExtendedID, and UserFlags

This table shows how this model encodes information in the `MasterID`, `ExtendedID`, and `UserFlags` bus attributes:

**Table 3-980: MasterID, ExtendedID, and UserFlags**

PVBus attribute	Bits used	Property encoded	Notes
MasterID	31:0	Master ID that invoked the register access	–
ExtendedID	–	–	Not used
UserFlags	–	–	Not used

**Note**

The `pvbus_m` port does not use `MasterID`, `ExtendedID`, or `UserFlags`.

## AE-specific features implemented

GIC600AE is a Functional Safety (FuSa) variant of GIC600. It has the following differences from GIC600:

- Both GIC600AE and GIC600 support RAS, but only GIC600AE supports the Fault Management Unit (FMU). This support is controlled by the `has-fmu` parameter which is true by default. The FMU resides in the Distributor and processes faults that are detected by the Safety Mechanisms from all blocks.
- In GIC600AE, the GIC reset pin is connected to FMU reset. Only reset changes the error record registers and `FMU_ERRGSR` to their reset values.
- In GIC600AE, the Safety Mechanism detects faults and forwards them to the FMU. The FMU forwards all errors to the Safety Island.
- The APB port has been added to GIC600AE for FuSa purposes. It does not exist on the GIC600.
- GIC600AE supports both Error Recovery Interrupt (ERI) and Fault Handling Interrupt (FHI).
- GIC600AE has the limitation that it only supports error injection through the `FMU_SMINJERR` register.

## Iris and MTI instances for GIC600AE

This model has the following Iris instances:

**Table 3-981: GIC600AE Iris instances**

InstanceName	ComponentName
GIC600AE	GIC_IRI

InstanceName	ComponentName
GIC600AE.GICV3_ProtocolChecker	GICv3ProtocolChecker
GIC600AE.ITS0	GICv3InterruptTranslationService
GIC600AE.rd_0	GICv3RedistributorInternal
GIC600AE.rd_0_0	GICv3RedistributorInternal
GIC600AE.rd_0_0_0	GICv3RedistributorInternal
GIC600AE.rd_0_0_0_0	GICv3Redistributor
GIC600AE.rd_tl	GICv3Distributor

This model has the following MTI trace components:

**Table 3-982: GIC600AE MTI instances**

InstanceName	ComponentName
GIC600AE.GICV3_ProtocolChecker	GICv3ProtocolChecker
GIC600AE.ITS0	GICv3InterruptTranslationService
GIC600AE.rd_0	GICv3RedistributorInternal
GIC600AE.rd_0_0	GICv3RedistributorInternal
GIC600AE.rd_0_0_0	GICv3RedistributorInternal
GIC600AE.rd_0_0_0_0	GICv3Redistributor
GIC600AE.rd_tl	GICv3Distributor

## Ports for GIC600AE

**Table 3-983: Ports**

Name	Protocol	Type	Description
apb_bus	PVBus	Slave	APB4 port to FMU, which will be connected from safety island for FuSa
chip_id	Value	Slave	chip_id port used for multichip operation
cpu_active_s[256]	Signal	Slave	CPUActive pins.
fm_u_error_int	Signal	Master	FuSa FMU error interrupt signal
fm_u_fault_int	Signal	Master	FuSa FMU fault interrupt signal
po_reset	Signal	Slave	Resets. This is used as a dbg_reset in TRM, and also be used for cold reset for PMU and FMU.
ppi_in_0[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 0.
ppi_in_1[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 1.
ppi_in_10[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 10.
ppi_in_100[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 100.
ppi_in_101[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 101.
ppi_in_102[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 102.
ppi_in_103[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 103.
ppi_in_104[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 104.
ppi_in_105[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 105.
ppi_in_106[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 106.

Name	Protocol	Type	Description
ppi_in_107[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 107.
ppi_in_108[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 108.
ppi_in_109[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 109.
ppi_in_11[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 11.
ppi_in_110[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 110.
ppi_in_111[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 111.
ppi_in_112[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 112.
ppi_in_113[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 113.
ppi_in_114[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 114.
ppi_in_115[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 115.
ppi_in_116[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 116.
ppi_in_117[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 117.
ppi_in_118[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 118.
ppi_in_119[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 119.
ppi_in_12[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 12.
ppi_in_120[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 120.
ppi_in_121[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 121.
ppi_in_122[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 122.
ppi_in_123[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 123.
ppi_in_124[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 124.
ppi_in_125[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 125.
ppi_in_126[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 126.
ppi_in_127[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 127.
ppi_in_128[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 128.
ppi_in_129[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 129.
ppi_in_13[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 13.
ppi_in_130[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 130.
ppi_in_131[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 131.
ppi_in_132[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 132.
ppi_in_133[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 133.
ppi_in_134[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 134.
ppi_in_135[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 135.
ppi_in_136[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 136.
ppi_in_137[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 137.
ppi_in_138[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 138.
ppi_in_139[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 139.
ppi_in_14[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 14.
ppi_in_140[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 140.
ppi_in_141[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 141.

Name	Protocol	Type	Description
ppi_in_142[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 142.
ppi_in_143[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 143.
ppi_in_144[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 144.
ppi_in_145[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 145.
ppi_in_146[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 146.
ppi_in_147[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 147.
ppi_in_148[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 148.
ppi_in_149[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 149.
ppi_in_15[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 15.
ppi_in_150[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 150.
ppi_in_151[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 151.
ppi_in_152[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 152.
ppi_in_153[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 153.
ppi_in_154[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 154.
ppi_in_155[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 155.
ppi_in_156[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 156.
ppi_in_157[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 157.
ppi_in_158[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 158.
ppi_in_159[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 159.
ppi_in_16[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 16.
ppi_in_160[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 160.
ppi_in_161[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 161.
ppi_in_162[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 162.
ppi_in_163[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 163.
ppi_in_164[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 164.
ppi_in_165[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 165.
ppi_in_166[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 166.
ppi_in_167[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 167.
ppi_in_168[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 168.
ppi_in_169[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 169.
ppi_in_17[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 17.
ppi_in_170[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 170.
ppi_in_171[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 171.
ppi_in_172[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 172.
ppi_in_173[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 173.
ppi_in_174[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 174.
ppi_in_175[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 175.
ppi_in_176[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 176.
ppi_in_177[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 177.

Name	Protocol	Type	Description
ppi_in_178[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 178.
ppi_in_179[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 179.
ppi_in_18[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 18.
ppi_in_180[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 180.
ppi_in_181[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 181.
ppi_in_182[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 182.
ppi_in_183[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 183.
ppi_in_184[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 184.
ppi_in_185[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 185.
ppi_in_186[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 186.
ppi_in_187[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 187.
ppi_in_188[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 188.
ppi_in_189[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 189.
ppi_in_19[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 19.
ppi_in_190[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 190.
ppi_in_191[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 191.
ppi_in_192[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 192.
ppi_in_193[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 193.
ppi_in_194[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 194.
ppi_in_195[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 195.
ppi_in_196[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 196.
ppi_in_197[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 197.
ppi_in_198[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 198.
ppi_in_199[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 199.
ppi_in_2[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 2.
ppi_in_20[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 20.
ppi_in_200[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 200.
ppi_in_201[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 201.
ppi_in_202[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 202.
ppi_in_203[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 203.
ppi_in_204[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 204.
ppi_in_205[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 205.
ppi_in_206[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 206.
ppi_in_207[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 207.
ppi_in_208[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 208.
ppi_in_209[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 209.
ppi_in_21[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 21.
ppi_in_210[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 210.
ppi_in_211[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 211.

Name	Protocol	Type	Description
ppi_in_212[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 212.
ppi_in_213[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 213.
ppi_in_214[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 214.
ppi_in_215[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 215.
ppi_in_216[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 216.
ppi_in_217[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 217.
ppi_in_218[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 218.
ppi_in_219[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 219.
ppi_in_22[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 22.
ppi_in_220[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 220.
ppi_in_221[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 221.
ppi_in_222[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 222.
ppi_in_223[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 223.
ppi_in_224[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 224.
ppi_in_225[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 225.
ppi_in_226[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 226.
ppi_in_227[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 227.
ppi_in_228[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 228.
ppi_in_229[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 229.
ppi_in_23[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 23.
ppi_in_230[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 230.
ppi_in_231[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 231.
ppi_in_232[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 232.
ppi_in_233[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 233.
ppi_in_234[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 234.
ppi_in_235[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 235.
ppi_in_236[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 236.
ppi_in_237[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 237.
ppi_in_238[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 238.
ppi_in_239[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 239.
ppi_in_24[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 24.
ppi_in_240[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 240.
ppi_in_241[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 241.
ppi_in_242[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 242.
ppi_in_243[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 243.
ppi_in_244[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 244.
ppi_in_245[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 245.
ppi_in_246[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 246.
ppi_in_247[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 247.

Name	Protocol	Type	Description
ppi_in_248[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 248.
ppi_in_249[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 249.
ppi_in_25[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 25.
ppi_in_250[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 250.
ppi_in_251[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 251.
ppi_in_252[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 252.
ppi_in_253[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 253.
ppi_in_254[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 254.
ppi_in_255[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 255.
ppi_in_26[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 26.
ppi_in_27[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 27.
ppi_in_28[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 28.
ppi_in_29[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 29.
ppi_in_3[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 3.
ppi_in_30[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 30.
ppi_in_31[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 31.
ppi_in_32[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 32.
ppi_in_33[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 33.
ppi_in_34[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 34.
ppi_in_35[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 35.
ppi_in_36[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 36.
ppi_in_37[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 37.
ppi_in_38[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 38.
ppi_in_39[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 39.
ppi_in_4[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 4.
ppi_in_40[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 40.
ppi_in_41[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 41.
ppi_in_42[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 42.
ppi_in_43[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 43.
ppi_in_44[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 44.
ppi_in_45[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 45.
ppi_in_46[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 46.
ppi_in_47[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 47.
ppi_in_48[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 48.
ppi_in_49[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 49.
ppi_in_5[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 5.
ppi_in_50[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 50.
ppi_in_51[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 51.
ppi_in_52[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 52.

Name	Protocol	Type	Description
ppi_in_53[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 53.
ppi_in_54[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 54.
ppi_in_55[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 55.
ppi_in_56[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 56.
ppi_in_57[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 57.
ppi_in_58[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 58.
ppi_in_59[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 59.
ppi_in_6[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 6.
ppi_in_60[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 60.
ppi_in_61[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 61.
ppi_in_62[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 62.
ppi_in_63[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 63.
ppi_in_64[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 64.
ppi_in_65[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 65.
ppi_in_66[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 66.
ppi_in_67[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 67.
ppi_in_68[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 68.
ppi_in_69[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 69.
ppi_in_7[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 7.
ppi_in_70[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 70.
ppi_in_71[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 71.
ppi_in_72[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 72.
ppi_in_73[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 73.
ppi_in_74[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 74.
ppi_in_75[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 75.
ppi_in_76[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 76.
ppi_in_77[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 77.
ppi_in_78[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 78.
ppi_in_79[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 79.
ppi_in_8[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 8.
ppi_in_80[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 80.
ppi_in_81[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 81.
ppi_in_82[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 82.
ppi_in_83[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 83.
ppi_in_84[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 84.
ppi_in_85[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 85.
ppi_in_86[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 86.
ppi_in_87[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 87.
ppi_in_88[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 88.

Name	Protocol	Type	Description
ppi_in_89[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 89.
ppi_in_9[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 9.
ppi_in_90[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 90.
ppi_in_91[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 91.
ppi_in_92[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 92.
ppi_in_93[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 93.
ppi_in_94[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 94.
ppi_in_95[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 95.
ppi_in_96[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 96.
ppi_in_97[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 97.
ppi_in_98[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 98.
ppi_in_99[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 99.
pvbuss_m	PVBus	Master	Memory bus out: transactions generated by the IRI.
pvbuss_s	PVBus	Slave	Memory bus in: memory-mapped register accesses are accepted on this interface.
redistributor_m[256]	GICv3Comms	Master	Input from and output to CPU interface.
reset	Signal	Slave	Resets.
spi_in[960]	Signal	Slave	Shared peripheral interrupts.
wake_request[256]	Signal	Master	Power management outputs.

## Parameters for GIC600AE

### CPU-affinities

#### Type

string

#### Default value

0.0.0.0

#### Description

A comma separated list of dotted quads containing the affinities of all PEs connected to this IRI. If CPU-affinities-file is specified, this parameter is ignored.

### CPU-affinities-file

#### Type

string

#### Default value

""

#### Description

A file containing comma separated list of dotted quads containing the affinities of all PEs connected to this IRI. If this parameter is specified, CPU-affinities parameter will be ignored even when it is given.

**DS-behaviour****Type**

int

**Default value**

2

GICD\_CTLR.DS field behaviour

0 :RAZ/WI

1 :RAO/WI

2 :RW

**IIDR****Type**

int

**Default value**

0x300543b

**Description**

GICD\_IIDR, GICR\_IIDR and GITS\_IIDR value. Defaults to the latest revision.

**ITS-ID-bits****Type**

int

**Default value**

0x10

**Description**

Number of interrupt bits supported by ITS.

**ITS-collection-ID-bits****Type**

int

**Default value**

0x8

**Description**

Number of collection bits supported by ITS (optional parameter, 0 =&gt; 16bits support and GITS\_TYPER.CIL=0).

**ITS-count****Type**

int

**Default value**

0x1

**Description**

Number of Interrupt Translation Services to be instantiated (0=none).

**ITS-device-bits****Type**

int

**Default value**

0x10

**Description**

Number of bits supported for ITS device IDs.

**PPI-count****Type**

int

**Default value**

16

Selects the number of PPI available for each PE

**8**

id22-27,29,30

**12**

id 20-31

**16**

id 16-31

**RAS-CFI-support****Type**

bool

**Default value**

0x0

**Description**

If true, fault handling interrupt for corrected errors is supported. Not supported otherwise.

**RAS-FI-support****Type**

bool

**Default value**

0x0

**Description**

If true, fault handling interrupt is supported. Not supported otherwise.

**RAS-UE-support****Type**

bool

**Default value**

0x0

**Description**

If true, In-band uncorrected error reporting is supported. Not supported otherwise.

**RAS-UI-support****Type**

bool

**Default value**

0x0

**Description**

If true, error recovery interrupt for uncorrected errors is supported. Not supported otherwise.

**SPI-blocks****Type**

int

**Default value**

0x1e

**Description**

Number of SPI blocks supported by the IRI, each block contains 32 SPIs.

**affinity-width****Type**

string

**Default value**

"4.8.8.8"

**Description**

A dotted quad indicating the bitwidth of fields at each affinity level.

**chip-id****Type**

int

**Default value**

0x0

**Description**

Chip ID when multichip operation is enabled.

**chip-select-affinity-level****Type**

int

**Default value**

0x3

**Description**

Affinity level 2 or 3 can be used for chip select.

**clear-ISPENDR-bit-for-level-sensitive-interrupt-when-acknowledged****Type**

bool

**Default value**

0x0

**Description**

If true, acknowledgement of a level sensitive interrupt clears the corresponding bit in the ISPENDR register.

**direct-lpi-support****Type**

bool

**Default value**

0x0

**Description**

Enable support for LPI operations through GICR registers.

**enable-multichip-operation****Type**

bool

**Default value**

0x0

**Description**

Enables multi-chip operation between Distributors in distributed GIC IRI.

**enabled****Type**

bool

**Default value**

0x1

**Description**

Enable GICv3 functionality; when false the component is inactive.

**gicp-allow-ns-reset****Type**

bool

**Default value**

0x1

**Description**

If true, non-secure read/write access to GICP register is allowed at reset. Not allowed otherwise. This emulates gicp\_allow\_ns tie-off signal.

**gict-allow-ns-reset****Type**

bool

**Default value**

0x1

**Description**

If true, non-secure read/write access to GICT register is allowed at reset. Not allowed otherwise. This emulates gict\_allow\_ns tie-off signal.

**max-cores-supported-by-GCI****Type**

int

**Default value**

0x8

**Description**

GCI can support 1-64 cores. Maximum supported cores in GCI is configurable by device.

**max-pe-on-chip****Type**

int

**Default value**

0x4

**Description**

Maximum number of cores on any single chip. This will be used to identify the target chip and core when multichip operation is enabled.

**multichip-threaded-dgi****Type**

bool

**Default value**

0x1

**Description**

Enable sending multichip DGI messages in a separate thread. This parameter is valid only if enable-multichip-operation is set.

**print-memory-map****Type**

bool

**Default value**

0x0

**Description**

Print memory map to stdout.

**redistributor-group****Type**

string

**Default value**

-

Redistributor grouping information with affinity as JSON :

```
{
  "0": [
    "0.0.0.0",
    "0.0.0.1"
  ],
  "1": [
    "0.0.1.0",
    "0.0.1.1"
  ]
}
```

where RD with quad 0.0.0.0 and 0.0.0.1 belongs to RD group 0. All the RDs belong to one group when this parameter is not given.

### **redistributor-group-file**

#### **Type**

string

#### **Default value**

-

File path to redistributor grouping information with affinity as JSON.

The file uses the same format as `redistributor-group` parameter.

### **redistributor-power-managed-by-pwrr**

#### **Type**

bool

#### **Default value**

0x1

#### **Description**

GIC600 dedistributor power management is done by updating GICR\_PWRR register.

### **reg-base**

#### **Type**

int

#### **Default value**

0x2c010000

#### **Description**

GIC-600AE base address.

### **reg-base-per-redistributor**

#### **Type**

string

#### **Default value**

{}

Base address for each redistributor in the form:

```
0.0.0.0=0x2c010000, 0.0.0.1=0x2c020000
```

All redistributors must be specified and this overrides the `reg-base` parameter (except that `reg-base` will still be used for the top-level redistributor). If `reg-base-per-redistributor-file` is specified, this parameter is ignored.

### 3.10.36 GIC600AE\_Filter

GIC-600AE IRI implementation: Single chip validation/filter component variant limited to 265 PE.  
This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-984: IP revisions support**

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### About GIC600AE\_Filter

GIC600AE and GIC600AE\_Filter are minimal models of an Arm GIC-600AE Generic Interrupt Controller, suitable for single-chip or multichip systems, where multichip operation has been tested, with the following exceptions:

- LPI/LPI command is implemented but untested.
- Power operation is unimplemented.

They provide a simple configuration interface that allows designers to introduce GIC600AE-like functionality to their systems, while only implementing the architectural behavior, as defined by the GICv3 architecture.

All implementation-specific registers and functionality are implemented.

As with the other GIC components, there are two variants of the model with slightly different memory interfaces. Both GIC600AE and GIC600AE\_Filter have a `pvbuss_s` port for register accesses and a `pvbuss_m` port for the LPI-related traffic from redistributors and the ITS. The `pvbuss_m` port is also used to compose multichip operation.

In addition, the GIC600AE\_Filter variant has a `pvbuss_filtermiss_m` port, to which any transactions on the `pvbuss_s` port and not directed to a 4 KB page used by the GIC are forwarded unmodified. Such transactions are terminated in the component when using the GIC600AE variant.

It is recommended to use the GIC600AE variant in most cases.

Also, the RAS register is implemented and various RAS errors are reported through status registers. Not all the RAS errors are available because Fast Models does not model errors that can cause ECC errors. Fast Models supports error record 0 and error record 13+. FMU registers are also implemented and are accessible by software.

**Note**

- Set the FASTSIM\_GIC\_MEMORY\_MAP environment variable to 1 to print to stderr the memory map of any GICv3 or later models that are included in the platform being run.

- For writes to `GITS_TRANSLATE64R`, the `MSIRewriter` component can be used to create the correct data transactions based on the device ID. For more details about `GITS_TRANSLATE64R`, see [MSIRewriter](#).

## MasterID, ExtendedID, and UserFlags

This table shows how this model encodes information in the `MasterID`, `ExtendedID`, and `UserFlags` bus attributes:

**Table 3-985: MasterID, ExtendedID, and UserFlags**

PVBus attribute	Bits used	Property encoded	Notes
MasterID	31:0	Master ID that invoked the register access	–
ExtendedID	–	–	Not used
UserFlags	–	–	Not used

Note

The `pvbus_m` port does not use `MasterID`, `ExtendedID`, or `UserFlags`.

## AE-specific features implemented

`GIC600AE_Filter` is a Functional Safety (FuSa) variant of `GIC600_Filter`. It has the following differences from `GIC600_Filter`:

- Both `GIC600AE_Filter` and `GIC600_Filter` support RAS, but only `GIC600AE_Filter` supports the Fault Management Unit (FMU). This support is controlled by the `has-fmu` parameter which is true by default. The FMU resides in the Distributor and processes faults that are detected by the Safety Mechanisms from all blocks.
- In `GIC600AE_Filter`, the GIC reset pin is connected to FMU reset. Only reset changes the error record registers and `FMU_ERRGSR` to their reset values.
- In `GIC600AE_Filter`, the Safety Mechanism detects faults and forwards them to the FMU. The FMU forwards all errors to the Safety Island.
- The APB port has been added to `GIC600AE_Filter` for FuSa purposes. It does not exist on the `GIC600_Filter`.
- `GIC600AE_Filter` supports both Error Recovery Interrupt (ERI) and Fault Handling Interrupt (FHI).
- `GIC600AE_Filter` has the limitation that it only supports error injection through the `FMU_SMINJERR` register.

## Iris and MTI instances for GIC600AE\_Filter

This model has the following Iris instances:

**Table 3-986: GIC600AE\_Filter Iris instances**

InstanceName	ComponentName
<code>GIC600AE_Filter</code>	<code>GIC_IRI</code>

InstanceName	ComponentName
GIC600AE_Filter.GICV3_ProtocolChecker	GICv3ProtocolChecker
GIC600AE_Filter.ITS0	GICv3InterruptTranslationService
GIC600AE_Filter.rd_0	GICv3RedistributorInternal
GIC600AE_Filter.rd_0_0	GICv3RedistributorInternal
GIC600AE_Filter.rd_0_0_0	GICv3RedistributorInternal
GIC600AE_Filter.rd_0_0_0_0	GICv3Redistributor
GIC600AE_Filter.rd_tl	GICv3Distributor

This model has the following MTI trace components:

**Table 3-987: GIC600AE\_Filter MTI instances**

InstanceName	ComponentName
GIC600AE_Filter.GICV3_ProtocolChecker	GICv3ProtocolChecker
GIC600AE_Filter.ITS0	GICv3InterruptTranslationService
GIC600AE_Filter.rd_0	GICv3RedistributorInternal
GIC600AE_Filter.rd_0_0	GICv3RedistributorInternal
GIC600AE_Filter.rd_0_0_0	GICv3RedistributorInternal
GIC600AE_Filter.rd_0_0_0_0	GICv3Redistributor
GIC600AE_Filter.rd_tl	GICv3Distributor

## Ports for GIC600AE\_Filter

**Table 3-988: Ports**

Name	Protocol	Type	Description
apb_bus	PVBus	Slave	APB4 port to FMU, which will be connected from safety island for FuSa
chip_id	Value	Slave	chip_id port used for multichip operation
cpu_active_s[256]	Signal	Slave	CPUActive pins.
fm_u_error_int	Signal	Master	FuSa FMU error interrupt signal
fm_u_fault_int	Signal	Master	FuSa FMU fault interrupt signal
po_reset	Signal	Slave	Reset.
ppi_in_0[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 0.
ppi_in_1[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 1.
ppi_in_10[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 10.
ppi_in_100[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 100.
ppi_in_101[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 101.
ppi_in_102[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 102.
ppi_in_103[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 103.
ppi_in_104[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 104.
ppi_in_105[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 105.
ppi_in_106[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 106.
ppi_in_107[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 107.

Name	Protocol	Type	Description
ppi_in_108[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 108.
ppi_in_109[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 109.
ppi_in_11[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 11.
ppi_in_110[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 110.
ppi_in_111[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 111.
ppi_in_112[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 112.
ppi_in_113[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 113.
ppi_in_114[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 114.
ppi_in_115[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 115.
ppi_in_116[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 116.
ppi_in_117[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 117.
ppi_in_118[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 118.
ppi_in_119[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 119.
ppi_in_12[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 12.
ppi_in_120[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 120.
ppi_in_121[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 121.
ppi_in_122[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 122.
ppi_in_123[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 123.
ppi_in_124[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 124.
ppi_in_125[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 125.
ppi_in_126[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 126.
ppi_in_127[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 127.
ppi_in_128[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 128.
ppi_in_129[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 129.
ppi_in_13[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 13.
ppi_in_130[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 130.
ppi_in_131[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 131.
ppi_in_132[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 132.
ppi_in_133[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 133.
ppi_in_134[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 134.
ppi_in_135[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 135.
ppi_in_136[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 136.
ppi_in_137[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 137.
ppi_in_138[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 138.
ppi_in_139[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 139.
ppi_in_14[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 14.
ppi_in_140[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 140.
ppi_in_141[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 141.
ppi_in_142[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 142.

Name	Protocol	Type	Description
ppi_in_143[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 143.
ppi_in_144[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 144.
ppi_in_145[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 145.
ppi_in_146[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 146.
ppi_in_147[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 147.
ppi_in_148[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 148.
ppi_in_149[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 149.
ppi_in_15[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 15.
ppi_in_150[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 150.
ppi_in_151[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 151.
ppi_in_152[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 152.
ppi_in_153[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 153.
ppi_in_154[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 154.
ppi_in_155[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 155.
ppi_in_156[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 156.
ppi_in_157[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 157.
ppi_in_158[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 158.
ppi_in_159[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 159.
ppi_in_16[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 16.
ppi_in_160[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 160.
ppi_in_161[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 161.
ppi_in_162[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 162.
ppi_in_163[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 163.
ppi_in_164[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 164.
ppi_in_165[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 165.
ppi_in_166[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 166.
ppi_in_167[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 167.
ppi_in_168[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 168.
ppi_in_169[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 169.
ppi_in_17[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 17.
ppi_in_170[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 170.
ppi_in_171[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 171.
ppi_in_172[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 172.
ppi_in_173[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 173.
ppi_in_174[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 174.
ppi_in_175[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 175.
ppi_in_176[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 176.
ppi_in_177[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 177.
ppi_in_178[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 178.

Name	Protocol	Type	Description
ppi_in_179[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 179.
ppi_in_18[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 18.
ppi_in_180[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 180.
ppi_in_181[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 181.
ppi_in_182[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 182.
ppi_in_183[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 183.
ppi_in_184[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 184.
ppi_in_185[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 185.
ppi_in_186[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 186.
ppi_in_187[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 187.
ppi_in_188[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 188.
ppi_in_189[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 189.
ppi_in_19[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 19.
ppi_in_190[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 190.
ppi_in_191[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 191.
ppi_in_192[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 192.
ppi_in_193[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 193.
ppi_in_194[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 194.
ppi_in_195[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 195.
ppi_in_196[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 196.
ppi_in_197[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 197.
ppi_in_198[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 198.
ppi_in_199[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 199.
ppi_in_2[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 2.
ppi_in_20[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 20.
ppi_in_200[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 200.
ppi_in_201[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 201.
ppi_in_202[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 202.
ppi_in_203[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 203.
ppi_in_204[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 204.
ppi_in_205[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 205.
ppi_in_206[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 206.
ppi_in_207[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 207.
ppi_in_208[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 208.
ppi_in_209[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 209.
ppi_in_21[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 21.
ppi_in_210[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 210.
ppi_in_211[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 211.
ppi_in_212[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 212.

Name	Protocol	Type	Description
ppi_in_213[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 213.
ppi_in_214[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 214.
ppi_in_215[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 215.
ppi_in_216[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 216.
ppi_in_217[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 217.
ppi_in_218[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 218.
ppi_in_219[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 219.
ppi_in_22[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 22.
ppi_in_220[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 220.
ppi_in_221[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 221.
ppi_in_222[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 222.
ppi_in_223[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 223.
ppi_in_224[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 224.
ppi_in_225[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 225.
ppi_in_226[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 226.
ppi_in_227[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 227.
ppi_in_228[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 228.
ppi_in_229[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 229.
ppi_in_23[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 23.
ppi_in_230[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 230.
ppi_in_231[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 231.
ppi_in_232[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 232.
ppi_in_233[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 233.
ppi_in_234[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 234.
ppi_in_235[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 235.
ppi_in_236[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 236.
ppi_in_237[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 237.
ppi_in_238[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 238.
ppi_in_239[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 239.
ppi_in_24[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 24.
ppi_in_240[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 240.
ppi_in_241[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 241.
ppi_in_242[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 242.
ppi_in_243[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 243.
ppi_in_244[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 244.
ppi_in_245[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 245.
ppi_in_246[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 246.
ppi_in_247[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 247.
ppi_in_248[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 248.

Name	Protocol	Type	Description
ppi_in_249[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 249.
ppi_in_25[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 25.
ppi_in_250[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 250.
ppi_in_251[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 251.
ppi_in_252[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 252.
ppi_in_253[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 253.
ppi_in_254[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 254.
ppi_in_255[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 255.
ppi_in_26[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 26.
ppi_in_27[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 27.
ppi_in_28[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 28.
ppi_in_29[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 29.
ppi_in_3[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 3.
ppi_in_30[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 30.
ppi_in_31[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 31.
ppi_in_32[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 32.
ppi_in_33[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 33.
ppi_in_34[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 34.
ppi_in_35[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 35.
ppi_in_36[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 36.
ppi_in_37[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 37.
ppi_in_38[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 38.
ppi_in_39[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 39.
ppi_in_4[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 4.
ppi_in_40[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 40.
ppi_in_41[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 41.
ppi_in_42[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 42.
ppi_in_43[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 43.
ppi_in_44[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 44.
ppi_in_45[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 45.
ppi_in_46[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 46.
ppi_in_47[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 47.
ppi_in_48[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 48.
ppi_in_49[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 49.
ppi_in_5[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 5.
ppi_in_50[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 50.
ppi_in_51[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 51.
ppi_in_52[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 52.
ppi_in_53[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 53.

Name	Protocol	Type	Description
ppi_in_54[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 54.
ppi_in_55[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 55.
ppi_in_56[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 56.
ppi_in_57[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 57.
ppi_in_58[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 58.
ppi_in_59[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 59.
ppi_in_6[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 6.
ppi_in_60[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 60.
ppi_in_61[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 61.
ppi_in_62[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 62.
ppi_in_63[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 63.
ppi_in_64[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 64.
ppi_in_65[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 65.
ppi_in_66[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 66.
ppi_in_67[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 67.
ppi_in_68[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 68.
ppi_in_69[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 69.
ppi_in_7[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 7.
ppi_in_70[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 70.
ppi_in_71[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 71.
ppi_in_72[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 72.
ppi_in_73[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 73.
ppi_in_74[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 74.
ppi_in_75[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 75.
ppi_in_76[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 76.
ppi_in_77[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 77.
ppi_in_78[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 78.
ppi_in_79[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 79.
ppi_in_8[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 8.
ppi_in_80[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 80.
ppi_in_81[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 81.
ppi_in_82[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 82.
ppi_in_83[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 83.
ppi_in_84[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 84.
ppi_in_85[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 85.
ppi_in_86[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 86.
ppi_in_87[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 87.
ppi_in_88[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 88.
ppi_in_89[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 89.

Name	Protocol	Type	Description
ppi_in_9[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 9.
ppi_in_90[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 90.
ppi_in_91[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 91.
ppi_in_92[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 92.
ppi_in_93[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 93.
ppi_in_94[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 94.
ppi_in_95[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 95.
ppi_in_96[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 96.
ppi_in_97[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 97.
ppi_in_98[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 98.
ppi_in_99[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 99.
pvbus_filtermiss_m	PVBus	Master	Memory bus out. Transactions not filtered by the component.
pvbus_m	PVBus	Master	Memory bus out: transactions generated by the IRI.
pvbus_s	PVBus	Slave	Memory bus in: memory-mapped register accesses are accepted on this interface.
redistributor_m[256]	GICv3Comms	Master	Input from and output to CPU interface.
reset	Signal	Slave	Reset.
spi_in[960]	Signal	Slave	Shared peripheral interrupts.
wake_request[256]	Signal	Master	Power management outputs.

## Parameters for GIC600AE\_Filter

### CPU-affinities

#### Type

string

#### Default value

0.0.0.0

#### Description

A comma separated list of dotted quads containing the affinities of all PEs connected to this IRI. If CPU-affinities-file is specified, this parameter is ignored.

### CPU-affinities-file

#### Type

string

#### Default value

""

#### Description

A file containing comma separated list of dotted quads containing the affinities of all PEs connected to this IRI. If this parameter is specified, CPU-affinities parameter will be ignored even when it is given.

**DS-behaviour****Type**

int

**Default value**

2

GICD\_CTLR.DS field behaviour

0 :RAZ/WI

1 :RAO/WI

2 :RW

**IIDR****Type**

int

**Default value**

0x300543b

**Description**

GICD\_IIDR, GICR\_IIDR and GITS\_IIDR value. Defaults to the latest revision.

**ITS-ID-bits****Type**

int

**Default value**

0x10

**Description**

Number of interrupt bits supported by ITS.

**ITS-collection-ID-bits****Type**

int

**Default value**

0x8

**Description**

Number of collection bits supported by ITS (optional parameter, 0 =&gt; 16bits support and GITS\_TYPER.CIL=0).

**ITS-count****Type**

int

**Default value**

0x1

**Description**

Number of Interrupt Translation Services to be instantiated (0=none).

**ITS-device-bits****Type**

int

**Default value**

0x10

**Description**

Number of bits supported for ITS device IDs.

**PPI-count****Type**

int

**Default value**

16

Selects the number of PPI available for each PE

**8**

id22-27,29,30

**12**

id 20-31

**16**

id 16-31

**RAS-CFI-support****Type**

bool

**Default value**

0x0

**Description**

If true, fault handling interrupt for corrected errors is supported. Not supported otherwise.

**RAS-FI-support****Type**

bool

**Default value**

0x0

**Description**

If true, fault handling interrupt is supported. Not supported otherwise.

**RAS-UE-support****Type**

bool

**Default value**

0x0

**Description**

If true, In-band uncorrected error reporting is supported. Not supported otherwise.

**RAS-UI-support****Type**

bool

**Default value**

0x0

**Description**

If true, error recovery interrupt for uncorrected errors is supported. Not supported otherwise.

**SPI-blocks****Type**

int

**Default value**

0x1e

**Description**

Number of SPI blocks supported by the IRI, each block contains 32 SPIs.

**affinity-width****Type**

string

**Default value**

"4.8.8.8"

**Description**

A dotted quad indicating the bitwidth of fields at each affinity level.

**chip-id****Type**

int

**Default value**

0x0

**Description**

Chip ID when multichip operation is enabled.

**chip-select-affinity-level****Type**

int

**Default value**

0x3

**Description**

Affinity level 2 or 3 can be used for chip select.

**clear-ISPENDR-bit-for-level-sensitive-interrupt-when-acknowledged****Type**

bool

**Default value**

0x0

**Description**

If true, acknowledgement of a level sensitive interrupt clears the corresponding bit in the ISPENDR register.

**direct-lpi-support****Type**

bool

**Default value**

0x0

**Description**

Enable support for LPI operations through GICR registers.

**enable-multichip-operation****Type**

bool

**Default value**

0x0

**Description**

Enables multi-chip operation between Distributors in distributed GIC IRI.

**enabled****Type**

bool

**Default value**

0x1

**Description**

Enable GICv3 functionality; when false the component is inactive.

**gicp-allow-ns-reset****Type**

bool

**Default value**

0x1

**Description**

If true, non-secure read/write access to GICP register is allowed at reset. Not allowed otherwise. This emulates gicp\_allow\_ns tie-off signal.

**gict-allow-ns-reset****Type**

bool

**Default value**

0x1

**Description**

If true, non-secure read/write access to GICT register is allowed at reset. Not allowed otherwise. This emulates gict\_allow\_ns tie-off signal.

**max-cores-supported-by-GCI****Type**

int

**Default value**

0x8

**Description**

GCI can support 1-64 cores. Maximum supported cores in GCI is configurable by device.

**max-pe-on-chip****Type**

int

**Default value**

0x4

**Description**

Maximum number of cores on any single chip. This will be used to identify the target chip and core when multichip operation is enabled.

**multichip-threaded-dgi****Type**

bool

**Default value**

0x1

**Description**

Enable sending multichip DGI messages in a separate thread. This parameter is valid only if enable-multichip-operation is set.

**print-memory-map****Type**

bool

**Default value**

0x0

**Description**

Print memory map to stdout.

**redistributor-group****Type**

string

**Default value**

-

Redistributor grouping information with affinity as JSON :

```
{
  "0": [
    "0.0.0.0",
    "0.0.0.1"
  ],
  "1": [
    "0.0.1.0",
    "0.0.1.1"
  ]
}
```

where RD with quad 0.0.0.0 and 0.0.0.1 belongs to RD group 0. All the RDs belong to one group when this parameter is not given.

### **redistributor-group-file**

#### **Type**

string

#### **Default value**

-

File path to redistributor grouping information with affinity as JSON.

The file uses the same format as `redistributor-group` parameter.

### **redistributor-power-managed-by-pwrr**

#### **Type**

bool

#### **Default value**

0x1

#### **Description**

GIC600 dedistributor power management is done by updating GICR\_PWRR register.

### **reg-base**

#### **Type**

int

#### **Default value**

0x2c010000

#### **Description**

GIC-600AE base address.

### **reg-base-per-redistributor**

#### **Type**

string

#### **Default value**

{}

Base address for each redistributor in the form:

```
0.0.0.0=0x2c010000, 0.0.0.1=0x2c020000
```

All redistributors must be specified and this overrides the `reg-base` parameter (except that `reg-base` will still be used for the top-level redistributor). If `reg-base-per-redistributor-file` is specified, this parameter is ignored.

### 3.10.37 GIC600\_Filter

GIC-600 IRI implementation: Single chip validation/filter component variant limited to 265 PE. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-989: IP revisions support**

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### About GIC600\_Filter

GIC600 and GIC600\_Filter are minimal models of an Arm GIC-600 Generic Interrupt Controller, suitable for single-chip or multichip systems, where multichip operation has been tested, with the following exceptions:

- LPI/LPI command is implemented but untested.
- Power operation is unimplemented.

They provide a simple configuration interface that allows designers to introduce GIC600-like functionality to their systems, while only implementing the architectural behavior, as defined by the GICv3 architecture.

All implementation-specific registers and functionality are implemented.

As with the other GIC components, there are two variants of the model with slightly different memory interfaces. Both GIC600 and GIC600\_Filter have a `pvbus_s` port for register accesses and a `pvbus_m` port for the LPI-related traffic from redistributors and the ITS. The `pvbus_m` port is also used to compose multichip operation.

In addition, the GIC600\_Filter variant has a `pvbus_filtermiss_m` port, to which any transactions on the `pvbus_s` port and not directed to a 4K page used by the GIC are forwarded unmodified. Such transactions are terminated in the component when using the GIC600 variant.

It is recommended to use the GIC600 variant in most cases.

Also, the RAS register is implemented and various RAS errors are reported through status registers. Not all the RAS errors are available because Fast Models does not model errors that can cause ECC errors. Fast Models supports error record 0 and error record 13+.

- Set the `FASTSIM_GIC_MEMORY_MAP` environment variable to 1 to print to stderr the memory map of any GICv3 or later models that are included in the platform being run.

- For writes to GITS\_TRANSLATE64R, the MSIRewriter component can be used to create the correct data transactions based on the device ID. For more details about GITS\_TRANSLATE64R, see [MSIRewriter](#).

## MasterID, ExtendedID, and UserFlags

This table shows how this model encodes information in the `MasterID`, `ExtendedID`, and `UserFlags` bus attributes:

**Table 3-990: MasterID, ExtendedID, and UserFlags**

PVBus attribute	Bits used	Property encoded	Notes
MasterID	31:0	Master ID that invoked the register access	–
ExtendedID	–	–	Not used
UserFlags	–	–	Not used

**Note**

The `pvbus_m` port does not use `MasterID`, `ExtendedID`, or `UserFlags`.

## Iris and MTI instances for GIC600\_Filter

This model has the following Iris instances:

**Table 3-991: GIC600\_Filter Iris instances**

InstanceName	ComponentName
GIC600_Filter	GIC_IRI
GIC600_Filter.GICV3_ProtocolChecker	GICv3ProtocolChecker
GIC600_Filter.ITS0	GICv3InterruptTranslationService
GIC600_Filter.rd_0	GICv3RedistributorInternal
GIC600_Filter.rd_0_0	GICv3RedistributorInternal
GIC600_Filter.rd_0_0_0	GICv3RedistributorInternal
GIC600_Filter.rd_0_0_0_0	GICv3Redistributor
GIC600_Filter.rd_tl	GICv3Distributor

This model has the following MTI trace components:

**Table 3-992: GIC600\_Filter MTI instances**

InstanceName	ComponentName
GIC600_Filter.GICV3_ProtocolChecker	<a href="#">GICv3ProtocolChecker</a>
GIC600_Filter.ITS0	<a href="#">GICv3InterruptTranslationService</a>
GIC600_Filter.rd_0	<a href="#">GICv3RedistributorInternal</a>
GIC600_Filter.rd_0_0	<a href="#">GICv3RedistributorInternal</a>
GIC600_Filter.rd_0_0_0	<a href="#">GICv3RedistributorInternal</a>

InstanceName	ComponentName
GIC600_Filter.rd_0_0_0_0	GICv3Redistributor
GIC600_Filter.rd_tl	GICv3Distributor

## Ports for GIC600\_Filter

**Table 3-993: Ports**

Name	Protocol	Type	Description
chip_id	Value	Slave	chip_id port which is valid from GIC600 r1p2. Writing to this port for prior GIC600 version will be ignored.
cpu_active_s[256]	Signal	Slave	CPUActive pins.
po_reset	Signal	Slave	Reset.
ppi_in_0[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 0.
ppi_in_1[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 1.
ppi_in_10[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 10.
ppi_in_100[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 100.
ppi_in_101[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 101.
ppi_in_102[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 102.
ppi_in_103[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 103.
ppi_in_104[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 104.
ppi_in_105[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 105.
ppi_in_106[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 106.
ppi_in_107[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 107.
ppi_in_108[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 108.
ppi_in_109[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 109.
ppi_in_11[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 11.
ppi_in_110[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 110.
ppi_in_111[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 111.
ppi_in_112[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 112.
ppi_in_113[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 113.
ppi_in_114[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 114.
ppi_in_115[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 115.
ppi_in_116[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 116.
ppi_in_117[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 117.
ppi_in_118[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 118.
ppi_in_119[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 119.
ppi_in_12[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 12.
ppi_in_120[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 120.
ppi_in_121[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 121.
ppi_in_122[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 122.
ppi_in_123[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 123.

Name	Protocol	Type	Description
ppi_in_124[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 124.
ppi_in_125[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 125.
ppi_in_126[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 126.
ppi_in_127[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 127.
ppi_in_128[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 128.
ppi_in_129[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 129.
ppi_in_13[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 13.
ppi_in_130[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 130.
ppi_in_131[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 131.
ppi_in_132[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 132.
ppi_in_133[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 133.
ppi_in_134[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 134.
ppi_in_135[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 135.
ppi_in_136[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 136.
ppi_in_137[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 137.
ppi_in_138[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 138.
ppi_in_139[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 139.
ppi_in_14[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 14.
ppi_in_140[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 140.
ppi_in_141[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 141.
ppi_in_142[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 142.
ppi_in_143[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 143.
ppi_in_144[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 144.
ppi_in_145[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 145.
ppi_in_146[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 146.
ppi_in_147[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 147.
ppi_in_148[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 148.
ppi_in_149[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 149.
ppi_in_15[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 15.
ppi_in_150[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 150.
ppi_in_151[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 151.
ppi_in_152[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 152.
ppi_in_153[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 153.
ppi_in_154[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 154.
ppi_in_155[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 155.
ppi_in_156[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 156.
ppi_in_157[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 157.
ppi_in_158[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 158.
ppi_in_159[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 159.

Name	Protocol	Type	Description
ppi_in_16[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 16.
ppi_in_160[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 160.
ppi_in_161[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 161.
ppi_in_162[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 162.
ppi_in_163[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 163.
ppi_in_164[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 164.
ppi_in_165[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 165.
ppi_in_166[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 166.
ppi_in_167[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 167.
ppi_in_168[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 168.
ppi_in_169[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 169.
ppi_in_17[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 17.
ppi_in_170[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 170.
ppi_in_171[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 171.
ppi_in_172[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 172.
ppi_in_173[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 173.
ppi_in_174[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 174.
ppi_in_175[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 175.
ppi_in_176[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 176.
ppi_in_177[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 177.
ppi_in_178[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 178.
ppi_in_179[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 179.
ppi_in_18[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 18.
ppi_in_180[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 180.
ppi_in_181[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 181.
ppi_in_182[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 182.
ppi_in_183[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 183.
ppi_in_184[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 184.
ppi_in_185[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 185.
ppi_in_186[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 186.
ppi_in_187[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 187.
ppi_in_188[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 188.
ppi_in_189[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 189.
ppi_in_19[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 19.
ppi_in_190[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 190.
ppi_in_191[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 191.
ppi_in_192[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 192.
ppi_in_193[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 193.
ppi_in_194[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 194.

Name	Protocol	Type	Description
ppi_in_195[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 195.
ppi_in_196[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 196.
ppi_in_197[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 197.
ppi_in_198[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 198.
ppi_in_199[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 199.
ppi_in_2[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 2.
ppi_in_20[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 20.
ppi_in_200[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 200.
ppi_in_201[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 201.
ppi_in_202[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 202.
ppi_in_203[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 203.
ppi_in_204[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 204.
ppi_in_205[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 205.
ppi_in_206[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 206.
ppi_in_207[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 207.
ppi_in_208[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 208.
ppi_in_209[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 209.
ppi_in_21[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 21.
ppi_in_210[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 210.
ppi_in_211[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 211.
ppi_in_212[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 212.
ppi_in_213[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 213.
ppi_in_214[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 214.
ppi_in_215[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 215.
ppi_in_216[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 216.
ppi_in_217[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 217.
ppi_in_218[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 218.
ppi_in_219[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 219.
ppi_in_22[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 22.
ppi_in_220[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 220.
ppi_in_221[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 221.
ppi_in_222[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 222.
ppi_in_223[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 223.
ppi_in_224[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 224.
ppi_in_225[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 225.
ppi_in_226[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 226.
ppi_in_227[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 227.
ppi_in_228[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 228.
ppi_in_229[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 229.

Name	Protocol	Type	Description
ppi_in_23[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 23.
ppi_in_230[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 230.
ppi_in_231[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 231.
ppi_in_232[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 232.
ppi_in_233[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 233.
ppi_in_234[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 234.
ppi_in_235[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 235.
ppi_in_236[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 236.
ppi_in_237[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 237.
ppi_in_238[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 238.
ppi_in_239[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 239.
ppi_in_24[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 24.
ppi_in_240[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 240.
ppi_in_241[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 241.
ppi_in_242[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 242.
ppi_in_243[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 243.
ppi_in_244[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 244.
ppi_in_245[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 245.
ppi_in_246[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 246.
ppi_in_247[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 247.
ppi_in_248[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 248.
ppi_in_249[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 249.
ppi_in_25[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 25.
ppi_in_250[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 250.
ppi_in_251[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 251.
ppi_in_252[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 252.
ppi_in_253[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 253.
ppi_in_254[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 254.
ppi_in_255[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 255.
ppi_in_26[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 26.
ppi_in_27[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 27.
ppi_in_28[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 28.
ppi_in_29[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 29.
ppi_in_3[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 3.
ppi_in_30[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 30.
ppi_in_31[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 31.
ppi_in_32[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 32.
ppi_in_33[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 33.
ppi_in_34[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 34.

Name	Protocol	Type	Description
ppi_in_35[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 35.
ppi_in_36[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 36.
ppi_in_37[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 37.
ppi_in_38[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 38.
ppi_in_39[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 39.
ppi_in_4[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 4.
ppi_in_40[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 40.
ppi_in_41[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 41.
ppi_in_42[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 42.
ppi_in_43[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 43.
ppi_in_44[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 44.
ppi_in_45[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 45.
ppi_in_46[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 46.
ppi_in_47[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 47.
ppi_in_48[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 48.
ppi_in_49[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 49.
ppi_in_5[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 5.
ppi_in_50[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 50.
ppi_in_51[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 51.
ppi_in_52[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 52.
ppi_in_53[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 53.
ppi_in_54[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 54.
ppi_in_55[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 55.
ppi_in_56[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 56.
ppi_in_57[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 57.
ppi_in_58[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 58.
ppi_in_59[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 59.
ppi_in_6[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 6.
ppi_in_60[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 60.
ppi_in_61[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 61.
ppi_in_62[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 62.
ppi_in_63[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 63.
ppi_in_64[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 64.
ppi_in_65[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 65.
ppi_in_66[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 66.
ppi_in_67[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 67.
ppi_in_68[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 68.
ppi_in_69[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 69.
ppi_in_7[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 7.

Name	Protocol	Type	Description
ppi_in_70[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 70.
ppi_in_71[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 71.
ppi_in_72[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 72.
ppi_in_73[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 73.
ppi_in_74[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 74.
ppi_in_75[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 75.
ppi_in_76[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 76.
ppi_in_77[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 77.
ppi_in_78[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 78.
ppi_in_79[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 79.
ppi_in_8[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 8.
ppi_in_80[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 80.
ppi_in_81[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 81.
ppi_in_82[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 82.
ppi_in_83[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 83.
ppi_in_84[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 84.
ppi_in_85[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 85.
ppi_in_86[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 86.
ppi_in_87[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 87.
ppi_in_88[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 88.
ppi_in_89[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 89.
ppi_in_9[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 9.
ppi_in_90[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 90.
ppi_in_91[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 91.
ppi_in_92[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 92.
ppi_in_93[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 93.
ppi_in_94[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 94.
ppi_in_95[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 95.
ppi_in_96[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 96.
ppi_in_97[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 97.
ppi_in_98[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 98.
ppi_in_99[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 99.
pvbus_filtermiss_m	PVBus	Master	Memory bus out. Transactions not filtered by the component.
pvbus_m	PVBus	Master	Memory bus out: transactions generated by the IRI.
pvbus_s	PVBus	Slave	Memory bus in: memory-mapped register accesses are accepted on this interface.
redistributor_m[256]	GICv3Comms	Master	Input from and output to CPU interface.
reset	Signal	Slave	Reset.
spi_in[960]	Signal	Slave	Shared peripheral interrupts.
wake_request[256]	Signal	Master	Power management outputs.

## Parameters for GIC600\_Filter

### CPU-affinities

**Type**

string

**Default value**

0.0.0.0

**Description**

A comma separated list of dotted quads containing the affinities of all PEs connected to this IRI. If CPU-affinities-file is specified, this parameter is ignored.

### CPU-affinities-file

**Type**

string

**Default value**

""

**Description**

A file containing comma separated list of dotted quads containing the affinities of all PEs connected to this IRI. If this parameter is specified, CPU-affinities parameter will be ignored even when it is given.

### DS-behaviour

**Type**

int

**Default value**

2

GICD\_CTLR.DS field behaviour

0 :RAZ/WI

1 :RAO/WI

2 :RW

### IIDR

**Type**

int

**Default value**

0x201743b

**Description**

GICD\_IIDR and GICR\_IIDR value. Defaults to the latest revision.

**ITS-ID-bits****Type**

int

**Default value**

0x10

**Description**

Number of interrupt bits supported by ITS.

**ITS-collection-ID-bits****Type**

int

**Default value**

0x8

**Description**

Number of collection bits supported by ITS (optional parameter, 0 =&gt; 16bits support and GITS\_TYPER.CIL=0).

**ITS-count****Type**

int

**Default value**

0x1

**Description**

Number of Interrupt Translation Services to be instantiated (0=none).

**ITS-device-bits****Type**

int

**Default value**

0x10

**Description**

Number of bits supported for ITS device IDs.

**PPI-count****Type**

int

**Default value**

16

Selects the number of PPI available for each PE

8 :id22-27,29,30

**12**

id 20-31

**16**

id 16-31

### **RAS-CFI-support**

#### **Type**

bool

#### **Default value**

0x0

#### **Description**

If true, fault handling interrupt for corrected errors is supported. Not supported otherwise.

### **RAS-FI-support**

#### **Type**

bool

#### **Default value**

0x0

#### **Description**

If true, fault handling interrupt is supported. Not supported otherwise.

### **RAS-UE-support**

#### **Type**

bool

#### **Default value**

0x0

#### **Description**

If true, In-band uncorrected error reporting is supported. Not supported otherwise.

### **RAS-UI-support**

#### **Type**

bool

#### **Default value**

0x0

#### **Description**

If true, error recovery interrupt for uncorrected errors is supported. Not supported otherwise.

**SPI-blocks****Type**

int

**Default value**

0x1e

**Description**

Number of SPI blocks supported by the IRI, each block contains 32 SPIs.

**affinity-width****Type**

string

**Default value**

"4.8.8.8"

**Description**

A dotted quad indicating the bitwidth of fields at each affinity level.

**chip-id****Type**

int

**Default value**

0x0

**Description**

Chip ID when multichip operation is enabled.

**chip-select-affinity-level****Type**

int

**Default value**

0x3

**Description**

Affinity level 2 or 3 can be used for chip select.

**clear-ISPENDR-bit-for-level-sensitive-interrupt-when-acknowledged****Type**

bool

**Default value**

0x0

**Description**

If true, acknowledgement of a level sensitive interrupt clears the corresponding bit in the ISPENDR register.

**direct-lpi-support****Type**

bool

**Default value**

0x0

**Description**

Enable support for LPI operations through GICR registers.

**enable-multichip-operation****Type**

bool

**Default value**

0x0

**Description**

Enables multi-chip operation between Distributors in distributed GIC IRI.

**enabled****Type**

bool

**Default value**

0x1

**Description**

Enable GICv3 functionality; when false the component is inactive.

**gicp-allow-ns-reset****Type**

bool

**Default value**

0x1

**Description**

If true, non-secure read/write access to GICP register is allowed at reset. Not allowed otherwise. This emulates gicp\_allow\_ns tie-off signal.

**gict-allow-ns-reset****Type**

bool

**Default value**

0x1

**Description**

If true, non-secure read/write access to GICT register is allowed at reset. Not allowed otherwise. This emulates gict\_allow\_ns tie-off signal.

**max-cores-supported-by-GCI****Type**

int

**Default value**

0x8

**Description**

GCI can support 1-64 cores. Maximum supported cores in GCI is configurable by device.

**max-pe-on-chip****Type**

int

**Default value**

0x4

**Description**

Maximum number of cores on any single chip. This will be used to identify the target chip and core when multichip operation is enabled.

**multichip-threaded-dgi****Type**

bool

**Default value**

0x1

**Description**

Enable sending multichip DGI messages in a separate thread. This parameter is valid only if enable-multichip-operation is set.

**print-memory-map****Type**

bool

**Default value**

0x0

**Description**

Print memory map to stdout.

**redistributor-group****Type**

string

**Default value**

-

Redistributor grouping information with affinity as JSON :

```
{
  "0": [
    "0.0.0.0",
    "0.0.0.1"
  ],
  "1": [
    "0.0.1.0",
    "0.0.1.1"
  ]
}
```

where RD with quad 0.0.0.0 and 0.0.0.1 belongs to RD group 0. All the RDs belong to one group when this parameter is not given.

**redistributor-group-file****Type**

string

**Default value**

-

File path to redistributor grouping information with affinity as JSON.

The file uses the same format as `redistributor-group` parameter.

**redistributor-power-managed-by-pwrr****Type**

bool

**Default value**

0x1

**Description**

GIC600 dedistributor power management is done by updating GICR\_PWRR register.

**reg-base****Type**

int

**Default value**

0x2c010000

Description

GIC-600 base address.

reg-base-per-redistributor

Type

string

Default value

{}

Base address for each redistributor in the form:

```
0.0.0.0=0x2c010000, 0.0.0.1=0x2c020000
```

All redistributors must be specified and this overrides the reg-base parameter (except that reg-base will still be used for the top-level redistributor). If reg-base-per-redistributor-file is specified, this parameter is ignored.

3.10.38 GIC625

GIC-625 IRI implementation: Single chip validation/filter component variant limited to 8 PE. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-994: IP revisions support

Revision	Quality level
r0p1	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

About GIC625

GIC625 and GIC625\_Filter are Generic Interrupt Controllers that handle interrupts from peripherals to cores and interrupts between cores in a single cluster of up to 8 cores. They support the GICv3 and GICv3.1 architectures.

GIC625 supports the following features:

- Grouping cores in GCI.
- LPI is disabled.
- Power Management updates such as:
  - GCI grouping.
  - GCI RDPowerDown support
  - Updating the GCI ID for the cluster.

- GIC GICR\_PWRR register updates.
- Inversion of SPI and PPI inputs.
- Extended PPI.

**Note**

- Extended SPI is not supported.
- All implementation-specific registers and functionality are implemented.

## Iris and MTI instances for GIC625

This model has the following Iris instances:

**Table 3-995: GIC625 Iris instances**

InstanceName	ComponentName
GIC625	GIC_IRI
GIC625.GICV3_ProtocolChecker	GICv3ProtocolChecker
GIC625.rd_0	GICv3RedistributorInternal
GIC625.rd_0_0	GICv3RedistributorInternal
GIC625.rd_0_0_0	GICv3RedistributorInternal
GIC625.rd_0_0_0_0	GICv3Redistributor
GIC625.rd_t1	GICv3Distributor

This model has the following MTI trace components:

**Table 3-996: GIC625 MTI instances**

InstanceName	ComponentName
GIC625.GICV3_ProtocolChecker	GICv3ProtocolChecker
GIC625.rd_0	GICv3RedistributorInternal
GIC625.rd_0_0	GICv3RedistributorInternal
GIC625.rd_0_0_0	GICv3RedistributorInternal
GIC625.rd_0_0_0_0	GICv3Redistributor
GIC625.rd_t1	GICv3Distributor

## Ports for GIC625

**Table 3-997: Ports**

Name	Protocol	Type	Description
chip_id	Value	Slave	chip_id port used for multichip operation
cpu_active_s[8]	Signal	Slave	CPUActive pins.
po_reset	Signal	Slave	Resets. This is used as a dbg_reset in TRM, and also be used for cold reset for PMU and FMU.
ppi_in_0[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 0.

Name	Protocol	Type	Description
ppi_in_1[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 1.
ppi_in_2[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 2.
ppi_in_3[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 3.
ppi_in_4[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 4.
ppi_in_5[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 5.
ppi_in_6[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 6.
ppi_in_7[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 7.
pvbus_m	PVBus	Master	Memory bus out: transactions generated by the IRI.
pvbus_s	PVBus	Slave	Memory bus in: memory-mapped register accesses are accepted on this interface.
redistributor_m[8]	GICv3Comms	Master	Input from and output to CPU interface.
reset	Signal	Slave	Resets.
spi_in[960]	Signal	Slave	Shared peripheral interrupts.
wake_request[8]	Signal	Master	Power management outputs.

## Parameters for GIC625

### CPU-affinities

#### Type

string

#### Default value

0.0.0.0

#### Description

A comma separated list of dotted quads containing the affinities of all PEs connected to this IRI. If CPU-affinities-file is specified, this parameter is ignored.

### CPU-affinities-file

#### Type

string

#### Default value

""

#### Description

A file containing comma separated list of dotted quads containing the affinities of all PEs connected to this IRI. If this parameter is specified, CPU-affinities parameter will be ignored even when it is given.

### IIDR

#### Type

int

#### Default value

0x601043b

**Description**

GICD\_IIDR and GICR\_IIDR value.

**PPI-count****Type**

int

**Default value**

16

Selects the number of PPI available for each PE

**8**

id22-27,29,30

**12**

id 20-31

**16**

id 16-31

**RAS-CFI-support****Type**

bool

**Default value**

0x0

**Description**

If true, fault handling interrupt for corrected errors is supported. Not supported otherwise.

**RAS-FI-support****Type**

bool

**Default value**

0x0

**Description**

If true, fault handling interrupt is supported. Not supported otherwise.

**RAS-UE-support****Type**

bool

**Default value**

0x0

**Description**

If true, In-band uncorrected error reporting is supported. Not supported otherwise.

**RAS-UI-support****Type**

bool

**Default value**

0x0

**Description**

If true, error recovery interrupt for uncorrected errors is supported. Not supported otherwise.

**SPI-blocks****Type**

int

**Default value**

0x1e

**Description**

Number of SPI blocks supported by the IRI, each block contains 32 SPIs.

**affinity-width****Type**

string

**Default value**

"4.8.8.8"

**Description**

A dotted quad indicating the bitwidth of fields at each affinity level.

**chip-select-affinity-level****Type**

int

**Default value**

0x3

**Description**

Affinity level 2 or 3 can be used for chip select.

**clear-ISPENDR-bit-for-level-sensitive-interrupt-when-acknowledged****Type**

bool

**Default value**

0x0

**Description**

If true, acknowledgement of a level sensitive interrupt clears the corresponding bit in the ISPENDR register.

**enabled****Type**

bool

**Default value**

0x1

**Description**

Enable GICv3 functionality; when false the component is inactive.

**gicp-allow-ns-reset****Type**

bool

**Default value**

0x1

**Description**

If true, non-secure read/write access to GICP register is allowed at reset. Not allowed otherwise. This emulates gicp\_allow\_ns tie-off signal.

**gict-allow-ns-reset****Type**

bool

**Default value**

0x1

**Description**

If true, non-secure read/write access to GICT register is allowed at reset. Not allowed otherwise. This emulates gict\_allow\_ns tie-off signal.

**has-two-security-states****Type**

bool

**Default value**

0x1

**Description**

If true, has two security states.

**max-cores-supported-by-GCI****Type**

int

**Default value**

0x8

**Description**

GCI can support 1-64 cores. Maximum supported cores in GCI is configurable by device.

**print-memory-map****Type**

bool

**Default value**

0x0

**Description**

Print memory map to stdout.

**redistributor-group****Type**

string

**Default value**

-

Redistributor grouping information with affinity as JSON :

```
{
  "0": [
    "0.0.0.0",
    "0.0.0.1"
  ],
  "1": [
    "0.0.1.0",
    "0.0.1.1"
  ]
}
```

where RD with quad 0.0.0.0 and 0.0.0.1 belongs to RD group 0. All the RDs belong to one group when this parameter is not given.

**redistributor-group-file****Type**

string

**Default value**

-

File path to redistributor grouping information with affinity as JSON.

The file uses the same format as `redistributor-group` parameter.

**redistributor-power-managed-by-pwrr**

**Type**

bool

**Default value**

0x1

**Description**

GIC600 dedistributor power management is done by updating GICR\_PWRR register.

**reg-base**

**Type**

int

**Default value**

0x2c010000

**Description**

GIC-625 base address.

**reg-base-per-redistributor**

**Type**

string

**Default value**

""

Base address for each redistributor in the form:

```
0.0.0.0=0x2c010000, 0.0.0.1=0x2c020000
```

All redistributors must be specified and this overrides the `reg-base` parameter (except that `reg-base` will still be used for the top-level redistributor). If `reg-base-per-redistributor-file` is specified, this parameter is ignored.

**3.10.39 GIC625\_Filter**

GIC-625 IRI implementation: Single chip validation/filter component variant limited to 8 PE. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-998: IP revisions support

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

### About GIC625\_Filter

GIC625 and GIC625\_Filter are Generic Interrupt Controllers that handle interrupts from peripherals to cores and interrupts between cores in a single cluster of up to 8 cores. They support the GICv3 and GICv3.1 architectures.

GIC625\_Filter supports the following features:

- Grouping cores in GCI.
- LPI is disabled.
- Power Management updates such as:
  - GCI grouping.
  - GCI RDPowerDown support
  - Updating the GCI ID for the cluster.
  - GCI GICR\_PWRR register updates.
- Inversion of SPI and PPI inputs.
- Extended PPI.

Note

- Extended SPI is not supported.
- All implementation-specific registers and functionality are implemented.

### Iris and MTI instances for GIC625\_Filter

This model has the following Iris instances:

**Table 3-999: GIC625\_Filter Iris instances**

InstanceName	ComponentName
GIC625_Filter	GIC_IRI
GIC625_Filter.GICV3_ProtocolChecker	GICv3ProtocolChecker
GIC625_Filter.rd_0	GICv3RedistributorInternal
GIC625_Filter.rd_0_0	GICv3RedistributorInternal
GIC625_Filter.rd_0_0_0	GICv3RedistributorInternal
GIC625_Filter.rd_0_0_0_0	GICv3Redistributor
GIC625_Filter.rd_t1	GICv3Distributor

This model has the following MTI trace components:

**Table 3-1000: GIC625\_Filter MTI instances**

InstanceName	ComponentName
GIC625_Filter.GICV3_ProtocolChecker	GICv3ProtocolChecker

InstanceName	ComponentName
GIC625_Filter.rd_0	GICv3RedistributorInternal
GIC625_Filter.rd_0_0	GICv3RedistributorInternal
GIC625_Filter.rd_0_0_0	GICv3RedistributorInternal
GIC625_Filter.rd_0_0_0_0	GICv3Redistributor
GIC625_Filter.rd_tl	GICv3Distributor

## Ports for GIC625\_Filter

**Table 3-1001: Ports**

Name	Protocol	Type	Description
chip_id	Value	Slave	chip_id port used for multichip operation
cpu_active_s[8]	Signal	Slave	CPUActive pins.
po_reset	Signal	Slave	Reset.
ppi_in_0[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 0.
ppi_in_1[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 1.
ppi_in_2[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 2.
ppi_in_3[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 3.
ppi_in_4[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 4.
ppi_in_5[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 5.
ppi_in_6[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 6.
ppi_in_7[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 7.
pvbus_filtermiss_m	PVBus	Master	Memory bus out. Transactions not filtered by the component.
pvbus_m	PVBus	Master	Memory bus out: transactions generated by the IRI.
pvbus_s	PVBus	Slave	Memory bus in: memory-mapped register accesses are accepted on this interface.
redistributor_m[8]	GICv3Comms	Master	Input from and output to CPU interface.
reset	Signal	Slave	Reset.
spi_in[960]	Signal	Slave	Shared peripheral interrupts.
wake_request[8]	Signal	Master	Power management outputs.

## Parameters for GIC625\_Filter

### CPU-affinities

#### Type

string

#### Default value

0.0.0.0

#### Description

A comma separated list of dotted quads containing the affinities of all PEs connected to this IRI. If CPU-affinities-file is specified, this parameter is ignored.

**CPU-affinities-file****Type**

string

**Default value**

""

**Description**

A file containing comma separated list of dotted quads containing the affinities of all PEs connected to this IRI. If this parameter is specified, CPU-affinities parameter will be ignored even when it is given.

**IIDR****Type**

int

**Default value**

0x601043b

**Description**

GICD\_IIDR and GICR\_IIDR value.

**PPI-count****Type**

int

**Default value**

16

Selects the number of PPI available for each PE

**8**

id22-27,29,30

**12**

id 20-31

**16**

id 16-31

**RAS-CFI-support****Type**

bool

**Default value**

0x0

**Description**

If true, fault handling interrupt for corrected errors is supported. Not supported otherwise.

**RAS-FI-support****Type**

bool

**Default value**

0x0

**Description**

If true, fault handling interrupt is supported. Not supported otherwise.

**RAS-UE-support****Type**

bool

**Default value**

0x0

**Description**

If true, In-band uncorrected error reporting is supported. Not supported otherwise.

**RAS-UI-support****Type**

bool

**Default value**

0x0

**Description**

If true, error recovery interrupt for uncorrected errors is supported. Not supported otherwise.

**SPI-blocks****Type**

int

**Default value**

0x1e

**Description**

Number of SPI blocks supported by the IRI, each block contains 32 SPIs.

**affinity-width****Type**

string

**Default value**

"4.8.8.8"

**Description**

A dotted quad indicating the bitwidth of fields at each affinity level.

**chip-select-affinity-level****Type**

int

**Default value**

0x3

**Description**

Affinity level 2 or 3 can be used for chip select.

**clear-ISPENDR-bit-for-level-sensitive-interrupt-when-acknowledged****Type**

bool

**Default value**

0x0

**Description**

If true, acknowledgement of a level sensitive interrupt clears the corresponding bit in the ISPENDR register.

**enabled****Type**

bool

**Default value**

0x1

**Description**

Enable GICv3 functionality; when false the component is inactive.

**gicp-allow-ns-reset****Type**

bool

**Default value**

0x1

**Description**

If true, non-secure read/write access to GICP register is allowed at reset. Not allowed otherwise. This emulates gicp\_allow\_ns tie-off signal.

**gict-allow-ns-reset****Type**

bool

**Default value**

0x1

**Description**

If true, non-secure read/write access to GICT register is allowed at reset. Not allowed otherwise. This emulates gict\_allow\_ns tie-off signal.

**has-two-security-states****Type**

bool

**Default value**

0x1

**Description**

If true, has two security states.

**max-cores-supported-by-GCI****Type**

int

**Default value**

0x8

**Description**

GCI can support 1-64 cores. Maximum supported cores in GCI is configurable by device.

**print-memory-map****Type**

bool

**Default value**

0x0

**Description**

Print memory map to stdout.

**redistributor-group****Type**

string

**Default value**

-

Redistributor grouping information with affinity as JSON :

```
{
  "0":
    ["0.0.0.0",
     "0.0.0.1"],
```

```
"1":
  ["0.0.1.0",
   "0.0.1.1"]
}
```

where RD with quad 0.0.0.0 and 0.0.0.1 belongs to RD group 0. All the RDs belong to one group when this parameter is not given.

### **redistributor-group-file**

#### **Type**

string

#### **Default value**

-

File path to redistributor grouping information with affinity as JSON.

The file uses the same format as `redistributor-group` parameter.

### **redistributor-power-managed-by-pwrr**

#### **Type**

bool

#### **Default value**

0x1

#### **Description**

GIC600 dedistributor power management is done by updating GICR\_PWRR register.

### **reg-base**

#### **Type**

int

#### **Default value**

0x2c010000

#### **Description**

GIC-625 base address.

### **reg-base-per-redistributor**

#### **Type**

string

#### **Default value**

{}

Base address for each redistributor in the form:

```
0.0.0.0=0x2c010000, 0.0.0.1=0x2c020000
```

All redistributors must be specified and this overrides the `reg-base` parameter (except that `reg-base` will still be used for the top-level redistributor). If `reg-base-per-redistributor-file` is specified, this parameter is ignored.

### 3.10.40 GIC700

GIC-700 IRI implementation: Single/multi chip validation/filter component variant limited to 64 PE. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1002: IP revisions support**

Revision	Quality level
r0p0	Full support
r1p0	Full support
r2p0	Full support
r3p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### Changes in 11.29.19

Parameters added:

- `has_nmi`

#### About GIC700

GIC700 and GIC700\_Filter are minimal models of an Arm® GIC-700 Generic Interrupt Controller, suitable for single-chip or multichip systems. They support the following multichip operations:

- Multichip configuration through distributor registers
- SPI
- SGI
- Physical LPI
- Physical LPI command
- Virtual LPI
- Virtual LPI command

The models provide a simple configuration interface that allows designers to introduce GIC700-like functionality to systems, while only implementing the architectural behavior, as defined by the GICv3/GICv4 architecture.

All implementation-specific registers and functionality are implemented.

As with the other GIC components, there are two variants of the model with slightly different memory interfaces. Both GIC700 and GIC700\_Filter have a `pvbuss_s` port for register accesses and a `pvbuss_m` port for the LPI-related traffic from redistributors and the ITS.

In addition, the GIC700\_Filter variant has a `pvbuss_filtermiss_m` port, to which any transactions on the `pvbuss_s` port and not directed to a 4 KB page used by the GIC are forwarded unmodified. Such transactions are terminated in the component when using the GIC700 variant.

GIC700 and GIC700\_Filter support an extended interrupt range, with 64 more PPIs and 1024 more SPIs. To program additional interrupts, refer to the GICv3/GICv4 specification.

GIC700 and GIC700\_Filter support direct injection of virtual interrupts. This reduces the overhead of trapping to hypervisor for the generation of virtual interrupts. In the GICv3/GICv4 specification, direct injection is supported in two different versions, GICv4.0 and GICv4.1. GIC700 and GIC700\_Filter support GICv4.1.

It is recommended to use GIC700 instead of GIC700\_Filter in most cases.

The GIC700 model supports multiple revisions of the IP. By default, its behavior is set to the latest revision supported. Parameters can be used to enable or disable features that are specific to earlier revisions. The LCA (Local Cross-chip Addressing) feature which is added in r2p0 is disabled by default and is enabled by setting the parameter `enable-local-cross-chip-addressing` to true. The model's registers follow the specification for the latest IP revision supported.

Note

- Set the `FASTSIM_GIC_MEMORY_MAP` environment variable to 1 to print to stderr the memory map of any GICv3 or later models that are included in the platform being run.
- For writes to `GITS_TRANSLATE64R`, the MSIRewriter component can be used to create the correct data transactions based on the device ID. For more details about `GITS_TRANSLATE64R`, see [MSIRewriter](#).

## Limitations

- The following multichip operations are not yet supported:
  - vPE control.
  - Power control.
- There is no support for the VMOV command.
- Limited testing has been performed for multichip LPI operations, so the model might contain defects.
- One ITS is supported for each GIC for multichip operations.
- There is no support for VICM.

## MasterID, ExtendedID, and UserFlags

This table shows how this model encodes information in the `MasterID`, `ExtendedID`, and `UserFlags` bus attributes:

**Table 3-1003: MasterID, ExtendedID, and UserFlags**

PVBus attribute	Bits used	Property encoded	Notes
MasterID	31:0	Master ID that invoked the register access	–
ExtendedID	–	–	Not used
UserFlags	–	–	Not used

**Note**

The `pvbus_m` port does not use `MasterID`, `ExtendedID`, or `UserFlags`.

**Iris and MTI instances for GIC700**

This model has the following Iris instances:

**Table 3-1004: GIC700 Iris instances**

InstanceName	ComponentName
GIC700	GIC_IRI
GIC700.GICV3_ProtocolChecker	GICv3ProtocolChecker
GIC700.ITS0	GICv4InterruptTranslationService
GIC700.ITS0.bus_subordinate	PVBusSlave
GIC700.rd_0	GICv4RedistributorInternal
GIC700.rd_0_0	GICv4RedistributorInternal
GIC700.rd_0_0_0	GICv4RedistributorInternal
GIC700.rd_0_0_0_0	GICv3Redistributor
GIC700.rd_t1	GICv3Distributor

This model has the following MTI trace components:

**Table 3-1005: GIC700 MTI instances**

InstanceName	ComponentName
GIC700.GICV3_ProtocolChecker	GICv3ProtocolChecker
GIC700.ITS0	GICv4InterruptTranslationService
GIC700.ITS0.bus_subordinate	PVBusSlave
GIC700.rd_0	GICv4RedistributorInternal
GIC700.rd_0_0	GICv4RedistributorInternal
GIC700.rd_0_0_0	GICv4RedistributorInternal
GIC700.rd_0_0_0_0	GICv3Redistributor
GIC700.rd_t1	GICv3Distributor

## Ports for GIC700

Table 3-1006: Ports

Name	Protocol	Type	Description
axi_stream_msi_s[32]	PVBus	Slave	AXI Stream Interface ports for MSI (message-signalled interrupt) translation, in GIC-700. Typically the SMMU's TCU connects to this port for MSI.
chip_id	Value	Slave	chip_id port for multichip operation
cpu_active_s[256]	Signal	Slave	CPUActive pins.
cpu_wake_request[256]	Signal	Master	-
extended_ppi_in_0[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 0.
extended_ppi_in_1[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 1.
extended_ppi_in_10[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 10.
extended_ppi_in_100[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 100
extended_ppi_in_101[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 101
extended_ppi_in_102[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 102
extended_ppi_in_103[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 103
extended_ppi_in_104[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 104
extended_ppi_in_105[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 105
extended_ppi_in_106[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 106
extended_ppi_in_107[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 107
extended_ppi_in_108[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 108
extended_ppi_in_109[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 109
extended_ppi_in_11[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 11.
extended_ppi_in_110[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 110
extended_ppi_in_111[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 111
extended_ppi_in_112[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 112
extended_ppi_in_113[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 113
extended_ppi_in_114[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 114

Name	Protocol	Type	Description
extended_ppi_in_115[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 115
extended_ppi_in_116[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 116
extended_ppi_in_117[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 117
extended_ppi_in_118[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 118
extended_ppi_in_119[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 119
extended_ppi_in_12[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 12.
extended_ppi_in_120[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 120
extended_ppi_in_121[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 121
extended_ppi_in_122[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 122
extended_ppi_in_123[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 123
extended_ppi_in_124[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 124
extended_ppi_in_125[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 125
extended_ppi_in_126[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 126
extended_ppi_in_127[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 127
extended_ppi_in_128[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 128
extended_ppi_in_129[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 129
extended_ppi_in_13[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 13.
extended_ppi_in_130[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 130
extended_ppi_in_131[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 131
extended_ppi_in_132[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 132
extended_ppi_in_133[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 133
extended_ppi_in_134[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 134
extended_ppi_in_135[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 135

Name	Protocol	Type	Description
extended_ppi_in_136[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 136
extended_ppi_in_137[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 137
extended_ppi_in_138[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 138
extended_ppi_in_139[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 139
extended_ppi_in_14[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 14.
extended_ppi_in_140[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 140
extended_ppi_in_141[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 141
extended_ppi_in_142[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 142
extended_ppi_in_143[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 143
extended_ppi_in_144[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 144
extended_ppi_in_145[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 145
extended_ppi_in_146[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 146
extended_ppi_in_147[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 147
extended_ppi_in_148[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 148
extended_ppi_in_149[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 149
extended_ppi_in_15[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 15.
extended_ppi_in_150[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 150
extended_ppi_in_151[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 151
extended_ppi_in_152[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 152
extended_ppi_in_153[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 153
extended_ppi_in_154[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 154
extended_ppi_in_155[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 155
extended_ppi_in_156[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 156

Name	Protocol	Type	Description
extended_ppi_in_157[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 157
extended_ppi_in_158[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 158
extended_ppi_in_159[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 159
extended_ppi_in_16[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 16.
extended_ppi_in_160[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 160
extended_ppi_in_161[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 161
extended_ppi_in_162[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 162
extended_ppi_in_163[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 163
extended_ppi_in_164[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 164
extended_ppi_in_165[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 165
extended_ppi_in_166[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 166
extended_ppi_in_167[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 167
extended_ppi_in_168[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 168
extended_ppi_in_169[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 169
extended_ppi_in_17[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 17.
extended_ppi_in_170[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 170
extended_ppi_in_171[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 171
extended_ppi_in_172[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 172
extended_ppi_in_173[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 173
extended_ppi_in_174[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 174
extended_ppi_in_175[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 175
extended_ppi_in_176[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 176
extended_ppi_in_177[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 177

Name	Protocol	Type	Description
extended_ppi_in_178[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 178
extended_ppi_in_179[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 179
extended_ppi_in_18[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 18.
extended_ppi_in_180[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 180
extended_ppi_in_181[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 181
extended_ppi_in_182[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 182
extended_ppi_in_183[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 183
extended_ppi_in_184[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 184
extended_ppi_in_185[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 185
extended_ppi_in_186[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 186
extended_ppi_in_187[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 187
extended_ppi_in_188[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 188
extended_ppi_in_189[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 189
extended_ppi_in_19[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 19.
extended_ppi_in_190[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 190
extended_ppi_in_191[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 191
extended_ppi_in_192[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 192
extended_ppi_in_193[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 193
extended_ppi_in_194[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 194
extended_ppi_in_195[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 195
extended_ppi_in_196[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 196
extended_ppi_in_197[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 197
extended_ppi_in_198[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 198

Name	Protocol	Type	Description
extended_ppi_in_199[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 199
extended_ppi_in_2[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 2.
extended_ppi_in_20[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 20.
extended_ppi_in_200[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 200
extended_ppi_in_201[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 201
extended_ppi_in_202[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 202
extended_ppi_in_203[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 203
extended_ppi_in_204[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 204
extended_ppi_in_205[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 205
extended_ppi_in_206[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 206
extended_ppi_in_207[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 207
extended_ppi_in_208[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 208
extended_ppi_in_209[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 209
extended_ppi_in_21[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 21.
extended_ppi_in_210[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 210
extended_ppi_in_211[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 211
extended_ppi_in_212[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 212
extended_ppi_in_213[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 213
extended_ppi_in_214[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 214
extended_ppi_in_215[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 215
extended_ppi_in_216[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 216
extended_ppi_in_217[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 217
extended_ppi_in_218[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 218

Name	Protocol	Type	Description
extended_ppi_in_219[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 219
extended_ppi_in_22[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 22.
extended_ppi_in_220[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 220
extended_ppi_in_221[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 221
extended_ppi_in_222[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 222
extended_ppi_in_223[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 223
extended_ppi_in_224[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 224
extended_ppi_in_225[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 225
extended_ppi_in_226[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 226
extended_ppi_in_227[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 227
extended_ppi_in_228[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 228
extended_ppi_in_229[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 229
extended_ppi_in_23[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 23.
extended_ppi_in_230[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 230
extended_ppi_in_231[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 231
extended_ppi_in_232[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 232
extended_ppi_in_233[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 233
extended_ppi_in_234[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 234
extended_ppi_in_235[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 235
extended_ppi_in_236[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 236
extended_ppi_in_237[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 237
extended_ppi_in_238[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 238
extended_ppi_in_239[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 239

Name	Protocol	Type	Description
extended_ppi_in_24[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 24.
extended_ppi_in_240[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 240
extended_ppi_in_241[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 241
extended_ppi_in_242[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 242
extended_ppi_in_243[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 243
extended_ppi_in_244[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 244
extended_ppi_in_245[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 245
extended_ppi_in_246[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 246
extended_ppi_in_247[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 247
extended_ppi_in_248[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 248
extended_ppi_in_249[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 249
extended_ppi_in_25[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 25.
extended_ppi_in_250[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 250
extended_ppi_in_251[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 251
extended_ppi_in_252[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 252
extended_ppi_in_253[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 253
extended_ppi_in_254[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 254
extended_ppi_in_255[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 255
extended_ppi_in_26[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 26.
extended_ppi_in_27[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 27.
extended_ppi_in_28[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 28.
extended_ppi_in_29[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 29.
extended_ppi_in_3[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 3.

Name	Protocol	Type	Description
extended_ppi_in_30[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 30.
extended_ppi_in_31[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 31.
extended_ppi_in_32[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 32.
extended_ppi_in_33[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 33.
extended_ppi_in_34[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 34.
extended_ppi_in_35[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 35.
extended_ppi_in_36[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 36.
extended_ppi_in_37[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 37.
extended_ppi_in_38[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 38.
extended_ppi_in_39[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 39.
extended_ppi_in_4[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 4.
extended_ppi_in_40[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 40.
extended_ppi_in_41[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 41.
extended_ppi_in_42[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 42.
extended_ppi_in_43[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 43.
extended_ppi_in_44[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 44.
extended_ppi_in_45[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 45.
extended_ppi_in_46[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 46.
extended_ppi_in_47[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 47.
extended_ppi_in_48[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 48.
extended_ppi_in_49[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 49.
extended_ppi_in_5[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 5.
extended_ppi_in_50[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 50.

Name	Protocol	Type	Description
extended_ppi_in_51[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 51.
extended_ppi_in_52[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 52.
extended_ppi_in_53[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 53.
extended_ppi_in_54[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 54.
extended_ppi_in_55[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 55.
extended_ppi_in_56[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 56.
extended_ppi_in_57[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 57.
extended_ppi_in_58[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 58.
extended_ppi_in_59[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 59.
extended_ppi_in_6[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 6.
extended_ppi_in_60[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 60.
extended_ppi_in_61[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 61.
extended_ppi_in_62[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 62.
extended_ppi_in_63[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 63.
extended_ppi_in_64[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 64
extended_ppi_in_65[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 65
extended_ppi_in_66[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 66
extended_ppi_in_67[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 67
extended_ppi_in_68[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 68
extended_ppi_in_69[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 69
extended_ppi_in_7[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 7.
extended_ppi_in_70[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 70
extended_ppi_in_71[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 71

Name	Protocol	Type	Description
extended_ppi_in_72[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 72
extended_ppi_in_73[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 73
extended_ppi_in_74[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 74
extended_ppi_in_75[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 75
extended_ppi_in_76[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 76
extended_ppi_in_77[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 77
extended_ppi_in_78[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 78
extended_ppi_in_79[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 79
extended_ppi_in_8[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 8.
extended_ppi_in_80[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 80
extended_ppi_in_81[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 81
extended_ppi_in_82[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 82
extended_ppi_in_83[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 83
extended_ppi_in_84[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 84
extended_ppi_in_85[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 85
extended_ppi_in_86[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 86
extended_ppi_in_87[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 87
extended_ppi_in_88[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 88
extended_ppi_in_89[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 89
extended_ppi_in_9[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 9.
extended_ppi_in_90[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 90
extended_ppi_in_91[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 91
extended_ppi_in_92[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 92

Name	Protocol	Type	Description
extended_ppi_in_93[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 93
extended_ppi_in_94[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 94
extended_ppi_in_95[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 95
extended_ppi_in_96[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 96
extended_ppi_in_97[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 97
extended_ppi_in_98[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 98
extended_ppi_in_99[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 99
extended_spi_in[1024]	Signal	Slave	Extended Shared peripheral interrupts.
icdrt_out	PVBus	Master	AXI Stream Interface. This is used only when local cross chip addressing is enabled at the moment
icrdt_in	PVBus	Slave	-
po_reset	Signal	Slave	Resets.
ppi_in_0[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 0.
ppi_in_1[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 1.
ppi_in_10[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 10.
ppi_in_100[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 100
ppi_in_101[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 101
ppi_in_102[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 102
ppi_in_103[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 103
ppi_in_104[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 104
ppi_in_105[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 105
ppi_in_106[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 106
ppi_in_107[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 107
ppi_in_108[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 108
ppi_in_109[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 109
ppi_in_11[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 11.
ppi_in_110[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 110
ppi_in_111[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 111
ppi_in_112[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 112
ppi_in_113[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 113
ppi_in_114[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 114
ppi_in_115[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 115
ppi_in_116[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 116
ppi_in_117[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 117

Name	Protocol	Type	Description
ppi_in_118[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 118
ppi_in_119[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 119
ppi_in_12[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 12.
ppi_in_120[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 120
ppi_in_121[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 121
ppi_in_122[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 122
ppi_in_123[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 123
ppi_in_124[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 124

ppi_in_126[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 126
ppi_in_127[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 127
ppi_in_128[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 128
ppi_in_129[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 129
ppi_in_13[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 13.
ppi_in_130[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 130
ppi_in_131[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 131
ppi_in_132[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 132
ppi_in_133[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 133
ppi_in_134[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 134
ppi_in_135[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 135
ppi_in_136[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 136
ppi_in_137[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 137
ppi_in_138[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 138
ppi_in_139[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 139
ppi_in_14[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 14.
ppi_in_140[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 140
ppi_in_141[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 141
ppi_in_142[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 142
ppi_in_143[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 143
ppi_in_144[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 144
ppi_in_145[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 145
ppi_in_146[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 146
ppi_in_147[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 147
ppi_in_148[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 148
ppi_in_149[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 149
ppi_in_15[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 15.
ppi_in_150[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 150
ppi_in_151[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 151
ppi_in_152[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 152

Name	Protocol	Type	Description
ppi_in_153[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 153
ppi_in_154[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 154
ppi_in_155[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 155
ppi_in_156[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 156
ppi_in_157[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 157
ppi_in_158[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 158
ppi_in_159[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 159
ppi_in_16[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 16.
ppi_in_160[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 160
ppi_in_161[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 161
ppi_in_162[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 162
ppi_in_163[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 163
ppi_in_164[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 164
ppi_in_165[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 165
ppi_in_166[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 166
ppi_in_167[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 167
ppi_in_168[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 168
ppi_in_169[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 169
ppi_in_17[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 17.
ppi_in_170[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 170
ppi_in_171[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 171
ppi_in_172[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 172
ppi_in_173[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 173
ppi_in_174[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 174
ppi_in_175[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 175
ppi_in_176[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 176
ppi_in_177[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 177
ppi_in_178[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 178
ppi_in_179[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 179
ppi_in_18[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 18.
ppi_in_180[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 180
ppi_in_181[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 181
ppi_in_182[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 182
ppi_in_183[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 183
ppi_in_184[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 184
ppi_in_185[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 185
ppi_in_186[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 186
ppi_in_187[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 187
ppi_in_188[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 188

Name	Protocol	Type	Description
ppi_in_189[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 189
ppi_in_19[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 19.
ppi_in_190[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 190
ppi_in_191[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 191
ppi_in_192[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 192
ppi_in_193[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 193
ppi_in_194[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 194
ppi_in_195[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 195
ppi_in_196[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 196
ppi_in_197[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 197
ppi_in_198[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 198
ppi_in_199[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 199
ppi_in_2[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 2.
ppi_in_20[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 20.
ppi_in_200[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 200
ppi_in_201[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 201
ppi_in_202[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 202
ppi_in_203[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 203
ppi_in_204[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 204
ppi_in_205[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 205
ppi_in_206[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 206
ppi_in_207[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 207
ppi_in_208[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 208
ppi_in_209[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 209
ppi_in_21[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 21.
ppi_in_210[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 210
ppi_in_211[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 211
ppi_in_212[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 212
ppi_in_213[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 213
ppi_in_214[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 214
ppi_in_215[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 215
ppi_in_216[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 216
ppi_in_217[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 217
ppi_in_218[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 218
ppi_in_219[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 219
ppi_in_22[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 22.
ppi_in_220[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 220
ppi_in_221[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 221
ppi_in_222[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 222

Name	Protocol	Type	Description
ppi_in_223[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 223
ppi_in_224[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 224
ppi_in_225[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 225
ppi_in_226[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 226
ppi_in_227[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 227
ppi_in_228[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 228
ppi_in_229[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 229
ppi_in_23[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 23.
ppi_in_230[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 230
ppi_in_231[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 231
ppi_in_232[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 232
ppi_in_233[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 233
ppi_in_234[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 234
ppi_in_235[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 235
ppi_in_236[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 236
ppi_in_237[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 237
ppi_in_238[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 238
ppi_in_239[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 239
ppi_in_24[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 24.
ppi_in_240[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 240
ppi_in_241[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 241
ppi_in_242[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 242
ppi_in_243[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 243
ppi_in_244[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 244
ppi_in_245[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 245
ppi_in_246[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 246
ppi_in_247[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 247
ppi_in_248[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 248
ppi_in_249[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 249
ppi_in_25[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 25.
ppi_in_250[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 250
ppi_in_251[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 251
ppi_in_252[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 252
ppi_in_253[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 253
ppi_in_254[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 254
ppi_in_255[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 255
ppi_in_26[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 26.
ppi_in_27[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 27.
ppi_in_28[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 28.

Name	Protocol	Type	Description
ppi_in_29[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 29.
ppi_in_3[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 3.
ppi_in_30[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 30.
ppi_in_31[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 31.
ppi_in_32[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 32.
ppi_in_33[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 33.
ppi_in_34[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 34.
ppi_in_35[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 35.
ppi_in_36[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 36.
ppi_in_37[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 37.
ppi_in_38[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 38.
ppi_in_39[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 39.
ppi_in_4[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 4.
ppi_in_40[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 40.
ppi_in_41[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 41.
ppi_in_42[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 42.
ppi_in_43[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 43.
ppi_in_44[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 44.
ppi_in_45[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 45.
ppi_in_46[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 46.
ppi_in_47[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 47.
ppi_in_48[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 48.
ppi_in_49[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 49.
ppi_in_5[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 5.
ppi_in_50[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 50.
ppi_in_51[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 51.
ppi_in_52[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 52.
ppi_in_53[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 53.
ppi_in_54[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 54.
ppi_in_55[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 55.
ppi_in_56[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 56.
ppi_in_57[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 57.
ppi_in_58[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 58.
ppi_in_59[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 59.
ppi_in_6[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 6.
ppi_in_60[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 60.
ppi_in_61[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 61.
ppi_in_62[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 62.
ppi_in_63[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 63.

Name	Protocol	Type	Description
ppi_in_64[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 64
ppi_in_65[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 65
ppi_in_66[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 66
ppi_in_67[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 67
ppi_in_68[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 68
ppi_in_69[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 69
ppi_in_7[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 7.
ppi_in_70[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 70
ppi_in_71[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 71
ppi_in_72[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 72
ppi_in_73[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 73
ppi_in_74[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 74
ppi_in_75[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 75
ppi_in_76[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 76
ppi_in_77[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 77
ppi_in_78[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 78
ppi_in_79[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 79
ppi_in_8[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 8.
ppi_in_80[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 80
ppi_in_81[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 81
ppi_in_82[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 82
ppi_in_83[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 83
ppi_in_84[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 84
ppi_in_85[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 85
ppi_in_86[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 86
ppi_in_87[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 87
ppi_in_88[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 88
ppi_in_89[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 89
ppi_in_9[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 9.
ppi_in_90[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 90
ppi_in_91[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 91
ppi_in_92[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 92
ppi_in_93[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 93
ppi_in_94[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 94
ppi_in_95[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 95
ppi_in_96[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 96
ppi_in_97[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 97
ppi_in_98[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 98
ppi_in_99[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 99

Name	Protocol	Type	Description
pvbus_m	PVBus	Master	Memory bus out: transactions generated by the IRI.
pvbus_s	PVBus	Slave	Memory bus in: memory-mapped register accesses are accepted on this interface.
redistributor_m[256]	GICv3Comms	Master	Input from and output to CPU interface.
reset	Signal	Slave	Resets.
spi_in[960]	Signal	Slave	Shared peripheral interrupts.
wake_request[256]	Signal	Master	Power management outputs.

## Parameters for GIC700

### CPU-affinities

#### Type

string

#### Default value

0.0.0.0

#### Description

A comma separated list of dotted quads containing the affinities of all PEs connected to this IRI. If CPU-affinities-file is specified, this parameter is ignored.

### CPU-affinities-file

#### Type

string

#### Default value

""

#### Description

A file containing comma separated list of dotted quads containing the affinities of all PEs connected to this IRI. If this parameter is specified, CPU-affinities parameter will be ignored even when it is given.

### GICD\_CTLR\_DS-1-means-secure-only

#### Type

bool

#### Default value

0x0

#### Description

If GICD\_CTLR.DS=1, GICD supports a single security state which is secure if this is true, otherwise is non-secure.

### GICD\_TYPER2

#### Type

int

**Default value**

0x0

**Description**

GICD\_TYPER2 value containing VID and VIL to define the width of vPEID for GICv4.1.

**IIDR****Type**

int

**Default value**

0x403043b

**Description**

GICD\_IIDR and GICR\_IIDR value.

**ITS-ID-bits****Type**

int

**Default value**

0x10

**Description**

Number of interrupt bits supported by ITS.

**ITS-collection-ID-bits****Type**

int

**Default value**

0x8

**Description**

Number of collection bits supported by ITS (optional parameter, 0 => 16bits support and GITS\_TYPER.CIL=0).

**ITS-count****Type**

int

**Default value**

0x1

**Description**

Number of Interrupt Translation Services to be instantiated (0=none).

**ITS-device-bits****Type**

int

**Default value**

0x10

**Description**

Number of bits supported for ITS device IDs.

**ITS-enable-itt-address-verification****Type**

bool

**Default value**

0x0

**Description**

If true, a transaction will be sent to ITT Address for verification.

**ITS-hardware-collection-count****Type**

int

**Default value**

0x0

**Description**

Number of hardware collections held exclusively in the ITS.

**ITS-shared-vPE-table****Type**

int

**Default value**

0x0

**Description**

Number of affinity levels to which the vPE configuration table is shared. This parameter is valid when has-gicv4.1 is true.

**ITS-vmovp-bit****Type**

bool

**Default value**

0x0

**Description**

Device supports software issuing a VMOVP to only one of the ITSs that has a mapping for a vPE. The device itself ensures synchronization of the VMOVP command across all ITSs that have mapping for that vPE.

**PPI-count****Type**

int

**Default value**

16

Selects the number of PPI available for each PE

**8**

id22-27,29,30

**12**

id 20-31

**16**

id 16-31

**SPI-blocks****Type**

int

**Default value**

0x3e

**Description**

Number of SPI blocks supported by the IRI, each block contains 32 SPIs.

**add-output-cpu-wake-request-signal-from-redistributor****Type**

bool

**Default value**

0x0

**Description**

if true, the redistributor will have the output signal cpu\_wake\_request from GIC to DSU and if false, the signals are not added to the redistributor.

**affinity-width****Type**

string

**Default value**

"4.8.8.8"

**Description**

A dotted quad indicating the bitwidth of fields at each affinity level.

**allow-LPIEN-clear****Type**

bool

**Default value**

0x1

**Description**

Allow RW behaviour on GICR\_CTLR.LPIEN instead of set once.

**chip-count****Type**

int

**Default value**

0x10

**Description**

The total number of chips supported.

**chip-id****Type**

int

**Default value**

0x0

**Description**

Chip ID when multichip operation is enabled.

**chip-select-affinity-level****Type**

int

**Default value**

0x3

**Description**

Affinity level 2 or 3 can be used for chip select.

**clear-ISPENDR-bit-for-level-sensitive-interrupt-when-acknowledged****Type**

bool

**Default value**

0x0

**Description**

If true, acknowledgement of a level sensitive interrupt clears the corresponding bit in the ISPENDR register.

**common-vPE-table-affinity****Type**

string

**Default value**

""

**Description**

Affinity value list in the form of 'a.b.c.d, e.f.g.h, etc' given to the ITS(s) (where a.b.c.d corresponds to ITS0, e.f.g.h corresponds to ITS1 and so on). Under an affinity value the vPE configuration table is shared among redistributors where the level to be shared is defined by ITS-shared-vPE-table. This parameter is valid when has-gicv4.1 is true.

**consolidators****Type**

string

**Default value**

""

Specify consolidators' base addresses, interrupt line counts and base interrupt IDs, in the form:

```
'baseAddr0:itlineCount0:baseINTID0, baseAddr1:itlineCount1:baseINTID1'
```

For example:

```
'0x3f100000:64:4096, 0x3f200000:64:4224'
```

The consolidators' count is inferred from the list (maximum of 4). If not specified, the component contains no consolidators.

**cross-chip-AMBA-is-ACE****Type**

bool

**Default value**

0x0

**Description**

Indicates the AMBA protocol that the cross-chip interface uses. If true, the cross-chip interface uses the ACE5-Lite protocol. Otherwise, it uses the AXI5-Stream protocol. This parameter is meaningful only if enable-multichip-operation is set.

**enable-local-cross-chip-addressing****Type**

bool

**Default value**

0x0

**Description**

If true, each distributor in a multichip system will use routing table address (ADDR) values programmed by local software, and will not be overwritten by the default chip. Otherwise, all the distributors will share the same routing table address values programmed in the default chip. This parameter is valid only if enable-multichip-operation is set.

**enabled****Type**

bool

**Default value**

0x1

**Description**

Enable GICv3 functionality; when false the component is inactive.

**extended-ppi-count****Type**

int

**Default value**

0x40

**Description**

Number of extended PPI supported.

**gicp-allow-ns-reset****Type**

bool

**Default value**

0x1

**Description**

If true, non-secure read/write access to GICP register is allowed at reset. Not allowed otherwise. This emulates gicp\_allow\_ns tie-off signal.

**gict-allow-ns-reset****Type**

bool

**Default value**

0x1

**Description**

If true, non-secure read/write access to GICT register is allowed at reset. Not allowed otherwise. This emulates gict\_allow\_ns tie-off signal.

**has-gicv4.1****Type**

bool

**Default value**

0x1

**Description**

Enable GICv4.1 functionality; when false the component is inactive.

**has-two-security-states****Type**

bool

**Default value**

0x1

**Description**

If true, has two security states.

**has\_nmi****Type**

bool

**Default value**

0x0

**Description**

Enable support for Non-maskable Interrupts (NMIs). (FEAT\_GICv3\_NMI).

**max-cores-supported-by-GCI****Type**

int

**Default value**

0x8

**Description**

GCI can support 1-64 cores. Maximum supported cores in GCI is configurable by device.

**max-pe-on-chip****Type**

int

**Default value**

0x4

**Description**

Maximum number of cores on any single chip. This will be used to identify the target chip and core.

**multichip-threaded-dgi****Type**

bool

**Default value**

0x1

**Description**

Enable sending multichip DGI messages in a separate thread. This parameter is valid only if enable-multichip-operation is set.

**output\_attributes****Type**

string

**Default value**

"ExtendedID[62:55]=MPAM\_PMG, ExtendedID[54:39]=MPAM\_PARTID,  
ExtendedID[38]=MPAM\_NS"

**Description**

User-defined transform to be applied to bus attributes like MasterID, ExtendedID or UserFlags. Currently, only works for MPAM Attributes encoding into bus attributes.

**print-memory-map****Type**

bool

**Default value**

0x0

**Description**

Print memory map to stdout.

**prog-mpidr****Type**

unsigned

**Default value**

0

Whether software or hardware can remove cores from a GIC configuration.

**0**

none

**1**

prog - Secure software to remove cores during the boot up of a system.

**2**

strap - enables hardware to remove cores as GIC exits reset

**redistributor-group****Type**

string

**Default value**

-

Redistributor grouping information with affinity as JSON :

```
{
  "0": [
    "0.0.0.0",
    "0.0.0.1"
  ],
  "1": [
    "0.0.1.0",
    "0.0.1.1"
  ]
}
```

where RD with quad 0.0.0.0 and 0.0.0.1 belongs to RD group 0. All the RDs belong to one group when this parameter is not given.

**redistributor-group-file****Type**

string

**Default value**

-

File path to redistributor grouping information with affinity as JSON.

The file uses the same format as `redistributor-group` parameter.

**redistributor-power-managed-by-pwrr****Type**

bool

**Default value**  
0x1

**Description**  
GIC-700 dedistributor power management is done by updating GICR\_PWRR register.

**reg-base**

**Type**  
int

**Default value**  
0x2c010000

**Description**  
GIC-700 base address.

3.10.41 GIC700\_Filter

GIC-700 IRI implementation: Single/multi chip validation/filter component variant limited to 64 PE. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-1007: IP revisions support

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**Changes in 11.29.19**

Parameters added:

- has\_nmi

**About GIC700\_Filter**

GIC700 and GIC700\_Filter are minimal models of an Arm&reg GIC-700 Generic Interrupt Controller, suitable for single-chip or multichip systems. They support the following multichip operations:

- Multichip configuration through distributor registers.
- SPI.
- SGL.
- Physical LPI.
- Physical LPI command.
- Virtual LPI.
- Virtual LPI command.

The models provide a simple configuration interface that allows designers to introduce GIC700-like functionality to systems, while only implementing the architectural behavior, as defined by the GICv3/GICv4 architecture.

All implementation-specific registers and functionality are implemented.

As with the other GIC components, there are two variants of the model with slightly different memory interfaces. Both GIC700 and GIC700\_Filter have a `pvbus_s` port for register accesses and a `pvbus_m` port for the LPI-related traffic from redistributors and the ITS.

In addition, the GIC700\_Filter variant has a `pvbus_filtermiss_m` port, to which any transactions on the `pvbus_s` port and not directed to a 4 KB page used by the GIC are forwarded unmodified. Such transactions are terminated in the component when using the GIC700 variant.

GIC700 and GIC700\_Filter support an extended interrupt range, with 64 more PPIs and 1024 more SPIs. To program additional interrupts, refer to the GICv3/GICv4 specification.

GIC700 and GIC700\_Filter support direct injection of virtual interrupts. This reduces the overhead of trapping to hypervisor for the generation of virtual interrupts. In the GICv3/GICv4 specification, direct injection is supported in two different versions, GICv4.0 and GICv4.1. GIC700 and GIC700\_Filter support GICv4.1.

It is recommended to use GIC700 instead of GIC700\_Filter in most cases.

The GIC700 model supports multiple revisions of the IP. By default, its behavior is set to the latest revision supported. Parameters can be used to enable or disable features that are specific to earlier revisions. The LCA (Local Cross-chip Addressing) feature which is added in r2p0 is disabled by default and is enabled by setting the parameter `enable-local-cross-chip-addressing` to true. The model's registers follow the specification for the latest IP revision supported.

Note

- Set the FASTSIM\_GIC\_MEMORY\_MAP environment variable to 1 to print to stderr the memory map of any GICv3 or later models that are included in the platform being run.
- For writes to `GITS_TRANSLATE64R`, the MSIRewriter component can be used to create the correct data transactions based on the device ID. For more details about `GITS_TRANSLATE64R`, see [MSIRewriter](#).

## Limitations

- The following multichip operations are not yet supported:
  - vPE control.
  - Power control.
- There is no support for the VMOV command.
- Limited testing has been performed for multichip LPI operations, so the model might contain defects.
- One ITS is supported for each GIC for multichip operations.

## MasterID, ExtendedID, and UserFlags

This table shows how this model encodes information in the `MasterID`, `ExtendedID`, and `UserFlags` bus attributes:

**Table 3-1008: MasterID, ExtendedID, and UserFlags**

PVBus attribute	Bits used	Property encoded	Notes
MasterID	31:0	Master ID that invoked the register access	–
ExtendedID	–	–	Not used
UserFlags	–	–	Not used

Note

The `pvbus_m` port does not use `MasterID`, `ExtendedID`, or `UserFlags`.

## Iris and MTI instances for GIC700\_Filter

This model has the following Iris instances:

**Table 3-1009: GIC700\_Filter Iris instances**

InstanceName	ComponentName
GIC700_Filter	GIC_IRI
GIC700_Filter.GICV3_ProtocolChecker	GICv3ProtocolChecker
GIC700_Filter.ITS0	GICv4InterruptTranslationService
GIC700_Filter.ITS0.bus_subordinate	PVBusSlave
GIC700_Filter.rd_0	GICv4RedistributorInternal
GIC700_Filter.rd_0_0	GICv4RedistributorInternal
GIC700_Filter.rd_0_0_0	GICv4RedistributorInternal
GIC700_Filter.rd_0_0_0_0	GICv3Redistributor
GIC700_Filter.rd_t1	GICv3Distributor

This model has the following MTI trace components:

**Table 3-1010: GIC700\_Filter MTI instances**

InstanceName	ComponentName
GIC700_Filter.GICV3_ProtocolChecker	GICv3ProtocolChecker
GIC700_Filter.ITS0	GICv4InterruptTranslationService
GIC700_Filter.ITS0.bus_subordinate	PVBusSlave
GIC700_Filter.rd_0	GICv4RedistributorInternal
GIC700_Filter.rd_0_0	GICv4RedistributorInternal
GIC700_Filter.rd_0_0_0	GICv4RedistributorInternal
GIC700_Filter.rd_0_0_0_0	GICv3Redistributor
GIC700_Filter.rd_t1	GICv3Distributor

## Ports for GIC700\_Filter

Table 3-1011: Ports

Name	Protocol	Type	Description
axi_stream_msi_s[32]	PVBus	Slave	AXI Stream Interface ports for MSI (message-signalled interrupt) translation, in GIC-700. Typically the SMMU's TCU connects to this port for MSI.
chip_id	Value	Slave	chip_id port for multichip operation
cpu_active_s[256]	Signal	Slave	CPUActive pins.
extended_ppi_in_0[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 0.
extended_ppi_in_1[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 1.
extended_ppi_in_10[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 10.
extended_ppi_in_100[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 100
extended_ppi_in_101[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 101
extended_ppi_in_102[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 102
extended_ppi_in_103[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 103
extended_ppi_in_104[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 104
extended_ppi_in_105[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 105
extended_ppi_in_106[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 106
extended_ppi_in_107[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 107
extended_ppi_in_108[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 108
extended_ppi_in_109[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 109
extended_ppi_in_11[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 11.
extended_ppi_in_110[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 110
extended_ppi_in_111[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 111
extended_ppi_in_112[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 112
extended_ppi_in_113[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 113
extended_ppi_in_114[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 114
extended_ppi_in_115[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 115

Name	Protocol	Type	Description
extended_ppi_in_116[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 116
extended_ppi_in_117[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 117
extended_ppi_in_118[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 118
extended_ppi_in_119[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 119
extended_ppi_in_12[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 12.
extended_ppi_in_120[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 120
extended_ppi_in_121[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 121
extended_ppi_in_122[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 122
extended_ppi_in_123[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 123
extended_ppi_in_124[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 124
extended_ppi_in_125[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 125
extended_ppi_in_126[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 126
extended_ppi_in_127[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 127
extended_ppi_in_128[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 128
extended_ppi_in_129[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 129
extended_ppi_in_13[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 13.
extended_ppi_in_130[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 130
extended_ppi_in_131[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 131
extended_ppi_in_132[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 132
extended_ppi_in_133[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 133
extended_ppi_in_134[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 134
extended_ppi_in_135[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 135
extended_ppi_in_136[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 136

Name	Protocol	Type	Description
extended_ppi_in_137[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 137
extended_ppi_in_138[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 138
extended_ppi_in_139[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 139
extended_ppi_in_14[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 14.
extended_ppi_in_140[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 140
extended_ppi_in_141[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 141
extended_ppi_in_142[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 142
extended_ppi_in_143[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 143
extended_ppi_in_144[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 144
extended_ppi_in_145[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 145
extended_ppi_in_146[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 146
extended_ppi_in_147[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 147
extended_ppi_in_148[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 148
extended_ppi_in_149[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 149
extended_ppi_in_15[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 15.
extended_ppi_in_150[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 150
extended_ppi_in_151[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 151
extended_ppi_in_152[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 152
extended_ppi_in_153[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 153
extended_ppi_in_154[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 154
extended_ppi_in_155[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 155
extended_ppi_in_156[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 156
extended_ppi_in_157[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 157

Name	Protocol	Type	Description
extended_ppi_in_158[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 158
extended_ppi_in_159[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 159
extended_ppi_in_16[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 16.
extended_ppi_in_160[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 160
extended_ppi_in_161[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 161
extended_ppi_in_162[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 162
extended_ppi_in_163[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 163
extended_ppi_in_164[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 164
extended_ppi_in_165[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 165
extended_ppi_in_166[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 166
extended_ppi_in_167[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 167
extended_ppi_in_168[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 168
extended_ppi_in_169[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 169
extended_ppi_in_17[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 17.
extended_ppi_in_170[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 170
extended_ppi_in_171[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 171
extended_ppi_in_172[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 172
extended_ppi_in_173[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 173
extended_ppi_in_174[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 174
extended_ppi_in_175[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 175
extended_ppi_in_176[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 176
extended_ppi_in_177[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 177
extended_ppi_in_178[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 178

Name	Protocol	Type	Description
extended_ppi_in_179[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 179
extended_ppi_in_18[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 18.
extended_ppi_in_180[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 180
extended_ppi_in_181[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 181
extended_ppi_in_182[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 182
extended_ppi_in_183[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 183
extended_ppi_in_184[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 184
extended_ppi_in_185[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 185
extended_ppi_in_186[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 186
extended_ppi_in_187[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 187
extended_ppi_in_188[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 188
extended_ppi_in_189[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 189
extended_ppi_in_19[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 19.
extended_ppi_in_190[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 190
extended_ppi_in_191[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 191
extended_ppi_in_192[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 192
extended_ppi_in_193[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 193
extended_ppi_in_194[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 194
extended_ppi_in_195[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 195
extended_ppi_in_196[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 196
extended_ppi_in_197[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 197
extended_ppi_in_198[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 198
extended_ppi_in_199[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 199

Name	Protocol	Type	Description
extended_ppi_in_2[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 2.
extended_ppi_in_20[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 20.
extended_ppi_in_200[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 200
extended_ppi_in_201[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 201
extended_ppi_in_202[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 202
extended_ppi_in_203[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 203
extended_ppi_in_204[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 204
extended_ppi_in_205[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 205
extended_ppi_in_206[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 206
extended_ppi_in_207[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 207
extended_ppi_in_208[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 208
extended_ppi_in_209[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 209
extended_ppi_in_21[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 21.
extended_ppi_in_210[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 210
extended_ppi_in_211[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 211
extended_ppi_in_212[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 212
extended_ppi_in_213[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 213
extended_ppi_in_214[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 214
extended_ppi_in_215[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 215
extended_ppi_in_216[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 216
extended_ppi_in_217[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 217
extended_ppi_in_218[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 218
extended_ppi_in_219[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 219

Name	Protocol	Type	Description
extended_ppi_in_22[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 22.
extended_ppi_in_220[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 220
extended_ppi_in_221[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 221
extended_ppi_in_222[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 222
extended_ppi_in_223[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 223
extended_ppi_in_224[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 224
extended_ppi_in_225[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 225
extended_ppi_in_226[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 226
extended_ppi_in_227[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 227
extended_ppi_in_228[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 228
extended_ppi_in_229[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 229
extended_ppi_in_23[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 23.
extended_ppi_in_230[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 230
extended_ppi_in_231[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 231
extended_ppi_in_232[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 232
extended_ppi_in_233[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 233
extended_ppi_in_234[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 234
extended_ppi_in_235[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 235
extended_ppi_in_236[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 236
extended_ppi_in_237[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 237
extended_ppi_in_238[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 238
extended_ppi_in_239[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 239
extended_ppi_in_24[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 24.

Name	Protocol	Type	Description
extended_ppi_in_240[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 240
extended_ppi_in_241[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 241
extended_ppi_in_242[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 242
extended_ppi_in_243[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 243
extended_ppi_in_244[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 244
extended_ppi_in_245[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 245
extended_ppi_in_246[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 246
extended_ppi_in_247[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 247
extended_ppi_in_248[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 248
extended_ppi_in_249[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 249
extended_ppi_in_25[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 25.
extended_ppi_in_250[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 250
extended_ppi_in_251[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 251
extended_ppi_in_252[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 252
extended_ppi_in_253[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 253
extended_ppi_in_254[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 254
extended_ppi_in_255[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 255
extended_ppi_in_26[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 26.
extended_ppi_in_27[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 27.
extended_ppi_in_28[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 28.
extended_ppi_in_29[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 29.
extended_ppi_in_3[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 3.
extended_ppi_in_30[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 30.

Name	Protocol	Type	Description
extended_ppi_in_31[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 31.
extended_ppi_in_32[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 32.
extended_ppi_in_33[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 33.
extended_ppi_in_34[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 34.
extended_ppi_in_35[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 35.
extended_ppi_in_36[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 36.
extended_ppi_in_37[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 37.
extended_ppi_in_38[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 38.
extended_ppi_in_39[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 39.
extended_ppi_in_4[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 4.
extended_ppi_in_40[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 40.
extended_ppi_in_41[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 41.
extended_ppi_in_42[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 42.
extended_ppi_in_43[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 43.
extended_ppi_in_44[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 44.
extended_ppi_in_45[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 45.
extended_ppi_in_46[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 46.
extended_ppi_in_47[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 47.
extended_ppi_in_48[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 48.
extended_ppi_in_49[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 49.
extended_ppi_in_5[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 5.
extended_ppi_in_50[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 50.
extended_ppi_in_51[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 51.

Name	Protocol	Type	Description
extended_ppi_in_52[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 52.
extended_ppi_in_53[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 53.
extended_ppi_in_54[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 54.
extended_ppi_in_55[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 55.
extended_ppi_in_56[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 56.
extended_ppi_in_57[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 57.
extended_ppi_in_58[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 58.
extended_ppi_in_59[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 59.
extended_ppi_in_6[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 6.
extended_ppi_in_60[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 60.
extended_ppi_in_61[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 61.
extended_ppi_in_62[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 62.
extended_ppi_in_63[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 63.
extended_ppi_in_64[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 64
extended_ppi_in_65[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 65
extended_ppi_in_66[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 66
extended_ppi_in_67[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 67
extended_ppi_in_68[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 68
extended_ppi_in_69[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 69
extended_ppi_in_7[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 7.
extended_ppi_in_70[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 70
extended_ppi_in_71[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 71
extended_ppi_in_72[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 72

Name	Protocol	Type	Description
extended_ppi_in_73[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 73
extended_ppi_in_74[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 74
extended_ppi_in_75[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 75
extended_ppi_in_76[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 76
extended_ppi_in_77[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 77
extended_ppi_in_78[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 78
extended_ppi_in_79[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 79
extended_ppi_in_8[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 8.
extended_ppi_in_80[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 80
extended_ppi_in_81[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 81
extended_ppi_in_82[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 82
extended_ppi_in_83[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 83
extended_ppi_in_84[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 84
extended_ppi_in_85[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 85
extended_ppi_in_86[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 86
extended_ppi_in_87[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 87
extended_ppi_in_88[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 88
extended_ppi_in_89[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 89
extended_ppi_in_9[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 9.
extended_ppi_in_90[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 90

ppi_in_107[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 107
ppi_in_108[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 108
ppi_in_109[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 109
ppi_in_11[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 11.
ppi_in_110[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 110
ppi_in_111[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 111
ppi_in_112[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 112
ppi_in_113[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 113
ppi_in_114[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 114
ppi_in_115[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 115
ppi_in_116[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 116
ppi_in_117[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 117
ppi_in_118[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 118
ppi_in_119[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 119

Name	Protocol	Type	Description
ppi_in_12[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 12.
ppi_in_120[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 120
ppi_in_121[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 121
ppi_in_122[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 122
ppi_in_123[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 123
ppi_in_124[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 124
ppi_in_125[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 125
ppi_in_126[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 126
ppi_in_127[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 127
ppi_in_128[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 128
ppi_in_129[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 129
ppi_in_13[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 13.
ppi_in_130[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 130
ppi_in_131[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 131
ppi_in_132[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 132
ppi_in_133[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 133
ppi_in_134[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 134
ppi_in_135[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 135
ppi_in_136[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 136
ppi_in_137[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 137
ppi_in_138[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 138
ppi_in_139[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 139
ppi_in_14[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 14.
ppi_in_140[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 140
ppi_in_141[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 141
ppi_in_142[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 142
ppi_in_143[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 143
ppi_in_144[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 144
ppi_in_145[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 145
ppi_in_146[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 146
ppi_in_147[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 147
ppi_in_148[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 148
ppi_in_149[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 149
ppi_in_15[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 15.
ppi_in_150[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 150
ppi_in_151[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 151
ppi_in_152[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 152
ppi_in_153[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 153
ppi_in_154[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 154

Name	Protocol	Type	Description
ppi_in_155[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 155
ppi_in_156[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 156
ppi_in_157[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 157
ppi_in_158[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 158
ppi_in_159[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 159
ppi_in_16[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 16.
ppi_in_160[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 160
ppi_in_161[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 161
ppi_in_162[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 162
ppi_in_163[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 163
ppi_in_164[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 164
ppi_in_165[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 165
ppi_in_166[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 166
ppi_in_167[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 167
ppi_in_168[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 168
ppi_in_169[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 169
ppi_in_17[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 17.
ppi_in_170[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 170
ppi_in_171[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 171
ppi_in_172[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 172
ppi_in_173[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 173
ppi_in_174[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 174
ppi_in_175[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 175
ppi_in_176[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 176
ppi_in_177[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 177
ppi_in_178[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 178
ppi_in_179[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 179
ppi_in_18[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 18.
ppi_in_180[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 180
ppi_in_181[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 181
ppi_in_182[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 182
ppi_in_183[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 183
ppi_in_184[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 184
ppi_in_185[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 185
ppi_in_186[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 186
ppi_in_187[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 187
ppi_in_188[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 188
ppi_in_189[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 189
ppi_in_19[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 19.

Name	Protocol	Type	Description
ppi_in_190[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 190
ppi_in_191[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 191
ppi_in_192[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 192
ppi_in_193[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 193
ppi_in_194[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 194
ppi_in_195[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 195
ppi_in_196[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 196
ppi_in_197[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 197
ppi_in_198[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 198
ppi_in_199[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 199
ppi_in_2[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 2.
ppi_in_20[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 20.
ppi_in_200[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 200
ppi_in_201[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 201
ppi_in_202[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 202
ppi_in_203[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 203
ppi_in_204[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 204
ppi_in_205[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 205
ppi_in_206[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 206
ppi_in_207[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 207
ppi_in_208[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 208
ppi_in_209[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 209
ppi_in_21[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 21.
ppi_in_210[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 210
ppi_in_211[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 211
ppi_in_212[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 212
ppi_in_213[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 213
ppi_in_214[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 214
ppi_in_215[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 215
ppi_in_216[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 216
ppi_in_217[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 217
ppi_in_218[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 218
ppi_in_219[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 219
ppi_in_22[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 22.
ppi_in_220[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 220
ppi_in_221[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 221
ppi_in_222[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 222
ppi_in_223[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 223
ppi_in_224[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 224

Name	Protocol	Type	Description
ppi_in_225[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 225
ppi_in_226[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 226
ppi_in_227[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 227
ppi_in_228[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 228
ppi_in_229[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 229
ppi_in_23[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 23.
ppi_in_230[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 230
ppi_in_231[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 231
ppi_in_232[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 232
ppi_in_233[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 233
ppi_in_234[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 234
ppi_in_235[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 235
ppi_in_236[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 236
ppi_in_237[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 237
ppi_in_238[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 238
ppi_in_239[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 239
ppi_in_24[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 24.
ppi_in_240[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 240
ppi_in_241[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 241
ppi_in_242[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 242
ppi_in_243[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 243
ppi_in_244[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 244
ppi_in_245[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 245
ppi_in_246[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 246
ppi_in_247[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 247
ppi_in_248[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 248
ppi_in_249[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 249
ppi_in_25[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 25.
ppi_in_250[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 250
ppi_in_251[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 251
ppi_in_252[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 252
ppi_in_253[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 253
ppi_in_254[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 254
ppi_in_255[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 255
ppi_in_26[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 26.
ppi_in_27[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 27.
ppi_in_28[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 28.
ppi_in_29[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 29.
ppi_in_3[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 3.

Name	Protocol	Type	Description
ppi_in_30[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 30.
ppi_in_31[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 31.
ppi_in_32[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 32.
ppi_in_33[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 33.
ppi_in_34[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 34.
ppi_in_35[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 35.
ppi_in_36[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 36.
ppi_in_37[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 37.
ppi_in_38[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 38.
ppi_in_39[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 39.
ppi_in_4[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 4.
ppi_in_40[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 40.
ppi_in_41[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 41.
ppi_in_42[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 42.
ppi_in_43[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 43.
ppi_in_44[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 44.
ppi_in_45[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 45.
ppi_in_46[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 46.
ppi_in_47[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 47.
ppi_in_48[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 48.
ppi_in_49[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 49.
ppi_in_5[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 5.
ppi_in_50[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 50.
ppi_in_51[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 51.
ppi_in_52[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 52.
ppi_in_53[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 53.
ppi_in_54[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 54.
ppi_in_55[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 55.
ppi_in_56[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 56.
ppi_in_57[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 57.
ppi_in_58[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 58.
ppi_in_59[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 59.
ppi_in_6[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 6.
ppi_in_60[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 60.
ppi_in_61[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 61.
ppi_in_62[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 62.
ppi_in_63[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 63.
ppi_in_64[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 64.
ppi_in_65[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 65.

Name	Protocol	Type	Description
ppi_in_66[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 66
ppi_in_67[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 67
ppi_in_68[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 68
ppi_in_69[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 69
ppi_in_7[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 7.
ppi_in_70[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 70
ppi_in_71[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 71
ppi_in_72[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 72
ppi_in_73[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 73
ppi_in_74[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 74
ppi_in_75[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 75
ppi_in_76[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 76
ppi_in_77[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 77
ppi_in_78[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 78
ppi_in_79[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 79
ppi_in_8[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 8.
ppi_in_80[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 80
ppi_in_81[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 81
ppi_in_82[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 82
ppi_in_83[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 83
ppi_in_84[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 84
ppi_in_85[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 85
ppi_in_86[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 86
ppi_in_87[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 87
ppi_in_88[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 88
ppi_in_89[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 89
ppi_in_9[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 9.
ppi_in_90[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 90
ppi_in_91[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 91
ppi_in_92[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 92
ppi_in_93[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 93
ppi_in_94[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 94
ppi_in_95[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 95
ppi_in_96[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 96
ppi_in_97[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 97
ppi_in_98[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 98
ppi_in_99[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 99
pvbus_filtermiss_m	PVBus	Master	Memory bus out. Transactions not filtered by the component.
pvbus_m	PVBus	Master	Memory bus out: transactions generated by the IRI.

Name	Protocol	Type	Description
pvbus_s	PVBus	Slave	Memory bus in: memory-mapped register accesses are accepted on this interface.
redistributor_m[256]	GICv3Comms	Master	Input from and output to CPU interface.
reset	Signal	Slave	Reset.
spi_in[960]	Signal	Slave	Shared peripheral interrupts.
wake_request[256]	Signal	Master	Power management outputs.

## Parameters for GIC700\_Filter

### CPU-affinities

#### Type

string

#### Default value

0.0.0.0

#### Description

A comma separated list of dotted quads containing the affinities of all PEs connected to this IRI. If CPU-affinities-file is specified, this parameter is ignored.

### CPU-affinities-file

#### Type

string

#### Default value

""

#### Description

A file containing comma separated list of dotted quads containing the affinities of all PEs connected to this IRI. If this parameter is specified, CPU-affinities parameter will be ignored even when it is given.

### GICD\_CTLR\_DS-1-means-secure-only

#### Type

bool

#### Default value

0x0

#### Description

If GICD\_CTLR.DS=1, GICD supports a single security state which is secure if this is true, otherwise is non-secure.

### GICD\_TYPER2

#### Type

int

**Default value**

0x0

**Description**

GICD\_TYPER2 value containing VID and VIL to define the width of vPEID for GICv4.1.

**IIDR****Type**

int

**Default value**

0x403043b

**Description**

GICD\_IIDR and GICR\_IIDR value.

**ITS-ID-bits****Type**

int

**Default value**

0x10

**Description**

Number of interrupt bits supported by ITS.

**ITS-collection-ID-bits****Type**

int

**Default value**

0x8

**Description**

Number of collection bits supported by ITS (optional parameter, 0 => 16bits support and GITS\_TYPER.CIL=0).

**ITS-count****Type**

int

**Default value**

0x1

**Description**

Number of Interrupt Translation Services to be instantiated (0=none).

**ITS-device-bits****Type**

int

**Default value**

0x10

**Description**

Number of bits supported for ITS device IDs.

**ITS-enable-itt-address-verification****Type**

bool

**Default value**

0x0

**Description**

If true, a transaction will be sent to ITT Address for verification.

**ITS-hardware-collection-count****Type**

int

**Default value**

0x0

**Description**

Number of hardware collections held exclusively in the ITS.

**ITS-shared-vPE-table****Type**

int

**Default value**

0x0

**Description**

Number of affinity levels to which the vPE configuration table is shared. This parameter is valid when has-gicv4.1 is true.

**ITS-vmovp-bit****Type**

bool

**Default value**

0x0

**Description**

Device supports software issuing a VMOVP to only one of the ITSs that has a mapping for a vPE. The device itself ensures synchronization of the VMOVP command across all ITSs that have mapping for that vPE.

**PPI-count****Type**

int

**Default value**

16

Selects the number of PPI available for each PE

**8**

id22-27,29,30

**12**

id 20-31

**16**

id 16-31

**SPI-blocks****Type**

int

**Default value**

0x3e

**Description**

Number of SPI blocks supported by the IRI, each block contains 32 SPIs.

**add-output-cpu-wake-request-signal-from-redistributor****Type**

bool

**Default value**

0x0

**Description**

if true, the redistributor will have the output signal cpu\_wake\_request from GIC to DSU and if false, the signals are not added to the redistributor.

**affinity-width****Type**

string

**Default value**

"4.8.8.8"

**Description**

A dotted quad indicating the bitwidth of fields at each affinity level.

**allow-LPIEN-clear****Type**

bool

**Default value**

0x1

**Description**

Allow RW behaviour on GICR\_CTLR.LPIEN instead of set once.

**chip-count****Type**

int

**Default value**

0x10

**Description**

The total number of chips supported.

**chip-id****Type**

int

**Default value**

0x0

**Description**

Chip ID when multichip operation is enabled.

**chip-select-affinity-level****Type**

int

**Default value**

0x3

**Description**

Affinity level 2 or 3 can be used for chip select.

**clear-ISPENDR-bit-for-level-sensitive-interrupt-when-acknowledged****Type**

bool

**Default value**

0x0

**Description**

If true, acknowledgement of a level sensitive interrupt clears the corresponding bit in the ISPENDR register.

**common-vPE-table-affinity****Type**

string

**Default value**

""

**Description**

Affinity value list in the form of 'a.b.c.d, e.f.g.h, etc' given to the ITS(s) (where a.b.c.d corresponds to ITS0, e.f.g.h corresponds to ITS1 and so on). Under an affinity value the vPE configuration table is shared among redistributors where the level to be shared is defined by ITS-shared-vPE-table. This parameter is valid when has-gicv4.1 is true.

**consolidators****Type**

string

**Default value**

""

Specify consolidators' base addresses, interrupt line counts and base interrupt IDs, in the form:

```
'baseAddr0:itlineCount0:baseINTID0, baseAddr1:itlineCount1:baseINTID1'
```

For example:

```
'0x3f100000:64:4096, 0x3f200000:64:4224'
```

The consolidators' count is inferred from the list (maximum of 4). If not specified, the component contains no consolidators.

**cross-chip-AMBA-is-ACE****Type**

bool

**Default value**

0x0

**Description**

Indicates the AMBA protocol that the cross-chip interface uses. If true, the cross-chip interface uses the ACE5-Lite protocol. Otherwise, it uses the AXI5-Stream protocol. This parameter is meaningful only if enable-multichip-operation is set.

**enable-local-cross-chip-addressing****Type**

bool

**Default value**

0x0

**Description**

If true, each distributor in a multichip system will use routing table address (ADDR) values programmed by local software, and will not be overwritten by the default chip. Otherwise, all the distributors will share the same routing table address values programmed in the default chip. This parameter is valid only if enable-multichip-operation is set.

**enabled****Type**

bool

**Default value**

0x1

**Description**

Enable GICv3 functionality; when false the component is inactive.

**extended-ppi-count****Type**

int

**Default value**

0x40

**Description**

Number of extended PPI supported.

**gicp-allow-ns-reset****Type**

bool

**Default value**

0x1

**Description**

If true, non-secure read/write access to GICP register is allowed at reset. Not allowed otherwise. This emulates gicp\_allow\_ns tie-off signal.

**gict-allow-ns-reset****Type**

bool

**Default value**

0x1

**Description**

If true, non-secure read/write access to GICT register is allowed at reset. Not allowed otherwise. This emulates gict\_allow\_ns tie-off signal.

**has-gicv4.1****Type**

bool

**Default value**

0x1

**Description**

Enable GICv4.1 functionality; when false the component is inactive.

**has-two-security-states****Type**

bool

**Default value**

0x1

**Description**

If true, has two security states.

**has\_nmi****Type**

bool

**Default value**

0x0

**Description**

Enable support for Non-maskable Interrupts (NMIs). (FEAT\_GICv3\_NMI).

**max-cores-supported-by-GCI****Type**

int

**Default value**

0x8

**Description**

GCI can support 1-64 cores. Maximum supported cores in GCI is configurable by device.

**max-pe-on-chip****Type**

int

**Default value**

0x4

**Description**

Maximum number of cores on any single chip. This will be used to identify the target chip and core.

**multichip-threaded-dgi****Type**

bool

**Default value**

0x1

**Description**

Enable sending multichip DGI messages in a separate thread. This parameter is valid only if enable-multichip-operation is set.

**output\_attributes****Type**

string

**Default value**

"ExtendedID[62:55]=MPAM\_PMG, ExtendedID[54:39]=MPAM\_PARTID,  
ExtendedID[38]=MPAM\_NS"

**Description**

User-defined transform to be applied to bus attributes like MasterID, ExtendedID or UserFlags. Currently, only works for MPAM Attributes encoding into bus attributes.

**print-memory-map****Type**

bool

**Default value**

0x0

**Description**

Print memory map to stdout.

**prog-mpidr****Type**

unsigned

**Default value**

0

Whether software or hardware can remove cores from a GIC configuration.

**0**

none

**1**

prog - Secure software to remove cores during the boot up of a system.

**2**

strap - enables hardware to remove cores as GIC exits reset

**redistributor-group****Type**

string

**Default value**

-

Redistributor grouping information with affinity as JSON :

```
{
  "0": [
    "0.0.0.0",
    "0.0.0.1"
  ],
  "1": [
    "0.0.1.0",
    "0.0.1.1"
  ]
}
```

where RD with quad 0.0.0.0 and 0.0.0.1 belongs to RD group 0. All the RDs belong to one group when this parameter is not given.

**redistributor-group-file****Type**

string

**Default value**

-

File path to redistributor grouping information with affinity as JSON.

The file uses the same format as `redistributor-group` parameter.

**redistributor-power-managed-by-pwrr****Type**

bool

**Default value**

0x1

**Description**

GIC-700 dedistributor power management is done by updating GICR\_PWRR register.

**reg-base****Type**

int

**Default value**

0x2c010000

**Description**

GIC-700 base address.

### 3.10.42 GIC720AE

GIC-720AE IRI implementation: Single/multi chip validation/filter component variant limited to 64 PE. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1012: IP revisions support**

Revision	Quality level
N/A	Preliminary support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**Changes in 11.29.19**

Parameters added:

- `has_nmi`
- `view-id-bits-offset`

**About GIC720AE**

The model has the same functionality as [GIC700](#), but in addition supports the following AE-specific features:

- GIC FMU
- Multiple views

It has the same limitations as GIC700.

**Iris and MTI instances for GIC720AE**

This model has the following Iris instances:

**Table 3-1013: GIC720AE Iris instances**

InstanceName	ComponentName
GIC720AE	GIC_IRI
GIC720AE.GICV3_ProtocolChecker	GICv3ProtocolChecker
GIC720AE.ITS0	GICv4InterruptTranslationService
GIC720AE.ITS0.bus_subordinate	PVBusSlave
GIC720AE.fmu	FMU
GIC720AE.fmu.pvbus_slave	PVBusSlave
GIC720AE.rd_0	GICv4RedistributorInternal
GIC720AE.rd_0_0	GICv4RedistributorInternal
GIC720AE.rd_0_0_0	GICv4RedistributorInternal
GIC720AE.rd_0_0_0_0	GICv3Redistributor
GIC720AE.rd_tl	GICv3Distributor

This model has the following MTI trace components:

**Table 3-1014: GIC720AE MTI instances**

InstanceName	ComponentName
GIC720AE.GICV3_ProtocolChecker	GICv3ProtocolChecker
GIC720AE.ITS0	GICv4InterruptTranslationService
GIC720AE.ITS0.bus_subordinate	PVBusSlave
GIC720AE.fmu	FMU
GIC720AE.fmu.pvbus_slave	PVBusSlave
GIC720AE.rd_0	GICv4RedistributorInternal
GIC720AE.rd_0_0	GICv4RedistributorInternal
GIC720AE.rd_0_0_0	GICv4RedistributorInternal
GIC720AE.rd_0_0_0_0	GICv3Redistributor
GIC720AE.rd_tl	GICv3Distributor

## Ports for GIC720AE

**Table 3-1015: Ports**

Name	Protocol	Type	Description
apb_bus	PVBus	Slave	FMU signals
axi_stream_msi_s[32]	PVBus	Slave	AXI Stream Interface ports for MSI (message-signalled interrupt) translation, in GIC-720AE. Typically the SMMU's TCU connects to this port for MSI.
chip_id	Value	Slave	chip_id port for multichip operation
cpu_active_s[256]	Signal	Slave	CPUActive pins.
cpu_wake_request[256]	Signal	Master	-
extended_ppi_in_0[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 0.

Name	Protocol	Type	Description
extended_ppi_in_1[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 1.
extended_ppi_in_10[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 10.
extended_ppi_in_100[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 100
extended_ppi_in_101[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 101
extended_ppi_in_102[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 102
extended_ppi_in_103[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 103
extended_ppi_in_104[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 104
extended_ppi_in_105[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 105
extended_ppi_in_106[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 106
extended_ppi_in_107[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 107
extended_ppi_in_108[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 108
extended_ppi_in_109[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 109
extended_ppi_in_11[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 11.
extended_ppi_in_110[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 110
extended_ppi_in_111[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 111
extended_ppi_in_112[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 112
extended_ppi_in_113[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 113
extended_ppi_in_114[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 114
extended_ppi_in_115[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 115
extended_ppi_in_116[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 116
extended_ppi_in_117[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 117
extended_ppi_in_118[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 118
extended_ppi_in_119[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 119

Name	Protocol	Type	Description
extended_ppi_in_12[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 12.
extended_ppi_in_120[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 120
extended_ppi_in_121[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 121
extended_ppi_in_122[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 122
extended_ppi_in_123[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 123
extended_ppi_in_124[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 124
extended_ppi_in_125[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 125
extended_ppi_in_126[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 126
extended_ppi_in_127[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 127
extended_ppi_in_128[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 128
extended_ppi_in_129[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 129
extended_ppi_in_13[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 13.
extended_ppi_in_130[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 130
extended_ppi_in_131[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 131
extended_ppi_in_132[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 132
extended_ppi_in_133[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 133
extended_ppi_in_134[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 134
extended_ppi_in_135[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 135
extended_ppi_in_136[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 136
extended_ppi_in_137[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 137
extended_ppi_in_138[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 138
extended_ppi_in_139[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 139
extended_ppi_in_14[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 14.

Name	Protocol	Type	Description
extended_ppi_in_140[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 140
extended_ppi_in_141[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 141
extended_ppi_in_142[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 142
extended_ppi_in_143[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 143
extended_ppi_in_144[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 144
extended_ppi_in_145[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 145
extended_ppi_in_146[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 146
extended_ppi_in_147[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 147
extended_ppi_in_148[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 148
extended_ppi_in_149[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 149
extended_ppi_in_15[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 15.
extended_ppi_in_150[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 150
extended_ppi_in_151[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 151
extended_ppi_in_152[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 152
extended_ppi_in_153[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 153
extended_ppi_in_154[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 154
extended_ppi_in_155[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 155
extended_ppi_in_156[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 156
extended_ppi_in_157[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 157
extended_ppi_in_158[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 158
extended_ppi_in_159[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 159
extended_ppi_in_16[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 16.
extended_ppi_in_160[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 160

Name	Protocol	Type	Description
extended_ppi_in_161[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 161
extended_ppi_in_162[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 162
extended_ppi_in_163[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 163
extended_ppi_in_164[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 164
extended_ppi_in_165[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 165
extended_ppi_in_166[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 166
extended_ppi_in_167[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 167
extended_ppi_in_168[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 168
extended_ppi_in_169[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 169
extended_ppi_in_17[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 17.
extended_ppi_in_170[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 170
extended_ppi_in_171[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 171
extended_ppi_in_172[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 172
extended_ppi_in_173[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 173
extended_ppi_in_174[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 174
extended_ppi_in_175[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 175
extended_ppi_in_176[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 176
extended_ppi_in_177[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 177
extended_ppi_in_178[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 178
extended_ppi_in_179[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 179
extended_ppi_in_18[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 18.
extended_ppi_in_180[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 180
extended_ppi_in_181[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 181

Name	Protocol	Type	Description
extended_ppi_in_182[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 182
extended_ppi_in_183[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 183
extended_ppi_in_184[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 184
extended_ppi_in_185[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 185
extended_ppi_in_186[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 186
extended_ppi_in_187[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 187
extended_ppi_in_188[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 188
extended_ppi_in_189[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 189
extended_ppi_in_19[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 19.
extended_ppi_in_190[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 190
extended_ppi_in_191[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 191

ppi_in_103[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 103
ppi_in_104[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 104
ppi_in_105[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 105
ppi_in_106[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 106
ppi_in_107[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 107
ppi_in_108[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 108
ppi_in_109[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 109
ppi_in_11[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 11.
ppi_in_110[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 110
ppi_in_111[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 111
ppi_in_112[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 112
ppi_in_113[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 113
ppi_in_114[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 114
ppi_in_115[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 115
ppi_in_116[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 116
ppi_in_117[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 117
ppi_in_118[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 118
ppi_in_119[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 119
ppi_in_12[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 12.
ppi_in_120[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 120
ppi_in_121[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 121
ppi_in_122[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 122

Name	Protocol	Type	Description
ppi_in_123[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 123
ppi_in_124[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 124
ppi_in_125[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 125
ppi_in_126[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 126
ppi_in_127[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 127
ppi_in_128[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 128
ppi_in_129[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 129
ppi_in_13[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 13.
ppi_in_130[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 130
ppi_in_131[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 131
ppi_in_132[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 132
ppi_in_133[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 133
ppi_in_134[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 134
ppi_in_135[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 135
ppi_in_136[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 136
ppi_in_137[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 137
ppi_in_138[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 138
ppi_in_139[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 139
ppi_in_14[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 14.
ppi_in_140[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 140
ppi_in_141[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 141
ppi_in_142[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 142
ppi_in_143[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 143
ppi_in_144[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 144
ppi_in_145[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 145
ppi_in_146[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 146
ppi_in_147[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 147
ppi_in_148[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 148
ppi_in_149[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 149
ppi_in_15[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 15.
ppi_in_150[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 150
ppi_in_151[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 151
ppi_in_152[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 152
ppi_in_153[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 153
ppi_in_154[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 154
ppi_in_155[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 155
ppi_in_156[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 156
ppi_in_157[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 157
ppi_in_158[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 158

Name	Protocol	Type	Description
ppi_in_159[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 159
ppi_in_16[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 16.
ppi_in_160[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 160
ppi_in_161[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 161
ppi_in_162[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 162
ppi_in_163[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 163
ppi_in_164[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 164
ppi_in_165[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 165
ppi_in_166[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 166
ppi_in_167[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 167
ppi_in_168[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 168
ppi_in_169[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 169
ppi_in_17[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 17.
ppi_in_170[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 170
ppi_in_171[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 171
ppi_in_172[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 172
ppi_in_173[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 173
ppi_in_174[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 174
ppi_in_175[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 175
ppi_in_176[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 176
ppi_in_177[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 177
ppi_in_178[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 178
ppi_in_179[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 179
ppi_in_18[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 18.
ppi_in_180[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 180
ppi_in_181[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 181
ppi_in_182[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 182
ppi_in_183[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 183
ppi_in_184[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 184
ppi_in_185[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 185
ppi_in_186[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 186
ppi_in_187[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 187
ppi_in_188[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 188
ppi_in_189[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 189
ppi_in_19[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 19.
ppi_in_190[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 190
ppi_in_191[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 191
ppi_in_192[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 192
ppi_in_193[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 193

Name	Protocol	Type	Description
ppi_in_194[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 194
ppi_in_195[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 195
ppi_in_196[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 196
ppi_in_197[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 197
ppi_in_198[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 198
ppi_in_199[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 199
ppi_in_2[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 2.
ppi_in_20[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 20.
ppi_in_200[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 200
ppi_in_201[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 201
ppi_in_202[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 202
ppi_in_203[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 203
ppi_in_204[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 204
ppi_in_205[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 205
ppi_in_206[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 206
ppi_in_207[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 207
ppi_in_208[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 208
ppi_in_209[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 209
ppi_in_21[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 21.
ppi_in_210[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 210
ppi_in_211[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 211
ppi_in_212[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 212
ppi_in_213[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 213
ppi_in_214[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 214
ppi_in_215[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 215
ppi_in_216[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 216
ppi_in_217[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 217
ppi_in_218[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 218
ppi_in_219[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 219
ppi_in_22[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 22.
ppi_in_220[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 220
ppi_in_221[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 221
ppi_in_222[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 222
ppi_in_223[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 223
ppi_in_224[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 224
ppi_in_225[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 225
ppi_in_226[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 226
ppi_in_227[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 227
ppi_in_228[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 228

Name	Protocol	Type	Description
ppi_in_229[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 229
ppi_in_23[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 23.
ppi_in_230[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 230
ppi_in_231[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 231
ppi_in_232[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 232
ppi_in_233[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 233
ppi_in_234[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 234
ppi_in_235[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 235
ppi_in_236[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 236
ppi_in_237[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 237
ppi_in_238[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 238
ppi_in_239[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 239
ppi_in_24[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 24.
ppi_in_240[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 240
ppi_in_241[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 241
ppi_in_242[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 242
ppi_in_243[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 243
ppi_in_244[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 244
ppi_in_245[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 245
ppi_in_246[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 246
ppi_in_247[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 247
ppi_in_248[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 248
ppi_in_249[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 249
ppi_in_25[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 25.
ppi_in_250[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 250
ppi_in_251[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 251
ppi_in_252[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 252
ppi_in_253[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 253
ppi_in_254[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 254
ppi_in_255[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 255
ppi_in_26[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 26.
ppi_in_27[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 27.
ppi_in_28[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 28.
ppi_in_29[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 29.
ppi_in_3[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 3.
ppi_in_30[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 30.
ppi_in_31[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 31.
ppi_in_32[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 32.
ppi_in_33[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 33.

Name	Protocol	Type	Description
ppi_in_34[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 34.
ppi_in_35[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 35.
ppi_in_36[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 36.
ppi_in_37[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 37.
ppi_in_38[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 38.
ppi_in_39[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 39.
ppi_in_4[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 4.
ppi_in_40[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 40.
ppi_in_41[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 41.
ppi_in_42[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 42.
ppi_in_43[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 43.
ppi_in_44[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 44.
ppi_in_45[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 45.
ppi_in_46[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 46.
ppi_in_47[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 47.
ppi_in_48[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 48.
ppi_in_49[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 49.
ppi_in_5[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 5.
ppi_in_50[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 50.
ppi_in_51[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 51.
ppi_in_52[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 52.
ppi_in_53[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 53.
ppi_in_54[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 54.
ppi_in_55[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 55.
ppi_in_56[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 56.
ppi_in_57[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 57.
ppi_in_58[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 58.
ppi_in_59[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 59.
ppi_in_6[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 6.
ppi_in_60[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 60.
ppi_in_61[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 61.
ppi_in_62[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 62.
ppi_in_63[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 63.
ppi_in_64[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 64.
ppi_in_65[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 65.
ppi_in_66[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 66.
ppi_in_67[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 67.
ppi_in_68[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 68.
ppi_in_69[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 69.

Name	Protocol	Type	Description
ppi_in_7[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 7.
ppi_in_70[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 70
ppi_in_71[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 71
ppi_in_72[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 72
ppi_in_73[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 73
ppi_in_74[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 74
ppi_in_75[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 75
ppi_in_76[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 76
ppi_in_77[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 77
ppi_in_78[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 78
ppi_in_79[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 79
ppi_in_8[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 8.
ppi_in_80[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 80
ppi_in_81[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 81
ppi_in_82[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 82
ppi_in_83[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 83
ppi_in_84[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 84
ppi_in_85[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 85
ppi_in_86[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 86
ppi_in_87[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 87
ppi_in_88[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 88
ppi_in_89[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 89
ppi_in_9[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 9.
ppi_in_90[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 90
ppi_in_91[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 91
ppi_in_92[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 92
ppi_in_93[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 93
ppi_in_94[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 94
ppi_in_95[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 95
ppi_in_96[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 96
ppi_in_97[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 97
ppi_in_98[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 98
ppi_in_99[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 99
pvbus_m	PVBus	Master	Memory bus out: transactions generated by the IRI.
pvbus_s	PVBus	Slave	Memory bus in: memory-mapped register accesses are accepted on this interface.
redistributor_m[256]	GICv3Comms	Master	Input from and output to CPU interface.
reset	Signal	Slave	Resets.
spi_in[960]	Signal	Slave	Shared peripheral interrupts.
wake_request[256]	Signal	Master	Power management outputs.

## Parameters for GIC720AE

### **CPU-affinities**

**Type**

string

**Default value**

0.0.0.0

**Description**

A comma separated list of dotted quads containing the affinities of all PEs connected to this IRI. If CPU-affinities-file is specified, this parameter is ignored.

### **CPU-affinities-file**

**Type**

string

**Default value**

""

**Description**

A file containing comma separated list of dotted quads containing the affinities of all PEs connected to this IRI. If this parameter is specified, CPU-affinities parameter will be ignored even when it is given.

### **GICD\_CTLR-DS-1-means-secure-only**

**Type**

bool

**Default value**

0x0

**Description**

If GICD\_CTLR.DS=1, GICD supports a single security state which is secure if this is true, otherwise is non-secure.

### **GICD\_TYPER2**

**Type**

int

**Default value**

0x0

**Description**

GICD\_TYPER2 value containing VID and VIL to define the width of vPEID for GICv4.1.

**IIDR****Type**

int

**Default value**

0x700143b

**Description**

GICD\_IIDR and GICR\_IIDR value.

**ITS-ID-bits****Type**

int

**Default value**

0x10

**Description**

Number of interrupt bits supported by ITS.

**ITS-collection-ID-bits****Type**

int

**Default value**

0x8

**Description**

Number of collection bits supported by ITS (optional parameter, 0 =&gt; 16bits support and GITS\_TYPER.CIL=0).

**ITS-count****Type**

int

**Default value**

0x1

**Description**

Number of Interrupt Translation Services to be instantiated (0=none).

**ITS-device-bits****Type**

int

**Default value**

0x10

**Description**

Number of bits supported for ITS device IDs.

**ITS-enable-itt-address-verification****Type**

bool

**Default value**

0x0

**Description**

If true, a transaction will be sent to ITT Address for verification.

**ITS-hardware-collection-count****Type**

int

**Default value**

0x0

**Description**

Number of hardware collections held exclusively in the ITS.

**ITS-shared-vPE-table****Type**

int

**Default value**

0x0

**Description**

Number of affinity levels to which the vPE configuration table is shared. This parameter is valid when has-gicv4.1 is true.

**ITS-vmovp-bit****Type**

bool

**Default value**

0x0

**Description**

Device supports software issuing a VMOVP to only one of the ITSs that has a mapping for a vPE. The device itself ensures synchronization of the VMOVP command across all ITSs that have mapping for that vPE.

**PPI-count****Type**

int

**Default value**

16

Selects the number of PPI available for each PE

**8**

id22-27,29,30

**12**

id 20-31

**16**

id 16-31

**SPI-blocks****Type**

int

**Default value**

0x3e

**Description**

Number of SPI blocks supported by the IRI, each block contains 32 SPIs.

**add-output-cpu-wake-request-signal-from-redistributor****Type**

bool

**Default value**

0x0

**Description**

if true, the redistributor will have the output signal `cpu_wake_request` from GIC to DSU and if false, the signals are not added to the redistributor.

**affinity-width****Type**

string

**Default value**

"4.8.8.8"

**Description**

A dotted quad indicating the bitwidth of fields at each affinity level.

**allow-LPIEN-clear****Type**

bool

**Default value**

0x1

**Description**

Allow RW behaviour on GICR\_CTLR.LPIEN instead of set once.

**chip-count****Type**

int

**Default value**

0x10

**Description**

The total number of chips supported.

**chip-id****Type**

int

**Default value**

0x0

**Description**

Chip ID when multichip operation is enabled.

**chip-select-affinity-level****Type**

int

**Default value**

0x3

**Description**

Affinity level 2 or 3 can be used for chip select.

**clear-ISPENDR-bit-for-level-sensitive-interrupt-when-acknowledged****Type**

bool

**Default value**

0x0

**Description**

If true, acknowledgement of a level sensitive interrupt clears the corresponding bit in the ISPENDR register.

**common-vPE-table-affinity****Type**

string

**Default value**

""

**Description**

Affinity value list in the form of 'a.b.c.d, e.f.g.h, etc' given to the ITS(s) (where a.b.c.d corresponds to ITS0, e.f.g.h corresponds to ITS1 and so on). Under an affinity value the vPE configuration table is shared among redistributors where the level to be shared is defined by ITS-shared-vPE-table. This parameter is valid when has-gicv4.1 is true.

**consolidators****Type**

string

**Default value**

""

Specify consolidators' base addresses, interrupt line counts and base interrupt IDs, in the form:

```
'baseAddr0:itlineCount0:baseINTID0, baseAddr1:itlineCount1:baseINTID1'
```

For example:

```
'0x3f100000:64:4096, 0x3f200000:64:4224'
```

The consolidators' count is inferred from the list (maximum of 4). If not specified, the component contains no consolidators.

**cross-chip-AMBA-is-ACE****Type**

bool

**Default value**

0x0

**Description**

Indicates the AMBA protocol that the cross-chip interface uses. If true, the cross-chip interface uses the ACE5-Lite protocol. Otherwise, it uses the AXI5-Stream protocol. This parameter is meaningful only if enable-multichip-operation is set.

**enable-local-cross-chip-addressing****Type**

bool

**Default value**

0x0

**Description**

If true, each distributor in a multichip system will use routing table address (ADDR) values programmed by local software, and will not be overwritten by the default chip. Otherwise, all the distributors will share the same routing table address values programmed in the default chip. This parameter is valid only if enable-multichip-operation is set.

**enable-multiple-views-feature****Type**

bool

**Default value**

0x0

**Description**

If true, multiple view feature will provide multiple programming views which can be used by multiple hypervisors.

**enabled****Type**

bool

**Default value**

0x1

**Description**

Enable GICv3 functionality; when false the component is inactive.

**extended-ppi-count****Type**

int

**Default value**

0x40

**Description**

Number of extended PPI supported.

**fmu-blktype-num****Type**

int

**Default value**

0x6

**Description**

Number of stakeholder block types for FMU.

**`gicp-allow-ns-reset`****Type**

bool

**Default value**

0x1

**Description**

If true, non-secure read/write access to GICP register is allowed at reset. Not allowed otherwise. This emulates gicp\_allow\_ns tie-off signal.

**`gict-allow-ns-reset`****Type**

bool

**Default value**

0x1

**Description**

If true, non-secure read/write access to GICT register is allowed at reset. Not allowed otherwise. This emulates gict\_allow\_ns tie-off signal.

**`has-gicv4.1`****Type**

bool

**Default value**

0x1

**Description**

Enable GICv4.1 functionality; when false the component is inactive.

**`has-two-security-states`****Type**

bool

**Default value**

0x1

**Description**

If true, has two security states.

**has\_nmi****Type**

bool

**Default value**

0x0

**Description**

Enable support for Non-maskable Interrupts (NMIs). (FEAT\_GICv3\_NMI).

**max-cores-supported-by-GCI****Type**

int

**Default value**

0x8

**Description**

GCI can support 1-64 cores. Maximum supported cores in GCI is configurable by device.

**max-pe-on-chip****Type**

int

**Default value**

0x4

**Description**

Maximum number of cores on any single chip. This will be used to identify the target chip and core.

**multichip-threaded-dgi****Type**

bool

**Default value**

0x1

**Description**

Enable sending multichip DGI messages in a separate thread. This parameter is valid only if enable-multichip-operation is set.

**output\_attributes****Type**

string

**Default value**

"ExtendedID[62:55]=MPAM\_PMG, ExtendedID[54:39]=MPAM\_PARTID,  
ExtendedID[38]=MPAM\_NS"

**Description**

User-defined transform to be applied to bus attributes like MasterID, ExtendedID or UserFlags. Currently, only works for MPAM Attributes encoding into bus attributes.

**print-memory-map****Type**

bool

**Default value**

0x0

**Description**

Print memory map to stdout.

**prog-mpidr****Type**

unsigned

**Default value**

0

Whether software or hardware can remove cores from a GIC configuration.

0

none

1

prog - Secure software to remove cores during the boot up of a system.

2

strap - enables hardware to remove cores as GIC exits reset

**redistributor-group****Type**

string

**Default value**

-

Redistributor grouping information with affinity as JSON :

```
{
  "0":
    ["0.0.0.0",
     "0.0.0.1"],
  "1":
    ["0.0.1.0",
     "0.0.1.1"]
}
```

where RD with quad 0.0.0.0 and 0.0.0.1 belongs to RD group 0. All the RDs belong to one group when this parameter is not given.

### **redistributor-group-file**

#### **Type**

string

#### **Default value**

-

File path to redistributor grouping information with affinity as JSON.

The file uses the same format as `redistributor-group` parameter.

### **redistributor-power-managed-by-pwrr**

#### **Type**

bool

#### **Default value**

0x1

#### **Description**

GIC-700 dedistributor power management is done by updating GICR\_PWRR register.

### **reg-base**

#### **Type**

int

#### **Default value**

0x2c010000

#### **Description**

GIC-700 base address.

### **view-id-bits-offset**

#### **Type**

int

#### **Default value**

0x0

#### **Description**

The offset of the view-id bits in the address. Effective only when multiple views feature is enabled. Accepted values will depend on the configuration affecting the GIC memory footprint, such as the input to the parameter 'CPU-affinities'. For example, for a 32MB-sized view, the value of this parameter should be 25.

### 3.10.43 GIC720AE\_Filter

GIC-720AE IRI implementation: Single/multi chip validation/filter component variant limited to 64 PE. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1016: IP revisions support**

Revision	Quality level
N/A	Preliminary support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### Changes in 11.29.19

Parameters added:

- `has_nmi`
- `view-id-bits-offset`

#### About GIC720AE\_Filter

The model has the same functionality as [GIC700\\_Filter](#), but in addition supports the following AE-specific features:

- GIC FMU
- Multiple views

It has the same limitations as [GIC700\\_Filter](#).

#### Iris and MTI instances for GIC720AE\_Filter

This model has the following Iris instances:

**Table 3-1017: GIC720AE\_Filter Iris instances**

InstanceName	ComponentName
GIC720AE_Filter	GIC_IRI
GIC720AE_Filter.GICV3_ProtocolChecker	GICv3ProtocolChecker
GIC720AE_Filter.ITS0	GICv4InterruptTranslationService
GIC720AE_Filter.ITS0.bus_subordinate	PVBusSlave
GIC720AE_Filter.fmu	FMU
GIC720AE_Filter.fmu.pvbus_slave	PVBusSlave
GIC720AE_Filter.rd_0	GICv4RedistributorInternal
GIC720AE_Filter.rd_0_0	GICv4RedistributorInternal
GIC720AE_Filter.rd_0_0_0	GICv4RedistributorInternal
GIC720AE_Filter.rd_0_0_0_0	GICv3Redistributor
GIC720AE_Filter.rd_tl	GICv3Distributor

This model has the following MTI trace components:

**Table 3-1018: GIC720AE\_Filter MTI instances**

InstanceName	ComponentName
GIC720AE_Filter.GICV3_ProtocolChecker	GICv3ProtocolChecker
GIC720AE_Filter.ITS0	GICv4InterruptTranslationService
GIC720AE_Filter.ITS0.bus_subordinate	PVBusSlave
GIC720AE_Filter.fmu	FMU
GIC720AE_Filter.fmu.pvbus_slave	PVBusSlave
GIC720AE_Filter.rd_0	GICv4RedistributorInternal
GIC720AE_Filter.rd_0_0	GICv4RedistributorInternal
GIC720AE_Filter.rd_0_0_0	GICv4RedistributorInternal
GIC720AE_Filter.rd_0_0_0_0	GICv3Redistributor
GIC720AE_Filter.rd_tl	GICv3Distributor

### Ports for GIC720AE\_Filter

**Table 3-1019: Ports**

Name	Protocol	Type	Description
apb_bus	PVBus	Slave	FMU signals
axi_stream_msi_s[32]	PVBus	Slave	AXI Stream Interface ports for MSI (message-signalled interrupt) translation, in GIC-720AE. Typically the SMMU's TCU connects to this port for MSI.
chip_id	Value	Slave	chip_id port for multichip operation
cpu_active_s[256]	Signal	Slave	CPUActive pins.
extended_ppi_in_0[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 0.
extended_ppi_in_1[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 1.
extended_ppi_in_10[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 10.
extended_ppi_in_100[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 100
extended_ppi_in_101[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 101
extended_ppi_in_102[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 102
extended_ppi_in_103[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 103
extended_ppi_in_104[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 104
extended_ppi_in_105[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 105
extended_ppi_in_106[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 106

Name	Protocol	Type	Description
extended_ppi_in_107[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 107
extended_ppi_in_108[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 108
extended_ppi_in_109[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 109
extended_ppi_in_11[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 11.
extended_ppi_in_110[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 110
extended_ppi_in_111[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 111
extended_ppi_in_112[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 112
extended_ppi_in_113[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 113
extended_ppi_in_114[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 114
extended_ppi_in_115[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 115
extended_ppi_in_116[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 116
extended_ppi_in_117[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 117
extended_ppi_in_118[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 118
extended_ppi_in_119[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 119
extended_ppi_in_12[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 12.
extended_ppi_in_120[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 120
extended_ppi_in_121[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 121
extended_ppi_in_122[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 122
extended_ppi_in_123[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 123
extended_ppi_in_124[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 124
extended_ppi_in_125[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 125
extended_ppi_in_126[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 126
extended_ppi_in_127[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 127

Name	Protocol	Type	Description
extended_ppi_in_128[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 128
extended_ppi_in_129[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 129
extended_ppi_in_13[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 13.
extended_ppi_in_130[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 130
extended_ppi_in_131[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 131
extended_ppi_in_132[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 132
extended_ppi_in_133[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 133
extended_ppi_in_134[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 134
extended_ppi_in_135[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 135
extended_ppi_in_136[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 136
extended_ppi_in_137[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 137
extended_ppi_in_138[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 138
extended_ppi_in_139[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 139
extended_ppi_in_14[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 14.
extended_ppi_in_140[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 140
extended_ppi_in_141[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 141
extended_ppi_in_142[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 142
extended_ppi_in_143[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 143
extended_ppi_in_144[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 144
extended_ppi_in_145[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 145
extended_ppi_in_146[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 146
extended_ppi_in_147[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 147
extended_ppi_in_148[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 148

Name	Protocol	Type	Description
extended_ppi_in_149[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 149
extended_ppi_in_15[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 15.
extended_ppi_in_150[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 150
extended_ppi_in_151[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 151
extended_ppi_in_152[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 152
extended_ppi_in_153[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 153
extended_ppi_in_154[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 154
extended_ppi_in_155[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 155
extended_ppi_in_156[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 156
extended_ppi_in_157[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 157
extended_ppi_in_158[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 158
extended_ppi_in_159[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 159
extended_ppi_in_16[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 16.
extended_ppi_in_160[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 160
extended_ppi_in_161[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 161
extended_ppi_in_162[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 162
extended_ppi_in_163[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 163
extended_ppi_in_164[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 164
extended_ppi_in_165[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 165
extended_ppi_in_166[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 166
extended_ppi_in_167[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 167
extended_ppi_in_168[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 168
extended_ppi_in_169[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 169

Name	Protocol	Type	Description
extended_ppi_in_17[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 17.
extended_ppi_in_170[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 170
extended_ppi_in_171[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 171
extended_ppi_in_172[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 172
extended_ppi_in_173[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 173
extended_ppi_in_174[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 174
extended_ppi_in_175[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 175
extended_ppi_in_176[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 176
extended_ppi_in_177[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 177
extended_ppi_in_178[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 178
extended_ppi_in_179[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 179
extended_ppi_in_18[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 18.
extended_ppi_in_180[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 180
extended_ppi_in_181[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 181
extended_ppi_in_182[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 182
extended_ppi_in_183[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 183
extended_ppi_in_184[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 184
extended_ppi_in_185[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 185
extended_ppi_in_186[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 186
extended_ppi_in_187[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 187
extended_ppi_in_188[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 188
extended_ppi_in_189[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 189
extended_ppi_in_19[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 19.

Name	Protocol	Type	Description
extended_ppi_in_190[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 190
extended_ppi_in_191[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 191
extended_ppi_in_192[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 192
extended_ppi_in_193[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 193
extended_ppi_in_194[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 194
extended_ppi_in_195[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 195
extended_ppi_in_196[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 196
extended_ppi_in_197[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 197
extended_ppi_in_198[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 198
extended_ppi_in_199[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 199
extended_ppi_in_2[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 2.
extended_ppi_in_20[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 20.
extended_ppi_in_200[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 200
extended_ppi_in_201[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 201
extended_ppi_in_202[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 202
extended_ppi_in_203[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 203
extended_ppi_in_204[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 204
extended_ppi_in_205[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 205
extended_ppi_in_206[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 206
extended_ppi_in_207[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 207
extended_ppi_in_208[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 208
extended_ppi_in_209[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 209
extended_ppi_in_21[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 21.

Name	Protocol	Type	Description
extended_ppi_in_210[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 210
extended_ppi_in_211[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 211
extended_ppi_in_212[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 212
extended_ppi_in_213[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 213
extended_ppi_in_214[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 214
extended_ppi_in_215[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 215
extended_ppi_in_216[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 216
extended_ppi_in_217[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 217
extended_ppi_in_218[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 218
extended_ppi_in_219[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 219
extended_ppi_in_22[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 22.
extended_ppi_in_220[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 220
extended_ppi_in_221[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 221
extended_ppi_in_222[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 222
extended_ppi_in_223[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 223
extended_ppi_in_224[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 224
extended_ppi_in_225[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 225
extended_ppi_in_226[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 226
extended_ppi_in_227[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 227
extended_ppi_in_228[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 228
extended_ppi_in_229[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 229
extended_ppi_in_23[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 23.
extended_ppi_in_230[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 230

Name	Protocol	Type	Description
extended_ppi_in_231[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 231
extended_ppi_in_232[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 232
extended_ppi_in_233[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 233
extended_ppi_in_234[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 234
extended_ppi_in_235[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 235
extended_ppi_in_236[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 236
extended_ppi_in_237[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 237
extended_ppi_in_238[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 238
extended_ppi_in_239[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 239
extended_ppi_in_24[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 24.
extended_ppi_in_240[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 240
extended_ppi_in_241[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 241
extended_ppi_in_242[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 242
extended_ppi_in_243[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 243
extended_ppi_in_244[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 244
extended_ppi_in_245[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 245
extended_ppi_in_246[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 246
extended_ppi_in_247[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 247
extended_ppi_in_248[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 248
extended_ppi_in_249[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 249
extended_ppi_in_25[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 25.
extended_ppi_in_250[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 250
extended_ppi_in_251[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 251

Name	Protocol	Type	Description
extended_ppi_in_252[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 252
extended_ppi_in_253[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 253
extended_ppi_in_254[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 254
extended_ppi_in_255[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 255
extended_ppi_in_26[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 26.
extended_ppi_in_27[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 27.
extended_ppi_in_28[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 28.
extended_ppi_in_29[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 29.
extended_ppi_in_3[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 3.
extended_ppi_in_30[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 30.
extended_ppi_in_31[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 31.
extended_ppi_in_32[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 32.
extended_ppi_in_33[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 33.
extended_ppi_in_34[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 34.
extended_ppi_in_35[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 35.
extended_ppi_in_36[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 36.
extended_ppi_in_37[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 37.
extended_ppi_in_38[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 38.
extended_ppi_in_39[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 39.
extended_ppi_in_4[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 4.
extended_ppi_in_40[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 40.
extended_ppi_in_41[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 41.
extended_ppi_in_42[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 42.

Name	Protocol	Type	Description
extended_ppi_in_43[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 43.
extended_ppi_in_44[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 44.
extended_ppi_in_45[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 45.
extended_ppi_in_46[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 46.
extended_ppi_in_47[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 47.
extended_ppi_in_48[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 48.
extended_ppi_in_49[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 49.
extended_ppi_in_5[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 5.
extended_ppi_in_50[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 50.
extended_ppi_in_51[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 51.
extended_ppi_in_52[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 52.
extended_ppi_in_53[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 53.

extended_ppi_in_96[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 96
extended_ppi_in_97[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 97
extended_ppi_in_98[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 98
extended_ppi_in_99[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 99
extended_spi_in[1024]	Signal	Slave	Extended Shared peripheral interrupts.
fmu_cri	Signal	Master	Critical Interrupt
fmu_eri	Signal	Master	Error recovery Interrupt
icdrt_out	PVBus	Master	AXI Stream Interface. This is used only when local cross chip addressing is enabled at the moment
icrdt_in	PVBus	Slave	-
po_reset	Signal	Slave	Reset.
ppi_in_0[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 0.
ppi_in_1[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 1.
ppi_in_10[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 10.
ppi_in_100[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 100
ppi_in_101[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 101

Name	Protocol	Type	Description
ppi_in_102[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 102
ppi_in_103[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 103
ppi_in_104[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 104
ppi_in_105[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 105
ppi_in_106[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 106
ppi_in_107[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 107
ppi_in_108[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 108
ppi_in_109[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 109
ppi_in_11[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 11.
ppi_in_110[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 110
ppi_in_111[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 111
ppi_in_112[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 112
ppi_in_113[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 113
ppi_in_114[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 114
ppi_in_115[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 115
ppi_in_116[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 116
ppi_in_117[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 117
ppi_in_118[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 118
ppi_in_119[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 119
ppi_in_12[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 12.
ppi_in_120[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 120
ppi_in_121[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 121
ppi_in_122[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 122
ppi_in_123[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 123
ppi_in_124[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 124
ppi_in_125[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 125
ppi_in_126[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 126
ppi_in_127[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 127
ppi_in_128[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 128
ppi_in_129[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 129
ppi_in_13[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 13.
ppi_in_130[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 130
ppi_in_131[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 131
ppi_in_132[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 132
ppi_in_133[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 133
ppi_in_134[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 134
ppi_in_135[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 135
ppi_in_136[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 136
ppi_in_137[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 137

Name	Protocol	Type	Description
ppi_in_138[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 138
ppi_in_139[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 139
ppi_in_14[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 14.
ppi_in_140[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 140
ppi_in_141[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 141
ppi_in_142[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 142
ppi_in_143[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 143
ppi_in_144[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 144
ppi_in_145[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 145
ppi_in_146[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 146
ppi_in_147[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 147
ppi_in_148[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 148
ppi_in_149[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 149
ppi_in_15[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 15.
ppi_in_150[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 150
ppi_in_151[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 151
ppi_in_152[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 152
ppi_in_153[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 153
ppi_in_154[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 154
ppi_in_155[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 155
ppi_in_156[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 156
ppi_in_157[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 157
ppi_in_158[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 158
ppi_in_159[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 159
ppi_in_16[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 16.
ppi_in_160[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 160
ppi_in_161[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 161
ppi_in_162[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 162
ppi_in_163[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 163
ppi_in_164[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 164
ppi_in_165[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 165
ppi_in_166[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 166
ppi_in_167[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 167
ppi_in_168[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 168
ppi_in_169[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 169
ppi_in_17[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 17.
ppi_in_170[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 170
ppi_in_171[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 171
ppi_in_172[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 172

Name	Protocol	Type	Description
ppi_in_173[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 173
ppi_in_174[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 174
ppi_in_175[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 175
ppi_in_176[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 176
ppi_in_177[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 177
ppi_in_178[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 178
ppi_in_179[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 179
ppi_in_18[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 18.
ppi_in_180[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 180
ppi_in_181[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 181
ppi_in_182[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 182
ppi_in_183[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 183
ppi_in_184[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 184
ppi_in_185[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 185
ppi_in_186[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 186
ppi_in_187[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 187
ppi_in_188[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 188
ppi_in_189[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 189
ppi_in_19[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 19.
ppi_in_190[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 190
ppi_in_191[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 191
ppi_in_192[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 192
ppi_in_193[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 193
ppi_in_194[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 194
ppi_in_195[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 195
ppi_in_196[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 196
ppi_in_197[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 197
ppi_in_198[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 198
ppi_in_199[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 199
ppi_in_2[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 2.
ppi_in_20[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 20.
ppi_in_200[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 200
ppi_in_201[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 201
ppi_in_202[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 202
ppi_in_203[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 203
ppi_in_204[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 204
ppi_in_205[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 205
ppi_in_206[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 206
ppi_in_207[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 207

Name	Protocol	Type	Description
ppi_in_208[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 208
ppi_in_209[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 209
ppi_in_21[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 21.
ppi_in_210[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 210
ppi_in_211[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 211
ppi_in_212[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 212
ppi_in_213[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 213
ppi_in_214[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 214
ppi_in_215[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 215
ppi_in_216[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 216
ppi_in_217[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 217
ppi_in_218[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 218
ppi_in_219[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 219
ppi_in_22[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 22.
ppi_in_220[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 220
ppi_in_221[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 221
ppi_in_222[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 222
ppi_in_223[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 223
ppi_in_224[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 224
ppi_in_225[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 225
ppi_in_226[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 226
ppi_in_227[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 227
ppi_in_228[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 228
ppi_in_229[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 229
ppi_in_23[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 23.
ppi_in_230[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 230
ppi_in_231[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 231
ppi_in_232[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 232
ppi_in_233[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 233
ppi_in_234[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 234
ppi_in_235[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 235
ppi_in_236[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 236
ppi_in_237[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 237
ppi_in_238[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 238
ppi_in_239[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 239
ppi_in_24[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 24.
ppi_in_240[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 240
ppi_in_241[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 241
ppi_in_242[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 242

Name	Protocol	Type	Description
ppi_in_243[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 243
ppi_in_244[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 244
ppi_in_245[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 245
ppi_in_246[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 246
ppi_in_247[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 247
ppi_in_248[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 248
ppi_in_249[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 249
ppi_in_25[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 25.
ppi_in_250[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 250
ppi_in_251[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 251
ppi_in_252[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 252
ppi_in_253[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 253
ppi_in_254[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 254
ppi_in_255[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 255
ppi_in_26[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 26.
ppi_in_27[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 27.
ppi_in_28[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 28.
ppi_in_29[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 29.
ppi_in_3[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 3.
ppi_in_30[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 30.
ppi_in_31[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 31.
ppi_in_32[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 32.
ppi_in_33[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 33.
ppi_in_34[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 34.
ppi_in_35[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 35.
ppi_in_36[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 36.
ppi_in_37[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 37.
ppi_in_38[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 38.
ppi_in_39[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 39.
ppi_in_4[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 4.
ppi_in_40[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 40.
ppi_in_41[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 41.
ppi_in_42[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 42.
ppi_in_43[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 43.
ppi_in_44[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 44.
ppi_in_45[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 45.
ppi_in_46[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 46.
ppi_in_47[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 47.
ppi_in_48[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 48.

Name	Protocol	Type	Description
ppi_in_49[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 49.
ppi_in_5[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 5.
ppi_in_50[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 50.
ppi_in_51[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 51.
ppi_in_52[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 52.
ppi_in_53[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 53.
ppi_in_54[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 54.
ppi_in_55[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 55.
ppi_in_56[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 56.
ppi_in_57[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 57.
ppi_in_58[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 58.
ppi_in_59[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 59.
ppi_in_6[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 6.
ppi_in_60[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 60.
ppi_in_61[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 61.
ppi_in_62[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 62.
ppi_in_63[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 63.
ppi_in_64[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 64.
ppi_in_65[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 65.
ppi_in_66[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 66.
ppi_in_67[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 67.
ppi_in_68[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 68.
ppi_in_69[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 69.
ppi_in_7[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 7.
ppi_in_70[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 70.
ppi_in_71[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 71.
ppi_in_72[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 72.
ppi_in_73[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 73.
ppi_in_74[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 74.
ppi_in_75[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 75.
ppi_in_76[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 76.
ppi_in_77[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 77.
ppi_in_78[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 78.
ppi_in_79[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 79.
ppi_in_8[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 8.
ppi_in_80[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 80.
ppi_in_81[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 81.
ppi_in_82[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 82.
ppi_in_83[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 83.

Name	Protocol	Type	Description
ppi_in_84[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 84
ppi_in_85[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 85
ppi_in_86[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 86
ppi_in_87[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 87
ppi_in_88[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 88
ppi_in_89[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 89
ppi_in_9[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 9.
ppi_in_90[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 90
ppi_in_91[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 91
ppi_in_92[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 92
ppi_in_93[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 93
ppi_in_94[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 94
ppi_in_95[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 95
ppi_in_96[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 96
ppi_in_97[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 97
ppi_in_98[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 98
ppi_in_99[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 99
pvbus_filtermiss_m	PVBus	Master	Memory bus out. Transactions not filtered by the component.
pvbus_m	PVBus	Master	Memory bus out: transactions generated by the IRI.
pvbus_s	PVBus	Slave	Memory bus in: memory-mapped register accesses are accepted on this interface.
redistributor_m[256]	GICv3Comms	Master	Input from and output to CPU interface.
reset	Signal	Slave	Reset.
spi_in[960]	Signal	Slave	Shared peripheral interrupts.
wake_request[256]	Signal	Master	Power management outputs.

## Parameters for GIC720AE\_Filter

### CPU-affinities

#### Type

string

#### Default value

0.0.0.0

#### Description

A comma separated list of dotted quads containing the affinities of all PEs connected to this IRI. If CPU-affinities-file is specified, this parameter is ignored.

### CPU-affinities-file

#### Type

string

**Default value**

""

**Description**

A file containing comma separated list of dotted quads containing the affinities of all PEs connected to this IRI. If this parameter is specified, CPU-affinities parameter will be ignored even when it is given.

**GICD\_CTLR-DS-1-means-secure-only****Type**

bool

**Default value**

0x0

**Description**

If GICD\_CTLR.DS=1, GICD supports a single security state which is secure if this is true, otherwise is non-secure.

**GICD\_TYPER2****Type**

int

**Default value**

0x0

**Description**

GICD\_TYPER2 value containing VID and VIL to define the width of vPEID for GICv4.1.

**IIDR****Type**

int

**Default value**

0x700143b

**Description**

GICD\_IIDR and GICR\_IIDR value.

**ITS-ID-bits****Type**

int

**Default value**

0x10

**Description**

Number of interrupt bits supported by ITS.

**ITS-collection-ID-bits****Type**

int

**Default value**

0x8

**Description**

Number of collection bits supported by ITS (optional parameter, 0 => 16bits support and GITS\_TYPER.CIL=0).

**ITS-count****Type**

int

**Default value**

0x1

**Description**

Number of Interrupt Translation Services to be instantiated (0=none).

**ITS-device-bits****Type**

int

**Default value**

0x10

**Description**

Number of bits supported for ITS device IDs.

**ITS-enable-itt-address-verification****Type**

bool

**Default value**

0x0

**Description**

If true, a transaction will be sent to ITT Address for verification.

**ITS-hardware-collection-count****Type**

int

**Default value**

0x0

**Description**  
Number of hardware collections held exclusively in the ITS.

**ITS-shared-vPE-table**

**Type**  
int  
**Default value**  
0x0

**Description**  
Number of affinity levels to which the vPE configuration table is shared. This parameter is valid when has-gicv4.1 is true.

**ITS-vmovp-bit**

**Type**  
bool  
**Default value**  
0x0

**Description**  
Device supports software issuing a VMOVP to only one of the ITSs that has a mapping for a vPE. The device itself ensures synchronization of the VMOVP command across all ITSs that have mapping for that vPE.

**PPI-count**

**Type**  
int  
**Default value**  
16

Selects the number of PPI available for each PE

**8**  
id22-27,29,30

**12**  
id 20-31

**16**  
id 16-31

**SPI-blocks**

**Type**  
int  
**Default value**  
0x3e

**Description**

Number of SPI blocks supported by the IRI, each block contains 32 SPIs.

**add-output-cpu-wake-request-signal-from-redistributor****Type**

bool

**Default value**

0x0

**Description**

if true, the redistributor will have the output signal cpu\_wake\_request from GIC to DSU and if false, the signals are not added to the redistributor.

**affinity-width****Type**

string

**Default value**

"4.8.8.8"

**Description**

A dotted quad indicating the bitwidth of fields at each affinity level.

**allow-LPIEN-clear****Type**

bool

**Default value**

0x1

**Description**

Allow RW behaviour on GICR\_CTLR.LPIEN instead of set once.

**chip-count****Type**

int

**Default value**

0x10

**Description**

The total number of chips supported.

**chip-id****Type**

int

**Default value**

0x0

**Description**

Chip ID when multichip operation is enabled.

**chip-select-affinity-level****Type**

int

**Default value**

0x3

**Description**

Affinity level 2 or 3 can be used for chip select.

**clear-ISPENDR-bit-for-level-sensitive-interrupt-when-acknowledged****Type**

bool

**Default value**

0x0

**Description**

If true, acknowledgement of a level sensitive interrupt clears the corresponding bit in the ISPENDR register.

**common-vPE-table-affinity****Type**

string

**Default value**

""

**Description**

Affinity value list in the form of 'a.b.c.d, e.f.g.h, etc' given to the ITS(s) (where a.b.c.d corresponds to ITS0, e.f.g.h corresponds to ITS1 and so on). Under an affinity value the vPE configuration table is shared among redistributors where the level to be shared is defined by ITS-shared-vPE-table. This parameter is valid when has-gicv4.1 is true.

**consolidators****Type**

string

**Default value**

""

Specify consolidators' base addresses, interrupt line counts and base interrupt IDs, in the form:

```
'baseAddr0:itlineCount0:baseINTID0, baseAddr1:itlineCount1:baseINTID1'
```

For example:

```
'0x3f100000:64:4096, 0x3f200000:64:4224'
```

The consolidators' count is inferred from the list (maximum of 4). If not specified, the component contains no consolidators.

### **cross-chip-AMBA-is-ACE**

#### **Type**

bool

#### **Default value**

0x0

#### **Description**

Indicates the AMBA protocol that the cross-chip interface uses. If true, the cross-chip interface uses the ACE5-Lite protocol. Otherwise, it uses the AXI5-Stream protocol. This parameter is meaningful only if enable-multichip-operation is set.

### **enable-local-cross-chip-addressing**

#### **Type**

bool

#### **Default value**

0x0

#### **Description**

If true, each distributor in a multichip system will use routing table address (ADDR) values programmed by local software, and will not be overwritten by the default chip. Otherwise, all the distributors will share the same routing table address values programmed in the default chip. This parameter is valid only if enable-multichip-operation is set.

### **enable-multiple-views-feature**

#### **Type**

bool

#### **Default value**

0x0

#### **Description**

If true, multiple view feature will provide multiple programming views which can be used by multiple hypervisors.

**enabled****Type**

bool

**Default value**

0x1

**Description**

Enable GICv3 functionality; when false the component is inactive.

**extended-ppi-count****Type**

int

**Default value**

0x40

**Description**

Number of extended PPI supported.

**fmv-blktype-num****Type**

int

**Default value**

0x6

**Description**

Number of stakeholder block types for FMU.

**gicp-allow-ns-reset****Type**

bool

**Default value**

0x1

**Description**

If true, non-secure read/write access to GICP register is allowed at reset. Not allowed otherwise. This emulates gicp\_allow\_ns tie-off signal.

**gict-allow-ns-reset****Type**

bool

**Default value**

0x1

**Description**

If true, non-secure read/write access to GICT register is allowed at reset. Not allowed otherwise. This emulates gict\_allow\_ns tie-off signal.

**has-gicv4.1****Type**

bool

**Default value**

0x1

**Description**

Enable GICv4.1 functionality; when false the component is inactive.

**has-two-security-states****Type**

bool

**Default value**

0x1

**Description**

If true, has two security states.

**has\_nmi****Type**

bool

**Default value**

0x0

**Description**

Enable support for Non-maskable Interrupts (NMIs). (FEAT\_GICv3\_NMI).

**max-cores-supported-by-GCI****Type**

int

**Default value**

0x8

**Description**

GCI can support 1-64 cores. Maximum supported cores in GCI is configurable by device.

**max-pe-on-chip****Type**

int

**Default value**

0x4

**Description**

Maximum number of cores on any single chip. This will be used to identify the target chip and core.

**multichip-threaded-dgi****Type**

bool

**Default value**

0x1

**Description**

Enable sending multichip DGI messages in a separate thread. This parameter is valid only if enable-multichip-operation is set.

**output\_attributes****Type**

string

**Default value**

"ExtendedID[62:55]=MPAM\_PMG, ExtendedID[54:39]=MPAM\_PARTID,  
ExtendedID[38]=MPAM\_NS"

**Description**

User-defined transform to be applied to bus attributes like MasterID, ExtendedID or UserFlags. Currently, only works for MPAM Attributes encoding into bus attributes.

**print-memory-map****Type**

bool

**Default value**

0x0

**Description**

Print memory map to stdout.

**prog-mpidr****Type**

unsigned

**Default value**

0

Whether software or hardware can remove cores from a GIC configuration.

**0**

none

**1**

prog - Secure software to remove cores during the boot up of a system.

**2**

strap - enables hardware to remove cores as GIC exits reset

**redistributor-group****Type**

string

**Default value**

-

Redistributor grouping information with affinity as JSON :

```
{
  "0": [
    "0.0.0.0",
    "0.0.0.1"
  ],
  "1": [
    "0.0.1.0",
    "0.0.1.1"
  ]
}
```

where RD with quad 0.0.0.0 and 0.0.0.1 belongs to RD group 0. All the RDs belong to one group when this parameter is not given.

**redistributor-group-file****Type**

string

**Default value**

-

File path to redistributor grouping information with affinity as JSON.

The file uses the same format as `redistributor-group` parameter.

**redistributor-power-managed-by-pwrr****Type**

bool

**Default value**

0x1

**Description**

GIC-700 dedistributor power management is done by updating GICR\_PWRR register.

**reg-base**

**Type**

int

**Default value**

0x2c010000

**Description**

GIC-700 base address.

**view-id-bits-offset**

**Type**

int

**Default value**

0x0

**Description**

The offset of the view-id bits in the address. Effective only when multiple views feature is enabled. Accepted values will depend on the configuration affecting the GIC memory footprint, such as the input to the parameter 'CPU-affinities'. For example, for a 32MB-sized view, the value of this parameter should be 25.

3.10.44 GIC\_400

This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-1020: IP revisions support

Revision	Quality level
r0p1	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

About GIC\_400

This component is a wrapper that permits easier configuration of the v7\_VGIC component that supports parameterized configuration.

The GIC-400 has several memory-mapped interfaces at the same address. The processor that is communicating with the GIC-400 banks them. The GIC-400 must be able to identify which processor a transaction originates from. In the hardware, the AUSER fields on AXI supply this information to the GIC-400. In the model, there is no exact equivalent to this field. However, each transaction has a `master_id` that the model can use to identify the originating processor.

Arm clusters assign the `master_id` as follows:

**Bits[31:16]**

SBZ, which the GIC-400 ignores.

**Bits[5:2]**

CLUSTERID.

**Bits[1:0]**

cpu\_id within the cluster.

CLUSTERID is the 4-bit field that either a parameter on the processor sets or a value that the `clusterid` port drives. CPUID is the core number within the cluster. CLUSTERID appears in the CP15 register space as part of the MPIDR register.

The Arm architecture suggests that each cluster in the system is given a different CLUSTERID. This distinction is essential for the VGIC to identify the cluster. The parameters in the GIC-400 component permit it to construct the map of `master_id` to interface number.

Processor interfaces that the GIC-400 supports have these parameters:

- `interfaceN.cluster_id`
- `interfaceN.core_id`
- `interfaceN.inout_port_number_to_use`

N is the interface number (0-7). The `cluster_id` and `core_id` tell the GIC-400 to map that cluster or core combination to interface N.

By using `inout_port_number_to_use`, the GIC-400 has some input and output ports that pair with a particular processor interface. For example:

- The `irqcpu[]` pin wires to the `irq` port of the corresponding processor.
- The `cntpnsirq` pin from the processor wires to a `cntpnsirq[]` pin on GIC-400 to transport a Private Peripheral Interrupt (PPI) from the processor to the GIC-400.

The `interfaceN.inout_port_number_to_use` parameter supports clusters that can have variable numbers of cores. It tells the GIC-400 that to send to or receive a signal from the processor that is attached to interface N, it must use these pins:

- `irqout[interfaceN.inout_port_number_to_use]`
- `fiqout[interfaceN.inout_port_number_to_use]`
- `virqout[interfaceN.inout_port_number_to_use]`
- `vfiqout[interfaceN.inout_port_number_to_use]`
- `legacyirq[interfaceN.inout_port_number_to_use]`
- `cntpnsirq[interfaceN.inout_port_number_to_use]`
- `cntpsirq[interfaceN.inout_port_number_to_use]`
- `legacyfiq[interfaceN.inout_port_number_to_use]`
- `cntvirq[interfaceN.inout_port_number_to_use]`

- `cnthpirq[interfaceN.inout_port_number_to_use]`
- ...

`legacyirq` and `legacyfiq` are not signals from the processor but are signals into the GIC-400 from the legacy interrupt system. They are wired to PPIs. If the control registers of the GIC-400 are set up in particular ways, they can also bypass the GIC-400. See [ARM Generic Interrupt Controller Architecture version 2.0 Architecture Specification](#) for more information.

The fabric between the clusters and the GIC might remap the `master_id` of a transaction. If so, then the GIC might lose the ability to identify the originating processor. The fabrics that Arm ships in Fast Models perform no such transformation.

The comparison that the GIC-400 performs on the `master_id` is only on the bottom 6 bits of the `master_id`. It ignores the rest. If you are writing your own fabric and do not properly propagate the `master_id` or transform it, the GIC-400 might not be able to identify the processor. The source code for the GIC\_400 component can be examined to see how it might be adapted for it to understand different `master_id` schemes.

## Differences between the model and the RTL

The GIC-400 model has these limitations:

- Reads and writes to `GICD_ISACTIVERn`, `GICD_ICACTIVERn`, `GICD_ISPENDRn`, or `GICD_ICPENDRn` might not work as expected unless there is a configured target in `GICD_ICFGRm`.
- Some of the interaction between `GICD_CTLR.EnableGrpX` and level-sensitive interrupts might not work correctly.
- It does not model the `nIRQOUT` or `nFIQOUT` signals.
- It models interrupts with positive logic, rather than the negative logic that the hardware uses. So, the signal pins omit the 'n' prefix in their names.

## Iris and MTI instances for GIC\_400

This model has the following Iris instances:

**Table 3-1021: GIC\_400 Iris instances**

InstanceName	ComponentName
<code>GIC_400</code>	<code>GIC_400</code>
<code>GIC_400.vgic_bus_slave</code>	<code>PVBusSlave</code>

This model has the following MTI trace components:

**Table 3-1022: GIC\_400 MTI instances**

InstanceName	ComponentName
<code>GIC_400</code>	<code>GIC_400</code>
<code>GIC_400.vgic_bus_slave</code>	<code>PVBusSlave</code>

Ports for GIC\_400

Table 3-1023: Ports

Name	Protocol	Type	Description
cfgsdisable	Signal	Slave	Disable write access to some GIC registers.
cnthpirq[8]	Signal	Slave	Secure physical timer event. PPI interrupt id 26.
cntpnsirq[8]	Signal	Slave	Non-secure physical timer event. PPI interrupt id 30.
cntpsirq[8]	Signal	Slave	Secure physical timer event. PPI interrupt id 29.
cntvirq[8]	Signal	Slave	Virtual timer event. PPI interrupt id 27.
fiqcpu[8]	Signal	Master	FIQ signal to the corresponding processor.
fiqout[8]	Signal	Master	FIQOUT signal to the corresponding processor.
irqcpu[8]	Signal	Master	IRQ signal to the corresponding processor.
irqout[8]	Signal	Master	IRQOUT signal to the corresponding processor.
irqs[480]	Signal	Slave	Interrupt request input lines for the GIC.
legacyfiq[8]	Signal	Slave	Signal into the GIC-400 from the legacy interrupt system. PPI interrupt id 28.
legacyirq[8]	Signal	Slave	Signal into the GIC-400 from the legacy interrupt system. PPI interrupt id 31.
pvbus_s	PVBus	Slave	Handles incoming transactions from PVBus masters.
reset_signal	Signal	Slave	Reset signal input.
vfiqcpu[8]	Signal	Master	Virtual FIQ signal to the processor.
virqcpu[8]	Signal	Master	Virtual IRQ signal to the processor.

Parameters for GIC\_400

NUM\_CPUS

Type

int

Default value

0x1

Description

Number of interfaces to support.

NUM\_SPIS

Type

int

Default value

0xe0

Description

Number of interrupt pins.

**enable\_log\_errors****Type**

bool

**Default value**

0x0

**Description****enable\_log\_fatal****Type**

bool

**Default value**

0x0

**Description****enable\_log\_warnings****Type**

bool

**Default value**

0x0

**Description****interface0.cluster\_id****Type**

int

**Default value**

0x0

**Description**

The CLUSTERID of the interface you want to appear as interface0 in the VGIC.

**interface0.core\_id****Type**

int

**Default value**

0x0

**Description**

The core id of interface0 in the cluster.

**interface0.inout\_port\_number\_to\_use****Type**

int

**Default value**

0x0

**Description**

Which ppiN port is used for this interface.

**interface1.cluster\_id****Type**

int

**Default value**

0x0

**Description**

The CLUSTERID of the interface you want to appear as interface1 in the VGIC.

**interface1.core\_id****Type**

int

**Default value**

0x0

**Description**

The core id of interface1 in the cluster.

**interface1.inout\_port\_number\_to\_use****Type**

int

**Default value**

0x1

**Description**

Which ppiN port is used for this interface.

**interface2.cluster\_id****Type**

int

**Default value**

0x0

**Description**

The CLUSTERID of the interface you want to appear as interface2 in the VGIC.

**interface2.core\_id****Type**

int

**Default value**

0x0

**Description**

The core id of interface2 in the cluster.

**interface2.inout\_port\_number\_to\_use****Type**

int

**Default value**

0x2

**Description**

Which ppiN port is used for this interface.

**interface3.cluster\_id****Type**

int

**Default value**

0x0

**Description**

The CLUSTERID of the interface you want to appear as interface3 in the VGIC.

**interface3.core\_id****Type**

int

**Default value**

0x0

**Description**

The core id of interface3 in the cluster.

**interface3.inout\_port\_number\_to\_use****Type**

int

**Default value**

0x3

**Description**

Which ppiN port is used for this interface.

**interface4.cluster\_id****Type**

int

**Default value**

0x0

**Description**

The CLUSTERID of the interface you want to appear as interface4 in the VGIC.

**interface4.core\_id****Type**

int

**Default value**

0x0

**Description**

The core id of interface4 in the cluster.

**interface4.inout\_port\_number\_to\_use****Type**

int

**Default value**

0x4

**Description**

Which ppiN port is used for this interface.

**interface5.cluster\_id****Type**

int

**Default value**

0x0

**Description**

The CLUSTERID of the interface you want to appear as interface5 in the VGIC.

**interface5.core\_id****Type**

int

**Default value**

0x0

**Description**

The core id of interface5 in the cluster.

**interface5.inout\_port\_number\_to\_use****Type**

int

**Default value**

0x5

**Description**

Which ppiN port is used for this interface.

**interface6.cluster\_id****Type**

int

**Default value**

0x0

**Description**

The CLUSTERID of the interface you want to appear as interface6 in the VGIC.

**interface6.core\_id****Type**

int

**Default value**

0x0

**Description**

The core id of interface6 in the cluster.

**interface6.inout\_port\_number\_to\_use****Type**

int

**Default value**

0x6

**Description**

Which ppiN port is used for this interface.

**interface7.cluster\_id****Type**

int

**Default value**

0x0

**Description**

The CLUSTERID of the interface you want to appear as interface7 in the VGIC.

**interface7.core\_id**

**Type**

int

**Default value**

0x0

**Description**

The core id of interface7 in the cluster.

**interface7.inout\_port\_number\_to\_use**

**Type**

int

**Default value**

0x7

**Description**

Which ppiN port is used for this interface.

3.10.45 GIC\_IRI

GIC metacomponent for redistribution of interrupts. Contains a Distributor and a configurable number of ITSs and Redistributors. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-1024: IP revisions support

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

About GIC\_IRI

The GIC\_IRI has one slave PVBUS interface and one master PVBUS interface. It behaves in a similar manner to a GICv3-compatible device, with the slave interface, `pvbust_s`, granting access to the register banks used by the configuration and operation of MSIs and the master interface, `pvbust_m`, issuing transactions that are required by the ITS and the redistributors in LPI-related operations. All transactions that are routed to the slave port terminate in the component. Accesses to unmapped space are **RAZ/WI**.

An instance of GICv3 requires a small set of parameters to be configured to be useful. For example:

```
gic_iri : GIC_IRI(  
    "reg-base" = 0xF0020000, //Base address for GICD_* REGISTERS, 64K aligned  
    "CPU-affinities" = "0.0.0.0, 0.0.1.0, 0.0.1.1",  
    //A comma-separated list of affinity addresses corresponding to  
    //cpu affinities in the system
```

```
"reg-base-per-redistributor"="0.0.0.0=0xF0040000,0.0.1.0=0xF0060000,
0.0.0.0=0xF0080000",
    //Base addresses for each redistributor in a comma-separated list of
    //affinity=address
);
```

To use LPIs, an ITS must be configured. A minimal configuration might consist of, for example:

```
"ITS-count" = 1, //The number of ITSs in the IRI. Defaults to zero.
"ITS0-base" = 0xF0100000,
"GITS_BASER0-type" = 1, //Type 1 is Devices. A device table is always needed.
"GITS_BASER2-type" = 4, //Type 4 is Collections.
                        //A collection table is needed if GITS_TYPER.HCC is 0.
```

To use GICv4 functionality, one or more ITSs must be configured, as shown in the previous example. In addition, the following parameters are required:

```
"virtual-lpi-support"=true,
"GITS_BASER4-type"=2 //Type 2 is Virtual PEs.
                    //Such a table is needed for GICv4 functionality.
```

Note

- Set the `FASTSIM_GIC_MEMORY_MAP` environment variable to 1 to print to stderr the memory map of any GICv3 or later models that are included in the platform being run.
- Set the `GICD_ITARGETSR-RAZWI` parameter to true for legacy, GICv2-style routing, where interrupts are routed to the first processor in the system.

## Iris and MTI instances for GIC\_IRI

This model has the following Iris instances:

**Table 3-1025: GIC\_IRI Iris instances**

InstanceName	ComponentName
GIC_IRI	GIC_IRI
GIC_IRI.rd_0	GICv3RedistributorInternal
GIC_IRI.rd_0_0	GICv3RedistributorInternal
GIC_IRI.rd_0_0_0	GICv3RedistributorInternal
GIC_IRI.rd_0_0_0_0	GICv3Redistributor
GIC_IRI.rd_t1	GICv3Distributor

This model has the following MTI trace components:

**Table 3-1026: GIC\_IRI MTI instances**

InstanceName	ComponentName
GIC_IRI.rd_0	GICv3RedistributorInternal
GIC_IRI.rd_0_0	GICv3RedistributorInternal
GIC_IRI.rd_0_0_0	GICv3RedistributorInternal

InstanceName	ComponentName
GIC_IRI.rd_0_0_0_0	GICv3Redistributor
GIC_IRI.rd_t1	GICv3Distributor

## Ports for GIC\_IRI

**Table 3-1027: Ports**

Name	Protocol	Type	Description
cfgsdisable	Signal	Slave	Disable some SPIs signal.
extended_ppi_in_0[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 0.
extended_ppi_in_1[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 1.
extended_ppi_in_10[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 10.
extended_ppi_in_100[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 100.
extended_ppi_in_101[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 101.
extended_ppi_in_102[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 102.
extended_ppi_in_103[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 103.
extended_ppi_in_104[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 104.
extended_ppi_in_105[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 105.
extended_ppi_in_106[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 106.
extended_ppi_in_107[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 107.
extended_ppi_in_108[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 108.
extended_ppi_in_109[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 109.
extended_ppi_in_11[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 11.
extended_ppi_in_110[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 110.
extended_ppi_in_111[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 111.
extended_ppi_in_112[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 112.
extended_ppi_in_113[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 113.
extended_ppi_in_114[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 114.

Name	Protocol	Type	Description
extended_ppi_in_115[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 115.
extended_ppi_in_116[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 116.
extended_ppi_in_117[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 117.
extended_ppi_in_118[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 118.
extended_ppi_in_119[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 119.
extended_ppi_in_12[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 12.
extended_ppi_in_120[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 120.
extended_ppi_in_121[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 121.
extended_ppi_in_122[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 122.
extended_ppi_in_123[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 123.
extended_ppi_in_124[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 124.
extended_ppi_in_125[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 125.
extended_ppi_in_126[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 126.
extended_ppi_in_127[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 127.
extended_ppi_in_128[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 128.
extended_ppi_in_129[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 129.
extended_ppi_in_13[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 13.
extended_ppi_in_130[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 130.
extended_ppi_in_131[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 131.
extended_ppi_in_132[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 132.
extended_ppi_in_133[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 133.
extended_ppi_in_134[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 134.
extended_ppi_in_135[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 135.

Name	Protocol	Type	Description
extended_ppi_in_136[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 136.
extended_ppi_in_137[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 137.
extended_ppi_in_138[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 138.
extended_ppi_in_139[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 139.
extended_ppi_in_14[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 14.
extended_ppi_in_140[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 140.
extended_ppi_in_141[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 141.
extended_ppi_in_142[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 142.
extended_ppi_in_143[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 143.
extended_ppi_in_144[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 144.
extended_ppi_in_145[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 145.
extended_ppi_in_146[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 146.
extended_ppi_in_147[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 147.
extended_ppi_in_148[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 148.
extended_ppi_in_149[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 149.
extended_ppi_in_15[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 15.
extended_ppi_in_150[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 150.
extended_ppi_in_151[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 151.
extended_ppi_in_152[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 152.
extended_ppi_in_153[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 153.
extended_ppi_in_154[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 154.
extended_ppi_in_155[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 155.
extended_ppi_in_156[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 156.

Name	Protocol	Type	Description
extended_ppi_in_157[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 157.
extended_ppi_in_158[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 158.
extended_ppi_in_159[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 159.
extended_ppi_in_16[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 16.
extended_ppi_in_160[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 160.
extended_ppi_in_161[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 161.
extended_ppi_in_162[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 162.
extended_ppi_in_163[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 163.
extended_ppi_in_164[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 164.
extended_ppi_in_165[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 165.
extended_ppi_in_166[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 166.
extended_ppi_in_167[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 167.
extended_ppi_in_168[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 168.
extended_ppi_in_169[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 169.
extended_ppi_in_17[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 17.
extended_ppi_in_170[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 170.
extended_ppi_in_171[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 171.
extended_ppi_in_172[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 172.
extended_ppi_in_173[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 173.
extended_ppi_in_174[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 174.
extended_ppi_in_175[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 175.
extended_ppi_in_176[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 176.
extended_ppi_in_177[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 177.

Name	Protocol	Type	Description
extended_ppi_in_178[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 178.
extended_ppi_in_179[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 179.
extended_ppi_in_18[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 18.
extended_ppi_in_180[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 180.
extended_ppi_in_181[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 181.
extended_ppi_in_182[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 182.
extended_ppi_in_183[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 183.
extended_ppi_in_184[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 184.
extended_ppi_in_185[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 185.
extended_ppi_in_186[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 186.
extended_ppi_in_187[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 187.
extended_ppi_in_188[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 188.
extended_ppi_in_189[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 189.
extended_ppi_in_19[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 19.
extended_ppi_in_190[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 190.
extended_ppi_in_191[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 191.
extended_ppi_in_192[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 192.
extended_ppi_in_193[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 193.
extended_ppi_in_194[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 194.
extended_ppi_in_195[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 195.
extended_ppi_in_196[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 196.
extended_ppi_in_197[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 197.
extended_ppi_in_198[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 198.

Name	Protocol	Type	Description
extended_ppi_in_199[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 199.
extended_ppi_in_2[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 2.
extended_ppi_in_20[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 20.
extended_ppi_in_200[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 200.
extended_ppi_in_201[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 201.
extended_ppi_in_202[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 202.
extended_ppi_in_203[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 203.
extended_ppi_in_204[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 204.
extended_ppi_in_205[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 205.
extended_ppi_in_206[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 206.
extended_ppi_in_207[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 207.
extended_ppi_in_208[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 208.
extended_ppi_in_209[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 209.
extended_ppi_in_21[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 21.
extended_ppi_in_210[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 210.
extended_ppi_in_211[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 211.
extended_ppi_in_212[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 212.
extended_ppi_in_213[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 213.
extended_ppi_in_214[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 214.
extended_ppi_in_215[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 215.
extended_ppi_in_216[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 216.
extended_ppi_in_217[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 217.
extended_ppi_in_218[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 218.

Name	Protocol	Type	Description
extended_ppi_in_219[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 219.
extended_ppi_in_22[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 22.
extended_ppi_in_220[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 220.
extended_ppi_in_221[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 221.
extended_ppi_in_222[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 222.
extended_ppi_in_223[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 223.
extended_ppi_in_224[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 224.
extended_ppi_in_225[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 225.
extended_ppi_in_226[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 226.
extended_ppi_in_227[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 227.
extended_ppi_in_228[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 228.
extended_ppi_in_229[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 229.
extended_ppi_in_23[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 23.
extended_ppi_in_230[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 230.
extended_ppi_in_231[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 231.
extended_ppi_in_232[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 232.
extended_ppi_in_233[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 233.
extended_ppi_in_234[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 234.
extended_ppi_in_235[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 235.
extended_ppi_in_236[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 236.
extended_ppi_in_237[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 237.
extended_ppi_in_238[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 238.
extended_ppi_in_239[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 239.

Name	Protocol	Type	Description
extended_ppi_in_24[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 24.
extended_ppi_in_240[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 240.
extended_ppi_in_241[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 241.
extended_ppi_in_242[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 242.
extended_ppi_in_243[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 243.
extended_ppi_in_244[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 244.
extended_ppi_in_245[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 245.
extended_ppi_in_246[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 246.
extended_ppi_in_247[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 247.
extended_ppi_in_248[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 248.
extended_ppi_in_249[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 249.
extended_ppi_in_25[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 25.
extended_ppi_in_250[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 250.
extended_ppi_in_251[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 251.
extended_ppi_in_252[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 252.
extended_ppi_in_253[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 253.
extended_ppi_in_254[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 254.
extended_ppi_in_255[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 255.
extended_ppi_in_26[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 26.
extended_ppi_in_27[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 27.
extended_ppi_in_28[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 28.
extended_ppi_in_29[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 29.
extended_ppi_in_3[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 3.

Name	Protocol	Type	Description
extended_ppi_in_30[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 30.
extended_ppi_in_31[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 31.
extended_ppi_in_32[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 32.
extended_ppi_in_33[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 33.
extended_ppi_in_34[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 34.
extended_ppi_in_35[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 35.
extended_ppi_in_36[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 36.
extended_ppi_in_37[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 37.
extended_ppi_in_38[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 38.
extended_ppi_in_39[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 39.
extended_ppi_in_4[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 4.
extended_ppi_in_40[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 40.
extended_ppi_in_41[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 41.
extended_ppi_in_42[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 42.
extended_ppi_in_43[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 43.
extended_ppi_in_44[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 44.
extended_ppi_in_45[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 45.
extended_ppi_in_46[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 46.
extended_ppi_in_47[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 47.
extended_ppi_in_48[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 48.
extended_ppi_in_49[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 49.
extended_ppi_in_5[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 5.
extended_ppi_in_50[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 50.

Name	Protocol	Type	Description
extended_ppi_in_51[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 51.
extended_ppi_in_52[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 52.
extended_ppi_in_53[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 53.
extended_ppi_in_54[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 54.
extended_ppi_in_55[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 55.
extended_ppi_in_56[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 56.
extended_ppi_in_57[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 57.
extended_ppi_in_58[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 58.
extended_ppi_in_59[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 59.
extended_ppi_in_6[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 6.
extended_ppi_in_60[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 60.
extended_ppi_in_61[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 61.
extended_ppi_in_62[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 62.
extended_ppi_in_63[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 63.
extended_ppi_in_64[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 64.
extended_ppi_in_65[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 65.
extended_ppi_in_66[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 66.
extended_ppi_in_67[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 67.
extended_ppi_in_68[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 68.
extended_ppi_in_69[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 69.
extended_ppi_in_7[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 7.
extended_ppi_in_70[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 70.
extended_ppi_in_71[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 71.

Name	Protocol	Type	Description
extended_ppi_in_72[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 72.
extended_ppi_in_73[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 73.
extended_ppi_in_74[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 74.
extended_ppi_in_75[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 75.
extended_ppi_in_76[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 76.
extended_ppi_in_77[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 77.
extended_ppi_in_78[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 78.
extended_ppi_in_79[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 79.
extended_ppi_in_8[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 8.
extended_ppi_in_80[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 80.
extended_ppi_in_81[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 81.
extended_ppi_in_82[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 82.
extended_ppi_in_83[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 83.
extended_ppi_in_84[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 84.
extended_ppi_in_85[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 85.
extended_ppi_in_86[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 86.
extended_ppi_in_87[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 87.
extended_ppi_in_88[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 88.
extended_ppi_in_89[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 89.
extended_ppi_in_9[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 9.
extended_ppi_in_90[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 90.
extended_ppi_in_91[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 91.
extended_ppi_in_92[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 92.

Name	Protocol	Type	Description
extended_ppi_in_93[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 93.
extended_ppi_in_94[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 94.
extended_ppi_in_95[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 95.
extended_ppi_in_96[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 96.
extended_ppi_in_97[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 97.
extended_ppi_in_98[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 98.
extended_ppi_in_99[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 99.
extended_spi_in[1024]	Signal	Slave	Extended Shared peripheral interrupts.
msi_error_interrupt	Signal	Master	When report of MSI error allowed through interrupt, loop-back this signal to relevant IRQ input signal
po_reset	Signal	Slave	Resets.
ppi_in_0[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 0.
ppi_in_1[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 1.
ppi_in_10[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 10.
ppi_in_100[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 100.
ppi_in_101[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 101.
ppi_in_102[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 102.
ppi_in_103[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 103.
ppi_in_104[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 104.
ppi_in_105[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 105.
ppi_in_106[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 106.
ppi_in_107[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 107.
ppi_in_108[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 108.
ppi_in_109[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 109.
ppi_in_11[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 11.
ppi_in_110[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 110.
ppi_in_111[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 111.
ppi_in_112[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 112.
ppi_in_113[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 113.
ppi_in_114[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 114.
ppi_in_115[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 115.
ppi_in_116[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 116.
ppi_in_117[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 117.
ppi_in_118[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 118.

Name	Protocol	Type	Description
ppi_in_119[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 119.
ppi_in_12[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 12.
ppi_in_120[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 120.
ppi_in_121[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 121.
ppi_in_122[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 122.
ppi_in_123[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 123.
ppi_in_124[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 124.
ppi_in_125[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 125.
ppi_in_126[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 126.
ppi_in_127[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 127.
ppi_in_128[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 128.
ppi_in_129[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 129.
ppi_in_13[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 13.
ppi_in_130[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 130.
ppi_in_131[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 131.
ppi_in_132[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 132.
ppi_in_133[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 133.
ppi_in_134[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 134.
ppi_in_135[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 135.
ppi_in_136[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 136.
ppi_in_137[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 137.
ppi_in_138[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 138.
ppi_in_139[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 139.
ppi_in_14[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 14.
ppi_in_140[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 140.
ppi_in_141[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 141.
ppi_in_142[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 142.
ppi_in_143[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 143.
ppi_in_144[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 144.
ppi_in_145[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 145.
ppi_in_146[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 146.
ppi_in_147[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 147.
ppi_in_148[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 148.
ppi_in_149[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 149.
ppi_in_15[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 15.
ppi_in_150[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 150.
ppi_in_151[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 151.
ppi_in_152[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 152.
ppi_in_153[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 153.

Name	Protocol	Type	Description
ppi_in_154[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 154.
ppi_in_155[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 155.
ppi_in_156[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 156.
ppi_in_157[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 157.
ppi_in_158[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 158.
ppi_in_159[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 159.
ppi_in_16[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 16.
ppi_in_160[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 160.
ppi_in_161[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 161.
ppi_in_162[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 162.
ppi_in_163[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 163.
ppi_in_164[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 164.
ppi_in_165[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 165.
ppi_in_166[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 166.
ppi_in_167[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 167.
ppi_in_168[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 168.
ppi_in_169[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 169.
ppi_in_17[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 17.
ppi_in_170[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 170.
ppi_in_171[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 171.
ppi_in_172[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 172.
ppi_in_173[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 173.
ppi_in_174[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 174.
ppi_in_175[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 175.
ppi_in_176[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 176.
ppi_in_177[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 177.
ppi_in_178[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 178.
ppi_in_179[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 179.
ppi_in_18[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 18.
ppi_in_180[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 180.
ppi_in_181[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 181.
ppi_in_182[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 182.
ppi_in_183[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 183.
ppi_in_184[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 184.
ppi_in_185[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 185.
ppi_in_186[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 186.
ppi_in_187[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 187.
ppi_in_188[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 188.
ppi_in_189[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 189.

Name	Protocol	Type	Description
ppi_in_19[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 19.
ppi_in_190[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 190.
ppi_in_191[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 191.
ppi_in_192[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 192.
ppi_in_193[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 193.
ppi_in_194[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 194.
ppi_in_195[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 195.
ppi_in_196[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 196.
ppi_in_197[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 197.
ppi_in_198[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 198.
ppi_in_199[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 199.
ppi_in_2[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 2.
ppi_in_20[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 20.
ppi_in_200[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 200.
ppi_in_201[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 201.
ppi_in_202[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 202.
ppi_in_203[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 203.
ppi_in_204[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 204.
ppi_in_205[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 205.
ppi_in_206[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 206.
ppi_in_207[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 207.
ppi_in_208[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 208.
ppi_in_209[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 209.
ppi_in_21[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 21.
ppi_in_210[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 210.
ppi_in_211[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 211.
ppi_in_212[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 212.
ppi_in_213[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 213.
ppi_in_214[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 214.
ppi_in_215[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 215.
ppi_in_216[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 216.
ppi_in_217[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 217.
ppi_in_218[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 218.
ppi_in_219[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 219.
ppi_in_22[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 22.
ppi_in_220[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 220.
ppi_in_221[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 221.
ppi_in_222[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 222.
ppi_in_223[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 223.

Name	Protocol	Type	Description
ppi_in_224[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 224.
ppi_in_225[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 225.
ppi_in_226[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 226.
ppi_in_227[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 227.
ppi_in_228[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 228.
ppi_in_229[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 229.
ppi_in_23[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 23.
ppi_in_230[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 230.
ppi_in_231[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 231.
ppi_in_232[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 232.
ppi_in_233[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 233.
ppi_in_234[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 234.
ppi_in_235[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 235.
ppi_in_236[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 236.
ppi_in_237[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 237.
ppi_in_238[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 238.
ppi_in_239[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 239.
ppi_in_24[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 24.
ppi_in_240[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 240.
ppi_in_241[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 241.
ppi_in_242[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 242.
ppi_in_243[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 243.
ppi_in_244[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 244.
ppi_in_245[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 245.
ppi_in_246[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 246.
ppi_in_247[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 247.
ppi_in_248[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 248.
ppi_in_249[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 249.
ppi_in_25[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 25.
ppi_in_250[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 250.
ppi_in_251[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 251.
ppi_in_252[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 252.
ppi_in_253[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 253.
ppi_in_254[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 254.
ppi_in_255[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 255.
ppi_in_26[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 26.
ppi_in_27[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 27.
ppi_in_28[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 28.
ppi_in_29[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 29.

Name	Protocol	Type	Description
ppi_in_3[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 3.
ppi_in_30[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 30.
ppi_in_31[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 31.
ppi_in_32[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 32.
ppi_in_33[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 33.
ppi_in_34[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 34.
ppi_in_35[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 35.
ppi_in_36[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 36.
ppi_in_37[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 37.
ppi_in_38[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 38.
ppi_in_39[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 39.
ppi_in_4[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 4.
ppi_in_40[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 40.
ppi_in_41[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 41.
ppi_in_42[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 42.
ppi_in_43[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 43.
ppi_in_44[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 44.
ppi_in_45[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 45.
ppi_in_46[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 46.
ppi_in_47[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 47.
ppi_in_48[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 48.
ppi_in_49[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 49.
ppi_in_5[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 5.
ppi_in_50[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 50.
ppi_in_51[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 51.
ppi_in_52[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 52.
ppi_in_53[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 53.
ppi_in_54[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 54.
ppi_in_55[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 55.
ppi_in_56[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 56.
ppi_in_57[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 57.
ppi_in_58[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 58.
ppi_in_59[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 59.
ppi_in_6[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 6.
ppi_in_60[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 60.
ppi_in_61[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 61.
ppi_in_62[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 62.
ppi_in_63[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 63.
ppi_in_64[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 64.

Name	Protocol	Type	Description
ppi_in_65[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 65.
ppi_in_66[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 66.
ppi_in_67[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 67.
ppi_in_68[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 68.
ppi_in_69[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 69.
ppi_in_7[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 7.
ppi_in_70[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 70.
ppi_in_71[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 71.
ppi_in_72[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 72.
ppi_in_73[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 73.
ppi_in_74[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 74.
ppi_in_75[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 75.
ppi_in_76[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 76.
ppi_in_77[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 77.
ppi_in_78[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 78.
ppi_in_79[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 79.
ppi_in_8[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 8.
ppi_in_80[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 80.
ppi_in_81[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 81.
ppi_in_82[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 82.
ppi_in_83[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 83.
ppi_in_84[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 84.
ppi_in_85[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 85.
ppi_in_86[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 86.
ppi_in_87[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 87.
ppi_in_88[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 88.
ppi_in_89[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 89.
ppi_in_9[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 9.
ppi_in_90[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 90.
ppi_in_91[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 91.
ppi_in_92[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 92.
ppi_in_93[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 93.
ppi_in_94[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 94.
ppi_in_95[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 95.
ppi_in_96[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 96.
ppi_in_97[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 97.
ppi_in_98[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 98.
ppi_in_99[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 99.
pvbus_m	PVBus	Master	Memory bus out: transactions generated by the IRI.

Name	Protocol	Type	Description
pvbus_s	PVBus	Slave	Memory bus in: memory-mapped register accesses are accepted on this interface.
redistributor_m[256]	GICv3Comms	Master	Input from and output to CPU interface.
reset	Signal	Slave	Resets.
spi_in[988]	Signal	Slave	Shared peripheral interrupts.
wake_request[256]	Signal	Master	Power management outputs.
wire_to_msi_in_0[1024]	Signal	Slave	Wire-to-MSI interrupts for architectural consolidator 0.
wire_to_msi_in_1[1024]	Signal	Slave	Wire-to-MSI interrupts for architectural consolidator 1.
wire_to_msi_in_2[1024]	Signal	Slave	Wire-to-MSI interrupts for architectural consolidator 2.
wire_to_msi_in_3[1024]	Signal	Slave	Wire-to-MSI interrupts for architectural consolidator 3.

## Parameters for GIC\_IRI

### A3-affinity-supported

#### Type

bool

#### Default value

0x0

#### Description

Device supports affinity level 3 values that are non-zero.

### ARE-fixed-to-one

#### Type

bool

#### Default value

0x0

#### Description

GICv2 compatibility is not supported and GICD\_CTLR.ARE\_\* is always one.

### CPU-affinities

#### Type

string

#### Default value

0.0.0.0

#### Description

A comma separated list of dotted quads containing the affinities of all PEs connected to this IRI. If CPU-affinities-file is specified, this parameter is ignored.

**CPU-affinities-file****Type**

string

**Default value**

""

**Description**

A file containing comma separated list of dotted quads containing the affinities of all PEs connected to this IRI. If this parameter is specified, CPU-affinities parameter will be ignored even when it is given.

**DPG-ARE-only****Type**

bool

**Default value**

0x0

**Description**

Limit application of DPG bits to interrupt groups for which ARE=1.

**DPG-bits-implemented****Type**

bool

**Default value**

0x0

**Description**

Enable implementation of interrupt group participation bits or DPG bits in GICR\_CTLR.

**DS-fixed-to-zero****Type**

bool

**Default value**

0x0

**Description**

Enable/disable support of single security state.

**GICD-alias****Type**

int

**Default value**

0x0

**Description**

In GICv2 mode: the base address for a 4k page alias of the first 4k of the Distributor page, in GICv3 mode. the base address of a 64KB page containing message based SPI signalling register aliases(0:Disabled).

**GICD-legacy-registers-as-reserved****Type**

bool

**Default value**

0x0

**Description**

When ARE is RAO/WI, makes superfluous registers in GICD reserved ( including for the purpose of STATUSR updates).

**GICD\_CTLR-DS-1-means-secure-only****Type**

bool

**Default value**

0x0

**Description**

If GICD\_CTLR.DS=1, GICD supports a single security state which is secure if this is true, otherwise is non-secure.

**GICD\_ITARGETSR-RAZWI****Type**

bool

**Default value**

0x0

**Description**

If true, the GICD\_ITARGETS registers are RAZ/WI.

**GICD\_PIDR****Type**

int

**Default value**

0x0

**Description**

The value for the GICD\_PIDR registers, if non-zero. Note: fixed fields (device type etc.) will be overridden in this value.

**GICD\_TYPER2****Type**

int

**Default value**

0x0

**Description**

GICD\_TYPER2 value containing VID and VIL to define the width of vPEID for GICv4.1.

**GICR-clear-enable-supported****Type**

bool

**Default value**

0x0

**Description**

When true, this sets the value of the RO bit GICR\_CTLR.CES with the value of the parameter allow-LPIEN-clear, making it visible to software.

**GICR-invalidate-registers-implemented****Type**

bool

**Default value**

0x0

**Description**

When true, the registers GICR\_INVLPIR, GICR\_INVALLR and GICR\_SYNCR are implemented.

**GICR\_PIDR****Type**

int

**Default value**

0x0

**Description**

The value for the GICR\_PIDR registers, if non-zero. Note: fixed fields (device type etc.) will be overridden in this value.

**GICR\_PROPBASER-read-only****Type**

bool

**Default value**

0x0

**Description**

GICR\_PROPBASER register is read-only.

**GICR\_PROPBASER-reset-value****Type**

int

**Default value**

0x0

**Description**

Value of GICR\_PROPBASER on reset.

**GITS\_BASER0-entry-bytes****Type**

int

**Default value**

0x8

**Description**

Number of bytes required per entry for GITS\_BASER0 register.

**GITS\_BASER0-indirect-RAZ****Type**

bool

**Default value**

0x0

**Description**

Indirect field for GITS\_BASER0 register is RAZ/WI.

**GITS\_BASER0-type****Type**

int

**Default value**

0x0

**Description**

Type field for GITS\_BASER0 register. 0 = Unimplemented; 1 = Devices; 2 = Virtual Processors; 3 = Physical Processors; 4 = Collections.

**GITS\_BASER1-entry-bytes****Type**

int

**Default value**

0x8

**Description**

Number of bytes required per entry for GITS\_BASER1 register.

**GITS\_BASER1-indirect-RAZ****Type**

bool

**Default value**

0x0

**Description**

Indirect field for GITS\_BASER1 register is RAZ/WI.

**GITS\_BASER1-type****Type**

int

**Default value**

0x0

**Description**

Type field for GITS\_BASER1 register. 0 = Unimplemented; 1 = Devices; 2 = Virtual Processors; 3 = Physical Processors; 4 = Collections.

**GITS\_BASER2-entry-bytes****Type**

int

**Default value**

0x8

**Description**

Number of bytes required per entry for GITS\_BASER2 register.

**GITS\_BASER2-indirect-RAZ****Type**

bool

**Default value**

0x0

**Description**

Indirect field for GITS\_BASER2 register is RAZ/WI.

**GITS\_BASER2-type****Type**

int

**Default value**

0x0

**Description**

Type field for GITS\_BASER2 register. 0 = Unimplemented; 1 = Devices; 2 = Virtual Processors; 3 = Physical Processors; 4 = Collections.

**GITS\_BASER3-entry-bytes****Type**

int

**Default value**

0x8

**Description**

Number of bytes required per entry for GITS\_BASER3 register.

**GITS\_BASER3-indirect-RAZ****Type**

bool

**Default value**

0x0

**Description**

Indirect field for GITS\_BASER3 register is RAZ/WI.

**GITS\_BASER3-type****Type**

int

**Default value**

0x0

**Description**

Type field for GITS\_BASER3 register. 0 = Unimplemented; 1 = Devices; 2 = Virtual Processors; 3 = Physical Processors; 4 = Collections.

**GITS\_BASER4-entry-bytes****Type**

int

**Default value**

0x8

**Description**

Number of bytes required per entry for GITS\_BASER4 register.

**GITS\_BASER4-indirect-RAZ****Type**

bool

**Default value**

0x0

**Description**

Indirect field for GITS\_BASER4 register is RAZ/WI.

**GITS\_BASER4-type****Type**

int

**Default value**

0x0

**Description**

Type field for GITS\_BASER4 register. 0 = Unimplemented; 1 = Devices; 2 = Virtual Processors; 3 = Physical Processors; 4 = Collections.

**GITS\_BASER5-entry-bytes****Type**

int

**Default value**

0x8

**Description**

Number of bytes required per entry for GITS\_BASER5 register.

**GITS\_BASER5-indirect-RAZ****Type**

bool

**Default value**

0x0

**Description**

Indirect field for GITS\_BASER5 register is RAZ/WI.

**GITS\_BASER5-type****Type**

int

**Default value**

0x0

**Description**

Type field for GITS\_BASER5 register. 0 = Unimplemented; 1 = Devices; 2 = Virtual Processors; 3 = Physical Processors; 4 = Collections.

**GITS\_BASER6-entry-bytes****Type**

int

**Default value**

0x8

**Description**

Number of bytes required per entry for GITS\_BASER6 register.

**GITS\_BASER6-indirect-RAZ****Type**

bool

**Default value**

0x0

**Description**

Indirect field for GITS\_BASER6 register is RAZ/WI.

**GITS\_BASER6-type****Type**

int

**Default value**

0x0

**Description**

Type field for GITS\_BASER6 register. 0 = Unimplemented; 1 = Devices; 2 = Virtual Processors; 3 = Physical Processors; 4 = Collections.

**GITS\_BASER7-entry-bytes****Type**

int

**Default value**

0x8

**Description**

Number of bytes required per entry for GITS\_BASER7 register.

**GITS\_BASER7-indirect-RAZ****Type**

bool

**Default value**

0x0

**Description**

Indirect field for GITS\_BASER7 register is RAZ/WI.

**GITS\_BASER7-type****Type**

int

**Default value**

0x0

**Description**

Type field for GITS\_BASER7 register. 0 = Unimplemented; 1 = Devices; 2 = Virtual Processors; 3 = Physical Processors; 4 = Collections.

**GITS\_PIDR****Type**

int

**Default value**

0x0

**Description**

The value for the GITS\_PIDR registers, if non-zero. Note: fixed fields (device type etc.) will be overridden in this value.

**ICFGR-PPI-mask****Type**

int

**Default value**

0xaaaaaaaa

**Description**

Mask for writes to ICFGR registers that configure PPIs.

**ICFGR-PPI-reset****Type**

int

**Default value**

0x0

**Description**

Reset value for ICFGR registers that configure PPIs.

**ICFGR-SGI-mask****Type**

int

**Default value**

0x0

**Description**

Mask for writes to ICFGR registers that configure SGIs.

**ICFGR-SGI-reset****Type**

int

**Default value**

0xaaaaaaaa

**Description**

Reset value for ICFGR registers that configure SGIs.

**ICFGR-SPI-mask****Type**

int

**Default value**

0xaaaaaaaa

**Description**

Mask for writes to ICFGR registers that configure SPIs.

**ICFGR-SPI-reset****Type**

int

**Default value**

0x0

**Description**

Reset value for ICFGR registers that configure SPIs.

**ICFGR-rsvd-bit****Type**

bool

**Default value**

0x0

**Description**

If ARE=0, the value of reserved bits i.e. bit 0,2,4..30 of ICFGRn for n>0.

**IGROUP-PPI-mask****Type**

int

**Default value**

0xffff

**Description**

Mask for writes to PPI bits in IGROUP registers.

**IGROUP-PPI-reset****Type**

int

**Default value**

0x0

**Description**

Reset value for SGI bits in IGROUP registers.

**IGROUP-SGI-mask****Type**

int

**Default value**

0xffff

**Description**

Mask for writes to SGI bits in IGROUP registers.

**IGROUP-SGI-reset****Type**

int

**Default value**

0x0

**Description**

Reset value for SGI bits in IGROUP registers.

**IIDR****Type**

int

**Default value**

0x0

**Description**

GICD\_IIDR and GICR\_IIDR value.

**IRI-ID-bits****Type**

int

**Default value**

0x10

**Description**

Number of bits used to represent interrupts IDs in the Distributor and Redistributors, forced to 10 when none of LPIs, extended SPIs or extended PPIs is supported.

**IROUTER-IRM-RAZ-WI****Type**

bool

**Default value**

0x0

**Description**

GICD\_IROUTERn.InterruptRoutingMode is RAZ/WI.

**ITS-BASER-force-page-alignment****Type**

bool

**Default value**

0x1

**Description**

Force alignment of address written to a GITS\_BASER register to the page size configured.

**ITS-ID-bits****Type**

int

**Default value**

0x10

**Description**

Number of interrupt bits supported by ITS.

**ITS-MOVALL-update-collections****Type**

bool

**Default value**

0x0

**Description**

Whether MOVALL command updates the collection entires.

**ITS-TRANSLATE64R****Type**

bool

**Default value**

0x0

**Description**

Add an implementation specific register at 0x10008 supporting 64 bit TRANSLATER (dev[63:32], interrupt[31:0]).

**ITS-cache-invalidate-on-disable****Type**

bool

**Default value**

0x0

**Description**

Sets the RO bit GITS\_TYPER.INV. When true, after the following sequence: 1) GITS\_CTLR.Enabled written 1-->0, 2) GITS\_CTLR.Quiescent observed as 1, 3) GITS\_BASER<n>.Valid written 1-->0, there is no cached information from the ITS memory structure pointed to by GITS\_BASER<n>.

**ITS-collection-ID-bits****Type**

int

**Default value**

0x0

**Description**

Number of collection bits supported by ITS (optional parameter, 0 => 16bits support and GITS\_TYPER.CIL=0.

**ITS-count****Type**

int

**Default value**

0x0

**Description**

Number of Interrupt Translation Services to be instantiated (0=none).

**ITS-cumulative-collection-tables****Type**

bool

**Default value**

0x1

**Description**

When true, the supported amount of collections is the sum of GITS\_TYPER.HCC and the number of collections supported in memory, otherwise, simply the number supported in memory only. Irrelevant when HCC=0.

**ITS-device-bits****Type**

int

**Default value**

0x10

**Description**

Number of bits supported for ITS device IDs.

**ITS-enable-itt-address-verification****Type**

bool

**Default value**

0x0

**Description**

If true, a transaction will be sent to ITT Address for verification.

**ITS-entry-size****Type**

int

**Default value**

0x8

**Description**

Number of bytes required to store each entry in the ITT tables.

**ITS-hardware-collection-count****Type**

int

**Default value**

0x0

**Description**

Number of hardware collections held exclusively in the ITS.

**ITS-legacy-iidr-typer-offset****Type**

bool

**Default value**

0x0

**Description**

Put the GITS\_IIDR and GITS\_TYPER registers at their older offset of 0x8 and 0x4 respectively.

**ITS-shared-vPE-table****Type**

int

**Default value**

0x0

**Description**

Number of affinity levels to which the vPE configuration table is shared. This parameter is valid when has-gicv4.1 is true.

**ITS-threaded-command-queue****Type**

bool

**Default value**

0x1

**Description**

Enable execution of ITS commands in a separate thread which is sometimes required for cosimulation.

**ITS-use-physical-target-addresses****Type**

bool

**Default value**

0x1

**Description**

Use physical hardware addresses for targets in ITS commands -- must be true for distributed implementations.

**ITS-vmovp-bit****Type**

bool

**Default value**

0x0

**Description**

Device supports software issuing a VMOVP to only one of the ITSs that has a mapping for a vPE. The device itself ensures synchronization of the VMOVP command across all ITSs that have mapping for that vPE.

**ITS0-base****Type**

int

**Default value**

0x0

**Description**

Register base address for ITS0 (automatic if 0).

**ITS1-base****Type**

int

**Default value**

0x0

**Description**

Register base address for ITS1 (automatic if 0).

**ITS2-base****Type**

int

**Default value**

0x0

**Description**

Register base address for ITS2 (automatic if 0).

**ITS3-base****Type**

int

**Default value**

0x0

**Description**

Register base address for ITS3 (automatic if 0).

**LPI-cache-check-data****Type**

bool

**Default value**

0x0

**Description**

Enable Cached LPI data against memory checking when available for cache type.

**LPI-cache-type****Type**

int

**Default value**

0x1

**Description**

Cache type for LPIs, 0:No caching, 1:Full caching.

**MSI\_IIDR****Type**

int

**Default value**

0x0

**Description**

Value returned in MSI\_IIDR registers.

**MSI\_NS-frame0-base****Type**

int

**Default value**

0x0

**Description**

If non-zero, sets the base address used for non-secure MSI frame 0 registers.

**MSI\_NS-frame0-max-SPI****Type**

int

**Default value**

0x0

**Description**

Maximum SPI ID supported by non-secure MSI frame 0. Set to 0 to disable frame.

**MSI\_NS-frame0-min-SPI****Type**

int

**Default value**

0x0

**Description**

Minimum SPI ID supported by non-secure MSI frame 0. Set to 0 to disable frame.

**MSI\_NS-frame1-base****Type**

int

**Default value**

0x0

**Description**

If non-zero, sets the base address used for non-secure MSI frame 1 registers.

**MSI\_NS-frame1-max-SPI****Type**

int

**Default value**

0x0

**Description**

Maximum SPI ID supported by non-secure MSI frame 1. Set to 0 to disable frame.

**MSI\_NS-frame1-min-SPI****Type**

int

**Default value**

0x0

**Description**

Minimum SPI ID supported by non-secure MSI frame 1. Set to 0 to disable frame.

**MSI\_NS-frame2-base****Type**

int

**Default value**

0x0

**Description**

If non-zero, sets the base address used for non-secure MSI frame 2 registers.

**MSI\_NS-frame2-max-SPI****Type**

int

**Default value**

0x0

**Description**

Maximum SPI ID supported by non-secure MSI frame 2. Set to 0 to disable frame.

**MSI\_NS-frame2-min-SPI****Type**

int

**Default value**

0x0

**Description**

Minimum SPI ID supported by non-secure MSI frame 2. Set to 0 to disable frame.

**MSI\_NS-frame3-base****Type**

int

**Default value**

0x0

**Description**

If non-zero, sets the base address used for non-secure MSI frame 3 registers.

**MSI\_NS-frame3-max-SPI****Type**

int

**Default value**

0x0

**Description**

Maximum SPI ID supported by non-secure MSI frame 3. Set to 0 to disable frame.

**MSI\_NS-frame3-min-SPI****Type**

int

**Default value**

0x0

**Description**

Minimum SPI ID supported by non-secure MSI frame 3. Set to 0 to disable frame.

**MSI\_NS-frame4-base****Type**

int

**Default value**

0x0

**Description**

If non-zero, sets the base address used for non-secure MSI frame 4 registers.

**MSI\_NS-frame4-max-SPI****Type**

int

**Default value**

0x0

**Description**

Maximum SPI ID supported by non-secure MSI frame 4. Set to 0 to disable frame.

**MSI\_NS-frame4-min-SPI****Type**

int

**Default value**

0x0

**Description**

Minimum SPI ID supported by non-secure MSI frame 4. Set to 0 to disable frame.

**MSI\_NS-frame5-base****Type**

int

**Default value**

0x0

**Description**

If non-zero, sets the base address used for non-secure MSI frame 5 registers.

**MSI\_NS-frame5-max-SPI****Type**

int

**Default value**

0x0

**Description**

Maximum SPI ID supported by non-secure MSI frame 5. Set to 0 to disable frame.

**MSI\_NS-frame5-min-SPI****Type**

int

**Default value**

0x0

**Description**

Minimum SPI ID supported by non-secure MSI frame 5. Set to 0 to disable frame.

**MSI\_NS-frame6-base****Type**

int

**Default value**

0x0

**Description**

If non-zero, sets the base address used for non-secure MSI frame 6 registers.

**MSI\_NS-frame6-max-SPI****Type**

int

**Default value**

0x0

**Description**

Maximum SPI ID supported by non-secure MSI frame 6. Set to 0 to disable frame.

**MSI\_NS-frame6-min-SPI****Type**

int

**Default value**

0x0

**Description**

Minimum SPI ID supported by non-secure MSI frame 6. Set to 0 to disable frame.

**MSI\_NS-frame7-base****Type**

int

**Default value**

0x0

**Description**

If non-zero, sets the base address used for non-secure MSI frame 7 registers.

**MSI\_NS-frame7-max-SPI****Type**

int

**Default value**

0x0

**Description**

Maximum SPI ID supported by non-secure MSI frame 7. Set to 0 to disable frame.

**MSI\_NS-frame7-min-SPI****Type**

int

**Default value**

0x0

**Description**

Minimum SPI ID supported by non-secure MSI frame 7. Set to 0 to disable frame.

**MSI\_PIDR****Type**

int

**Default value**

0x0

**Description**

The value for the MSI\_PIDR registers, if non-zero and distributor supports GICv2m. Note: fixed fields (device type etc.) will be overridden in this value.

**MSI\_S-frame0-base****Type**

int

**Default value**

0x0

**Description**

If non-zero, sets the base address used for secure MSI frame 0 registers.

**MSI\_S-frame0-max-SPI****Type**

int

**Default value**

0x0

**Description**

Maximum SPI ID supported by secure MSI frame 0. Set to 0 to disable frame.

**MSI\_S-frame0-min-SPI****Type**

int

**Default value**

0x0

**Description**

Minimum SPI ID supported by secure MSI frame 0. Set to 0 to disable frame.

**MSI\_S-frame1-base****Type**

int

**Default value**

0x0

**Description**

If non-zero, sets the base address used for secure MSI frame 1 registers.

**MSI\_S-frame1-max-SPI****Type**

int

**Default value**

0x0

**Description**

Maximum SPI ID supported by secure MSI frame 1. Set to 0 to disable frame.

**MSI\_S-frame1-min-SPI****Type**

int

**Default value**

0x0

**Description**

Minimum SPI ID supported by secure MSI frame 1. Set to 0 to disable frame.

**MSI\_S-frame2-base****Type**

int

**Default value**

0x0

**Description**

If non-zero, sets the base address used for secure MSI frame 2 registers.

**MSI\_S-frame2-max-SPI****Type**

int

**Default value**

0x0

**Description**

Maximum SPI ID supported by secure MSI frame 2. Set to 0 to disable frame.

**MSI\_S-frame2-min-SPI****Type**

int

**Default value**

0x0

**Description**

Minimum SPI ID supported by secure MSI frame 2. Set to 0 to disable frame.

**MSI\_S-frame3-base****Type**

int

**Default value**

0x0

**Description**

If non-zero, sets the base address used for secure MSI frame 3 registers.

**MSI\_S-frame3-max-SPI****Type**

int

**Default value**

0x0

**Description**

Maximum SPI ID supported by secure MSI frame 3. Set to 0 to disable frame.

**MSI\_S-frame3-min-SPI****Type**

int

**Default value**

0x0

**Description**

Minimum SPI ID supported by secure MSI frame 3. Set to 0 to disable frame.

**MSI\_S-frame4-base****Type**

int

**Default value**

0x0

**Description**

If non-zero, sets the base address used for secure MSI frame 4 registers.

**MSI\_S-frame4-max-SPI****Type**

int

**Default value**

0x0

**Description**

Maximum SPI ID supported by secure MSI frame 4. Set to 0 to disable frame.

**MSI\_S-frame4-min-SPI****Type**

int

**Default value**

0x0

**Description**

Minimum SPI ID supported by secure MSI frame 4. Set to 0 to disable frame.

**MSI\_S-frame5-base****Type**

int

**Default value**

0x0

**Description**

If non-zero, sets the base address used for secure MSI frame 5 registers.

**MSI\_S-frame5-max-SPI****Type**

int

**Default value**

0x0

**Description**

Maximum SPI ID supported by secure MSI frame 5. Set to 0 to disable frame.

**MSI\_S-frame5-min-SPI****Type**

int

**Default value**

0x0

**Description**

Minimum SPI ID supported by secure MSI frame 5. Set to 0 to disable frame.

**MSI\_S-frame6-base****Type**

int

**Default value**

0x0

**Description**

If non-zero, sets the base address used for secure MSI frame 6 registers.

**MSI\_S-frame6-max-SPI****Type**

int

**Default value**

0x0

**Description**

Maximum SPI ID supported by secure MSI frame 6. Set to 0 to disable frame.

**MSI\_S-frame6-min-SPI****Type**

int

**Default value**

0x0

**Description**

Minimum SPI ID supported by secure MSI frame 6. Set to 0 to disable frame.

**MSI\_S-frame7-base****Type**

int

**Default value**

0x0

**Description**

If non-zero, sets the base address used for secure MSI frame 7 registers.

**MSI\_S-frame7-max-SPI****Type**

int

**Default value**

0x0

**Description**

Maximum SPI ID supported by secure MSI frame 7. Set to 0 to disable frame.

**MSI\_S-frame7-min-SPI****Type**

int

**Default value**

0x0

**Description**

Minimum SPI ID supported by secure MSI frame 7. Set to 0 to disable frame.

**PA\_SIZE****Type**

int

**Default value**

0x30

**Description**

Number of valid bits in physical address.

**PPI-implemented-mask****Type**

int

**Default value**

0xffff

**Description**

Mask of PPIs that are implemented. One bit per PPI bit 0 == PPI 16 (first PPI). This will affect other masks.

**SPI-count****Type**

int

**Default value**

0xe0

**Description**

Number of SPIs that are implemented.

**SPI-message-based-support****Type**

bool

**Default value**

0x1

**Description**

Distributor supports message based signaling of SPI.

**SPI-unimplemented****Type**

string

**Default value**

""

**Description**

A comma separated list of unimplemented SPIs ranges for sparse SPI definition(for ex: '35, 39-42, 73').

**STATUSR-implemented****Type**

bool

**Default value**

0x1

**Description**

Determines whether the GICR\_STATUSR register is implemented.

**add-output-cpu-wake-request-signal-from-redistributor****Type**

bool

**Default value**

0x0

**Description**

if true, the redistributor will have the output signal `cpu_wake_request` from GIC to DSU and if false, the signals are not added to the redistributor.

**allow-LPIEN-clear****Type**

bool

**Default value**

0x0

**Description**

Allow RW behaviour on GICR\_CTLR.LPIEN instead of set once.

**clear-ISPENDR-bit-for-level-sensitive-interrupt-when-acknowledged****Type**

bool

**Default value**

0x0

**Description**

If true, acknowledgement of a level sensitive interrupt clears the corresponding bit in the ISPENDR register.

**common-lpi-configuration****Type**

int

**Default value**

0x0

**Description**

Describes which re-distributors share (and must be configured with the same) LPI configuration table as described in GICR\_TYPER( 0:All, 1:A.x.x.x, 2:A.B.x.x, 3:A.B.C.x.

**common-vPE-table-affinity****Type**

string

**Default value**

""

**Description**

Affinity value list in the form of 'a.b.c.d, e.f.g.h, etc' given to the ITS(s) (where a.b.c.d corresponds to ITS0, e.f.g.h corresponds to ITS1 and so on). Under an affinity value the vPE configuration table is shared among redistributors where the level to be shared is defined by ITS-shared-vPE-table. This parameter is valid when `has-gicv4.1` is true.

**consolidators****Type**

string

**Default value**

""

**Description**

Specify consolidators' base addresses, interrupt line counts and base interrupt IDs, in the form 'baseAddr0:itlineCount0:baseINTID0, baseAddr1:itlineCount1:baseINTID1, [etc]'. (eg '0x3f100000:64:4096, 0x3f200000:64:4224'). The consolidators' count is inferred from the list (maximum of 4). If not specified, the component contains no consolidators.

**delay-ITS-accesses****Type**

bool

**Default value**

0x1

**Description**

Delay accesses from the ITS until GICR\_SYNCRR is read.

**delay-redistributor-accesses****Type**

bool

**Default value**

0x1

**Description**

Delay memory accesses from the redistributor until GICR\_SYNCRR is read.

**direct-lpi-support****Type**

bool

**Default value**

0x0

**Description**

Enable support for LPI operations through GICR registers.

**enable\_protocol\_checking****Type**

bool

**Default value**

0x0

**Description**

Enable/disable protocol checking at cpu interface.

**enabled****Type**

bool

**Default value**

0x1

**Description**

Enable GICv3 functionality; when false the component is inactive.

**extended-ppi-count****Type**

int

**Default value**

0x0

**Description**

Number of extended PPI supported.

**extended-spi-count****Type**

int

**Default value**

0x0

**Description**

Number of extended SPI supported.

**fixed-routed-spis****Type**

string

**Default value**

""

**Description**

Value of IROUTER[n] register in the form 'n=a.b.c.d, n=\*'. The RM bit of IROUTER is 0 when n=a.b.c.d is used else 1 when n=\* is used. n can be >= 32 and <= 1019.

**gicr-icfgr-extended-count****Type**

int

**Default value**

0x4

**Description**

Number of extended GICR\_ICFGR registers supported.

**`gicv2-only`****Type**

bool

**Default value**

0x0

**Description**

If true, when using the GICv3 model, pretend to be a GICv2 system.

**`group-enables-control-doorbell`****Type**

bool

**Default value**

0x0

**Description**

When true, GICR\_VPENDBASER.{VGrp0En,VGrp1En} are cached to allow GIC to check group enables when virtual interrupt targeting this VCPU which is non-resident reaches Redistributor.

**`has-gicv4.1`****Type**

bool

**Default value**

0x0

**Description**

Enable GICv4.1 functionality; when false the component is inactive.

**`has-two-security-states`****Type**

bool

**Default value**

0x1

**Description**

If true, has two security states.

**has\_VPENDBASER-dirty-flag-on-load****Type**

bool

**Default value**

0x0

**Description**

GICR\_VPENDBASER.Dirty reflects transient loading state when valid=1.

**has\_mpam****Type**

bool

**Default value**

0x0

**Description**

Enable MPAM support on ITS and RDs.

**has\_nmi****Type**

bool

**Default value**

0x0

**Description**

Enable support for Non-maskable Interrupts (NMIs). (FEAT\_GICv3\_NMI).

**ignore-generate-sgi-when-no-are****Type**

bool

**Default value**

0x0

**Description**

Ignore GenerateSgi packets coming from the CPU interface if both ARE\_S and ARE\_NS are 0.

**individual-doorbell-not-supported****Type**

bool

**Default value**

0x0

**Description**

For IRI with support of virtual interrupt, individual doorbell is not supported when true.

**irouter-default-mask****Type**

string

**Default value**

""

**Description**

Default Mask value for IROUTER[32..1019] register in the form 'a.b.c.d'.

**irouter-default-reset****Type**

string

**Default value**

""

**Description**

Default Reset Value of IROUTER[32..1019] register in the form 'a.b.c.d' or '\*'.

**irouter-mask-values****Type**

string

**Default value**

""

**Description**

Mask Value of IROUTER[n] register in the form 'n=a.b.c.d'.n can be >= 32 and <= 1019.

**irouter-reset-values****Type**

string

**Default value**

""

**Description**

Reset Value of IROUTER[n] register in the form 'n=a.b.c.d or n=\*'.n can be >= 32 and <= 1019.

**legacy-sgi-enable-rao****Type**

bool

**Default value**

0x0

**Description**

Enables for SGI associated with an ARE=0 regime are RAO/WI.

**local-SEIs****Type**

bool

**Default value**

0x0

**Description**

Generate SEI to signal internal issues.

**local-VSEIs****Type**

bool

**Default value**

0x0

**Description**

Generate VSEI to signal internal issues.

**lockable-SPI-count****Type**

int

**Default value**

0x0

**Description**

Number of SPIs that are locked down when CFGSDISABLE signal is asserted. Only applies for GICv2.

**monolithic****Type**

bool

**Default value**

0x0

**Description**

Indicate that the implementation is not distributed.

**mpam\_max\_partid****Type**

int

**Default value**

0xffff

**Description**

Maximum valid PARTID.

**mpam\_max\_pmg****Type**

int

**Default value**

0xff

**Description**

Maximum valid PMG.

**non-ARE-core-count****Type**

int

**Default value**

0x8

**Description**

Maximum number of non-ARE cores; normally used to pass the cluster-level NUM\_CORES parameter to the top-level redistributor.

**outer-cacheability-support****Type**

bool

**Default value**

0x0

**Description**

Allow configuration of outer cachability attributes in ITS and Redistributor.

**output\_attributes****Type**

string

**Default value**"ExtendedID[62:55]=MPAM\_PMG, ExtendedID[54:39]=MPAM\_PARTID,  
ExtendedID[38]=MPAM\_NS"

**Description**

User-defined transform to be applied to bus attributes like MasterID, ExtendedID or UserFlags. Currently, only works for MPAM Attributes encoding into bus attributes.

**print-memory-map****Type**

bool

**Default value**

0x0

**Description**

Print memory map to stdout.

**priority-bits****Type**

int

**Default value**

0x5

**Description**

Number of implemented priority bits.

**processor-numbers****Type**

string

**Default value**

""

**Description**

Specify processor numbers (as appears in GICR\_TYPER) in the form 0.0.0.0=0,0.0.0.1=1 etc.)  
If not specified, will number processors starting at 0.

**redistributor-threaded-sync****Type**

bool

**Default value**

0x1

**Description**

Enable execution of redistributor delayed transactions in a separate thread which is sometimes required for cosimulation.

**reg-base****Type**

int

**Default value**

0x2c010000

**Description**

Base for decoding GICv3 registers.

**reg-base-per-redistributor****Type**

string

**Default value**{}  
  
Base address for each redistributor in the form:

```
0.0.0.0=0x2c010000, 0.0.0.1=0x2c020000
```

All redistributors must be specified and this overrides the reg-base parameter (except that reg-base will still be used for the top-level redistributor). If reg-base-per-redistributor-file is specified, this parameter is ignored.

**reg-base-per-redistributor-file****Type**

string

**Default value**

""

**Description**

Path to file containing the base address for each redistributor in the form '0.0.0.0=0x2c010000, 0.0.0.1=0x2c020000'. All redistributors must be specified and this overrides the reg-base parameter (except that reg-base will still be used for the top-level redistributor). If this parameter is specified, reg-base-per-redistributor parameter will be ignored even when it is given.

**report-MSI-error-via-statusr****Type**

int

**Default value**

0x0

**Description**

Report MSI error via GITS\_STATUSR. (0:unsupported, 1:report by GITS\_STATUSR, 2:report by GITS\_STATUSR and interrupt as well).

**rme\_default\_mecid\_nonsecure****Type**

int

**Default value**

0x0

**Description**

Default MECID value for NON-SECURE PAS.

**sgi-range-selector-support****Type**

bool

**Default value**

0x0

**Description**

Device has support for the Range Selector feature for SGI.

**single-set-support****Type**

bool

**Default value**

0x0

**Description**

When true, forces redistributors to recall interrupts with a clear rather than issue a second Set command.

**supports-shareability****Type**

bool

**Default value**

0x1

**Description**

Device supports shareability attributes on outgoing memory bus (i.e. is modelling an ACElite port rather than an AXI4 port).

**trace-speculative-lpi-property-update****Type**

bool

**Default value**

0x0

**Description**

Trace LPI property updates performed on speculative accesses (useful for debugging LPI).

**vPE-table-entry-size-in-doubleword****Type**

int

**Default value**

0x5

**Description**

The size of one entry of a vPE configuration table in double word. The value decremented by one is shown at GICR\_VPROPBASER.Entry\_Size. Current model mandates the minimum entry size to be 4 doublewords. When lower value is given, it is truncated to 4.

**virtual-lpi-support****Type**

bool

**Default value**

0x0

**Description**

GICv4 Virtual LPIs and Direct injection of Virtual LPIs supported.

**virtual-priority-bits****Type**

int

**Default value**

0x5

**Description**

Number of implemented virtual priority bits.

**wakeup-on-reset****Type**

bool

**Default value**

0x0

## Description

Go against specification and start redistributors in woken-up state at reset. This allows software that was written for previous versions of the GICv3 specification to work correctly. This should not be used for production code or when the distributor is used separately from the core fast model.

### 3.10.46 GIC\_IRI\_Filter

GIC metacomponent for redistribution of interrupts. Contains a Distributor and a configurable number of ITSs and Redistributors. Validation only version. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1028: IP revisions support**

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

## About GIC\_IRI\_Filter

The GIC\_IRI\_Filter has similar behavior to the GIC\_IRI, except for the slave interface. Any transaction accessing a 4 KB page that is not used by the GIC, as configurable through the parameters, is forwarded to the `pvbush_filtermiss_m` port, which is only present in this variant.

**Note**

- Set the `FASTSIM_GIC_MEMORY_MAP` environment variable to 1 to print to stderr the memory map of any GICv3 or later models that are included in the platform being run.
- Set the `GICD_ITARGETSR-RAZWI` parameter to true for legacy, GICv2-style routing, where interrupts are routed to the first processor in the system.

## Iris and MTI instances for GIC\_IRI\_Filter

This model has the following Iris instances:

**Table 3-1029: GIC\_IRI\_Filter Iris instances**

InstanceName	ComponentName
GIC_IRI_Filter	GIC_IRI
GIC_IRI_Filter.rd_0	GICv3RedistributorInternal
GIC_IRI_Filter.rd_0_0	GICv3RedistributorInternal
GIC_IRI_Filter.rd_0_0_0	GICv3RedistributorInternal
GIC_IRI_Filter.rd_0_0_0_0	GICv3Redistributor
GIC_IRI_Filter.rd_t1	GICv3Distributor

This model has the following MTI trace components:

**Table 3-1030: GIC\_IRI\_Filter MTI instances**

InstanceName	ComponentName
GIC_IRI_Filter.rd_0	GICv3RedistributorInternal
GIC_IRI_Filter.rd_0_0	GICv3RedistributorInternal
GIC_IRI_Filter.rd_0_0_0	GICv3RedistributorInternal
GIC_IRI_Filter.rd_0_0_0_0	GICv3Redistributor
GIC_IRI_Filter.rd_tl	GICv3Distributor

### Ports for GIC\_IRI\_Filter

**Table 3-1031: Ports**

Name	Protocol	Type	Description
cfgsdisable	Signal	Slave	Disable some SPLs signal.
extended_ppi_in_0[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 0.
extended_ppi_in_1[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 1.
extended_ppi_in_10[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 10.
extended_ppi_in_100[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 100.
extended_ppi_in_101[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 101.
extended_ppi_in_102[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 102.
extended_ppi_in_103[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 103.
extended_ppi_in_104[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 104.
extended_ppi_in_105[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 105.
extended_ppi_in_106[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 106.
extended_ppi_in_107[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 107.
extended_ppi_in_108[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 108.
extended_ppi_in_109[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 109.
extended_ppi_in_11[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 11.
extended_ppi_in_110[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 110.
extended_ppi_in_111[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 111.

Name	Protocol	Type	Description
extended_ppi_in_112[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 112.
extended_ppi_in_113[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 113.
extended_ppi_in_114[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 114.
extended_ppi_in_115[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 115.
extended_ppi_in_116[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 116.
extended_ppi_in_117[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 117.
extended_ppi_in_118[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 118.
extended_ppi_in_119[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 119.
extended_ppi_in_12[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 12.
extended_ppi_in_120[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 120.
extended_ppi_in_121[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 121.
extended_ppi_in_122[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 122.
extended_ppi_in_123[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 123.
extended_ppi_in_124[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 124.
extended_ppi_in_125[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 125.
extended_ppi_in_126[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 126.
extended_ppi_in_127[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 127.
extended_ppi_in_128[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 128.
extended_ppi_in_129[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 129.
extended_ppi_in_13[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 13.
extended_ppi_in_130[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 130.
extended_ppi_in_131[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 131.
extended_ppi_in_132[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 132.

Name	Protocol	Type	Description
extended_ppi_in_133[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 133.
extended_ppi_in_134[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 134.
extended_ppi_in_135[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 135.
extended_ppi_in_136[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 136.
extended_ppi_in_137[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 137.
extended_ppi_in_138[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 138.
extended_ppi_in_139[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 139.
extended_ppi_in_14[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 14.
extended_ppi_in_140[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 140.
extended_ppi_in_141[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 141.
extended_ppi_in_142[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 142.
extended_ppi_in_143[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 143.
extended_ppi_in_144[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 144.
extended_ppi_in_145[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 145.
extended_ppi_in_146[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 146.
extended_ppi_in_147[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 147.
extended_ppi_in_148[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 148.
extended_ppi_in_149[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 149.
extended_ppi_in_15[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 15.
extended_ppi_in_150[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 150.
extended_ppi_in_151[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 151.
extended_ppi_in_152[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 152.
extended_ppi_in_153[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 153.

Name	Protocol	Type	Description
extended_ppi_in_154[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 154.
extended_ppi_in_155[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 155.
extended_ppi_in_156[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 156.
extended_ppi_in_157[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 157.
extended_ppi_in_158[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 158.
extended_ppi_in_159[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 159.
extended_ppi_in_16[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 16.
extended_ppi_in_160[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 160.
extended_ppi_in_161[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 161.
extended_ppi_in_162[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 162.
extended_ppi_in_163[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 163.
extended_ppi_in_164[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 164.
extended_ppi_in_165[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 165.
extended_ppi_in_166[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 166.
extended_ppi_in_167[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 167.
extended_ppi_in_168[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 168.
extended_ppi_in_169[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 169.
extended_ppi_in_17[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 17.
extended_ppi_in_170[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 170.
extended_ppi_in_171[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 171.
extended_ppi_in_172[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 172.
extended_ppi_in_173[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 173.
extended_ppi_in_174[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 174.

Name	Protocol	Type	Description
extended_ppi_in_175[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 175.
extended_ppi_in_176[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 176.
extended_ppi_in_177[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 177.
extended_ppi_in_178[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 178.
extended_ppi_in_179[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 179.
extended_ppi_in_18[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 18.
extended_ppi_in_180[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 180.
extended_ppi_in_181[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 181.
extended_ppi_in_182[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 182.
extended_ppi_in_183[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 183.
extended_ppi_in_184[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 184.
extended_ppi_in_185[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 185.
extended_ppi_in_186[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 186.
extended_ppi_in_187[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 187.
extended_ppi_in_188[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 188.
extended_ppi_in_189[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 189.
extended_ppi_in_19[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 19.
extended_ppi_in_190[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 190.
extended_ppi_in_191[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 191.
extended_ppi_in_192[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 192.
extended_ppi_in_193[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 193.
extended_ppi_in_194[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 194.
extended_ppi_in_195[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 195.

Name	Protocol	Type	Description
extended_ppi_in_196[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 196.
extended_ppi_in_197[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 197.
extended_ppi_in_198[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 198.
extended_ppi_in_199[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 199.
extended_ppi_in_2[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 2.
extended_ppi_in_20[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 20.
extended_ppi_in_200[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 200.
extended_ppi_in_201[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 201.
extended_ppi_in_202[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 202.
extended_ppi_in_203[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 203.
extended_ppi_in_204[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 204.
extended_ppi_in_205[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 205.
extended_ppi_in_206[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 206.
extended_ppi_in_207[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 207.
extended_ppi_in_208[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 208.
extended_ppi_in_209[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 209.
extended_ppi_in_21[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 21.
extended_ppi_in_210[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 210.
extended_ppi_in_211[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 211.
extended_ppi_in_212[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 212.
extended_ppi_in_213[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 213.
extended_ppi_in_214[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 214.
extended_ppi_in_215[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 215.

Name	Protocol	Type	Description
extended_ppi_in_216[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 216.
extended_ppi_in_217[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 217.
extended_ppi_in_218[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 218.
extended_ppi_in_219[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 219.
extended_ppi_in_22[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 22.
extended_ppi_in_220[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 220.
extended_ppi_in_221[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 221.
extended_ppi_in_222[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 222.
extended_ppi_in_223[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 223.
extended_ppi_in_224[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 224.
extended_ppi_in_225[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 225.
extended_ppi_in_226[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 226.
extended_ppi_in_227[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 227.
extended_ppi_in_228[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 228.
extended_ppi_in_229[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 229.
extended_ppi_in_23[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 23.
extended_ppi_in_230[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 230.
extended_ppi_in_231[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 231.
extended_ppi_in_232[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 232.
extended_ppi_in_233[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 233.
extended_ppi_in_234[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 234.
extended_ppi_in_235[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 235.
extended_ppi_in_236[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 236.

Name	Protocol	Type	Description
extended_ppi_in_237[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 237.
extended_ppi_in_238[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 238.
extended_ppi_in_239[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 239.
extended_ppi_in_24[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 24.
extended_ppi_in_240[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 240.
extended_ppi_in_241[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 241.
extended_ppi_in_242[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 242.
extended_ppi_in_243[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 243.
extended_ppi_in_244[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 244.
extended_ppi_in_245[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 245.
extended_ppi_in_246[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 246.
extended_ppi_in_247[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 247.
extended_ppi_in_248[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 248.
extended_ppi_in_249[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 249.
extended_ppi_in_25[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 25.
extended_ppi_in_250[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 250.
extended_ppi_in_251[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 251.
extended_ppi_in_252[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 252.
extended_ppi_in_253[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 253.
extended_ppi_in_254[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 254.
extended_ppi_in_255[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 255.
extended_ppi_in_26[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 26.
extended_ppi_in_27[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 27.

Name	Protocol	Type	Description
extended_ppi_in_28[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 28.
extended_ppi_in_29[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 29.
extended_ppi_in_3[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 3.
extended_ppi_in_30[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 30.
extended_ppi_in_31[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 31.
extended_ppi_in_32[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 32.
extended_ppi_in_33[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 33.
extended_ppi_in_34[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 34.
extended_ppi_in_35[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 35.
extended_ppi_in_36[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 36.
extended_ppi_in_37[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 37.
extended_ppi_in_38[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 38.
extended_ppi_in_39[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 39.
extended_ppi_in_4[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 4.
extended_ppi_in_40[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 40.
extended_ppi_in_41[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 41.
extended_ppi_in_42[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 42.
extended_ppi_in_43[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 43.
extended_ppi_in_44[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 44.
extended_ppi_in_45[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 45.
extended_ppi_in_46[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 46.
extended_ppi_in_47[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 47.
extended_ppi_in_48[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 48.

Name	Protocol	Type	Description
extended_ppi_in_49[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 49.
extended_ppi_in_5[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 5.
extended_ppi_in_50[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 50.
extended_ppi_in_51[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 51.
extended_ppi_in_52[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 52.
extended_ppi_in_53[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 53.
extended_ppi_in_54[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 54.
extended_ppi_in_55[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 55.
extended_ppi_in_56[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 56.
extended_ppi_in_57[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 57.
extended_ppi_in_58[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 58.
extended_ppi_in_59[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 59.
extended_ppi_in_6[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 6.
extended_ppi_in_60[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 60.
extended_ppi_in_61[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 61.
extended_ppi_in_62[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 62.
extended_ppi_in_63[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 63.
extended_ppi_in_64[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 64.
extended_ppi_in_65[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 65.
extended_ppi_in_66[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 66.
extended_ppi_in_67[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 67.
extended_ppi_in_68[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 68.
extended_ppi_in_69[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 69.

Name	Protocol	Type	Description
extended_ppi_in_7[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 7.
extended_ppi_in_70[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 70.
extended_ppi_in_71[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 71.
extended_ppi_in_72[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 72.
extended_ppi_in_73[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 73.
extended_ppi_in_74[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 74.
extended_ppi_in_75[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 75.
extended_ppi_in_76[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 76.
extended_ppi_in_77[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 77.
extended_ppi_in_78[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 78.
extended_ppi_in_79[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 79.
extended_ppi_in_8[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 8.
extended_ppi_in_80[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 80.
extended_ppi_in_81[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 81.
extended_ppi_in_82[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 82.
extended_ppi_in_83[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 83.
extended_ppi_in_84[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 84.
extended_ppi_in_85[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 85.
extended_ppi_in_86[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 86.
extended_ppi_in_87[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 87.
extended_ppi_in_88[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 88.
extended_ppi_in_89[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 89.
extended_ppi_in_9[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 9.

Name	Protocol	Type	Description
extended_ppi_in_90[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 90.
extended_ppi_in_91[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 91.
extended_ppi_in_92[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 92.
extended_ppi_in_93[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 93.
extended_ppi_in_94[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 94.
extended_ppi_in_95[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 95.
extended_ppi_in_96[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 96.
extended_ppi_in_97[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 97.
extended_ppi_in_98[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 98.
extended_ppi_in_99[64]	Signal	Slave	Extended private peripheral interrupts (ID1056-ID1119) for cpu 99.
extended_spi_in[1024]	Signal	Slave	Extended Shared peripheral interrupts.
msi_error_interrupt	Signal	Master	When report of MSI error allowed through interrupt, loop-back this signal to relevant IRQ input signal
po_reset	Signal	Slave	Resets.
ppi_in_0[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 0.
ppi_in_1[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 1.
ppi_in_10[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 10.
ppi_in_100[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 100.
ppi_in_101[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 101.
ppi_in_102[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 102.
ppi_in_103[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 103.
ppi_in_104[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 104.
ppi_in_105[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 105.
ppi_in_106[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 106.
ppi_in_107[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 107.
ppi_in_108[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 108.
ppi_in_109[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 109.
ppi_in_11[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 11.
ppi_in_110[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 110.
ppi_in_111[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 111.
ppi_in_112[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 112.
ppi_in_113[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 113.

Name	Protocol	Type	Description
ppi_in_114[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 114.
ppi_in_115[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 115.
ppi_in_116[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 116.
ppi_in_117[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 117.
ppi_in_118[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 118.
ppi_in_119[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 119.
ppi_in_12[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 12.
ppi_in_120[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 120.
ppi_in_121[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 121.
ppi_in_122[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 122.
ppi_in_123[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 123.
ppi_in_124[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 124.
ppi_in_125[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 125.
ppi_in_126[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 126.
ppi_in_127[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 127.
ppi_in_128[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 128.
ppi_in_129[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 129.
ppi_in_13[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 13.
ppi_in_130[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 130.
ppi_in_131[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 131.
ppi_in_132[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 132.
ppi_in_133[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 133.
ppi_in_134[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 134.
ppi_in_135[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 135.
ppi_in_136[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 136.
ppi_in_137[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 137.
ppi_in_138[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 138.
ppi_in_139[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 139.
ppi_in_14[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 14.
ppi_in_140[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 140.
ppi_in_141[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 141.
ppi_in_142[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 142.
ppi_in_143[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 143.
ppi_in_144[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 144.
ppi_in_145[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 145.
ppi_in_146[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 146.
ppi_in_147[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 147.
ppi_in_148[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 148.
ppi_in_149[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 149.

Name	Protocol	Type	Description
ppi_in_15[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 15.
ppi_in_150[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 150.
ppi_in_151[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 151.
ppi_in_152[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 152.
ppi_in_153[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 153.
ppi_in_154[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 154.
ppi_in_155[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 155.
ppi_in_156[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 156.
ppi_in_157[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 157.
ppi_in_158[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 158.
ppi_in_159[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 159.
ppi_in_16[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 16.
ppi_in_160[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 160.
ppi_in_161[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 161.
ppi_in_162[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 162.
ppi_in_163[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 163.
ppi_in_164[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 164.
ppi_in_165[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 165.
ppi_in_166[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 166.
ppi_in_167[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 167.
ppi_in_168[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 168.
ppi_in_169[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 169.
ppi_in_17[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 17.
ppi_in_170[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 170.
ppi_in_171[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 171.
ppi_in_172[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 172.
ppi_in_173[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 173.
ppi_in_174[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 174.
ppi_in_175[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 175.
ppi_in_176[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 176.
ppi_in_177[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 177.
ppi_in_178[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 178.
ppi_in_179[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 179.
ppi_in_18[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 18.
ppi_in_180[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 180.
ppi_in_181[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 181.
ppi_in_182[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 182.
ppi_in_183[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 183.
ppi_in_184[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 184.

Name	Protocol	Type	Description
ppi_in_185[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 185.
ppi_in_186[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 186.
ppi_in_187[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 187.
ppi_in_188[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 188.
ppi_in_189[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 189.
ppi_in_19[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 19.
ppi_in_190[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 190.
ppi_in_191[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 191.
ppi_in_192[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 192.
ppi_in_193[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 193.
ppi_in_194[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 194.
ppi_in_195[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 195.
ppi_in_196[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 196.
ppi_in_197[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 197.
ppi_in_198[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 198.
ppi_in_199[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 199.
ppi_in_2[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 2.
ppi_in_20[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 20.
ppi_in_200[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 200.
ppi_in_201[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 201.
ppi_in_202[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 202.
ppi_in_203[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 203.
ppi_in_204[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 204.
ppi_in_205[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 205.
ppi_in_206[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 206.
ppi_in_207[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 207.
ppi_in_208[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 208.
ppi_in_209[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 209.
ppi_in_21[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 21.
ppi_in_210[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 210.
ppi_in_211[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 211.
ppi_in_212[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 212.
ppi_in_213[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 213.
ppi_in_214[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 214.
ppi_in_215[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 215.
ppi_in_216[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 216.
ppi_in_217[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 217.
ppi_in_218[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 218.
ppi_in_219[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 219.

Name	Protocol	Type	Description
ppi_in_22[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 22.
ppi_in_220[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 220.
ppi_in_221[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 221.
ppi_in_222[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 222.
ppi_in_223[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 223.
ppi_in_224[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 224.
ppi_in_225[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 225.
ppi_in_226[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 226.
ppi_in_227[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 227.
ppi_in_228[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 228.
ppi_in_229[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 229.
ppi_in_23[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 23.
ppi_in_230[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 230.
ppi_in_231[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 231.
ppi_in_232[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 232.
ppi_in_233[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 233.
ppi_in_234[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 234.
ppi_in_235[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 235.
ppi_in_236[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 236.
ppi_in_237[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 237.
ppi_in_238[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 238.
ppi_in_239[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 239.
ppi_in_24[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 24.
ppi_in_240[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 240.
ppi_in_241[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 241.
ppi_in_242[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 242.
ppi_in_243[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 243.
ppi_in_244[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 244.
ppi_in_245[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 245.
ppi_in_246[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 246.
ppi_in_247[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 247.
ppi_in_248[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 248.
ppi_in_249[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 249.
ppi_in_25[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 25.
ppi_in_250[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 250.
ppi_in_251[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 251.
ppi_in_252[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 252.
ppi_in_253[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 253.
ppi_in_254[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 254.

Name	Protocol	Type	Description
ppi_in_255[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 255.
ppi_in_26[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 26.
ppi_in_27[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 27.
ppi_in_28[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 28.
ppi_in_29[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 29.
ppi_in_3[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 3.
ppi_in_30[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 30.
ppi_in_31[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 31.
ppi_in_32[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 32.
ppi_in_33[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 33.
ppi_in_34[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 34.
ppi_in_35[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 35.
ppi_in_36[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 36.
ppi_in_37[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 37.
ppi_in_38[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 38.
ppi_in_39[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 39.
ppi_in_4[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 4.
ppi_in_40[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 40.
ppi_in_41[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 41.
ppi_in_42[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 42.
ppi_in_43[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 43.
ppi_in_44[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 44.
ppi_in_45[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 45.
ppi_in_46[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 46.
ppi_in_47[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 47.
ppi_in_48[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 48.
ppi_in_49[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 49.
ppi_in_5[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 5.
ppi_in_50[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 50.
ppi_in_51[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 51.
ppi_in_52[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 52.
ppi_in_53[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 53.
ppi_in_54[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 54.
ppi_in_55[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 55.
ppi_in_56[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 56.
ppi_in_57[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 57.
ppi_in_58[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 58.
ppi_in_59[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 59.
ppi_in_6[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 6.

Name	Protocol	Type	Description
ppi_in_60[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 60.
ppi_in_61[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 61.
ppi_in_62[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 62.
ppi_in_63[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 63.
ppi_in_64[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 64.
ppi_in_65[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 65.
ppi_in_66[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 66.
ppi_in_67[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 67.
ppi_in_68[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 68.
ppi_in_69[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 69.
ppi_in_7[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 7.
ppi_in_70[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 70.
ppi_in_71[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 71.
ppi_in_72[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 72.
ppi_in_73[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 73.
ppi_in_74[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 74.
ppi_in_75[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 75.
ppi_in_76[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 76.
ppi_in_77[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 77.
ppi_in_78[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 78.
ppi_in_79[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 79.
ppi_in_8[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 8.
ppi_in_80[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 80.
ppi_in_81[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 81.
ppi_in_82[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 82.
ppi_in_83[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 83.
ppi_in_84[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 84.
ppi_in_85[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 85.
ppi_in_86[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 86.
ppi_in_87[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 87.
ppi_in_88[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 88.
ppi_in_89[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 89.
ppi_in_9[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 9.
ppi_in_90[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 90.
ppi_in_91[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 91.
ppi_in_92[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 92.
ppi_in_93[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 93.
ppi_in_94[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 94.
ppi_in_95[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 95.

Name	Protocol	Type	Description
ppi_in_96[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 96.
ppi_in_97[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 97.
ppi_in_98[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 98.
ppi_in_99[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 99.
pvbus_filtermiss_m	PVBus	Master	Passthrough for accesses to pages not used by the GIC IRI.
pvbus_m	PVBus	Master	Memory bus for transactions generated by the GIC.
pvbus_s	PVBus	Slave	Memory bus in.
redistributor_m[256]	GICv3Comms	Master	Input from and output to CPU interface.
reset	Signal	Slave	Resets.
spi_in[988]	Signal	Slave	Shared peripheral interrupts.
wake_request[256]	Signal	Master	Power management outputs.
wire_to_msi_in_0[1024]	Signal	Slave	Wire-to-MSI interrupts for architectural consolidator 0.
wire_to_msi_in_1[1024]	Signal	Slave	Wire-to-MSI interrupts for architectural consolidator 1.
wire_to_msi_in_2[1024]	Signal	Slave	Wire-to-MSI interrupts for architectural consolidator 2.
wire_to_msi_in_3[1024]	Signal	Slave	Wire-to-MSI interrupts for architectural consolidator 3.

## Parameters for GIC\_IRI\_Filter

### A3-affinity-supported

#### Type

bool

#### Default value

0x0

#### Description

Device supports affinity level 3 values that are non-zero.

### ARE-fixed-to-one

#### Type

bool

#### Default value

0x0

#### Description

GICv2 compatibility is not supported and GICD\_CTLR.ARE\_\* is always one.

### CPU-affinities

#### Type

string

**Default value**

0.0.0.0

**Description**

A comma separated list of dotted quads containing the affinities of all PEs connected to this IRI. If CPU-affinities-file is specified, this parameter is ignored.

**CPU-affinities-file****Type**

string

**Default value**

""

**Description**

A file containing comma separated list of dotted quads containing the affinities of all PEs connected to this IRI. If this parameter is specified, CPU-affinities parameter will be ignored even when it is given.

**DPG-ARE-only****Type**

bool

**Default value**

0x0

**Description**

Limit application of DPG bits to interrupt groups for which ARE=1.

**DPG-bits-implemented****Type**

bool

**Default value**

0x0

**Description**

Enable implementation of interrupt group participation bits or DPG bits in GICR\_CTLR.

**DS-fixed-to-zero****Type**

bool

**Default value**

0x0

**Description**

Enable/disable support of single security state.

**GICD-alias****Type**

int

**Default value**

0x0

**Description**

In GICv2 mode: the base address for a 4k page alias of the first 4k of the Distributor page, in GICv3 mode. the base address of a 64KB page containing message based SPI signalling register aliases(0:Disabled).

**GICD-legacy-registers-as-reserved****Type**

bool

**Default value**

0x0

**Description**

When ARE is RAO/WI, makes superfluous registers in GICD reserved ( including for the purpose of STATUSR updates).

**GICD\_CTLR-DS-1-means-secure-only****Type**

bool

**Default value**

0x0

**Description**

If GICD\_CTLR.DS=1, GICD supports a single security state which is secure if this is true, otherwise is non-secure.

**GICD\_ITARGETSR-RAZWI****Type**

bool

**Default value**

0x0

**Description**

If true, the GICD\_ITARGETS registers are RAZ/WI.

**GICD\_PIDR****Type**

int

**Default value**

0x0

**Description**

The value for the GICD\_PIDR registers, if non-zero. Note: fixed fields (device type etc.) will be overridden in this value.

**GICD\_TYPER2****Type**

int

**Default value**

0x0

**Description**

GICD\_TYPER2 value containing VID and VIL to define the width of vPEID for GICv4.1.

**GICR-clear-enable-supported****Type**

bool

**Default value**

0x0

**Description**

When true, this sets the value of the RO bit GICR\_CTLR.CES with the value of the parameter allow-LPIEN-clear, making it visible to software.

**GICR-invalidate-registers-implemented****Type**

bool

**Default value**

0x0

**Description**

When true, the registers GICR\_INVLPIR, GICR\_INVALLR and GICR\_SYNCR are implemented.

**GICR\_PIDR****Type**

int

**Default value**

0x0

**Description**

The value for the GICR\_PIDR registers, if non-zero. Note: fixed fields (device type etc.) will be overridden in this value.

**GICR\_PROPBASER-read-only****Type**

bool

**Default value**

0x0

**Description**

GICR\_PROPBASER register is read-only.

**GICR\_PROPBASER-reset-value****Type**

int

**Default value**

0x0

**Description**

Value of GICR\_PROPBASER on reset.

**GITS\_BASER0-entry-bytes****Type**

int

**Default value**

0x8

**Description**

Number of bytes required per entry for GITS\_BASER0 register.

**GITS\_BASER0-indirect-RAZ****Type**

bool

**Default value**

0x0

**Description**

Indirect field for GITS\_BASER0 register is RAZ/WI.

**GITS\_BASER0-type****Type**

int

**Default value**

0x0

**Description**

Type field for GITS\_BASER0 register. 0 = Unimplemented; 1 = Devices; 2 = Virtual Processors; 3 = Physical Processors; 4 = Collections.

**GITS\_BASER1-entry-bytes****Type**

int

**Default value**

0x8

**Description**

Number of bytes required per entry for GITS\_BASER1 register.

**GITS\_BASER1-indirect-RAZ****Type**

bool

**Default value**

0x0

**Description**

Indirect field for GITS\_BASER1 register is RAZ/WI.

**GITS\_BASER1-type****Type**

int

**Default value**

0x0

**Description**

Type field for GITS\_BASER1 register. 0 = Unimplemented; 1 = Devices; 2 = Virtual Processors; 3 = Physical Processors; 4 = Collections.

**GITS\_BASER2-entry-bytes****Type**

int

**Default value**

0x8

**Description**

Number of bytes required per entry for GITS\_BASER2 register.

**GITS\_BASER2-indirect-RAZ****Type**

bool

**Default value**

0x0

**Description**

Indirect field for GITS\_BASER2 register is RAZ/WI.

**GITS\_BASER2-type****Type**

int

**Default value**

0x0

**Description**

Type field for GITS\_BASER2 register. 0 = Unimplemented; 1 = Devices; 2 = Virtual Processors; 3 = Physical Processors; 4 = Collections.

**GITS\_BASER3-entry-bytes****Type**

int

**Default value**

0x8

**Description**

Number of bytes required per entry for GITS\_BASER3 register.

**GITS\_BASER3-indirect-RAZ****Type**

bool

**Default value**

0x0

**Description**

Indirect field for GITS\_BASER3 register is RAZ/WI.

**GITS\_BASER3-type****Type**

int

**Default value**

0x0

**Description**

Type field for GITS\_BASER3 register. 0 = Unimplemented; 1 = Devices; 2 = Virtual Processors; 3 = Physical Processors; 4 = Collections.

**GITS\_BASER4-entry-bytes****Type**

int

**Default value**

0x8

**Description**

Number of bytes required per entry for GITS\_BASER4 register.

**GITS\_BASER4-indirect-RAZ****Type**

bool

**Default value**

0x0

**Description**

Indirect field for GITS\_BASER4 register is RAZ/WI.

**GITS\_BASER4-type****Type**

int

**Default value**

0x0

**Description**

Type field for GITS\_BASER4 register. 0 = Unimplemented; 1 = Devices; 2 = Virtual Processors; 3 = Physical Processors; 4 = Collections.

**GITS\_BASER5-entry-bytes****Type**

int

**Default value**

0x8

**Description**

Number of bytes required per entry for GITS\_BASER5 register.

**GITS\_BASER5-indirect-RAZ****Type**

bool

**Default value**

0x0

**Description**

Indirect field for GITS\_BASER5 register is RAZ/WI.

**GITS\_BASER5-type****Type**

int

**Default value**

0x0

**Description**

Type field for GITS\_BASER5 register. 0 = Unimplemented; 1 = Devices; 2 = Virtual Processors; 3 = Physical Processors; 4 = Collections.

**GITS\_BASER6-entry-bytes****Type**

int

**Default value**

0x8

**Description**

Number of bytes required per entry for GITS\_BASER6 register.

**GITS\_BASER6-indirect-RAZ****Type**

bool

**Default value**

0x0

**Description**

Indirect field for GITS\_BASER6 register is RAZ/WI.

**GITS\_BASER6-type****Type**

int

**Default value**

0x0

**Description**

Type field for GITS\_BASER6 register. 0 = Unimplemented; 1 = Devices; 2 = Virtual Processors; 3 = Physical Processors; 4 = Collections.

**GITS\_BASER7-entry-bytes****Type**

int

**Default value**

0x8

**Description**

Number of bytes required per entry for GITS\_BASER7 register.

**GITS\_BASER7-indirect-RAZ****Type**

bool

**Default value**

0x0

**Description**

Indirect field for GITS\_BASER7 register is RAZ/WI.

**GITS\_BASER7-type****Type**

int

**Default value**

0x0

**Description**

Type field for GITS\_BASER7 register. 0 = Unimplemented; 1 = Devices; 2 = Virtual Processors; 3 = Physical Processors; 4 = Collections.

**GITS\_PIDR****Type**

int

**Default value**

0x0

**Description**

The value for the GITS\_PIDR registers, if non-zero. Note: fixed fields (device type etc.) will be overridden in this value.

**ICFGR-PPI-mask****Type**

int

**Default value**

0xaaaaaaaa

**Description**

Mask for writes to ICFGR registers that configure PPIs.

**ICFGR-PPI-reset****Type**

int

**Default value**

0x0

**Description**

Reset value for ICFGR registers that configure PPIs.

**ICFGR-SGI-mask****Type**

int

**Default value**

0x0

**Description**

Mask for writes to ICFGR registers that configure SGIs.

**ICFGR-SGI-reset****Type**

int

**Default value**

0xaaaaaaaa

**Description**

Reset value for ICFGR registers that configure SGIs.

**ICFGR-SPI-mask****Type**

int

**Default value**

0xaaaaaaaa

**Description**

Mask for writes to ICFGR registers that configure SPIs.

**ICFGR-SPI-reset****Type**

int

**Default value**

0x0

**Description**

Reset value for ICFGR registers that configure SPIs.

**ICFGR-rsvd-bit****Type**

bool

**Default value**

0x0

**Description**

If ARE=0, the value of reserved bits i.e. bit 0,2,4..30 of ICFGRn for n>0.

**IGROUP-PPI-mask****Type**

int

**Default value**

0xffff

**Description**

Mask for writes to PPI bits in IGROUP registers.

**IGROUP-PPI-reset****Type**

int

**Default value**

0x0

**Description**

Reset value for SGI bits in IGROUP registers.

**IGROUP-SGI-mask****Type**

int

**Default value**

0xffff

**Description**

Mask for writes to SGI bits in IGROUP registers.

**IGROUP-SGI-reset****Type**

int

**Default value**

0x0

**Description**

Reset value for SGI bits in IGROUP registers.

**IIDR****Type**

int

**Default value**

0x0

**Description**

GICD\_IIDR and GICR\_IIDR value.

**IRI-ID-bits****Type**

int

**Default value**

0x10

**Description**

Number of bits used to represent interrupts IDs in the Distributor and Redistributors, forced to 10 when none of LPIs, extended SPIs or extended PPIs is supported.

**IROUTER-IRM-RAZ-WI****Type**

bool

**Default value**

0x0

**Description**

GICD\_IROUTERn.InterruptRoutingMode is RAZ/WI.

**ITS-BASER-force-page-alignment****Type**

bool

**Default value**

0x1

**Description**

Force alignment of address written to a GITS\_BASER register to the page size configured.

**ITS-ID-bits****Type**

int

**Default value**

0x10

**Description**

Number of interrupt bits supported by ITS.

**ITS-MOVALL-update-collections****Type**

bool

**Default value**

0x0

**Description**

Whether MOVALL command updates the collection entires.

**ITS-TRANSLATE64R****Type**

bool

**Default value**

0x0

**Description**

Add an implementation specific register at 0x10008 supporting 64 bit TRANSLATER (dev[63:32], interrupt[31:0]).

**ITS-cache-invalidate-on-disable****Type**

bool

**Default value**

0x0

**Description**

Sets the RO bit GITS\_TYPER.INV. When true, after the following sequence: 1) GITS\_CTLR.Enabled written 1-->0, 2) GITS\_CTLR.Quiescent observed as 1, 3) GITS\_BASER<n>.Valid written 1-->0, there is no cached information from the ITS memory structure pointed to by GITS\_BASER<n>.

**ITS-collection-ID-bits****Type**

int

**Default value**

0x0

**Description**

Number of collection bits supported by ITS (optional parameter, 0 => 16bits support and GITS\_TYPER.CIL=0.

**ITS-count****Type**

int

**Default value**

0x0

**Description**

Number of Interrupt Translation Services to be instantiated (0=none).

**ITS-cumulative-collection-tables****Type**

bool

**Default value**

0x1

**Description**

When true, the supported amount of collections is the sum of GITS\_TYPER.HCC and the number of collections supported in memory, otherwise, simply the number supported in memory only. Irrelevant when HCC=0.

**ITS-device-bits****Type**

int

**Default value**

0x10

**Description**

Number of bits supported for ITS device IDs.

**ITS-enable-itt-address-verification****Type**

bool

**Default value**

0x0

**Description**

If true, a transaction will be sent to ITT Address for verification.

**ITS-entry-size****Type**

int

**Default value**

0x8

**Description**

Number of bytes required to store each entry in the ITT tables.

**ITS-hardware-collection-count****Type**

int

**Default value**

0x0

**Description**

Number of hardware collections held exclusively in the ITS.

**ITS-legacy-iidr-typer-offset****Type**

bool

**Default value**

0x0

**Description**

Put the GITS\_IIDR and GITS\_TYPER registers at their older offset of 0x8 and 0x4 respectively.

**ITS-shared-vPE-table****Type**

int

**Default value**

0x0

**Description**

Number of affinity levels to which the vPE configuration table is shared. This parameter is valid when has-gicv4.1 is true.

**ITS-threaded-command-queue****Type**

bool

**Default value**

0x1

**Description**

Enable execution of ITS commands in a separate thread which is sometimes required for cosimulation.

**ITS-use-physical-target-addresses****Type**

bool

**Default value**

0x1

**Description**

Use physical hardware addresses for targets in ITS commands -- must be true for distributed implementations.

**ITS-vmovp-bit****Type**

bool

**Default value**

0x0

**Description**

Device supports software issuing a VMOVP to only one of the ITSs that has a mapping for a vPE. The device itself ensures synchronization of the VMOVP command across all ITSs that have mapping for that vPE.

**ITS0-base****Type**

int

**Default value**

0x0

**Description**

Register base address for ITS0 (automatic if 0).

**ITS1-base****Type**

int

**Default value**

0x0

**Description**

Register base address for ITS1 (automatic if 0).

**ITS2-base****Type**

int

**Default value**

0x0

**Description**

Register base address for ITS2 (automatic if 0).

**ITS3-base****Type**

int

**Default value**

0x0

**Description**

Register base address for ITS3 (automatic if 0).

**LPI-cache-check-data****Type**

bool

**Default value**

0x0

**Description**

Enable Cached LPI data against memory checking when available for cache type.

**LPI-cache-type****Type**

int

**Default value**

0x1

**Description**

Cache type for LPIs, 0:No caching, 1:Full caching.

**MSI\_IIDR****Type**

int

**Default value**

0x0

**Description**

Value returned in MSI\_IIDR registers.

**MSI\_NS-frame0-base****Type**

int

**Default value**

0x0

**Description**

If non-zero, sets the base address used for non-secure MSI frame 0 registers.

**MSI\_NS-frame0-max-SPI****Type**

int

**Default value**

0x0

**Description**

Maximum SPI ID supported by non-secure MSI frame 0. Set to 0 to disable frame.

**MSI\_NS-frame0-min-SPI****Type**

int

**Default value**

0x0

**Description**

Minimum SPI ID supported by non-secure MSI frame 0. Set to 0 to disable frame.

**MSI\_NS-frame1-base****Type**

int

**Default value**

0x0

**Description**

If non-zero, sets the base address used for non-secure MSI frame 1 registers.

**MSI\_NS-frame1-max-SPI****Type**

int

**Default value**

0x0

**Description**

Maximum SPI ID supported by non-secure MSI frame 1. Set to 0 to disable frame.

**MSI\_NS-frame1-min-SPI****Type**

int

**Default value**

0x0

**Description**

Minimum SPI ID supported by non-secure MSI frame 1. Set to 0 to disable frame.

**MSI\_NS-frame2-base****Type**

int

**Default value**

0x0

**Description**

If non-zero, sets the base address used for non-secure MSI frame 2 registers.

**MSI\_NS-frame2-max-SPI****Type**

int

**Default value**

0x0

**Description**

Maximum SPI ID supported by non-secure MSI frame 2. Set to 0 to disable frame.

**MSI\_NS-frame2-min-SPI****Type**

int

**Default value**

0x0

**Description**

Minimum SPI ID supported by non-secure MSI frame 2. Set to 0 to disable frame.

**MSI\_NS-frame3-base****Type**

int

**Default value**

0x0

**Description**

If non-zero, sets the base address used for non-secure MSI frame 3 registers.

**MSI\_NS-frame3-max-SPI****Type**

int

**Default value**

0x0

**Description**

Maximum SPI ID supported by non-secure MSI frame 3. Set to 0 to disable frame.

**MSI\_NS-frame3-min-SPI****Type**

int

**Default value**

0x0

**Description**

Minimum SPI ID supported by non-secure MSI frame 3. Set to 0 to disable frame.

**MSI\_NS-frame4-base****Type**

int

**Default value**

0x0

**Description**

If non-zero, sets the base address used for non-secure MSI frame 4 registers.

**MSI\_NS-frame4-max-SPI****Type**

int

**Default value**

0x0

**Description**

Maximum SPI ID supported by non-secure MSI frame 4. Set to 0 to disable frame.

**MSI\_NS-frame4-min-SPI****Type**

int

**Default value**

0x0

**Description**

Minimum SPI ID supported by non-secure MSI frame 4. Set to 0 to disable frame.

**MSI\_NS-frame5-base****Type**

int

**Default value**

0x0

**Description**

If non-zero, sets the base address used for non-secure MSI frame 5 registers.

**MSI\_NS-frame5-max-SPI****Type**

int

**Default value**

0x0

**Description**

Maximum SPI ID supported by non-secure MSI frame 5. Set to 0 to disable frame.

**MSI\_NS-frame5-min-SPI****Type**

int

**Default value**

0x0

**Description**

Minimum SPI ID supported by non-secure MSI frame 5. Set to 0 to disable frame.

**MSI\_NS-frame6-base****Type**

int

**Default value**

0x0

**Description**

If non-zero, sets the base address used for non-secure MSI frame 6 registers.

**MSI\_NS-frame6-max-SPI****Type**

int

**Default value**

0x0

**Description**

Maximum SPI ID supported by non-secure MSI frame 6. Set to 0 to disable frame.

**MSI\_NS-frame6-min-SPI****Type**

int

**Default value**

0x0

**Description**

Minimum SPI ID supported by non-secure MSI frame 6. Set to 0 to disable frame.

**MSI\_NS-frame7-base****Type**

int

**Default value**

0x0

**Description**

If non-zero, sets the base address used for non-secure MSI frame 7 registers.

**MSI\_NS-frame7-max-SPI****Type**

int

**Default value**

0x0

**Description**

Maximum SPI ID supported by non-secure MSI frame 7. Set to 0 to disable frame.

**MSI\_NS-frame7-min-SPI****Type**

int

**Default value**

0x0

**Description**

Minimum SPI ID supported by non-secure MSI frame 7. Set to 0 to disable frame.

**MSI\_PIDR****Type**

int

**Default value**

0x0

**Description**

The value for the MSI\_PIDR registers, if non-zero and distributor supports GICv2m. Note: fixed fields (device type etc.) will be overridden in this value.

**MSI\_S-frame0-base****Type**

int

**Default value**

0x0

**Description**

If non-zero, sets the base address used for secure MSI frame 0 registers.

**MSI\_S-frame0-max-SPI****Type**

int

**Default value**

0x0

**Description**

Maximum SPI ID supported by secure MSI frame 0. Set to 0 to disable frame.

**MSI\_S-frame0-min-SPI****Type**

int

**Default value**

0x0

**Description**

Minimum SPI ID supported by secure MSI frame 0. Set to 0 to disable frame.

**MSI\_S-frame1-base****Type**

int

**Default value**

0x0

**Description**

If non-zero, sets the base address used for secure MSI frame 1 registers.

**MSI\_S-frame1-max-SPI****Type**

int

**Default value**

0x0

**Description**

Maximum SPI ID supported by secure MSI frame 1. Set to 0 to disable frame.

**MSI\_S-frame1-min-SPI****Type**

int

**Default value**

0x0

**Description**

Minimum SPI ID supported by secure MSI frame 1. Set to 0 to disable frame.

**MSI\_S-frame2-base****Type**

int

**Default value**

0x0

**Description**

If non-zero, sets the base address used for secure MSI frame 2 registers.

**MSI\_S-frame2-max-SPI****Type**

int

**Default value**

0x0

**Description**

Maximum SPI ID supported by secure MSI frame 2. Set to 0 to disable frame.

**MSI\_S-frame2-min-SPI****Type**

int

**Default value**

0x0

**Description**

Minimum SPI ID supported by secure MSI frame 2. Set to 0 to disable frame.

**MSI\_S-frame3-base****Type**

int

**Default value**

0x0

**Description**

If non-zero, sets the base address used for secure MSI frame 3 registers.

**MSI\_S-frame3-max-SPI****Type**

int

**Default value**

0x0

**Description**

Maximum SPI ID supported by secure MSI frame 3. Set to 0 to disable frame.

**MSI\_S-frame3-min-SPI****Type**

int

**Default value**

0x0

**Description**

Minimum SPI ID supported by secure MSI frame 3. Set to 0 to disable frame.

**MSI\_S-frame4-base****Type**

int

**Default value**

0x0

**Description**

If non-zero, sets the base address used for secure MSI frame 4 registers.

**MSI\_S-frame4-max-SPI****Type**

int

**Default value**

0x0

**Description**

Maximum SPI ID supported by secure MSI frame 4. Set to 0 to disable frame.

**MSI\_S-frame4-min-SPI****Type**

int

**Default value**

0x0

**Description**

Minimum SPI ID supported by secure MSI frame 4. Set to 0 to disable frame.

**MSI\_S-frame5-base****Type**

int

**Default value**

0x0

**Description**

If non-zero, sets the base address used for secure MSI frame 5 registers.

**MSI\_S-frame5-max-SPI****Type**

int

**Default value**

0x0

**Description**

Maximum SPI ID supported by secure MSI frame 5. Set to 0 to disable frame.

**MSI\_S-frame5-min-SPI****Type**

int

**Default value**

0x0

**Description**

Minimum SPI ID supported by secure MSI frame 5. Set to 0 to disable frame.

**MSI\_S-frame6-base****Type**

int

**Default value**

0x0

**Description**

If non-zero, sets the base address used for secure MSI frame 6 registers.

**MSI\_S-frame6-max-SPI****Type**

int

**Default value**

0x0

**Description**

Maximum SPI ID supported by secure MSI frame 6. Set to 0 to disable frame.

**MSI\_S-frame6-min-SPI****Type**

int

**Default value**

0x0

**Description**

Minimum SPI ID supported by secure MSI frame 6. Set to 0 to disable frame.

**MSI\_S-frame7-base****Type**

int

**Default value**

0x0

**Description**

If non-zero, sets the base address used for secure MSI frame 7 registers.

**MSI\_S-frame7-max-SPI****Type**

int

**Default value**

0x0

**Description**

Maximum SPI ID supported by secure MSI frame 7. Set to 0 to disable frame.

**MSI\_S-frame7-min-SPI****Type**

int

**Default value**

0x0

**Description**

Minimum SPI ID supported by secure MSI frame 7. Set to 0 to disable frame.

**PA\_SIZE****Type**

int

**Default value**

0x30

**Description**

Number of valid bits in physical address.

**PPI-implemented-mask****Type**

int

**Default value**`0xffff`**Description**

Mask of PPIs that are implemented. One bit per PPI bit 0 == PPI 16 (first PPI). This will affect other masks.

**SPI-count****Type**`int`**Default value**`0xe0`**Description**

Number of SPIs that are implemented.

**SPI-message-based-support****Type**`bool`**Default value**`0x1`**Description**

Distributor supports message based signaling of SPI.

**SPI-unimplemented****Type**`string`**Default value**`""`**Description**

A comma separated list of unimplemented SPIs ranges for sparse SPI definition(for ex: '35, 39-42, 73').

**STATUSR-implemented****Type**`bool`**Default value**`0x1`**Description**

Determines whether the GICR\_STATUSR register is implemented.

**add-output-cpu-wake-request-signal-from-redistributor****Type**

bool

**Default value**

0x0

**Description**

if true, the redistributor will have the output signal `cpu_wake_request` from GIC to DSU and if false, the signals are not added to the redistributor.

**allow-LPIEN-clear****Type**

bool

**Default value**

0x0

**Description**

Allow RW behaviour on `GICR_CTLR.LPIEN` instead of set once.

**clear-ISPENDR-bit-for-level-sensitive-interrupt-when-acknowledged****Type**

bool

**Default value**

0x0

**Description**

If true, acknowledgement of a level sensitive interrupt clears the corresponding bit in the `ISPENDR` register.

**common-lpi-configuration****Type**

int

**Default value**

0x0

**Description**

Describes which re-distributors share (and must be configured with the same) LPI configuration table as described in `GICR_TYPER`( 0:All, 1:A.x.x.x, 2:A.B.x.x, 3:A.B.C.x).

**common-vPE-table-affinity****Type**

string

**Default value**

""

**Description**

Affinity value list in the form of 'a.b.c.d, e.f.g.h, etc' given to the ITS(s) (where a.b.c.d corresponds to ITS0, e.f.g.h corresponds to ITS1 and so on). Under an affinity value the vPE configuration table is shared among redistributors where the level to be shared is defined by ITS-shared-vPE-table. This parameter is valid when has-gicv4.1 is true.

**consolidators****Type**

string

**Default value**

""

**Description**

Specify consolidators' base addresses, interrupt line counts and base interrupt IDs, in the form 'baseAddr0:itlineCount0:baseINTID0, baseAddr1:itlineCount1:baseINTID1, [etc]' (eg '0x3f100000:64:4096, 0x3f200000:64:4224'). The consolidators' count is inferred from the list (maximum of 4). If not specified, the component contains no consolidators.

**delay-ITS-accesses****Type**

bool

**Default value**

0x1

**Description**

Delay accesses from the ITS until GICR\_SYNCRR is read.

**delay-redistributor-accesses****Type**

bool

**Default value**

0x1

**Description**

Delay memory accesses from the redistributor until GICR\_SYNCRR is read.

**direct-lpi-support****Type**

bool

**Default value**

0x0

**Description**

Enable support for LPI operations through GICR registers.

**enable\_protocol\_checking****Type**

bool

**Default value**

0x0

**Description**

Enable/disable protocol checking at cpu interface.

**enabled****Type**

bool

**Default value**

0x1

**Description**

Enable GICv3 functionality; when false the component is inactive.

**extended-ppi-count****Type**

int

**Default value**

0x0

**Description**

Number of extended PPI supported.

**extended-spi-count****Type**

int

**Default value**

0x0

**Description**

Number of extended SPI supported.

**fixed-routed-spis****Type**

string

**Default value**

""

**Description**

Value of IROUTER[n] register in the form 'n=a.b.c.d, n=\*'. The RM bit of IROUTER is 0 when n=a.b.c.d is used else 1 when n=\* is used. n can be >= 32 and <= 1019.

**gicr-icfgr-extended-count****Type**

int

**Default value**

0x4

**Description**

Number of extended GICR\_ICFGR registers supported.

**gicv2-only****Type**

bool

**Default value**

0x0

**Description**

If true, when using the GICv3 model, pretend to be a GICv2 system.

**group-enables-control-doorbell****Type**

bool

**Default value**

0x0

**Description**

When true, GICR\_VPENDBASER.{VGrp0En,VGrp1En} are cached to allow GIC to check group enables when virtual interrupt targeting this VCPU which is non-resident reaches Redistributor.

**has-gicv4.1****Type**

bool

**Default value**

0x0

**Description**

Enable GICv4.1 functionality; when false the component is inactive.

**has-two-security-states****Type**

bool

**Default value**

0x1

**Description**

If true, has two security states.

**has\_VPENDBASER-dirty-flag-on-load****Type**

bool

**Default value**

0x0

**Description**

GICR\_VPENDBASER.Dirty reflects transient loading state when valid=1.

**has\_mpam****Type**

bool

**Default value**

0x0

**Description**

Enable MPAM support on ITS and RDs.

**has\_nmi****Type**

bool

**Default value**

0x0

**Description**

Enable support for Non-maskable Interrupts (NMIs). (FEAT\_GICv3\_NMI).

**ignore-generate-sgi-when-no-are****Type**

bool

**Default value**

0x0

**Description**

Ignore GenerateSGL packets coming from the CPU interface if both ARE\_S and ARE\_NS are 0.

**individual-doorbell-not-supported****Type**

bool

**Default value**

0x0

**Description**

For IRI with support of virtual interrupt, individual doorbell is not supported when true.

**irouter-default-mask****Type**

string

**Default value**

""

**Description**

Default Mask value for IROUTER[32..1019] register in the form 'a.b.c.d'.

**irouter-default-reset****Type**

string

**Default value**

""

**Description**

Default Reset Value of IROUTER[32..1019] register in the form 'a.b.c.d' or '\*'.

**irouter-mask-values****Type**

string

**Default value**

""

**Description**

Mask Value of IROUTER[n] register in the form 'n=a.b.c.d'. n can be  $\geq 32$  and  $\leq 1019$ .

**irouter-reset-values****Type**

string

**Default value**

""

**Description**

Reset Value of IROUTER[n] register in the form 'n=a.b.c.d or n=\*.n can be >= 32 and <= 1019.

**legacy-sgi-enable-rao****Type**

bool

**Default value**

0x0

**Description**

Enables for SGI associated with an ARE=0 regime are RAO/WI.

**local-SEIs****Type**

bool

**Default value**

0x0

**Description**

Generate SEI to signal internal issues.

**local-VSEIs****Type**

bool

**Default value**

0x0

**Description**

Generate VSEI to signal internal issues.

**lockable-SPI-count****Type**

int

**Default value**

0x0

**Description**

Number of SPIs that are locked down when CFGSDISABLE signal is asserted. Only applies for GICv2.

**monolithic****Type**

bool

**Default value**

0x0

**Description**

Indicate that the implementation is not distributed.

**mpam\_max\_partid****Type**

int

**Default value**

0xffff

**Description**

Maximum valid PARTID.

**mpam\_max\_pmg****Type**

int

**Default value**

0xff

**Description**

Maximum valid PMG.

**non-ARE-core-count****Type**

int

**Default value**

0x8

**Description**

Maximum number of non-ARE cores; normally used to pass the cluster-level NUM\_CORES parameter to the top-level redistributor.

**outer-cacheability-support****Type**

bool

**Default value**

0x0

**Description**

Allow configuration of outer cachability attributes in ITS and Redistributor.

**output\_attributes****Type**

string

**Default value**

"ExtendedID[62:55]=MPAM\_PMG, ExtendedID[54:39]=MPAM\_PARTID,  
ExtendedID[38]=MPAM\_NS"

**Description**

User-defined transform to be applied to bus attributes like MasterID, ExtendedID or UserFlags. Currently, only works for MPAM Attributes encoding into bus attributes.

**print-memory-map****Type**

bool

**Default value**

0x0

**Description**

Print memory map to stdout.

**priority-bits****Type**

int

**Default value**

0x5

**Description**

Number of implemented priority bits.

**processor-numbers****Type**

string

**Default value**

""

**Description**

Specify processor numbers (as appears in GICR\_TYPER) in the form 0.0.0.0=0,0.0.0.1=1 etc.)  
If not specified, will number processors starting at 0.

**redistributor-threaded-sync****Type**

bool

**Default value**

0x1

**Description**

Enable execution of redistributor delayed transactions in a separate thread which is sometimes required for cosimulation.

**reg-base****Type**

int

**Default value**

0x2c010000

**Description**

Base for decoding GICv3 registers.

**reg-base-per-redistributor****Type**

string

**Default value**

""

Base address for each redistributor in the form:

```
0.0.0.0=0x2c010000, 0.0.0.1=0x2c020000
```

All redistributors must be specified and this overrides the reg-base parameter (except that reg-base will still be used for the top-level redistributor). If reg-base-per-redistributor-file is specified, this parameter is ignored.

**reg-base-per-redistributor-file****Type**

string

**Default value**

""

**Description**

Path to file containing the base address for each redistributor in the form '0.0.0.0=0x2c010000, 0.0.0.1=0x2c020000'. All redistributors must be specified and this overrides the reg-base parameter (except that reg-base will still be used for the top-level

redistributor). If this parameter is specified, reg-base-per-redistributor parameter will be ignored even when it is given.

**report-MSI-error-via-statusr****Type**

int

**Default value**

0x0

**Description**

Report MSI error via GITS\_STATUSR. (0:unsupported, 1:report by GITS\_STATUSR, 2:report by GITS\_STATUSR and interrupt as well).

**rme\_default\_mecid\_nonsecure****Type**

int

**Default value**

0x0

**Description**

Default MECID value for NON-SECURE PAS.

**sgi-range-selector-support****Type**

bool

**Default value**

0x0

**Description**

Device has support for the Range Selector feature for SGI.

**single-set-support****Type**

bool

**Default value**

0x0

**Description**

When true, forces redistributors to recall interrupts with a clear rather than issue a second Set command.

**supports-shareability****Type**

bool

**Default value**

0x1

**Description**

Device supports shareability attributes on outgoing memory bus (i.e. is modelling an ACElite port rather than an AXI4 port).

**trace-speculative-lpi-property-update****Type**

bool

**Default value**

0x0

**Description**

Trace LPI property updates performed on speculative accesses (useful for debugging LPI).

**vPE-table-entry-size-in-doubleword****Type**

int

**Default value**

0x5

**Description**

The size of one entry of a vPE configuration table in double word. The value decremented by one is shown at GICR\_VPROPBASER.Entry\_Size. Current model mandates the minimum entry size to be 4 doublewords. When lower value is given, it is truncated to 4.

**virtual-lpi-support****Type**

bool

**Default value**

0x0

**Description**

GICv4 Virtual LPIs and Direct injection of Virtual LPIs supported.

**virtual-priority-bits****Type**

int

**Default value**

0x5

**Description**

Number of implemented virtual priority bits.

**wakeup-on-reset**

**Type**

bool

**Default value**

0x0

**Description**

Go against specification and start redistributors in woken-up state at reset. This allows software that was written for previous versions of the GICv3 specification to work correctly. This should not be used for production code or when the distributor is used separately from the core fast model.

**3.10.47 ICS307**

Serially Programmable Clock Source. This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1032: IP revisions support**

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**About ICS307**

Use this component to convert the rate of one ClockSignal to another ClockSignal by using configurable multiplier, divider, and scale values. The divider ratio can be set by startup parameters or at runtime by a configuration port. Changes to the input ClockSignal rate and divider ratio are reflected immediately by the output ClockSignal ports.

Three values determine the divisor ratio:

- vdw
- rdw
- od

To calculate the divisor ratio, use:

$$\text{Divisor} = ((\text{rdw}+2) * \text{scale}) / (2 * (\text{vdw}+8))$$

where `scale` is derived from this table indexed by `od`:

**Table 3-1033: od to scale conversion**

od	scale
0	10

od	scale
1	2
2	8
3	4
4	5
5	7
6	3
7	6

The default values of vdw, rdw and od are 4, 6, and 3 to give a default divisor rate of:

$$((6+2) * 4) / (2 * (4+8)) = 4/3$$

### Iris and MTI instances for ICS307

This model has the following Iris instances:

**Table 3-1034: ICS307 Iris instances**

InstanceName	ComponentName
ICS307	ICS307
ICS307.clkdiv_clk1	ClockDivider

This model has the following MTI trace components:

**Table 3-1035: ICS307 MTI instances**

InstanceName	ComponentName
ICS307.clkdiv_clk1	ClockDivider

### Ports for ICS307

**Table 3-1036: Ports**

Name	Protocol	Type	Description
clk_in	ClockSignal	Slave	Master clock rate.
clk_out_clk1	ClockSignal	Master	Modified clock rate.
clk_out_ref	ClockSignal	Master	Pass through of master clock rate for divider chaining.
configuration	ICS307Configuration	Slave	Configuration port for setting divider ratio dynamically.

### Parameters for ICS307

#### clkdiv\_clk1.div

##### Type

int

##### Default value

0x1

**Description**

Clock Rate Divider. This parameter is not exposed via CADI and can only be set in LISA.

**`clkdiv_clk1.mul`****Type**

int

**Default value**

0x1

**Description**

Clock Rate Multiplier. This parameter is not exposed via CADI and can only be set in LISA.

**`od`****Type**

int

**Default value**

0x3

**Description**

OD.

**`rdr`****Type**

int

**Default value**

0x6

**Description**

RDR.

**`vdw`****Type**

int

**Default value**

0x4

**Description**

VDW.

### 3.10.48 IDAU

IDAU is a device that provides a Security attribute relating to the address passed to it. For each memory access (data and instruction), the CPU checks the IDAU and sets the security of its transactions based on it. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1037: IP revisions support**

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### IDAU interface

The Implementation Defined Attribution Unit (IDAU) model uses the `pvr::IDAUSignal` struct to return the Security attributes for the address passed to it.

Unlike the hardware, the CPU Fast Model does not query the IDAU for each access. Communication is at a higher abstraction level to maintain simulation speed.

IDAU interface input signals:

##### **IDAUADDR**

Address of the region

IDAU interface output signals:

##### **IDAUNS**

Non-secure region response

##### **IDAUNSC**

Non-secure-callable region response

##### **IDAUID**

Region number

##### **IDAUIDV**

Region number valid

##### **IDAUNCHK**

Region exempt from attribution check

#### IDAU transaction-level communication protocol

IDAU has the following ports:

- **slave port<PVBUS> pvbus\_s;**  
PVBUS memory-based slave port. Masters can read or write to this port as follows:

- **Read**  
Read returns IDAU region's `pv::IdauRegion` struct (32 byte), containing information about the IDAU region for the requested address. `pv::IdauRegion` contains the start address, end address, `pv::IDAUSignal`, and 8 bytes of padding (to make it 32 byte-aligned).
  - **Write**  
This port only supports 32 byte Write operations to pass in an `pv::IdauRegion` struct for updating an internal IDAU region.
  - **DMI**  
This port adds support for DMI requests and provides a pointer to a `pv::IdauRegion` for the requested address. An 'invalid DMI' call back occurs if the IDAU updates its regions.
- **master port<Value\_64> invalidate\_region;**  
This port is used as a call back to inform masters that the IDAU has updated its region information.

To disable the IDAU, set the `NUM_IDAU_REGION` parameter to zero.

### Iris and MTI instances for IDAU

This model has the following Iris instances:

Table 3-1038: IDAU Iris instances

InstanceName	ComponentName
IDAU.bus_bridge	PVBusBridge

### Ports for IDAU

Table 3-1039: Ports

Name	Protocol	Type	Description
invalidate_region	Value_64	Master	This port is used as a call back to inform masters that the IDAU has updated its region information.
pvbus_s	PVBus	Slave	-

### Parameters for IDAU

**IDAU\_REGION0.BADDR**

**Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region0.

**IDAU\_REGION0.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 0 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION0.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region0 as exempt.

**IDAU\_REGION0.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region0.

**IDAU\_REGION0.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 0 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION1.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region1.

**IDAU\_REGION1.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 1 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION1.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region1 as exempt.

**IDAU\_REGION1.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region1.

**IDAU\_REGION1.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 1 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION10.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region10.

**IDAU\_REGION10.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 10 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION10.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region10 as exempt.

**IDAU\_REGION10.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region10.

**IDAU\_REGION10.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 10 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION100.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region100.

**IDAU\_REGION100.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 100 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION100.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region100 as exempt.

**IDAU\_REGION100.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region100.

**IDAU\_REGION100.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 100 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION101.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region101.

**IDAU\_REGION101.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 101 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION101.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region101 as exempt.

**IDAU\_REGION101.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region101.

**IDAU\_REGION101.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 101 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION102.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region102.

**IDAU\_REGION102.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 102 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION102.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region102 as exempt.

**IDAU\_REGION102.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region102.

**IDAU\_REGION102.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 102 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION103.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region103.

**IDAU\_REGION103.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 103 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION103.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region103 as exempt.

**IDAU\_REGION103.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region103.

**IDAU\_REGION103.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 103 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION104.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region104.

**IDAU\_REGION104.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 104 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION104.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region104 as exempt.

**IDAU\_REGION104.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region104.

**IDAU\_REGION104.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 104 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION105.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region105.

**IDAU\_REGION105.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 105 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION105.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region105 as exempt.

**IDAU\_REGION105.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region105.

**IDAU\_REGION105.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 105 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION106.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region106.

**IDAU\_REGION106.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 106 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION106.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region106 as exempt.

**IDAU\_REGION106.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region106.

**IDAU\_REGION106.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 106 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION107.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region107.

**IDAU\_REGION107.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 107 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION107.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region107 as exempt.

**IDAU\_REGION107.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region107.

**IDAU\_REGION107.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 107 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION108.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region108.

**IDAU\_REGION108.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 108 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION108.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region108 as exempt.

**IDAU\_REGION108.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region108.

**IDAU\_REGION108.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 108 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION109.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region109.

**IDAU\_REGION109.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 109 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION109.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region109 as exempt.

**IDAU\_REGION109.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region109.

**IDAU\_REGION109.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 109 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION11.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region11.

**IDAU\_REGION11.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 11 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION11.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region11 as exempt.

**IDAU\_REGION11.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region11.

**IDAU\_REGION11.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 11 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION110.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region110.

**IDAU\_REGION110.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 110 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION110.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region110 as exempt.

**IDAU\_REGION110.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region110.

**IDAU\_REGION110.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 110 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION111.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region111.

**IDAU\_REGION111.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 111 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION111.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region111 as exempt.

**IDAU\_REGION111.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region111.

**IDAU\_REGION111.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 111 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION112.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region112.

**IDAU\_REGION112.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 112 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION112.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region112 as exempt.

**IDAU\_REGION112.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region112.

**IDAU\_REGION112.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 112 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION113.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region113.

**IDAU\_REGION113.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 113 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION113.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region113 as exempt.

**IDAU\_REGION113.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region113.

**IDAU\_REGION113.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 113 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION114.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region114.

**IDAU\_REGION114.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 114 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION114.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region114 as exempt.

**IDAU\_REGION114.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region114.

**IDAU\_REGION114.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 114 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION115.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region115.

**IDAU\_REGION115.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 115 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION115.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region115 as exempt.

**IDAU\_REGION115.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region115.

**IDAU\_REGION115.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 115 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION116.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region116.

**IDAU\_REGION116.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 116 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION116.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region116 as exempt.

**IDAU\_REGION116.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region116.

**IDAU\_REGION116.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 116 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION117.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region117.

**IDAU\_REGION117.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 117 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION117.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region117 as exempt.

**IDAU\_REGION117.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region117.

**IDAU\_REGION117.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 117 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION118.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region118.

**IDAU\_REGION118.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 118 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION118.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region118 as exempt.

**IDAU\_REGION118.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region118.

**IDAU\_REGION118.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 118 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION119.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region119.

**IDAU\_REGION119.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 119 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION119.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region119 as exempt.

**IDAU\_REGION119.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region119.

**IDAU\_REGION119.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 119 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION12.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region12.

**IDAU\_REGION12.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 12 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION12.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region12 as exempt.

**IDAU\_REGION12.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region12.

**IDAU\_REGION12.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 12 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION120.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region120.

**IDAU\_REGION120.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 120 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION120.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region120 as exempt.

**IDAU\_REGION120.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region120.

**IDAU\_REGION120.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 120 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION121.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region121.

**IDAU\_REGION121.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 121 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION121.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region121 as exempt.

**IDAU\_REGION121.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region121.

**IDAU\_REGION121.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 121 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION122.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region122.

**IDAU\_REGION122.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 122 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION122.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region122 as exempt.

**IDAU\_REGION122.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region122.

**IDAU\_REGION122.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 122 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION123.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region123.

**IDAU\_REGION123.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 123 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION123.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region123 as exempt.

**IDAU\_REGION123.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region123.

**IDAU\_REGION123.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 123 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION124.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region124.

**IDAU\_REGION124.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 124 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION124.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region124 as exempt.

**IDAU\_REGION124.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region124.

**IDAU\_REGION124.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 124 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION125.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region125.

**IDAU\_REGION125.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 125 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION125.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region125 as exempt.

**IDAU\_REGION125.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region125.

**IDAU\_REGION125.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 125 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION126.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region126.

**IDAU\_REGION126.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 126 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION126.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region126 as exempt.

**IDAU\_REGION126.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region126.

**IDAU\_REGION126.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 126 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION127.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region127.

**IDAU\_REGION127.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 127 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION127.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region127 as exempt.

**IDAU\_REGION127.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region127.

**IDAU\_REGION127.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 127 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION128.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region128.

**IDAU\_REGION128.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 128 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION128.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region128 as exempt.

**IDAU\_REGION128.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region128.

**IDAU\_REGION128.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 128 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION129.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region129.

**IDAU\_REGION129.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 129 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION129.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region129 as exempt.

**IDAU\_REGION129.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region129.

**IDAU\_REGION129.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 129 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION13.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region13.

**IDAU\_REGION13.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 13 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION13.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region13 as exempt.

**IDAU\_REGION13.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region13.

**IDAU\_REGION13.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 13 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION130.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region130.

**IDAU\_REGION130.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 130 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION130.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region130 as exempt.

**IDAU\_REGION130.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region130.

**IDAU\_REGION130.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 130 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION131.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region131.

**IDAU\_REGION131.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 131 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION131.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region131 as exempt.

**IDAU\_REGION131.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region131.

**IDAU\_REGION131.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 131 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION132.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region132.

**IDAU\_REGION132.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 132 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION132.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region132 as exempt.

**IDAU\_REGION132.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region132.

**IDAU\_REGION132.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 132 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION133.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region133.

**IDAU\_REGION133.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 133 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION133.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region133 as exempt.

**IDAU\_REGION133.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region133.

**IDAU\_REGION133.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 133 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION134.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region134.

**IDAU\_REGION134.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 134 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION134.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region134 as exempt.

**IDAU\_REGION134.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region134.

**IDAU\_REGION134.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 134 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION135.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region135.

**IDAU\_REGION135.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 135 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION135.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region135 as exempt.

**IDAU\_REGION135.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region135.

**IDAU\_REGION135.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 135 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION136.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region136.

**IDAU\_REGION136.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 136 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION136.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region136 as exempt.

**IDAU\_REGION136.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region136.

**IDAU\_REGION136.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 136 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION137.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region137.

**IDAU\_REGION137.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 137 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION137.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region137 as exempt.

**IDAU\_REGION137.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region137.

**IDAU\_REGION137.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 137 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION138.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region138.

**IDAU\_REGION138.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 138 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION138.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region138 as exempt.

**IDAU\_REGION138.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region138.

**IDAU\_REGION138.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 138 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION139.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region139.

**IDAU\_REGION139.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 139 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION139.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region139 as exempt.

**IDAU\_REGION139.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region139.

**IDAU\_REGION139.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 139 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION14.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region14.

**IDAU\_REGION14.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 14 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION14.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region14 as exempt.

**IDAU\_REGION14.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region14.

**IDAU\_REGION14.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 14 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION140.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region140.

**IDAU\_REGION140.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 140 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION140.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region140 as exempt.

**IDAU\_REGION140.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region140.

**IDAU\_REGION140.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 140 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION141.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region141.

**IDAU\_REGION141.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 141 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION141.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region141 as exempt.

**IDAU\_REGION141.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region141.

**IDAU\_REGION141.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 141 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION142.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region142.

**IDAU\_REGION142.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 142 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION142.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region142 as exempt.

**IDAU\_REGION142.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region142.

**IDAU\_REGION142.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 142 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION143.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region143.

**IDAU\_REGION143.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 143 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION143.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region143 as exempt.

**IDAU\_REGION143.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region143.

**IDAU\_REGION143.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 143 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION144.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region144.

**IDAU\_REGION144.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 144 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION144.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region144 as exempt.

**IDAU\_REGION144.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region144.

**IDAU\_REGION144.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 144 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION145.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region145.

**IDAU\_REGION145.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 145 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION145.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region145 as exempt.

**IDAU\_REGION145.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region145.

**IDAU\_REGION145.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 145 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION146.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region146.

**IDAU\_REGION146.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 146 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION146.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region146 as exempt.

**IDAU\_REGION146.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region146.

**IDAU\_REGION146.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 146 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION147.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region147.

**IDAU\_REGION147.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 147 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION147.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region147 as exempt.

**IDAU\_REGION147.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region147.

**IDAU\_REGION147.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 147 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION148.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region148.

**IDAU\_REGION148.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 148 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION148.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region148 as exempt.

**IDAU\_REGION148.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region148.

**IDAU\_REGION148.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 148 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION149.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region149.

**IDAU\_REGION149.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 149 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION149.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region149 as exempt.

**IDAU\_REGION149.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region149.

**IDAU\_REGION149.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 149 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION15.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region15.

**IDAU\_REGION15.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 15 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION15.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region15 as exempt.

**IDAU\_REGION15.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region15.

**IDAU\_REGION15.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 15 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION150.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region150.

**IDAU\_REGION150.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 150 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION150.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region150 as exempt.

**IDAU\_REGION150.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region150.

**IDAU\_REGION150.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 150 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION151.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region151.

**IDAU\_REGION151.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 151 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION151.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region151 as exempt.

**IDAU\_REGION151.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region151.

**IDAU\_REGION151.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 151 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION152.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region152.

**IDAU\_REGION152.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 152 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION152.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region152 as exempt.

**IDAU\_REGION152.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region152.

**IDAU\_REGION152.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 152 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION153.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region153.

**IDAU\_REGION153.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 153 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION153.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region153 as exempt.

**IDAU\_REGION153.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region153.

**IDAU\_REGION153.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 153 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION154.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region154.

**IDAU\_REGION154.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 154 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION154.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region154 as exempt.

**IDAU\_REGION154.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region154.

**IDAU\_REGION154.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 154 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION155.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region155.

**IDAU\_REGION155.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 155 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION155.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region155 as exempt.

**IDAU\_REGION155.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region155.

**IDAU\_REGION155.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 155 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION156.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region156.

**IDAU\_REGION156.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 156 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION156.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region156 as exempt.

**IDAU\_REGION156.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region156.

**IDAU\_REGION156.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 156 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION157.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region157.

**IDAU\_REGION157.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 157 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION157.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region157 as exempt.

**IDAU\_REGION157.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region157.

**IDAU\_REGION157.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 157 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION158.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region158.

**IDAU\_REGION158.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 158 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION158.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region158 as exempt.

**IDAU\_REGION158.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region158.

**IDAU\_REGION158.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 158 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION159.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region159.

**IDAU\_REGION159.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 159 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION159.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region159 as exempt.

**IDAU\_REGION159.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region159.

**IDAU\_REGION159.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 159 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION16.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region16.

**IDAU\_REGION16.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 16 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION16.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region16 as exempt.

**IDAU\_REGION16.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region16.

**IDAU\_REGION16.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 16 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION160.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region160.

**IDAU\_REGION160.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 160 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION160.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region160 as exempt.

**IDAU\_REGION160.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region160.

**IDAU\_REGION160.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 160 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION161.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region161.

**IDAU\_REGION161.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 161 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION161.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region161 as exempt.

**IDAU\_REGION161.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region161.

**IDAU\_REGION161.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 161 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION162.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region162.

**IDAU\_REGION162.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 162 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION162.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region162 as exempt.

**IDAU\_REGION162.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region162.

**IDAU\_REGION162.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 162 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION163.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region163.

**IDAU\_REGION163.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 163 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION163.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region163 as exempt.

**IDAU\_REGION163.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region163.

**IDAU\_REGION163.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 163 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION164.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region164.

**IDAU\_REGION164.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 164 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION164.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region164 as exempt.

**IDAU\_REGION164.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region164.

**IDAU\_REGION164.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 164 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION165.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region165.

**IDAU\_REGION165.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 165 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION165.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region165 as exempt.

**IDAU\_REGION165.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region165.

**IDAU\_REGION165.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 165 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION166.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region166.

**IDAU\_REGION166.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 166 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION166.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region166 as exempt.

**IDAU\_REGION166.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region166.

**IDAU\_REGION166.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 166 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION167.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region167.

**IDAU\_REGION167.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 167 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION167.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region167 as exempt.

**IDAU\_REGION167.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region167.

**IDAU\_REGION167.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 167 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION168.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region168.

**IDAU\_REGION168.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 168 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION168.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region168 as exempt.

**IDAU\_REGION168.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region168.

**IDAU\_REGION168.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 168 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION169.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region169.

**IDAU\_REGION169.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 169 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION169.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region169 as exempt.

**IDAU\_REGION169.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region169.

**IDAU\_REGION169.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 169 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION17.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region17.

**IDAU\_REGION17.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 17 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION17.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region17 as exempt.

**IDAU\_REGION17.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region17.

**IDAU\_REGION17.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 17 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION170.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region170.

**IDAU\_REGION170.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 170 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION170.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region170 as exempt.

**IDAU\_REGION170.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region170.

**IDAU\_REGION170.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 170 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION171.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region171.

**IDAU\_REGION171.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 171 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION171.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region171 as exempt.

**IDAU\_REGION171.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region171.

**IDAU\_REGION171.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 171 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION172.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region172.

**IDAU\_REGION172.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 172 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION172.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region172 as exempt.

**IDAU\_REGION172.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region172.

**IDAU\_REGION172.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 172 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION173.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region173.

**IDAU\_REGION173.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 173 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION173.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region173 as exempt.

**IDAU\_REGION173.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region173.

**IDAU\_REGION173.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 173 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION174.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region174.

**IDAU\_REGION174.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 174 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION174.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region174 as exempt.

**IDAU\_REGION174.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region174.

**IDAU\_REGION174.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 174 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION175.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region175.

**IDAU\_REGION175.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 175 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION175.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region175 as exempt.

**IDAU\_REGION175.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region175.

**IDAU\_REGION175.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 175 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION176.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region176.

**IDAU\_REGION176.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 176 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION176.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region176 as exempt.

**IDAU\_REGION176.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region176.

**IDAU\_REGION176.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 176 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION177.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region177.

**IDAU\_REGION177.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 177 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION177.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region177 as exempt.

**IDAU\_REGION177.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region177.

**IDAU\_REGION177.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 177 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION178.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region178.

**IDAU\_REGION178.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 178 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION178.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region178 as exempt.

**IDAU\_REGION178.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region178.

**IDAU\_REGION178.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 178 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION179.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region179.

**IDAU\_REGION179.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 179 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION179.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region179 as exempt.

**IDAU\_REGION179.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region179.

**IDAU\_REGION179.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 179 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION18.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region18.

**IDAU\_REGION18.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 18 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION18.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region18 as exempt.

**IDAU\_REGION18.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region18.

**IDAU\_REGION18.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 18 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION180.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region180.

**IDAU\_REGION180.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 180 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION180.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region180 as exempt.

**IDAU\_REGION180.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region180.

**IDAU\_REGION180.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 180 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION181.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region181.

**IDAU\_REGION181.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 181 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION181.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region181 as exempt.

**IDAU\_REGION181.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region181.

**IDAU\_REGION181.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 181 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION182.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region182.

**IDAU\_REGION182.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 182 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION182.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region182 as exempt.

**IDAU\_REGION182.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region182.

**IDAU\_REGION182.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 182 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION183.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region183.

**IDAU\_REGION183.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 183 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION183.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region183 as exempt.

**IDAU\_REGION183.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region183.

**IDAU\_REGION183.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 183 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION184.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region184.

**IDAU\_REGION184.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 184 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION184.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region184 as exempt.

**IDAU\_REGION184.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region184.

**IDAU\_REGION184.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 184 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION185.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region185.

**IDAU\_REGION185.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 185 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION185.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region185 as exempt.

**IDAU\_REGION185.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region185.

**IDAU\_REGION185.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 185 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION186.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region186.

**IDAU\_REGION186.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 186 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION186.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region186 as exempt.

**IDAU\_REGION186.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region186.

**IDAU\_REGION186.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 186 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION187.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region187.

**IDAU\_REGION187.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 187 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION187.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region187 as exempt.

**IDAU\_REGION187.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region187.

**IDAU\_REGION187.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 187 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION188.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region188.

**IDAU\_REGION188.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 188 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION188.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region188 as exempt.

**IDAU\_REGION188.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region188.

**IDAU\_REGION188.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 188 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION189.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region189.

**IDAU\_REGION189.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 189 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION189.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region189 as exempt.

**IDAU\_REGION189.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region189.

**IDAU\_REGION189.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 189 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION19.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region19.

**IDAU\_REGION19.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 19 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION19.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region19 as exempt.

**IDAU\_REGION19.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region19.

**IDAU\_REGION19.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 19 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION190.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region190.

**IDAU\_REGION190.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 190 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION190.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region190 as exempt.

**IDAU\_REGION190.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region190.

**IDAU\_REGION190.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 190 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION191.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region191.

**IDAU\_REGION191.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 191 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION191.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region191 as exempt.

**IDAU\_REGION191.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region191.

**IDAU\_REGION191.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 191 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION192.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region192.

**IDAU\_REGION192.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 192 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION192.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region192 as exempt.

**IDAU\_REGION192.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region192.

**IDAU\_REGION192.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 192 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION193.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region193.

**IDAU\_REGION193.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 193 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION193.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region193 as exempt.

**IDAU\_REGION193.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region193.

**IDAU\_REGION193.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 193 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION194.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region194.

**IDAU\_REGION194.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 194 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION194.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region194 as exempt.

**IDAU\_REGION194.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region194.

**IDAU\_REGION194.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 194 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION195.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region195.

**IDAU\_REGION195.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 195 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION195.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region195 as exempt.

**IDAU\_REGION195.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region195.

**IDAU\_REGION195.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 195 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION196.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region196.

**IDAU\_REGION196.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 196 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION196.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region196 as exempt.

**IDAU\_REGION196.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region196.

**IDAU\_REGION196.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 196 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION197.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region197.

**IDAU\_REGION197.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 197 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION197.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region197 as exempt.

**IDAU\_REGION197.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region197.

**IDAU\_REGION197.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 197 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION198.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region198.

**IDAU\_REGION198.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 198 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION198.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region198 as exempt.

**IDAU\_REGION198.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region198.

**IDAU\_REGION198.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 198 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION199.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region199.

**IDAU\_REGION199.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 199 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION199.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region199 as exempt.

**IDAU\_REGION199.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region199.

**IDAU\_REGION199.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 199 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION2.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region2.

**IDAU\_REGION2.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 2 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION2.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region2 as exempt.

**IDAU\_REGION2.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region2.

**IDAU\_REGION2.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 2 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION20.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region20.

**IDAU\_REGION20.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 20 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION20.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region20 as exempt.

**IDAU\_REGION20.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region20.

**IDAU\_REGION20.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 20 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION200.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region200.

**IDAU\_REGION200.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 200 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION200.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region200 as exempt.

**IDAU\_REGION200.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region200.

**IDAU\_REGION200.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 200 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION201.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region201.

**IDAU\_REGION201.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 201 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION201.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region201 as exempt.

**IDAU\_REGION201.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region201.

**IDAU\_REGION201.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 201 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION202.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region202.

**IDAU\_REGION202.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 202 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION202.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region202 as exempt.

**IDAU\_REGION202.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region202.

**IDAU\_REGION202.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 202 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION203.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region203.

**IDAU\_REGION203.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 203 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION203.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region203 as exempt.

**IDAU\_REGION203.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region203.

**IDAU\_REGION203.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 203 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION204.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region204.

**IDAU\_REGION204.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 204 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION204.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region204 as exempt.

**IDAU\_REGION204.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region204.

**IDAU\_REGION204.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 204 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION205.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region205.

**IDAU\_REGION205.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 205 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION205.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region205 as exempt.

**IDAU\_REGION205.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region205.

**IDAU\_REGION205.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 205 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION206.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region206.

**IDAU\_REGION206.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 206 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION206.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region206 as exempt.

**IDAU\_REGION206.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region206.

**IDAU\_REGION206.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 206 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION207.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region207.

**IDAU\_REGION207.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 207 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION207.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region207 as exempt.

**IDAU\_REGION207.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region207.

**IDAU\_REGION207.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 207 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION208.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region208.

**IDAU\_REGION208.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 208 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION208.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region208 as exempt.

**IDAU\_REGION208.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region208.

**IDAU\_REGION208.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 208 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION209.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region209.

**IDAU\_REGION209.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 209 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION209.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region209 as exempt.

**IDAU\_REGION209.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region209.

**IDAU\_REGION209.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 209 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION21.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region21.

**IDAU\_REGION21.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 21 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION21.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region21 as exempt.

**IDAU\_REGION21.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region21.

**IDAU\_REGION21.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 21 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION210.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region210.

**IDAU\_REGION210.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 210 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION210.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region210 as exempt.

**IDAU\_REGION210.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region210.

**IDAU\_REGION210.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 210 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION211.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region211.

**IDAU\_REGION211.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 211 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION211.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region211 as exempt.

**IDAU\_REGION211.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region211.

**IDAU\_REGION211.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 211 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION212.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region212.

**IDAU\_REGION212.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 212 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION212.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region212 as exempt.

**IDAU\_REGION212.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region212.

**IDAU\_REGION212.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 212 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION213.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region213.

**IDAU\_REGION213.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 213 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION213.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region213 as exempt.

**IDAU\_REGION213.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region213.

**IDAU\_REGION213.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 213 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION214.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region214.

**IDAU\_REGION214.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 214 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION214.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region214 as exempt.

**IDAU\_REGION214.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region214.

**IDAU\_REGION214.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 214 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION215.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region215.

**IDAU\_REGION215.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 215 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION215.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region215 as exempt.

**IDAU\_REGION215.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region215.

**IDAU\_REGION215.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 215 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION216.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region216.

**IDAU\_REGION216.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 216 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION216.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region216 as exempt.

**IDAU\_REGION216.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region216.

**IDAU\_REGION216.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 216 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION217.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region217.

**IDAU\_REGION217.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 217 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION217.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region217 as exempt.

**IDAU\_REGION217.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region217.

**IDAU\_REGION217.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 217 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION218.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region218.

**IDAU\_REGION218.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 218 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION218.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region218 as exempt.

**IDAU\_REGION218.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region218.

**IDAU\_REGION218.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 218 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION219.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region219.

**IDAU\_REGION219.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 219 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION219.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region219 as exempt.

**IDAU\_REGION219.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region219.

**IDAU\_REGION219.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 219 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION22.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region22.

**IDAU\_REGION22.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 22 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION22.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region22 as exempt.

**IDAU\_REGION22.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region22.

**IDAU\_REGION22.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 22 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION220.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region220.

**IDAU\_REGION220.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 220 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION220.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region220 as exempt.

**IDAU\_REGION220.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region220.

**IDAU\_REGION220.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 220 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION221.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region221.

**IDAU\_REGION221.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 221 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION221.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region221 as exempt.

**IDAU\_REGION221.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region221.

**IDAU\_REGION221.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 221 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION222.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region222.

**IDAU\_REGION222.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 222 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION222.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region222 as exempt.

**IDAU\_REGION222.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region222.

**IDAU\_REGION222.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 222 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION223.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region223.

**IDAU\_REGION223.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 223 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION223.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region223 as exempt.

**IDAU\_REGION223.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region223.

**IDAU\_REGION223.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 223 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION224.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region224.

**IDAU\_REGION224.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 224 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION224.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region224 as exempt.

**IDAU\_REGION224.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region224.

**IDAU\_REGION224.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 224 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION225.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region225.

**IDAU\_REGION225.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 225 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION225.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region225 as exempt.

**IDAU\_REGION225.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region225.

**IDAU\_REGION225.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 225 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION226.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region226.

**IDAU\_REGION226.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 226 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION226.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region226 as exempt.

**IDAU\_REGION226.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region226.

**IDAU\_REGION226.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 226 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION227.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region227.

**IDAU\_REGION227.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 227 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION227.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region227 as exempt.

**IDAU\_REGION227.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region227.

**IDAU\_REGION227.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 227 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION228.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region228.

**IDAU\_REGION228.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 228 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION228.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region228 as exempt.

**IDAU\_REGION228.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region228.

**IDAU\_REGION228.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 228 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION229.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region229.

**IDAU\_REGION229.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 229 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION229.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region229 as exempt.

**IDAU\_REGION229.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region229.

**IDAU\_REGION229.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 229 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION23.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region23.

**IDAU\_REGION23.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 23 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION23.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region23 as exempt.

**IDAU\_REGION23.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region23.

**IDAU\_REGION23.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 23 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION230.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region230.

**IDAU\_REGION230.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 230 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION230.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region230 as exempt.

**IDAU\_REGION230.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region230.

**IDAU\_REGION230.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 230 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION231.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region231.

**IDAU\_REGION231.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 231 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION231.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region231 as exempt.

**IDAU\_REGION231.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region231.

**IDAU\_REGION231.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 231 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION232.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region232.

**IDAU\_REGION232.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 232 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION232.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region232 as exempt.

**IDAU\_REGION232.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region232.

**IDAU\_REGION232.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 232 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION233.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region233.

**IDAU\_REGION233.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 233 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION233.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region233 as exempt.

**IDAU\_REGION233.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region233.

**IDAU\_REGION233.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 233 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION234.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region234.

**IDAU\_REGION234.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 234 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION234.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region234 as exempt.

**IDAU\_REGION234.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region234.

**IDAU\_REGION234.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 234 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION235.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region235.

**IDAU\_REGION235.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 235 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION235.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region235 as exempt.

**IDAU\_REGION235.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region235.

**IDAU\_REGION235.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 235 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION236.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region236.

**IDAU\_REGION236.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 236 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION236.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region236 as exempt.

**IDAU\_REGION236.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region236.

**IDAU\_REGION236.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 236 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION237.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region237.

**IDAU\_REGION237.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 237 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION237.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region237 as exempt.

**IDAU\_REGION237.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region237.

**IDAU\_REGION237.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 237 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION238.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region238.

**IDAU\_REGION238.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 238 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION238.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region238 as exempt.

**IDAU\_REGION238.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region238.

**IDAU\_REGION238.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 238 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION239.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region239.

**IDAU\_REGION239.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 239 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION239.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region239 as exempt.

**IDAU\_REGION239.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region239.

**IDAU\_REGION239.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 239 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION24.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region24.

**IDAU\_REGION24.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 24 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION24.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region24 as exempt.

**IDAU\_REGION24.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region24.

**IDAU\_REGION24.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 24 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION240.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region240.

**IDAU\_REGION240.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 240 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION240.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region240 as exempt.

**IDAU\_REGION240.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region240.

**IDAU\_REGION240.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 240 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION241.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region241.

**IDAU\_REGION241.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 241 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION241.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region241 as exempt.

**IDAU\_REGION241.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region241.

**IDAU\_REGION241.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 241 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION242.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region242.

**IDAU\_REGION242.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 242 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION242.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region242 as exempt.

**IDAU\_REGION242.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region242.

**IDAU\_REGION242.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 242 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION243.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region243.

**IDAU\_REGION243.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 243 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION243.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region243 as exempt.

**IDAU\_REGION243.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region243.

**IDAU\_REGION243.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 243 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION244.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region244.

**IDAU\_REGION244.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 244 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION244.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region244 as exempt.

**IDAU\_REGION244.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region244.

**IDAU\_REGION244.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 244 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION245.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region245.

**IDAU\_REGION245.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 245 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION245.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region245 as exempt.

**IDAU\_REGION245.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region245.

**IDAU\_REGION245.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 245 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION246.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region246.

**IDAU\_REGION246.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 246 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION246.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region246 as exempt.

**IDAU\_REGION246.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region246.

**IDAU\_REGION246.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 246 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION247.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region247.

**IDAU\_REGION247.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 247 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION247.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region247 as exempt.

**IDAU\_REGION247.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region247.

**IDAU\_REGION247.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 247 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION248.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region248.

**IDAU\_REGION248.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 248 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION248.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region248 as exempt.

**IDAU\_REGION248.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region248.

**IDAU\_REGION248.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 248 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION249.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region249.

**IDAU\_REGION249.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 249 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION249.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region249 as exempt.

**IDAU\_REGION249.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region249.

**IDAU\_REGION249.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 249 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION25.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region25.

**IDAU\_REGION25.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 25 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION25.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region25 as exempt.

**IDAU\_REGION25.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region25.

**IDAU\_REGION25.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 25 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION250.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region250.

**IDAU\_REGION250.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 250 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION250.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region250 as exempt.

**IDAU\_REGION250.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region250.

**IDAU\_REGION250.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 250 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION251.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region251.

**IDAU\_REGION251.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 251 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION251.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region251 as exempt.

**IDAU\_REGION251.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region251.

**IDAU\_REGION251.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 251 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION252.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region252.

**IDAU\_REGION252.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 252 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION252.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region252 as exempt.

**IDAU\_REGION252.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region252.

**IDAU\_REGION252.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 252 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION253.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region253.

**IDAU\_REGION253.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 253 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION253.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region253 as exempt.

**IDAU\_REGION253.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region253.

**IDAU\_REGION253.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 253 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION254.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region254.

**IDAU\_REGION254.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 254 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION254.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region254 as exempt.

**IDAU\_REGION254.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region254.

**IDAU\_REGION254.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 254 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION255.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region255.

**IDAU\_REGION255.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 255 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION255.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region255 as exempt.

**IDAU\_REGION255.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region255.

**IDAU\_REGION255.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 255 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION26.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region26.

**IDAU\_REGION26.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 26 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION26.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region26 as exempt.

**IDAU\_REGION26.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region26.

**IDAU\_REGION26.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 26 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION27.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region27.

**IDAU\_REGION27.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 27 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION27.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region27 as exempt.

**IDAU\_REGION27.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region27.

**IDAU\_REGION27.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 27 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION28.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region28.

**IDAU\_REGION28.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 28 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION28.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region28 as exempt.

**IDAU\_REGION28.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region28.

**IDAU\_REGION28.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 28 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION29.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region29.

**IDAU\_REGION29.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 29 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION29.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region29 as exempt.

**IDAU\_REGION29.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region29.

**IDAU\_REGION29.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 29 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION3.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region3.

**IDAU\_REGION3.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 3 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION3.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region3 as exempt.

**IDAU\_REGION3.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region3.

**IDAU\_REGION3.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 3 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION30.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region30.

**IDAU\_REGION30.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 30 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION30.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region30 as exempt.

**IDAU\_REGION30.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region30.

**IDAU\_REGION30.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 30 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION31.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region31.

**IDAU\_REGION31.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 31 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION31.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region31 as exempt.

**IDAU\_REGION31.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region31.

**IDAU\_REGION31.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 31 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION32.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region32.

**IDAU\_REGION32.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 32 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION32.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region32 as exempt.

**IDAU\_REGION32.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region32.

**IDAU\_REGION32.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 32 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION33.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region33.

**IDAU\_REGION33.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 33 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION33.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region33 as exempt.

**IDAU\_REGION33.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region33.

**IDAU\_REGION33.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 33 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION34.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region34.

**IDAU\_REGION34.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 34 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION34.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region34 as exempt.

**IDAU\_REGION34.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region34.

**IDAU\_REGION34.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 34 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION35.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region35.

**IDAU\_REGION35.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 35 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION35.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region35 as exempt.

**IDAU\_REGION35.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region35.

**IDAU\_REGION35.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 35 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION36.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region36.

**IDAU\_REGION36.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 36 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION36.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region36 as exempt.

**IDAU\_REGION36.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region36.

**IDAU\_REGION36.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 36 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION37.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region37.

**IDAU\_REGION37.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 37 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION37.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region37 as exempt.

**IDAU\_REGION37.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region37.

**IDAU\_REGION37.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 37 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION38.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region38.

**IDAU\_REGION38.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 38 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION38.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region38 as exempt.

**IDAU\_REGION38.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region38.

**IDAU\_REGION38.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 38 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION39.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region39.

**IDAU\_REGION39.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 39 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION39.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region39 as exempt.

**IDAU\_REGION39.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region39.

**IDAU\_REGION39.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 39 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION4.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region4.

**IDAU\_REGION4.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 4 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION4.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region4 as exempt.

**IDAU\_REGION4.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region4.

**IDAU\_REGION4.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 4 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION40.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region40.

**IDAU\_REGION40.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 40 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION40.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region40 as exempt.

**IDAU\_REGION40.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region40.

**IDAU\_REGION40.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 40 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION41.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region41.

**IDAU\_REGION41.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 41 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION41.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region41 as exempt.

**IDAU\_REGION41.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region41.

**IDAU\_REGION41.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 41 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION42.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region42.

**IDAU\_REGION42.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 42 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION42.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region42 as exempt.

**IDAU\_REGION42.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region42.

**IDAU\_REGION42.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 42 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION43.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region43.

**IDAU\_REGION43.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 43 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION43.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region43 as exempt.

**IDAU\_REGION43.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region43.

**IDAU\_REGION43.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 43 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION44.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region44.

**IDAU\_REGION44.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 44 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION44.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region44 as exempt.

**IDAU\_REGION44.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region44.

**IDAU\_REGION44.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 44 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION45.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region45.

**IDAU\_REGION45.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 45 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION45.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region45 as exempt.

**IDAU\_REGION45.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region45.

**IDAU\_REGION45.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 45 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION46.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region46.

**IDAU\_REGION46.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 46 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION46.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region46 as exempt.

**IDAU\_REGION46.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region46.

**IDAU\_REGION46.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 46 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION47.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region47.

**IDAU\_REGION47.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 47 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION47.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region47 as exempt.

**IDAU\_REGION47.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region47.

**IDAU\_REGION47.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 47 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION48.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region48.

**IDAU\_REGION48.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 48 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION48.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region48 as exempt.

**IDAU\_REGION48.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region48.

**IDAU\_REGION48.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 48 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION49.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region49.

**IDAU\_REGION49.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 49 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION49.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region49 as exempt.

**IDAU\_REGION49.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region49.

**IDAU\_REGION49.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 49 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION5.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region5.

**IDAU\_REGION5.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 5 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION5.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region5 as exempt.

**IDAU\_REGION5.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region5.

**IDAU\_REGION5.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 5 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION50.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region50.

**IDAU\_REGION50.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 50 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION50.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region50 as exempt.

**IDAU\_REGION50.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region50.

**IDAU\_REGION50.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 50 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION51.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region51.

**IDAU\_REGION51.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 51 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION51.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region51 as exempt.

**IDAU\_REGION51.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region51.

**IDAU\_REGION51.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 51 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION52.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region52.

**IDAU\_REGION52.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 52 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION52.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region52 as exempt.

**IDAU\_REGION52.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region52.

**IDAU\_REGION52.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 52 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION53.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region53.

**IDAU\_REGION53.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 53 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION53.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region53 as exempt.

**IDAU\_REGION53.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region53.

**IDAU\_REGION53.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 53 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION54.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region54.

**IDAU\_REGION54.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 54 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION54.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region54 as exempt.

**IDAU\_REGION54.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region54.

**IDAU\_REGION54.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 54 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION55.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region55.

**IDAU\_REGION55.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 55 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION55.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region55 as exempt.

**IDAU\_REGION55.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region55.

**IDAU\_REGION55.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 55 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION56.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region56.

**IDAU\_REGION56.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 56 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION56.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region56 as exempt.

**IDAU\_REGION56.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region56.

**IDAU\_REGION56.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 56 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION57.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region57.

**IDAU\_REGION57.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 57 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION57.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region57 as exempt.

**IDAU\_REGION57.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region57.

**IDAU\_REGION57.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 57 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION58.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region58.

**IDAU\_REGION58.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 58 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION58.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region58 as exempt.

**IDAU\_REGION58.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region58.

**IDAU\_REGION58.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 58 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION59.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region59.

**IDAU\_REGION59.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 59 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION59.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region59 as exempt.

**IDAU\_REGION59.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region59.

**IDAU\_REGION59.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 59 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION6.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region6.

**IDAU\_REGION6.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 6 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION6.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region6 as exempt.

**IDAU\_REGION6.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region6.

**IDAU\_REGION6.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 6 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION60.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region60.

**IDAU\_REGION60.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 60 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION60.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region60 as exempt.

**IDAU\_REGION60.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region60.

**IDAU\_REGION60.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 60 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION61.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region61.

**IDAU\_REGION61.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 61 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION61.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region61 as exempt.

**IDAU\_REGION61.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region61.

**IDAU\_REGION61.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 61 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION62.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region62.

**IDAU\_REGION62.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 62 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION62.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region62 as exempt.

**IDAU\_REGION62.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region62.

**IDAU\_REGION62.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 62 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION63.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region63.

**IDAU\_REGION63.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 63 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION63.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region63 as exempt.

**IDAU\_REGION63.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region63.

**IDAU\_REGION63.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 63 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION64.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region64.

**IDAU\_REGION64.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 64 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION64.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region64 as exempt.

**IDAU\_REGION64.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region64.

**IDAU\_REGION64.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 64 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION65.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region65.

**IDAU\_REGION65.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 65 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION65.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region65 as exempt.

**IDAU\_REGION65.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region65.

**IDAU\_REGION65.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 65 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION66.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region66.

**IDAU\_REGION66.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 66 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION66.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region66 as exempt.

**IDAU\_REGION66.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region66.

**IDAU\_REGION66.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 66 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION67.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region67.

**IDAU\_REGION67.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 67 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION67.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region67 as exempt.

**IDAU\_REGION67.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region67.

**IDAU\_REGION67.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 67 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION68.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region68.

**IDAU\_REGION68.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 68 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION68.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region68 as exempt.

**IDAU\_REGION68.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region68.

**IDAU\_REGION68.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 68 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION69.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region69.

**IDAU\_REGION69.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 69 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION69.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region69 as exempt.

**IDAU\_REGION69.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region69.

**IDAU\_REGION69.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 69 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION7.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region7.

**IDAU\_REGION7.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 7 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION7.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region7 as exempt.

**IDAU\_REGION7.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region7.

**IDAU\_REGION7.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 7 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION70.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region70.

**IDAU\_REGION70.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 70 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION70.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region70 as exempt.

**IDAU\_REGION70.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region70.

**IDAU\_REGION70.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 70 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION71.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region71.

**IDAU\_REGION71.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 71 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION71.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region71 as exempt.

**IDAU\_REGION71.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region71.

**IDAU\_REGION71.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 71 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION72.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region72.

**IDAU\_REGION72.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 72 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION72.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region72 as exempt.

**IDAU\_REGION72.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region72.

**IDAU\_REGION72.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 72 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION73.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region73.

**IDAU\_REGION73.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 73 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION73.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region73 as exempt.

**IDAU\_REGION73.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region73.

**IDAU\_REGION73.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 73 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION74.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region74.

**IDAU\_REGION74.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 74 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION74.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region74 as exempt.

**IDAU\_REGION74.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region74.

**IDAU\_REGION74.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 74 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION75.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region75.

**IDAU\_REGION75.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 75 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION75.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region75 as exempt.

**IDAU\_REGION75.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region75.

**IDAU\_REGION75.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 75 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION76.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region76.

**IDAU\_REGION76.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 76 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION76.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region76 as exempt.

**IDAU\_REGION76.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region76.

**IDAU\_REGION76.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 76 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION77.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region77.

**IDAU\_REGION77.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 77 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION77.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region77 as exempt.

**IDAU\_REGION77.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region77.

**IDAU\_REGION77.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 77 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION78.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region78.

**IDAU\_REGION78.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 78 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION78.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region78 as exempt.

**IDAU\_REGION78.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region78.

**IDAU\_REGION78.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 78 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION79.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region79.

**IDAU\_REGION79.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 79 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION79.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region79 as exempt.

**IDAU\_REGION79.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region79.

**IDAU\_REGION79.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 79 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION8.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region8.

**IDAU\_REGION8.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 8 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION8.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region8 as exempt.

**IDAU\_REGION8.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region8.

**IDAU\_REGION8.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 8 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION80.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region80.

**IDAU\_REGION80.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 80 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION80.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region80 as exempt.

**IDAU\_REGION80.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region80.

**IDAU\_REGION80.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 80 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION81.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region81.

**IDAU\_REGION81.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 81 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION81.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region81 as exempt.

**IDAU\_REGION81.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region81.

**IDAU\_REGION81.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 81 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION82.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region82.

**IDAU\_REGION82.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 82 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION82.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region82 as exempt.

**IDAU\_REGION82.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region82.

**IDAU\_REGION82.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 82 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION83.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region83.

**IDAU\_REGION83.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 83 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION83.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region83 as exempt.

**IDAU\_REGION83.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region83.

**IDAU\_REGION83.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 83 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION84.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region84.

**IDAU\_REGION84.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 84 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION84.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region84 as exempt.

**IDAU\_REGION84.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region84.

**IDAU\_REGION84.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 84 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION85.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region85.

**IDAU\_REGION85.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 85 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION85.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region85 as exempt.

**IDAU\_REGION85.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region85.

**IDAU\_REGION85.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 85 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION86.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region86.

**IDAU\_REGION86.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 86 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION86.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region86 as exempt.

**IDAU\_REGION86.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region86.

**IDAU\_REGION86.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 86 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION87.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region87.

**IDAU\_REGION87.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 87 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION87.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region87 as exempt.

**IDAU\_REGION87.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region87.

**IDAU\_REGION87.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 87 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION88.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region88.

**IDAU\_REGION88.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 88 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION88.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region88 as exempt.

**IDAU\_REGION88.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region88.

**IDAU\_REGION88.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 88 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION89.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region89.

**IDAU\_REGION89.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 89 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION89.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region89 as exempt.

**IDAU\_REGION89.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region89.

**IDAU\_REGION89.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 89 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION9.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region9.

**IDAU\_REGION9.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 9 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION9.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region9 as exempt.

**IDAU\_REGION9.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region9.

**IDAU\_REGION9.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 9 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION90.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region90.

**IDAU\_REGION90.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 90 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION90.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region90 as exempt.

**IDAU\_REGION90.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region90.

**IDAU\_REGION90.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 90 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION91.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region91.

**IDAU\_REGION91.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 91 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION91.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region91 as exempt.

**IDAU\_REGION91.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region91.

**IDAU\_REGION91.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 91 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION92.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region92.

**IDAU\_REGION92.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 92 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION92.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region92 as exempt.

**IDAU\_REGION92.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region92.

**IDAU\_REGION92.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 92 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION93.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region93.

**IDAU\_REGION93.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 93 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION93.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region93 as exempt.

**IDAU\_REGION93.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region93.

**IDAU\_REGION93.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 93 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION94.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region94.

**IDAU\_REGION94.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 94 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION94.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region94 as exempt.

**IDAU\_REGION94.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region94.

**IDAU\_REGION94.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 94 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION95.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region95.

**IDAU\_REGION95.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 95 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION95.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region95 as exempt.

**IDAU\_REGION95.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region95.

**IDAU\_REGION95.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 95 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION96.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region96.

**IDAU\_REGION96.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 96 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION96.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region96 as exempt.

**IDAU\_REGION96.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region96.

**IDAU\_REGION96.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 96 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION97.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region97.

**IDAU\_REGION97.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 97 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION97.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region97 as exempt.

**IDAU\_REGION97.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region97.

**IDAU\_REGION97.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 97 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION98.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region98.

**IDAU\_REGION98.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 98 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored.  
1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION98.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region98 as exempt.

**IDAU\_REGION98.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region98.

**IDAU\_REGION98.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 98 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**IDAU\_REGION99.BADDR****Type**

int

**Default value**

0x0

**Description**

Base address of IDAU region99.

**IDAU\_REGION99.ENABLE****Type**

bool

**Default value**

0x0

**Description**

Controls if region 99 is S or NS, only valid when NSC=0. If NSC=1 this parameter is ignored. 1 = region is NS, 0 = region is S (absent if LADDR=0).

**IDAU\_REGION99.EXEMPT****Type**

bool

**Default value**

0x0

**Description**

Mark IDAU region99 as exempt.

**IDAU\_REGION99.LADDR****Type**

int

**Default value**

0x0

**Description**

Limit address of IDAU region99.

**IDAU\_REGION99.NSC****Type**

bool

**Default value**

0x0

**Description**

Controls if region 99 is NSC. 1 = IDAU region is NSC, 0 = ENABLE parameter determines if S or NS.

**NUM\_IDAU\_REGION****Type**

int

**Default value**

0x0

**Description**

Number of IDAU regions.

### 3.10.49 ILCU

Integraton Layer Control Unit. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1040: IP revisions support**

Revision	Quality level
0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**Iris and MTI instances for ILCU**

This model has the following Iris instances:

**Table 3-1041: ILCU Iris instances**

InstanceName	ComponentName
ILCU	ILCU

**Ports for ILCU****Table 3-1042: Ports**

Name	Protocol	Type	Description
apb_control_in	PVBus	Slave	APB3 Subordinate Interface - Access to ILCU registers
clk_div_control_out	Value	Master	3 bits to control the Cryptocell clock divider
crypto_irq_in	Signal	Slave	Interrupt input driven by the Cryptocell
crypto_irq_out	Signal	Master	Interrupt output destined for the processor
ic_trigger_in_ack_out	Signal	Master	Integrity checker trigger acknowledge signal

Name	Protocol	Type	Description
ic_trigger_in_req_in	Signal	Slave	Integrity checker trigger request signal
irq_mux_control_out	Signal	Master	IRQ Mux control bit that internally selects where crypto_irq_in is routed
lcm_seed_lfsr_data_out	Value_64	Master	64 bit seed value for the LFSR interface
lcm_seed_lfsr_valid_out	Signal	Master	Indicates that the lcm_seed_lfsr_data signal is valid
lcs_in	Value	Slave	3 bits giving the lifecycle state from the RSE persistent state interface (PSI)
lcs_valid_in	Signal	Slave	Signal from the RSE PSI indicating whether the lifecycle state is valid
n_coldreset_in	Signal	Slave	ICLU reset in
otpw_otp_is_ready_in	Signal	Slave	Status signal from the OTP wrapper indicating it is ready for commands
secure_gpo_out	Value	Master	16 bits of general purpose output (8 bits programmed + 8 complemented bits driven)
trigger_mux_control_out	Value	Master	2 bits input to the DMA Trigger Mux to internally select the DMA trigger source
trigger_out_ack_in	Signal	Slave	DMA Trigger from one of the muxed sources acknowledge signal
trigger_out_req_out	Signal	Master	DMA Trigger from one of the muxed sources request signal
trng_trigger_out	Signal	Master	DMA Trigger Mux input from the IRQ Mux indicating whether the TRNG complete irq has occurred

## Parameters for ILCU

### LCM\_RNG\_SEED\_NOT\_REQUIRED

#### Type

int

#### Default value

0x0

#### Description

Sets reset value of VALID bit in LCM\_SEED\_CTRL register.

### diagnostics

#### Type

int

#### Default value

0x0

#### Description

Diagnostics 0-4 (0:FATAL 1:ERROR 2:WARNING 3:INFO 4:DEBUG - DEFAULT==2).

## 3.10.50 IntegrityChecker

Integrity Checker. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Copyright © 2017–2025 Arm Limited (or its affiliates). All rights reserved.  
Non-Confidential

**Table 3-1043: IP revisions support**

Revision	Quality level
0.5	Alpha support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

### Iris and MTI instances for IntegrityChecker

This model has the following Iris instances:

**Table 3-1044: IntegrityChecker Iris instances**

InstanceName	ComponentName
IntegrityChecker	IntegrityChecker
IntegrityChecker.apb	PVBusSlave

This model has the following MTI trace components:

**Table 3-1045: IntegrityChecker MTI instances**

InstanceName	ComponentName
IntegrityChecker.apb	PVBusSlave

### Ports for IntegrityChecker

**Table 3-1046: Ports**

Name	Protocol	Type	Description
apb	PVBus	Slave	APB Subordinate Interface - Access to registers
ic_alarm_out	Signal	Master	Alarm status out signal
ic_interrupt_out	Signal	Master	Interrupt out signal
ic_match_trigger_ack_in	Signal	Slave	IC Match done ack signal
ic_match_trigger_req_out	Signal	Master	IC Match done req signal
pvbus_m	PVBus	Master	To read and write to external memory
reset_in	Signal	Slave	Reset in signal
warm_reset_in	Signal	Slave	Warm Reset in signal

### Parameters for IntegrityChecker

#### ICBC\_RESET\_VALUE

##### Type

int

##### Default value

0x11b

##### Description

ICBC Registers Reset Value.

**ICDL\_CHUNK\_SIZE****Type**

int

**Default value**

0x8

**Description**

ICDL Chunk Size.

**PID0\_RESET\_VALUE****Type**

int

**Default value**

0x0

**Description**

PID0 Registers Reset Value.

**PID1\_RESET\_VALUE****Type**

int

**Default value**

0xb0

**Description**

PID1 Registers Reset Value.

**diagnostics****Type**

int

**Default value**

0x2

**Description**

Diagnostics 0-4 (0:FATAL 1:ERROR 2:WARNING 3:INFO 4:DEBUG - DEFAULT==2).

### 3.10.51 IoTSS3\_SystemControl

IoT Subsystem System 3.0 Control registers. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1047: IP revisions support**

Revision	Quality level
3.0	Alpha support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

### Iris and MTI instances for IoTSS3\_SystemControl

This model has the following Iris instances:

**Table 3-1048: IoTSS3\_SystemControl Iris instances**

InstanceName	ComponentName
IoTSS3_SystemControl	IoTSS3_SystemControl
IoTSS3_SystemControl.busmaster	PVBusMaster
IoTSS3_SystemControl.busslave	PVBusSlave

This model has the following MTI trace components:

**Table 3-1049: IoTSS3\_SystemControl MTI instances**

InstanceName	ComponentName
IoTSS3_SystemControl.busmaster	PVBusMaster
IoTSS3_SystemControl.busslave	PVBusSlave

### Ports for IoTSS3\_SystemControl

**Table 3-1050: Ports**

Name	Protocol	Type	Description
busmaster_control	PVTransactionMaster	Master	-
cpu0_lockup_reset_request	Signal	Slave	-
cpu0_warm_reset_request	Signal	Slave	-
cpu0core_ppu_irq	Signal	Slave	-
cpu1_lockup_reset_request	Signal	Slave	-
cpu1_warm_reset_request	Signal	Slave	-
cpu2_lockup_reset_request	Signal	Slave	-
cpu2_warm_reset_request	Signal	Slave	-
cpu3_lockup_reset_request	Signal	Slave	-
cpu3_warm_reset_request	Signal	Slave	-
cpuextnmienable_out[4]	Signal	Master	-
cpuintnmienable_out[4]	Signal	Master	-
cpuwait_out[4]	Signal	Master	-
crypto_ppu_irq	Signal	Slave	-
crypto_warm_reset_request	Signal	Slave	-
dbg_ppu_irq	Signal	Slave	-
dbgen_in	Signal	Slave	-

Name	Protocol	Type	Description
dbgen_out	Signal	Master	-
host_level_reset_request	Signal	Slave	-
initsvtor[4]	Value	Master	-
mgmt_ppu_irq	Signal	Slave	-
niden_in	Signal	Slave	-
niden_out	Signal	Master	-
nonsecure_watchdog_reset_request	Signal	Slave	-
npu0_ppu_irq	Signal	Slave	-
pdc_m_pvb_s	PVBus	Master	-
po_reset	Signal	Master	-
pvbus_s	PVBus	Slave	-
secure_watchdog_reset_request	Signal	Slave	-
slow_clock_watchdog_reset_request	Signal	Slave	-
software_reset_request	Signal	Slave	-
spiden_in	Signal	Slave	-
spiden_out	Signal	Master	-
spniden_in	Signal	Slave	-
spniden_out	Signal	Master	-
subsystem_hardware_reset_request	Signal	Slave	-
sys_ppu_irq	Signal	Slave	-
warm_reset	Signal	Master	-

## Parameters for IoTSS3\_SystemControl

### INITSVTOR\_RST

#### Type

int

#### Default value

0x0

#### Description

Reset int32\_t for INITSVTOR. Should match cpu<i>.INITSVTOR.

### NUMCPU

#### Type

int

#### Default value

0x1

#### Description

Number of Cortex-M CPU cores in the subsystem.

**NUMVMBANK****Type**

int

**Default value**

0x2

**Description**

Number of Volatile Memory Banks.

**SWRESETREQ\_BIT****Type**

int

**Default value**

0x9

**Description**

Bit used for SWRESETREQ.

**cpu0wait****Type**

bool

**Default value**

0x0

**Description**

Whether to hold cpu0 in reset at boot.

**cpu1wait****Type**

bool

**Default value**

0x1

**Description**

Whether to hold cpu1 in reset at boot.

**cpu2wait****Type**

bool

**Default value**

0x1

**Description**

Whether to hold cpu2 in reset at boot.

**cpu3wait**

**Type**

bool

**Default value**

0x1

**Description**

Whether to hold cpu3 in reset at boot.

**diagnostics**

**Type**

int

**Default value**

0x2

**Description**

Diagnostics.

**3.10.52 IoTSS\_AccessControlGate**

IoT Subsystem Access Control Gate. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1051: IP revisions support**

Revision	Quality level
1.0	Alpha support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**Iris and MTI instances for IoTSS\_AccessControlGate**

This model has the following Iris instances:

**Table 3-1052: IoTSS\_AccessControlGate Iris instances**

InstanceName	ComponentName
IoTSS_AccessControlGate	IoTSS_AccessControlGate
IoTSS_AccessControlGate.bus_mapper	PVBusMapper

This model has the following MTI trace components:

**Table 3-1053: IoTSS\_AccessControlGate MTI instances**

InstanceName	ComponentName
IoTSS_AccessControlGate.bus_mapper	<a href="#">PVBusMapper</a>

## Ports for IoTSS\_AccessControlGate

**Table 3-1054: Ports**

Name	Protocol	Type	Description
ext_gate	Signal	Slave	-
master_ppuhwstat	Value	Slave	-
pdbus_m	PVBus	Master	-
pdbus_s	PVBus	Slave	-
slave_ppuhwstat	Value	Slave	-
wake_request	Signal	Master	-

## Parameters for IoTSS\_AccessControlGate

### enabled

#### Type

bool

#### Default value

0x1

#### Description

Enable the ACG. If disabled, will let all transactions through without side effects.

## 3.10.53 IoTSS\_PeripheralProtectionController

IoT Subsystem Peripheral Protection Controller. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1055: IP revisions support**

Revision	Quality level
1.0	Alpha support

## Iris and MTI instances for IoTSS\_PeripheralProtectionController

This model has the following Iris instances:

**Table 3-1056: IoTSS\_PeripheralProtectionController Iris instances**

InstanceName	ComponentName
IoTSS_PeripheralProtectionController	IoTSS_PeripheralProtectionController
IoTSS_PeripheralProtectionController.bus_mapper0	PVBusMapper
IoTSS_PeripheralProtectionController.bus_mapper1	PVBusMapper
IoTSS_PeripheralProtectionController.bus_mapper10	PVBusMapper
IoTSS_PeripheralProtectionController.bus_mapper11	PVBusMapper

InstanceName	ComponentName
IoTSS_PeripheralProtectionController.bus_mapper12	PVBusMapper
IoTSS_PeripheralProtectionController.bus_mapper13	PVBusMapper
IoTSS_PeripheralProtectionController.bus_mapper14	PVBusMapper
IoTSS_PeripheralProtectionController.bus_mapper15	PVBusMapper
IoTSS_PeripheralProtectionController.bus_mapper2	PVBusMapper
IoTSS_PeripheralProtectionController.bus_mapper3	PVBusMapper
IoTSS_PeripheralProtectionController.bus_mapper4	PVBusMapper
IoTSS_PeripheralProtectionController.bus_mapper5	PVBusMapper
IoTSS_PeripheralProtectionController.bus_mapper6	PVBusMapper
IoTSS_PeripheralProtectionController.bus_mapper7	PVBusMapper
IoTSS_PeripheralProtectionController.bus_mapper8	PVBusMapper
IoTSS_PeripheralProtectionController.bus_mapper9	PVBusMapper

This model has the following MTI trace components:

**Table 3-1057: IoTSS\_PeripheralProtectionController MTI instances**

InstanceName	ComponentName
IoTSS_PeripheralProtectionController.bus_mapper0	PVBusMapper
IoTSS_PeripheralProtectionController.bus_mapper1	PVBusMapper
IoTSS_PeripheralProtectionController.bus_mapper10	PVBusMapper
IoTSS_PeripheralProtectionController.bus_mapper11	PVBusMapper
IoTSS_PeripheralProtectionController.bus_mapper12	PVBusMapper
IoTSS_PeripheralProtectionController.bus_mapper13	PVBusMapper
IoTSS_PeripheralProtectionController.bus_mapper14	PVBusMapper

IoTSS_PeripheralProtectionController.bus_mapper5	PVBusMapper
IoTSS_PeripheralProtectionController.bus_mapper6	PVBusMapper
IoTSS_PeripheralProtectionController.bus_mapper7	PVBusMapper
IoTSS_PeripheralProtectionController.bus_mapper8	PVBusMapper
IoTSS_PeripheralProtectionController.bus_mapper9	PVBusMapper

### Ports for IoTSS\_PeripheralProtectionController

**Table 3-1058: Ports**

Name	Protocol	Type	Description
cfg_ap	ValueState	Slave	-
cfg_nonsec	ValueState	Slave	-
cfg_sec_resp	ValueState	Slave	-

Name	Protocol	Type	Description
ida_u_invalidate_region	Value_64	Slave	-
ppc_irq	StateSignal	Master	-
pvbus_m[16]	PVBus	Master	-
pvbus_s[16]	PVBus	Slave	-

## Parameters for IoTSS\_PeripheralProtectionController

### DISABLE\_GATING

#### Type

bool

#### Default value

0x0

#### Description

Disable Memory gating logic.

### NONSEC\_MASK

#### Type

int

#### Default value

0x0

#### Description

16-bit wide mask for security checking of ports: 0 = check, 1 = mask.

### PORTx\_ENABLE

#### Type

int

#### Default value

0xffff

#### Description

Enable (1) or disable (0) port x (where x is between 0-15): enable = 1, disable = 0.

### diagnostics

#### Type

int

#### Default value

0x0

#### Description

Diagnostics.

### 3.10.54 KeyManagementUnit

KeyManagementUnit. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1059: IP revisions support**

Revision	Quality level
0.5	Alpha support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### Iris and MTI instances for KeyManagementUnit

This model has the following Iris instances:

**Table 3-1060: KeyManagementUnit Iris instances**

InstanceName	ComponentName
KeyManagementUnit	KeyManagementUnit
KeyManagementUnit.apb	PVBusSlave
KeyManagementUnit.keys_in	PVBusSlave

This model has the following MTI trace components:

**Table 3-1061: KeyManagementUnit MTI instances**

InstanceName	ComponentName
KeyManagementUnit.apb	<a href="#">PVBusSlave</a>
KeyManagementUnit.keys_in	<a href="#">PVBusSlave</a>

#### Ports for KeyManagementUnit

**Table 3-1062: Ports**

Name	Protocol	Type	Description
apb	<a href="#">PVBus</a>	Slave	register access via apb port
hw_keys_in	<a href="#">PVBus</a>	Slave	HW key register access via private apb port - connect to LCM
irq_out	<a href="#">Signal</a>	Master	IRQ signal out
keys_out	<a href="#">PVBus</a>	Master	output keys via port
reset_in	<a href="#">Signal</a>	Slave	Reset signal in

#### Parameters for KeyManagementUnit

##### KMUDKPARV0

##### Type

int

**Default value**

0x0

**Description**

Reset value of the KMUDKPA<0> register. If no hardware key slot is supported (KMUNHWKSLTS is 0), this configuration option must be set to 0x0000\_0000.

**KMUDKPARV1****Type**

int

**Default value**

0x0

**Description**

Reset value of the KMUDKPA<1> register. If no hardware key slot is supported (KMUNHWKSLTS is 1), this configuration option must be set to 0x0000\_0000.

**KMUDKPARV2****Type**

int

**Default value**

0x0

**Description**

Reset value of the KMUDKPA<2> register. If no hardware key slot is supported (KMUNHWKSLTS is 2), this configuration option must be set to 0x0000\_0000.

**KMUDKPARV3****Type**

int

**Default value**

0x0

**Description**

Reset value of the KMUDKPA<3> register. If no hardware key slot is supported (KMUNHWKSLTS is 3), this configuration option must be set to 0x0000\_0000.

**KMUDKPARV4****Type**

int

**Default value**

0x0

**Description**

Reset value of the KMUDKPA<4> register. If no hardware key slot is supported (KMUNHWKSLTS is 4), this configuration option must be set to 0x0000\_0000.

**KMUDKPARV5****Type**

int

**Default value**

0x0

**Description**

Reset value of the KMUDKPA<5> register. If no hardware key slot is supported (KMUNHWKSLTS is 5), this configuration option must be set to 0x0000\_0000.

**KMUDKPARV6****Type**

int

**Default value**

0x0

**Description**

Reset value of the KMUDKPA<6> register. If no hardware key slot is supported (KMUNHWKSLTS is 6), this configuration option must be set to 0x0000\_0000.

**KMUDKPARV7****Type**

int

**Default value**

0x0

**Description**

Reset value of the KMUDKPA<7> register. If no hardware key slot is supported (KMUNHWKSLTS is 7), this configuration option must be set to 0x0000\_0000.

**KMUKSCRVO****Type**

int

**Default value**

0x0

**Description**

Reset value of the KMUKSC<0> register. If no hardware key slot is supported (KMUNHWKSLTS is 0), this configuration option must be set to 0x0000\_0000.

**KMUKSCRV1****Type**

int

**Default value**

0x0

**Description**

Reset value of the KMUKSC<1> register. If no hardware key slot is supported (KMUNHWKSLTS is 1), this configuration option must be set to 0x0000\_0000.

**KMUKSCRV2****Type**

int

**Default value**

0x0

**Description**

Reset value of the KMUKSC<2> register. If no hardware key slot is supported (KMUNHWKSLTS is 2), this configuration option must be set to 0x0000\_0000.

**KMUKSCRV3****Type**

int

**Default value**

0x0

**Description**

Reset value of the KMUKSC<3> register. If no hardware key slot is supported (KMUNHWKSLTS is 3), this configuration option must be set to 0x0000\_0000.

**KMUKSCRV4****Type**

int

**Default value**

0x0

**Description**

Reset value of the KMUKSC<4> register. If no hardware key slot is supported (KMUNHWKSLTS is 4), this configuration option must be set to 0x0000\_0000.

**KMUKSCRV5****Type**

int

**Default value**

0x0

**Description**

Reset value of the KMKSC<5> register. If no hardware key slot is supported (KMUNHWKSLTS is 5), this configuration option must be set to 0x0000\_0000.

**KMKSCRV6****Type**

int

**Default value**

0x0

**Description**

Reset value of the KMKSC<6> register. If no hardware key slot is supported (KMUNHWKSLTS is 6), this configuration option must be set to 0x0000\_0000.

**KMKSCRV7****Type**

int

**Default value**

0x0

**Description**

Reset value of the KMKSC<7> register. If no hardware key slot is supported (KMUNHWKSLTS is 7), this configuration option must be set to 0x0000\_0000.

**KMUNHWKSLTS****Type**

int

**Default value**

0x7

**Description**

Number of hardware key slots. Supported values: 0..8 (0 = No hardware key slot). The first KMUNHWKSLTS key slots are filled by hardware (typically by LCM) and the rest are software key slots. (Default=7).

**KMUNKS****Type**

int

**Default value**

0x5

**Description**

Selects the number of key slots that the KMU supports. This value is reflected in KMUBC.NKS. 0x1=2, 0x2=4, 0x3=8, 0x4=16, 0x5=32 key slots (Default=0x5).

**KMUTANG**

**Type**

int

**Default value**

0x5

**Description**

Specifies four possible values for the Top Address Nibble Groups of the target crypto devices that the KMU allows software to set in the KMUDKPA<n> registers.

**diagnostics**

**Type**

int

**Default value**

0x2

**Description**

Diagnostics 0-4 (0:FATAL 1:ERROR 2:WARNING 3:INFO 4:DEBUG - DEFAULT==2).

**3.10.55 LifeCycleManager**

LifeCycleManager. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1063: IP revisions support**

Revision	Quality level
1.02	Alpha support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**Changes in 11.29.19**

Parameters added:

- DCU\_PERMANENT\_DISABLE\_MASK\_VAL
- VIRGIN\_DCU\_PERMANENT\_DISABLE\_MASK\_VAL\_LCS\_CM
- VIRGIN\_DEFAULT\_DCU\_VAL\_LCS\_CM

**Iris and MTI instances for LifeCycleManager**

This model has the following Iris instances:

**Table 3-1064: LifeCycleManager Iris instances**

InstanceName	ComponentName
LifeCycleManager	RSE_LifeCycleManager
LifeCycleManager.apb	PVBusSlave
LifeCycleManager.hw_keys_out	PVBusMaster
LifeCycleManager.nvm_external_out	PVBusMaster

This model has the following MTI trace components:

**Table 3-1065: LifeCycleManager MTI instances**

InstanceName	ComponentName
LifeCycleManager.apb	PVBusSlave
LifeCycleManager.hw_keys_out	PVBusMaster
LifeCycleManager.nvm_external_out	PVBusMaster

### Ports for LifeCycleManager

**Table 3-1066: Ports**

Name	Protocol	Type	Description
apb	PVBus	Slave	APB4 Subordinate Interface - Access to LCM registers and internal OTP/NVM
dcu_force_disable_in	Value	Slave	LCM Force disable DCU_EN signals
hw_keys_out	PVBus	Master	APB manager interface for output of the HW Root of Trust keys
lcm_diagnostic_mode_trig_ack_in	Signal	Slave	LCM diagnostic mode trigger response from DMA.
lcm_diagnostic_mode_trig_req_out	Signal	Master	LCM diagnostic mode trigger request to DMA.
lcm_mission_mode_trig_ack_in	Signal	Slave	LCM mission mode trigger response from DMA.
lcm_mission_mode_trig_req_out	Signal	Master	LCM mission mode trigger request to DMA.
lcm_mission_provisioning_mode_trig_ack_in	Signal	Slave	LCM mission-provisioning mode trigger response from DMA.
lcm_mission_provisioning_mode_trig_req_out	Signal	Master	LCM mission-provisioning mode trigger request to DMA.
lcm_mission_se_mode_trig_ack_in	Signal	Slave	LCM security-enabled life cycle mode trigger response from DMA.
lcm_mission_se_mode_trig_req_out	Signal	Master	LCM security-enabled life cycle mode trigger request to DMA.
lcs	Value	Master	The 3-bit value of the LCS register
lcs_valid_out	Signal	Master	LCM state valid out
nvm_external_out	PVBus	Master	APB manager interface for external NVM (OTP)
psi_dcu_en0_out[96]	Signal	Master	-

Name	Protocol	Type	Description
psi_dcu_en1_out[6]	Signal	Master	Debug Control Enable Values (LCM DCUs). Force disabled Debug Control Enable Values. These signals are driven by the computed fd_dcu_en[5:0] signals..
psi_dcu_gppc_out[16]	Signal	Master	General-Purpose Persistent Configuration. These signals are driven by the LCM gppc[15:0] signals and can be exposed to the SoC.
reset_in	Signal	Slave	LCM reset in
sp_reset_out	Signal	Master	LCM SP_RST_REQ signal out

## Parameters for LifeCycleManager

### DCU\_PERMANENT\_DISABLE\_MASK\_VAL

#### Type

string

#### Default value

"OxFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFF"

#### Description

Permanently disables the dcu\_en ports.

### DCU\_SP\_DISABLE\_MASK\_VAL

#### Type

string

#### Default value

"OxFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFF"

#### Description

The Secure Provisioning disable mask of the 128-bit DCU signals. Clearing a bit in the mask will force the relevant DCU signal to zero when LCM is in Secure Provisioning Mode (SP\_EN=1).

### DISABLE\_DIRECT\_KEY\_APB\_MASKING

#### Type

int

#### Default value

0x0

#### Description

When set to 1, the Direct Key APB masking feature should be disabled.

### KRTL\_VAL

#### Type

string

#### Default value

0x7bfee0b730dcc241938458dafc2bc784cc15bdabeb84311f59cca8a9a4e8bc35

**Description**

The Krtl value. (256-bit hex).

**OTP\_ADDR\_WIDTH****Type**

int

**Default value**

0xc

**Description**

The OTP bus width (width in bits = OTP\_ADDR\_WIDTH + 2).

**OTP\_MASK\_VAL****Type**

string

**Default value**

0x3aaf46ac792c53b0ffd80fe92129f0e8d80a9048799c5498c19f1a1ce7ddf5b20e2cc8f9456cf4ade2fe

**Description**

This value must be generated using a true random number generator (1536-bit hex).

**OTP\_SIZE\_IN\_BYTES****Type**

int

**Default value**

0x4000

**Description**

The size of the OTP region accessible from the LCM APB-S interface. The maximum size is 60KB.

**PCI\_DCU\_PERMANENT\_DISABLE\_MASK\_VAL\_LCS\_CM****Type**

string

**Default value**

"0xFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFF"

**Description**

The permanent disable mask of the 128-bit DCU signals when LCS=CM and TP Mode=PCI. Clearing a bit in the mask will force the relevant DCU signal to zero.

**PCI\_DCU\_PERMANENT\_DISABLE\_MASK\_VAL\_LCS\_DM****Type**

string

**Default value**

"OxFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFF"

**Description**

The permanent disable mask of the 128-bit DCU signals when LCS=DM and TP Mode=PCI.  
Clearing a bit in the mask will force the relevant DCU signal to zero.

**PCI\_DCU\_PERMANENT\_DISABLE\_MASK\_VAL\_LCS\_RMA****Type**

string

**Default value**

"OxFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFF"

**Description**

The permanent disable mask of the 128-bit DCU signals when LCS=RMA and TP Mode=PCI.  
Clearing a bit in the mask will force the relevant DCU signal to zero.

**PCI\_DCU\_PERMANENT\_DISABLE\_MASK\_VAL\_LCS\_SECURE****Type**

string

**Default value**

"OxFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFF"

**Description**

The permanent disable mask of the 128-bit DCU signals when LCS=SE and TP Mode=PCI.  
Clearing a bit in the mask will force the relevant DCU signal to zero.

**PCI\_DEFAULT\_DCU\_VAL\_LCS\_CM****Type**

string

**Default value**

"OxFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFF"

**Description**

The default reset value of the 128-bit DCU signals when LCS=CM and TP Mode=PCI.

**PCI\_DEFAULT\_DCU\_VAL\_LCS\_DM****Type**

string

**Default value**

"OxFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFF"

**Description**

The default reset value of the 128-bit DCU signals when LCS=DM and TP Mode=PCI.

**PCI\_DEFAULT\_DCU\_VAL\_LCS\_RMA****Type**

string

**Default value**

"OxFFFFFFFFFFFFFFFFFFFFFFFF"

**Description**

The default reset value of the 128-bit DCU signals when LCS=RMA and TP Mode=PCI.

**PCI\_DEFAULT\_DCU\_VAL\_LCS\_SECURE****Type**

string

**Default value**

"0x0"

**Description**

The default reset value of the 128-bit DCU signals when LCS=SE and TP Mode=PCI.

**TCI\_DCU\_PERMANENT\_DISABLE\_MASK\_VAL\_LCS\_CM****Type**

string

**Default value**

"OxFFFFFFFFFFFFFFFFFFFFFFFF"

**Description**

The permanent disable mask of the 128-bit DCU signals when LCS=CM and TP Mode=TCI.  
Clearing a bit in the mask will force the relevant DCU signal to zero.

**TCI\_DCU\_PERMANENT\_DISABLE\_MASK\_VAL\_LCS\_DM****Type**

string

**Default value**

"OxFFFFFFFFFFFFFFFFFFFFFFFF"

**Description**

The permanent disable mask of the 128-bit DCU signals when LCS=DM and TP Mode=TCI.  
Clearing a bit in the mask will force the relevant DCU signal to zero.

**TCI\_DCU\_PERMANENT\_DISABLE\_MASK\_VAL\_LCS\_RMA****Type**

string

**Default value**

"OxFFFFFFFFFFFFFFFFFFFFFFFF"

**Description**

The permanent disable mask of the 128-bit DCU signals when LCS=RMA and TP Mode=TCI. Clearing a bit in the mask will force the relevant DCU signal to zero.

**TCI\_DCU\_PERMANENT\_DISABLE\_MASK\_VAL\_LCS\_SECURE****Type**

string

**Default value**

"OxFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFF"

**Description**

The permanent disable mask of the 128-bit DCU signals when LCS=SE and TP Mode=TCI. Clearing a bit in the mask will force the relevant DCU signal to zero.

**TCI\_DEFAULT\_DCU\_VAL\_LCS\_CM****Type**

string

**Default value**

"OxFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFF"

**Description**

The default reset value of the 128-bit DCU signals when LCS=CM and TP Mode=TCI.

**TCI\_DEFAULT\_DCU\_VAL\_LCS\_DM****Type**

string

**Default value**

"OxFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFF"

**Description**

The default reset value of the 128-bit DCU signals when LCS=DM and TP Mode=TCI.

**TCI\_DEFAULT\_DCU\_VAL\_LCS\_RMA****Type**

string

**Default value**

"OxFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFF"

**Description**

The default reset value of the 128-bit DCU signals when LCS=RMA and TP Mode=TCI.

**TCI\_DEFAULT\_DCU\_VAL\_LCS\_SECURE****Type**

string

**Default value**

"OxFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFF"

**Description**

The default reset value of the 128-bit DCU signals when LCS=SE and TP Mode=TCI.

**VIRGIN\_DCU\_PERMANENT\_DISABLE\_MASK\_VAL\_LCS\_CM**

**Type**

string

**Default value**

"OxFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFF"

**Description**

The permanent disable mask of the 128-bit DCU signals when LCS=CM and TP Mode=Virgin. Clearing a bit in the mask will force the relevant DCU signal to zero.

**VIRGIN\_DEFAULT\_DCU\_VAL\_LCS\_CM**

**Type**

string

**Default value**

"OxBFFFFFFFFFFFFFFFFFFFFFFFF55555555"

**Description**

The default reset value of the 128-bit DCU signals when LCS=CM and TP Mode=Virgin.

**diagnostics**

**Type**

int

**Default value**

0x2

**Description**

Diagnostics 0-4 (0:FATAL 1:ERROR 2:WARNING 3:INFO 4:DEBUG - DEFAULT==2).

**3.10.56 MHU320AE**

Message Handling Unit 320 AE. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1067: IP revisions support**

Revision	Quality level
MHU320AE	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

## Iris and MTI instances for MHU320AE

This model has the following Iris instances:

**Table 3-1068: MHU320AE Iris instances**

InstanceName	ComponentName
MHU320AE	MHU320AE
MHU320AE.MHU320AE_FMU	mhu320ae_fmu

This model has the following MTI trace components:

**Table 3-1069: MHU320AE MTI instances**

InstanceName	ComponentName
MHU320AE	MessageHandlingUnitV3

## Ports for MHU320AE

**Table 3-1070: Ports**

Name	Protocol	Type	Description
fmu_cri_out	Signal	Master	-
fmu_eri_out	Signal	Master	-
fmu_reset_in	Signal	Slave	-
pvbus_s_rec	PVBus	Slave	Register access for Receiver/Mailbox
pvbus_s_snd	PVBus	Slave	Register access for Sender/Postbox
rec_combined_irq_out	Signal	Master	All interrupts combined for Receiver/MBX
rec_fast_channel_group_irq_out[32]	Signal	Master	Receiver fast channel group interrupts
rec_fast_channel_irq_out[1024]	Signal	Master	Receiver fast channel interrupts
rec_reset_in	Signal	Slave	Reset signal for Receiver/Mailbox
recv_fmu_pvbus_s	PVBus	Slave	-
send_fmu_pvbus_s	PVBus	Slave	FUSA related FMU signals
snd_combined_irq_out	Signal	Master	All Interrupts combined for Sender/PBX
snd_reset_in	Signal	Slave	Reset signal for Sender/Postbox

## Parameters for MHU320AE

### NUM\_DB\_CH

#### Type

int

#### Default value

0x1

#### Description

Number of DoorBell Channels, default=1.

**NUM\_FAST\_CH****Type**

int

**Default value**

0x1

**Description**

Number of Fast Channels, default=1.

**NUM\_FIFO\_CH****Type**

int

**Default value**

0x1

**Description**

Number of FIFO Channels, default=1.

**auto\_op\_full****Type**

bool

**Default value**

0x0

**Description**

AutoOp mode - AutoOp(min) == false, AutoOp(full) == true - default: AutoOp(min).

**diagnostics****Type**

int

**Default value**

0x2

**Description**

Diagnostics 0-4 (0:FATAL 1:ERROR 2:WARNING 3:INFO 4:DEBUG), default=2.

**fast\_ch\_group\_int\_enable****Type**

bool

**Default value**

0x0

**Description**

Fast Channel group interrupts enable, default=false.

**fast\_ch\_n\_per\_group****Type**

int

**Default value**

0x1

**Description**

Fast Channel num channels per group, default=1.

**fast\_ch\_num\_groups****Type**

int

**Default value**

0x1

**Description**

Fast Channel num of groups, default=1.

**fast\_ch\_word\_size****Type**

int

**Default value**

0x20

**Description**

Fast Channel word size 32bit or 64bit, default=32.

**fifo\_depth****Type**

int

**Default value**

0x4

**Description**

Depth of the FIFO = fifo\_depth + 1.

**fmu\_location****Type**

int

**Default value**

0x2

**Description**

fmu\_location 0-2 (0:SENDER 1:RECEIVER 2:BOTH).

**m16ba\_spt****Type**

bool

**Default value**

0x0

**Description**

Mailbox 16 bit access support to FIFO registers.

**m32ba\_spt****Type**

bool

**Default value**

0x1

**Description**

Mailbox 32 bit access support to FIFO registers.

**m64ba\_spt****Type**

bool

**Default value**

0x0

**Description**

Mailbox 64 bit access support to FIFO registers.

**m8ba\_spt****Type**

bool

**Default value**

0x0

**Description**

Mailbox 8 bit access support to FIFO registers.

**monolithic****Type**

bool

**Default value**

0x1

**Description**

Monolithic or Distributed MHU - default: monolithic(true).

**p16ba\_spt****Type**

bool

**Default value**

0x0

**Description**

Postbox 16 bit access support to FIFO registers.

**p32ba\_spt****Type**

bool

**Default value**

0x1

**Description**

Postbox 32 bit access support to FIFO registers.

**p64ba\_spt****Type**

bool

**Default value**

0x0

**Description**

Postbox 64 bit access support to FIFO registers.

**p8ba\_spt****Type**

bool

**Default value**

0x0

**Description**

Postbox 8 bit access support to FIFO registers.

### 3.10.57 MMC

Generic Multimedia Card. This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1071: IP revisions support**

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

## About MMC

This component simulates an SD or SDHC card that is compatible with the [MultiMedia Card Association, MMCA](#) specification version 3.31. The parameters permit configuration of a number of attributes reflected in the CID and CSD registers. You can customize the component further by modifying the supplied MMC model source code directly.

When paired with a PL180\_MCI component, the MMC device model provides emulation of a flexible, persistent storage mechanism.

The MMC component uses a file on the host PC to simulate the storage device. The size of this backing store file determines the reported size of the MMC device. As small sections of this file are paged in by the model, large filesystems can be modeled while making efficient use of host PC memory. The backing store file can contain a partition table and filesystems such as FAT or EXT2.

The image file is a direct bit copy of the contents of an SD card. If the image file that the `p_mmc_file` parameter refers to does not exist, the component behaves as if the card is absent. If the image file is read-only, then the component behaves as if the card is read-only.

Operating system boots often attempt to write to the boot filesystem. They might not work properly if the boot filesystem is on a read-only card.

---

The MMC component does not model card insertion or removal. It models the card having already been inserted at system instantiation time.

You can configure the MMC component to behave as an SDHC card by setting the `card_type` parameter to SDHC. SDHC mode is a model-specific extension, and is not supported by PL180 hardware. It supports filesystems that are larger than 2 GB.

The component supports these commands:

- `MMC_GO_IDLE_STATE`
- `MMC_SEND_OP_COND`
- `MMC_ALL_SEND_CID`
- `MMC_SET_RELATIVE_ADDR`
- `MMC_SET_DSR`
- `MMC_SELDESL_CARD`
- `MMC_SEND_CSD`

- MMC\_SEND\_CID
- MMC\_STOP\_TRANSMISSION
- MMC\_SEND\_STATUS
- MMC\_GO\_INACTIVE\_STATE
- MMC\_READ\_SINGLE\_BLOCK
- MMC\_READ\_MULTIPLE\_BLOCK
- MMC\_SET\_BLOCK\_COUNT
- MMC\_WRITE\_BLOCK
- MMC\_WRITE\_MULTIPLE\_BLOCK
- MMC\_SEND\_EXT\_CSD. This command is supported in SDHC mode only

The block length is 512 bytes. SimGen reports attempts to change it as errors.

The component supports these erase commands (Class 5), but they have no effect on the disk backing storage:

- MMC\_ERASE\_GROUP\_START
- MMC\_ERASE\_GROUP\_END
- MMC\_ERASE

The component does not support these commands:

- MMC\_BUSTEST\_R
- MMC\_BUSTEST\_W

The component does not support stream read and write commands (Classes 1 and 3):

- MMC\_READ\_DAT\_UNTIL\_STOP
- MMC\_WRITE\_DAT\_UNTIL\_STOP
- MMC\_PROGRAM\_CID
- MMC\_PROGRAM\_CSD

The component does not support block oriented write protection commands (Class 6):

- MMC\_SET\_WRITE\_PROT
- MMC\_CLR\_WRITE\_PROT
- MMC\_SEND\_WRITE\_PROT

The component does not support lock card commands (Class 7) or application-specific commands (Class 8):

- MMC\_LOCK\_UNLOCK
- MMC\_APP\_CMD
- MMC\_GEN\_CMD

The component does not support I/O mode commands (Class 9):

- `MMC_FAST_IO`
- `MMC_GO_IRQ_STATE`

The component does not support reserved commands. Using a reserved command sets the `MMC_ST_ER_B_ILLEGAL_COMMAND` bit in the status register of the card. Read this with the `MMC_SEND_STATUS` command.

Use the `p_diagnostics` parameter to select the level of diagnostic output, to help to debug device driver and controller-to-card protocol issues. It supports the following levels:

#### Level 0

None

#### Level 1

Warnings about attempting to change read-only settings.

#### Level 2

Trace of command calls.

#### Level 3

Information about every step in the `MMC_Protocol` interaction.

#### Level 4

Hex dump of every block sent or received.

The registers are not memory mapped. Instead, you access them using relevant MMC commands. The MMC component model makes the registers available through a CADI interface. Modification of these registers through CADI is not recommended, but not prohibited. For example, modifying the card ID (CID) registers can be useful when experimenting with drivers, but direct modification of the `STATUS_REG` register is likely to put the card model into an indeterminate state.

For a full definition of MMC registers, see the MMCA System Summary documentation. Device-specific register information can also be obtained from MMC vendors.

**Table 3-1072: MMC registers**

Name	CADI register number	Description
<code>OCR_REG</code>	<code>0x000</code>	Operating conditions register
<code>CID_REG0</code>	<code>0x004</code>	Card ID bits 127:96
<code>CID_REG1</code>	<code>0x005</code>	Card ID bits 95:64
<code>CID_REG2</code>	<code>0x006</code>	Card ID bits 63:32
<code>CID_REG3</code>	<code>0x007</code>	Card ID bits 31:0
<code>CSD_REG0</code>	<code>0x008</code>	Card specific data bits 127:96
<code>CSD_REG1</code>	<code>0x009</code>	Card specific data bits 95:64
<code>CSD_REG2</code>	<code>0x00a</code>	Card specific data bits 63:32
<code>CSD_REG3</code>	<code>0x00b</code>	Card specific data bit 31:0
<code>RCA_REG</code>	<code>0x00c</code>	Relative card address register
<code>DSR_REG</code>	<code>0x00d</code>	Driver stage register

Name	CADI register number	Description
BLOCKLEN_REG	0x00e	Block length
STATUS_REG	0x00f	Card status
BLOCK_COUNT_REG	0x010	Block count

## Iris and MTI instances for MMC

This model has the following Iris instances:

**Table 3-1073: MMC Iris instances**

InstanceName	ComponentName
MMC	MMC
MMC.timer	ClockTimerThread
MMC.timer.timer	ClockTimerThread64
MMC.timer.timer.thread	SchedulerThread
MMC.timer.timer.thread_event	SchedulerThreadEvent

## Ports for MMC

**Table 3-1074: Ports**

Name	Protocol	Type	Description
card_present	StateSignal	Master	Used to signal whether an MMC image is loaded. It is set if an image is loaded, and is clear if no image is loaded.
clk_in	ClockSignal	Slave	Input clock signal used to drive our 'bus'.
mmc	MMC_Protocol	Slave	The MMC slave port.

## Parameters for MMC

### card\_type

#### Type

string

#### Default value

"SDHC"

#### Description

Card type ('SD' or 'SDHC').

### diagnostics

#### Type

int

#### Default value

0x0

#### Description

Diagnostics level.

**force\_sector\_addressing****Type**

bool

**Default value**

0x0

**Description**

Use sector addressing even on small cards.

**p\_OEMid****Type**

int

**Default value**

0x0

**Description**

Card ID OEM ID.

**p\_fast\_access****Type**

bool

**Default value**

0x1

**Description**

Don't simulate MMC block access delays.

**p\_manid****Type**

int

**Default value**

0x2

**Description**

Card ID Manufacturer ID.

**p\_max\_block\_count****Type**

int

**Default value**

0x80

**Description**

Default maximum block count reg. Default 0x80.

**p\_mmc\_file****Type**

string

**Default value**

"mmc.dat"

**Description**

MMCARD filename.

**p\_prodName****Type**

string

**Default value**

"ARMmmc"

**Description**

Card ID Product Name (6 chars).

**p\_prodRev****Type**

int

**Default value**

0x1

**Description**

Card ID Product Revision.

**p\_sernum****Type**

int

**Default value**

0xca4d0001

**Description**

Card Serial Number.

**support\_unpadded\_images****Type**

bool

**Default value**

0x0

**Description**

Support images that are not a multiple of 512k by padding them to the needed size (SDHC cards only).

3.10.58 MMU\_400

MMU-400 component. This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

Table 3-1075: IP revisions support

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**About MMU\_400**

This provides a basic MMU-400 that is configurable. It does not allow arbitrary configuration with respect to how StreamIDs and SSD\_Indexes are derived from the transaction attributes.

Set the `use_label_mapping` parameter to `true` if your upstream devices have labels in the top 16 bits of the transaction MasterID.

Note

The model does not have a concept of AXI-ID, but a transaction can have a MasterID set on it.

Label your upstream components 0...N so that the parameters of this component can map those integers to StreamID and SSD\_Index.

Set `use_label_mapping` to `false` if the StreamID is encoded in the top 16 bits of the MasterID and the bottom 16 bits encode either the SSD\_Index or the SSD state directly, depending on `use_ssd_determination_table`. Typically in hardware, a device emits different AXI-IDs, depending on what it is doing. In the model, MasterIDs are usually not diverse and a device might only emit one MasterID.

If `use_ssd_determination_table` is `true`, the bottom 16 bits of the MasterID encode the SSD\_Index. They must be  $< 2^{\text{ssd\_index\_width}}$ . If it is `false`, they encode the SSD state directly (zero is Secure and nonzero is Non-secure).

This component models all architectural registers that are specified in the Technical Reference Manual (TRM), except that it does not model any of the performance registers, and has the following limitations:

- MMU-400 does not have an SMMU\_STLBSTATUS register because the Secure side is a nominal pass-through. MMU-400 only has stage 2 support and you cannot use stage 2 on the Secure side.
- The SMMU\_NSACR is an alias of the Non-secure SMMU\_ACR. This component models SMMU\_ACR as **RAZ/WI**.
- The \*ACR registers have IMP DEF contents. This component models only the PAGESIZE bit of the SACR, as non-**RAZ/WI**. It models no other IMP DEF registers

### Iris and MTI instances for MMU\_400

This model has the following Iris instances:

**Table 3-1076: MMU\_400 Iris instances**

InstanceName	ComponentName
MMU_400	MMU_400
MMU_400.mmu	MMU_400_BASE
MMU_400.mmu.apb3_control_ns_slv	PVBusSlave
MMU_400.mmu.apb3_control_s_slv	PVBusSlave
MMU_400.mmu.apb4_control_slv	PVBusSlave
MMU_400.mmu.mapper	PVBusMapper
MMU_400.mmu.ptw_dvm_receiver	PVBusMapper
MMU_400.mmu.ptw_master	PVBusMaster
MMU_400.mmu.pvbus_master	PVBusMaster

This model has the following MTI trace components:

**Table 3-1077: MMU\_400 MTI instances**

InstanceName	ComponentName
MMU_400.mmu	MMU_400_BASE
MMU_400.mmu.apb3_control_ns_slv	PVBusSlave
MMU_400.mmu.apb3_control_s_slv	PVBusSlave
MMU_400.mmu.apb4_control_slv	PVBusSlave
MMU_400.mmu.mapper	PVBusMapper
MMU_400.mmu.ptw_dvm_receiver	PVBusMapper
MMU_400.mmu.ptw_master	PVBusMaster
MMU_400.mmu.pvbus_master	PVBusMaster

### Ports for MMU\_400

**Table 3-1078: Ports**

Name	Protocol	Type	Description
apb3_control_ns	PVBus	Slave	APBv3 control port for Non-secure access to the register file. If this port is used do not use the APBv4 port.

Name	Protocol	Type	Description
apb3_control_s	PVBus	Slave	APBv3 control port for Secure access to the register file. If this port is used do not use the APBv4 port.
apb4_control	PVBus	Slave	APBv4 control port for access to the register file. If this port is used do not use the APBv3 ports.
cfg_cttw_in	Signal	Slave	Enables coherent page table walks.
cfgflt_irpt_ns	Signal	Master	Non-secure configuration access fault interrupt. Corresponds to SMMU architectural signal SMMU_NScfglrpt.
cfgflt_irpt_s	Signal	Master	Secure configuration access fault interrupt. Corresponds to SMMU architectural signal SMMU_gCfglrpt.
comb_irpt_ns	Signal	Master	Non-secure combined interrupt.
comb_irpt_s	Signal	Master	Secure combined interrupt.
cxt_irpt_ns	Signal	Master	Non-secure context bank fault.
glblflt_irpt_ns	Signal	Master	Global Non-secure fault interrupt. Corresponds to SMMU architectural signal SMMU_NSGlrpt.
glblflt_irpt_s	Signal	Master	Global Secure fault interrupt. Corresponds to SMMU architectural signal SMMU_glrpt.
priv_internals	MMU_400_Internals	Slave	For internal use only, please do not use.
pvbus_m	PVBus	Master	Downstream port of the MMU, where translated transactions emerge.
pvbus_ptw_m	PVBus	Master	Downstream port for page table walks if configured using the ptw_has_separate_port parameter.
pvbus_s	PVBus	Slave	Upstream port of the MMU. Addresses on the port are in VA/IPA.
reset_in	Signal	Slave	Signal to reset the MMU.

## Parameters for MMU\_400

### **always\_secure\_ssd\_indices**

#### Type

string

#### Default value

""

#### Description

Non-programmable SSD Indexes that are always secure (e.g. 0, 6, 35-64).

### **cfg\_cttw**

#### Type

bool

#### Default value

0x1

#### Description

Perform coherent page table walks.

**dump\_unpredictability\_in\_user\_flags****Type**

bool

**Default value**

0x0

**Description**

Override the user flags to encode unpredictable information (validation only).

**label0\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label0: Read SDD or SSD\_Index.

**label0\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label0: Read Stream ID.

**label0\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label0: Write SDD or SSD\_Index.

**label0\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label0: Write Stream ID.

**label10\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label10: Read SDD or SSD\_Index.

**label10\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label10: Read Stream ID.

**label10\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label10: Write SDD or SSD\_Index.

**label10\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label10: Write Stream ID.

**label11\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label11: Read SDD or SSD\_Index.

**label11\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label11: Read Stream ID.

**label11\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label11: Write SDD or SSD\_Index.

**label11\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label11: Write Stream ID.

**label12\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label12: Read SDD or SSD\_Index.

**label12\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label12: Read Stream ID.

**label12\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label12: Write SDD or SSD\_Index.

**label12\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label12: Write Stream ID.

**label13\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label13: Read SDD or SSD\_Index.

**label13\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label13: Read Stream ID.

**label13\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label13: Write SDD or SSD\_Index.

**label13\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label13: Write Stream ID.

**label14\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label14: Read SDD or SSD\_Index.

**label14\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label14: Read Stream ID.

**label14\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label14: Write SDD or SSD\_Index.

**label14\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label14: Write Stream ID.

**label15\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label15: Read SDD or SSD\_Index.

**label15\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label15: Read Stream ID.

**label15\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label15: Write SDD or SSD\_Index.

**label15\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label15: Write Stream ID.

**label16\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label16: Read SDD or SSD\_Index.

**label16\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label16: Read Stream ID.

**label16\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label16: Write SDD or SSD\_Index.

**label16\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label16: Write Stream ID.

**label17\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label17: Read SDD or SSD\_Index.

**label17\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label17: Read Stream ID.

**label17\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label17: Write SDD or SSD\_Index.

**label17\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label17: Write Stream ID.

**label18\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label18: Read SDD or SSD\_Index.

**label18\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label18: Read Stream ID.

**label18\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label18: Write SDD or SSD\_Index.

**label18\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label18: Write Stream ID.

**label19\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label19: Read SDD or SSD\_Index.

**label19\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label19: Read Stream ID.

**label19\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label19: Write SDD or SSD\_Index.

**label19\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label19: Write Stream ID.

**label1\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label1: Read SDD or SSD\_Index.

**label1\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label1: Read Stream ID.

**label1\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label1: Write SDD or SSD\_Index.

**label1\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label1: Write Stream ID.

**label20\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label20: Read SDD or SSD\_Index.

**label20\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label20: Read Stream ID.

**label20\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label20: Write SDD or SSD\_Index.

**label20\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label20: Write Stream ID.

**label21\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label21: Read SDD or SSD\_Index.

**label21\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label21: Read Stream ID.

**label21\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label21: Write SDD or SSD\_Index.

**label21\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label21: Write Stream ID.

**label22\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label22: Read SDD or SSD\_Index.

**label22\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label22: Read Stream ID.

**label22\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label22: Write SDD or SSD\_Index.

**label22\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label22: Write Stream ID.

**label23\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label23: Read SDD or SSD\_Index.

**label23\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label23: Read Stream ID.

**label23\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label23: Write SDD or SSD\_Index.

**label23\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label23: Write Stream ID.

**label24\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label24: Read SDD or SSD\_Index.

**label24\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label24: Read Stream ID.

**label24\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label24: Write SDD or SSD\_Index.

**label24\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label24: Write Stream ID.

**label25\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label25: Read SDD or SSD\_Index.

**label25\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label25: Read Stream ID.

**label25\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label25: Write SDD or SSD\_Index.

**label25\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label25: Write Stream ID.

**label26\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label26: Read SDD or SSD\_Index.

**label26\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label26: Read Stream ID.

**label26\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label26: Write SDD or SSD\_Index.

**label26\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label26: Write Stream ID.

**label27\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label27: Read SDD or SSD\_Index.

**label27\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label27: Read Stream ID.

**label27\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label27: Write SDD or SSD\_Index.

**label27\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label27: Write Stream ID.

**label28\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label28: Read SDD or SSD\_Index.

**label28\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label28: Read Stream ID.

**label28\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label28: Write SDD or SSD\_Index.

**label28\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label28: Write Stream ID.

**label29\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label29: Read SDD or SSD\_Index.

**label29\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label29: Read Stream ID.

**label29\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label29: Write SDD or SSD\_Index.

**label29\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label29: Write Stream ID.

**label2\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label2: Read SDD or SSD\_Index.

**label12\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label2: Read Stream ID.

**label12\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label2: Write SDD or SSD\_Index.

**label12\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label2: Write Stream ID.

**label130\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label30: Read SDD or SSD\_Index.

**label130\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label30: Read Stream ID.

**label30\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label30: Write SDD or SSD\_Index.

**label30\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label30: Write Stream ID.

**label31\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label31: Read SDD or SSD\_Index.

**label31\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label31: Read Stream ID.

**label31\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label31: Write SDD or SSD\_Index.

**label31\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label31: Write Stream ID.

**label3\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label3: Read SDD or SSD\_Index.

**label3\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label3: Read Stream ID.

**label3\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label3: Write SDD or SSD\_Index.

**label3\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label3: Write Stream ID.

**label14\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label4: Read SDD or SSD\_Index.

**label14\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label4: Read Stream ID.

**label14\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label4: Write SDD or SSD\_Index.

**label14\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label4: Write Stream ID.

**label15\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label5: Read SDD or SSD\_Index.

**label5\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label5: Read Stream ID.

**label5\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label5: Write SDD or SSD\_Index.

**label5\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label5: Write Stream ID.

**label6\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label6: Read SDD or SSD\_Index.

**label6\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label6: Read Stream ID.

**label6\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label6: Write SDD or SSD\_Index.

**label6\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label6: Write Stream ID.

**label7\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label7: Read SDD or SSD\_Index.

**label7\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label7: Read Stream ID.

**label7\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label7: Write SDD or SSD\_Index.

**label17\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label7: Write Stream ID.

**label18\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label8: Read SDD or SSD\_Index.

**label18\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label8: Read Stream ID.

**label18\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label8: Write SDD or SSD\_Index.

**label18\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label8: Write Stream ID.

**label9\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label9: Read SDD or SSD\_Index.

**label9\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label9: Read Stream ID.

**label9\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label9: Write SDD or SSD\_Index.

**label9\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label9: Write Stream ID.

**mmu.seed****Type**

int

**Default value**

0x12345678

**Description**

Seed for SMMU.

**number\_of\_contexts****Type**

int

**Default value**

0x8

**Description**

Number of context banks.

**number\_of\_smrs****Type**

int

**Default value**

0x20

**Description**

Number of stream match registers.

**percent\_tlbstatus\_commits****Type**

int

**Default value**

0xa

**Description**

Percentage of times that a poll of TLBSTATUS will commit the TLBI commands.

**prefetch\_only\_requests****Type**

int

**Default value**

0x0

**Description**

Handle prefetch-only requests by:- 0 -- deny them 1 -- use debug table walks and TLB entries 2 -- treat them as normal transactions (dangerous).

**programmable\_non\_secure\_by\_default\_ssd\_indices****Type**

string

**Default value**

""

**Description**

Programmable SSD Indexes that are by default non-secure (e.g. 0, 6, 35-84).

**`programmable_secure_by_default_ssd_indices`****Type**

string

**Default value**

""

**Description**

Programmable SSD Indexes that are by default secure (e.g. 0, 6, 35-84).

**`ptw_has_separate_port`****Type**

bool

**Default value**

0x1

**Description**

Page Table Walks use pvbus\_ptw\_m.

**`pvbus_m_is_ace_lite`****Type**

bool

**Default value**

0x1

**Description**

Is pvbus\_m (the downstream port that translated transaction exit) ACE-Lite.

**`pvbus_ptw_m_is_ace_lite`****Type**

bool

**Default value**

0x1

**Description**

Is pvbus\_ptw\_m (the downstream port that is used for walks if ptw\_has\_separate\_port is true) ACE-Lite.

**`stream_id_width`****Type**

int

**Default value**

0x6

**Description**

StreamID bit width.

**tlb\_depth**

**Type**

int

**Default value**

0x40

**Description**

TLB Depth (0 means 10000). The model will perform best with more TLB entries.

**use\_label\_mapping**

**Type**

bool

**Default value**

0x1

**Description**

Use label mapping.

**use\_ssd\_determination\_table**

**Type**

bool

**Default value**

0x1

**Description**

Use SSD Determination Table.

**3.10.59 MMU\_400\_BASE**

MMU-400 base component. This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1079: IP revisions support**

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

## Iris and MTI instances for MMU\_400\_BASE

This model has the following Iris instances:

**Table 3-1080: MMU\_400\_BASE Iris instances**

InstanceName	ComponentName
MMU_400_BASE	MMU_400_BASE
MMU_400_BASE.apb3_control_ns_slv	PVBusSlave
MMU_400_BASE.apb3_control_s_slv	PVBusSlave
MMU_400_BASE.apb4_control_slv	PVBusSlave
MMU_400_BASE.mapper	PVBusMapper
MMU_400_BASE.ptw_dvm_receiver	PVBusMapper
MMU_400_BASE.ptw_master	PVBusMaster
MMU_400_BASE.pvbus_master	PVBusMaster

This model has the following MTI trace components:

**Table 3-1081: MMU\_400\_BASE MTI instances**

InstanceName	ComponentName
MMU_400_BASE	MMU_400_BASE
MMU_400_BASE.apb3_control_ns_slv	PVBusSlave
MMU_400_BASE.apb3_control_s_slv	PVBusSlave
MMU_400_BASE.apb4_control_slv	PVBusSlave
MMU_400_BASE.mapper	PVBusMapper
MMU_400_BASE.ptw_dvm_receiver	PVBusMapper
MMU_400_BASE.ptw_master	PVBusMaster
MMU_400_BASE.pvbus_master	PVBusMaster

## Ports for MMU\_400\_BASE

**Table 3-1082: Ports**

Name	Protocol	Type	Description
apb3_control_ns	PVBus	Slave	If the device has been configured with APB3 control ports then this is used to address the register file with non-secure accesses. If this is the case then the apb4_control port should not be used.
apb3_control_s	PVBus	Slave	If the device has been configured with APB3 control ports then this is used to address the register file with secure accesses. If this is the case then the apb4_control port should not be used.
apb4_control	PVBus	Slave	If the device has been configured with APB4 control ports then this port is used -- it carries the security world with the transaction itself. If this is the case then the apb3_control_s and apb3_control_ns should not be used.

Name	Protocol	Type	Description
cfg_cttw_in	Signal	Slave	The SoC supports coherent page walks, this is meant to be sampled at reset. However, in practice the model has to prevent the race condition between cfg_cttw being asserted at the same 'cycle' as negedge reset. Thus we actually only sample the signal on the first transaction to the SMMU or the first transition on this signal after reset. Thus in the model, we require that cfg_cttw be held for at least this period of time.
cfgflt_irpt_ns	Signal	Master	Non-secure Configuration Access Fault Interrupt In the SMMU Architecture this is called SMMU_NSgCflrpt.
cfgflt_irpt_s	Signal	Master	Secure Configuration Access Fault Interrupt In the SMMU Architecture this is called SMMU_gCflrpt.
comb_irpt_ns	Signal	Master	"Non-secure combined interrupt" (cfgflt_irpt_ns   glblflt_irpt_ns   cxt_irpt_ns)?
comb_irpt_s	Signal	Master	"Secure combined interrupt"
cxt_irpt_ns	Signal	Master	Non-secure context bank fault NOTE that there is only one context bank fault, despite there being potentially 8 contexts. As we are HW stage 2 only then we can't have any banks configured as secure (well if we do then we generate a global fault).
glblflt_irpt_ns	Signal	Master	Global non-secure Fault Interrupt In the SMMU Architecture this is called SMMU_NSglrpt.
glblflt_irpt_s	Signal	Master	Global secure Fault Interrupt In the SMMU Architecture this is called SMMU_glrpt.
identify	MMU_400_BASE_IDENTIFY	Master	This port is a special model port that is used to take a transaction and map it to an SSD/SSD_Index and StreamID.
priv_internals	MMU_400_Internals	Slave	For internal use only, please do not use.
pvbus_m	PVBus	Master	This downstream port is where the translated accesses from pvbus_s emerge. If page walks are configured to come out of this port, then they will come out with the with the same attributes as described for pvbus_ptw_m.
pvbus_ptw_m	PVBus	Master	This downstream port is where page table walk accesses come from. This is only used if configured to use a separate page table walk port. The MMU-400 will only obey DVM messages if configured to use this port. The page walks come out of this port with the following master_id and user_flags. master_id : 0xFFFFFFFF The user flags : user_flags[7:0] stage 1 context_id (or 0xFF if stage2 only) user_flags[15:8] stage 2 context_id (or 0xFF if stage 1 with stage 2 bypass) user_flags[18:16] stage 1 level user_flags[21:19] stage 2 level user_flags[23:22] stage 1 descriptor encoding (0=v7s, 1=v7l, 2=v8l, 3=none) user_flags[25:24] stage 2 descriptor encoding (0=v7s, 1=v7l, 2=v8l, 3=none) user_flags[31:30] adomain of the transaction NOTE that if the walk is being done for a stage 1 page walk descriptor fetch then the stage 1 level field will indicate that level. If the walk is being done for a stage 2 descriptor fetch, then the stage 2 level field will show that level. If the context-id for a stage is not valid (0xFF) then the 'level' information is 0x7.
pvbus_s	PVBus	Slave	This port is the upstream port of the device, addresses on the port are in the VA/IPA
reset_in	Signal	Slave	The reset pin.

## Parameters for MMU\_400\_BASE

### **always\_secure\_ssd\_indices**

**Type**

string

**Default value**

""

**Description**

Non-programmable SSD Indexes that are always secure (e.g. 0, 6, 35-64).

### **cfg\_cttw**

**Type**

bool

**Default value**

0x1

**Description**

Perform coherent page table walks.

### **dump\_unpredictability\_in\_user\_flags**

**Type**

bool

**Default value**

0x0

**Description**

Override the user flags to encode unpredictable information (validation only).

### **number\_of\_contexts**

**Type**

int

**Default value**

0x8

**Description**

Number of context banks.

### **number\_of\_smrs**

**Type**

int

**Default value**

0x10

**Description**

Number of stream match registers.

**percent\_tlbstatus\_commits****Type**

int

**Default value**

0xa

**Description**

Percentage of times that a poll of TLBSTATUS will commit the TLBI commands.

**prefetch\_only\_requests****Type**

int

**Default value**

0x0

**Description**

Handle prefetch-only requests by:- 0 -- deny them 1 -- use debug table walks and TLB entries 2 -- treat them as normal transactions (dangerous).

**programmable\_non\_secure\_by\_default\_ssd\_indices****Type**

string

**Default value**

""

**Description**

Programmable SSD Indexes that are by default non-secure (e.g. 0, 6, 35-84).

**programmable\_secure\_by\_default\_ssd\_indices****Type**

string

**Default value**

""

**Description**

Programmable SSD Indexes that are by default secure (e.g. 0, 6, 35-84).

**ptw\_has\_separate\_port****Type**

bool

**Default value**

0x1

**Description**

Page Table Walks use pvbus\_ptw\_m.

**pvbus\_m\_is\_ace\_lite****Type**

bool

**Default value**

0x1

**Description**

Is pvbus\_m (the downstream port that translated transaction exit) ACE-Lite.

**pvbus\_ptw\_m\_is\_ace\_lite****Type**

bool

**Default value**

0x1

**Description**

Is pvbus\_ptw\_m (the downstream port that is used for walks if ptw\_has\_separate\_port is true) ACE-Lite.

**seed****Type**

int

**Default value**

0x12345678

**Description**

Seed for SMMU.

**stream\_id\_width****Type**

int

**Default value**

0x6

**Description**

StreamID bit width.

**tlb\_depth**  
**Type**  
int  
**Default value**  
0x40  
**Description**  
TLB Depth (0 means 10000). The model will perform best with more TLB entries.

**use\_ssd\_determination\_table**  
**Type**  
bool  
**Default value**  
0x1  
**Description**  
Use SSD Determination Table.

### 3.10.60 MMU\_500

MMU-500 component. This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

Table 3-1083: IP revisions support

Revision	Quality level
r2p4	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### About MMU\_500

This is a model of a basic MMU-500. Set the version using the `version` parameter.

You cannot arbitrarily configure how you derive StreamIDs and SSD\_Indexes from the transaction attributes.

This component has two label modes which you select using the parameter `use_label_mapping`:

- Set `use_label_mapping` to `true` if your upstream devices have labels in the top 16 bits of the transaction MasterID.

The model does not have a concept of AXI-ID, but a transaction can have a MasterID set on it.

Label your upstream components 0...N so that the parameters of this component can map those integers to StreamID and SSD\_Index.

- Set `use_label_mapping` to `false` if the StreamID is encoded in the top 16 bits of the MasterID and the bottom 16 bits encode either the SSD\_Index or the SSD state directly, depending on `use_ssd_determination_table`:
  - If `use_ssd_determination_table` is `true`, the bottom 16 bits of the MasterID encode the SSD\_Index. They must be  $< 2^{\text{ssd\_index\_width}}$ .
  - If `use_ssd_determination_table` is `false`, the bottom 16 bits of the MasterID encode the SSD state directly, where zero is Secure and nonzero is Non-secure.

Typically in hardware, a device emits different AXI-IDs, depending on what it is doing. In the model, MasterIDs are usually not diverse and a device might only emit one MasterID.

This component models the registers as follows:

- It models all architectural registers that the Technical Reference Manual (TRM) specifies, except that it does not model any of the performance registers.
- Unlike the MMU-400, MMU-500 does have an SMMU\_STLBGSTATUS register because it has stage 1 and stage 2 support.
- The SMMU\_NSACR is an alias of the Non-secure SMMU\_ACR. This component models SMMU\_ACR as **RAZ/WI**.
- The \*ACR registers have IMP DEF contents. This component models only the PAGESIZE bit of the SACR, as non-**RAZ/WI**. It models no other IMP DEF registers.

## Iris and MTI instances for MMU\_500

This model has the following Iris instances:

## Ports for MMU\_500

Table 3-1086: Ports

Name	Protocol	Type	Description
cfg_cttw_in	Signal	Slave	Enables coherent page table walks.
comb_irpt_ns	Signal	Master	Non-secure combined interrupt.
comb_irpt_s	Signal	Master	Secure combined interrupt.
cxt_irpt[128]	Signal	Master	Context interrupt.
glbl_flt_irpt_ns	Signal	Master	Global Non-secure fault interrupt.
glbl_flt_irpt_s	Signal	Master	Global Secure fault interrupt.
priv_internals	MMU_500_Internals	Slave	For internal use only, please do not use.
pvbus_control_s	PVBus	Slave	Provides memory-mapped read write access to the control registers of the module.
pvbus_m[32]	PVBus	Master	For all memory accesses. One for each Translation Buffer Unit (TBU).
pvbus_ptw_m	PVBus	Master	If ptw_has_separate_port is true, use for page table walks.
pvbus_s[32]	PVBus	Slave	For transactions from PVBus master/decoder. One for each TBU.
reset_in	Signal	Slave	Reset signal.

## Parameters for MMU\_500

**always\_secure\_ssd\_indices**

## Type

string

## Default value

""

## Description

Non-programmable SSD Indexes that are always secure (e.g. 0, 6, 35-64).

**cfg\_cttw**

## Type

bool

## Default value

0x1

## Description

Perform coherent page table walks.

**dump\_unpredictability\_in\_user\_flags**

## Type

bool

## Default value

0x0

**Description**

Override the user flags to encode unpredictable information (validation only).

**label0\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label0: Read SDD or SSD\_Index.

**label0\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label0: Read Stream ID.

**label0\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label0: Write SDD or SSD\_Index.

**label0\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label0: Write Stream ID.

**label10\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label10: Read SDD or SSD\_Index.

**label10\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label10: Read Stream ID.

**label10\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label10: Write SDD or SSD\_Index.

**label10\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label10: Write Stream ID.

**label11\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label11: Read SDD or SSD\_Index.

**label11\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label11: Read Stream ID.

**label11\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label11: Write SDD or SSD\_Index.

**label11\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label11: Write Stream ID.

**label12\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label12: Read SDD or SSD\_Index.

**label12\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label12: Read Stream ID.

**label12\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label12: Write SDD or SSD\_Index.

**label12\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label12: Write Stream ID.

**label13\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label13: Read SDD or SSD\_Index.

**label13\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label13: Read Stream ID.

**label13\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label13: Write SDD or SSD\_Index.

**label13\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label13: Write Stream ID.

**label14\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label14: Read SDD or SSD\_Index.

**label14\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label14: Read Stream ID.

**label14\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label14: Write SDD or SSD\_Index.

**label14\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label14: Write Stream ID.

**label15\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label15: Read SDD or SSD\_Index.

**label15\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label15: Read Stream ID.

**label15\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label15: Write SDD or SSD\_Index.

**label15\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label15: Write Stream ID.

**label16\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label16: Read SDD or SSD\_Index.

**label16\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label16: Read Stream ID.

**label16\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label16: Write SDD or SSD\_Index.

**label16\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label16: Write Stream ID.

**label17\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label17: Read SDD or SSD\_Index.

**label17\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label17: Read Stream ID.

**label17\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label17: Write SDD or SSD\_Index.

**label17\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label17: Write Stream ID.

**label18\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label18: Read SDD or SSD\_Index.

**label18\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label18: Read Stream ID.

**label18\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label18: Write SDD or SSD\_Index.

**label18\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label18: Write Stream ID.

**label19\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label19: Read SDD or SSD\_Index.

**label19\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label19: Read Stream ID.

**label19\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label19: Write SDD or SSD\_Index.

**label19\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label19: Write Stream ID.

**label1\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label1: Read SDD or SSD\_Index.

**label11\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label1: Read Stream ID.

**label11\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label1: Write SDD or SSD\_Index.

**label11\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label1: Write Stream ID.

**label120\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label20: Read SDD or SSD\_Index.

**label120\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label20: Read Stream ID.

**label20\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label20: Write SDD or SSD\_Index.

**label20\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label20: Write Stream ID.

**label21\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label21: Read SDD or SSD\_Index.

**label21\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label21: Read Stream ID.

**label21\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label21: Write SDD or SSD\_Index.

**label21\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label21: Write Stream ID.

**label22\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label22: Read SDD or SSD\_Index.

**label22\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label22: Read Stream ID.

**label22\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label22: Write SDD or SSD\_Index.

**label22\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label22: Write Stream ID.

**label123\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label23: Read SDD or SSD\_Index.

**label123\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label23: Read Stream ID.

**label123\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label23: Write SDD or SSD\_Index.

**label123\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label23: Write Stream ID.

**label124\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label24: Read SDD or SSD\_Index.

**label124\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label24: Read Stream ID.

**label124\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label24: Write SDD or SSD\_Index.

**label124\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label24: Write Stream ID.

**label125\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label25: Read SDD or SSD\_Index.

**label125\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label25: Read Stream ID.

**label25\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label25: Write SDD or SSD\_Index.

**label25\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label25: Write Stream ID.

**label26\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label26: Read SDD or SSD\_Index.

**label26\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label26: Read Stream ID.

**label26\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label26: Write SDD or SSD\_Index.

**label26\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label26: Write Stream ID.

**label27\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label27: Read SDD or SSD\_Index.

**label27\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label27: Read Stream ID.

**label27\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label27: Write SDD or SSD\_Index.

**label27\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label27: Write Stream ID.

**label28\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label28: Read SDD or SSD\_Index.

**label28\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label28: Read Stream ID.

**label28\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label28: Write SDD or SSD\_Index.

**label28\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label28: Write Stream ID.

**label29\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label29: Read SDD or SSD\_Index.

**label129\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label29: Read Stream ID.

**label129\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label29: Write SDD or SSD\_Index.

**label129\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label29: Write Stream ID.

**label12\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label2: Read SDD or SSD\_Index.

**label12\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label2: Read Stream ID.

**label12\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label2: Write SDD or SSD\_Index.

**label12\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label2: Write Stream ID.

**label130\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label30: Read SDD or SSD\_Index.

**label130\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label30: Read Stream ID.

**label130\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label30: Write SDD or SSD\_Index.

**label30\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label30: Write Stream ID.

**label31\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label31: Read SDD or SSD\_Index.

**label31\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label31: Read Stream ID.

**label31\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label31: Write SDD or SSD\_Index.

**label31\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label31: Write Stream ID.

**label13\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label3: Read SDD or SSD\_Index.

**label13\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label3: Read Stream ID.

**label13\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label3: Write SDD or SSD\_Index.

**label13\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label3: Write Stream ID.

**label14\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label4: Read SDD or SSD\_Index.

**label14\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label4: Read Stream ID.

**label14\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label4: Write SDD or SSD\_Index.

**label14\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label4: Write Stream ID.

**label15\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label5: Read SDD or SSD\_Index.

**label15\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label5: Read Stream ID.

**label5\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label5: Write SDD or SSD\_Index.

**label5\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label5: Write Stream ID.

**label6\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label6: Read SDD or SSD\_Index.

**label6\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label6: Read Stream ID.

**label6\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label6: Write SDD or SSD\_Index.

**label6\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label6: Write Stream ID.

**label7\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label7: Read SDD or SSD\_Index.

**label7\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label7: Read Stream ID.

**label7\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label7: Write SDD or SSD\_Index.

**label7\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label7: Write Stream ID.

**label18\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label8: Read SDD or SSD\_Index.

**label18\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label8: Read Stream ID.

**label18\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label8: Write SDD or SSD\_Index.

**label18\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label8: Write Stream ID.

**label19\_read\_ssd****Type**

int

**Default value**

0x0

**Description**

Label9: Read SDD or SSD\_Index.

**label9\_read\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label9: Read Stream ID.

**label9\_write\_ssd****Type**

int

**Default value**

0x0

**Description**

Label9: Write SDD or SSD\_Index.

**label9\_write\_stream\_id****Type**

int

**Default value**

0x0

**Description**

Label9: Write Stream ID.

**mmu.PRIVATE\_PARAMETER\_personality****Type**

string

**Default value**

""

**Description**

The personality to use (affects ID codes and various imp def features).

**mmu.PRIVATE\_PARAMETER\_seed****Type**

int

**Default value**

0x12345678

**Description**

Seed for randomised SMMU implementation defined behaviour.

**`mmu.PRIVATE_PARAMETER_validation_mode`****Type**

int

**Default value**

0x0

**Description**

Internal validation mode.

**`number_of_contexts`****Type**

int

**Default value**

0x8

**Description**

Number of context banks.

**`number_of_smrs`****Type**

int

**Default value**

0x20

**Description**

Number of stream match registers.

**`percent_tlbstatus_commits`****Type**

int

**Default value**

0xa

**Description**

Percentage of times that a poll of TLBSTATUS will commit the TLBI commands.

**`prefetch_only_requests`****Type**

int

**Default value**

0x0

**Description**

Handle prefetch-only requests by:- 0 -- deny them 1 -- use debug table walks and TLB entries 2 -- treat them as normal transactions (dangerous).

**programmable\_non\_secure\_by\_default\_ssd\_indices****Type**

string

**Default value**

""

**Description**

Programmable SSD Indexes that are by default non-secure (e.g. 0, 6, 35-84).

**programmable\_secure\_by\_default\_ssd\_indices****Type**

string

**Default value**

""

**Description**

Programmable SSD Indexes that are by default secure (e.g. 0, 6, 35-84).

**ptw\_has\_separate\_port****Type**

bool

**Default value**

0x1

**Description**

Page Table Walks use pvbus\_ptw\_m.

**supports\_nested\_translations****Type**

bool

**Default value**

0x1

**Description**

Supports nested translations (stage 1 + stage 2).

**tlb\_depth****Type**

int

**Default value**  
0x800

**Description**  
TLB Depth (0 means 10000). The model will perform best with more TLB entries.

**use\_label\_mapping**

**Type**  
bool

**Default value**  
0x1

**Description**  
Use label mapping.

**use\_ssd\_determination\_table**

**Type**  
bool

**Default value**  
0x1

**Description**  
Use SSD Determination Table.

**version**

**Type**  
string

**Default value**  
"EAC"

**Description**  
Version of the RTL that the model represents. Valid values are LACr1 and EAC.

3.10.61 MMU\_500\_BASE

MMU-500 base component. This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

Table 3-1087: IP revisions support

Revision	Quality level
r2p4	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

## Iris and MTI instances for MMU\_500\_BASE

This model has the following Iris instances:

**Table 3-1088: MMU\_500\_BASE Iris instances**

## Ports for MMU\_500\_BASE

**Table 3-1090: Ports**

Name	Protocol	Type	Description
cfg_cttw_in	Signal	Slave	The SoC supports coherent page walks, this is meant to be sampled at reset. However, in practice the model has to prevent the race condition between cfg_cttw being asserted at the same 'cycle' as negedge reset. Thus we actually only sample the signal on the first transaction to the SMMU or the first transition on this signal after reset. Thus in the model, we require that cfg_cttw be held for at least this period of time.
comb_irpt_ns	Signal	Master	"Non-secure combined interrupt"
comb_irpt_s	Signal	Master	"Secure combined interrupt"
cxt_irpt[128]	Signal	Master	Non-secure context bank fault.
glblflt_irpt_ns	Signal	Master	Global non-secure Fault Interrupt In the SMMU Architecture this is called SMMU_NSglrpt.
glblflt_irpt_s	Signal	Master	Global secure Fault Interrupt In the SMMU Architecture this is called SMMU_glrpt.
identify	MMU_500_BASE_IDENTIFY	Master	This port is a special model port that is used to take a transaction and map it to an SSD/SSD_Index and StreamID.
priv_internals	MMU_500_Internals	Slave	For internal use only, please do not use.
pvbus_control_s	PVBus	Slave	The register port of the device is AXI.
pvbus_m[32]	PVBus	Master	This downstream port is where the translated accesses from pvbus_s emerge. See notes for pvbus_s[] as well. If the Page Table Walk (PTW) does not have a separate port then PTW accesses will emerge at port 0 with the same attributes as described in pvbus_ptw_m.

Name	Protocol	Type	Description
pvbus_ptw_m	PVBus	Master	This downstream port is where page table walk accesses come from. This is only used if configured to use a separate page table walk port. The MMU-500 will only obey DVM messages if configured to use this port. The page walks come out of this port with the following master_id and user_flags. master_id : 0xFFFFFFFF The user flags : user_flags[7:0] stage 1 context_id (or 0xFF if stage2 only) user_flags[15:8] stage 2 context_id (or 0xFF if stage 1 with stage 2 bypass) user_flags[18:16] stage 1 level user_flags[21:19] stage 2 level user_flags[31,30] adomain of the transaction NOTE that if the walk is being done for a stage 1 page walk descriptor fetch then the stage 1 level field will indicate that level. If the walk is being done for a stage 2 descriptor fetch, then the stage 2 level field will show that level. If the context-id for a stage is not valid (0xFF) then the 'level' information is 0x7.
pvbus_s[32]	PVBus	Slave	This port is the upstream port of the device, addresses on the port are in the VA/IPA Each TBU in the design is represented by a pair of pvbus_s[tbu_id] and pvbus_m[tbu_id]. That is transactions that go into pvbus_s[tbu_id] will emerge at pvbus_m[tbu_id]. The port index that a transaction comes in on is the tbu_number_ parameter to the MMU_500_BASE_IDENTIFY::identify() function. The identify() function must use all the information it is given by the parameters to map to the architectural concepts of StreamID and SSD_Index/SSD. How it does this is IMPLEMENTATION DEFINED and depends on the topology of the SoC and the masters upstream of the TBUs.
reset_in	Signal	Slave	The reset pin.

## Parameters for MMU\_500\_BASE

### PRIVATE\_PARAMETER\_personality

#### Type

string

#### Default value

""

#### Description

The personality to use (affects ID codes and various imp def features).

### PRIVATE\_PARAMETER\_seed

#### Type

int

#### Default value

0x12345678

#### Description

Seed for randomised SMMU implementation defined behaviour.

### PRIVATE\_PARAMETER\_validation\_mode

#### Type

int

**Default value**

0x0

**Description**

Internal validation mode.

**`always_secure_ssd_indices`****Type**

string

**Default value**

""

**Description**

Non-programmable SSD Indexes that are always secure (e.g. 0, 6, 35-64).

**`cfg_cttw`****Type**

bool

**Default value**

0x1

**Description**

Perform coherent page table walks.

**`dump_unpredictability_in_user_flags`****Type**

bool

**Default value**

0x0

**Description**

Override the user flags to encode unpredictable information (validation only).

**`number_of_contexts`****Type**

int

**Default value**

0x8

**Description**

Number of context banks.

**`number_of_smrs`****Type**

int

**Default value**

0x10

**Description**

Number of stream match registers.

**percent\_tlbstatus\_commits****Type**

int

**Default value**

0xa

**Description**

Percentage of times that a poll of TLBSTATUS will commit the TLBI commands.

**prefetch\_only\_requests****Type**

int

**Default value**

0x0

**Description**

Handle prefetch-only requests by:- 0 -- deny them 1 -- use debug table walks and TLB entries 2 -- treat them as normal transactions (dangerous).

**programmable\_non\_secure\_by\_default\_ssd\_indices****Type**

string

**Default value**

""

**Description**

Programmable SSD Indexes that are by default non-secure (e.g. 0, 6, 35-84).

**programmable\_secure\_by\_default\_ssd\_indices****Type**

string

**Default value**

""

**Description**

Programmable SSD Indexes that are by default secure (e.g. 0, 6, 35-84).

**ptw\_has\_separate\_port****Type**

bool

**Default value**

0x1

**Description**

Page Table Walks use pvbus\_ptw\_m (or uses pvbus\_m[0]).

**supports\_nested\_translations****Type**

bool

**Default value**

0x1

**Description**

Supports nested translations (stage 1 + stage 2).

**tlb\_depth****Type**

int

**Default value**

0x800

**Description**

TLB Depth (0 means 10000). The model will perform best with more TLB entries.

**use\_ssd\_determination\_table****Type**

bool

**Default value**

0x1

**Description**

Use SSD Determination Table.

**version****Type**

string

**Default value**

"EAC"

**Description**

Version of the RTL that the model represents. Valid values are LACr1 and EAC.

### 3.10.62 MMU\_600

This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1091: IP revisions support**

Revision	Quality level
r0p0	Full support
r0p1	Full support
r0p2	Full support
r1p0	Full support
r2p0	Full support
r2p1	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### Limitations

- No power control
- AMBA stash operations, destructive read and destructive hint operations are not supported on PVBus and also are not supported by the device.
- The PMU has limited functionality. Only a subset of the architecturally mandatory events are supported, as indicated by the `SMMU_PMC_G_CEIFD0` fields. The PMU is intended for demonstration purposes only and for driver development.

Note

Between 11.17 and 11.18, the point of triggering for events changed for 'TLB miss' and this might lead to an (architecturally valid) change in the values captured in some circumstances.

- Limited RAS support
- The SYSCO interface is not implemented
- The low power interface is not implemented
- `TCU_CFG.XLATE_SLOTS` is fixed at 512
- `TCU_STATUS.GNT_XLATE_SLOTS` always reads at 512

#### Notes

- A bad configuration renders the model inactive.
- Some configurations can be adjusted by configuration pins. These are only sampled at the negative edge of the reset pin. If you want to use these pins then you must drive them before sending a negative edge on the reset pin. During simulation reset the component driving them must also drive this transition again.

- Debug reads to the registers do not disturb the state.
- Writes to registers with Update flags, including debug writes, are ignored if the Update flag is already set to one.
- Debug and real accesses to the registers must be 32 bits or 64 bits.
- The model deals with groups of transactions with the same attributes and a similar range of addresses. The mapping used is remembered by the bus infrastructure and is used for subsequent sufficiently similar transactions without requiring intervention from the SMMU model, and is not traced, for instance.

The range of addresses that the mapping is valid for is determined by the SMMU model, depending on architectural and model-implementation details. However, as it is unaware of any sign-extension or the mapping that the SoC does, the SoC is responsible for subsequently narrowing the range of addresses for which this mapping is valid. Typically, this is done automatically when using PVBUSMapper.

- The hardware is a distributed SMMU and is divided into:
  - A single Translation Control Unit (TCU)
    - Has a port for the programming interface of the SMMU
    - Receives DVM messages
    - Does all the page walking, queue manipulation, etc.
  - One or more Translation Bus Units (TBUs)
    - Translate transactions from upstream (client) device into downstream transactions.
  - Zero or more connections to PCIe Root Complexes (PCIe-RCs)
  - There can be a total of 62 TBUs and PCIe-RCs attached.
  - An interconnect connecting the TBUs, PCIe-RCs to the TCU.
- A PCIe-RC has one connection to the TCU to make ATS requests but the PCIe-RC uses one or more TBUs to transform the transactions and pass them to the memory system. In the model, those TBUs are configured by the parameter `list_of_pcie_mode`. The SMMU does not know which TBUs a particular PCIe-RC is attached to.
- The TBU ORs a value into each StreamID that it receives. In the model, this is configured by the parameters:
  - `list_of_s_sid_high_at_bitpos0`
  - `list_of_ns_sid_high_at_bitpos0`
- The TCU, TBU, and the interconnect are all represented by this single model component.
- In the model, a pair of ports `tbs_pvbuss_s[i]/tbm_pvbuss_m[i]` represent a TBU 'i' or the `tbs_pvbuss_s[i]` represents an incoming connection for a PCIe-RC. The corresponding reverse connection from the TCU to the PCIe-RC is by a special bus called `pvbus_id_routed_m` that is used to transport ATC Invalidates to the PCIe-RC.
  - In order to reduce system construction complexity the `tbs_pvbuss_s[i]/tbm_pvbuss_m[i]` also acts as a TBU so that the PCIe-RC need not separate its normal transactions and its ATS requests.

- However, ATC Invalidates are only sent to a port which appears in `list_of_pcie_rc`. It should be uniquely decoded to a single port based on `list_of_ns_sid_high_at_bitpos0` and those ATC Invalidates must be routed to the correct PCIe subsystem in order to invalidate the cache of ATS Response in the subsystem. Thus all TBUs that a PCIe-RC uses must have a unique reverse mapping from stream id to port.
- The pin `sup_oas` is not supported, instead it is a parameter as it is assumed that it would be tied to a fixed value in any specific platform.
- The hardware only has a single cacheability attribute for input transactions, but PVBUS transports both inner and outer cacheability.
- For non-PCIe-mode TBUs (i.e. their index does not appear in `list_of_pcie_mode` or `list_of_pcie_rc`):
  - For non-cache maintenance operations:
    - If the input attribute is any type of device then it is well defined as being outer-shared and Device-nGnRnE or Device-nGnRE. There is no support for Gathering or Reordering.
    - If the outer cacheable input attribute is normal then if it is Write-back then this is converted to Inner Write-back Outer Write-back (iWB-oWB) with the desired shareability. No Transient hint is supported and is always treated as non-transient.
    - This leaves all other normal memory types that are mapped to Inner Normal Non-cacheable, Outer Normal Non-cacheable outer shared (iNC-oNC-osh).
- Thus the upstream devices must present the cacheability in the *outer* cacheability attribute on PVBUS if it is cacheable. If it is a device type then both the inner and outer attributes must be set to the same. If it is iNC-oNC-osh then it must be presented as such.
- For PCIe-mode TBUs (i.e. their index appears in `list_of_pcie_mode` or `list_of_pcie_rc`):
  - Input transactions are from PCIe and the only indication of the memory type is in the NoSnoop bit of the transaction. No shareability is transported.
    - NoSnoop interpreted as iNC-oNC-osh
    - ! NoSnoop interpreted as iWB-oWB-ish (note inner shareable)
  - If a NoSnoop transaction has an attribute transform applied to it and the result of the transform is weaker than iNC-oNC-osh then it is forced to iNC-oNC-osh. For example, if a NoSnoop transaction uses a page table and is transformed to iWB-oWB-nsh then it is forced to iNC-oNC-osh. However, if the page tables transformed it to a device type then, as all device types are stronger than iNC-oNC-osh then it exits the SMMU as the device type.
  - In the model, transactions are classified by their incoming memory attributes as to whether they are NoSnoop or not and then normalized appropriately:
    - iWB-oWB-any-shareability transactions are interpreted as ! NoSnoop and therefore are normalized to iWB-oWB-ish.
    - Anything else is considered NoSnoop and therefore is normalized to iNC-oNC-osh.
  - Translated accesses also suffer the same interpretation to determine NoSnoop and how they are normalized. Thus they could enter the system with attributes different to if they were Untranslated Accesses translated by normal means.

- It is expected that there is a component downstream of the SMMU that is aware of the system address map and will override the memory type to 'device' for any transaction that accesses a peripheral.
- The hardware has a single cacheability on input and, for transactions that are neither cache-maintenance operations nor PCIe transactions, normalizes the input to an architectural form before performing the SMMUv3 architectural transform:
  - Any device type is left untouched (the input can only represent Device-nGnRE and Device-nGnRnE).
  - If the input is Write-back (WB) then it is normalized to iWB-oWB with the incoming shareability.
  - If the input is anything else it is normalized to iNC-oNC-osh.
- The model accepts full architectural attributes of two levels of cacheability and so has to decide how to interpret this in terms of the hardware. For transactions that are not cache maintenance operations, the model replicates the outer attribute into the inner attribute and then performs the normalization that the hardware does.
- The hardware normalizes the architectural output attributes and outputs a single level of cacheability and a user flag (OC) specifying if the architectural attributes were cacheable in the outer cacheable domain. If the transaction is classified as a PCIe one then the NoSnoop transform described above is applied. If the original transaction was NoSnoop, then any weaker memory type is strengthened to iNC-oNC-osh so apply the following transform:

```

if      iWB-oWB-nsh/ish/osh      then output WB-nsh/ish/osh, OC = 1
else if i (NC/WT/WB) -o (WB/WT)  then output NC-Sys,      OC = 1
else if i (NC/WT/WB) -oNC        then output NC-Sys,      OC = 0
else if Device-(GRE/nGRE/nGnRE) then output DV-Sys,      OC = 0
else                               output SO-Sys,      OC = 0

```

- The model only normalizes according to PCIe but otherwise leaves the architectural attributes intact on the output bus.
- MSIs are issued on the `qtw_pvbus_m` port using attributes determined by the parameter `msi_attribute_transform`, whilst Event Queue writes are always issued with `ExtendedID=0`, `UserFlags=0`, `MasterID=0xFFFFFFf`.

In the hardware, there is no way of distinguishing Event Queue writes from MSI writes, however, this provides a mechanism that if the model system needs to distinguish then it can.

## Parameters for parsing transaction attributes

Some of the parameters are strings that share a common parsing format for extracting from and placing information into the transaction's attributes.

They can extract and place information into the following fields of a transaction's attributes:

- `ManagerID64` (64 bits)
- `MasterID` (32 bits) (This is the lower 32 bits of `ManagerID64`)
- `ExtendedID` (64 bits)
- `UserFlags` (32 bits)

The string parameter is parsed as a comma-separated list of:

```
lhs_expression=rhs_expression
```

The `lhs_expression` and `rhs_expression` can be an entire symbol, for example:

```
StreamID
```

or a bit, or bit slice:

```
StreamID[16]  
StreamID[31:20]
```

In `rhs_expression`, numeric constants (or slices of numeric constants) are also allowed:

```
StreamID[16]=1  
StreamID[16]=10[2]
```

A single symbol might be assigned from multiple non-contiguous arrays of bits from a mix of different RHS symbols:

```
StreamID[16]=1, StreamID[31:30]=ExtendedID[1:0],  
StreamID[15:0]=UserFlags[31:16], ...
```

In those cases where a left hand symbol can also appear on the right hand side, it is possible to swap bits and transform the symbol. For example, the following expression swaps bits 0 and 1 of the `ExtendedID`:

```
ExtendedID[0]=ExtendedID[1], ExtendedID[1]=ExtendedID[0]
```

Any bits of the attributes that have no transform specified are retained from the input.

The `lhs_expression` and `rhs_expression` must have the same bit width.

## Iris and MTI instances for MMU\_600

This model has the following Iris instances:

**Table 3-1092: MMU\_600 Iris instances**

InstanceName	ComponentName

## Ports for MMU\_600

**Table 3-1094: Ports**

Name	Protocol	Type	Description
clk_in	ClockSignal	Slave	Clock signal (in RTL aclk) This is a clock time-base used by the TCU to spread some of its processing over time, if enabled by the wait_* parameters. The clock must always be connected.
cmd_sync_irpt_ns	Signal	Master	Pulsed interrupt output signal for non-secure CMD_SYNC having a completion signal of SIG_IRQ.
cmd_sync_irpt_s	Signal	Master	Pulsed interrupt output signal for secure CMD_SYNC having a completion signal of SIG_IRQ.
event_q_irpt_ns	Signal	Master	Pulsed interrupt output signal for the non-secure event queue becoming non-empty.
event_q_irpt_s	Signal	Master	Pulsed interrupt output signal for the secure event queue becoming non-empty.
evento	Signal	Master	Event signal

Name	Protocol	Type	Description
global_irpt_ns	Signal	Master	Pulsed interrupt output signal for non-secure SMMU_GERROR(N) signalling an error.
global_irpt_s	Signal	Master	Pulsed interrupt output signal for secure SMMU_S_GERROR(N) signalling an error.
identify	SMMUv3AEMIdentifyProtocol	Master	Map the transaction to the tuple (StreamID, SubStreamID, SubStreamIDValid, SSD) The StreamID that is produced by the implementation of this protocol is not the final StreamID. The final StreamID is produced by using the list_of_ns_sid_high_at_bitpos0/list_of_s_sid_high_at_bitpos0 parameter to map the StreamID based on the upstream port index. Also see the parameter howto_identify which can replace the functionality of this port under certain circumstances.
pri_q_irpt_ns	Signal	Master	Pulsed interrupt output signal for the PRI queue becoming non-empty. Exists only for r1 and higher.
prog_pvbus_s	PVBus	Slave	Register subordinate port (in RTL PROG)
pvbus_id_routed_m[62]	PVBus	Master	This is a special "id-routed" port for transmitting ATC invalidates upstream into the PCIe EndPoints, it is not a normal bus. See the parameter output_id_routed_transform. The FastModels ATC Invalidate and PRI Response protocol specifies how to route and deal with this port.
qtw_pvbus_m	PVBus	Master	Manager port used for Table Walks, MSIs and Queue access. Note that although this is a manager port, it can still receive DVM messages.
sec_override	Signal	Slave	Allow certain registers to be accessible to non-secure accesses from reset, as described in the TCU_SCR register. This port is sampled at negedge of tcu_reset_in and must be set before the negedge of the reset signal.
sup_btm	Signal	Slave	System supports BTM and will be reflected in the IDR registers. This signal can override the value set by the parameters configuring the IDR registers. If BTM (Broadcast Table Maintenance) is not supported then DVM messages will be ignored. This port is sampled at negedge of tcu_reset_in and must be set before the negedge of the reset signal.
sup_cohacc	Signal	Slave	System supports COHACC and will be reflected in the IDR registers. This port is sampled at negedge of tcu_reset_in and must be set before the negedge of the reset signal.
sup_sev	Signal	Slave	System supports SEV and will be reflected in the IDR registers. This signal can override the value set by the parameters configuring the IDR registers. This port is sampled at negedge of tcu_reset_in and must be set before the negedge of the reset signal.
tbm_pvbus_m[62]	PVBus	Master	The TBU manager ports that carry transactions that have been translated from the correspondingly numbered tbs_pvbus_s[] port.
tbs_pvbus_s[62]	PVBus	Slave	The TBU subordinate ports that receive transactions to be translated. They will exit the SMMU through the same numbered pvbus_m[] port.
tbu_pmu_irpt[62]	Signal	Master	TBU Performance Monitoring Unit interrupt, one per TBU.
tbu_pmusnapshot_ack[62]	Signal	Master	PMU snapshot interface for the TBU, ack a snapshot.

Name	Protocol	Type	Description
tbu_pmusnapshot_req[62]	Signal	Slave	PMU snapshot interface for the TBU, request a snapshot.
tbu_ras_irpt[62]	Signal	Master	The RAS interrupt pin for errors detected in the TBUs.
tbu_reset_in[62]	Signal	Slave	Reset signals The TBUs can have independent reset signals. However, TCU reset will result in the reset of all TBUs. This behavior is unlike SMMU RTL implementations which do allow for independent reset of the TCU separate from TBUs. Each signal tbu_reset_in[n] corresponds to the TBU using tbs_pvbus_s[n]/tbs_pvbus_s[n] pair. If the SMMU receives a transaction whilst the TBU is expected to be in reset then it will complain using the ArchMsg.Warning.warning trace source. Those tbu_reset_in that correspond to a PCIe-RC connection can be connected to monitor the PCIe-RC's reset signal. If it receives an ATS request when in reset then it will complain in a similar way. You must connect these pins if you wish the TCU_NODE_STATUS for the nodes to be accurate (including any connected to the PCIe-RC).
tcu_pmu_irpt	Signal	Master	TCU Performance Monitoring Unit interrupt
tcu_pmusnapshot_ack	Signal	Master	PMU snapshot interface for the TCU, ack a snapshot.
tcu_pmusnapshot_req	Signal	Slave	PMU snapshot interface This is a four-phase handshake to have the corresponding PMCG perform a capture of the current counter values. PMU snapshot interface for the TCU, request a snapshot.
tcu_ras_irpt	Signal	Master	The RAS interrupt pin for errors detected in the TCU.
tcu_reset_in	Signal	Slave	The reset signal to the TCU interface.

## Parameters for MMU\_600

### TCUCFG\_XLATE\_SLOTS

#### Type

uint32\_t

#### Default value

512

Maximum number of outstanding stalled transactions that the SMMU supports.

Note

TCUCFG\_XLATE\_SLOTS must be  $\geq$  TCUCFG\_PTW\_SLOTS which is currently fixed to 512.

Accepted Values: 512

### all\_error\_messages\_through\_trace

#### Type

bool

**Default value**

false

Some conditions in the SMMU are so strange that the software programming the SMMU has done something wrong. At this point messages are output to either `ArchMsg.Error.*` or `ArchMsg.Warning.*` or to the error stream of the simulator. Outputting to the error stream of the simulator may cause it to return with a non-zero exit status.

If you set this option to true then instead of using the error stream of the simulator it will always use a trace stream allowing the simulation to exit with a zero exit status.

**behaviour\_of\_sampled\_at\_reset\_signals****Type**

unsigned

**Default value**

0

Some configuration signals into the SMMU are sampled on negedge of reset.

However, it can sometimes be hard to arrange to drive a configuration pin before the negedge of reset.

The configuration pins are sampled:

**0**

at negedge reset.

**1**

at negedge reset, but if a later change occurs at the same simulated time, and no transactions have occurred, then they will be resampled and the SMMU reset again.

**cmdq\_max\_number\_of\_commands\_to\_buffer****Type**

uint32\_t

**Default value**

10

The command queues can buffer fetched commands before issuing them. This parameter is roughly the maximum number of commands to do this for. The programmer visible effects are that just because the CONS pointer shows a command has been consumed does not necessarily mean that it has been issued (and completed). Higher values accentuate this effect.

**enable\_device\_id\_checks****Type**

bool

**Default value**

true

If this parameter is true then the DeviceIDs seen by the GIC are:

- **for client devices**

```
DeviceID = StreamID + translated_device_id_base
```

- **for SMMU-generated MSIs**

```
smmu_msi_device_id
```

This parameter enables two checks:

- If the DeviceID is used in the `output_attribute_transform` parameter, if it overflows 32 bits then the model warns. If the DeviceID is not used, it is assumed that the external agent that forms the DeviceID warns if it overflows.
- If the SMMU supports MSIs, the model checks that the GIC is able to distinguish an MSI generated by the SMMU from one generated by a client device.

As the exact mechanism to determine the DeviceID is in the system and not necessarily under control of the SMMU then you can disable these warnings using this parameter.

See also the parameters: `output_attribute_transform` and `msi_attribute_transform`.

**howto\_identify****Type**

string

**Default value**

"use-identify"

If `use-identify` then the SMMU uses the `identify` port to determine the `ssid`, `streamid`, `substreamid`. Otherwise, this string extracts them from the transaction's attributes.

Examples:

```
SEC_SID=ExtendedID[63], SSV=ExtendedID[62], SubstreamID=ExtendedID[51:32],  
StreamID=ExtendedID[31:0]
```

or

```
nSEC_SID=ExtendedID[63], StreamID=ExtendedID[55:24], nSSV=ExtendedID[20],  
SubstreamID=ExtendedID[19:0]  
StreamID[31:24]=0, StreamID[23:0]=ExtendedID[23:0], SSV=1[0], ...
```

Note

If you are not using the `use-identify` option then the configuration string is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

LHS Symbols:

**SIDV**

Indicates that the StreamID is valid.

**SSV**

Indicates that the SubstreamID is valid.

**SEC\_SID / SEC\_SID\_bit\_1**

Bits 0 and 1 respectively of the StreamID Security State

**StreamID**

(32 b) valid if `SIDV` is 1 or both `SIDV` and `NSIDV` are unused.

**SubstreamID**

(20 b) is valid if `SSV` is true.

**nSEC\_SID / nSEC\_SID\_bit\_1 / nSSV / nSIDV**

Negative logic of above parameters. Different attributes are independent and can use negative or positive logic.

RHS Symbols:

**ExtendedID / ManagerID64 / MasterID / UserFlags**

Incoming PVBUS transaction attributes

`SEC_SID` is 1b in the model. For RME systems, in hardware, then `SEC_SID` is 2b, in the model `SEC_SID_bit_1` represents bit[1].

`SIDV == 0` indicates a NoStreamID transaction and the SSD is the PAS of the transaction, `SEC_SID` is not used.

Negative and positive logic symbols for the same attribute is an error.

The model uses the term SSD (Security State Determination) to mean which security state the transaction, register, structure, event, etc. belongs to.

In the SMMUV3 Architecture, the side-band signal `SEC_SID` holds the information for the transactions, but uses a different encoding.

Before RME, `SEC_SID` was a one bit signal. With RME, in the hardware, it was expanded to 2b. To retain backwards compatibility in the model, `SEC_SID` remains as 1b in this parameter, but the second bit can be expressed with `SEC_SID_bit_1` (and its negative logic version `nSEC_SID_bit_1`)

Security state	SSD	SEC_SID_bit_1	SEC_SID
secure	0	0	1
non-secure	1	0	0
root (reserved)	2	1	1
realm	3	1	0

For those systems that support NoStreamID transactions, and `howto_identify` is not using the port, first the SMMU determines the value of `sidv` or `nsidv` to see if the transaction is a NoStreamID transaction (`sidv == 0` or `nsidv == 1`). If so then the rest of the `howto_identify` string is ignored as the information extracted relates only to StreamID transactions. Instead more information is extracted using the parameter `howto_identify_NoStreamID_extra_info`.

In AMBA systems, the equivalent signal to `sidv` is called either `ARMMUVALID` or `AWMMUVALID`. Collectively they are known as `AxMMUVALID`.

### **`list_of_ns_sid_high_at_bitpos0`**

#### **Type**

string

#### **Default value**

`()`

A comma-separated list of values to bitwise OR into each Non-secure StreamID for each TBU/Node. Bit 0 of the value corresponds to bit 0 of the StreamID.

Each TBU that is connected to a PCIe-RC (see `list_of_pcie_rc`) must serve a unique contiguous subset of StreamIDs as determined by their top bits. This is used in order to know which port to route ATC Invalidates and PRI Responses to the PCIe subsystems.

The empty string corresponds to all 0s.

### **`list_of_pcie_mode`**

#### **Type**

string

#### **Default value**

`()`

A comma-separated list of ranges of ports that represent TBUs that are attached to PCIe Root Complexes (PCIe-RC). A single PCIe-RC might use several TBUs and stripe accesses across them. The attribute handling for these TBUs is slightly different in that if the PCIe transaction is NoSnoop and the output attributes of the translation would be weaker than `inc-osh` then the output is forced to `inc-osh`.

`inc-osh == "inner normal non-cacheable, out normal non-cacheable, outer shared"`

### **`list_of_pcie_rc`**

#### **Type**

string

#### **Default value**

`()`

This is a list of ports that are connected to PCIe Root Complex (PCIe-RC) by a protocol called DTI-ATS. This port is used to transport ATS and PRI Requests to the SMMU from the PCIe-RC.

In the real hardware, the PCIe-RC uses this port for ATS/PRI, and the actual transactions go through separate TBUs. In the model, this port can accept actual transactions as well. However, in the model, then the ATC Invalidates and the PRI Responses need to be transferred over the corresponding `pvbus_id_routed_m` port as DTI-ATS is bidirectional, but PVBUS is not.

### **`list_of_s_sid_high_at_bitpos0`**

#### **Type**

string

#### **Default value**

""

A comma-separated list of values to bitwise OR into each Secure StreamID for each TBU/Node. Bit 0 of the value corresponds to bit 0 of the StreamID.

The empty string corresponds to all 0s.

`use_ns` can be used to apply the `list_of_ns_sid_high_at_bitpos0` values instead.

### **`msi_attribute_transform`**

#### **Type**

string

#### **Default value**

"ExtendedID[31:0]=smmu\_msi\_device\_id, ManagerID64[31:0]=0xFFFFffff"

Transform downstream attributes of MSI transactions.

**Note**

The parameter is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

- "" or "none" – no transform
- How to alter output attributes of SMMU-generated MSIs. Example:

```
"UserFlags[15:0]=smmu_msi_device_id[31:16],
ManagerID64[15:0]=smmu_msi_device_id[15:0],
ExtendedID=0"
```

LHS Symbols:

**ExtendedID / ManagerID64 / MasterID / UserFlags**

Outgoing PVBUS transaction attributes

RHS Symbols:

**smmu\_msi\_device\_id**

The value stored in the parameter with the same name

**interrupt\_kind**

The selected bit corresponds to the interrupts listed below

**0/1**

EVENTQ s/ns

**2**

PRIQ

**3/4**

CMD\_SYNC s/ns

**5/6**

GERROR s/ns

**7/8**

PMCG s/ns

**9/10/11**

RAS FHI/ERI/CRI

**12/13**

gpf\_far/gpt\_cfg\_far

**14/15/16/17**

Realm EVENTQ/PRIQ/CMDQ/GERROR

**HWATTR\_KIND\_0**

PBHA information

**Numeric Literals**

Any number. Ex: 0x1234

ExtendedID/ManagerID64/MasterID/UserFlags start with values {0, 0xFFFFffff, 0xFFFFffff, 0} respectively.

Any bits with no transform are unchanged.

This transform can be used to determine the DeviceID passed to the GIC to distinguish MSIs generated by the SMMU from those generated by client devices.

**Note**

See also `output_attribute_transform` and `enable_device_id_checks`.

---

After 11.25 the `interrupt_kind` field was extended to 5 bits. This is strictly a non-backwards compatible change. However, the original 3 bits were insufficient to express all the interrupt kinds that exist.

## **number\_of\_ports**

### **Type**

unsigned

### **Default value**

1

The number of port pairs that the SMMU has.

## **output\_attribute\_transform**

### **Type**

string

### **Default value**

"ExtendedID[31:0]=DeviceID"

Transform the downstream attributes of a translated transaction.

The parameter is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

- "" or "none": no transform
- How to alter output attributes. Example:

```
"ExtendedID[15:0]=DeviceID[15:0], UserFlags[31]=nSSV,
UserFlags[19:0]=SubstreamID,
ManagerID64[10]=ManagerID64[11], ManagerID64[11]=ManagerID64[10]"
```

RHS/LHS Symbols:

**ExtendedID / ManagerID64 / MasterID / UserFlags**

Incoming/Outgoing PVBUS transaction attributes

RHS Symbols:

**DeviceID**

StreamID + translated\_device\_id\_base

**StreamID / SubstreamID / SEC\_SID / SSV**

Architectural information. See parameter `howto_identify` for more information.

**nSEC\_SID / nSSV**

Negative logic of above parameters. Different attributes are independent and can use negative or positive logic.

**st1PBHA / st2PBHA**

Page Based Hardware Attributes from leaf descriptors (zero if unused).

**STE\_IMPDEF1**

STE[127:116]

**Numeric Literals**

Any number. Ex: 0x1234

The streamID has had ns\_sid\_high/s\_sid\_high ORred into it for the appropriate TBU.

**output\_id\_routed\_transform****Type**

string

**Default value**

"Address[27:12]=StreamID[15:0], PAS=SSD"

Note

The parameter is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

The SMMU generates the following ID-routed transaction on the pvbus\_id\_routed\_m bus:

- ATC Invalidate
- PRI Response

This parameter controls how the SMMU should express:

- the StreamID
- the Trusted (T) bit

The value is a comma-separated list of assignments:

```
Address[27:12]=StreamID[15:0], ExtendedID[60]=T, ExtendedID[15:0]=StreamID[31:16]
```

Address bits[11:0] cannot be used.

The LHS can be one of:

- PAS
- MasterID / ManagerID64 / ExtendedID / UserFlags
- Address

The RHS can be one of:

- a numeric constant
- `SSD`
- `T` or negative version `nT`
- `StreamID`

For realm (or 'Trusted') transactions, then `ssd=0b11`, `T=1`, `nT=0`. For non-secure (or 'Non-Trusted') transactions, then `ssd=0b01`, `T=0`, `nT=1`.

## **prefetch\_only\_requests**

### **Type**

unsigned

### **Default value**

0

The simulator supports 'prefetch-only' DMI requests, which can occur at any time and for any reason and are intended to be invisible to the end execution of the model and to the user.

**0**

deny all prefetch-only requests

**1**

- use debug requests for any page table walks
  - form and use debug TLB/cache entries
  - any faults will not record, but deny the prefetch request

**2**

- treat prefetch-only requests like normal transactions
  - use normal page table walk transactions
  - use and form normal TLB/cache entries
  - faults will alter the programmer-visible state of the SMMU

0 is the safest.

1 treats the access like a debug request and requires that debug page table walks are treated correctly downstream. Any descriptors that need HTTU to allow the transaction to proceed will fail the request.

2 is dangerous, it uses real transactions and reports faults that are unphysical. Real transactions can be `wait()`ed and this disobeys the SystemC spec for `get_direct_mem_ptr()`.

## **sec\_override**

### **Type**

bool

**Default value**

false

The IMP DEF port `sec_override` controls whether some of the registers are accessible to secure or non-secure transactions. This parameter is the default value assumed for that port if the port is not driven by a signal.

**seed****Type**

uint32\_t

**Default value**

0x12345678

Used to seed the pseudo-random number generator that the SMMU model uses.

**size\_of\_cd\_cache****Type**

uint32\_t

**Default value**

0

The number of entries in the cache holding CD structures. If this is zero it is treated as a large number ('infinite') but it is bounded so that the host memory usage of the cache is also bounded.

**size\_of\_l1cd\_cache****Type**

uint32\_t

**Default value**

0

The number of entries in the cache holding L1CD descriptors. If this is zero it is treated as a large number ('infinite') but it is bounded so that the host memory usage of the cache is also bounded.

**size\_of\_l1ste\_cache****Type**

uint32\_t

**Default value**

0

The number of entries in the cache holding L1STE descriptors. If this is zero it is treated as a large number ('infinite') but it is bounded so that the host memory usage of the cache is also bounded.

**size\_of\_ste\_cache****Type**

uint32\_t

**Default value**

0

The number of entries in the cache holding STE structures. If this is zero it is treated as a large number ('infinite') but it is bounded so that the host memory usage of the cache is also bounded.

**size\_of\_tlb****Type**

uint32\_t

**Default value**

0

The number of entries in the TLB. If this is zero it is treated as a large number ('infinite') but it is bounded so that the host memory usage of the cache is also bounded.

**smmu\_msi\_device\_id****Type**

uint32\_t

**Default value**

0

When appropriately enabled, assume that MSIs that are generated by the SMMU are presented to the GIC with this DeviceID.

See parameters `msi_attribute_transform` and `enable_device_id_checks`.

**sup\_btm****Type**

bool

**Default value**

true

The default value of the register field `SMMU_IDR0.BTM` and `SMMU_ROOT_IDR0.BGPTM` (when supported). This enables Broadcast TLB maintenance.

**sup\_cohacc****Type**

bool

**Default value**

true

The default value of the register `SMMU_IDR0.COHAAC`

### **sup\_oas**

#### **Type**

unsigned

#### **Default value**

5

The hardware has an input port `sup_oas[2:0]` that indicates what output address size (OAS) the system has. This is sampled at reset.

The model does not have this port as it is expected to be a constant for the system and not to change. Instead it is just a parameter.

The allowed values are:

**0**

32 bits

**1**

36 bits

**2**

40 bits

**3**

42 bits

**4**

44 bits

**5**

48 bits

### **sup\_sev**

#### **Type**

bool

#### **Default value**

true

The default value of the register `SMMU_IDR0.SEV`

### **tlb\_when\_do\_f\_tlb\_conflict\_on\_overlap**

#### **Type**

unsigned

#### **Default value**

0

If a TLB entry is created by a walk and it overlaps an existing entry, there are some architectural situations where the result is known. For all others, then an implementation is allowed to use an **UNPREDICTABLE** combination of the two entries, or it can generate `F_TLB_CONFLICT`:

- 0**  
never generate
- 1**  
sometimes generate
- 2**  
always generate

Conflicts between global and non-global entries are not detected by the model.

### **translated\_device\_id\_base**

#### **Type**

uint32\_t

#### **Default value**

0

When appropriately enabled, assume that client device accesses are translated to a DeviceID as seen by the GIC of:

```
StreamID + translated_device_id_base
```

See parameter `output_attribute_transform` and `enable_device_id_checks`.

### **tw\_qs\_attribute\_transform**

#### **Type**

string

#### **Default value**

""

Transform downstream attributes of table walk and queue transactions.

The parameter is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

- "" or "none" – no transform
- How to alter the output attributes. Example:

```
"ExtendedID[35:32]=HWATTR_KIND_0"
```

RHS/LHS Symbols:

**ExtendedID / ManagerID64 / MasterID / UserFlags**

Incoming/Outgoing PVBUS transaction attributes

RHS Symbols:

**HWATTR\_KIND\_0**

PBHA information

**kind**

Transaction kind

- For a read:

**0/1**

L1STE/STE

**2/3**

L1CD/CD

**4/5**

S1/S2 TTD (including CAS)

**6**

CMDQ

**7**

VMS

**11/12**

LOGPT/L1GPT

**13/14**

LODPT/L1DPT

- For a write:

**0**

EVENTQ

**1**

PRIQ

ExtendedID/ManagerID64/MasterID/UserFlags start with values {0, 0xFFFFffff, 0xFFFFffff, 0} respectively.

Any bits with no transform are unchanged.

**Note**

See also `output_attribute_transform` and `msi_attribute_transform`.

---

**version****Type**

string

**Default value**

"r0p0"

The version of this product

**wait\_cmdq\_ticks****Type**

uint64\_t

**Default value**

0

This is the time to wait before doing something on the command queue. If bit 32 is set (0x1\_0000\_0000) then the time waited for is a uniform randomly distributed time  $[0, \max(2, (t \& 0xFFFFffffff)) - 1]$ .

**wait\_eventq\_ticks****Type**

uint64\_t

**Default value**

0

This is the time to wait before doing something on the event queue. If bit 32 is set (0x1\_0000\_0000) then the time waited for is a uniform randomly distributed time  $[0, \max(2, (t \& 0xFFFFffffff)) - 1]$ .

**wait\_imp\_def\_work\_ticks****Type**

uint64\_t

**Default value**

0

This is the time to wait before doing an IMP DEF operation. If bit 32 is set (0x1\_0000\_0000) then the time waited for is a uniform randomly distributed time  $[0, \max(2, (t \& 0xFFFFffffff)) - 1]$ .

The IMP DEF work in this case is the number of ticks between raising pmusnapshot\_req and pmusnapshot\_ack being raised, and the converse operation.

**wait\_misc\_async\_actions\_ticks****Type**

uint64\_t

**Default value**

0

This is the time to wait before doing an async action that could be delayed is performed. If bit 32 is set (0x1\_0000\_0000) then the time waited for is a uniform randomly distributed time  $[0, \max(2, (t \ \& \ 0xFFFFffff)) - 1]$ .

**wait\_msi\_ticks****Type**

uint64\_t

**Default value**

0

This is the time to wait before sending an MSI. If bit 32 is set (0x1\_0000\_0000) then the time waited for is a uniform randomly distributed time  $[0, \max(2, (t \ \& \ 0xFFFFffff)) - 1]$ .

**wait\_pri\_req\_ticks****Type**

uint64\_t

**Default value**

0

This is the time to wait before processing a PRI Request. If bit 32 is set (0x1\_0000\_0000) then the time waited for is a uniform randomly distributed time  $[0, \max(2, (t \ \& \ 0xFFFFffff)) - 1]$ .

**wait\_pri\_resp\_ticks****Type**

uint64\_t

**Default value**

1

This is the time to wait before sending a PRI Response back to the PCIe subsystem. When a PRI Response is an auto-response then the ATC might immediately make a new ATS request, that immediately fails, immediately makes a PRI Request, or auto-responds, etc. To break this loop, then we introduce a minimum time on all PRI Responses to give other components in the system a chance to run. If bit 32 is set (0x1\_0000\_0000) then the time waited for is a uniform randomly distributed time  $[0, \max(2, (t \ \& \ 0xFFFFffff)) - 1]$ .

### 3.10.63 MMU\_700

This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1096: IP revisions support**

Revision	Quality level
r0p0	Full support
r1p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

## Limitations

- No power control
- AMBA stash operations, destructive read and destructive hint operations are not supported on PVBUS and also are not supported by the device.
- The PMU has limited functionality. Only a subset of the architecturally mandatory events are supported, as indicated by the `SMMU_PMCB_CEBID0` fields. The PMU is intended for demonstration purposes only and for driver development.

Between 11.17 and 11.18, the point of triggering for events changed for 'TLB miss' and this might lead to an (architecturally valid) change in the values captured in some circumstances.

- Limited RAS support
- The SYSCO interface is not implemented
- The low power interface is not implemented
- The IMP DEF MPAM register file is not implemented. This controls how the internal resources of the MMU-700 are partitioned.
- `tcu_sid[31:0]` is not modelled, instead the parameter `smmu_msi_device_id` is used.
- The HWATTR side-band signal is available by configuring `output_attribute_transform`, `msi_attribute_transform` and `tw_qs_attribute_transform` with `HWATTR_KIND_0`. For some transactions HWATTR comes from the `SMMU_S_AGBPA[3:0]`. In the hardware, this register has an 'Update' bit[31] that should be written as 1 and will be turned to zero when all transactions using the old value have completed. The model does not implement this behavior and the Update bit is **RAZ/WI**.
- Any configuration parameter listed in the TRM but not shown in this file is not supported.
- `TCU_STATUS.GNT_XLATE_SLOTS` always reads at 512

## Notes

- A bad configuration renders the model inactive.
- Some configurations can be adjusted by configuration pins. These are only sampled at the negative edge of the reset pin. If you want to use these pins then you must drive them before sending a negative edge on the reset pin. During simulation reset the component driving them must also drive this transition again.
- Debug reads to the registers do not disturb the state.

- Writes to registers with Update flags, including debug writes, are ignored if the Update flag is already set to one.
- Debug and real accesses to the registers must be 32 bits or 64 bits.
- The model deals with groups of transactions with the same attributes and a similar range of addresses. The mapping used is remembered by the bus infrastructure and is used for subsequent sufficiently similar transactions without requiring intervention from the SMMU model, and is not traced, for instance.

The range of addresses that the mapping is valid for is determined by the SMMU model, depending on architectural and model-implementation details. However, as it is unaware of any sign-extension or the mapping that the SoC does, the SoC is responsible for subsequently narrowing the range of addresses for which this mapping is valid. Typically, this is done automatically when using PVBUSMapper.

- The hardware is a distributed SMMU and is divided into:
  - A single Translation Control Unit (TCU)
    - Has a port for the programming interface of the SMMU
    - Receives DVM messages
    - Does all the page walking, queue manipulation, etc.
  - One or more Translation Bus Units (TBUs)
    - Translate transactions from upstream (client) device into downstream transactions.
  - Zero or more connections to PCIe Root Complexes (PCIe-RCs)
  - There can be a total of 62 TBUs and PCIe-RCs attached.
  - An interconnect connecting the TBUs, PCIe-RCs to the TCU.
- A PCIe-RC has one connection to the TCU to make ATS requests but the PCIe-RC uses one or more TBUs to transform the transactions and pass them to the memory system. In the model, those TBUs are configured by the parameter `list_of_pcie_mode`. The SMMU does not know which TBUs a particular PCIe-RC is attached to.
- The TBU ORs a value into each StreamID that it receives. In the model, this is configured by the parameters:
  - `list_of_s_sid_high_at_bitpos0`
  - `list_of_ns_sid_high_at_bitpos0`
- The TCU, TBU, and the interconnect are all represented by this single model component.
- In the model, a pair of ports `tbs_pvbus_s[i]/tbm_pvbus_m[i]` represent a TBU 'i' or the `tbs_pvbus_s[i]` represents an incoming connection for a PCIe-RC. The corresponding reverse connection from the TCU to the PCIe-RC is by a special bus called `pvbus_id_routed_m` that is used to transport ATC Invalidates to the PCIe-RC.
  - In order to reduce system construction complexity the `tbs_pvbus_s[i]/tbm_pvbus_m[i]` also acts as a TBU so that the PCIe-RC need not separate its normal transactions and its ATS requests.
  - However, ATC Invalidates are only sent to a port which appears in `list_of_pcie_rc`. It should be uniquely decoded to a single port based on `list_of_ns_sid_high_at_bitpos0`

and those ATC Invalidates must be routed to the correct PCIe subsystem in order to invalidate the cache of ATS Response in the subsystem. Thus all TBUs that a PCIe-RC uses must have a unique reverse mapping from stream id to port.

- The pin `sup_oas` is not supported, instead it is a parameter as it is assumed that it would be tied to a fixed value in any specific platform.
- The hardware only has a single cacheability attribute for input transactions, but PVBUS transports both inner and outer cacheability.
- For non-PCIe-mode TBUs (i.e. their index does not appear in `list_of_pcie_mode` or `list_of_pcie_rc`):
  - For non-cache maintenance operations:
    - If the input attribute is any type of device then it is well defined as being outer-shared and Device-nGnRnE or Device-nGnRE. There is no support for Gathering or Reordering.
    - If the outer cacheable input attribute is normal then if it is Write-back then this is converted to Inner Write-back Outer Write-back (iWB-oWB) with the desired shareability. No Transient hint is supported and is always treated as non-transient.
    - This leaves all other normal memory types that are mapped to Inner Normal Non-cacheable, Outer Normal Non-cacheable outer shared (iNC-oNC-osh).
- Thus the upstream devices must present the cacheability in the *outer* cacheability attribute on PVBUS if it is cacheable. If it is a device type then both the inner and outer attributes must be set to the same. If it is iNC-oNC-osh then it must be presented as such.
- For PCIe-mode TBUs (i.e. their index appears in `list_of_pcie_mode` or `list_of_pcie_rc`):
  - Input transactions are from PCIe and the only indication of the memory type is in the NoSnoop bit of the transaction. No shareability is transported.
    - NoSnoop interpreted as iNC-oNC-osh
    - ! NoSnoop interpreted as iWB-oWB-ish (note inner shareable)
  - If a NoSnoop transaction has an attribute transform applied to it and the result of the transform is weaker than iNC-oNC-osh then it is forced to iNC-oNC-osh. For example, if a NoSnoop transaction uses a page table and is transformed to iWB-oWB-nsh then it is forced to iNC-oNC-osh. However, if the page tables transformed it to a device type then, as all device types are stronger than iNC-oNC-osh then it exits the SMMU as the device type.
  - In the model, transactions are classified by their incoming memory attributes as to whether they are NoSnoop or not and then normalized appropriately:
    - iWB-oWB-any-shareability transactions are interpreted as ! NoSnoop and therefore are normalized to iWB-oWB-ish.
    - Anything else is considered NoSnoop and therefore is normalized to iNC-oNC-osh.
  - Translated accesses also suffer the same interpretation to determine NoSnoop and how they are normalized. Thus they could enter the system with attributes different to if they were Untranslated Accesses translated by normal means.
  - It is expected that there is a component downstream of the SMMU that is aware of the system address map and will override the memory type to 'device' for any transaction that accesses a peripheral.

- The hardware has a single cacheability on input and, for transactions that are neither cache-maintenance operations nor PCIe transactions, normalizes the input to an architectural form before performing the SMMUv3 architectural transform:
  - Any device type is left untouched (the input can only represent Device-nGnRE and Device-nGnRnE).
  - If the input is Write-back (WB) then it is normalized to iWB-oWB with the incoming shareability.
  - If the input is anything else it is normalized to iNC-oNC-osh.
- The model accepts full architectural attributes of two levels of cacheability and so has to decide how to interpret this in terms of the hardware. For transactions that are not cache maintenance operations, the model replicates the outer attribute into the inner attribute and then performs the normalization that the hardware does.
- The hardware normalizes the architectural output attributes and outputs a single level of cacheability and a user flag (OC) specifying if the architectural attributes were cacheable in the outer cacheable domain. If the transaction is classified as a PCIe one then the NoSnoop transform described above is applied. If the original transaction was NoSnoop, then any weaker memory type is strengthened to iNC-oNC-osh so apply the following transform:

```

if      iWB-oWB-nsh/ish/osh      then output WB-nsh/ish/osh, OC = 1
else if i (NC/WT/WB) -o (WB/WT)  then output NC-Sys,      OC = 1
else if i (NC/WT/WB) -oNC        then output NC-Sys,      OC = 0
else if Device-(GRE/nGRE/nGnRE) then output DV-Sys,      OC = 0
else                               output SO-Sys,        OC = 0

```

- The model only normalizes according to PCIe but otherwise leaves the architectural attributes intact on the output bus.
- MSIs are issued on the `qtw_pvbus_m` port using attributes determined by the parameter `msi_attribute_transform`, whilst Event Queue writes are always issued with `ExtendedID=0`, `UserFlags=0`, `MasterID=0xFFFFffff`.

In the hardware, there is no way of distinguishing Event Queue writes from MSI writes, however, this provides a mechanism that if the model system needs to distinguish then it can.

## Parameters for parsing transaction attributes

Some of the parameters are strings that share a common parsing format for extracting from and placing information into the transaction's attributes.

They can extract and place information into the following fields of a transaction's attributes:

- `ManagerID64` (64 bits)
- `MasterID` (32 bits) (This is the lower 32 bits of `ManagerID64`)
- `ExtendedID` (64 bits)
- `UserFlags` (32 bits)

The string parameter is parsed as a comma-separated list of:

```
lhs_expression=rhs_expression
```

The `lhs_expression` and `rhs_expression` can be an entire symbol, for example:

```
StreamID
```

or a bit, or bit slice:

```
StreamID[16]  
StreamID[31:20]
```

In `rhs_expression`, numeric constants (or slices of numeric constants) are also allowed:

```
StreamID[16]=1  
StreamID[16]=10[2]
```

A single symbol might be assigned from multiple non-contiguous arrays of bits from a mix of different RHS symbols:

```
StreamID[16]=1, StreamID[31:30]=ExtendedID[1:0],  
StreamID[15:0]=UserFlags[31:16], ...
```

In those cases where a left hand symbol can also appear on the right hand side, it is possible to swap bits and transform the symbol. For example, the following expression swaps bits 0 and 1 of the `ExtendedID`:

```
ExtendedID[0]=ExtendedID[1], ExtendedID[1]=ExtendedID[0]
```

Any bits of the attributes that have no transform specified are retained from the input.

The `lhs_expression` and `rhs_expression` must have the same bit width.

## Iris and MTI instances for MMU\_700

This model has the following Iris instances:

**Table 3-1097: MMU\_700 Iris instances**

## Ports for MMU\_700

**Table 3-1099: Ports**

Name	Protocol	Type	Description
axi_stream_msi_addr_to_match_s	Value_64	Slave	Any SMMU-originated MSI which exactly matches the address in this port will be sent through the AXI stream port axi_stream_msi_m which is usually connected to the GIC through axi_stream_msi_s. As MSIs are 32 bit aligned then if bits[1:0] != 0 or the address is above OAS then this is effectively disabled. NOTE that the model does not support tcu_sid[31:0] which is the MSI DeviceID to send on axi_stream_msi_m. Instead the parameter smmu_msi_device_id is used. See also the parameters: axi_stream_msi_TID and axi_stream_msi_TDEST. The default value of this port is set by the parameter axi_stream_msi_addr_to_match. This port is sampled at negedge of tcu_reset_in and must be set before the negedge of the reset signal.
axi_stream_msi_m	PVBus	Master	Manager port used for sending SMMU originated MSIs directly to the GIC

Name	Protocol	Type	Description
clk_in	ClockSignal	Slave	Clock signal (in RTL aclk) This is a clock time-base used by the TCU to spread some of its processing over time, if enabled by the wait_* parameters. The clock must always be connected.
cmd_sync_irpt_ns	Signal	Master	Pulsed interrupt output signal for non-secure CMD_SYNC having a completion signal of SIG_IRQ.
cmd_sync_irpt_s	Signal	Master	Pulsed interrupt output signal for secure CMD_SYNC having a completion signal of SIG_IRQ.
event_q_irpt_ns	Signal	Master	Pulsed interrupt output signal for the non-secure event queue becoming non-empty.
event_q_irpt_s	Signal	Master	Pulsed interrupt output signal for the secure event queue becoming non-empty.
evento	Signal	Master	Event signal
global_irpt_ns	Signal	Master	Pulsed interrupt output signal for non-secure SMMU_GERROR(N) signalling an error.
global_irpt_s	Signal	Master	Pulsed interrupt output signal for secure SMMU_S_GERROR(N) signalling an error.
identify	SMMUv3AEMIdentifyProtocol	Master	Map the transaction to the tuple (StreamID, SubStreamID, SubStreamIDValid, SSD) The StreamID that is produced by the implementation of this protocol is not the final StreamID. The final StreamID is produced by using the list_of_ns_sid_high_at_bitpos0/list_of_s_sid_high_at_bitpos0 parameter to map the StreamID based on the upstream port index. Also see the parameter howto_identify which can replace the functionality of this port under certain circumstances.
pri_q_irpt_ns	Signal	Master	Pulsed interrupt output signal for the PRI queue becoming non-empty.
prog_pvbus_s	PVBus	Slave	Register subordinate port (in RTL PROG)
pvbus_id_routed_m[62]	PVBus	Master	This is a special "id-routed" port for transmitting ATC invalidates upstream into the PCIe EndPoints, it is not a normal bus. See the parameter output_id_routed_transform. The FastModels ATC Invalidate and PRI Response protocol specifies how to route and deal with this port.
qtw_pvbus_m	PVBus	Master	Manager port used for Table Walks, MSIs and Queue access. Note that although this is a manager port, it can still receive DVM messages.
sec_override	Signal	Slave	Allow certain registers to be accessible to non-secure accesses from reset, as described in the TCU_SCR register. This port is sampled at negedge of tcu_reset_in and must be set before the negedge of the reset signal.
sup_btm	Signal	Slave	System supports BTM and will be reflected in the IDR registers. This signal can override the value set by the parameters configuring the IDR registers. If BTM (Broadcast Table Maintenance) is not supported then DVM messages will be ignored. This port is sampled at negedge of tcu_reset_in and must be set before the negedge of the reset signal.
sup_cohacc	Signal	Slave	System supports COHACC and will be reflected in the IDR registers. This port is sampled at negedge of tcu_reset_in and must be set before the negedge of the reset signal.

Name	Protocol	Type	Description
sup_httu	Signal	Slave	System supports HTTU and will be reflected in the value of SMMU_IDR0.HTTU: - 0b00 (HTTU not supported) if sup_httu is 0 - 0b10 (update of AF and Dirty flags supported) if sup_httu is 1 The default value for this pin is 1. This port is sampled at negedge of tcu_reset_in and must be set before the negedge of the reset signal.
sup_sev	Signal	Slave	System supports SEV and will be reflected in the IDR registers. This signal can override the value set by the parameters configuring the IDR registers. This port is sampled at negedge of tcu_reset_in and must be set before the negedge of the reset signal.
tbm_pvbus_m[62]	PVBus	Master	The TBU manager ports that carry transactions that have been translated from the correspondingly numbered tbs_pvbus_s[] port.
tbs_pvbus_s[62]	PVBus	Slave	The TBU subordinate ports that receive transactions to be translated. They will exit the SMMU through the same numbered pvbus_m[] port.
tbu_cri_irpt[62]	Signal	Master	Critical error interrupt for RAS events from the TBU. This is used for specific uncorrected errors where a System Coprocessor (SCP) might have to reset the system because the stability of the system can no longer be guaranteed. NOTE in the hardware then this is called ras_cri.
tbu_eri_irpt[62]	Signal	Master	Error Recovery Interrupt for RAS events from the TBU. This is used for uncorrected errors. NOTE in the hardware then this is called ras_eri.
tbu_fhi_irpt[62]	Signal	Master	Fault Handling Interrupt for RAS events from the TBU. Usually this is for corrected errors. NOTE in the hardware then this is called ras_fhi.
tbu_pmu_irpt[62]	Signal	Master	TBU Performance Monitoring Unit interrupt, one per TBU.
tbu_pmusnapshot_ack[62]	Signal	Master	PMU snapshot interface for the TBU, ack a snapshot.
tbu_pmusnapshot_req[62]	Signal	Slave	PMU snapshot interface for the TBU, request a snapshot.
tbu_reset_in[62]	Signal	Slave	Reset signals The TBUs can have independent reset signals. However, TCU reset will result in the reset of all TBUs. This behavior is unlike SMMU RTL implementations which do allow for independent reset of the TCU separate from TBUs. Each signal tbu_reset_in[n] corresponds to the TBU using tbs_pvbus_s[n]/tbs_pvbus_s[n] pair. If the SMMU receives a transaction whilst the TBU is expected to be in reset then it will complain using the ArchMsg.Warning.warning trace source. Those tbu_reset_in that correspond to a PCIe-RC connection can be connected to monitor the PCIe-RC's reset signal. If it receives an ATS request when in reset then it will complain in a similar way. You must connect these pins if you wish the TCU_NODE_STATUS for the nodes to be accurate (including any connected to the PCIe-RC).
tcu_cri_irpt	Signal	Master	Critical error interrupt for RAS events from the TCU. This is used for specific uncorrected errors where a System Coprocessor (SCP) might have to reset the system because the stability of the system can no longer be guaranteed. NOTE in the hardware then this is called ras_cri.

Name	Protocol	Type	Description
tcu_eri_irpt	Signal	Master	Error Recovery Interrupt for RAS events from the TCU. This is used for uncorrected errors. NOTE in the hardware then this is called ras_eri.
tcu_fhi_irpt	Signal	Master	Fault Handling Interrupt for RAS events from the TCU. Usually this is for corrected errors. NOTE in the hardware then this is called ras_fhi.
tcu_pmu_irpt	Signal	Master	TCU Performance Monitoring Unit interrupt
tcu_pmusnapshot_ack	Signal	Master	PMU snapshot interface for the TCU, ack a snapshot.
tcu_pmusnapshot_req	Signal	Slave	PMU snapshot interface This is a four-phase handshake to have the corresponding PMCG perform a capture of the current counter values. PMU snapshot interface for the TCU, request a snapshot.
tcu_reset_in	Signal	Slave	The reset signal to the TCU interface.

## Parameters for MMU\_700

### TCUCFG\_PARTID\_WIDTH

#### Type

unsigned

#### Default value

9

The width of the MPAM PARTID on the bus.

See also parameter mpam\_attribute\_transform. Accepted Values: 1 6 9

### TCUCFG\_XLATE\_SLOTS

#### Type

uint32\_t

#### Default value

512

Maximum number of outstanding stalled transactions that the SMMU supports.

Note

TCUCFG\_XLATE\_SLOTS must be  $\geq$  TCUCFG\_PTW\_SLOTS which is currently fixed to 512.

Accepted Values: 512 1024 2048 4096

### all\_error\_messages\_through\_trace

#### Type

bool

**Default value**

false

Some conditions in the SMMU are so strange that the software programming the SMMU has done something wrong. At this point messages are output to either `ArchMsg.Error.*` or `ArchMsg.Warning.*` or to the error stream of the simulator. Outputting to the error stream of the simulator may cause it to return with a non-zero exit status.

If you set this option to true then instead of using the error stream of the simulator it will always use a trace stream allowing the simulation to exit with a zero exit status.

**axi\_stream\_msi\_TDEST****Type**

uint32\_t

**Default value**

0

ID of the AXI stream subordinate port on the GIC that receives SMMU originated MSIs sent directly. The name of the GIC port is `axi_stream_msi_s`.

**Note**

If `axi_stream_msi_addr_to_match[1:0] != 0`, or the address is above OAS then this is effectively disabled.

---

See also:

- `axi_stream_msi_addr_to_match`
- `axi_stream_msi_TID`

**axi\_stream\_msi\_TID****Type**

uint32\_t

**Default value**

0

ID of the AXI stream manager port that sends SMMU TCU originated MSIs directly to the GIC. The name of the SMMU port is `axi_stream_msi_m`.

**Note**

If `axi_stream_msi_addr_to_match[1:0] != 0`, or the address is above OAS then this is effectively disabled.

---

See also:

- `axi_stream_msi_addr_to_match`
- `axi_stream_msi_TDEST`

### **`axi_stream_msi_addr_to_match`**

#### **Type**

`uint64_t`

#### **Default value**

`0xFFFFFFFFFFFFFFFF`

If the last two bits are 0, any SMMU-originated MSI which exactly matches the address will be sent through the AXI stream port `axi_stream_msi_m` which is usually connected to the GIC.

This parameter drives the value of the `axi_stream_msi_addr_to_match_s` port at simulation reset. For every reset after that, the value of the port will be sampled and used if changed.

The entire address must match, including bits [1:0]. As MSIs are 32 bit aligned then if `axi_stream_msi_addr_to_match[1:0] != 0`, or the address is above OAS then this is effectively disabled.

---

See also:

- `axi_stream_msi_TID`
- `axi_stream_msi_TDEST`

### **`behaviour_of_sampled_at_reset_signals`**

#### **Type**

unsigned

#### **Default value**

0

Some configuration signals into the SMMU are sampled on negedge of reset.

However, it can sometimes be hard to arrange to drive a configuration pin before the negedge of reset.

The configuration pins are sampled:

**0**

at negedge reset.

**1**

at negedge reset, but if a later change occurs at the same simulated time, and no transactions have occurred, then they will be resampled and the SMMU reset again.

**cmdq\_max\_number\_of\_commands\_to\_buffer****Type**

uint32\_t

**Default value**

10

The command queues can buffer fetched commands before issuing them. This parameter is roughly the maximum number of commands to do this for. The programmer visible effects are that just because the CONS pointer shows a command has been consumed does not necessarily mean that it has been issued (and completed). Higher values accentuate this effect.

**enable\_device\_id\_checks****Type**

bool

**Default value**

true

If this parameter is true then the DeviceIDs seen by the GIC are:

- **for client devices**

$$\text{DeviceID} = \text{StreamID} + \text{translated\_device\_id\_base}$$

- **for SMMU-generated MSIs**

$$\text{smmu\_msi\_device\_id}$$

This parameter enables two checks:

- If the DeviceID is used in the `output_attribute_transform` parameter, if it overflows 32 bits then the model warns. If the DeviceID is not used, it is assumed that the external agent that forms the DeviceID warns if it overflows.
- If the SMMU supports MSIs, the model checks that the GIC is able to distinguish an MSI generated by the SMMU from one generated by a client device.

As the exact mechanism to determine the DeviceID is in the system and not necessarily under control of the SMMU then you can disable these warnings using this parameter.

See also the parameters: `output_attribute_transform` and `msi_attribute_transform`.

**howto\_identify****Type**

string

**Default value**

"use-identify"

If `use-identify` then the SMMU uses the `identify` port to determine the `ssd`, `StreamID`, `SubStreamID`. Otherwise, this string extracts them from the transaction's attributes.

Examples:

```
SEC_SID=ExtendedID[63], SSV=ExtendedID[62], SubstreamID=ExtendedID[51:32],
StreamID=ExtendedID[31:0]
```

or

```
nSEC_SID=ExtendedID[63], StreamID=ExtendedID[55:24], nSSV=ExtendedID[20],
SubstreamID=ExtendedID[19:0]
StreamID[31:24]=0, StreamID[23:0]=ExtendedID[23:0], SSV=1[0], ...
```

Note

If you are not using the `use-identify` option then the configuration string is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

LHS Symbols:

**SIDV**

Indicates that the StreamID is valid.

**SSV**

Indicates that the SubstreamID is valid.

**SEC\_SID / SEC\_SID\_bit\_1**

Bits 0 and 1 respectively of the StreamID Security State

**StreamID**

(32 b) valid if `SIDV` is 1 or both `SIDV` and `nSIDV` are unused.

**SubstreamID**

(20 b) is valid if `ssv` is true.

**nSEC\_SID / nSEC\_SID\_bit\_1 / nSSV / nSIDV**

Negative logic of above parameters. Different attributes are independent and can use negative or positive logic.

RHS Symbols:

**ExtendedID / ManagerID64 / MasterID / UserFlags**

Incoming PVBUS transaction attributes

`SEC_SID` is 1b in the model. For RME systems, in hardware, then `SEC_SID` is 2b, in the model `SEC_SID_bit_1` represents bit[1].

`SIDV == 0` indicates a NoStreamID transaction and the SSD is the PAS of the transaction, `SEC_SID` is not used.

Negative and positive logic symbols for the same attribute is an error.

The model uses the term SSD (Security State Determination) to mean which security state the transaction, register, structure, event, etc. belongs to.

In the SMMUv3 Architecture, the side-band signal `SEC_SID` holds the information for the transactions, but uses a different encoding.

Before RME, `SEC_SID` was a one bit signal. With RME, in the hardware, it was expanded to 2b. To retain backwards compatibility in the model, `SEC_SID` remains as 1b in this parameter, but the second bit can be expressed with `SEC_SID_bit_1` (and its negative logic version `nSEC_SID_bit_1`)

Security state	SSD	SEC_SID_bit_1	SEC_SID
secure	0	0	1
non-secure	1	0	0
root (reserved)	2	1	1
realm	3	1	0

For those systems that support NoStreamID transactions, and `howto_identify` is not using the port, first the SMMU determines the value of `SIDV` or `nSIDV` to see if the transaction is a NoStreamID transaction (`SIDV == 0` or `nSIDV == 1`). If so then the rest of the `howto_identify` string is ignored as the information extracted relates only to StreamID transactions. Instead more information is extracted using the parameter `howto_identify_NoStreamID_extra_info`.

In AMBA systems, the equivalent signal to `SIDV` is called either `ARMMUVALID` OR `AWMMUVALID`. Collectively they are known as `AxMMUVALID`.

**ish\_is\_osh\_DANGER**

**Type**

bool

**Default value**

true

When set, any transaction that would use the architectural inner shareable domain is converted to use the outer shareable domain.

- 

Note

This parameter should match the equivalent `ish_is_osh` from the PE. If an incompatible value of the `ish_is_osh` parameter is configured for the PE and the SMMU, data coherency may be compromised.
- 

Note

All implementations should have this parameter as true but it is allowed in the model to give it a false value for modelling and debug purposes only.

**list\_of\_ns\_sid\_high\_at\_bitpos0****Type**

string

**Default value**

""

A comma-separated list of values to bitwise OR into each Non-secure StreamID for each TBU/Node. Bit 0 of the value corresponds to bit 0 of the StreamID.

Each TBU that is connected to a PCIe-RC (see `list_of_pcie_rc`) must serve a unique contiguous subset of StreamIDs as determined by their top bits. This is used in order to know which port to route ATC Invalidates and PRI Responses to the PCIe subsystems.

The empty string corresponds to all 0s.

**list\_of\_pcie\_mode****Type**

string

**Default value**

""

A comma-separated list of ranges of ports that represent TBUs that are attached to PCIe Root Complexes (PCIe-RC). A single PCIe-RC might use several TBUs and stripe accesses across them. The attribute handling for these TBUs is slightly different in that if the PCIe transaction is NoSnoop and the output attributes of the translation would be weaker than `iNC-oNC-osh` then the output is forced to `iNC-oNC-osh`.

`iNC-oNC-osh` == "inner normal non-cacheable, out normal non-cacheable, outer shared"

**list\_of\_pcie\_rc****Type**

string

**Default value**

""

This is a list of ports that are connected to PCIe Root Complex (PCIe-RC) by a protocol called DTI-ATS. This port is used to transport ATS and PRI Requests to the SMMU from the PCIe-RC.

In the real hardware, the PCIe-RC uses this port for ATS/PRI, and the actual transactions go through separate TBUs. In the model, this port can accept actual transactions as well. However, in the model, then the ATC Invalidates and the PRI Responses need to be transferred over the corresponding `pvbus_id_routed_m` port as DTI-ATS is bidirectional, but PVBUS is not.

**list\_of\_s\_sid\_high\_at\_bitpos0****Type**

string

**Default value**

""

A comma-separated list of values to bitwise OR into each Secure StreamID for each TBU/Node. Bit 0 of the value corresponds to bit 0 of the StreamID.

The empty string corresponds to all 0s.

use-ns can be used to apply the list\_of\_ns\_sid\_high\_at\_bitpos0 values instead.

**mpam\_attribute\_transform****Type**

string

**Default value**

"ExtendedID[62:55]=MPAM\_PMG, ExtendedID[54:39]=MPAM\_PARTID,  
ExtendedID[38]=MPAM\_NS"

**Note**

The parameter is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

If MPAM is supported, this is applied to *all* downstream transactions to transport the MPAM information.

- "" or "none" – no transform
- How to alter the output attributes. Example:

```
"ExtendedID[62:55]=MPAM_PMG, ExtendedID[54:39]=MPAM_PARTID,  
ExtendedID[38]=MPAM_NS"
```

RHS/LHS Symbols:

- ExtendedID/ManagerID64/MasterID/UserFlags.

RHS Symbols:

- MPAM\_PARTID
- MPAM\_PMG
- MPAM\_NS

Any bits with no transform are unchanged.

**Note**

- attribute transforms applied before this:
  - for client transactions 'output\_attribute\_transform'.
  - for table walks `tw_qs_attribute_transform`.
  - for MSIs `msi_attribute_transform`.
- for translated transactions from client devices then `MPAM_NS = ! SEC_SID`.

## **msi\_attribute\_transform**

### Type

string

### Default value

"ExtendedID[31:0]=smmu\_msi\_device\_id, ManagerID64[31:0]=0xFFFFFFFF"

Transform downstream attributes of MSI transactions.

**Note**

The parameter is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

- "" or "none" – no transform
- How to alter output attributes of SMMU-generated MSIs. Example:

```
"UserFlags[15:0]=smmu_msi_device_id[31:16],
  ManagerID64[15:0]=smmu_msi_device_id[15:0],
  ExtendedID=0"
```

LHS Symbols:

**ExtendedID / ManagerID64 / MasterID / UserFlags**

Outgoing PVBUS transaction attributes

RHS Symbols:

**smmu\_msi\_device\_id**

The value stored in the parameter with the same name

**interrupt\_kind**

The selected bit corresponds to the interrupts listed below

**0/1**

EVENTQ s/ns

**2**

PRIQ

- 3/4  
CMD\_SYNC s/ns
- 5/6  
GERROR s/ns
- 7/8  
PMCG s/ns
- 9/10/11  
RAS FHI/ERI/CRI
- 12/13  
gpf\_far/gpt\_cfg\_far
- 14/15/16/17  
Realm EVENTQ/PRIQ/CMDQ/GERROR

**HWATTR\_KIND\_0**  
PBHA information

**Numeric Literals**  
Any number. Ex: 0x1234

ExtendedID/ManagerID64/MasterID/UserFlags start with values {0, 0xFFFFFFFF, 0xFFFFFFFF, 0} respectively.

Any bits with no transform are unchanged.

This transform can be used to determine the DeviceID passed to the GIC to distinguish MSIs generated by the SMMU from those generated by client devices.

See also `output_attribute_transform` and `enable_device_id_checks`.

After 11.25 the `interrupt_kind` field was extended to 5 bits. This is strictly a non-backwards compatible change. However, the original 3 bits were insufficient to express all the interrupt kinds that exist.

---

**`normalize_input_normal_non_iWB_oWB_to_iNC_oNC_osh_DANGER`**

Type

bool

Default value

true

When set, use Inner Non Cacheable, Outer Non Cacheable, Outer Shareable for any upstream transaction that would use any of the following attributes:

- Normal Non-cacheable Bufferable
- Normal Non-cacheable Non-bufferable
- Write-through

Note

This parameter should match the equivalent configuration from the PE. If an incompatible value of this parameter is configured for the PE and the SMMU, data coherency may be compromised.

All implementations should have this parameter as true but it is allowed in the model to give it a false value for modelling and debug purposes only.

## number\_of\_ports

### Type

unsigned

### Default value

1

The number of port pairs that the SMMU has.

## output\_attribute\_transform

### Type

string

### Default value

"ExtendedID[31:0]=DeviceID"

Transform the downstream attributes of a translated transaction.

Note

The parameter is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

- "" or "none": no transform
- How to alter output attributes. Example:

```
"ExtendedID[15:0]=DeviceID[15:0], UserFlags[31]=nSSV,
UserFlags[19:0]=SubstreamID,
ManagerID64[10]=ManagerID64[11], ManagerID64[11]=ManagerID64[10]"
```

RHS/LHS Symbols:

**ExtendedID / ManagerID64 / MasterID / UserFlags**  
Incoming/Outgoing PVBUS transaction attributes

RHS Symbols:

**DeviceID**  
StreamID + translated\_device\_id\_base

**StreamID / SubstreamID / SEC\_SID / SSV**  
Architectural information. See parameter `howto_identify` for more information.

**nSEC\_SID / nSSV**  
Negative logic of above parameters. Different attributes are independent and can use negative or positive logic.

**St1PBHA / St2PBHA**  
Page Based Hardware Attributes from leaf descriptors (zero if unused).

**STE\_IMPDEF1**  
STE[127:116]

**HWATTR\_KIND\_0**  
PBHA information

**Numeric Literals**  
Any number. Ex: 0x1234

The `streamID` has had `ns_sid_high/s_sid_high` ORred into it for the appropriate TBU.

Note

‘mpam\_attribute\_transform’ is applied after this.

**output\_id\_routed\_transform**

**Type**  
string

**Default value**  
“Address[27:12]=StreamID[15:0], PAS=SSD”

Note

The parameter is parsed according to the rules in the section ‘Parameters for parsing transaction attributes’.

The SMMU generates the following ID-routed transaction on the `pvbus_id_routed_m` bus:

- ATC Invalidate
- PRI Response

This parameter controls how the SMMU should express:

- the StreamID
- the Trusted (T) bit

The value is a comma-separated list of assignments:

```
Address[27:12]=StreamID[15:0], ExtendedID[60]=T, ExtendedID[15:0]=StreamID[31:16]
```

Address bits[11:0] cannot be used.

The LHS can be one of:

- PAS
- MasterID / ManagerID64 / ExtendedID / UserFlags
- Address

The RHS can be one of:

- a numeric constant
- SSD
- T or negative version nT
- StreamID

For realm (or 'Trusted') transactions, then `ssd=0b11`, `T=1`, `nT=0`. For non-secure (or 'Non-Trusted') transactions, then `ssd=0b01`, `T=0`, `nT=1`.

## **prefetch\_only\_requests**

### **Type**

unsigned

### **Default value**

0

The simulator supports 'prefetch-only' DMI requests, which can occur at any time and for any reason and are intended to be invisible to the end execution of the model and to the user.

**0**

deny all prefetch-only requests

**1**

- use debug requests for any page table walks
  - form and use debug TLB/cache entries
  - any faults will not record, but deny the prefetch request

**2**

- treat prefetch-only requests like normal transactions

- use normal page table walk transactions
- use and form normal TLB/cache entries
- faults will alter the programmer-visible state of the SMMU

0 is the safest.

1 treats the access like a debug request and requires that debug page table walks are treated correctly downstream. Any descriptors that need HTTU to allow the transaction to proceed will fail the request.

2 is dangerous, it uses real transactions and reports faults that are unphysical. Real transactions can be `wait()`ed and this disobeys the SystemC spec for `get_direct_mem_ptr()`.

### **sec\_override**

#### **Type**

bool

#### **Default value**

false

The IMP DEF port `sec_override` controls whether some of the registers are accessible to secure or non-secure transactions. This parameter is the default value assumed for that port if the port is not driven by a signal.

### **seed**

#### **Type**

uint32\_t

#### **Default value**

0x12345678

Used to seed the pseudo-random number generator that the SMMU model uses.

### **size\_of\_cd\_cache**

#### **Type**

uint32\_t

#### **Default value**

0

The number of entries in the cache holding CD structures. If this is zero it is treated as a large number ('infinite') but it is bounded so that the host memory usage of the cache is also bounded.

### **size\_of\_l1cd\_cache**

#### **Type**

uint32\_t

**Default value**

0

The number of entries in the cache holding L1CD descriptors. If this is zero it is treated as a large number ('infinite') but it is bounded so that the host memory usage of the cache is also bounded.

**size\_of\_l1ste\_cache****Type**

uint32\_t

**Default value**

0

The number of entries in the cache holding L1STE descriptors. If this is zero it is treated as a large number ('infinite') but it is bounded so that the host memory usage of the cache is also bounded.

**size\_of\_ste\_cache****Type**

uint32\_t

**Default value**

0

The number of entries in the cache holding STE structures. If this is zero it is treated as a large number ('infinite') but it is bounded so that the host memory usage of the cache is also bounded.

**size\_of\_tlb****Type**

uint32\_t

**Default value**

0

The number of entries in the TLB. If this is zero it is treated as a large number ('infinite') but it is bounded so that the host memory usage of the cache is also bounded.

**smmu\_msi\_device\_id****Type**

uint32\_t

**Default value**

0

When appropriately enabled, assume that MSIs that are generated by the SMMU are presented to the GIC with this DeviceID.

See parameters `msi_attribute_transform` and `enable_device_id_checks`.

**sup\_btm****Type**

bool

**Default value**

true

The default value of the register field `SMMU_IDR0.BTM` and `SMMU_ROOT_IDR0.BGPTM` (when supported). This enables Broadcast TLB maintenance.

**sup\_cohacc****Type**

bool

**Default value**

true

The default value of the register `SMMU_IDR0.COHAAC`

**sup\_httu****Type**

bool

**Default value**

true

The initial value of the `sup_httu` port. See the port description for `sup_httu`.

**sup\_oas****Type**

unsigned

**Default value**

6

The hardware has an input port `sup_oas[2:0]` that indicates what output address size (OAS) the system has. This is sampled at reset.

The model does not have this port as it is expected to be a constant for the system and not to change. Instead it is just a parameter.

The allowed values are:

**0**

32 bits

**1**

36 bits

- 2  
40 bits
- 3  
42 bits
- 4  
44 bits
- 5  
48 bits
- 6  
52 bits

**sup\_sev**  
**Type**  
bool  
**Default value**  
true

The default value of the register `SMMU_IDR0.SEV`

**tlb\_when\_do\_f\_tlb\_conflict\_on\_overlap**  
**Type**  
unsigned  
**Default value**  
0

If a TLB entry is created by a walk and it overlaps an existing entry, there are some architectural situations where the result is known. For all others, then an implementation is allowed to use an **UNPREDICTABLE** combination of the two entries, or it can generate `F_TLB_CONFLICT`:

- 0  
never generate
- 1  
sometimes generate
- 2  
always generate

Conflicts between global and non-global entries are not detected by the model.

**translated\_device\_id\_base**  
**Type**  
uint32\_t

**Default value**

0

When appropriately enabled, assume that client device accesses are translated to a DeviceID as seen by the GIC of:

```
StreamID + translated_device_id_base
```

See parameter `output_attribute_transform` and `enable_device_id_checks`.

**tw\_qs\_attribute\_transform****Type**

string

**Default value**

""

Transform downstream attributes of table walk and queue transactions.

**Note**

The parameter is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

- "" or "none" – no transform
- How to alter the output attributes. Example:

```
"ExtendedID[35:32]=HWATTR_KIND_0"
```

RHS/LHS Symbols:

**ExtendedID / ManagerID64 / MasterID / UserFlags**

Incoming/Outgoing PVBUS transaction attributes

RHS Symbols:

**HWATTR\_KIND\_0**

PBHA information

**kind**

Transaction kind

- For a read:

**0/1**

L1STE/STE

**2/3**

L1CD/CD

**4/5**

S1/S2 TTD (including CAS)

**6**

CMDQ

**7**

VMS

**11/12**

LOGPT/L1GPT

**13/14**

LODPT/L1DPT

- For a write:

**0**

EVENTQ

**1**

PRIQ

ExtendedID/ManagerID64/MasterID/UserFlags start with values {0, 0xFFFFFFFF, 0xFFFFFFFF, 0} respectively.

Any bits with no transform are unchanged.

**Note**

See also `output_attribute_transform` and `msi_attribute_transform`.

**version****Type**

string

**Default value**

"r0p0"

The version of this product.

Valid values are:

- r0p0
- r1p0

**wait\_cmdq\_ticks****Type**

uint64\_t

**Default value**

0

This is the time to wait before doing something on the command queue. If bit 32 is set (0x1\_0000\_0000) then the time waited for is a uniform randomly distributed time  $[0, \max(2, (t \& 0xFFFFffff)) - 1]$ .

**wait\_eventq\_ticks****Type**

uint64\_t

**Default value**

0

This is the time to wait before doing something on the event queue. If bit 32 is set (0x1\_0000\_0000) then the time waited for is a uniform randomly distributed time  $[0, \max(2, (t \& 0xFFFFffff)) - 1]$ .

**wait\_misc\_async\_actions\_ticks****Type**

uint64\_t

**Default value**

0

This is the time to wait before doing an async action that could be delayed is performed. If bit 32 is set (0x1\_0000\_0000) then the time waited for is a uniform randomly distributed time  $[0, \max(2, (t \& 0xFFFFffff)) - 1]$ .

**wait\_msi\_ticks****Type**

uint64\_t

**Default value**

0

This is the time to wait before sending an MSI. If bit 32 is set (0x1\_0000\_0000) then the time waited for is a uniform randomly distributed time  $[0, \max(2, (t \& 0xFFFFffff)) - 1]$ .

**wait\_pri\_req\_ticks****Type**

uint64\_t

**Default value**

0

This is the time to wait before processing a PRI Request. If bit 32 is set (0x1\_0000\_0000) then the time waited for is a uniform randomly distributed time  $[0, \max(2, (t \& 0xFFFFffff)) - 1]$ .

**wait\_pri\_resp\_ticks****Type**

uint64\_t

**Default value**

1

This is the time to wait before sending a PRI Response back to the PCIe subsystem. When a PRI Response is an auto-response then the ATC might immediately make a new ATS request, that immediately fails, immediately makes a PRI Request, or auto-responds, etc. To break this loop, then we introduce a minimum time on all PRI Responses to give other components in the system a chance to run. If bit 32 is set (0x1\_0000\_0000) then the time waited for is a uniform randomly distributed time  $[0, \max(2, (t \ \& \ 0xFFFFffff)) - 1]$ .

### 3.10.64 MMU\_720AE

This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1101: IP revisions support**

Revision	Quality level
r0p0	Preliminary support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**Limitations**

- No power control
- AMBA stash operations, destructive read and destructive hint operations are not supported on PVBUS and also are not supported by the device.
- The PMU has limited functionality. Only a subset of the architecturally mandatory events are supported, as indicated by the `SMMU_PMC_CBEID0` fields. The PMU is intended for demonstration purposes only and for driver development.
- Limited RAS support
- The SYSCO interface is not implemented
- The low power interface is not implemented
- The IMP DEF MPAM register file is not implemented. This controls how the internal resources of the MMU-720AE are partitioned.
- `tcu_sid[31:0]` is not modelled, instead the parameter `smmu_msi_device_id` is used.
- The HWATTR side-band signal is available by configuring `output_attribute_transform`, `msi_attribute_transform` and `tw_qs_attribute_transform` with `HWATTR_KIND_0`. For some transactions HWATTR comes from the `SMMU_S_AGBPA[3:0]`. In the hardware, this register has an 'Update' bit[31] that should be written as 1 and will be turned to zero when all transactions

using the old value have completed. The model does not implement this behavior and the Update bit is **RAZ/WI**.

- Any configuration parameter listed in the TRM but not shown in this file is not supported.
- `TCU_CTRL_AUX0-55` registers are modeled but unlike the TRM, reset values for these registers are 0. There is no functionality associated with these registers.
- There is no functionality associated with `TCU_ROOT_CTRL` register field `DIS_DVM`. Note: If `DIS_DVM` is set to 1, an error message is thrown which can be disabled by setting `all_error_messages_through_trace` to true.
- The model does not support the `eventoack` signal. In integration mode, the value of the field `eventoack` (bit 0) in `ITIN_PIU` will match the value of the `evento` signal.
- There is no functionality associated with `TCU_NODE_STATUS` register field `ATSv`, which indicates whether the node implements DTI-ATSv4.

## Notes

- A bad configuration renders the model inactive.
- Some configurations can be adjusted by configuration pins. These are only sampled at the negative edge of the reset pin. If you want to use these pins then you must drive them before sending a negative edge on the reset pin. During simulation reset the component driving them must also drive this transition again.
- Debug reads to the registers do not disturb the state.
- Writes to registers with Update flags, including debug writes, are ignored if the Update flag is already set to one.
- Debug and real accesses to the registers must be 32 bits or 64 bits.
- The model deals with groups of transactions with the same attributes and a similar range of addresses. The mapping used is remembered by the bus infrastructure and is used for subsequent sufficiently similar transactions without requiring intervention from the SMMU model, and is not traced, for instance.

The range of addresses that the mapping is valid for is determined by the SMMU model, depending on architectural and model-implementation details. However, as it is unaware of any sign-extension or the mapping that the SoC does, the SoC is responsible for subsequently narrowing the range of addresses for which this mapping is valid. Typically, this is done automatically when using `PVBusMapper`.

- The hardware is a distributed SMMU and is divided into:
  - A single Translation Control Unit (TCU)
    - Has a port for the programming interface of the SMMU
    - Receives DVM messages
    - Does all the page walking, queue manipulation, etc.
  - One or more Translation Bus Units (TBUs)
    - Translate transactions from upstream (client) device into downstream transactions.
  - Zero or more connections to PCIe Root Complexes (PCIe-RCs)

- There can be a total of 62 TBUs and PCIe-RCs attached.
- An interconnect connecting the TBUs, PCIe-RCs to the TCU.
- A PCIe-RC has one connection to the TCU to make ATS requests but the PCIe-RC uses one or more TBUs to transform the transactions and pass them to the memory system. In the model, those TBUs are configured by the parameter `list_of_pcie_mode`. The SMMU does not know which TBUs a particular PCIe-RC is attached to.
- The TBU ORs a value into each StreamID that it receives. In the model, this is configured by the parameters:
  - `list_of_s_sid_high_at_bitpos0`
  - `list_of_ns_sid_high_at_bitpos0`
- The TCU, TBU, and the interconnect are all represented by this single model component.
- In the model, a pair of ports `tbs_pvbuss_s[i]/tbm_pvbuss_m[i]` represent a TBU 'i' or the `tbs_pvbuss_s[i]` represents an incoming connection for a PCIe-RC. The corresponding reverse connection from the TCU to the PCIe-RC is by a special bus called `pvbus_id_routed_m` that is used to transport ATC Invalidates to the PCIe-RC.
  - In order to reduce system construction complexity the `tbs_pvbuss_s[i]/tbm_pvbuss_m[i]` also acts as a TBU so that the PCIe-RC need not separate its normal transactions and its ATS requests.
  - However, ATC Invalidates are only sent to a port which appears in `list_of_pcie_rc`. It should be uniquely decoded to a single port based on `list_of_ns_sid_high_at_bitpos0` and those ATC Invalidates must be routed to the correct PCIe subsystem in order to invalidate the cache of ATS Response in the subsystem. Thus all TBUs that a PCIe-RC uses must have a unique reverse mapping from stream id to port.
- The pin `sup_oas` is not supported, instead it is a parameter as it is assumed that it would be tied to a fixed value in any specific platform.
- The hardware only has a single cacheability attribute for input transactions, but PVBUS transports both inner and outer cacheability.
- For non-PCIe-mode TBUs (i.e. their index does not appear in `list_of_pcie_mode` or `list_of_pcie_rc`):
  - For non-cache maintenance operations:
    - If the input attribute is any type of device then it is well defined as being outer-shared and Device-nGnRnE or Device-nGnRE. There is no support for Gathering or Reordering.
    - If the outer cacheable input attribute is normal then if it is Write-back then this is converted to Inner Write-back Outer Write-back (iWB-oWB) with the desired shareability. No Transient hint is supported and is always treated as non-transient.
    - This leaves all other normal memory types that are mapped to Inner Normal Non-cacheable, Outer Normal Non-cacheable outer shared (iNC-oNC-osh).
- Thus the upstream devices must present the cacheability in the *outer* cacheability attribute on PVBUS if it is cacheable. If it is a device type then both the inner and outer attributes must be set to the same. If it is iNC-oNC-osh then it must be presented as such.
- For PCIe-mode TBUs (i.e. their index appears in `list_of_pcie_mode` or `list_of_pcie_rc`):

- Input transactions are from PCIe and the only indication of the memory type is in the NoSnoop bit of the transaction. No shareability is transported.
  - NoSnoop interpreted as iNC-oNC-osh
  - ! NoSnoop interpreted as iWB-oWB-ish (note inner shareable)
- If a NoSnoop transaction has an attribute transform applied to it and the result of the transform is weaker than iNC-oNC-osh then it is forced to iNC-oNC-osh. For example, if a NoSnoop transaction uses a page table and is transformed to iWB-oWB-nsh then it is forced to iNC-oNC-osh. However, if the page tables transformed it to a device type then, as all device types are stronger than iNC-oNC-osh then it exits the SMMU as the device type.
- In the model, transactions are classified by their incoming memory attributes as to whether they are NoSnoop or not and then normalized appropriately:
  - iWB-oWB-any-shareability transactions are interpreted as ! NoSnoop and therefore are normalized to iWB-oWB-ish.
  - Anything else is considered NoSnoop and therefore is normalized to iNC-oNC-osh.
- Translated accesses also suffer the same interpretation to determine NoSnoop and how they are normalized. Thus they could enter the system with attributes different to if they were Untranslated Accesses translated by normal means.
- It is expected that there is a component downstream of the SMMU that is aware of the system address map and will override the memory type to 'device' for any transaction that accesses a peripheral.
- The hardware has a single cacheability on input and, for transactions that are neither cache-maintenance operations nor PCIe transactions, normalizes the input to an architectural form before performing the SMMUv3 architectural transform:
  - Any device type is left untouched (the input can only represent Device-nGnRE and Device-nGnRE).
  - If the input is Write-back (WB) then it is normalized to iWB-oWB with the incoming shareability.
  - If the input is anything else it is normalized to iNC-oNC-osh.
- The model accepts full architectural attributes of two levels of cacheability and so has to decide how to interpret this in terms of the hardware. For transactions that are not cache maintenance operations, the model replicates the outer attribute into the inner attribute and then performs the normalization that the hardware does.
- The hardware normalizes the architectural output attributes and outputs a single level of cacheability and a user flag (OC) specifying if the architectural attributes were cacheable in the outer cacheable domain. If the transaction is classified as a PCIe one then the NoSnoop transform described above is applied. If the original transaction was NoSnoop, then any weaker memory type is strengthened to iNC-oNC-osh so apply the following transform:

```

if      iWB-oWB-nsh/ish/osh      then output WB-nsh/ish/osh, OC = 1
else if i(NC/WT/WB)-o(WB/WT)    then output NC-Sys,      OC = 1
else if i(NC/WT/WB)-oNC         then output NC-Sys,      OC = 0
else if Device-(GRE/nGRE/nGnRE) then output DV-Sys,      OC = 0
else                               output SO-Sys,      OC = 0

```

- The model only normalizes according to PCIe but otherwise leaves the architectural attributes intact on the output bus.
- MSIs are issued on the `qtw_pvbus_m` port using attributes determined by the parameter `msi_attribute_transform`, whilst Event Queue writes are always issued with `ExtendedID=0`, `UserFlags=0`, `MasterID=0xFFFFffff`.

In the hardware, there is no way of distinguishing Event Queue writes from MSI writes, however, this provides a mechanism that if the model system needs to distinguish then it can. MPAM and MEC attributes are provided by the parameters:

- `mpam_attribute_transform`
- `mec_attribute_transform` (not all versions support MEC)
- The model supports architectural features and registers matching `rOp0-00eac0`.

### Security State Determination (SSD)

The model uses the term SSD to mean the security state that the transaction, register, structure, or event belongs to. In the SMMUv3 architecture, the sideband signal `SEC_SID` holds this information for the transactions, but uses a different encoding.

Before RME, `SEC_SID` was a one-bit signal. With RME, in the hardware, it was expanded to two bits. To retain backwards compatibility in the model, `SEC_SID` remains as one-bit in the parameter `howto_identify`, but the second bit can be expressed with `SEC_SID_bit_1`, and its negative logic version `nSEC_SID_bit_1`.

Security state	SSD	SEC_SID_bit_1	SEC_SID
secure	0	0	1
non-secure	1	0	0
root (reserved)	2	1	1
realm	3	1	0

### Parameters for parsing transaction attributes

Some of the parameters are strings that share a common parsing format for extracting from and placing information into the transaction's attributes.

They can extract and place information into the following fields of a transaction's attributes:

- `ManagerID64` (64 bits)
- `MasterID` (32 bits) (This is the lower 32 bits of `ManagerID64`)
- `ExtendedID` (64 bits)
- `UserFlags` (32 bits)

The string parameter is parsed as a comma-separated list of:

```
lhs_expression=rhs_expression
```

The `lhs_expression` and `rhs_expression` can be an entire symbol, for example:

```
StreamID
```

or a bit, or bit slice:

```
StreamID[16]
StreamID[31:20]
```

In `rhs_expression`, numeric constants (or slices of numeric constants) are also allowed:

```
StreamID[16]=1
StreamID[16]=10[2]
```

A single symbol might be assigned from multiple non-contiguous arrays of bits from a mix of different RHS symbols:

```
StreamID[16]=1, StreamID[31:30]=ExtendedID[1:0],
StreamID[15:0]=UserFlags[31:16], ...
```

In those cases where a left hand symbol can also appear on the right hand side, it is possible to swap bits and transform the symbol. For example, the following expression swaps bits 0 and 1 of the `ExtendedID`:

```
ExtendedID[0]=ExtendedID[1], ExtendedID[1]=ExtendedID[0]
```

Any bits of the attributes that have no transform specified are retained from the input.

The `lhs_expression` and `rhs_expression` must have the same bit width.

## Iris and MTI instances for MMU\_720AE

This model has the following Iris instances:

## Ports for MMU\_720AE

**Table 3-1105: Ports**

Name	Protocol	Type	Description
axi_stream_msi_addr_to_match_s	Value_64	Slave	Any SMMU-originated MSI which exactly matches the address in this port will be sent through the AXI stream port axi_stream_msi_m which is usually connected to the GIC through axi_stream_msi_s. As MSIs are 32 bit aligned then if bits[1:0] != 0 or the address is above OAS then this is effectively disabled. NOTE that the model does not support tcu_sid[31:0] which is the MSI DeviceID to send on axi_stream_msi_m. Instead the parameter smmu_msi_device_id is used. See also the parameters: axi_stream_msi_TID and axi_stream_msi_TDEST. The default value of this port is set by the parameter axi_stream_msi_addr_to_match. This port is sampled at negedge of tcu_reset_in and must be set before the negedge of the reset signal.
axi_stream_msi_m	PVBus	Master	Manager port used for sending SMMU originated MSIs directly to the GIC
clk_in	ClockSignal	Slave	Clock signal (in RTL aclk) This is a clock time-base used by the TCU to spread some of its processing over time, if enabled by the wait_* parameters. The clock must always be connected.

Name	Protocol	Type	Description
cmd_sync_irpt_ns	Signal	Master	Pulsed interrupt output signal for non-secure CMD_SYNC having a completion signal of SIG_IRQ.
cmd_sync_irpt_r	Signal	Master	Pulsed interrupt output signal for realm CMD_SYNC having a completion signal of SIG_IRQ. This pin exists in r0 but is tied off to 0. It is implemented in r1.
cmd_sync_irpt_s	Signal	Master	Pulsed interrupt output signal for secure CMD_SYNC having a completion signal of SIG_IRQ.
event_q_irpt_ns	Signal	Master	Pulsed interrupt output signal for the non-secure event queue becoming non-empty.
event_q_irpt_r	Signal	Master	Pulsed interrupt output signal for the realm event queue becoming non-empty. This pin exists in r0 but is tied off to 0. It is implemented in r1.
event_q_irpt_s	Signal	Master	Pulsed interrupt output signal for the secure event queue becoming non-empty.
evento	Signal	Master	Event signal This aligns with the eventoreq signal on the RTL. The eventoack signal is not supported.
global_irpt_ns	Signal	Master	Pulsed interrupt output signal for non-secure SMMU_GERROR(N) signalling an error.
global_irpt_r	Signal	Master	Pulsed interrupt output signal for realm SMMU_R_GERROR(N) signalling an error. This pin exists in r0 but is tied off to 0. It is implemented in r1.
global_irpt_s	Signal	Master	Pulsed interrupt output signal for secure SMMU_S_GERROR(N) signalling an error.
gpf_far	Signal	Master	An error becomes active in SMMU_ROOT_GPF_FAR.
gpt_cfg_far	Signal	Master	An error becomes active in SMMU_ROOT_GPT_CFG_FAR.
identify	SMMUV3AEMIdentifyProtocol	Master	Map the transaction to the tuple (StreamID, SubStreamID, SubStreamIDValid, SSD) The StreamID that is produced by the implementation of this protocol is not the final StreamID. The final StreamID is produced by using the list_of_ns_sid_high_at_bitpos0/list_of_s_sid_high_at_bitpos0 parameter to map the StreamID based on the upstream port index. Also see the parameter howto_identify which can replace the functionality of this port under certain circumstances.
logptsz_s	Value	Slave	RME: This is a four bit signal that encodes the region size that a single LOGPT entry covers. The default value of this port is derived from the parameter rme_logpt_entry_covers_log2size_in_bytes which is in a different format to the port. If a valid value is driven then it will be put in the field SMMU_ROOT_GPT_BASE_CFG.LOGPTSZ. The port uses the same encoding as the field. If an invalid value is driven to this port and legacy_tz_en is low then the value is reported in the SMMU_ROOT_GPT_BASE_CFG.LOGPTSZ and then all transactions will fault with a GPT Configuration fault (gpt_cfg_far). This port is sampled at negedge of tcu_reset_in and must be set before the negedge of the reset signal.

Name	Protocol	Type	Description
legacy_tz_en	Signal	Slave	Tie this high to get non-RME behaviour. On the real hardware, then each of the TCUs and the TBUs have a legacy_tz_en and they must all be driven to the same value. In the model, we only have a single version of this pin. This port is sampled at negedge of tcu_reset_in and must be set before the negedge of the reset signal.
ns_gbpa_abort_init	Signal	Slave	This port is an Non-secure global bypass. The ns_gbpa_abort_init signal sets the reset value of SMMU_GBPA.ABORT: 0 - On reset, do not abort all incoming transactions. 1 - On reset, abort all incoming transactions. This port is sampled at negedge of tcu_reset_in and must be set before the negedge of the reset signal.
pri_q_irpt_ns	Signal	Master	Pulsed interrupt output signal for the non-secure PRI queue becoming non-empty.
pri_q_irpt_r	Signal	Master	Pulsed interrupt output signal for the realm PRI queue becoming non-empty. This pin exists in r0 but is tied off to 0. It is implemented in r1.
prog_pvbus_s	PVBus	Slave	Register subordinate port (in RTL PROG)
pvbus_id_routed_m[62]	PVBus	Master	This is a special "id-routed" port for transmitting ATC invalidates upstream into the PCIe EndPoints, it is not a normal bus. See parameter output_id_routed_transform. The FastModels ATC Invalidate and PRI Response protocol specifies how to route and deal with this port.
qtw_pvbus_m	PVBus	Master	Manager port used for Table Walks, MSIs and Queue access. Note that although this is a manager port, it can still receive DVM messages.
s_gbpa_abort_init	Signal	Slave	This port is an secure global bypass. The s_gbpa_abort_init signal sets the reset value of SMMU_S_GBPA.ABORT: 0 - On reset, do not abort all incoming transactions. 1 - On reset, abort all incoming transactions. This port is sampled at negedge of tcu_reset_in and must be set before the negedge of the reset signal.
sec_override	Signal	Slave	Allow certain registers to be accessible to non-secure accesses from reset, as described in the TCU_SCR register. This port is sampled at negedge of tcu_reset_in and must be set before the negedge of the reset signal.
sup_btm	Signal	Slave	System supports BTM and will be reflected in the IDR registers. This signal can override the value set by the parameters configuring the IDR registers. If BTM (Broadcast Table Maintenance) is not supported then DVM messages will be ignored. This port is sampled at negedge of tcu_reset_in and must be set before the negedge of the reset signal.
sup_cohacc	Signal	Slave	System supports COHACC and will be reflected in the IDR registers. This port is sampled at negedge of tcu_reset_in and must be set before the negedge of the reset signal.
sup_httu	Signal	Slave	System supports HTTU and will be reflected in the value of SMMU_IDR0.HTTU: - 0b00 (HTTU not supported) if sup_httu is 0 - 0b10 (update of AF and Dirty flags supported) if sup_httu is 1 The default value for this pin is 1. This port is sampled at negedge of tcu_reset_in and must be set before the negedge of the reset signal.

Name	Protocol	Type	Description
sup_sev	Signal	Slave	System supports SEV and will be reflected in the IDR registers. This signal can override the value set by the parameters configuring the IDR registers. This port is sampled at negedge of tcu_reset_in and must be set before the negedge of the reset signal.
tbm_pvbus_m[62]	PVBus	Master	The TBU manager ports that carry transactions that have been translated from the correspondingly numbered tbs_pvbus_s[] port.
tbs_pvbus_s[62]	PVBus	Slave	The TBU subordinate ports that receive transactions to be translated. They will exit the SMMU through the same numbered pvbus_m[] port.
tbu_crit_err[62]	Signal	Master	Critical error. This cannot occur in the model except by using an Integration Register to generate it.
tbu_fmurstdisable[62]	Signal	Slave	TBU Preserve FMU error record The TBUs have independent signals to enable a Warm Reset which preserves the state of the FMU node registers. Warm reset is enabled via the logical AND of the tbu_fmurstdisable signal and the rising edge of the tbu_reset_in signal. This signal must be asserted and stable prior to reset to enable a warm reset.
tbu_pmu_irpt[62]	Signal	Master	TBU Performance Monitoring Unit interrupt, one per TBU.
tbu_pmusnapshot_ack[62]	Signal	Master	PMU snapshot interface for the TBU, ack a snapshot.
tbu_pmusnapshot_req[62]	Signal	Slave	PMU snapshot interface for the TBU, request a snapshot.
tbu_ras_cri[62]	Signal	Master	Critical error interrupt for RAS events from the TBU. This is used for specific uncorrected errors where a System Coprocessor (SCP) might have to reset the system because the stability of the system can no longer be guaranteed. NOTE that in the MMU-720AE model this is called tbu_ras_et_cri.
tbu_ras_eri[62]	Signal	Master	Error Recovery Interrupt for RAS events from the TBU. This is used for uncorrected errors. NOTE that in the TRM of MMU-720AE model this is called tbu_ras_et_eri.
tbu_ras_fhi[62]	Signal	Master	Fault Handling Interrupt for RAS events from the TBU. Usually this is for corrected errors. NOTE that in the TRM of MMU-720AE model this is called tbu_ras_et_fhi.
tbu_ras_lt_cri[62]	Signal	Master	Level triggered critical error interrupt for RAS events from the TBU.
tbu_ras_lt_eri[62]	Signal	Master	Level triggered error recovery interrupt for RAS events from the TBU.
tbu_ras_lt_fhi[62]	Signal	Master	Level triggered fault handling interrupt for RAS events from the TBU.
tbu_ras_lt_irpt_v[62]	Signal	Master	Level triggered valid output for connection to System RAS agents. Asserted when the RAS record contains at least one valid error.

Name	Protocol	Type	Description
tbu_reset_in[62]	Signal	Slave	Reset signals The TBUs can have independent reset signals. However, TCU reset will result in the reset of all TBUs. This behavior is unlike SMMU RTL implementations which do allow for independent reset of the TCU separate from TBUs. Each signal tbu_reset_in[n] corresponds to the TBU using tbs_pvbus_s[n]/tbs_pvbus_s[n] pair. If the SMMU receives a transaction whilst the TBU is expected to be in reset then it will complain using the ArchMsg.Warning.warning trace source. Those tbu_reset_in that correspond to a PCIe-RC connection can be connected to monitor the PCIe-RC's reset signal. If it receives an ATS request when in reset then it will complain in a similar way. You must connect these pins if you wish the TCU_NODE_STATUS for the nodes to be accurate (including any connected to the PCIe-RC).
tcu_fmurstdisable	Signal	Slave	TCU Preserve FMU error record The TCU has an independent signal to enable a Warm Reset which preserves the state of the FMU node registers. Warm reset is enabled via the logical AND of the tcu_fmurstdisable signal and the rising edge of the tcu_reset_in signal. This signal must be asserted and stable prior to reset to enable a warm reset.
tcu_pmu_irpt	Signal	Master	TCU Performance Monitoring Unit interrupt
tcu_pmusnapshot_ack	Signal	Master	PMU snapshot interface for the TCU, ack a snapshot.
tcu_pmusnapshot_req	Signal	Slave	PMU snapshot interface This is a four-phase handshake to have the corresponding PMCG perform a capture of the current counter values. PMU snapshot interface for the TCU, request a snapshot.
tcu_ras_cri	Signal	Master	Critical error interrupt for RAS events from the TCU. This is used for specific uncorrected errors where a System Coprocessor (SCP) might have to reset the system because the stability of the system can no longer be guaranteed. NOTE that in the TRM of MMU-720AE model this is called tcu_ras_et_cri.
tcu_ras_eri	Signal	Master	Error Recovery Interrupt for RAS events from the TCU. This is used for uncorrected errors. NOTE that in the TRM of MMU-720AE model this is called tcu_ras_et_eri.
tcu_ras_fhi	Signal	Master	Fault Handling Interrupt for RAS events from the TCU. Usually this is for corrected errors. NOTE that in the TRM of MMU-720AE model this is called tcu_ras_et_fhi.
tcu_ras_lt_cri	Signal	Master	Level triggered critical error interrupt for RAS events from the TCU.
tcu_ras_lt_eri	Signal	Master	Level triggered error recovery interrupt for RAS events from the TCU.
tcu_ras_lt_fhi	Signal	Master	Level triggered fault handling interrupt for RAS events from the TCU.
tcu_ras_lt_irpt_v	Signal	Master	Level triggered valid output for connection to System RAS agents. Asserted when the RAS record contains at least one valid error.
tcu_reset_in	Signal	Slave	The reset signal to the TCU interface.

## Parameters for MMU\_720AE

### **TCUCFG\_DPT\_SUPPORT**

#### **Type**

bool

#### **Default value**

true

MMU-S3 r1 Parameter Only: Enable Device Permission Table (DPT), a mechanism to enforce the association between granules of physical address space and the memory footprint of virtual machines.

#### **0**

Realm DPT is disabled

#### **1**

Realm DPT is enabled (default)

### **TCUCFG\_DVM\_VAS**

#### **Type**

uint32\_t

#### **Default value**

53

Virtual address size used by the system. Once set, this value is discoverable using `TCU_SYSDISC35.TCUCFG_DVM_VAS`.

In hardware, it is important to get this parameter correct as it determines the DVM message format. If this doesn't match the PEs, DVM messages are misinterpreted and any TLBI operations performed are incorrectly applied.

The model uses a representation of DVM that does not depend on the VA size and so misconfiguring this has no effect other than on the system discovery register value. Accepted Values: 49 53

### **TCUCFG\_MECID\_WIDTH**

#### **Type**

uint32\_t

#### **Default value**

16

Memory Encryption Context (MEC) is a feature introduced in MMU-S3. The MECID is a 1-16 bit identifier that, if implemented, supports Memory Encryption Contexts for the Realm programming interface. The given value indicates the number of bits in the MECID. A value of 0 will disable MEC. Accepted Values: 0 4 8 12 16

**TCUCFG\_PARTID\_WIDTH****Type**

unsigned

**Default value**

9

The width of the MPAM PARTID on the bus.

The value 10 is just for MMU\_S3 r1.

See also parameter mpam\_attribute\_transform. Accepted Values: 1 6 9 10

**TCUCFG\_XLATE\_SLOTS****Type**

uint32\_t

**Default value**

512

Maximum number of outstanding stalled transactions that the SMMU supports.

**Note**

TCUCFG\_XLATE\_SLOTS must be  $\geq$  TCUCFG\_PTW\_SLOTS which is currently fixed to 512.

---

Accepted Values: 512 1024 2048 4096

**all\_error\_messages\_through\_trace****Type**

bool

**Default value**

false

Some conditions in the SMMU are so strange that the software programming the SMMU has done something wrong. At this point messages are output to either `ArchMsg.Error.*` or `ArchMsg.Warning.*` or to the error stream of the simulator. Outputting to the error stream of the simulator may cause it to return with a non-zero exit status.

If you set this option to true then instead of using the error stream of the simulator it will always use a trace stream allowing the simulation to exit with a zero exit status.

**axi\_stream\_msi\_TDEST****Type**

uint32\_t

**Default value**

0

ID of the AXI stream subordinate port on the GIC that receives SMMU originated MSIs sent directly. The name of the GIC port is `axi_stream_msi_s`.

**Note**

If `axi_stream_msi_addr_to_match[1:0] != 0`, or the address is above OAS then this is effectively disabled.

See also:

- `axi_stream_msi_addr_to_match`
- `axi_stream_msi_TID`

**`axi_stream_msi_TID`****Type**`uint32_t`**Default value**

0

ID of the AXI stream manager port that sends SMMU TCU originated MSIs directly to the GIC. The name of the SMMU port is `axi_stream_msi_m`.

**Note**

If `axi_stream_msi_addr_to_match[1:0] != 0`, or the address is above OAS then this is effectively disabled.

See also:

- `axi_stream_msi_addr_to_match`
- `axi_stream_msi_TDEST`

**`axi_stream_msi_addr_to_match`****Type**`uint64_t`**Default value**`0xFFFFffffffFFFFFF`

If the last two bits are 0, any SMMU-originated MSI which exactly matches the address will be sent through the AXI stream port `axi_stream_msi_m` which is usually connected to the GIC.

This parameter drives the value of the `axi_stream_msi_addr_to_match_s` port at simulation reset. For every reset after that, the value of the port will be sampled and used if changed.

**Note**

The entire address must match, including bits [1:0]. As MSIs are 32 bit aligned then if `axi_stream_msi_addr_to_match[1:0] != 0`, or the address is above OAS then this is effectively disabled.

See also:

- `axi_stream_msi_TID`
- `axi_stream_msi_TDEST`

### **behaviour\_of\_sampled\_at\_reset\_signals**

#### **Type**

unsigned

#### **Default value**

0

Some configuration signals into the SMMU are sampled on negedge of reset.

However, it can sometimes be hard to arrange to drive a configuration pin before the negedge of reset.

The configuration pins are sampled:

**0**

at negedge reset.

**1**

at negedge reset, but if a later change occurs at the same simulated time, and no transactions have occurred, then they will be resampled and the SMMU reset again.

### **cmdq\_max\_number\_of\_commands\_to\_buffer**

#### **Type**

uint32\_t

#### **Default value**

10

The command queues can buffer fetched commands before issuing them. This parameter is roughly the maximum number of commands to do this for. The programmer visible effects are that just because the CONS pointer shows a command has been consumed does not necessarily mean that it has been issued (and completed). Higher values accentuate this effect.

**enable\_device\_id\_checks****Type**

bool

**Default value**

true

If this parameter is true then the DeviceIDs seen by the GIC are:

- **for client devices**

$$\text{DeviceID} = \text{StreamID} + \text{translated\_device\_id\_base}$$

- **for SMMU-generated MSIs**

$$\text{smmu\_msi\_device\_id}$$

This parameter enables two checks:

- If the DeviceID is used in the `output_attribute_transform` parameter, if it overflows 32 bits then the model warns. If the DeviceID is not used, it is assumed that the external agent that forms the DeviceID warns if it overflows.
- If the SMMU supports MSIs, the model checks that the GIC is able to distinguish an MSI generated by the SMMU from one generated by a client device.

As the exact mechanism to determine the DeviceID is in the system and not necessarily under control of the SMMU then you can disable these warnings using this parameter.

See also the parameters: `output_attribute_transform` and `msi_attribute_transform`.

**hide\_warning\_ACCESSEN\_GPCEN\_set\_to\_1\_in\_a\_single\_write****Type**

bool

**Default value**

false

The architecture recommends against setting `SMMU_ROOT_CR0.ACCESSEN` and `SMMU_ROOT_CR0.GPCEN` to 1 in the same write if it is possible that a concurrent client device transaction could appear at the SMMU. This is because there could be a time window where the client device transaction sees effective values `ACCESSEN == 1` and `GPCEN == 0` and so would bypass GPC checking.

If your system cannot generate this possibility then you can set this parameter to true and turn off the warning that software has set both `ACCESSEN` and `GPCEN` to 1 at the same time.

**hide\_warning\_E0PD\_differs\_from\_what\_would\_be\_cached****Type**

bool

**Default value**

false

When this parameter is set to true, warnings that the effective EOPD value differs from what would be cached in the TLB are disabled. False (warnings are showed) by default.

### **hide\_warning\_NoStreamID\_transaction\_for\_unsupported\_PAS\_or\_MPAM\_SP**

#### **Type**

bool

#### **Default value**

false

When RME is not supported then a NoStreamID transaction with `PAS[1] == 1` or `MPAM_SP[1] == 1` is treated as though `PAS[1] == 0` and `MPAM_SP[1] == 0`. This is usually a system construction error and is not expected to occur.

The SMMU warns when this occurs, but the warning can be hidden by setting this parameter.

### **howto\_identify**

#### **Type**

string

#### **Default value**

"use-identify"

If `use-identify` then the SMMU uses the `identify` port to determine the `ssd`, `streamID`, `subStreamID`. Otherwise, this string extracts them from the transaction's attributes.

Examples:

```
SEC_SID=ExtendedID[63], SSV=ExtendedID[62], SubstreamID=ExtendedID[51:32],
StreamID=ExtendedID[31:0]
```

or

```
nSEC_SID=ExtendedID[63], StreamID=ExtendedID[55:24], nSSV=ExtendedID[20],
SubstreamID=ExtendedID[19:0]
StreamID[31:24]=0, StreamID[23:0]=ExtendedID[23:0], SSV=1[0], ...
```

#### **Note**

If you are not using the `use-identify` option then the configuration string is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

LHS Symbols:

#### **SIDV**

Indicates that the StreamID is valid.

**SSV**

Indicates that the SubstreamID is valid.

**SEC\_SID / SEC\_SID\_bit\_1**

Bits 0 and 1 respectively of the StreamID Security State

**StreamID**

(32 b) valid if `SIDV` is 1 or both `SIDV` and `nSIDV` are unused.

**SubstreamID**

(20 b) is valid if `ssv` is true.

**nSEC\_SID / nSEC\_SID\_bit\_1 / nSSV / nSIDV**

Negative logic of above parameters. Different attributes are independent and can use negative or positive logic.

RHS Symbols:

**ExtendedID / ManagerID64 / MasterID / UserFlags**

Incoming PVBUS transaction attributes

`SEC_SID` is 1b in the model. For RME systems, in hardware, then `SEC_SID` is 2b, in the model `SEC_SID_bit_1` represents bit[1].

`SIDV == 0` indicates a NoStreamID transaction and the SSD is the PAS of the transaction, `SEC_SID` is not used.

Negative and positive logic symbols for the same attribute is an error.

The model uses the term SSD (Security State Determination) to mean which security state the transaction, register, structure, event, etc. belongs to.

In the SMMUV3 Architecture, the side-band signal `SEC_SID` holds the information for the transactions, but uses a different encoding.

Before RME, `SEC_SID` was a one bit signal. With RME, in the hardware, it was expanded to 2b. To retain backwards compatibility in the model, `SEC_SID` remains as 1b in this parameter, but the second bit can be expressed with `SEC_SID_bit_1` (and its negative logic version `nSEC_SID_bit_1`)

Security state	SSD	SEC_SID_bit_1	SEC_SID
secure	0	0	1
non-secure	1	0	0
root (reserved)	2	1	1
realm	3	1	0

For those systems that support NoStreamID transactions, and `howto_identify` is not using the port, first the SMMU determines the value of `SIDV` or `nSIDV` to see if the transaction is a NoStreamID transaction (`SIDV == 0` or `nSIDV == 1`). If so then the rest of the `howto_identify` string is ignored as the information extracted relates only to StreamID transactions. Instead more information is extracted using the parameter `howto_identify_NoStreamID_extra_info`.

In AMBA systems, the equivalent signal to `SIDV` is called either `ARMMUVALID` or `AWMMUVALID`. Collectively they are known as `AxMMUVALID`.

### **howto\_identify\_NoStreamID\_extra\_info**

#### **Type**

string

#### **Default value**

""

The behavior of this parameter depends on `howto_identify`

- if it equals 'use-identify' then this must be "", otherwise there is an error.
- if it identifies a NoStreamID transaction (`SIDV=0`) then this parameter includes one or more of
  - `MPAM_SP`
  - `MPAM_PARTID`
  - `MPAM_PMG`
  - `MECID`
  - `HWATTR_KIND_0`
- in any other case, this parameter is ignored.

Fields set in this parameter must not overlap the `SIDV/NSIDV` fields in `howto_identify`

Example:

```
MPAM_PMG[7:0]=ExtendedID[62:55], MPAM_PARTID[15:0]=ExtendedID[54:39],
MPAM_SP[1:0]=ExtendedID[38:37], MECID[15:0]=UserFlags[31:16]
HWATTR_KIND_0[3:0]=ExtendedID[42:39]
```

Note

The parameter is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

### **ish\_is\_osh\_DANGER**

#### **Type**

bool

#### **Default value**

true

When set, any transaction that would use the architectural inner shareable domain is converted to use the outer shareable domain.

This parameter should match the equivalent `ish_is_osh` from the PE. If an incompatible value of the `ish_is_osh` parameter is configured for the PE and the SMMU, data coherency may be compromised.

All implementations should have this parameter as true but it is allowed in the model to give it a false value for modelling and debug purposes only.

### **legacy\_tz\_en**

#### **Type**

bool

#### **Default value**

false

The default value of the `legacy_tz_en` pin:

**0**

RME is enabled

**1**

RME is disabled

### **list\_of\_ns\_sid\_high\_at\_bitpos0**

#### **Type**

string

#### **Default value**

{}()

A comma-separated list of values to bitwise OR into each Non-secure StreamID for each TBU/Node. Bit 0 of the value corresponds to bit 0 of the StreamID.

Each TBU that is connected to a PCIe-RC (see `list_of_pcie_rc`) must serve a unique contiguous subset of StreamIDs as determined by their top bits. This is used in order to know which port to route ATC Invalidates and PRI Responses to the PCIe subsystems. The effective value for any PCIe-RC ports must be the same for non-secure and realm. See `list_of_r_sid_high_at_bitpos0`.

The empty string corresponds to all 0s.

### **list\_of\_pcie\_mode**

#### **Type**

string

**Default value**

""

A comma-separated list of ranges of ports that represent TBUs that are attached to PCIe Root Complexes (PCIe-RC). A single PCIe-RC might use several TBUs and stripe accesses across them. The attribute handling for these TBUs is slightly different in that if the PCIe transaction is NoSnoop and the output attributes of the translation would be weaker than `INC-ONC-OSH` then the output is forced to `INC-ONC-OSH`.

`INC-ONC-OSH` == "inner normal non-cacheable, out normal non-cacheable, outer shared"

**list\_of\_pcie\_rc****Type**

string

**Default value**

""

This is a list of ports that are connected to PCIe Root Complex (PCIe-RC) by a protocol called DTI-ATS. This port is used to transport ATS and PRI Requests to the SMMU from the PCIe-RC.

In the real hardware, the PCIe-RC uses this port for ATS/PRI, and the actual transactions go through separate TBUs. In the model, this port can accept actual transactions as well. However, in the model, then the ATC Invalidates and the PRI Responses need to be transferred over the corresponding `pvbus_id_routed_m` port as DTI-ATS is bidirectional, but PVBus is not.

**list\_of\_r\_sid\_high\_at\_bitpos0****Type**

string

**Default value**

""

A comma-separated list of values to bitwise OR into each Realm StreamID for each TBU/Node. Bit 0 of the value corresponds to bit 0 of the StreamID. This only has an effect for r1 and later.

Each TBU that is connected to a PCIe-RC (see `list_of_pcie_rc`) must serve a unique contiguous subset of StreamIDs as determined by their top bits. This is used in order to know which port to route ATC Invalidates and PRI Responses to the PCIe subsystems. The effective value for any PCIe-RC ports must be the same for non-secure and realm. See `list_of_ns_sid_high_at_bitpos0`.

The empty string corresponds to all 0s.

"use-ns" can be used to apply the `list_of_ns_sid_high_at_bitpos0` values instead.

**list\_of\_s\_sid\_high\_at\_bitpos0****Type**

string

## Default value

""

A comma-separated list of values to bitwise OR into each Secure StreamID for each TBU/Node. Bit 0 of the value corresponds to bit 0 of the StreamID.

The empty string corresponds to all 0s.

use-ns can be used to apply the `list_of_ns_sid_high_at_bitpos0` values instead.

## mec\_attribute\_transform

### Type

string

### Default value

""

Note

The parameter is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

If MEC is supported, this is applied to *all* downstream transactions to transport the MEC information.

- "" or "none" – no transform
- How to alter the output attributes. Example:

```
"UserFlags[31:16]=MECID[15:0]"
```

RHS/LHS Symbols:

- ExtendedID/ManagerID64/MasterID/UserFlags.

RHS Symbols:

- MECID

Any bits with no transform are unchanged.

Attribute transforms applied before this:

Note

- for client transactions `output_attribute_transform / output_attribute_transform_for_NoStreamID`.
- for table walks `tw_qs_attribute_transform`.
- for MSIs `msi_attribute_transform`.
- if MPAM is enabled `mpam_attribute_transform`.

**mpam\_attribute\_transform****Type**

string

**Default value**

"ExtendedID[62:55]=MPAM\_PMG, ExtendedID[54:39]=MPAM\_PARTID,  
ExtendedID[38]=MPAM\_NS"

**Note**

The parameter is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

If MPAM is supported, this is applied to *all* downstream transactions to transport the MPAM information.

- "" or "none" – no transform
- How to alter the output attributes. Example:

```
"ExtendedID[62:55]=MPAM_PMG, ExtendedID[54:39]=MPAM_PARTID,  
ExtendedID[38]=MPAM_SP[0]"
```

RHS/LHS Symbols:

- ExtendedID/ManagerID64/MasterID/UserFlags.

RHS Symbols:

- MPAM\_PARTID
- MPAM\_PMG
- MPAM\_NS
- MPAM\_SP
- numeric literals

Any bits with no transform are unchanged.

**Note**

- attribute transforms applied before this:
  - for client transactions `output_attribute_transform / output_attribute_transform_for_NoStreamID`.
  - for table walks `tw_qs_attribute_transform`.
  - for MSIs `msi_attribute_transform`.
- `mec_attribute_transform` is applied after this.
- for translated transactions from client devices then `MPAM_NS = ! SEC_SID`.

**msi\_attribute\_transform****Type**

string

**Default value**

"ExtendedID[31:0]=smmu\_msi\_device\_id, ManagerID64[31:0]=0xFFFFffff"

Transform downstream attributes of MSI transactions.

The parameter is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

- "" or "none" – no transform
- How to alter output attributes of SMMU-generated MSIs. Example:

```
"UserFlags[15:0]=smmu_msi_device_id[31:16],
ManagerID64[15:0]=smmu_msi_device_id[15:0],
ExtendedID=0"
```

LHS Symbols:

**ExtendedID / ManagerID64 / MasterID / UserFlags**

Outgoing PVBUS transaction attributes

RHS Symbols:

**smmu\_msi\_device\_id**

The value stored in the parameter with the same name

**interrupt\_kind**

The selected bit corresponds to the interrupts listed below

**0/1**

EVENTQ s/ns

**2**

PRIQ

**3/4**

CMD\_SYNC s/ns

**5/6**

GERROR s/ns

**7/8**

PMCG s/ns

**9/10/11**

RAS FHI/ERI/CRI

**12/13**

gpf\_far/gpt\_cfg\_far

**14/15/16/17**

Realm EVENTQ/PRIQ/CMDQ/GERROR

**HWATTR\_KIND\_0**

PBHA information

**Numeric Literals**

Any number. Ex: 0x1234

ExtendedID/ManagerID64/MasterID/UserFlags start with values {0, 0xFFFFffff, 0xFFFFffff, 0} respectively.

Any bits with no transform are unchanged.

This transform can be used to determine the DeviceID passed to the GIC to distinguish MSIs generated by the SMMU from those generated by client devices.

**Note**

See also `output_attribute_transform` and `enable_device_id_checks`.

---

**Note**

After 11.25 the `interrupt_kind` field was extended to 5 bits. This is strictly a non-backwards compatible change. However, the original 3 bits were insufficient to express all the interrupt kinds that exist.

---

**normalize\_input\_normal\_non\_iWB\_oWB\_to\_iNC\_oNC\_osh\_DANGER****Type**

bool

**Default value**

true

When set, use Inner Non Cacheable, Outer Non Cacheable, Outer Shareable for any upstream transaction that would use any of the following attributes:

- Normal Non-cacheable Bufferable
- Normal Non-cacheable Non-bufferable
- Write-through

**Note**

This parameter should match the equivalent configuration from the PE. If an incompatible value of this parameter is configured for the PE and the SMMU, data coherency may be compromised.

All implementations should have this parameter as true but it is allowed in the model to give it a false value for modelling and debug purposes only.

### **ns\_gbpa\_abort\_init**

#### **Type**

bool

#### **Default value**

false

The default value of the tie off signal `ns_gbpa_abort_init`

### **number\_of\_ports**

#### **Type**

unsigned

#### **Default value**

1

The number of port pairs that the SMMU has.

### **output\_attribute\_transform**

#### **Type**

string

#### **Default value**

"ExtendedID[31:0]=DeviceID"

Transform downstream attributes of StreamID transactions.

**Note**

The parameter is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

- "" or "none": no transform
- How to alter output attributes. Example:

```
"ExtendedID[15:0]=DeviceID[15:0], UserFlags[31]=nSSV,
UserFlags[19:0]=SubstreamID,
ManagerID64[10]=ManagerID64[11], ManagerID64[11]=ManagerID64[10]"
```

RHS/LHS Symbols:

**ExtendedID / ManagerID64 / MasterID / UserFlags**  
Incoming/Outgoing PVBUS transaction attributes

RHS Symbols:

**DeviceID**  
StreamID + translated\_device\_id\_base

**StreamID / SubstreamID / SEC\_SID / SEC\_SID\_bit\_1 / SIDV / SSV**  
Architectural information. See parameter `howto_identify` for more information.

**nSEC\_SID / nSEC\_SID\_bit\_1 / nSSV / nSIDV**  
Negative logic of above parameters. Different attributes are independent and can use negative or positive logic.

**st1PBHA / st2PBHA**  
Page Based Hardware Attributes from leaf descriptors (zero if unused).

**STE\_IMPDEF1**  
STE[127:116]

**HWATTR\_KIND\_0**  
PBHA information

**Numeric Literals**  
Any number. Ex: 0x1234

The `streamID` has had `ns_sid_high/s_sid_high/r_sid_high` ORred into it for the appropriate TBU.

- `mpam_attribute_transform` and `mec_attribute_transform` are applied in order after this.
- See also `output_attribute_transform_for_NoStreamID` for NoStreamID transactions.

**output\_attribute\_transform\_for\_NoStreamID**

**Type**  
string

**Default value**  
"ExtendedID[31:0]=0, ExtendedID[32]=1"

The parameter is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

Transform downstream attributes of NoStreamID transactions.

- "" or "none": no transform
- How to alter output attributes. Example:

```
"ExtendedID[15:0]=0, UserFlags[31]=1, UserFlags[19:0]=0,
ManagerID64[10]=ManagerID64[11],
ManagerID64[11]=ManagerID64[10] ManagerID64[9:6]=HWATTR_KIND_0"
```

RHS/LHS Symbols: \* ExtendedID/ManagerID64/MasterID/UserFlags: incoming/outgoing attributes.

RHS Symbols: \* SIDV = 0, nSIDV = 1 (fixed values to indicate NoStreamID) \* PAS \*  
HWATTR\_KIND\_0

Any bits with no transform are unchanged.

Note

- mpam\_attribute\_transform and mec\_attribute\_transform are applied in order after this.
- see also output\_attribute\_transform for StreamID transactions.

## output\_id\_routed\_transform

### Type

string

### Default value

"Address[27:12]=StreamID[15:0], PAS=SSD"

Note

The parameter is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

The SMMU generates the following ID-routed transaction on the pvbus\_id\_routed\_m bus:

- ATC Invalidate
- PRI Response

This parameter controls how the SMMU should express:

- the StreamID
- the Trusted (T) bit

The value is a comma-separated list of assignments:

```
Address[27:12]=StreamID[15:0], ExtendedID[60]=T, ExtendedID[15:0]=StreamID[31:16]
```

Address bits[11:0] cannot be used.

The LHS can be one of:

- PAS
- MasterID / ManagerID64 / ExtendedID / UserFlags
- Address

The RHS can be one of:

- a numeric constant
- SSD
- T or negative version nT
- StreamID

For realm (or 'Trusted') transactions, then  $ssd=0b11$ ,  $T=1$ ,  $nT=0$ . For non-secure (or 'Non-Trusted') transactions, then  $ssd=0b01$ ,  $T=0$ ,  $nT=1$ .

### **prefetch\_only\_requests**

#### **Type**

unsigned

#### **Default value**

0

The simulator supports 'prefetch-only' DMI requests, which can occur at any time and for any reason and are intended to be invisible to the end execution of the model and to the user.

#### **0**

deny all prefetch-only requests

#### **1**

- use debug requests for any page table walks
  - form and use debug TLB/cache entries
  - any faults will not record, but deny the prefetch request

#### **2**

- treat prefetch-only requests like normal transactions
  - use normal page table walk transactions
  - use and form normal TLB/cache entries
  - faults will alter the programmer-visible state of the SMMU

0 is the safest.

1 treats the access like a debug request and requires that debug page table walks are treated correctly downstream. Any descriptors that need HTTU to allow the transaction to proceed will fail the request.

2 is dangerous, it uses real transactions and reports faults that are unphysical. Real transactions can be `wait()`ed and this disobeys the SystemC spec for `get_direct_mem_ptr()`.

### **rme\_10gpt\_entry\_covers\_log2size\_in\_bytes**

#### **Type**

uint32\_t

#### **Default value**

30

Each LOGPT entry covers:

```
2**rme_10gpt_entry_covers_log2size_in_bytes
```

bytes of address space.

The valid values for this parameter are: 30, 34, 36, 39

This parameter is reported in an encoded format as the read-only field:

```
SMMU_ROOT_GPT_BASE_CFG.LOGPTSZ
```

This parameter can be overridden by the port `10gptsz_s` when sampled on negedge of reset.

### **s\_gbpa\_abort\_init**

#### **Type**

bool

#### **Default value**

false

The default value of the tie off signal `s_gbpa_abort_init`

### **sec\_override**

#### **Type**

bool

#### **Default value**

false

The IMP DEF port `sec_override` controls whether some of the registers are accessible to secure or non-secure/realms transactions. This parameter is the default value assumed for that port if the port is not driven by a signal.

### **seed**

#### **Type**

uint32\_t

**Default value**

0x12345678

Used to seed the pseudo-random number generator that the SMMU model uses.

**size\_of\_cd\_cache****Type**

uint32\_t

**Default value**

0

The number of entries in the cache holding CD structures. If this is zero it is treated as a large number ('infinite') but it is bounded so that the host memory usage of the cache is also bounded.

**size\_of\_dpttlb****Type**

uint32\_t

**Default value**

0

The number of entries in the DPT TLB. If this is zero then it is treated as a large number ('infinite') but it is bounded so that the host memory usage of the cache is also bounded.

**size\_of\_l1cd\_cache****Type**

uint32\_t

**Default value**

0

The number of entries in the cache holding L1CD descriptors. If this is zero it is treated as a large number ('infinite') but it is bounded so that the host memory usage of the cache is also bounded.

**size\_of\_l1ste\_cache****Type**

uint32\_t

**Default value**

0

The number of entries in the cache holding L1STE descriptors. If this is zero it is treated as a large number ('infinite') but it is bounded so that the host memory usage of the cache is also bounded.

**size\_of\_ste\_cache****Type**

uint32\_t

**Default value**

0

The number of entries in the cache holding STE structures. If this is zero it is treated as a large number ('infinite') but it is bounded so that the host memory usage of the cache is also bounded.

**size\_of\_tlb****Type**

uint32\_t

**Default value**

0

The number of entries in the TLB. If this is zero it is treated as a large number ('infinite') but it is bounded so that the host memory usage of the cache is also bounded.

**smmu\_msi\_device\_id****Type**

uint32\_t

**Default value**

0

When appropriately enabled, assume that MSIs that are generated by the SMMU are presented to the GIC with this DeviceID.

See parameters `msi_attribute_transform` and `enable_device_id_checks`.

**sup\_btm****Type**

bool

**Default value**

true

The default value of the register field `SMMU_IDR0.BTM` and `SMMU_ROOT_IDR0.BGPTM` (when supported). This enables Broadcast TLB maintenance.

**sup\_cohacc****Type**

bool

**Default value**

true

The default value of the register `SMMU_IDR0.COHAAC`

### **sup\_httu**

#### **Type**

bool

#### **Default value**

true

The initial value of the `sup_httu` port. See the port description for `sup_httu`.

### **sup\_oas**

#### **Type**

unsigned

#### **Default value**

6

The hardware has an input port `sup_oas[2:0]` that indicates what output address size (OAS) the system has. This is sampled at reset.

The model does not have this port as it is expected to be a constant for the system and not to change. Instead it is just a parameter.

The allowed values are:

**0**

32 bits

**1**

36 bits

**2**

40 bits

**3**

42 bits

**4**

44 bits

**5**

48 bits

**6**

52 bits

### **sup\_sev**

#### **Type**

bool

**Default value**

true

The default value of the register `SMMU_IDR0.SEV`

**tlb\_when\_do\_f\_tlb\_conflict\_on\_overlap****Type**

unsigned

**Default value**

0

If a TLB entry is created by a walk and it overlaps an existing entry, there are some architectural situations where the result is known. For all others, then an implementation is allowed to use an **UNPREDICTABLE** combination of the two entries, or it can generate `F_TLB_CONFLICT`:

**0**

never generate

**1**

sometimes generate

**2**

always generate

Conflicts between global and non-global entries are not detected by the model.

**translated\_device\_id\_base****Type**

uint32\_t

**Default value**

0

When appropriately enabled, assume that client device accesses are translated to a DeviceID as seen by the GIC of:

```
StreamID + translated_device_id_base
```

See parameter `output_attribute_transform` and `enable_device_id_checks`.

**tw\_qs\_attribute\_transform****Type**

string

**Default value**{}  
(0)

Transform downstream attributes of table walk and queue transactions.

The parameter is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

- "" or "none" – no transform
- How to alter the output attributes. Example:

```
"ExtendedID[35:32]=HWATTR_KIND_0"
```

RHS/LHS Symbols:

**ExtendedID / ManagerID64 / MasterID / UserFlags**

Incoming/Outgoing PVBUS transaction attributes

RHS Symbols:

**HWATTR\_KIND\_0**

PBHA information

**kind**

Transaction kind

- For a read:

**0/1**

L1STE/STE

**2/3**

L1CD/CD

**4/5**

S1/S2 TTD (including CAS)

**6**

CMDQ

**7**

VMS

**11/12**

LOGPT/L1GPT

**13/14**

LODPT/L1DPT

- For a write:

**0**

EVENTQ

**1**

PRIQ

ExtendedID/ManagerID64/MasterID/UserFlags start with values {0, 0xFFFFffff, 0xFFFFffff, 0} respectively.

Any bits with no transform are unchanged.

See also `output_attribute_transform` and `msi_attribute_transform`.

---

## **version**

### **Type**

string

### **Default value**

"r0p0"

The version of this product.

Valid values are:

- r0p0
- r1p0

## **wait\_cmdq\_ticks**

### **Type**

uint64\_t

### **Default value**

0

This is the time to wait before doing something on the command queue. If bit 32 is set (0x1\_0000\_0000) then the time waited for is a uniform randomly distributed time  $[0, \max(2, (t \& 0xFFFFffff)) - 1]$ .

## **wait\_eventq\_ticks**

### **Type**

uint64\_t

### **Default value**

0

This is the time to wait before doing something on the event queue. If bit 32 is set (0x1\_0000\_0000) then the time waited for is a uniform randomly distributed time  $[0, \max(2, (t \& 0xFFFFffff)) - 1]$ .

**wait\_misc\_async\_actions\_ticks****Type**

uint64\_t

**Default value**

0

This is the time to wait before doing an async action that could be delayed is performed. If bit 32 is set (0x1\_0000\_0000) then the time waited for is a uniform randomly distributed time  $[0, \max(2, (t \ \& \ 0xFFFFFFFF)) - 1]$ .

**wait\_msi\_ticks****Type**

uint64\_t

**Default value**

0

This is the time to wait before sending an MSI. If bit 32 is set (0x1\_0000\_0000) then the time waited for is a uniform randomly distributed time  $[0, \max(2, (t \ \& \ 0xFFFFFFFF)) - 1]$ .

**wait\_pri\_req\_ticks****Type**

uint64\_t

**Default value**

0

This is the time to wait before processing a PRI Request. If bit 32 is set (0x1\_0000\_0000) then the time waited for is a uniform randomly distributed time  $[0, \max(2, (t \ \& \ 0xFFFFFFFF)) - 1]$ .

**wait\_pri\_resp\_ticks****Type**

uint64\_t

**Default value**

1

This is the time to wait before sending a PRI Response back to the PCIe subsystem. When a PRI Response is an auto-response then the ATC might immediately make a new ATS request, that immediately fails, immediately makes a PRI Request, or auto-responds, etc. To break this loop, then we introduce a minimum time on all PRI Responses to give other components in the system a chance to run. If bit 32 is set (0x1\_0000\_0000) then the time waited for is a uniform randomly distributed time  $[0, \max(2, (t \ \& \ 0xFFFFFFFF)) - 1]$ .

### 3.10.65 MMU\_S3

This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1107: IP revisions support**

Revision	Quality level
r0p0	Full support
r1p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### Changes in 11.29.19

Parameters added:

- `hide_warning_ACCESSEN_GPCEN_set_to_1_in_a_single_write`

#### Limitations

- No power control
- AMBA stash operations, destructive read and destructive hint operations are not supported on PVBUS and also are not supported by the device.
- The PMU has limited functionality. Only a subset of the architecturally mandatory events are supported, as indicated by the `SMMU_PMCB_CBEID0` fields. The PMU is intended for demonstration purposes only and for driver development.
- Limited RAS support
- The SYSCO interface is not implemented
- The low power interface is not implemented
- The IMP DEF MPAM register file is not implemented. This controls how the internal resources of the MMU-S3 are partitioned.
- `tcu_sid[31:0]` is not modelled, instead the parameter `smmu_msi_device_id` is used.
- The HWATTR side-band signal is available by configuring `output_attribute_transform`, `msi_attribute_transform` and `tw_qs_attribute_transform` with `HWATTR_KIND_0`. For some transactions HWATTR comes from the `SMMU_S_AGBPA[3:0]`. In the hardware, this register has an 'Update' bit[31] that should be written as 1 and will be turned to zero when all transactions using the old value have completed. The model does not implement this behavior and the Update bit is **RAZ/WI**.
- Any configuration parameter listed in the TRM but not shown in this file is not supported.
- `TCU_CTRL_AUX0-55` registers are modeled but unlike the TRM, reset values for these registers are 0. There is no functionality associated with these registers.
- There is no functionality associated with `TCU_ROOT_CTRL` register field `DIS_DVM`. Note: If `DIS_DVM` is set to 1, an error message is thrown which can be disabled by setting `all_error_messages_through_trace` to true.

- The model does not support the `eventoack` signal. In integration mode, the value of the field `eventoack` (bit 0) in `ITIN_PIU` will match the value of the `evento` signal.
- There is no functionality associated with `TCU_NODE_STATUS` register field `ATSv`, which indicates whether the node implements DTI-ATSv4.

## Notes

- A bad configuration renders the model inactive.
- Some configurations can be adjusted by configuration pins. These are only sampled at the negative edge of the reset pin. If you want to use these pins then you must drive them before sending a negative edge on the reset pin. During simulation reset the component driving them must also drive this transition again.
- Debug reads to the registers do not disturb the state.
- Writes to registers with Update flags, including debug writes, are ignored if the Update flag is already set to one.
- Debug and real accesses to the registers must be 32 bits or 64 bits.
- The model deals with groups of transactions with the same attributes and a similar range of addresses. The mapping used is remembered by the bus infrastructure and is used for subsequent sufficiently similar transactions without requiring intervention from the SMMU model, and is not traced, for instance.

The range of addresses that the mapping is valid for is determined by the SMMU model, depending on architectural and model-implementation details. However, as it is unaware of any sign-extension or the mapping that the SoC does, the SoC is responsible for subsequently narrowing the range of addresses for which this mapping is valid. Typically, this is done automatically when using `PVBusMapper`.

- The hardware is a distributed SMMU and is divided into:
  - A single Translation Control Unit (TCU)
    - Has a port for the programming interface of the SMMU
    - Receives DVM messages
    - Does all the page walking, queue manipulation, etc.
  - One or more Translation Bus Units (TBUs)
    - Translate transactions from upstream (client) device into downstream transactions.
  - Zero or more connections to PCIe Root Complexes (PCIe-RCs)
  - There can be a total of 62 TBUs and PCIe-RCs attached.
  - An interconnect connecting the TBUs, PCIe-RCs to the TCU.
- A PCIe-RC has one connection to the TCU to make ATS requests but the PCIe-RC uses one or more TBUs to transform the transactions and pass them to the memory system. In the model, those TBUs are configured by the parameter `list_of_pcie_mode`. The SMMU does not know which TBUs a particular PCIe-RC is attached to.
- The TBU ORs a value into each StreamID that it receives. In the model, this is configured by the parameters:

- `list_of_s_sid_high_at_bitpos0`
- `list_of_ns_sid_high_at_bitpos0`
- The TCU, TBU, and the interconnect are all represented by this single model component.
- In the model, a pair of ports `tbs_pvbus_s[i]/tbm_pvbus_m[i]` represent a TBU 'i' or the `tbs_pvbus_s[i]` represents an incoming connection for a PCIe-RC. The corresponding reverse connection from the TCU to the PCIe-RC is by a special bus called `pvbus_id_routed_m` that is used to transport ATC Invalidates to the PCIe-RC.
  - In order to reduce system construction complexity the `tbs_pvbus_s[i]/tbm_pvbus_m[i]` also acts as a TBU so that the PCIe-RC need not separate its normal transactions and its ATS requests.
  - However, ATC Invalidates are only sent to a port which appears in `list_of_pcie_rc`. It should be uniquely decoded to a single port based on `list_of_ns_sid_high_at_bitpos0` and those ATC Invalidates must be routed to the correct PCIe subsystem in order to invalidate the cache of ATS Response in the subsystem. Thus all TBUs that a PCIe-RC uses must have a unique reverse mapping from stream id to port.
- The `pin_sup_oas` is not supported, instead it is a parameter as it is assumed that it would be tied to a fixed value in any specific platform.
- The hardware only has a single cacheability attribute for input transactions, but PVBUS transports both inner and outer cacheability.
- For non-PCIe-mode TBUs (i.e. their index does not appear in `list_of_pcie_mode` or `list_of_pcie_rc`):
  - For non-cache maintenance operations:
    - If the input attribute is any type of device then it is well defined as being outer-shared and Device-nGnRnE or Device-nGnRE. There is no support for Gathering or Reordering.
    - If the outer cacheable input attribute is normal then if it is Write-back then this is converted to Inner Write-back Outer Write-back (iWB-oWB) with the desired shareability. No Transient hint is supported and is always treated as non-transient.
    - This leaves all other normal memory types that are mapped to Inner Normal Non-cacheable, Outer Normal Non-cacheable outer shared (iNC-oNC-osh).
- Thus the upstream devices must present the cacheability in the *outer* cacheability attribute on PVBUS if it is cacheable. If it is a device type then both the inner and outer attributes must be set to the same. If it is iNC-oNC-osh then it must be presented as such.
- For PCIe-mode TBUs (i.e. their index appears in `list_of_pcie_mode` or `list_of_pcie_rc`):
  - Input transactions are from PCIe and the only indication of the memory type is in the NoSnoop bit of the transaction. No shareability is transported.
    - NoSnoop interpreted as iNC-oNC-osh
    - ! NoSnoop interpreted as iWB-oWB-ish (note inner shareable)
  - If a NoSnoop transaction has an attribute transform applied to it and the result of the transform is weaker than iNC-oNC-osh then it is forced to iNC-oNC-osh. For example, if a NoSnoop transaction uses a page table and is transformed to iWB-oWB-nsh then it is forced to iNC-oNC-osh. However, if the page tables transformed it to a device type then, as all device types are stronger than iNC-oNC-osh then it exits the SMMU as the device type.

- In the model, transactions are classified by their incoming memory attributes as to whether they are NoSnoop or not and then normalized appropriately:
  - iWB-oWB-any-shareability transactions are interpreted as ! NoSnoop and therefore are normalized to iWB-oWB-ish.
  - Anything else is considered NoSnoop and therefore is normalized to iNC-oNC-osh.
- Translated accesses also suffer the same interpretation to determine NoSnoop and how they are normalized. Thus they could enter the system with attributes different to if they were Untranslated Accesses translated by normal means.
- It is expected that there is a component downstream of the SMMU that is aware of the system address map and will override the memory type to 'device' for any transaction that accesses a peripheral.
- The hardware has a single cacheability on input and, for transactions that are neither cache-maintenance operations nor PCIe transactions, normalizes the input to an architectural form before performing the SMMUv3 architectural transform:
  - Any device type is left untouched (the input can only represent Device-nGnRE and Device-nGnRnE).
  - If the input is Write-back (WB) then it is normalized to iWB-oWB with the incoming shareability.
  - If the input is anything else it is normalized to iNC-oNC-osh.
- The model accepts full architectural attributes of two levels of cacheability and so has to decide how to interpret this in terms of the hardware. For transactions that are not cache maintenance operations, the model replicates the outer attribute into the inner attribute and then performs the normalization that the hardware does.
- The hardware normalizes the architectural output attributes and outputs a single level of cacheability and a user flag (OC) specifying if the architectural attributes were cacheable in the outer cacheable domain. If the transaction is classified as a PCIe one then the NoSnoop transform described above is applied. If the original transaction was NoSnoop, then any weaker memory type is strengthened to iNC-oNC-osh so apply the following transform:

```

if      iWB-oWB-nsh/ish/osh      then output WB-nsh/ish/osh, OC = 1
else if i (NC/WT/WB) -o (WB/WT) then output NC-Sys,      OC = 1
else if i (NC/WT/WB) -oNC        then output NC-Sys,      OC = 0
else if Device-(GRE/nGRE/nGnRE) then output DV-Sys,      OC = 0
else                               output SO-Sys,      OC = 0

```

- The model only normalizes according to PCIe but otherwise leaves the architectural attributes intact on the output bus.
- MSIs are issued on the `qtw_pvbuss_m` port using attributes determined by the parameter `msi_attribute_transform`, whilst Event Queue writes are always issued with `ExtendedID=0`, `UserFlags=0`, `MasterID=0xFFFFffff`.

In the hardware, there is no way of distinguishing Event Queue writes from MSI writes, however, this provides a mechanism that if the model system needs to distinguish then it can. MPAM and MEC attributes are provided by the parameters:

- `mpam_attribute_transform`

- `mec_attribute_transform` (not all versions support MEC)
- Note that some older versions of MMU-S3 documentation/RTL referred to the `ns_gbpa_abort_init` and `s_gbpa_abort_init` tie-offs as `sup_ns_gbpa_abort_rst` and `sup_s_gbpa_abort_rst`.
- The model supports architectural features and registers matching `r0p0-00eac0` and `r1p0-00eac0`.

## Security State Determination (SSD)

The model uses the term SSD to mean the security state that the transaction, register, structure, or event belongs to. In the SMMUv3 architecture, the sideband signal `SEC_SID` holds this information for the transactions, but uses a different encoding.

Before RME, `SEC_SID` was a one-bit signal. With RME, in the hardware, it was expanded to two bits. To retain backwards compatibility in the model, `SEC_SID` remains as one-bit in the parameter `howto_identify`, but the second bit can be expressed with `SEC_SID_bit_1`, and its negative logic version `nSEC_SID_bit_1`.

Security state	SSD	SEC_SID_bit_1	SEC_SID
secure	0	0	1
non-secure	1	0	0
root (reserved)	2	1	1
realm	3	1	0

## Parameters for parsing transaction attributes

Some of the parameters are strings that share a common parsing format for extracting from and placing information into the transaction's attributes.

They can extract and place information into the following fields of a transaction's attributes:

- `ManagerID64` (64 bits)
- `MasterID` (32 bits) (This is the lower 32 bits of `ManagerID64`)
- `ExtendedID` (64 bits)
- `UserFlags` (32 bits)

The string parameter is parsed as a comma-separated list of:

```
lhs_expression=rhs_expression
```

The `lhs_expression` and `rhs_expression` can be an entire symbol, for example:

```
StreamID
```

or a bit, or bit slice:

```
StreamID[16]
```

```
StreamID[31:20]
```

In `rhs_expression`, numeric constants (or slices of numeric constants) are also allowed:

```
StreamID[16]=1
StreamID[16]=10[2]
```

A single symbol might be assigned from multiple non-contiguous arrays of bits from a mix of different RHS symbols:

```
StreamID[16]=1, StreamID[31:30]=ExtendedID[1:0],
StreamID[15:0]=UserFlags[31:16], ...
```

In those cases where a left hand symbol can also appear on the right hand side, it is possible to swap bits and transform the symbol. For example, the following expression swaps bits 0 and 1 of the `ExtendedID`:

```
ExtendedID[0]=ExtendedID[1], ExtendedID[1]=ExtendedID[0]
```

Any bits of the attributes that have no transform specified are retained from the input.

The `lhs_expression` and `rhs_expression` must have the same bit width.

## Iris and MTI instances for MMU\_S3

This model has the following Iris instances:

**Table 3-1109: MMU\_S3 Iris instances**

## Ports for MMU\_S3

**Table 3-1111: Ports**

Name	Protocol	Type	Description
axi_stream_msi_addr_to_match_s	Value_64	Slave	Any SMMU-originated MSI which exactly matches the address in this port will be sent through the AXI stream port axi_stream_msi_m which is usually connected to the GIC through axi_stream_msi_s. As MSIs are 32 bit aligned then if bits[1:0] != 0 or the address is above OAS then this is effectively disabled. NOTE that the model does not support tcu_sid[31:0] which is the MSI DeviceID to send on axi_stream_msi_m. Instead the parameter smmu_msi_device_id is used. See also the parameters: axi_stream_msi_TID and axi_stream_msi_TDEST. The default value of this port is set by the parameter axi_stream_msi_addr_to_match. This port is sampled at negedge of tcu_reset_in and must be set before the negedge of the reset signal.
axi_stream_msi_m	PVBus	Master	Manager port used for sending SMMU originated MSIs directly to the GIC
clk_in	ClockSignal	Slave	Clock signal (in RTL aclk) This is a clock time-base used by the TCU to spread some of its processing over time, if enabled by the wait_* parameters. The clock must always be connected.
cmd_sync_irpt_ns	Signal	Master	Pulsed interrupt output signal for non-secure CMD_SYNC having a completion signal of SIG_IRQ.
cmd_sync_irpt_r	Signal	Master	Pulsed interrupt output signal for realm CMD_SYNC having a completion signal of SIG_IRQ. This pin exists in r0 but is tied off to 0. It is implemented in r1.
cmd_sync_irpt_s	Signal	Master	Pulsed interrupt output signal for secure CMD_SYNC having a completion signal of SIG_IRQ.
event_q_irpt_ns	Signal	Master	Pulsed interrupt output signal for the non-secure event queue becoming non-empty.

Name	Protocol	Type	Description
event_q_irpt_r	Signal	Master	Pulsed interrupt output signal for the realm event queue becoming non-empty. This pin exists in r0 but is tied off to 0. It is implemented in r1.
event_q_irpt_s	Signal	Master	Pulsed interrupt output signal for the secure event queue becoming non-empty.
evento	Signal	Master	Event signal This aligns with the eventoreq signal on the RTL. The eventock signal is not supported.
global_irpt_ns	Signal	Master	Pulsed interrupt output signal for non-secure SMMU_GERROR(N) signalling an error.
global_irpt_r	Signal	Master	Pulsed interrupt output signal for realm SMMU_R_GERROR(N) signalling an error. This pin exists in r0 but is tied off to 0. It is implemented in r1.
global_irpt_s	Signal	Master	Pulsed interrupt output signal for secure SMMU_S_GERROR(N) signalling an error.
gpf_far	Signal	Master	An error becomes active in SMMU_ROOT_GPF_FAR.
gpt_cfg_far	Signal	Master	An error becomes active in SMMU_ROOT_GPT_CFG_FAR.
identify	SMMUv3AEMIdentifyProtocol	Master	Map the transaction to the tuple (StreamID, SubStreamID, SubStreamIDValid, SSD) The StreamID that is produced by the implementation of this protocol is not the final StreamID. The final StreamID is produced by using the list_of_ns_sid_high_at_bitpos0/list_of_s_sid_high_at_bitpos0 parameter to map the StreamID based on the upstream port index. Also see the parameter howto_identify which can replace the functionality of this port under certain circumstances.
logptsz_s	Value	Slave	RME: This is a four bit signal that encodes the region size that a single LOGPT entry covers. The default value of this port is derived from the parameter rme_logpt_entry_covers_log2size_in_bytes which is in a different format to the port. If a valid value is driven then it will be put in the field SMMU_ROOT_GPT_BASE_CFG.LOGPTSZ. The port uses the same encoding as the field. If an invalid value is driven to this port and legacy_tz_en is low then the value is reported in the SMMU_ROOT_GPT_BASE_CFG.LOGPTSZ and then all transactions will fault with a GPT Configuration fault (gpt_cfg_far). This port is sampled at negedge of tcu_reset_in and must be set before the negedge of the reset signal.
legacy_tz_en	Signal	Slave	Tie this high to get non-RME behaviour. On the real hardware, then each of the TCUs and the TBUs have a legacy_tz_en and they must all be driven to the same value. In the model, we only have a single version of this pin. This port is sampled at negedge of tcu_reset_in and must be set before the negedge of the reset signal.
ns_gbpa_abort_init	Signal	Slave	This port is an Non-secure global bypass. The ns_gbpa_abort_init signal sets the reset value of SMMU_GBPA.ABORT: 0 - On reset, do not abort all incoming transactions. 1 - On reset, abort all incoming transactions. This port is sampled at negedge of tcu_reset_in and must be set before the negedge of the reset signal.
pri_q_irpt_ns	Signal	Master	Pulsed interrupt output signal for the non-secure PRI queue becoming non-empty.

Name	Protocol	Type	Description
pri_q_irpt_r	Signal	Master	Pulsed interrupt output signal for the realm PRI queue becoming non-empty. This pin exists in r0 but is tied off to 0. It is implemented in r1.
prog_pvbus_s	PVBus	Slave	Register subordinate port (in RTL PROG)
pvbus_id_routed_m[62]	PVBus	Master	This is a special "id-routed" port for transmitting ATC invalidates upstream into the PCIe EndPoints, it is not a normal bus. See parameter output_id_routed_transform. The FastModels ATC Invalidate and PRI Response protocol specifies how to route and deal with this port.
qtw_pvbus_m	PVBus	Master	Manager port used for Table Walks, MSIs and Queue access. Note that although this is a manager port, it can still receive DVM messages.
s_gbpa_abort_init	Signal	Slave	This port is an secure global bypass. The s_gbpa_abort_init signal sets the reset value of SMMU_S_GBPA.ABORT: 0 - On reset, do not abort all incoming transactions. 1 - On reset, abort all incoming transactions. This port is sampled at negedge of tcu_reset_in and must be set before the negedge of the reset signal.
sec_override	Signal	Slave	Allow certain registers to be accessible to non-secure accesses from reset, as described in the TCU_SCR register. This port is sampled at negedge of tcu_reset_in and must be set before the negedge of the reset signal.
sup_btm	Signal	Slave	System supports BTM and will be reflected in the IDR registers. This signal can override the value set by the parameters configuring the IDR registers. If BTM (Broadcast Table Maintenance) is not supported then DVM messages will be ignored. This port is sampled at negedge of tcu_reset_in and must be set before the negedge of the reset signal.
sup_cohacc	Signal	Slave	System supports COHACC and will be reflected in the IDR registers. This port is sampled at negedge of tcu_reset_in and must be set before the negedge of the reset signal.
sup_httu	Signal	Slave	System supports HTTU and will be reflected in the value of SMMU_IDR0.HTTU: - 0b00 (HTTU not supported) if sup_httu is 0 - 0b10 (update of AF and Dirty flags supported) if sup_httu is 1 The default value for this pin is 1. This port is sampled at negedge of tcu_reset_in and must be set before the negedge of the reset signal.
sup_sev	Signal	Slave	System supports SEV and will be reflected in the IDR registers. This signal can override the value set by the parameters configuring the IDR registers. This port is sampled at negedge of tcu_reset_in and must be set before the negedge of the reset signal.
tbm_pvbus_m[62]	PVBus	Master	The TBU manager ports that carry transactions that have been translated from the correspondingly numbered tbs_pvbus_s[] port.
tbs_pvbus_s[62]	PVBus	Slave	The TBU subordinate ports that receive transactions to be translated. They will exit the SMMU through the same numbered pvbus_m[] port.
tbu_crit_err[62]	Signal	Master	Critical error. This cannot occur in the model except by using an Integration Register to generate it.
tbu_pmu_irpt[62]	Signal	Master	TBU Performance Monitoring Unit interrupt, one per TBU.

Name	Protocol	Type	Description
tbu_pmusnapshot_ack[62]	Signal	Master	PMU snapshot interface for the TBU, ack a snapshot.
tbu_pmusnapshot_req[62]	Signal	Slave	PMU snapshot interface for the TBU, request a snapshot.
tbu_ras_cri[62]	Signal	Master	Critical error interrupt for RAS events from the TBU. This is used for specific uncorrected errors where a System Coprocessor (SCP) might have to reset the system because the stability of the system can no longer be guaranteed. NOTE that in the MMU-700 model this is called tbu_cri_irpt.
tbu_ras_eri[62]	Signal	Master	Error Recovery Interrupt for RAS events from the TBU. This is used for uncorrected errors. NOTE that in the MMU-700 model this is called tbu_eri_irpt. NOTE that in the MMU-700 model this is called tbu_eri_irpt.
tbu_ras_fhi[62]	Signal	Master	Fault Handling Interrupt for RAS events from the TBU. Usually this is for corrected errors. NOTE that in the MMU-700 model this is called tbu_fhi_irpt.
tbu_ras_lt_cri[62]	Signal	Master	Level triggered critical error interrupt for RAS events from the TBU.
tbu_ras_lt_eri[62]	Signal	Master	Level triggered error recovery interrupt for RAS events from the TBU.
tbu_ras_lt_fhi[62]	Signal	Master	Level triggered fault handling interrupt for RAS events from the TBU.
tbu_ras_lt_irpt_v[62]	Signal	Master	Level triggered valid output for connection to System RAS agents. Asserted when the RAS record contains at least one valid error.
tbu_reset_in[62]	Signal	Slave	Reset signals The TBUs can have independent reset signals. However, TCU reset will result in the reset of all TBUs. This behavior is unlike SMMU RTL implementations which do allow for independent reset of the TCU separate from TBUs. Each signal tbu_reset_in[n] corresponds to the TBU using tbs_pvbus_s[n]/tbs_pvbus_s[n] pair. If the SMMU receives a transaction whilst the TBU is expected to be in reset then it will complain using the ArchMsg.Warning.warning trace source. Those tbu_reset_in that correspond to a PCIe-RC connection can be connected to monitor the PCIe-RC's reset signal. If it receives an ATS request when in reset then it will complain in a similar way. You must connect these pins if you wish the TCU_NODE_STATUS for the nodes to be accurate (including any connected to the PCIe-RC).
tcu_pmu_irpt	Signal	Master	TCU Performance Monitoring Unit interrupt
tcu_pmusnapshot_ack	Signal	Master	PMU snapshot interface for the TCU, ack a snapshot.
tcu_pmusnapshot_req	Signal	Slave	PMU snapshot interface This is a four-phase handshake to have the corresponding PMCG perform a capture of the current counter values. PMU snapshot interface for the TCU, request a snapshot.
tcu_ras_cri	Signal	Master	Critical error interrupt for RAS events from the TCU. This is used for specific uncorrected errors where a System Coprocessor (SCP) might have to reset the system because the stability of the system can no longer be guaranteed. NOTE that in the MMU-700 model this is called tcu_cri_irpt.

Name	Protocol	Type	Description
tcu_ras_eri	Signal	Master	Error Recovery Interrupt for RAS events from the TCU. This is used for uncorrected errors. NOTE that in the MMU-700 model this is called tcu_eri_irpt.
tcu_ras_fhi	Signal	Master	Fault Handling Interrupt for RAS events from the TCU. Usually this is for corrected errors. NOTE that in the MMU-700 model this is called tcu_fhi_irpt.
tcu_ras_lt_cri	Signal	Master	Level triggered critical error interrupt for RAS events from the TCU.
tcu_ras_lt_eri	Signal	Master	Level triggered error recovery interrupt for RAS events from the TCU.
tcu_ras_lt_fhi	Signal	Master	Level triggered fault handling interrupt for RAS events from the TCU.
tcu_ras_lt_irpt_v	Signal	Master	Level triggered valid output for connection to System RAS agents. Asserted when the RAS record contains at least one valid error.
tcu_reset_in	Signal	Slave	The reset signal to the TCU interface.

## Parameters for MMU\_S3

### TCUCFG\_DPT\_SUPPORT

#### Type

bool

#### Default value

true

MMU-S3 r1 Parameter Only: Enable Device Permission Table (DPT), a mechanism to enforce the association between granules of physical address space and the memory footprint of virtual machines.

**0**

Realm DPT is disabled

**1**

Realm DPT is enabled (default)

### TCUCFG\_DVM\_VAS

#### Type

uint32\_t

#### Default value

53

Virtual address size used by the system. Once set, this value is discoverable using `TCU_SYSDISC35.TCUCFG_DVM_VAS`.

In hardware, it is important to get this parameter correct as it determines the DVM message format. If this doesn't match the PEs, DVM messages are misinterpreted and any TLBI operations performed are incorrectly applied.

The model uses a representation of DVM that does not depend on the VA size and so misconfiguring this has no effect other than on the system discovery register value. Accepted Values: 49 53

### **TCUCFG\_MECID\_WIDTH**

#### **Type**

uint32\_t

#### **Default value**

16

Memory Encryption Context (MEC) is a feature introduced in MMU-S3. The MECID is a 1-16 bit identifier that, if implemented, supports Memory Encryption Contexts for the Realm programming interface. The given value indicates the number of bits in the MECID. A value of 0 will disable MEC. Accepted Values: 0 4 8 12 16

### **TCUCFG\_PARTID\_WIDTH**

#### **Type**

unsigned

#### **Default value**

9

The width of the MPAM PARTID on the bus.

The value 10 is just for MMU\_S3 r1.

See also parameter mpam\_attribute\_transform. Accepted Values: 1 6 9 10

### **TCUCFG\_XLATE\_SLOTS**

#### **Type**

uint32\_t

#### **Default value**

512

Maximum number of outstanding stalled transactions that the SMMU supports.

**Note**

TCUCFG\_XLATE\_SLOTS must be  $\geq$  TCUCFG\_PTW\_SLOTS which is currently fixed to 512.

---

Accepted Values: 512 1024 2048 4096

**all\_error\_messages\_through\_trace****Type**

bool

**Default value**

false

Some conditions in the SMMU are so strange that the software programming the SMMU has done something wrong. At this point messages are output to either `ArchMsg.Error.*` or `ArchMsg.Warning.*` or to the error stream of the simulator. Outputting to the error stream of the simulator may cause it to return with a non-zero exit status.

If you set this option to true then instead of using the error stream of the simulator it will always use a trace stream allowing the simulation to exit with a zero exit status.

**axi\_stream\_msi\_TDEST****Type**

uint32\_t

**Default value**

0

ID of the AXI stream subordinate port on the GIC that receives SMMU originated MSIs sent directly. The name of the GIC port is `axi_stream_msi_s`.

**Note**

If `axi_stream_msi_addr_to_match[1:0] != 0`, or the address is above OAS then this is effectively disabled.

---

See also:

- `axi_stream_msi_addr_to_match`
- `axi_stream_msi_TID`

**axi\_stream\_msi\_TID****Type**

uint32\_t

**Default value**

0

ID of the AXI stream manager port that sends SMMU TCU originated MSIs directly to the GIC. The name of the SMMU port is `axi_stream_msi_m`.

**Note**

If `axi_stream_msi_addr_to_match[1:0] != 0`, or the address is above OAS then this is effectively disabled.

---

See also:

- `axi_stream_msi_addr_to_match`
- `axi_stream_msi_TDEST`

**`axi_stream_msi_addr_to_match`****Type**

`uint64_t`

**Default value**

`0xFFFFFFFFFFFFFFFF`

If the last two bits are 0, any SMMU-originated MSI which exactly matches the address will be sent through the AXI stream port `axi_stream_msi_m` which is usually connected to the GIC.

This parameter drives the value of the `axi_stream_msi_addr_to_match_s` port at simulation reset. For every reset after that, the value of the port will be sampled and used if changed.

---

**Note**

The entire address must match, including bits [1:0]. As MSIs are 32 bit aligned then if `axi_stream_msi_addr_to_match[1:0] != 0`, or the address is above OAS then this is effectively disabled.

---

See also:

- `axi_stream_msi_TID`
- `axi_stream_msi_TDEST`

**`behaviour_of_sampled_at_reset_signals`****Type**

unsigned

**Default value**

0

Some configuration signals into the SMMU are sampled on negedge of reset.

However, it can sometimes be hard to arrange to drive a configuration pin before the negedge of reset.

The configuration pins are sampled:

**0**

at negedge reset.

**1**

at negedge reset, but if a later change occurs at the same simulated time, and no transactions have occurred, then they will be resampled and the SMMU reset again.

**cmdq\_max\_number\_of\_commands\_to\_buffer****Type**

uint32\_t

**Default value**

10

The command queues can buffer fetched commands before issuing them. This parameter is roughly the maximum number of commands to do this for. The programmer visible effects are that just because the CONS pointer shows a command has been consumed does not necessarily mean that it has been issued (and completed). Higher values accentuate this effect.

**enable\_device\_id\_checks****Type**

bool

**Default value**

true

If this parameter is true then the DeviceIDs seen by the GIC are:

- **for client devices**

$$\text{DeviceID} = \text{StreamID} + \text{translated\_device\_id\_base}$$

- **for SMMU-generated MSIs**

$$\text{smmu\_msi\_device\_id}$$

This parameter enables two checks:

- If the DeviceID is used in the `output_attribute_transform` parameter, if it overflows 32 bits then the model warns. If the DeviceID is not used, it is assumed that the external agent that forms the DeviceID warns if it overflows.
- If the SMMU supports MSIs, the model checks that the GIC is able to distinguish an MSI generated by the SMMU from one generated by a client device.

As the exact mechanism to determine the DeviceID is in the system and not necessarily under control of the SMMU then you can disable these warnings using this parameter.

See also the parameters: `output_attribute_transform` and `msi_attribute_transform`.

**hide\_warning\_ACCESSEN\_GPCEN\_set\_to\_1\_in\_a\_single\_write****Type**

bool

**Default value**

false

The architecture recommends against setting `SMMU_ROOT_CR0.ACCESSEN` and `SMMU_ROOT_CR0.GPCEN` to 1 in the same write if it is possible that a concurrent client device transaction could appear at the SMMU. This is because there could be a time window where the client device transaction sees effective values `ACCESSEN == 1` and `GPCEN == 0` and so would bypass GPC checking.

If your system cannot generate this possibility then you can set this parameter to true and turn off the warning that software has set both `ACCESSEN` and `GPCEN` to 1 at the same time.

**hide\_warning\_EOPD\_differs\_from\_what\_would\_be\_cached****Type**

bool

**Default value**

false

When this parameter is set to true, warnings that the effective EOPD value differs from what would be cached in the TLB are disabled. False (warnings are showed) by default.

**hide\_warning\_NoStreamID\_transaction\_for\_unsupported\_PAS\_or\_MPAM\_SP****Type**

bool

**Default value**

false

When RME is not supported then a NoStreamID transaction with `PAS[1] == 1` or `MPAM_SP[1] == 1` is treated as though `PAS[1] == 0` and `MPAM_SP[1] == 0`. This is usually a system construction error and is not expected to occur.

The SMMU warns when this occurs, but the warning can be hidden by setting this parameter.

**howto\_identify****Type**

string

**Default value**

"use-identify"

If `use-identify` then the SMMU uses the `identify` port to determine the `ssd`, `streamID`, `substreamID`. Otherwise, this string extracts them from the transaction's attributes.

Examples:

```
SEC_SID=ExtendedID[63], SSV=ExtendedID[62], SubstreamID=ExtendedID[51:32],
StreamID=ExtendedID[31:0]
```

or

```
nSEC_SID=ExtendedID[63], StreamID=ExtendedID[55:24], nSSV=ExtendedID[20],
SubstreamID=ExtendedID[19:0]
StreamID[31:24]=0, StreamID[23:0]=ExtendedID[23:0], SSV=1[0], ...
```

If you are not using the `use-identify` option then the configuration string is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

LHS Symbols:

**SIDV**

Indicates that the StreamID is valid.

**SSV**

Indicates that the SubstreamID is valid.

**SEC\_SID / SEC\_SID\_bit\_1**

Bits 0 and 1 respectively of the StreamID Security State

**StreamID**

(32 b) valid if `SIDV` is 1 or both `SIDV` and `nSIDV` are unused.

**SubstreamID**

(20 b) is valid if `ssv` is true.

**nSEC\_SID / nSEC\_SID\_bit\_1 / nSSV / nSIDV**

Negative logic of above parameters. Different attributes are independent and can use negative or positive logic.

RHS Symbols:

**ExtendedID / ManagerID64 / MasterID / UserFlags**

Incoming PVBUS transaction attributes

`SEC_SID` is 1b in the model. For RME systems, in hardware, then `SEC_SID` is 2b, in the model `SEC_SID_bit_1` represents bit[1].

`SIDV == 0` indicates a NoStreamID transaction and the SSD is the PAS of the transaction, `SEC_SID` is not used.

Negative and positive logic symbols for the same attribute is an error.

The model uses the term SSD (Security State Determination) to mean which security state the transaction, register, structure, event, etc. belongs to.

In the SMMUV3 Architecture, the side-band signal `SEC_SID` holds the information for the transactions, but uses a different encoding.

Before RME, `SEC_SID` was a one bit signal. With RME, in the hardware, it was expanded to 2b. To retain backwards compatibility in the model, `SEC_SID` remains as 1b in this parameter, but the second bit can be expressed with `SEC_SID_bit_1` (and its negative logic version `nSEC_SID_bit_1`)

Security state	SSD	SEC_SID_bit_1	SEC_SID
secure	0	0	1
non-secure	1	0	0
root (reserved)	2	1	1
realm	3	1	0

For those systems that support NoStreamID transactions, and `howto_identify` is not using the port, first the SMMU determines the value of `SIDV` or `NSIDV` to see if the transaction is a NoStreamID transaction (`SIDV == 0` or `NSIDV == 1`). If so then the rest of the `howto_identify` string is ignored as the information extracted relates only to StreamID transactions. Instead more information is extracted using the parameter `howto_identify_NoStreamID_extra_info`.

In AMBA systems, the equivalent signal to `SIDV` is called either `ARMMUVALID` or `AWMMUVALID`. Collectively they are known as `AxMMUVALID`.

### **`howto_identify_NoStreamID_extra_info`**

#### **Type**

string

#### **Default value**

""

The behavior of this parameter depends on `howto_identify`

- if it equals 'use-identify' then this must be "", otherwise there is an error.
- if it identifies a NoStreamID transaction (`SIDV=0`) then this parameter includes one or more of
  - `MPAM_SP`
  - `MPAM_PARTID`
  - `MPAM_PMG`
  - `MECID`
  - `HWATTR_KIND_0`
- in any other case, this parameter is ignored.

Fields set in this parameter must not overlap the `SIDV/NSIDV` fields in `howto_identify`

Example:

```
MPAM_PMG[7:0]=ExtendedID[62:55], MPAM_PARTID[15:0]=ExtendedID[54:39],
MPAM_SP[1:0]=ExtendedID[38:37], MECID[15:0]=UserFlags[31:16]
HWATTR_KIND_0[3:0]=ExtendedID[42:39]
```

Note

The parameter is parsed according to the rules in the section ‘Parameters for parsing transaction attributes’.

**ish\_is\_osh\_DANGER**

Type  
bool

Default value  
true

When set, any transaction that would use the architectural inner shareable domain is converted to use the outer shareable domain.

Note

This parameter should match the equivalent `ish_is_osh` from the PE. If an incompatible value of the `ish_is_osh` parameter is configured for the PE and the SMMU, data coherency may be compromised.

Note

All implementations should have this parameter as true but it is allowed in the model to give it a false value for modelling and debug purposes only.

**legacy\_tz\_en**

Type  
bool

Default value  
false

The default value of the `legacy_tz_en` pin:

- 0  
RME is enabled
- 1  
RME is disabled

**list\_of\_ns\_sid\_high\_at\_bitpos0****Type**

string

**Default value**

""

A comma-separated list of values to bitwise OR into each Non-secure StreamID for each TBU/Node. Bit 0 of the value corresponds to bit 0 of the StreamID.

Each TBU that is connected to a PCIe-RC (see `list_of_pcie_rc`) must serve a unique contiguous subset of StreamIDs as determined by their top bits. This is used in order to know which port to route ATC Invalidates and PRI Responses to the PCIe subsystems. The effective value for any PCIe-RC ports must be the same for non-secure and realm. See `list_of_r_sid_high_at_bitpos0`.

The empty string corresponds to all 0s.

**list\_of\_pcie\_mode****Type**

string

**Default value**

""

A comma-separated list of ranges of ports that represent TBUs that are attached to PCIe Root Complexes (PCIe-RC). A single PCIe-RC might use several TBUs and stripe accesses across them. The attribute handling for these TBUs is slightly different in that if the PCIe transaction is NoSnoop and the output attributes of the translation would be weaker than `INC-ONC-OSH` then the output is forced to `INC-ONC-OSH`.

`INC-ONC-OSH` == "inner normal non-cacheable, out normal non-cacheable, outer shared"

**list\_of\_pcie\_rc****Type**

string

**Default value**

""

This is a list of ports that are connected to PCIe Root Complex (PCIe-RC) by a protocol called DTI-ATS. This port is used to transport ATS and PRI Requests to the SMMU from the PCIe-RC.

In the real hardware, the PCIe-RC uses this port for ATS/PRI, and the actual transactions go through separate TBUs. In the model, this port can accept actual transactions as well. However, in the model, then the ATC Invalidates and the PRI Responses need to be transferred over the corresponding `pvbus_id_routed_m` port as DTI-ATS is bidirectional, but PVBus is not.

**list\_of\_r\_sid\_high\_at\_bitpos0****Type**

string

**Default value**

""

A comma-separated list of values to bitwise OR into each Realm StreamID for each TBU/Node. Bit 0 of the value corresponds to bit 0 of the StreamID. This only has an effect for r1 and later.

Each TBU that is connected to a PCIe-RC (see `list_of_pcie_rc`) must serve a unique contiguous subset of StreamIDs as determined by their top bits. This is used in order to know which port to route ATC Invalidates and PRI Responses to the PCIe subsystems. The effective value for any PCIe-RC ports must be the same for non-secure and realm. See `list_of_ns_sid_high_at_bitpos0`.

The empty string corresponds to all 0s.

"use-ns" can be used to apply the `list_of_ns_sid_high_at_bitpos0` values instead.

**list\_of\_s\_sid\_high\_at\_bitpos0****Type**

string

**Default value**

""

A comma-separated list of values to bitwise OR into each Secure StreamID for each TBU/Node. Bit 0 of the value corresponds to bit 0 of the StreamID.

The empty string corresponds to all 0s.

use-ns can be used to apply the `list_of_ns_sid_high_at_bitpos0` values instead.

**mec\_attribute\_transform****Type**

string

**Default value**

""

**Note**

The parameter is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

If MEC is supported, this is applied to *all* downstream transactions to transport the MEC information.

- "" or "none" – no transform
- How to alter the output attributes. Example:

```
"UserFlags[31:16]=MECID[15:0]"
```

RHS/LHS Symbols:

- ExtendedID/ManagerID64/MasterID/UserFlags.

RHS Symbols:

- MECID

Any bits with no transform are unchanged.

Note

Attribute transforms applied before this:

- for client transactions `output_attribute_transform / output_attribute_transform_for_NoStreamID`.
- for table walks `tw_qs_attribute_transform`.
- for MSIs `msi_attribute_transform`.
- if MPAM is enabled `mpam_attribute_transform`.

## **mpam\_attribute\_transform**

Type

string

Default value

"ExtendedID[62:55]=MPAM\_PMG, ExtendedID[54:39]=MPAM\_PARTID,  
ExtendedID[38]=MPAM\_NS"

Note

The parameter is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

If MPAM is supported, this is applied to *all* downstream transactions to transport the MPAM information.

- "" or "none" – no transform
- How to alter the output attributes. Example:

```
"ExtendedID[62:55]=MPAM_PMG, ExtendedID[54:39]=MPAM_PARTID,  
ExtendedID[38]=MPAM_SP[0]"
```

RHS/LHS Symbols:

- ExtendedID/ManagerID64/MasterID/UserFlags.

RHS Symbols:

- MPAM\_PARTID
- MPAM\_PMG
- MPAM\_NS
- MPAM\_SP
- numeric literals

Any bits with no transform are unchanged.

Note

- attribute transforms applied before this:
  - for client transactions `output_attribute_transform / output_attribute_transform_for_NoStreamID`.
  - for table walks `tw_qs_attribute_transform`.
  - for MSIs `msi_attribute_transform`.
- `mec_attribute_transform` is applied after this.
- for translated transactions from client devices then `MPAM_NS = ! SEC_SID`.

## **msi\_attribute\_transform**

### **Type**

string

### **Default value**

"ExtendedID[31:0]=smmu\_msi\_device\_id, ManagerID64[31:0]=0xFFFFffff"

Transform downstream attributes of MSI transactions.

Note

The parameter is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

- "" or "none" – no transform
- How to alter output attributes of SMMU-generated MSIs. Example:

```
"UserFlags[15:0]=smmu_msi_device_id[31:16],
ManagerID64[15:0]=smmu_msi_device_id[15:0],
ExtendedID=0"
```

LHS Symbols:

**ExtendedID / ManagerID64 / MasterID / UserFlags**

Outgoing PVBUS transaction attributes

RHS Symbols:

**smmu\_msi\_device\_id**

The value stored in the parameter with the same name

**interrupt\_kind**

The selected bit corresponds to the interrupts listed below

**0/1**

EVENTQ s/ns

**2**

PRIQ

**3/4**

CMD\_SYNC s/ns

**5/6**

GERROR s/ns

**7/8**

PMCG s/ns

**9/10/11**

RAS FHI/ERI/CRI

**12/13**

gpf\_far/gpt\_cfg\_far

**14/15/16/17**

Realm EVENTQ/PRIQ/CMDQ/GERROR

**HWATTR\_KIND\_0**

PBHA information

**Numeric Literals**

Any number. Ex: 0x1234

ExtendedID/ManagerID64/MasterID/UserFlags start with values {0, 0xFFFFffff, 0xFFFFffff, 0} respectively.

Any bits with no transform are unchanged.

This transform can be used to determine the DeviceID passed to the GIC to distinguish MSIs generated by the SMMU from those generated by client devices.

**Note**

See also `output_attribute_transform` and `enable_device_id_checks`.

**Note**

After 11.25 the `interrupt_kind` field was extended to 5 bits. This is strictly a non-backwards compatible change. However, the original 3 bits were insufficient to express all the interrupt kinds that exist.

---

## **`normalize_input_normal_non_iWB_oWB_to_iNC_oNC_osh_DANGER`**

### **Type**

bool

### **Default value**

true

When set, use Inner Non Cacheable, Outer Non Cacheable, Outer Shareable for any upstream transaction that would use any of the following attributes:

- Normal Non-cacheable Bufferable
- Normal Non-cacheable Non-bufferable
- Write-through

**Note**

This parameter should match the equivalent configuration from the PE. If an incompatible value of this parameter is configured for the PE and the SMMU, data coherency may be compromised.

All implementations should have this parameter as true but it is allowed in the model to give it a false value for modelling and debug purposes only.

---

## **`ns_gbpa_abort_init`**

### **Type**

bool

### **Default value**

false

The default value of the tie off signal `ns_gbpa_abort_init`

## **`number_of_ports`**

### **Type**

unsigned

**Default value**

1

The number of port pairs that the SMMU has.

**output\_attribute\_transform****Type**

string

**Default value**

"ExtendedID[31:0]=DeviceID"

Transform downstream attributes of StreamID transactions.

**Note**

The parameter is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

- "" or "none": no transform
- How to alter output attributes. Example:

```
"ExtendedID[15:0]=DeviceID[15:0], UserFlags[31]=nSSV,
UserFlags[19:0]=SubstreamID,
ManagerID64[10]=ManagerID64[11], ManagerID64[11]=ManagerID64[10]"
```

RHS/LHS Symbols:

**ExtendedID / ManagerID64 / MasterID / UserFlags**

Incoming/Outgoing PVBUS transaction attributes

RHS Symbols:

**DeviceID**

StreamID + translated\_device\_id\_base

**StreamID / SubstreamID / SEC\_SID / SEC\_SID\_bit\_1 / SIDV / SSV**

Architectural information. See parameter `howto_identify` for more information.

**nSEC\_SID / nSEC\_SID\_bit\_1 / nSSV / nSIDV**

Negative logic of above parameters. Different attributes are independent and can use negative or positive logic.

**St1PBHA / St2PBHA**

Page Based Hardware Attributes from leaf descriptors (zero if unused).

**STE\_IMPDEF1**

STE[127:116]

**HWATTR\_KIND\_0**

PBHA information

**Numeric Literals**

Any number. Ex: 0x1234

The streamID has had ns\_sid\_high/s\_sid\_high/r\_sid\_high ORred into it for the appropriate TBU.

Note

- mpam\_attribute\_transform and mec\_attribute\_transform are applied in order after this.
- See also output\_attribute\_transform\_for\_NoStreamID for NoStreamID transactions.

**output\_attribute\_transform\_for\_NoStreamID**

**Type**

string

**Default value**

"ExtendedID[31:0]=0, ExtendedID[32]=1"

Note

The parameter is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

Transform downstream attributes of NoStreamID transactions.

- "" or "none": no transform
- How to alter output attributes. Example:

```
"ExtendedID[15:0]=0, UserFlags[31]=1, UserFlags[19:0]=0,  
ManagerID64[10]=ManagerID64[11],  
ManagerID64[11]=ManagerID64[10] ManagerID64[9:6]=HWATTR_KIND_0"
```

RHS/LHS Symbols: \* ExtendedID/ManagerID64/MasterID/UserFlags: incoming/outgoing attributes.

RHS Symbols: \* SIDV = 0, nSIDV = 1 (fixed values to indicate NoStreamID) \* PAS \* HWATTR\_KIND\_0

Any bits with no transform are unchanged.

Note

- mpam\_attribute\_transform and mec\_attribute\_transform are applied in order after this.
- see also output\_attribute\_transform for StreamID transactions.

**output\_id\_routed\_transform****Type**

string

**Default value**

"Address[27:12]=StreamID[15:0], PAS=SSD"

The parameter is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

The SMMU generates the following ID-routed transaction on the pvbus\_id\_routed\_m bus:

- ATC Invalidate
- PRI Response

This parameter controls how the SMMU should express:

- the StreamID
- the Trusted (T) bit

The value is a comma-separated list of assignments:

```
Address[27:12]=StreamID[15:0], ExtendedID[60]=T, ExtendedID[15:0]=StreamID[31:16]
```

Address bits[11:0] cannot be used.

The LHS can be one of:

- PAS
- MasterID / ManagerID64 / ExtendedID / UserFlags
- Address

The RHS can be one of:

- a numeric constant
- SSD
- T or negative version nT
- StreamID

For realm (or 'Trusted') transactions, then `ssd=0b11`, `T=1`, `nT=0`. For non-secure (or 'Non-Trusted') transactions, then `ssd=0b01`, `T=0`, `nT=1`.

**prefetch\_only\_requests****Type**

unsigned

**Default value**

0

The simulator supports 'prefetch-only' DMI requests, which can occur at any time and for any reason and are intended to be invisible to the end execution of the model and to the user.

**0**

deny all prefetch-only requests

**1**

- use debug requests for any page table walks
  - form and use debug TLB/cache entries
  - any faults will not record, but deny the prefetch request

**2**

- treat prefetch-only requests like normal transactions
  - use normal page table walk transactions
  - use and form normal TLB/cache entries
  - faults will alter the programmer-visible state of the SMMU

0 is the safest.

1 treats the access like a debug request and requires that debug page table walks are treated correctly downstream. Any descriptors that need HTTU to allow the transaction to proceed will fail the request.

2 is dangerous, it uses real transactions and reports faults that are unphysical. Real transactions can be `wait()`ed and this disobeys the SystemC spec for `get_direct_mem_ptr()`.

**rme\_logpt\_entry\_covers\_log2size\_in\_bytes****Type**

uint32\_t

**Default value**

30

Each LOGPT entry covers:

```
2**rme_logpt_entry_covers_log2size_in_bytes
```

bytes of address space.

The valid values for this parameter are: 30, 34, 36, 39

This parameter is reported in an encoded format as the read-only field:

```
SMMU_ROOT_GPT_BASE_CFG.LOGPTSZ
```

This parameter can be overridden by the port `logptsz_s` when sampled on negedge of reset.

### **s\_gbpa\_abort\_init**

#### **Type**

bool

#### **Default value**

false

The default value of the tie off signal `s_gbpa_abort_init`

### **sec\_override**

#### **Type**

bool

#### **Default value**

false

The IMP DEF port `sec_override` controls whether some of the registers are accessible to secure or non-secure/realm transactions. This parameter is the default value assumed for that port if the port is not driven by a signal.

### **seed**

#### **Type**

uint32\_t

#### **Default value**

0x12345678

Used to seed the pseudo-random number generator that the SMMU model uses.

### **size\_of\_cd\_cache**

#### **Type**

uint32\_t

#### **Default value**

0

The number of entries in the cache holding CD structures. If this is zero it is treated as a large number ('infinite') but it is bounded so that the host memory usage of the cache is also bounded.

**size\_of\_dpttlb****Type**

uint32\_t

**Default value**

0

The number of entries in the DPT TLB. If this is zero then it is treated as a large number ('infinite') but it is bounded so that the host memory usage of the cache is also bounded.

**size\_of\_l1cd\_cache****Type**

uint32\_t

**Default value**

0

The number of entries in the cache holding L1CD descriptors. If this is zero it is treated as a large number ('infinite') but it is bounded so that the host memory usage of the cache is also bounded.

**size\_of\_l1ste\_cache****Type**

uint32\_t

**Default value**

0

The number of entries in the cache holding L1STE descriptors. If this is zero it is treated as a large number ('infinite') but it is bounded so that the host memory usage of the cache is also bounded.

**size\_of\_ste\_cache****Type**

uint32\_t

**Default value**

0

The number of entries in the cache holding STE structures. If this is zero it is treated as a large number ('infinite') but it is bounded so that the host memory usage of the cache is also bounded.

**size\_of\_tlb****Type**

uint32\_t

**Default value**

0

The number of entries in the TLB. If this is zero it is treated as a large number ('infinite') but it is bounded so that the host memory usage of the cache is also bounded.

**smmu\_msi\_device\_id****Type**

uint32\_t

**Default value**

0

When appropriately enabled, assume that MSIs that are generated by the SMMU are presented to the GIC with this DeviceID.

See parameters `msi_attribute_transform` and `enable_device_id_checks`.

**sup\_btm****Type**

bool

**Default value**

true

The default value of the register field `SMMU_IDR0.BTM` and `SMMU_ROOT_IDR0.BGPTM` (when supported). This enables Broadcast TLB maintenance.

**sup\_cohacc****Type**

bool

**Default value**

true

The default value of the register `SMMU_IDR0.COACC`

**sup\_httu****Type**

bool

**Default value**

true

The initial value of the `sup_httu` port. See the port description for `sup_httu`.

**sup\_oas****Type**

unsigned

**Default value**

6

The hardware has an input port `sup_oas[2:0]` that indicates what output address size (OAS) the system has. This is sampled at reset.

The model does not have this port as it is expected to be a constant for the system and not to change. Instead it is just a parameter.

The allowed values are:

**0**

32 bits

**1**

36 bits

**2**

40 bits

**3**

42 bits

**4**

44 bits

**5**

48 bits

**6**

52 bits

**sup\_sev****Type**

bool

**Default value**

true

The default value of the register `SMMU_IDR0.SEV`

**tlb\_when\_do\_f\_tlb\_conflict\_on\_overlap****Type**

unsigned

**Default value**

0

If a TLB entry is created by a walk and it overlaps an existing entry, there are some architectural situations where the result is known. For all others, then an implementation is allowed to use an **UNPREDICTABLE** combination of the two entries, or it can generate `F_TLB_CONFLICT`:

**0**

never generate

**1**

sometimes generate

**2**

always generate

Conflicts between global and non-global entries are not detected by the model.

**translated\_device\_id\_base****Type**

uint32\_t

**Default value**

0

When appropriately enabled, assume that client device accesses are translated to a DeviceID as seen by the GIC of:

```
StreamID + translated_device_id_base
```

See parameter `output_attribute_transform` and `enable_device_id_checks`.

**tw\_qs\_attribute\_transform****Type**

string

**Default value**

""

Transform downstream attributes of table walk and queue transactions.

**Note**

The parameter is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

- "" or "none" – no transform
- How to alter the output attributes. Example:

```
"ExtendedID[35:32]=HWATTR_KIND_0"
```

RHS/LHS Symbols:

**ExtendedID / ManagerID64 / MasterID / UserFlags**

Incoming/Outgoing PVBUS transaction attributes

RHS Symbols:

**HWATTR\_KIND\_0**

PBHA information

**kind**

Transaction kind

- For a read:
  - 0/1**  
L1STE/STE
  - 2/3**  
L1CD/CD
  - 4/5**  
S1/S2 TTD (including CAS)
  - 6**  
CMDQ
  - 7**  
VMS
  - 11/12**  
LOGPT/L1GPT
  - 13/14**  
LODPT/L1DPT
- For a write:
  - 0**  
EVENTQ
  - 1**  
PRIQ

ExtendedID/ManagerID64/MasterID/UserFlags start with values {0, 0xFFFFFFFF, 0xFFFFFFFF, 0} respectively.

Any bits with no transform are unchanged.

See also `output_attribute_transform` and `msi_attribute_transform`.

---

**version****Type**

string

**Default value**

"rOp0"

The version of this product.

Valid values are:

- rOp0
- r1p0

**wait\_cmdq\_ticks****Type**

uint64\_t

**Default value**

0

This is the time to wait before doing something on the command queue. If bit 32 is set (0x1\_0000\_0000) then the time waited for is a uniform randomly distributed time  $[0, \max(2, (t \& 0xFFFFffffff)) - 1]$ .

**wait\_eventq\_ticks****Type**

uint64\_t

**Default value**

0

This is the time to wait before doing something on the event queue. If bit 32 is set (0x1\_0000\_0000) then the time waited for is a uniform randomly distributed time  $[0, \max(2, (t \& 0xFFFFffffff)) - 1]$ .

**wait\_misc\_async\_actions\_ticks****Type**

uint64\_t

**Default value**

0

This is the time to wait before doing an async action that could be delayed is performed. If bit 32 is set (0x1\_0000\_0000) then the time waited for is a uniform randomly distributed time  $[0, \max(2, (t \& 0xFFFFffffff)) - 1]$ .

**wait\_msi\_ticks**

Type  
uint64\_t

Default value  
0

This is the time to wait before sending an MSI. If bit 32 is set (0x1\_0000\_0000) then the time waited for is a uniform randomly distributed time  $[0, \max(2, (t \ \& \ 0xFFFFfff)) - 1]$ .

**wait\_pri\_req\_ticks**

Type  
uint64\_t

Default value  
0

This is the time to wait before processing a PRI Request. If bit 32 is set (0x1\_0000\_0000) then the time waited for is a uniform randomly distributed time  $[0, \max(2, (t \ \& \ 0xFFFFfff)) - 1]$ .

**wait\_pri\_resp\_ticks**

Type  
uint64\_t

Default value  
1

This is the time to wait before sending a PRI Response back to the PCIe subsystem. When a PRI Response is an auto-response then the ATC might immediately make a new ATS request, that immediately fails, immediately makes a PRI Request, or auto-responds, etc. To break this loop, then we introduce a minimum time on all PRI Responses to give other components in the system a chance to run. If bit 32 is set (0x1\_0000\_0000) then the time waited for is a uniform randomly distributed time  $[0, \max(2, (t \ \& \ 0xFFFFfff)) - 1]$ .

3.10.66 MemoryMappedCounterModule

Memory Mapped Counter Module for Generic Timers. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-1113: IP revisions support

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

## Changes in 11.29.19

Parameters removed:

- `non_arch_fixed_frequency`
- `use_real_time`

## About MemoryMappedCounterModule

This component must be used by multicluster models. It also must be used to run a single core system with a timer that runs at a rate that is different to the input clock to the core.

The component has two bus slave ports because the architecture specification permits you to map each set of registers at different, non-contiguous base addresses.

## Iris and MTI instances for MemoryMappedCounterModule

This model has the following Iris instances:

**Table 3-1114: MemoryMappedCounterModule Iris instances**

InstanceName	ComponentName
MemoryMappedCounterModule	MemoryMappedCounterModule
MemoryMappedCounterModule.pvbus_control_s[0]	PVBusSlave
MemoryMappedCounterModule.pvbus_read_s[0]	PVBusSlave

This model has the following MTI trace components:

**Table 3-1115: MemoryMappedCounterModule MTI instances**

InstanceName	ComponentName
MemoryMappedCounterModule.pvbus_control_s[0]	PVBusSlave
MemoryMappedCounterModule.pvbus_read_s[0]	PVBusSlave

## Ports for MemoryMappedCounterModule

**Table 3-1116: Ports**

Name	Protocol	Type	Description
clk_in	<a href="#">ClockSignal</a>	Slave	This clock input determines the frequency of the Physical Count provided to the clusters connected to the cntvalueb port.
cntvalueb	<a href="#">CounterInterface</a>	Master	This master port implements a private protocol between the cluster and the MemoryMappedCounterModule. This must be connected to the cntvalueb port on each cluster in the system and to the MemoryMappedCounterModule component.
counter_reset	<a href="#">Signal</a>	Slave	Resets when set.
pvbus_control_s	<a href="#">PVBus</a>	Slave	This slave port provides memory-mapped read write access to the control registers of the module.
pvbus_read_s	<a href="#">PVBus</a>	Slave	This slave port provides memory-mapped read access to the status frame registers.

## Parameters for MemoryMappedCounterModule

### **base\_frequency**

#### Type

int

#### Default value

0x5f5e100

#### Description

Reset value for CNTFID0, base frequency in Hz.

### **cntcidr0123\_C**

#### Type

int

#### Default value

0x0

#### Description

Values to be returned for control-frame CIDR registers.

### **cntcidr0123\_R**

#### Type

int

#### Default value

0x0

#### Description

Values to be returned for read-frame CIDR registers.

### **cntpidr0123\_C**

#### Type

int

#### Default value

0x0

#### Description

Values to be returned for control-frame PIDR registers 0-3.

### **cntpidr0123\_R**

#### Type

int

#### Default value

0x0

**Description**

Values to be returned for read-frame PIDR registers 0-3.

**cntpidr4567\_C****Type**

int

**Default value**

0x0

**Description**

Values to be returned for control-frame PIDR registers 4-7.

**cntpidr4567\_R****Type**

int

**Default value**

0x0

**Description**

Values to be returned for read-frame PIDR registers 4-7.

**diagnostics****Type**

int

**Default value**

0x0

**Description**

Diagnostics.

**has\_additional\_registers****Type**

bool

**Default value**

0x0

**Description**

Implements additional REFCLK CNT control registers.

**has\_counter\_scaling****Type**

bool

**Default value**

0x0

**Description**

Implements ARMv8.4 generic counter scaling (FEAT\_CNTSC).

**non\_arch\_start\_at\_default**

**Type**

bool

**Default value**

0x0

**Description**

Firmware is expected to enable the timer at boot time. However, turning this parameter on is a model-specific way of enabling the counter module out of reset.

**readonly\_is\_WI**

**Type**

bool

**Default value**

0x0

**Description**

Ignore (rather than failing) on writes to read-frame.

**3.10.67 MessageHandlingUnit**

Message Handling Unit. This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1117: IP revisions support**

Revision	Quality level
v2.0	Full support
v2.1	Full support
v3	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**Iris and MTI instances for MessageHandlingUnit**

This model has the following Iris instances:

**Table 3-1118: MessageHandlingUnit Iris instances**

InstanceName	ComponentName
MessageHandlingUnit	MessageHandlingUnit
MessageHandlingUnit.a_to_b_v2	MessageHandlingUnitV2
MessageHandlingUnit.a_to_b_v3	MessageHandlingUnitV3

InstanceName	ComponentName
MessageHandlingUnit.version_mapper_a_to_b_rec	PVBusMapper
MessageHandlingUnit.version_mapper_a_to_b_snd	PVBusMapper

This model has the following MTI trace components:

**Table 3-1119: MessageHandlingUnit MTI instances**

InstanceName	ComponentName
MessageHandlingUnit.a_to_b_v2	MessageHandlingUnitV2
MessageHandlingUnit.a_to_b_v3	MessageHandlingUnitV3
MessageHandlingUnit.version_mapper_a_to_b_rec	PVBusMapper
MessageHandlingUnit.version_mapper_a_to_b_snd	PVBusMapper

## Ports for MessageHandlingUnit

**Table 3-1120: Ports**

Name	Protocol	Type	Description
pdbus_s_rec	PVBus	Slave	-
pdbus_s_snd	PVBus	Slave	-
rec_combined_channel_irq_out[200]	Signal	Master	-
rec_combined_irq_out	Signal	Master	-
rec_reset_in	Signal	Slave	-
snd_combined_channel_irq_out[200]	Signal	Master	-
snd_combined_irq_out	Signal	Master	-
snd_reset_in	Signal	Slave	-

## Parameters for MessageHandlingUnit

### NUM\_DB\_CH

#### Type

int

#### Default value

0x1

#### Description

Number of doorbell channels.

### NUM\_FAST\_CH

#### Type

int

#### Default value

0x1

**Description**

Number of fast channels.

**a\_to\_b\_v3.NUM\_FIFO\_CH**

**Type**

int

**Default value**

0x1

**Description**

Number of FIFO Channels, default=1.

**a\_to\_b\_v3.auto\_op\_full**

**Type**

bool

**Default value**

0x0

**Description**

AutoOp mode - AutoOp(min) == false, AutoOp(full) == true - default: AutoOp(min).

**a\_to\_b\_v3.fast\_ch\_group\_int\_enable**

**Type**

bool

**Default value**

0x0

**Description**

Fast Channel group interrupts enable, default=false.

**a\_to\_b\_v3.fifo\_depth**

**Type**

int

**Default value**

0x4

**Description**

Depth of the FIFO = fifo\_depth + 1.

**a\_to\_b\_v3.m16ba\_spt**

**Type**

bool

**Default value**

0x0

**Description**

Mailbox 16 bit access support to FIFO registers.

**a\_to\_b\_v3.m32ba\_spt**

**Type**

bool

**Default value**

0x1

**Description**

Mailbox 32 bit access support to FIFO registers.

**a\_to\_b\_v3.m64ba\_spt**

**Type**

bool

**Default value**

0x0

**Description**

Mailbox 64 bit access support to FIFO registers.

**a\_to\_b\_v3.m8ba\_spt**

**Type**

bool

**Default value**

0x0

**Description**

Mailbox 8 bit access support to FIFO registers.

**a\_to\_b\_v3.monolithic**

**Type**

bool

**Default value**

0x1

**Description**

Monolithic or Distributed MHU - default: monolithic(true).

**a\_to\_b\_v3.p16ba\_spt**

**Type**

bool

**Default value**

0x0

**Description**

Postbox 16 bit access support to FIFO registers.

**a\_to\_b\_v3.p32ba\_spt**

**Type**

bool

**Default value**

0x1

**Description**

Postbox 32 bit access support to FIFO registers.

**a\_to\_b\_v3.p64ba\_spt**

**Type**

bool

**Default value**

0x0

**Description**

Postbox 64 bit access support to FIFO registers.

**a\_to\_b\_v3.p8ba\_spt**

**Type**

bool

**Default value**

0x0

**Description**

Postbox 8 bit access support to FIFO registers.

**diagnostics**

**Type**

int

**Default value**

0x2

**Description**

Diagnostics 0==FATAL\_ERROR -> 4==DEBUG.

**fast\_ch\_group\_int\_enable**

**Type**

bool

**Default value**

0x0

**Description**

Fast Channel group interrupts enable, default=false.

**fast\_ch\_n\_per\_group****Type**

int

**Default value**

0x1

**Description**

Fast Channel num channels per group, default=1.

**fast\_ch\_num\_groups****Type**

int

**Default value**

0x1

**Description**

Fast Channel num of groups, default=1.

**fast\_ch\_word\_size****Type**

int

**Default value**

0x20

**Description**

Fast Channel word size 32bit or 64bit, default=32.

**major\_version****Type**

int

**Default value**

0x2

**Description**

MHU major version (default=2).

**mhu\_arch\_beta01****Type**

bool

**Default value**

0x0

**Description**  
true = Aligns to MHUv3.beta01; false = Aligns to MHUv3.2.

**minor\_version**

**Type**  
int  
**Default value**  
0x1

**Description**  
MHU minor version (default=1).

**product\_id**

**Type**  
int  
**Default value**  
0x0

**Description**  
MHU part number.

3.10.68 MessageHandlingUnitV2

Message Handling Unit Version 2. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-1121: IP revisions support

Revision	Quality level
N/A	Full support

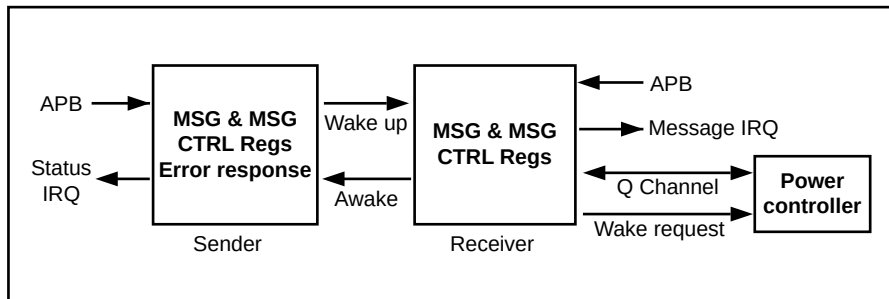

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

About MessageHandlingUnitV2

MessageHandlingUnitV2 is a unidirectional message channel with two APB interfaces, one for the sender and one for the receiver. There is one message handling unit for each sender and receiver pair.

The receiver can be powered off. A Q-Channel is provided for power control on the receiver side.

The message payload can be written directly to status registers. Multiple channels can be combined into a single message.

**Figure 3-3: MessageHandlingUnitV2 structure**

## Iris and MTI instances for MessageHandlingUnitV2

This model has the following Iris instances:

**Table 3-1122: MessageHandlingUnitV2 Iris instances**

InstanceName	ComponentName
MessageHandlingUnitV2	MessageHandlingUnitV2

This model has the following MTI trace components:

**Table 3-1123: MessageHandlingUnitV2 MTI instances**

InstanceName	ComponentName
MessageHandlingUnitV2	MessageHandlingUnitV2

## Ports for MessageHandlingUnitV2

**Table 3-1124: Ports**

Name	Protocol	Type	Description
int_access_nr2r	Signal	Master	-
int_access_r2nr	Signal	Master	-
mhu_combined_irq	Signal	Master	-
mhu_irq[124]	Signal	Master	-
mhu_snd_irq[124]	Signal	Master	-
pvbus_s_rec	PVBus	Slave	-
pvbus_s_snd	PVBus	Slave	-
qchannel_mhu_pwr	PChannel	Slave	-
reset_rec	Signal	Slave	-
reset_snd	Signal	Slave	-
snd_combined_irq	Signal	Master	-
wakerequest	Signal	Master	-

Parameters for MessageHandlingUnitV2

NUM\_CH

Type

int

Default value

0x1

Description

Number of device channels.

minor\_revision

Type

int

Default value

0x0

Description

MHUV2 minor revision, 0 for v2.0, 1 for v2.1.

product\_id

Type

int

Default value

0x0

Description

MHUV2 Product ID, MHU Part Number.

3.10.69 MessageHandlingUnitV3

Message Handling Unit Version 3. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-1125: IP revisions support

Revision	Quality level
v3	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

Iris and MTI instances for MessageHandlingUnitV3

This model has the following Iris instances:

**Table 3-1126: MessageHandlingUnitV3 Iris instances**

InstanceName	ComponentName
MessageHandlingUnitV3	MessageHandlingUnitV3

This model has the following MTI trace components:

**Table 3-1127: MessageHandlingUnitV3 MTI instances**

InstanceName	ComponentName
MessageHandlingUnitV3	MessageHandlingUnitV3

### Ports for MessageHandlingUnitV3

**Table 3-1128: Ports**

Name	Protocol	Type	Description
pvbus_s_rec	PVBus	Slave	Register access for Receiver/Mailbox
pvbus_s_snd	PVBus	Slave	Register access for Sender/Postbox
rec_combined_irq_out	Signal	Master	All interrupts combined for Receiver/MBX
rec_fast_channel_group_irq_out[32]	Signal	Master	Receiver fast channel group interrupts
rec_fast_channel_irq_out[1024]	Signal	Master	Receiver fast channel interrupts
rec_reset_in	Signal	Slave	Reset signal for Receiver/Mailbox
snd_combined_irq_out	Signal	Master	All Interrupts combined for Sender/PBX
snd_reset_in	Signal	Slave	Reset signal for Sender/Postbox

### Parameters for MessageHandlingUnitV3

#### NUM\_DB\_CH

##### Type

int

##### Default value

0x1

##### Description

Number of DoorBell Channels, default=1.

#### NUM\_FAST\_CH

##### Type

int

##### Default value

0x1

##### Description

Number of Fast Channels, default=1.

**NUM\_FIFO\_CH****Type**

int

**Default value**

0x1

**Description**

Number of FIFO Channels, default=1.

**auto\_op\_full****Type**

bool

**Default value**

0x0

**Description**

AutoOp mode - AutoOp(min) == false, AutoOp(full) == true - default: AutoOp(min).

**diagnostics****Type**

int

**Default value**

0x2

**Description**

Diagnostics 0-4 (0:FATAL 1:ERROR 2:WARNING 3:INFO 4:DEBUG), default=2.

**fast\_ch\_group\_int\_enable****Type**

bool

**Default value**

0x0

**Description**

Fast Channel group interrupts enable, default=false.

**fast\_ch\_n\_per\_group****Type**

int

**Default value**

0x1

**Description**

Fast Channel num channels per group, default=1.

**fast\_ch\_num\_groups****Type**

int

**Default value**

0x1

**Description**

Fast Channel num of groups, default=1.

**fast\_ch\_word\_size****Type**

int

**Default value**

0x20

**Description**

Fast Channel word size 32bit or 64bit, default=32.

**fifo\_depth****Type**

int

**Default value**

0x4

**Description**

Depth of the FIFO = fifo\_depth + 1.

**m16ba\_spt****Type**

bool

**Default value**

0x0

**Description**

Mailbox 16 bit access support to FIFO registers.

**m32ba\_spt****Type**

bool

**Default value**

0x1

**Description**

Mailbox 32 bit access support to FIFO registers.

**m64ba\_spt****Type**

bool

**Default value**

0x0

**Description**

Mailbox 64 bit access support to FIFO registers.

**m8ba\_spt****Type**

bool

**Default value**

0x0

**Description**

Mailbox 8 bit access support to FIFO registers.

**mhu\_arch\_beta01****Type**

bool

**Default value**

0x0

**Description**

true = Aligns to MHUv3.beta01; false = Aligns to MHUv3.2.

**monolithic****Type**

bool

**Default value**

0x1

**Description**

Monolithic or Distributed MHU - default: monolithic(true).

**p16ba\_spt****Type**

bool

**Default value**

0x0

**Description**

Postbox 16 bit access support to FIFO registers.

**p32ba\_spt**

Type

bool

Default value

0x1

Description

Postbox 32 bit access support to FIFO registers.

**p64ba\_spt**

Type

bool

Default value

0x0

Description

Postbox 64 bit access support to FIFO registers.

**p8ba\_spt**

Type

bool

Default value

0x0

Description

Postbox 8 bit access support to FIFO registers.

3.10.70 NI700

NI700 Interconnect Fast Model. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-1129: IP revisions support

Revision	Quality level
r0p0	Preliminary support
r1p0	Preliminary support
r2p0	Preliminary support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

Configuring and using the model

- Major IP revisions (rX) are modeled and are controlled by the `revision` parameter.

- Minor IP revisions (pY) are not modeled. There are no functional differences in the model between pY revisions, with the exception of the `periph_id2` register.
- To configure the model, you must have installed Arm Socrates. The `mesh_config_file` parameter defines the mesh placement of NI700 components. Set it to the name of the yaml configuration file emitted by Socrates. You must use version r1p5-03rel0 or later of Socrates to generate the file. For more information about Socrates, see [Arm Socrates](#) on Arm Developer. To download it, contact Arm Technical Support.
- Interconnect models are based on the TRM description and do not typically model RTL defects.
- The mapping between the port number for ASNI, AMNI, HSNi, HMNI, and PMNI ports and the xxNI name used in the yml file is its index when all xxNIs of that same type are sorted in ascending alphabetical order. For example, if the yml file has three ASNIs `asni_s100_scp`, `asni_s101_dap`, and `asni_s204_periph0`:
  - `asni_s100_scp` is mapped to `pvbuss_s_asni[0]`
  - `asni_s101_dap` is mapped to `pvbuss_s_asni[1]`
  - `asni_s204_periph0` is mapped to `pvbuss_s_asni[2]`

Similarly:

- AMNIs are mapped to `pvbuss_m_amni`
- HSNIs are mapped to `pvbuss_s_hsn`
- HMNIs are mapped to `pvbuss_m_hmni`
- PMNIs are mapped to `pvbuss_m_pmni`

Additionally, NI700's parser prints the name-to-index mappings when the component parameter `print_parser_log=true`.

Note

The PMNI RTL supports up to 16 external interfaces, however the model uses a single PMNI port. Through the single PMNI port, the models supports targeting each of the 16 interfaces independently in the SAM.

The following functionality is expected to work:

- The discovery feature to determine the system address of all nodes.
- Hashed and non-hashed memory regions. They are parsed from the `mesh_config_file`.
- MPAM support. Software must configure MPAM override in ASNI nodes by enabling and configuring the `ASNI_AR_MPAM_OVERRIDE` (0x0E0) and `ASNI_AW_MPAM_OVERRIDE` (0x0E4) registers. The `GT_MPAM_SUPPORT` signal is ignored. Software must configure MPAM support in ASNI nodes by enabling and configuring the Request MPAM Override (0x0E0) register.
- IDM support. The IDM features Access control and Reset control are modeled. Starting in r1p0, non-secure versions of the `ACCESS_STATUS` and `RESET_STATUS` registers are present. The DeviceID and the information whether an xxNI has IDM enabled are parsed from the `mesh_config_file`. When an xxNI is isolated with IDM Access Control or under reset with IDM Reset, all transactions to and from that xxNI are aborted. With respect to IDM reset support, IDM reset signals are modeled and they should be connected to the managed devices that are

connected to the respective xxNI port. The register `IDM_RESET_CONTROL` is supported. The target xxNI always enters or exits IDM reset immediately and drives the reset signals accordingly. In register `IDM_RESET_STATUS`, the bitfields `active_write` and `active_read` read always zero. In registers `IDM_RESET_READID` and `IDM_RESET_WRITEID`, the bitfields `vmaster_id` and `master_id` read always zero.

- There are no software functional differences for r2p1 and r2p0 can be used in its place.

## Model limitations

Issues listed in this section have identifiers of the form [SDDKW-x]. These are for Arm internal references only.

- Out of scope:
  - PMU counters are not supported. Counter registers are implemented as **RAZ**.
  - QoS is not supported and all related registers are **RAZ/WI**.
  - Error injection and error generation are not supported. All error registers are **RAZ/WI**.
  - Power, clock, and interrupt signals are not supported.
- An access to a reserved or nonexistent register does not abort. It returns `pv::Tx_Data::TX_OK` and is **RAZ/WI**.
- The maximum number of manager Network Interfaces is 127. The maximum tested is 127 AMNIs, 127 PMNIs, and 9 HMNIs.
- The maximum number of subordinate Network Interfaces is 128. The maximum tested is 128 ASNIs and 9 HSNIs.
- The maximum voltage, power, and clock domains of 32 each have not been tested.
- There is no support for 1 stripe target in a group, additional granularities, or the additional stripe group remap functionality described in r2p0 TRM section 2.4.5.
- Remapping features not supported:
  - Tested 5 out of the maximum of 8 remap states.
  - The priority for multiple address remapping states.
  - One target remapped to a different target.
  - A single target remapped to a stripe group.
  - One stripe group remapped to a different stripe group.
  - A stripe group remapped to a single target.
- Stripe features not supported:
  - ASNI striping to an HMNI target has not been tested.
  - Limited testing of stripe groups with different numbers of targets and granularities.
  - Single target stripe.

- The hashed memory regions support is limited by Fast Models DMI. Due to the 4KB memory pages in DMI, granularities smaller than 4KB are not accounted for by the model. Thus, subsequent accesses within a 4KB address range are delivered to the same destination node.
- AMNI nodes in the model are interface-indifferent and registers do not reflect the protocol version.
- r2 CMO Response control is not supported.
- There is no revision string for r2p1. r2p0 is functionally equivalent.
- Hashing of stripe groups is limited to a granularity of 4096B.
- xSNI access to CFGNI is not limited by router connectivity defined in the `mesh_config_file`. It considers only whether the xSNI has the CFGNI target defined in its memory map.
- A reset after model startup does not reset the registers or address remap selections.
- `*_IDM_RESET_STRAP` and its effect on the endpoint soft reset and `IDM_RESET_CONTROL` register is not supported.
- IDM for power domains is not supported.
- No register visibility support for a debugger.
- No software control for the CMO terminate response in register `AMNI_CONFIG_CTL`.

### Iris and MTI instances for NI700

This model has the following Iris instances:

**Table 3-1130: NI700 Iris instances**

InstanceName	ComponentName
NI700	NI700
NI700.decoder	PVBusMapper

This model has the following MTI trace components:

**Table 3-1131: NI700 MTI instances**

InstanceName	ComponentName
NI700	NI700
NI700.decoder	PVBusMapper

### Ports for NI700

**Table 3-1132: Ports**

Name	Protocol	Type	Description
idm_reset_signal_amni[127]	Signal	Master	IDM reset signals to AMNIs.
idm_reset_signal_asni[128]	Signal	Master	IDM reset signals to ASNIs.
idm_reset_signal_hmni[127]	Signal	Master	IDM reset signals to HMNIs.
idm_reset_signal_hsni[128]	Signal	Master	IDM reset signals to HSNIs.
idm_reset_signal_pmni[127]	Signal	Master	IDM reset signals to PMNIs.
pdbus_m_amni[127]	PVBus	Master	AMNI downstream ports.

Name	Protocol	Type	Description
pvbuse_m_hmni[127]	PVBus	Master	HMNI downstream ports.
pvbuse_m_pmni[127]	PVBus	Master	PMNI downstream ports.
pvbuse_s_asni[128]	PVBus	Slave	ASNI upstream ports.
pvbuse_s_hsni[128]	PVBus	Slave	HSNI upstream ports.
reset_in	Signal	Slave	Reset signal.

Parameters for NI700

mesh\_config\_file

Type

string

Default value

""

Description

Name of a file containing mesh placement of NI700 components.

mpam\_attributes

Type

string

Default value

""

User-defined transform to be applied to bus attributes like MasterID, ExtendedID Or UserFlags, for MPAM Attributes encoded into bus attributes.

For example:

```
ExtendedID[62:55]=MPAM_PMG, ExtendedID[54:39]=MPAM_PARTID, ExtendedID[38]=MPAM_NS
```

An empty string disables MPAM support.

periphbase

Type

int

Default value

0xffffffffffffffff

Description

Value for PERIPHBASE.

**print\_config**

**Type**  
bool

**Default value**  
0x0

**Description**  
Enables printing the config register addresses.

**print\_parser\_log**

**Type**  
bool

**Default value**  
0x0

**Description**  
Enables printing the yaml config parser log messages.

**revision**

**Type**  
string

**Default value**  
"r2p0"

**Description**  
Component revision. Currently supports r0p0, r1p0, r2p0.

**show\_banner**

**Type**  
uint64\_t

**Default value**  
2

Show component banner:

**0**  
supress entire banner

**1**  
suppress config file

**2+**  
show full banner

### 3.10.71 NI710AE

NI710AE Interconnect Fast Model. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1133: IP revisions support**

Revision	Quality level
r0p1	Preliminary support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### About NI710AE

To configure the model, you must have installed Arm Socrates. The `mesh_config_file` parameter defines the network interfaces present as well as their configuration options. Set it to the name of the YAML configuration file emitted by Socrates. You must use the r1p7-05 version of Socrates to generate the file. For more information about Socrates, see [Arm Socrates](#) on Arm Developer. To download it, contact Arm Technical Support.

The following functionality is supported in this release:

- All NI700 features plus the APU

Programmer's view related support:

- Model supports discovery to determine the system address of the following registers:
  - Global, Voltage, Power, and Clock Domain registers.
  - ASNI, HSNI, AMNI, HMNI, PMNI, and PMU registers.
  - APU subfeature registers.

Address map related support:

- Model supports Static Maps
- Model supports remap states
- NI700 limitations that relate to static maps and remap states also apply to NI710AE

FMU related support:

- A dedicated APB port to access the FMU registers is present in the model.
- The reset values for any configuration dependent FMU registers are currently incorrect.
- FMU related behavior has not been modeled. Any writes to FMU registers are currently ignored.

## Model limitations

Note

Issues listed in this section have identifiers of the form [SDDKW-x]. These are for Arm internal references only.

- All [NI700](#) limitations apply to NI710AE.
- FMU registers are accessible via the dedicated APB port but the functionality is not modeled.
- The PMU cannot be configured.
- [SDDKW-84456] Secure Access Override functionality (`xxNI.secure_access` register) is not supported.
- IDM limitations:
  - [SDDKW-88881] IDM Functionality is not tested and may not function correctly. Contact Arm Technical Support for support interest.
  - [SDDKW-88881] IDM Registers are accessible but `IDM_DEVICE_ID` is 0 for all IDMs.
- APU limitations
  - The base and size of address regions must be aligned to 4KiB even when `apuRegion4k` is false. A warning will be given and the region may not function properly due to PVBUS limitations.
  - `APU_ENABLE_RESET_STRAP` is not supported and `APU_CTRL.apu_enable` bit should be used to enable APU instead.
  - [SDDKW-80598] APU Region Locking is currently not supported.
  - APU Model does not enforce programming order described in TRM 102756\_0001\_03 Section 3.4.4.5 “Order of programming for APU address region registers”. The APU Model creates regions from the current values of the APU registers when `APU_CTRL.apu_enable = 1` is written.
  - [SDDKW-87737] APU Reprogramming in the model does not enforce the requirement that `APU_CTRL.apu_enable = 0` is written first before `APU_CTRL.apu_enable = 1` is written to reprogram new regions.
  - [SDDKW-82664] APUID is not read from the transaction attributes, instead the model parameter `apu_subsystem_id` is used to specify the `subsystemID/APUID` of the requestor sending in a transaction through an xSNI.

### Iris and MTI instances for NI710AE

This model has the following Iris instances:

**Table 3-1134: NI710AE Iris instances**

InstanceName	ComponentName
NI710AE	NI710AE
NI710AE.decoder	PVBusMapper

This model has the following MTI trace components:

**Table 3-1135: NI710AE MTI instances**

InstanceName	ComponentName
NI710AE	NI710AE
NI710AE.decoder	PVBusMapper

## Ports for NI710AE

**Table 3-1136: Ports**

Name	Protocol	Type	Description
idm_reset_signal_amni[127]	Signal	Master	IDM reset signals to AMNIs.
idm_reset_signal_asni[128]	Signal	Master	IDM reset signals to ASNIs.
idm_reset_signal_hmni[127]	Signal	Master	IDM reset signals to HMNIs.
idm_reset_signal_hsni[128]	Signal	Master	IDM reset signals to HSNIs.
idm_reset_signal_pmni[127]	Signal	Master	IDM reset signals to PMNIs.
pvbus_m_amni[127]	PVBus	Master	AMNI downstream ports.
pvbus_m_hmni[127]	PVBus	Master	HMNI downstream ports.
pvbus_m_pmni[127]	PVBus	Master	PMNI downstream ports.
pvbus_s_asni[128]	PVBus	Slave	ASNI upstream ports.
pvbus_s_fmu_apb	PVBus	Slave	Dedicated APB port to access FMU registers.
pvbus_s_hsni[128]	PVBus	Slave	HSNI upstream ports.
reset_in	Signal	Slave	Reset signal.

## Parameters for NI710AE

### apu\_subsystem\_id

#### Type

string

#### Default value

0

APUID/SubsystemID of the component connected to each <x>SNI. Specify the subsystem id of the component connected to each <x>SNI by using a format like:

```
<x>SNI<m>=<subsystemID0>,<y>SNI<n>=<subsystemID1>
```

The subsystemID is assumed to be 0 for any component connected to an <x>SNI that does not appear in this list.

### mesh\_config\_file

#### Type

string

**Default value**

""

**Description**

Name of a file containing mesh placement of NI710AE components.

**mpam\_attributes****Type**

string

**Default value**

""

User-defined transform to be applied to bus attributes like `MasterID`, `ExtendedID` OR `UserFlags`, for MPAM Attributes encoded into bus attributes.

For example:

```
ExtendedID[62:55]=MPAM_PMG, ExtendedID[54:39]=MPAM_PARTID, ExtendedID[38]=MPAM_NS
```

An empty string disables MPAM support.

**periphbase****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Value for PERIPHBASE.

**print\_config****Type**

bool

**Default value**

0x0

**Description**

Enables printing the config register addresses.

**print\_parser\_log****Type**

bool

**Default value**

0x0

**Description**

Enables printing the yaml config parser log messages.

**revision**

**Type**

string

**Default value**

"rOp1"

**Description**

Component revision. Currently supports rOp1.

**show\_banner**

**Type**

uint64\_t

**Default value**

2

Show component banner:

**0**

supress entire banner

**1**

suppress config file

**2+**

show full banner

3.10.72 NOC\_S3

NOC\_S3 Interconnect Fast Model. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-1137: IP revisions support

Revision	Quality level
rOp0	Preliminary support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

Configuring and using the model

- Major IP revisions (rX) are modeled and are controlled by the model `revision` parameter.
- Minor IP revisions (pY) are not modeled. There are no functional differences in the model between pY revisions, with the exception of the `peripheral_id2` register.

- To configure the model, you must have installed Arm Socrates. The `mesh_config_file` parameter defines the network interfaces present as well as their configuration options. Set it to the name of the YAML configuration file emitted by Socrates. You must use version r1p7-06 or later of Socrates to generate the file. For more information about Socrates, see [Arm Socrates](#) on Arm Developer. To download it, contact Arm Technical Support.
- Interconnect models are based on the TRM description and do not typically model RTL defects.
- The mapping between the port number for ASNI, AMNI, HSNI, HMNI, and PMNI ports and the xxNI name used in the yml file is its index when all xxNIs of that same type are sorted in ascending alphabetical order. For example, if the yml file has three ASNIs `asni_s100_scp`, `asni_s101_dap`, and `asni_s204_periph0`:
  - `asni_s100_scp` is mapped to `pvbuss_asni[0]`
  - `asni_s101_dap` is mapped to `pvbuss_asni[1]`
  - `asni_s204_periph0` is mapped to `pvbuss_asni[2]`

Similarly:

- AMNIs are mapped to `pvbuss_m_amni`
- HSNIs are mapped to `pvbuss_s_hsni`
- HMNIs are mapped to `pvbuss_m_hmni`
- PMNIs are mapped to `pvbuss_m_pmni`

Additionally, the mesh config file parser prints the name-to-index mappings when the component parameter `print_parser_log=true`.

Note

The PMNI RTL supports up to 16 external interfaces, however the model uses a single PMNI port. Through the single PMNI port, the models supports targeting each of the 16 interfaces independently in the SAM.

---

rXpY support:

- rOp0

Address map related support:

- Model supports Static Maps and Programmable Address Maps (PAM).
  - Static Map hashed and non-hashed memory regions are parsed from the `mesh_config_file`.
- (PAM flow) Support for `default_tgt_id` strap to set default `xsni` targets.
- Supports configurable address mask (`cmp_addr_mask_{l,u}`, `htg_addr_mask_{l,u}`).
- Model supports topology parameter `sam/regionCompLSB` to set minimum SAM address granule with values between 4KB and 64KB.
- Model supports `No_Target` as a target in Address Maps.
- Model supports remap states in static map flow.

Programmer's view related support:

- Model supports 4KB and 64KB for topology parameter `configNodeGranularity`.
- Model supports discovery to determine the system address of the following node registers:
  - Global, Voltage, Power, and Clock Domain registers.
  - ASNI, HSNI, AMNI, HMNI, PMNI, and PMU registers.
  - IDM, APU, and PAM subfeature registers.
  - FMU and FCU.

## Model limitations

Issues listed in this section have identifiers of the form [SDDKW-x]. These are for Arm internal references only.

- The following features are out of scope for the Fast Model, and will not be supported:
  - PMU counters are not supported. Counter registers are implemented as **RAZ**.
  - QoS is not supported and all related registers are **RAZ/WI**.
  - Power, clock and interrupt signals are not supported.
  - No support for AHB Locked transfers.
  - No support for IDM timeout detection.
  - No support for reorder buffers or Cyclic Dependency Avoidance Scheme (CDAS).
- APU limitations [SDDKW-82596]:
  - The base and size of address regions must be aligned to 4KiB even when `apuRegion4k` is false. A warning will be given and the region may not function properly due to PVBUS limitations.
  - `APU_ENABLE_RESET_STRAP` is not supported and `APU_CTRL.apu_enable` bit should be used to enable APU instead.
  - APU Region Locking is currently not supported. [SDDKW-80598]
  - `APUID` is not read from the transaction attributes, instead the model parameter `apu_subsystem_id` is used to specify the `subsystemID/APUID` of the requestor sending in a transaction through an `xSNI`. [SDDKW-81014]
  - If a transaction comes through an `xSNI` which does not have an APU and is routed to an `xMNI` which does have one, the APU in the `xMNI` treats the `APUID` as 0.
  - Since the `subsystemID/APUID` is not encoded in the transaction, components downstream to this model can't know the `APUID` of the requestor.
- Address map and bus traffic limitations [SDDKW-82595]:
  - Default target id cannot be configured through `sam_status` register. [SDDKW-77767] It can be provided through `default_tgtid_strap_i` model parameter.
  - Routers are not modeled. `xSNI` access only considers whether the target is defined in the `xSNI`'s memory map. [SDDKW-79760]

- No support for AMNI Address shuttering. [SDDKW-80419]
- Model supports 1, 2, and 4 targets for power-of-two stripe group hashing. No other striping functions/target combinations are supported.
- Hashing of stripe groups limited to a minimum granularity of 4096B. This is a DMI limitation of PVBus. See [Bus traffic in Fast Models](#) for information.
- No support for exclusive monitoring (ASNI/HSNI/AMNI/HMNI). [SDDKW-79385]
- xSNI access to CFGNI is not limited by router connectivity defined in the `mesh_config_file`. It considers only whether the xSNI has the CFGNI target defined in its memory map.
- Stripe limitations
  - ASNI striping to an HMNI target has not been tested.
  - Limited testing of stripe groups with different numbers of targets and granularities.
  - No Support for single target stripe.
  - There is no support for additional granularities, or the additional stripe group remap functionality.
  - Limited 8-way striping testing for static address maps. Not supported for programmable address maps.
- Remapping features not supported:
  - Tested 5 out of the maximum of 8 remap states.
  - The priority for multiple address remapping states.
  - One target remapped to a different target.
  - A single target remapped to a stripe group.
  - One stripe group remapped to a different stripe group.
  - A stripe group remapped to a single target.
- Programmer's view limitations [SDDKW-82591]:
  - 64-bit register accesses are not supported. [SDDKW-75304]
  - An access to a reserved or nonexistent register does not abort. It returns `pv::Tx_Data::TX_OK` and is **RAZ/WI**.
  - No support for secure/root override for register accesses. [SDDKW-77158]
  - IDM registers are not tested. [SDDKW-77474]
  - No support for `idm_sreset_strap_i` functionality. [SDDKW-80451]
  - AMNI nodes in the model are interface-indifferent and the registers may not reflect the protocol version.
  - Error injection and error generation (RAS) are not supported. All error registers are **RAZ/WI**. [SDDKW-73411]
  - No support for MTE.
- Topology size limitations [SDDKW-82589]:
  - Maximum number of Voltage Domains is 32. The maximum tested is 1.

- Maximum number of Power Domains is 32. The maximum tested is 2.
- Maximum number of Clock Domains is 32. The maximum tested is 16.
- Maximum number of PMU nodes is 32 (1 per Clock Domain). The maximum tested is 15.
- Maximum number of Subordinate Network Interfaces (SNIs) is 128 (ASNI + HSNI). The maximum tested is 128 ASNIs and 9 HSNI.
- Maximum number of Manager Network Interfaces (MNIs) is 127 (AMNI + HMNI + PMNI). The maximum tested is 127 AMNIs, 127 PMNIs, and 9 HMNIs.
- FMU and FCU limitations:
  - Registers are readable and writeable. No other functionality is modeled.
- CMO limitations:
  - No software control for the CMO terminate response in register `AMNI_CONFIG_CTL`.
  - CMO Response control is not supported.
- A warm reset using static address maps has not been tested. [SDDKW-84005]
- RME limitations:
  - RME disable per interface is not supported. The disable only works when the topology parameter `axi/rmeSupport` for all interfaces is set to Disabled. Complete support to disable RME such as hiding root override regs has not been modeled or tested. [SDDKW-85413]
  - RME disable does not prevent REALM/ROOT transactions from flowing through interconnect. [SDDKW-81472]
- AMNI nodes in the model are interface-indifferent and registers do not reflect the protocol version.
- A reset after model startup does not reset the registers or address remap selections.
- No register visibility support for a debugger.
- r1 not supported:
  - AXI-Stream (TSNI and TMNI) not supported
  - AMNI and HMNI exclusive monitors not supported

### Iris and MTI instances for NOC\_S3

This model has the following Iris instances:

**Table 3-1138: NOC\_S3 Iris instances**

InstanceName	ComponentName
NOC_S3	NOC-S3
NOC_S3.decoder	PVBusMapper
NOC_S3.dsu_mapper	PVBusMapper

This model has the following MTI trace components:

**Table 3-1139: NOC\_S3 MTI instances**

InstanceName	ComponentName
NOC_S3	NOC-S3
NOC_S3.decoder	PVBusMapper
NOC_S3.dsu_mapper	PVBusMapper

### Ports for NOC\_S3

**Table 3-1140: Ports**

Name	Protocol	Type	Description
idm_reset_signal_amni[127]	Signal	Master	IDM reset signals to AMNIs.
idm_reset_signal_asni[128]	Signal	Master	IDM reset signals to ASNIs.
idm_reset_signal_hmni[127]	Signal	Master	IDM reset signals to HMNIs.
idm_reset_signal_hsni[128]	Signal	Master	IDM reset signals to HSNIs.
idm_reset_signal_pmni[127]	Signal	Master	IDM reset signals to PMNIs.
pvbus_m_amni[127]	PVBus	Master	AMNI downstream ports.
pvbus_m_hmni[127]	PVBus	Master	HMNI downstream ports.
pvbus_m_pmni[127]	PVBus	Master	PMNI downstream ports.
pvbus_s_asni[128]	PVBus	Slave	ASNI upstream ports.
pvbus_s_hsni[128]	PVBus	Slave	HSNI upstream ports.
reset_in	Signal	Slave	Reset signal.

### Parameters for NOC\_S3

#### apu\_subsystem\_id

##### Type

string

##### Default value

"0"

APUID/SubsystemID of the component connected to each xSNI.

Specify the subsystem id of the component connected to each <x>SNI by using a format like:

```
<x>SNI<m>=<subsystemID0>,<y>SNI<n>=<subsystemID1>
```

The subsystemID is assumed to be 0 for any component connected to an <x>SNI that does not appear in this list.

#### default\_tgt\_id\_strap\_i

##### Type

string

**Default value**

```
""
```

Default Target ID input.

Specify the target id for each <x>SNI by using a format like:

```
<x>SNI<m>=<target_id0>,<y>SNI<n>=<target_id1>
```

CFGNI (Configuration Network Interface) is used as the default target if a certain <x>SNI does not appear in the list.

**mesh\_config\_file****Type**

```
string
```

**Default value**

```
""
```

**Description**

Name of a file containing mesh placement of NOC\_S3 components.

**mpam\_attributes****Type**

```
string
```

**Default value**

```
""
```

User-defined transform to be applied to bus attributes like `MasterID`, `ExtendedID` OR `UserFlags`, for MPAM Attributes encoded into bus attributes.

For example:

```
ExtendedID[62:55]=MPAM_PMG, ExtendedID[54:39]=MPAM_PARTID, ExtendedID[38]=MPAM_NS
```

An empty string disables MPAM support.

**periphbase****Type**

```
int
```

**Default value**

```
0xffffffffffffffff
```

**Description**

Value for PERIPHBASE.

**print\_config**

**Type**  
bool

**Default value**  
0x0

**Description**  
Enables printing the config register addresses.

**print\_parser\_log**

**Type**  
bool

**Default value**  
0x0

**Description**  
Enables printing the yaml config parser log messages.

**revision**

**Type**  
string

**Default value**  
"r0p0"

**Description**  
Component revision. Currently supports r0p0.

**show\_banner**

**Type**  
uint64\_t

**Default value**  
2

Show component banner:

**0**  
supress entire banner

**1**  
suppress config file

**2+**  
show full banner

### 3.10.73 OTPW

One Time Programmable Memory Wrapper. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1141: IP revisions support**

Revision	Quality level
0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### Iris and MTI instances for OTPW

This model has the following Iris instances:

**Table 3-1142: OTPW Iris instances**

InstanceName	ComponentName
OTPW	OTPW

#### Ports for OTPW

**Table 3-1143: Ports**

Name	Protocol	Type	Description
apb_host_in	<a href="#">PVBUS</a>	Slave	APB3 Subordinate Interface - Access to OTP memory or OTP emulation memory
apb_otp_out	<a href="#">PVBUS</a>	Master	APB3 Manager Interface - Access to OTP memory
apb_register_in	<a href="#">PVBUS</a>	Slave	APB3 Subordinate Interface - Access to OTPW registers
axi_emulated_otp_out	<a href="#">PVBUS</a>	Master	AXI Manager Interface - Access to emulated OTP memory
n_poreset_in	<a href="#">Signal</a>	Slave	ICLU power-on reset in
otp_alarm_out	<a href="#">Signal</a>	Master	Alarm output destined for the Security Alarm Manager
otp_int_out	<a href="#">Signal</a>	Master	Interrupt output destined for the processor
otp_otp_is_ready_out	<a href="#">Signal</a>	Master	Status signal indicating that the OTPW is ready

#### Parameters for OTPW

##### OTP\_SIZE\_IN\_WORDS

##### Type

int

##### Default value

0x1000

##### Description

Indicates the size of the OTP memory in words.

**diagnostics**

**Type**

int

**Default value**

0x2

**Description**

Diagnostics 0-4 (0:FATAL 1:ERROR 2:WARNING 3:INFO 4:DEBUG - DEFAULT==2).

**3.10.74 PL011\_Uart**

ARM PrimeCell UART(PL011). This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

Table 3-1144: IP revisions support

Revision	Quality level
r1p4	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**Using in\_file and in\_file\_escape\_sequence parameters**

The UART reads input from `in_file`. If `in_file` contains a line beginning:

```
## WaitForPrompt <something-up-to-end-of-line>
```

then the UART stops reading from `in_file` until the prompt has appeared.

For example, if `in_file` contains the following lines, the UART outputs `ls` only after the root prompt appears:

```
## WaitForPrompt root #  
ls
```

**Note**

Use the parameter `in_file_escape_sequence` to set a different escape sequence to `##`.

**Using the untimed\_fifos parameter**

When the `untimed_fifos` parameter is false, characters of serial data are clocked to or from the SerialData port at a rate controlled by the `clk_in_ref` clock rate and the `baud-rate-divider` configuration of the UART clock. Enabling `untimed_fifos` permits serial data to be sent or received as fast as it can be generated or consumed. The modem control signals are still generated correctly,

so the UART is not able to transmit data faster than the receiving end can handle. For example, TelnetTerminal uses the CTS signal to avoid overflowing its TCP/IP buffer. See [TelnetTerminal](#).

### Differences between the model and the RTL

This component does not implement the DMA functionality of the PL011 PrimeCell.

### Iris and MTI instances for PL011\_Uart

This model has the following Iris instances:

**Table 3-1145: PL011\_Uart Iris instances**

InstanceName	ComponentName
PL011_Uart	PL011_Uart
PL011_Uart.busslave	PVBusSlave
PL011_Uart.clk_divider	ClockDivider
PL011_Uart.timer	ClockTimerThread
PL011_Uart.timer.timer	ClockTimerThread64
PL011_Uart.timer.timer.thread	SchedulerThread
PL011_Uart.timer.timer.thread_event	SchedulerThreadEvent

This model has the following MTI trace components:

**Table 3-1146: PL011\_Uart MTI instances**

InstanceName	ComponentName
PL011_Uart	<a href="#">PL011_Uart</a>
PL011_Uart.busslave	<a href="#">PVBusSlave</a>
PL011_Uart.clk_divider	<a href="#">ClockDivider</a>

### Ports for PL011\_Uart

**Table 3-1147: Ports**

Name	Protocol	Type	Description
clk_in_ref	<a href="#">ClockSignal</a>	Slave	Clock input, typically 14.745MHz, which sets the master transmit/receive rate.
intr	<a href="#">Signal</a>	Master	Interrupt signal.
pvbuss	<a href="#">PVBus</a>	Slave	Slave port for register access.
serial_out	<a href="#">SerialData</a>	Master	Serial input/output and control signals. Used to communicate with a serial device, such as a terminal.

### Parameters for PL011\_Uart

#### baud\_rate

##### Type

int

**Default value**

0x9600

**Description**

Baud rate.

**`clk_divider.div`****Type**

int

**Default value**

0x1

**Description**

Clock Rate Divider. This parameter is not exposed via CADI and can only be set in LISA.

**`clk_divider.mul`****Type**

int

**Default value**

0x1

**Description**

Clock Rate Multiplier. This parameter is not exposed via CADI and can only be set in LISA.

**`clock_rate`****Type**

int

**Default value**

0xe10000

**Description**

Clock rate for PL011.

**`enable_dc4`****Type**

bool

**Default value**

0x1

**Description**

Enable DC4 commands (try echo -e "help\024" in a Linux shell in a serial console).

**`flow_ctrl_mask_en`****Type**

bool

**Default value**

0x0

**Description**

Enable hardware flow control workaround which forcefully disables CTSen and RTSen bits in UARTCR register.

**halt****Type**

bool

**Default value**

0x0

**Description**

Halt instead of shutdown for shutdown\_on\_eot and shutdown\_tag.

**in\_file****Type**

string

**Default value**

""

**Description**

Input file for data to be read by the UART.

**in\_file\_escape\_sequence****Type**

string

**Default value**

"##"

**Description**

Input file escape sequence.

**out\_file****Type**

string

**Default value**

""

**Description**

Output file to hold data written by the UART (use '-' to send all output to stdout).

**revision****Type**

string

**Default value**

"r1p4"

**Description**

Revision to simulate.

**shutdown\_on\_eot****Type**

bool

**Default value**

0x0

**Description**

Shutdown simulation when a EOT (ASCII 4) char is transmitted (useful for regression tests when semihosting is not available).

**shutdown\_tag****Type**

string

**Default value**

""

**Description**

Shutdown simulation when a string is transmitted.

**toggle\_mti****Type**

string

**Default value**

""

**Description**

Start/stop token for any ToggleMTI source. Argument uses the JSON format: [{ "start": "START-TOKEN", "stop": "STOP-TOKEN" }] where 'START-TOKEN/END-TOKEN' are the corresponding start/stop tokens for toggling the trace plugins. Note that '\n' will be ignored if at start or end of the token. For additional information, use 'help' as the value of this parameter.

**uart\_enable****Type**

bool

**Default value**

0x0

**Description**

Enable uart when the system starts up. (clock\_rate and baud\_rate are only valid when this option is enabled.).

**unbuffered\_output**

**Type**

bool

**Default value**

0x0

**Description**

Unbuffered output.

**untimed\_fifos**

**Type**

bool

**Default value**

0x1

**Description**

Ignore the clock rate and transmit/receive serial data immediately.

**3.10.75 PL022\_SSP**

ARM PrimeCell Synchronous Serial Port(PL022). This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1148: IP revisions support**

Revision	Quality level
r1p4	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**Differences between the model and the RTL**

Although the PL022\_SSP component has clock input, it is not internally clock-driven. This is different to the hardware.

Note

This component is a preliminary release. It is not a fully-supported peripheral.

## Iris and MTI instances for PL022\_SSP

This model has the following Iris instances:

**Table 3-1149: PL022\_SSP Iris instances**

InstanceName	ComponentName
PL022_SSP	PL022_SSP
PL022_SSP.busslave	PVBusSlave
PL022_SSP.prescaler	ClockDivider

This model has the following MTI trace components:

**Table 3-1150: PL022\_SSP MTI instances**

InstanceName	ComponentName
PL022_SSP.busslave	PVBusSlave
PL022_SSP.prescaler	ClockDivider

## Ports for PL022\_SSP

**Table 3-1151: Ports**

Name	Protocol	Type	Description
clk	ClockSignal	Slave	Main PrimeCell SSP clock input.
clkin	ClockSignal	Slave	PrimeCell SSP clock input.
clkout	ClockSignal	Master	Clock output.
intr	Signal	Master	Interrupt signaling.
pvbus	PVBus	Slave	Slave port for connection to PV bus master/decoder.
rorintr	Signal	Master	Receive overrun interrupt.
rtintr	Signal	Master	Receive timeout interrupt. We don't implement time out interrupt.
rx_dma_port	PL080_DMAC_DmaPortProtocol	Master	PrimeCell SSP receive DMA port.
rx_d	Value	Slave	PrimeCell SSP receive data.
rxintr	Signal	Master	Receive FIFO service request port.
tx_dma_port	PL080_DMAC_DmaPortProtocol	Master	PrimeCell SSP transmit DMA port.
tx_d	Value	Master	PrimeCell SSP transmit data.
txintr	Signal	Master	Transmit FIFO service request.

## Parameters for PL022\_SSP

### prescaler.div

#### Type

int

#### Default value

0x1

**Description**

Clock Rate Divider. This parameter is not exposed via CADI and can only be set in LISA.

**prescaler.mul**

**Type**

int

**Default value**

0x1

**Description**

Clock Rate Multiplier. This parameter is not exposed via CADI and can only be set in LISA.

### 3.10.76 PL030\_RTC

ARM PrimeCell Real Time Clock(PL030). This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1152: IP revisions support**

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### Iris and MTI instances for PL030\_RTC

This model has the following Iris instances:

**Table 3-1153: PL030\_RTC Iris instances**

InstanceName	ComponentName
PL030_RTC	PL030_RTC
PL030_RTC.busslave	PVBusSlave
PL030_RTC.timer	ClockTimerThread
PL030_RTC.timer.timer	ClockTimerThread64
PL030_RTC.timer.timer.thread	SchedulerThread
PL030_RTC.timer.timer.thread_event	SchedulerThreadEvent

This model has the following MTI trace components:

**Table 3-1154: PL030\_RTC MTI instances**

InstanceName	ComponentName
PL030_RTC.busslave	PVBusSlave

## Ports for PL030\_RTC

**Table 3-1155: Ports**

Name	Protocol	Type	Description
clock	<a href="#">ClockSignal</a>	Slave	Clock input, typically 1MHz, driving master count rate.
intr	<a href="#">Signal</a>	Master	Interrupt signaling.
pvbust	<a href="#">PVBus</a>	Slave	Slave port for connection to PV bus master/decoder.

## 3.10.77 PL031\_RTC

ARM PrimeCell Real Time Clock(PL031). This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1156: IP revisions support**

Revision	Quality level
r1p3	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

### About PL031\_RTC

This component can provide a basic alarm function or long time base counter.

It has no impact on the performance of a PV system when idle or counting down. The component only executes code when the counter expires or during bus accesses.

### Iris and MTI instances for PL031\_RTC

This model has the following Iris instances:

**Table 3-1157: PL031\_RTC Iris instances**

InstanceName	ComponentName
PL031_RTC	PL031_RTC
PL031_RTC.busslave	PVBusSlave
PL031_RTC.timer	ClockTimerThread
PL031_RTC.timer.timer	ClockTimerThread64
PL031_RTC.timer.timer.thread	SchedulerThread
PL031_RTC.timer.timer.thread_event	SchedulerThreadEvent

This model has the following MTI trace components:

**Table 3-1158: PL031\_RTC MTI instances**

InstanceName	ComponentName
PL031_RTC.busslave	<a href="#">PVBusSlave</a>

## Ports for PL031\_RTC

**Table 3-1159: Ports**

Name	Protocol	Type	Description
clock	<a href="#">ClockSignal</a>	Slave	Clock input, typically 1MHz, driving master count rate.
intr	<a href="#">Signal</a>	Master	Interrupt signaling.
pvbust	<a href="#">PVBus</a>	Slave	Slave port for connection to PV bus master/decoder.

## Parameters for PL031\_RTC

### RTCDR\_reset\_value

#### Type

int

#### Default value

0x0

#### Description

Reset value for RTCDR.

### RTCDR\_use\_current\_time

#### Type

bool

#### Default value

0x1

#### Description

Use current Unix/POSIX time for reset value for RTCDR. If true RTCDR\_reset\_value is ignored.

## 3.10.78 PL041\_AACI

ARM PrimeCell Advanced Audio CODEC Interface(PL041). This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1160: IP revisions support**

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

### About PL041\_AACI

The PL041\_AACI component is designed to connect to an audio output component such as [AudioOut\\_File](#) or [AudioOut\\_SDL](#).

The ability to play audio through this component depends on the AudioOut component in use and on the performance requirements of the software running on the simulated system. The rate of FIFO draining is controlled by the audio output to which the component is connected. This might not correspond to the rate that would be expected from the reference clock.

This component also contains a minimal register model of the LM4529 secondary codec as implemented on development boards supplied by Arm.

This component is not a complete implementation of the AACI because the following functionality is not implemented:

- Audio input
- DMA access to FIFOs, rather than Programmed I/O
- Programming of the secondary codec through FIFOs rather than slot registers

### Iris and MTI instances for PL041\_AACI

This model has the following Iris instances:

**Table 3-1161: PL041\_AACI Iris instances**

InstanceName	ComponentName
PL041_AACI	PL041_AACI
PL041_AACI.busslave	PVBusSlave
PL041_AACI.timer	ClockTimerThread
PL041_AACI.timer.timer	ClockTimerThread64
PL041_AACI.timer.timer.thread	SchedulerThread
PL041_AACI.timer.timer.thread_event	SchedulerThreadEvent

This model has the following MTI trace components:

**Table 3-1162: PL041\_AACI MTI instances**

InstanceName	ComponentName
PL041_AACI.busslave	PVBusSlave

### Ports for PL041\_AACI

**Table 3-1163: Ports**

Name	Protocol	Type	Description
audio	AudioControl	Master	Used to communicate with an audio out device.
clk_in_ref	ClockSignal	Slave	Reference clock input, typically 25MH.
dma_rx	PL080_DMAC_DmaPortProtocol	Master	DMA receive port.
dma_tx	PL080_DMAC_DmaPortProtocol	Master	DMA transmit port.
irq	Signal	Master	Single IRQ output port.
pvbus	PVBus	Slave	Slave port for connection to PV bus master/decoder.

## Parameters for PL041\_AACI

### enabled

#### Type

bool

#### Default value

0x1

#### Description

Host interface connection enabled.

## 3.10.79 PL050\_KMI

ARM PrimeCell PS2 Keyboard/Mouse Interface(PL050). This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1164: IP revisions support**

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

### About PL050\_KMI

This model communicates with models of PS/2-like devices, for example a PS2Keyboard or PS2Mouse.

### Iris and MTI instances for PL050\_KMI

This model has the following Iris instances:

**Table 3-1165: PL050\_KMI Iris instances**

InstanceName	ComponentName
PL050_KMI	PL050_KMI
PL050_KMI.busslave	PVBusSlave
PL050_KMI.clk_divider	ClockDivider

This model has the following MTI trace components:

**Table 3-1166: PL050\_KMI MTI instances**

InstanceName	ComponentName
PL050_KMI.busslave	<a href="#">PVBusSlave</a>
PL050_KMI.clk_divider	<a href="#">ClockDivider</a>

## Ports for PL050\_KMI

**Table 3-1167: Ports**

Name	Protocol	Type	Description
clock	<a href="#">ClockSignal</a>	Slave	Clock input, typically 1MHz, which sets the master transmit/receive rate.
intr	<a href="#">Signal</a>	Master	Master port signaling completion of transmit or receive.
ps2device	<a href="#">PS2Data</a>	Slave	Used to communicate with a PS/2-like device.
pvbuss	<a href="#">PVBus</a>	Slave	Slave port for connection to PV bus master/decoder.

## Parameters for PL050\_KMI

### `clk_divider.div`

#### Type

int

#### Default value

0x1

#### Description

Clock Rate Divider. This parameter is not exposed via CADI and can only be set in LISA.

### `clk_divider.mul`

#### Type

int

#### Default value

0x1

#### Description

Clock Rate Multiplier. This parameter is not exposed via CADI and can only be set in LISA.

## 3.10.80 PL061\_GPIO

ARM PrimeCell General Purpose Input/Output(PL061). This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1168: IP revisions support**

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

## About PL061\_GPIO

This component provides eight programmable inputs or outputs. Ports of different widths can be created by multiple instantiation. In addition, an interrupt interface is provided to configure any number of pins as interrupt sources.

## Iris and MTI instances for PL061\_GPIO

This model has the following Iris instances:

**Table 3-1169: PL061\_GPIO Iris instances**

InstanceName	ComponentName
PL061_GPIO	PL061_GPIO
PL061_GPIO.busslave	PVBusSlave

This model has the following MTI trace components:

**Table 3-1170: PL061\_GPIO MTI instances**

InstanceName	ComponentName
PL061_GPIO.busslave	PVBusSlave

## Ports for PL061\_GPIO

**Table 3-1171: Ports**

Name	Protocol	Type	Description
GPIO_In	Value	Slave	Input lines. 32-bit data in, only [7:0] is used.
GPIO_Intr	Signal	Master	Interrupt signal indicating to an interrupt controller that an interrupt occurred in one or more of the GPIO_In lines.
GPIO_MIS	Value	Master	Indicates the masked interrupt status. 32-bit data out , only [7:0] is used. NOT necessary, as the GPIOMIS can be read from address 0x418.
GPIO_Out	Value	Master	Output lines. 32-bit data out, only [7:0] is used.
pvbuss	PVBus	Slave	Slave port for register access.

## Parameters for PL061\_GPIO

### init\_inputs

#### Type

int

#### Default value

0x0

#### Description

Default input values [7:0].

## 3.10.81 PL080\_DMAC

ARM PrimeCell DMA Controller(PL080/081). This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1172: IP revisions support**

Revision	Quality level
r1p3	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

### About PL080\_DMAC

This component provides 8 configurable DMA channels and 16 DMA ports for handshaking with peripherals. You can configure each channel to operate in one of eight flow control modes either under DMA control or the control of the source or destination peripheral. Transfers can occur on either master channel and can optionally be endian-converted on both source and destination transfers.

This component might have a significant impact on system performance in certain flow control modes. Channels configured for small bursts, or using single bursts, and with peripheral DMA handshaking could add significant overhead. The peripheral has not been fully optimized to make use of the advanced features of the PVBUS model.

### Iris and MTI instances for PL080\_DMAC

This model has the following Iris instances:

**Table 3-1173: PL080\_DMAC Iris instances**

InstanceName	ComponentName
PL080_DMAC	PL080_DMAC
PL080_DMAC.busmaster0	PVBusMaster
PL080_DMAC.busmaster1	PVBusMaster
PL080_DMAC.busslave	PVBusSlave
PL080_DMAC.timer	ClockTimerThread
PL080_DMAC.timer.timer	ClockTimerThread64
PL080_DMAC.timer.timer.thread	SchedulerThread
PL080_DMAC.timer.timer.thread_event	SchedulerThreadEvent

This model has the following MTI trace components:

**Table 3-1174: PL080\_DMAC MTI instances**

InstanceName	ComponentName
PL080_DMAC.busmaster0	PVBusMaster
PL080_DMAC.busmaster1	PVBusMaster
PL080_DMAC.busslave	PVBusSlave

## Ports for PL080\_DMAC

Table 3-1175: Ports

Name	Protocol	Type	Description
clk_in	<a href="#">ClockSignal</a>	Slave	Clock signal to control DMA transfer rate.
dma_port[16]	<a href="#">PL080_DMAC_DmaPortProtocol</a>	Slave	request/response ports for communicating with devices.
interr	<a href="#">Signal</a>	Master	DMA error interrupt signal.
intr	<a href="#">Signal</a>	Master	Combined DMA error and terminal count signal.
inttc	<a href="#">Signal</a>	Master	DMA terminal count signal.
pvbush0_m	<a href="#">PVBush</a>	Master	Master bus interface 0 for DMA transfers.
pvbush1_m	<a href="#">PVBush</a>	Master	Master bus interface 1 for DMA transfers.
pvbush_s	<a href="#">PVBush</a>	Slave	Slave port for register accesses.
reset_in	<a href="#">Signal</a>	Slave	System reset.

## Parameters for PL080\_DMAC

**activate\_delay****Type**

int

**Default value**

0x0

**Description**

request delay.

**fifo\_size****Type**

int

**Default value**

0x10

**Description**

Channel FIFO size in bytes.

**generate\_clear****Type**

bool

**Default value**

0x0

**Description**

Generate clear response.

**max\_transfer****Type**

int

**Default value**

0x100

**Description**

Largest atomic transfer.

### 3.10.82 PL110\_CLCD

ARM PrimeCell Color LCD Controller(PL110). This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1176: IP revisions support**

Revision	Quality level
r1p2	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### About PL110\_CLCD

This implementation provides a register model of the LCD controller.

You can connect the model through a framebuffer port to a visualization component, for example, so that LCD output can be viewed.

The implementation is optimized for situations where the majority of the framebuffer does not change. For instance, displaying full-screen video results in significantly reduced performance. Rendering pixel data into an appropriate form for the framebuffer port (rasterization) can also take a significant amount of simulation time. If the pixel data are coming from a PVBusSlave region that has been configured as memory-like, rasterization only occurs in regions where memory contents are modified.

#### Iris and MTI instances for PL110\_CLCD

This model has the following Iris instances:

**Table 3-1177: PL110\_CLCD Iris instances**

InstanceName	ComponentName
PL110_CLCD	PL110_CLCD
PL110_CLCD.pl11x_clcd	PL11x_CLCD
PL110_CLCD.pl11x_clcd.busmaster	PVBusMaster
PL110_CLCD.pl11x_clcd.busslave	PVBusSlave
PL110_CLCD.pl11x_clcd.timer	ClockTimerThread

InstanceName	ComponentName
PL110_CLCD.pl11x_clcd.timer.timer	ClockTimerThread64
PL110_CLCD.pl11x_clcd.timer.timer.thread	SchedulerThread
PL110_CLCD.pl11x_clcd.timer.timer.thread_event	SchedulerThreadEvent

This model has the following MTI trace components:

**Table 3-1178: PL110\_CLCD MTI instances**

InstanceName	ComponentName
PL110_CLCD.pl11x_clcd.busmaster	PVBusMaster
PL110_CLCD.pl11x_clcd.busslave	PVBusSlave

### Ports for PL110\_CLCD

**Table 3-1179: Ports**

Name	Protocol	Type	Description
clk_in	ClockSignal	Slave	Master clock input, typically 24MHz, to drive pixel clock timing.
control	Value	Slave	Auxiliary control register 1.
display	LCD	Master	Connection to visualization component.
intr	Signal	Master	Interrupt signaling for flyback events.
pvbus	PVBus	Slave	Slave port for register access.
pvbus_m	PVBus	Master	DMA port for video data.

### Parameters for PL110\_CLCD

#### **disable\_snooping\_dma**

##### Type

bool

##### Default value

0x0

##### Description

Disable DMA snooping.

#### **pixel\_double\_limit**

##### Type

int

##### Default value

0x12c

##### Description

Minimum LCD pixel width before display will be zoomed.

### 3.10.83 PL111\_CLCD

ARM PrimeCell Color LCD Controller(PL111). This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1180: IP revisions support**

Revision	Quality level
r0p2	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### About PL111\_CLCD

This component implements the hardware cursor support of the PL111\_CLCD, which is the main difference with PL110\_CLCD.

#### Iris and MTI instances for PL111\_CLCD

This model has the following Iris instances:

**Table 3-1181: PL111\_CLCD Iris instances**

InstanceName	ComponentName
PL111_CLCD	PL111_CLCD
PL111_CLCD.pl11x_clcd	PL11x_CLCD
PL111_CLCD.pl11x_clcd.busmaster	PVBusMaster
PL111_CLCD.pl11x_clcd.busslave	PVBusSlave
PL111_CLCD.pl11x_clcd.timer	ClockTimerThread
PL111_CLCD.pl11x_clcd.timer.timer	ClockTimerThread64
PL111_CLCD.pl11x_clcd.timer.timer.thread	SchedulerThread
PL111_CLCD.pl11x_clcd.timer.timer.thread_event	SchedulerThreadEvent

This model has the following MTI trace components:

**Table 3-1182: PL111\_CLCD MTI instances**

InstanceName	ComponentName
PL111_CLCD.pl11x_clcd.busmaster	<a href="#">PVBusMaster</a>
PL111_CLCD.pl11x_clcd.busslave	<a href="#">PVBusSlave</a>

#### Ports for PL111\_CLCD

**Table 3-1183: Ports**

Name	Protocol	Type	Description
clk_in	<a href="#">ClockSignal</a>	Slave	Master clock input, typically 24MHz, to drive pixel clock timing.
control	<a href="#">Value</a>	Slave	Auxiliary control register 1.
display	<a href="#">LCD</a>	Master	Connection to visualization component.

Name	Protocol	Type	Description
intr	Signal	Master	Interrupt signaling for flyback events.
pvbus	PVBus	Slave	Slave port for register access.
pvbus_m	PVBus	Master	DMA port for video data.

## Parameters for PL111\_CLCD

### **disable\_snooping\_dma**

#### Type

bool

#### Default value

0x0

#### Description

Disable DMA snooping.

### **pixel\_double\_limit**

#### Type

int

#### Default value

0x12c

#### Description

Minimum LCD pixel width before display will be zoomed.

## 3.10.84 PL180\_MCI

ARM PrimeCell Multimedia Card Interface (PL180). This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1184: IP revisions support**

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

### About PL180\_MCI

When paired with an MMC card model, the PL180\_MCI component provides emulation of a flexible, persistent storage mechanism. See [MMC](#). The PL180\_MCI component fully models the registers of the corresponding PrimeCell, but supports a subset of the functionality of the PL180:

- The controller supports block mode transfers, but does not currently support streaming data transfer.

- The controller can be attached to a single MMC device. The MMC bus mode and SDIO modes of the PL180 PrimeCell are not supported.
- Command and Data timeouts are not simulated.
- Payload CRC errors are not simulated.
- The DMA interface present in the PL180 PrimeCell is not modeled.
- Minimal timing is implemented within the model.

At compile time, you can enable command tracing within the PL180\_MCI component by modifying the `PL180_TRACE` macro in the `MMC.lisa` file. This sends command and event trace to standard output. You can use this output to help diagnose device driver and controller-to-card protocol issues.

## Iris and MTI instances for PL180\_MCI

This model has the following Iris instances:

**Table 3-1185: PL180\_MCI Iris instances**

InstanceName	ComponentName
PL180_MCI	PL180_MCI
PL180_MCI.busslave	PVBusSlave

This model has the following MTI trace components:

**Table 3-1186: PL180\_MCI MTI instances**

InstanceName	ComponentName
PL180_MCI.busslave	PVBusSlave

## Ports for PL180\_MCI

**Table 3-1187: Ports**

Name	Protocol	Type	Description
MCIINTR[2]	Signal	Master	Interrupts.
mmc_m	MMC_Protocol	Master	The MultiMediaCard (MMC) master port.
pvbus	PVBus	Slave	Slave port for register access.

## Parameters for PL180\_MCI

### pl180\_fifo\_depth

Type

int

Default value

0x10

**Description**  
PL180 FIFO Depth.

3.10.85 PL192\_VIC

ARM PrimeCell Vectored Interrupt Controller(PL192). This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

Table 3-1188: IP revisions support

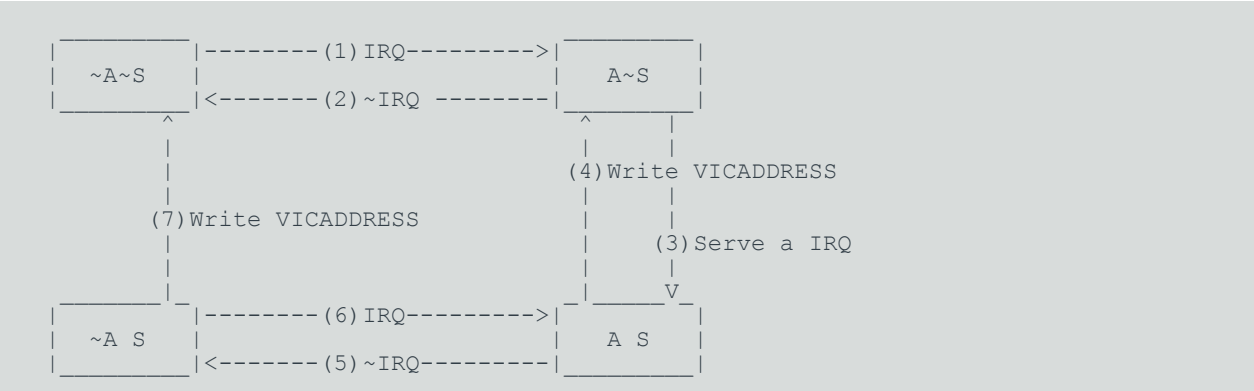

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

About PL192\_VIC

This component aggregates interrupts and generates interrupt signals for the Arm processor. When coupled with an Arm processor that provides a VIC port, routing to the appropriate interrupt handler can optionally be performed in hardware, reducing interrupt latency. The PL192\_VIC can also be daisy-chained with other PL192 VICs to permit more than 32 interrupts. The VIC supports hardware and software prioritization of interrupts.

This is the state transition diagram of a VIC 192 interrupt source:

- A  
The IRQ is active. It is in the irqServeList which is a sorted list of active IRQs that need to be served.
- $\sim A$   
Inactive IRQ. The corresponding input port is tied to low.
- S  
The IRQ is being served.
- $\sim S$   
The IRQ is waiting to be served

## Detailed Descriptions

1

An IRQ is asserted, and state changes from  $\sim A \sim S$  to  $A \sim S$ . The IRQ is inserted into a sorted list called `irqServeList` to wait for service. In this case, the corresponding input pin is tied to high.

2

The IRQ is deasserted. This can happen when the device does not want to keep IRQ active. For example, after continuously sending data, a UART can deassert IRQ to indicate stopping data transmission. In this case, even if the IRQ is in the stack and ready to be served it should be removed from the stack immediately.

3

When an IRQ that is at the top of the waiting stack is being served, the state changes from  $A \sim S$  to  $AS$ .

4

Writing to the `VICADDRESS` register indicates that the current served interrupt has been finished. However, the state of the IRQ could be still active. The device, such as a UART, that raised the IRQ could still want to generate a new IRQ to finish a task.

5

The IRQ is being served. Before finishing, the device deasserts the IRQ. The current IRQ will be removed from the top of the stack immediately, but it is still being served.

6

The IRQ is being served, and it is not in the stack. At this point, the device reasserts the IRQ and the state of IRQ changes from  $\sim AS$  to  $AS$ . In another words, the IRQ is reinserted into the stack.

7

An ISR writes to `VICADDRESS` to indicate the current IRQ has been served. Meanwhile the IRQ is deasserted by the device, the state of the VIC changes from  $\sim A S$  to  $\sim A \sim S$ .

The handshake when VIC is using VIC port to communicate. As this is an untimed model, it is not possible to model the timed nature of vector address passing accurately. There are two options offered:

1. Send the address just after the IRQ. This is closer to the hardware but requires that daisy-chained VICs repeatedly send their address as new, higher priority IRQs arrive, so may be slower:

2. Send the address during the ack. In this case, the ack ripples up through the VICs until it finds the IRQ and then the address ripples back down through the VICs, before the ack returns:

In both cases the ack clear is ignored by the VIC.

### Iris and MTI instances for PL192\_VIC

This model has the following Iris instances:

**Table 3-1189: PL192\_VIC Iris instances**

InstanceName	ComponentName
PL192_VIC	PL192_VIC
PL192_VIC.busslave	PVBusSlave

This model has the following MTI trace components:

**Table 3-1190: PL192\_VIC MTI instances**

InstanceName	ComponentName
PL192_VIC.busslave	PVBusSlave

### Ports for PL192\_VIC

**Table 3-1191: Ports**

Name	Protocol	Type	Description
nVICFIQ	Signal	Master	Send out FIQ signal to the next level VIC or CPI.
nVICFIQIN	Signal	Slave	Used to receive FIQ signal when daisy chained.
nVICIRQ	Signal	Master	Send out IRQ signal to the next level VIC or procesessor.
nVICIRQIN	Signal	Slave	Used to receive IRQ signal when daisy chained.
pdbus	PVBus	Slave	Slave port for register access.
VICIntSource[32]	Signal	Slave	Interrupt source input sources.
VICIRQACK	Signal	Slave	Receive acknowledge signal from next level VIC or processor.
VICIRQACKOUT	Signal	Master	Used to send out acknowledge signals when daisy chained.
VICVECTADDRIN	ValueState	Slave	Used to receive vector address when daisy chained.
VICVECTADDRROUT	ValueState	Master	Used to send vector address to next level VIC or processor.

### 3.10.86 PL310\_L2CC

ARM PrimeCell Level 2 Cache Controller (PL310). This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1192: IP revisions support**

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### About PL310\_L2CC

The presence of additional on-chip secondary cache can improve performance when significant memory traffic is generated by the processor. A secondary cache assumes the existence of a Level 1, or primary, cache that is closely coupled or internal to the processor.

This component has two modes of operation, which are controlled by the `cache-state_modelled` parameter:

##### Register view

Cache control registers are present but the cache behavior is not modeled.

##### Functional model

Cache behavior is modeled.

Arm supports the use of the PL310 when connected to the Arm® Cortex®-A5 or Cortex-A9 processor.

This component implements the programmer-visible functionality of the PL310, and excludes some non-programmer visible features. The following features are implemented in the model:

- Physically addressed and physically tagged.
- Lockdown format C supported, for data and instructions. Lockdown format C is also known as way locking.
- Lockdown by line supported.
- Lockdown by master ID supported.
- Direct mapped to 16-way associativity, depending on the configuration and the use of lockdown registers. The associativity is configurable as 8 or 16.
- L2 cache available size can be 16 KB to 8 MB, depending on configuration and the use of the lockdown registers.
- Fixed line length of 32 bytes (8 words or 256 bits).
- Supports all of the AXI cache modes:
  - Write-through and write-back.
  - Read allocate, write allocate, read and write allocate.

- Force write-allocate option to always have cacheable writes allocated to L2 cache, for processors not supporting this mode.
- Normal memory non-cacheable shared reads are treated as cacheable non-allocatable. Normal memory non-cacheable shared writes are treated as cacheable write-through no write-allocate. There is an option, Shared Override, to override this behavior.
- TrustZone support, with the following features:
  - Non-Secure (NS) tag bit added in tag RAM and used for lookup in the same way as an address bit.
  - NS bit in Tag RAM used to determine security level of evictions to L3.
  - Restrictions for NS accesses for control, configuration, and maintenance registers to restrict access to secure data.
- Pseudo-Random victim selection policy. You can make this deterministic by using lockdown registers.
- Software option to enable exclusive cache configuration.
- Configuration registers accessible using address decoding in the component.
- Interrupt triggering in case of an error response when accessing L3.
- Maintenance operations.
- Prefetching capability.

The performance of this component depends on the configuration of the associated L1 caches and the mode it is in:

#### Register mode

No significant effect.

#### Functional mode with functional-mode L1

The addition of a functional L2 cache has minimal further impact on performance when running applications that are cache-bound.

#### Functional mode with a register-mode L1

There is a significant impact on system performance.

Note

Setting timing delays in this model does not impact the simulation speed. Generally, timing delays are only modeled for CPUs.

---

#### Differences between the model and the RTL

This model does not implement the following features, most of which are not relevant from a PV modeling point of view:

- There is no interface to the data and tag RAM as they are embedded in the model.
- Critical word first linefill is not supported, as it is not relevant for PV modeling.
- Buffers are not modeled.

- Outstanding accesses on slave and master ports cannot occur by design in a PV model as all transactions are atomic.
- Option to select one or two master ports and option to select one or two slave ports is not supported. Only one master port and one slave port are supported.
- Clock management and power modes are not supported, as they are not relevant for PV modeling.
- Wait, latency, clock enable, parity, and error support for data and tag RAMs are not included, as they are not relevant for PV modeling, and the data and tag RAMs embedded in the model cannot generate error responses.
- MBIST support is not included.
- Debug mode and debug registers are not supported.
- Test mode and scan chains are not supported.
- L2 cache event monitoring is not supported.
- Address filtering in the master ports is not supported.
- Performance counters are not supported.
- These Cortex-A9-related optimizations are not supported:
  - Prefetch hints
  - Full line of zero
  - Early write response
- Hazard detection is not required because of the atomic nature of the accesses in PV modeling and the fact that buffers are not modeled, therefore hazards cannot occur.
- Registers that belong to unimplemented features are accessible but do not have any functionality.

This model implements the following features differently to the hardware:

- Error handling. DECERR from the master port is mapped to SLVERR. Internal errors in cache RAM, for example parity errors, cannot happen in the model.
- Background cache operations do not occur in the background. They occur atomically.
- The LOCKDOWN\_BY\_LINE and LOCKDOWN\_BY\_MASTER parameter values are reflected in the CacheType register, but the feature is not switched off when the parameter is 0.
- This feature is additional:
  - Data RAM and Tag RAM are embedded in the model.

### Iris and MTI instances for PL310\_L2CC

This model has the following Iris instances:

**Table 3-1193: PL310\_L2CC Iris instances**

InstanceName	ComponentName
PL310_L2CC	PL310_L2CC

This model has the following MTI trace components:

**Table 3-1194: PL310\_L2CC MTI instances**

InstanceName	ComponentName
PL310_L2CC	PL310_L2CC

### Ports for PL310\_L2CC

**Table 3-1195: Ports**

Name	Protocol	Type	Description
DECERRINTR	Signal	Master	Decode error received on master port from L3.
ECNTRINTR	Signal	Master	Event Counter Overflow / Increment.
ERRRDINTR	Signal	Master	Error on L2 data RAM read.
ERRRTINTR	Signal	Master	Error on L2 tag RAM read.
ERRWDINTR	Signal	Master	Error on L2 data RAM write.
ERRWTINTR	Signal	Master	Error on L2 tag RAM write.
L2CCINTR	Signal	Master	Combined interrupt output.
PARRDINTR	Signal	Master	Parity error on L2 data RAM read.
PARRTINTR	Signal	Master	Parity error on L2 tag RAM read.
pvbus_m	PVBus	Master	Master port for connection to PV bus master/decoder.
pvbus_s	PVBus	Slave	Slave port for connection to PV bus master/decoder.
SLVERRINTR	Signal	Master	Slave error on master port from L3.

### Parameters for PL310\_L2CC

#### ASSOCIATIVITY

##### Type

int

##### Default value

0x0

##### Description

Associativity for Auxiliary Control Register.

#### CACHEID

##### Type

int

##### Default value

0x0

##### Description

Cache controller cache ID.

**CFGBIGEND****Type**

int

**Default value**

0x0

**Description**

Big-endian mode for accessing configuration registers out of reset.

**LOCKDOWN\_BY\_LINE****Type**

int

**Default value**

0x0

**Description**

Lockdown by line - value is reflected in CacheType register Bit 25, but the feature is not switched off when the parameter is 0.

**LOCKDOWN\_BY\_MASTER****Type**

int

**Default value**

0x0

**Description**

Lockdown by master - value is reflected in CacheType register Bit 26, but the feature is not switched off when the parameter is 0.

**REGFILEBASE****Type**

int

**Default value**

0x1f002000

**Description**

Base address for accessing configuration registers.

**WAYSIZE****Type**

int

**Default value**

0x1

**Description**

Size of ways for Auxiliary Control Register.

**cache-state\_modelled****Type**

bool

**Default value**

0x0

**Description**

Specifies whether real cache state is modelled (vs. register model).

**delay\_cache\_hit****Type**

int

**Default value**

0x0

**Description**

Cost to handle a cache hit.

**delay\_cache\_miss****Type**

int

**Default value**

0x0

**Description**

Cost to handle a cache miss.

**delay\_cache\_perbeat****Type**

int

**Default value**

0x0

**Description**

Cost to handle one beat of cache data movement.

### 3.10.87 PL330\_DMAC

ARM PrimeCell DMA Controller(PL330). This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1196: IP revisions support**

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

### About PL330\_DMAC

The model uses a single LISA+ component but with a C++ model for each of the channels included in the LISA+ file. Enabled channels are kept on an enabled channels stack in priority order. When a channel state changes, re-arbitration takes place to make the highest (topmost) channel active.

Each transaction carries the identity of the requesting thread. This controller has up to eight channel threads and a manager thread. Each has an ID. In the hardware:

#### ID

AxID[3:0]

#### Identifying channels

0x0 - (numberOfChannels - 1)

#### Managers

numberOfChannels

For example, 0x0-0x7 and 0x8, respectively. The manager originates only instruction fetches, and the manager ID is also used for instruction fetches issued by the channels.

In the model, the identity of the requesting thread is encoded into each transaction using the low-order 16 bits of the Master ID field:

- Channel data: 0-7.
- Channel instruction fetch: 0xffff.
- Manager instruction fetch: 0xffff.

If a downstream component needs to know the IDs of bus masters that use either the low-order 16 bits or the label, use the label. The LabellerForDMA330 component shifts the low-order 16 bits into the label, while providing a degree of control over the label encoding. The example below maintains separate IDs for each data channel while using the correct hardware ID to identify instruction fetch for a DMA-330 with 8 channels:

```
p1330_dma : PL330_DMAC( "p_max_channels" = 8 );
dma_labeller : LabellerForDMA330(
    "dma330_discriminate_data_channels" = true,
    "dma330_s_instruction_label" = 8,
    "dma330_ns_instruction_label" = 8 );
p1330_dma.pvbus_m => dma_labeller.pvbus_s;
dma_labeller.pvbus_m => output_bus.pvbus_s;
```

### Iris and MTI instances for PL330\_DMAC

This model has the following Iris instances:

**Table 3-1197: PL330\_DMAC Iris instances**

InstanceName	ComponentName
PL330_DMAC	PL330_DMAC
PL330_DMAC.busmaster	PVBusMaster
PL330_DMAC.busslave	PVBusSlave
PL330_DMAC.busslave_ns	PVBusSlave
PL330_DMAC.timer	ClockTimerThread
PL330_DMAC.timer.timer	ClockTimerThread64
PL330_DMAC.timer.timer.thread	SchedulerThread
PL330_DMAC.timer.timer.thread_event	SchedulerThreadEvent

This model has the following MTI trace components:

**Table 3-1198: PL330\_DMAC MTI instances**

InstanceName	ComponentName
PL330_DMAC	PL330_DMAC
PL330_DMAC.busmaster	PVBusMaster
PL330_DMAC.busslave	PVBusSlave
PL330_DMAC.busslave_ns	PVBusSlave

## Ports for PL330\_DMAC

**Table 3-1199: Ports**

Name	Protocol	Type	Description
clk_in	ClockSignal	Slave	Clock input.
irq_abort_master_port	Signal	Master	Undefined instruction or instruction error.
irq_master_port[32]	Signal	Master	Sets when DMASEV.
pvbuse_m	PVBus	Master	Master port for all memory accesses.
pvbuse_s	PVBus	Slave	Slave port for all register accesses (secure).
pvbuse_s_ns	PVBus	Slave	Slave port for all register accesses (non-secure).
reset_in	Signal	Slave	System reset.

## Parameters for PL330\_DMAC

### activate\_delay

#### Type

int

#### Default value

0x0

#### Description

request delay.

**fifo\_size****Type**

int

**Default value**

0x10

**Description**

Channel FIFO size in bytes.

**generate\_clear****Type**

bool

**Default value**

0x0

**Description**

Generate clear response.

**max\_transfer****Type**

int

**Default value**

0x100

**Description**

Largest atomic transfer.

**p\_axi\_bus\_width\_param****Type**

int

**Default value**

0x20

**Description**

AXI bus width.

**p\_buffer\_depth****Type**

int

**Default value**

0x10

**Description**

buffer depth.

**p\_cache\_line\_words****Type**

int

**Default value**

0x1

**Description**

number of words in a cache line.

**p\_cache\_lines****Type**

int

**Default value**

0x1

**Description**

number of cache lines.

**p\_controller\_boots****Type**

bool

**Default value**

0x1

**Description**

DMA boots from reset.

**p\_controller\_nsecure****Type**

bool

**Default value**

0x0

**Description**

Controller non-secure at reset (boot\_manager\_ns).

**p\_irq\_nsecure****Type**

int

**Default value**

0x0

**Description**

Interrupts non-secure at reset.

**p\_lsq\_read\_size****Type**

int

**Default value**

0x4

**Description**

LSQ read buffer depth.

**p\_lsq\_write\_size****Type**

int

**Default value**

0x4

**Description**

LSQ write buffer depth.

**p\_max\_channels****Type**

int

**Default value**

0x8

**Description**

virtual channels.

**p\_max\_irqs****Type**

int

**Default value**

0x20

**Description**

number of interrupts.

**p\_max\_periph****Type**

int

**Default value**

0x20

**Description**

number of peripheral interfaces.

**p\_perip\_request\_acceptance\_0****Type**

int

**Default value**

0x2

**Description**

Peripheral 0 request acceptance.

**p\_perip\_request\_acceptance\_1****Type**

int

**Default value**

0x2

**Description**

Peripheral 1 request acceptance.

**p\_perip\_request\_acceptance\_10****Type**

int

**Default value**

0x2

**Description**

Peripheral 10 request acceptance.

**p\_perip\_request\_acceptance\_11****Type**

int

**Default value**

0x2

**Description**

Peripheral 11 request acceptance.

**p\_perip\_request\_acceptance\_12****Type**

int

**Default value**

0x2

**Description**

Peripheral 12 request acceptance.

**p\_perip\_request\_acceptance\_13****Type**

int

**Default value**

0x2

**Description**

Peripheral 13 request acceptance.

**p\_perip\_request\_acceptance\_14****Type**

int

**Default value**

0x2

**Description**

Peripheral 14 request acceptance.

**p\_perip\_request\_acceptance\_15****Type**

int

**Default value**

0x2

**Description**

Peripheral 15 request acceptance.

**p\_perip\_request\_acceptance\_16****Type**

int

**Default value**

0x2

**Description**

Peripheral 16 request acceptance.

**p\_perip\_request\_acceptance\_17****Type**

int

**Default value**

0x2

**Description**

Peripheral 17 request acceptance.

**p\_perip\_request\_acceptance\_18****Type**

int

**Default value**

0x2

**Description**

Peripheral 18 request acceptance.

**p\_perip\_request\_acceptance\_19****Type**

int

**Default value**

0x2

**Description**

Peripheral 19 request acceptance.

**p\_perip\_request\_acceptance\_2****Type**

int

**Default value**

0x2

**Description**

Peripheral 2 request acceptance.

**p\_perip\_request\_acceptance\_20****Type**

int

**Default value**

0x2

**Description**

Peripheral 20 request acceptance.

**p\_perip\_request\_acceptance\_21****Type**

int

**Default value**

0x2

**Description**

Peripheral 21 request acceptance.

**p\_perip\_request\_acceptance\_22****Type**

int

**Default value**

0x2

**Description**

Peripheral 22 request acceptance.

**p\_perip\_request\_acceptance\_23****Type**

int

**Default value**

0x2

**Description**

Peripheral 23 request acceptance.

**p\_perip\_request\_acceptance\_24****Type**

int

**Default value**

0x2

**Description**

Peripheral 24 request acceptance.

**p\_perip\_request\_acceptance\_25****Type**

int

**Default value**

0x2

**Description**

Peripheral 25 request acceptance.

**p\_perip\_request\_acceptance\_26****Type**

int

**Default value**

0x2

**Description**

Peripheral 26 request acceptance.

**p\_perip\_request\_acceptance\_27****Type**

int

**Default value**

0x2

**Description**

Peripheral 27 request acceptance.

**p\_perip\_request\_acceptance\_28****Type**

int

**Default value**

0x2

**Description**

Peripheral 28 request acceptance.

**p\_perip\_request\_acceptance\_29****Type**

int

**Default value**

0x2

**Description**

Peripheral 29 request acceptance.

**p\_perip\_request\_acceptance\_3****Type**

int

**Default value**

0x2

**Description**

Peripheral 3 request acceptance.

**p\_perip\_request\_acceptance\_30****Type**

int

**Default value**

0x2

**Description**

Peripheral 30 request acceptance.

**p\_perip\_request\_acceptance\_31****Type**

int

**Default value**

0x2

**Description**

Peripheral 31 request acceptance.

**p\_perip\_request\_acceptance\_4****Type**

int

**Default value**

0x2

**Description**

Peripheral 4 request acceptance.

**p\_perip\_request\_acceptance\_5****Type**

int

**Default value**

0x2

**Description**

Peripheral 5 request acceptance.

**p\_perip\_request\_acceptance\_6****Type**

int

**Default value**

0x2

**Description**

Peripheral 6 request acceptance.

**p\_perip\_request\_acceptance\_7****Type**

int

**Default value**

0x2

**Description**

Peripheral 7 request acceptance.

**p\_perip\_request\_acceptance\_8****Type**

int

**Default value**

0x2

**Description**

Peripheral 8 request acceptance.

**p\_perip\_request\_acceptance\_9****Type**

int

**Default value**

0x2

**Description**

Peripheral 9 request acceptance.

**p\_periph\_nsecure****Type**

bool

**Default value**

0x0

**Description**

Peripherals non-secure at reset.

**p\_read\_issuing\_capability****Type**

int

**Default value**

0x1

**Description**

AXI read issuing capability.

**p\_reset\_pc****Type**

int

**Default value**

0x60000000

**Description**

DMA PC at reset.

**p\_write\_issuing\_capability**

**Type**  
int

**Default value**  
0x1

**Description**  
AXI write issuing capability.

**revision**

**Type**  
string

**Default value**  
"r0p0"

**Description**  
revision ID.

3.10.88 PL340\_DMC

ARM PrimeCell Dynamic Memory Controller(PL340). This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

Table 3-1200: IP revisions support

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

About PL340\_DMC

This component provides an interface for up to four DRAM chips. The implementation also provides an APB interface to configure the controller behavior. You can access the registers through the APB interface.

Iris and MTI instances for PL340\_DMC

This model has the following Iris instances:

Table 3-1201: PL340\_DMC Iris instances

InstanceName	ComponentName
PL340_DMC	PL340_DMC
PL340_DMC.apb_slave	PVBusSlave
PL340_DMC.exclusive_monitor0	PVBusExclusiveMonitor
PL340_DMC.exclusive_monitor0.bus_mapper	PVBusMapper

InstanceName	ComponentName
PL340_DMC.exclusive_monitor1	PVBusExclusiveMonitor
PL340_DMC.exclusive_monitor1.bus_mapper	PVBusMapper
PL340_DMC.exclusive_monitor2	PVBusExclusiveMonitor
PL340_DMC.exclusive_monitor2.bus_mapper	PVBusMapper
PL340_DMC.exclusive_monitor3	PVBusExclusiveMonitor
PL340_DMC.exclusive_monitor3.bus_mapper	PVBusMapper

This model has the following MTI trace components:

**Table 3-1202: PL340\_DMC MTI instances**

InstanceName	ComponentName
PL340_DMC.apb_slave	PVBusSlave
PL340_DMC.exclusive_monitor0	PVBusExclusiveMonitor
PL340_DMC.exclusive_monitor0.bus_mapper	PVBusMapper
PL340_DMC.exclusive_monitor1	PVBusExclusiveMonitor
PL340_DMC.exclusive_monitor1.bus_mapper	PVBusMapper
PL340_DMC.exclusive_monitor2	PVBusExclusiveMonitor
PL340_DMC.exclusive_monitor2.bus_mapper	PVBusMapper
PL340_DMC.exclusive_monitor3	PVBusExclusiveMonitor
PL340_DMC.exclusive_monitor3.bus_mapper	PVBusMapper

## Ports for PL340\_DMC

**Table 3-1203: Ports**

Name	Protocol	Type	Description
apb_interface	PVBus	Slave	Receive the apb config read/writes here.
axi_if_in[4]	PVBus	Slave	Receive the axi reads/writes here; up to four chips can be connected.
axi_if_out[4]	PVBus	Master	The output ports where the actual mem chips are connected.

## Parameters for PL340\_DMC

### IF\_CHIP0

#### Type

int

#### Default value

0xffffffffffffffff

#### Description

Set this parameter to 0 if memory is connected.

**IF\_CHIP1****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Set this parameter to 0 if memory is connected.

**IF\_CHIP2****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Set this parameter to 0 if memory is connected.

**IF\_CHIP3****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Set this parameter to 0 if memory is connected.

**MEMORY\_WIDTH****Type**

int

**Default value**

0x20

**Description**

Set this parameter to 0 if memory is connected.

**exclusive\_monitor0.apply\_access\_width\_criteria\_to\_non\_excl\_stores****Type**

bool

**Default value**

0x1

**Description**

Apply the given exclusive store width matching criteria to non-exclusive stores.

**exclusive\_monitor0.clear\_on\_strex\_address\_mismatch****Type**

bool

**Default value**

0x1

**Description**

Whether monitor is cleared when strex fails due to address mismatch.

**exclusive\_monitor0.enable\_component****Type**

bool

**Default value**

0x1

**Description**

Enable component.

**exclusive\_monitor0.exclusive\_monitor\_clear\_on\_atomic\_from\_same\_master****Type**

bool

**Default value**

0x1

**Description**

Monitor atomics from the same master.

**exclusive\_monitor0.match\_secure\_state****Type**

bool

**Default value**

0x1

**Description**

Treat the secure state like an address bit.

**exclusive\_monitor0.monitor\_access\_level****Type**

int

**Default value**

0x0

**Description**

0: Monitor all accesses, 1: Monitor all accesses except WriteBack, 2: Only monitor accesses with memory type NonCacheable or Device.

**`exclusive_monitor0.monitor_non_excl_stores`****Type**

bool

**Default value**

0x0

**Description**

Monitor non-exclusive stores from the same master.

**`exclusive_monitor0.number_of_monitors`****Type**

int

**Default value**

0x8

**Description**

Number of monitors.

**`exclusive_monitor0.shareability_domain`****Type**

int

**Default value**

0x3

**Description**

Maximum shareability domain of interest, transactions outside of the domain will pass through un-monitored (0-non-shared, 1-inner, 2-outer, 3-system).

**`exclusive_monitor1.apply_access_width_criteria_to_non_excl_stores`****Type**

bool

**Default value**

0x1

**Description**

Apply the given exclusive store width matching criteria to non-exclusive stores.

**`exclusive_monitor1.clear_on_strex_address_mismatch`****Type**

bool

**Default value**

0x1

**Description**

Whether monitor is cleared when strex fails due to address mismatch.

**`exclusive_monitor1.enable_component`****Type**

bool

**Default value**

0x1

**Description**

Enable component.

**`exclusive_monitor1.exclusive_monitor_clear_on_atomic_from_same_master`****Type**

bool

**Default value**

0x1

**Description**

Monitor atomics from the same master.

**`exclusive_monitor1.match_secure_state`****Type**

bool

**Default value**

0x1

**Description**

Treat the secure state like an address bit.

**`exclusive_monitor1.monitor_access_level`****Type**

int

**Default value**

0x0

**Description**

0: Monitor all accesses, 1: Monitor all accesses except WriteBack, 2: Only monitor accesses with memory type NonCacheable or Device.

**exclusive\_monitor1.monitor\_non\_excl\_stores****Type**

bool

**Default value**

0x0

**Description**

Monitor non-exclusive stores from the same master.

**exclusive\_monitor1.number\_of\_monitors****Type**

int

**Default value**

0x8

**Description**

Number of monitors.

**exclusive\_monitor1.shareability\_domain****Type**

int

**Default value**

0x3

**Description**

Maximum shareability domain of interest, transactions outside of the domain will pass through un-monitored (0-non-shared, 1-inner, 2-outer, 3-system).

**exclusive\_monitor2.apply\_access\_width\_criteria\_to\_non\_excl\_stores****Type**

bool

**Default value**

0x1

**Description**

Apply the given exclusive store width matching criteria to non-exclusive stores.

**exclusive\_monitor2.clear\_on\_strex\_address\_mismatch****Type**

bool

**Default value**

0x1

**Description**

Whether monitor is cleared when strex fails due to address mismatch.

**`exclusive_monitor2.enable_component`****Type**

bool

**Default value**

0x1

**Description**

Enable component.

**`exclusive_monitor2.exclusive_monitor_clear_on_atomic_from_same_master`****Type**

bool

**Default value**

0x1

**Description**

Monitor atomics from the same master.

**`exclusive_monitor2.match_secure_state`****Type**

bool

**Default value**

0x1

**Description**

Treat the secure state like an address bit.

**`exclusive_monitor2.monitor_access_level`****Type**

int

**Default value**

0x0

**Description**

0: Monitor all accesses, 1: Monitor all accesses except WriteBack, 2: Only monitor accesses with memory type NonCacheable or Device.

**`exclusive_monitor2.monitor_non_excl_stores`****Type**

bool

**Default value**

0x0

**Description**

Monitor non-exclusive stores from the same master.

**`exclusive_monitor2.number_of_monitors`****Type**

int

**Default value**

0x8

**Description**

Number of monitors.

**`exclusive_monitor2.shareability_domain`****Type**

int

**Default value**

0x3

**Description**

Maximum shareability domain of interest, transactions outside of the domain will pass through un-monitored (0-non-shared, 1-inner, 2-outer, 3-system).

**`exclusive_monitor3.apply_access_width_criteria_to_non_excl_stores`****Type**

bool

**Default value**

0x1

**Description**

Apply the given exclusive store width matching criteria to non-exclusive stores.

**`exclusive_monitor3.clear_on_strex_address_mismatch`****Type**

bool

**Default value**

0x1

**Description**

Whether monitor is cleared when strex fails due to address mismatch.

**exclusive\_monitor3.enable\_component****Type**

bool

**Default value**

0x1

**Description**

Enable component.

**exclusive\_monitor3.exclusive\_monitor\_clear\_on\_atomic\_from\_same\_master****Type**

bool

**Default value**

0x1

**Description**

Monitor atomics from the same master.

**exclusive\_monitor3.match\_secure\_state****Type**

bool

**Default value**

0x1

**Description**

Treat the secure state like an address bit.

**exclusive\_monitor3.monitor\_access\_level****Type**

int

**Default value**

0x0

**Description**

0: Monitor all accesses, 1: Monitor all accesses except WriteBack, 2: Only monitor accesses with memory type NonCacheable or Device.

**exclusive\_monitor3.monitor\_non\_excl\_stores****Type**

bool

**Default value**

0x0

**Description**  
Monitor non-exclusive stores from the same master.

**exclusive\_monitor3.number\_of\_monitors**

**Type**  
int

**Default value**  
0x8

**Description**  
Number of monitors.

**exclusive\_monitor3.shareability\_domain**

**Type**  
int

**Default value**  
0x3

**Description**  
Maximum shareability domain of interest, transactions outside of the domain will pass through un-monitored (0-non-shared, 1-inner, 2-outer, 3-system).

3.10.89 PL350\_SMC

ARM PrimeCell Static Memory Controller(PL350). This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

Table 3-1204: IP revisions support

Revision	Quality level
r1p2	Full support
r2p2	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

About PL350\_SMC

This component provides two memory interfaces. Each interface can be connected to a maximum of four memory devices, giving a total of eight inputs from the PVBUSDecoder and eight outputs to either SRAM or NAND devices. Only one kind of memory can be connected to a particular interface, either SRAM or NAND.

It provides a PVBUS slave to control the device behavior. A remap port is also provided to assist in remapping particular memory regions.

This component is optimized to have negligible impact on transaction performance, except when memory remap settings are changed, when there might be a significant effect.

### Iris and MTI instances for PL350\_SMC

This model has the following Iris instances:

**Table 3-1205: PL350\_SMC Iris instances**

InstanceName	ComponentName
PL350_SMC	PL350_SMC
PL350_SMC.addr_remapper	TZSwitch
PL350_SMC.addr_remapper.pvbus_mapper	PVBusMapper
PL350_SMC.apb_slave	PVBusSlave
PL350_SMC.exclusive_monitor0_0	PVBusExclusiveMonitor
PL350_SMC.exclusive_monitor0_0.bus_mapper	PVBusMapper
PL350_SMC.exclusive_monitor0_1	PVBusExclusiveMonitor
PL350_SMC.exclusive_monitor0_1.bus_mapper	PVBusMapper
PL350_SMC.exclusive_monitor0_2	PVBusExclusiveMonitor
PL350_SMC.exclusive_monitor0_2.bus_mapper	PVBusMapper
PL350_SMC.exclusive_monitor0_3	PVBusExclusiveMonitor
PL350_SMC.exclusive_monitor0_3.bus_mapper	PVBusMapper
PL350_SMC.exclusive_monitor1_0	PVBusExclusiveMonitor
PL350_SMC.exclusive_monitor1_0.bus_mapper	PVBusMapper
PL350_SMC.exclusive_monitor1_1	PVBusExclusiveMonitor
PL350_SMC.exclusive_monitor1_1.bus_mapper	PVBusMapper
PL350_SMC.exclusive_monitor1_2	PVBusExclusiveMonitor
PL350_SMC.exclusive_monitor1_2.bus_mapper	PVBusMapper
PL350_SMC.exclusive_monitor1_3	PVBusExclusiveMonitor
PL350_SMC.exclusive_monitor1_3.bus_mapper	PVBusMapper
PL350_SMC.master_if0_0	PVBusMaster
PL350_SMC.master_if0_1	PVBusMaster
PL350_SMC.master_if0_2	PVBusMaster
PL350_SMC.master_if0_3	PVBusMaster
PL350_SMC.master_if1_0	PVBusMaster
PL350_SMC.master_if1_1	PVBusMaster
PL350_SMC.master_if1_2	PVBusMaster
PL350_SMC.master_if1_3	PVBusMaster
PL350_SMC.nand_remap_slave	PVBusSlave

This model has the following MTI trace components:

**Table 3-1206: PL350\_SMC MTI instances**

InstanceName	ComponentName
PL350_SMC.addr_remapper.pvbus_mapper	PVBusMapper
PL350_SMC.apb_slave	PVBusSlave

PL350_SMC.master_if1_2	PVBusMaster
PL350_SMC.master_if1_3	PVBusMaster
PL350_SMC.nand_remap_slave	PVBusSlave

## Ports for PL350\_SMC

**Table 3-1207: Ports**

Name	Protocol	Type	Description
apb_interface	PVBus	Slave	This is where we expect to receive all the APB data which is used to read/write the device regs.
axi_chip_if0_in[4]	PVBus	Slave	This is where we expect to receive all the AXI data which is used to read/wrie NAND/RAM mem.
axi_chip_if0_out[4]	PVBus	Master	Master interface 0 to connect to SRAM/NAND.
axi_chip_if1_in[4]	PVBus	Slave	This is where we expect to receive all the AXI data which is used to read/wrie NAND/RAM mem.
axi_chip_if1_out[4]	PVBus	Master	Master interface 1 to connect to SRAM/NAND.

Name	Protocol	Type	Description
axi_remap	PVBus	Slave	This is the remap port that the designer needs to connect to zero.
irq_in_if0	Signal	Slave	Interrupt signals from devices connected on interface 0.
irq_in_if1	Signal	Slave	Interrupt signals from device connected on interface 1.
irq_out	Signal	Master	Interrupt port.
nand_remap_port	PVBus	Slave	Remaps the connected NAND port to 0x0.

## Parameters for PL350\_SMC

### IF0\_CHIP0

#### Type

bool

#### Default value

0x0

#### Description

Interface 0 chip 0 connected.

### IF0\_CHIP0\_BASE

#### Type

int

#### Default value

0x0

#### Description

Interface 0 chip 0 Base address.

### IF0\_CHIP0\_SIZE

#### Type

int

#### Default value

0x0

#### Description

Interface 0 chip 0 Size.

### IF0\_CHIP1

#### Type

bool

#### Default value

0x0

#### Description

Interface 0 chip 1 connected.

**IF0\_CHIP1\_BASE****Type**

int

**Default value**

0x0

**Description**

Interface 0 chip 1 Base address.

**IF0\_CHIP1\_SIZE****Type**

int

**Default value**

0x0

**Description**

Interface 0 chip 1 Size.

**IF0\_CHIP2****Type**

bool

**Default value**

0x0

**Description**

Interface 0 chip 2 connected.

**IF0\_CHIP2\_BASE****Type**

int

**Default value**

0x0

**Description**

Interface 0 chip 2 Base address.

**IF0\_CHIP2\_SIZE****Type**

int

**Default value**

0x0

**Description**

Interface 0 chip 2 Size.

**IF0\_CHIP3****Type**

bool

**Default value**

0x0

**Description**

Interface 0 chip 3 connected.

**IF0\_CHIP3\_BASE****Type**

int

**Default value**

0x0

**Description**

Interface 0 chip 3 Base address.

**IF0\_CHIP3\_SIZE****Type**

int

**Default value**

0x0

**Description**

Interface 0 chip 3 Size.

**IF0\_MEM\_TYPE\_PARAMETER****Type**

int

**Default value**

0x0

**Description**

Interface 0 Mem type.

**IF1\_CHIP0****Type**

bool

**Default value**

0x0

**Description**

Interface 1 chip 0 connected.

**IF1\_CHIP0\_BASE****Type**

int

**Default value**

0x0

**Description**

Interface 1 chip 0 Base address.

**IF1\_CHIP0\_SIZE****Type**

int

**Default value**

0x0

**Description**

Interface 1 chip 0 Size.

**IF1\_CHIP1****Type**

bool

**Default value**

0x0

**Description**

Interface 1 chip 1 connected.

**IF1\_CHIP1\_BASE****Type**

int

**Default value**

0x0

**Description**

Interface 1 chip 1 Base address.

**IF1\_CHIP1\_SIZE****Type**

int

**Default value**

0x0

**Description**

Interface 1 chip 1 Size.

**IF1\_CHIP2****Type**

bool

**Default value**

0x0

**Description**

Interface 1 chip 2 connected.

**IF1\_CHIP2\_BASE****Type**

int

**Default value**

0x0

**Description**

Interface 1 chip 2 Base address.

**IF1\_CHIP2\_SIZE****Type**

int

**Default value**

0x0

**Description**

Interface 1 chip 2 Size.

**IF1\_CHIP3****Type**

bool

**Default value**

0x0

**Description**

Interface 1 chip 3 connected.

**IF1\_CHIP3\_BASE****Type**

int

**Default value**

0x0

**Description**

Interface 1 chip 3 Base address.

**IF1\_CHIP3\_SIZE****Type**

int

**Default value**

0x0

**Description**

Interface 1 chip 3 Size.

**IF1\_MEM\_TYPE\_PARAMETER****Type**

int

**Default value**

0x0

**Description**

Interface 1 Mem type.

**PERIPH\_ID\_0****Type**

int

**Default value**

0x52

**Description**

Periph\_ID\_0 value.

**REMAP****Type**

int

**Default value**

0xffffffffffffffff

**Description**

Remap the device.

**addr\_remapper.normal****Type**

int

**Default value**

0x2

**Description**

Normal Port.

**addr\_remapper.secure****Type**

int

**Default value**

0x1

**Description**

Secure Port.

**exclusive\_monitor0\_0.apply\_access\_width\_criteria\_to\_non\_excl\_stores****Type**

bool

**Default value**

0x1

**Description**

Apply the given exclusive store width matching criteria to non-exclusive stores.

**exclusive\_monitor0\_0.clear\_on\_strex\_address\_mismatch****Type**

bool

**Default value**

0x1

**Description**

Whether monitor is cleared when strex fails due to address mismatch.

**exclusive\_monitor0\_0.enable\_component****Type**

bool

**Default value**

0x1

**Description**

Enable component.

**exclusive\_monitor0\_0.exclusive\_monitor\_clear\_on\_atomic\_from\_same\_master****Type**

bool

**Default value**

0x1

**Description**

Monitor atomics from the same master.

**exclusive\_monitor0\_0.match\_secure\_state****Type**

bool

**Default value**

0x1

**Description**

Treat the secure state like an address bit.

**exclusive\_monitor0\_0.monitor\_access\_level****Type**

int

**Default value**

0x0

**Description**

0: Monitor all accesses, 1: Monitor all accesses except WriteBack, 2: Only monitor accesses with memory type NonCacheable or Device.

**exclusive\_monitor0\_0.monitor\_non\_excl\_stores****Type**

bool

**Default value**

0x0

**Description**

Monitor non-exclusive stores from the same master.

**exclusive\_monitor0\_0.number\_of\_monitors****Type**

int

**Default value**

0x8

**Description**

Number of monitors.

**exclusive\_monitor0\_0.shareability\_domain****Type**

int

**Default value**

0x3

**Description**

Maximum shareability domain of interest, transactions outside of the domain will pass through un-monitored (0-non-shared, 1-inner, 2-outer, 3-system).

**exclusive\_monitor0\_1.apply\_access\_width\_criteria\_to\_non\_excl\_stores****Type**

bool

**Default value**

0x1

**Description**

Apply the given exclusive store width matching criteria to non-exclusive stores.

**exclusive\_monitor0\_1.clear\_on\_strex\_address\_mismatch****Type**

bool

**Default value**

0x1

**Description**

Whether monitor is cleared when strex fails due to address mismatch.

**exclusive\_monitor0\_1.enable\_component****Type**

bool

**Default value**

0x1

**Description**

Enable component.

**exclusive\_monitor0\_1.exclusive\_monitor\_clear\_on\_atomic\_from\_same\_master****Type**

bool

**Default value**

0x1

**Description**

Monitor atomics from the same master.

**exclusive\_monitor0\_1.match\_secure\_state****Type**

bool

**Default value**

0x1

**Description**

Treat the secure state like an address bit.

**exclusive\_monitor0\_1.monitor\_access\_level****Type**

int

**Default value**

0x0

**Description**

0: Monitor all accesses, 1: Monitor all accesses except WriteBack, 2: Only monitor accesses with memory type NonCacheable or Device.

**exclusive\_monitor0\_1.monitor\_non\_excl\_stores****Type**

bool

**Default value**

0x0

**Description**

Monitor non-exclusive stores from the same master.

**exclusive\_monitor0\_1.number\_of\_monitors****Type**

int

**Default value**

0x8

**Description**

Number of monitors.

**exclusive\_monitor0\_1.shareability\_domain****Type**

int

**Default value**

0x3

**Description**

Maximum shareability domain of interest, transactions outside of the domain will pass through un-monitored (0-non-shared, 1-inner, 2-outer, 3-system).

**exclusive\_monitor0\_2.apply\_access\_width\_criteria\_to\_non\_excl\_stores****Type**

bool

**Default value**

0x1

**Description**

Apply the given exclusive store width matching criteria to non-exclusive stores.

**exclusive\_monitor0\_2.clear\_on\_strex\_address\_mismatch****Type**

bool

**Default value**

0x1

**Description**

Whether monitor is cleared when strex fails due to address mismatch.

**exclusive\_monitor0\_2.enable\_component****Type**

bool

**Default value**

0x1

**Description**

Enable component.

**exclusive\_monitor0\_2.exclusive\_monitor\_clear\_on\_atomic\_from\_same\_master****Type**

bool

**Default value**

0x1

**Description**

Monitor atomics from the same master.

**exclusive\_monitor0\_2.match\_secure\_state****Type**

bool

**Default value**

0x1

**Description**

Treat the secure state like an address bit.

**exclusive\_monitor0\_2.monitor\_access\_level****Type**

int

**Default value**

0x0

**Description**

0: Monitor all accesses, 1: Monitor all accesses except WriteBack, 2: Only monitor accesses with memory type NonCacheable or Device.

**exclusive\_monitor0\_2.monitor\_non\_excl\_stores****Type**

bool

**Default value**

0x0

**Description**

Monitor non-exclusive stores from the same master.

**exclusive\_monitor0\_2.number\_of\_monitors****Type**

int

**Default value**

0x8

**Description**

Number of monitors.

**exclusive\_monitor0\_2.shareability\_domain****Type**

int

**Default value**

0x3

**Description**

Maximum shareability domain of interest, transactions outside of the domain will pass through un-monitored (0-non-shared, 1-inner, 2-outer, 3-system).

**exclusive\_monitor0\_3.apply\_access\_width\_criteria\_to\_non\_excl\_stores****Type**

bool

**Default value**

0x1

**Description**

Apply the given exclusive store width matching criteria to non-exclusive stores.

**`exclusive_monitor0_3.clear_on_strex_address_mismatch`****Type**

bool

**Default value**

0x1

**Description**

Whether monitor is cleared when strex fails due to address mismatch.

**`exclusive_monitor0_3.enable_component`****Type**

bool

**Default value**

0x1

**Description**

Enable component.

**`exclusive_monitor0_3.exclusive_monitor_clear_on_atomic_from_same_master`****Type**

bool

**Default value**

0x1

**Description**

Monitor atomics from the same master.

**`exclusive_monitor0_3.match_secure_state`****Type**

bool

**Default value**

0x1

**Description**

Treat the secure state like an address bit.

**`exclusive_monitor0_3.monitor_access_level`****Type**

int

**Default value**

0x0

**Description**

0: Monitor all accesses, 1: Monitor all accesses except WriteBack, 2: Only monitor accesses with memory type NonCacheable or Device.

**exclusive\_monitor0\_3.monitor\_non\_excl\_stores****Type**

bool

**Default value**

0x0

**Description**

Monitor non-exclusive stores from the same master.

**exclusive\_monitor0\_3.number\_of\_monitors****Type**

int

**Default value**

0x8

**Description**

Number of monitors.

**exclusive\_monitor0\_3.shareability\_domain****Type**

int

**Default value**

0x3

**Description**

Maximum shareability domain of interest, transactions outside of the domain will pass through un-monitored (0-non-shared, 1-inner, 2-outer, 3-system).

**exclusive\_monitor1\_0.apply\_access\_width\_criteria\_to\_non\_excl\_stores****Type**

bool

**Default value**

0x1

**Description**

Apply the given exclusive store width matching criteria to non-exclusive stores.

**exclusive\_monitor1\_0.clear\_on\_strex\_address\_mismatch****Type**

bool

**Default value**

0x1

**Description**

Whether monitor is cleared when strex fails due to address mismatch.

**`exclusive_monitor1_0.enable_component`****Type**

bool

**Default value**

0x1

**Description**

Enable component.

**`exclusive_monitor1_0.exclusive_monitor_clear_on_atomic_from_same_master`****Type**

bool

**Default value**

0x1

**Description**

Monitor atomics from the same master.

**`exclusive_monitor1_0.match_secure_state`****Type**

bool

**Default value**

0x1

**Description**

Treat the secure state like an address bit.

**`exclusive_monitor1_0.monitor_access_level`****Type**

int

**Default value**

0x0

**Description**

0: Monitor all accesses, 1: Monitor all accesses except WriteBack, 2: Only monitor accesses with memory type NonCacheable or Device.

**exclusive\_monitor1\_0.monitor\_non\_excl\_stores****Type**

bool

**Default value**

0x0

**Description**

Monitor non-exclusive stores from the same master.

**exclusive\_monitor1\_0.number\_of\_monitors****Type**

int

**Default value**

0x8

**Description**

Number of monitors.

**exclusive\_monitor1\_0.shareability\_domain****Type**

int

**Default value**

0x3

**Description**

Maximum shareability domain of interest, transactions outside of the domain will pass through un-monitored (0-non-shared, 1-inner, 2-outer, 3-system).

**exclusive\_monitor1\_1.apply\_access\_width\_criteria\_to\_non\_excl\_stores****Type**

bool

**Default value**

0x1

**Description**

Apply the given exclusive store width matching criteria to non-exclusive stores.

**exclusive\_monitor1\_1.clear\_on\_strex\_address\_mismatch****Type**

bool

**Default value**

0x1

**Description**

Whether monitor is cleared when strex fails due to address mismatch.

**exclusive\_monitor1\_1.enable\_component****Type**

bool

**Default value**

0x1

**Description**

Enable component.

**exclusive\_monitor1\_1.exclusive\_monitor\_clear\_on\_atomic\_from\_same\_master****Type**

bool

**Default value**

0x1

**Description**

Monitor atomics from the same master.

**exclusive\_monitor1\_1.match\_secure\_state****Type**

bool

**Default value**

0x1

**Description**

Treat the secure state like an address bit.

**exclusive\_monitor1\_1.monitor\_access\_level****Type**

int

**Default value**

0x0

**Description**

0: Monitor all accesses, 1: Monitor all accesses except WriteBack, 2: Only monitor accesses with memory type NonCacheable or Device.

**exclusive\_monitor1\_1.monitor\_non\_excl\_stores****Type**

bool

**Default value**

0x0

**Description**

Monitor non-exclusive stores from the same master.

**`exclusive_monitor1_1.number_of_monitors`****Type**

int

**Default value**

0x8

**Description**

Number of monitors.

**`exclusive_monitor1_1.shareability_domain`****Type**

int

**Default value**

0x3

**Description**

Maximum shareability domain of interest, transactions outside of the domain will pass through un-monitored (0-non-shared, 1-inner, 2-outer, 3-system).

**`exclusive_monitor1_2.apply_access_width_criteria_to_non_excl_stores`****Type**

bool

**Default value**

0x1

**Description**

Apply the given exclusive store width matching criteria to non-exclusive stores.

**`exclusive_monitor1_2.clear_on_strex_address_mismatch`****Type**

bool

**Default value**

0x1

**Description**

Whether monitor is cleared when strex fails due to address mismatch.

**exclusive\_monitor1\_2.enable\_component****Type**

bool

**Default value**

0x1

**Description**

Enable component.

**exclusive\_monitor1\_2.exclusive\_monitor\_clear\_on\_atomic\_from\_same\_master****Type**

bool

**Default value**

0x1

**Description**

Monitor atomics from the same master.

**exclusive\_monitor1\_2.match\_secure\_state****Type**

bool

**Default value**

0x1

**Description**

Treat the secure state like an address bit.

**exclusive\_monitor1\_2.monitor\_access\_level****Type**

int

**Default value**

0x0

**Description**

0: Monitor all accesses, 1: Monitor all accesses except WriteBack, 2: Only monitor accesses with memory type NonCacheable or Device.

**exclusive\_monitor1\_2.monitor\_non\_excl\_stores****Type**

bool

**Default value**

0x0

**Description**

Monitor non-exclusive stores from the same master.

**`exclusive_monitor1_2.number_of_monitors`****Type**

int

**Default value**

0x8

**Description**

Number of monitors.

**`exclusive_monitor1_2.shareability_domain`****Type**

int

**Default value**

0x3

**Description**

Maximum shareability domain of interest, transactions outside of the domain will pass through un-monitored (0-non-shared, 1-inner, 2-outer, 3-system).

**`exclusive_monitor1_3.apply_access_width_criteria_to_non_excl_stores`****Type**

bool

**Default value**

0x1

**Description**

Apply the given exclusive store width matching criteria to non-exclusive stores.

**`exclusive_monitor1_3.clear_on_strex_address_mismatch`****Type**

bool

**Default value**

0x1

**Description**

Whether monitor is cleared when strex fails due to address mismatch.

**`exclusive_monitor1_3.enable_component`****Type**

bool

**Default value**

0x1

**Description**

Enable component.

**`exclusive_monitor1_3.exclusive_monitor_clear_on_atomic_from_same_master`****Type**

bool

**Default value**

0x1

**Description**

Monitor atomics from the same master.

**`exclusive_monitor1_3.match_secure_state`****Type**

bool

**Default value**

0x1

**Description**

Treat the secure state like an address bit.

**`exclusive_monitor1_3.monitor_access_level`****Type**

int

**Default value**

0x0

**Description**

0: Monitor all accesses, 1: Monitor all accesses except WriteBack, 2: Only monitor accesses with memory type NonCacheable or Device.

**`exclusive_monitor1_3.monitor_non_excl_stores`****Type**

bool

**Default value**

0x0

**Description**

Monitor non-exclusive stores from the same master.

**exclusive\_monitor1\_3.number\_of\_monitors**

**Type**  
int

**Default value**  
0x8

**Description**  
Number of monitors.

**exclusive\_monitor1\_3.shareability\_domain**

**Type**  
int

**Default value**  
0x3

**Description**  
Maximum shareability domain of interest, transactions outside of the domain will pass through un-monitored (0-non-shared, 1-inner, 2-outer, 3-system).

**revision**

**Type**  
string

**Default value**  
"r1p2"

**Description**  
Revision.

**3.10.90 PL350\_SMC\_NAND\_FLASH**

A NAND Flash implementation which works with PL350. This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

Table 3-1208: IP revisions support

Revision	Quality level
r1p2	Full support
r2p2	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**About PL350\_SMC\_NAND\_FLASH**

Program the component as you would the hardware.

## Iris and MTI instances for PL350\_SMC\_NAND\_FLASH

This model has the following Iris instances:

**Table 3-1209: PL350\_SMC\_NAND\_FLASH Iris instances**

InstanceName	ComponentName
PL350_SMC_NAND_FLASH	PL350_SMC_NAND_FLASH
PL350_SMC_NAND_FLASH.busslave	PVBusSlave

This model has the following MTI trace components:

**Table 3-1210: PL350\_SMC\_NAND\_FLASH MTI instances**

InstanceName	ComponentName
PL350_SMC_NAND_FLASH.busslave	PVBusSlave

## Ports for PL350\_SMC\_NAND\_FLASH

**Table 3-1211: Ports**

Name	Protocol	Type	Description
irq	Signal	Master	Interrupt signaling.
pvbust	PVBus	Slave	Slave port for connection to PV bus master/decoder.

## Parameters for PL350\_SMC\_NAND\_FLASH

### DEVICE\_1

#### Type

int

#### Default value

0xec

#### Description

Device manufacturer code.

### DEVICE\_2

#### Type

int

#### Default value

0xda

#### Description

Device code.

### DEVICE\_3

#### Type

int

**Default value**

0x80

**Description**

Device 3rd cycle code.

**DEVICE\_4****Type**

int

**Default value**

0x15

**Description**

Device 4th cycle code.

**DEVICE\_NAME****Type**

string

**Default value**

"Samsung K9F1G08U0M"

**Description**

Device Name.

**NAND\_BLOCK\_COUNT****Type**

int

**Default value**

0x800

**Description**

number of blocks in the flash device.

**NAND\_FLASH\_SIZE****Type**

int

**Default value**

0x10800000

**Description**

flash size in byte.

**NAND\_PAGE\_COUNT\_PER\_BLOCK****Type**

int

**Default value**

0x40

**Description**

number of pages in each block.

**NAND\_PAGE\_SIZE**

**Type**

int

**Default value**

0x840

**Description**

page size.

**NAND\_SPARE\_SIZE\_PER\_PAGE**

**Type**

int

**Default value**

0x40

**Description**

Spare size per page.

**NAND\_VALID\_SIZE\_PER\_PAGE**

**Type**

int

**Default value**

0x800

**Description**

valid page size.

**3.10.91 PL370\_HDLCD**

ARM PrimeCell HD Color LCD Controller (Nominal Designation PL370). This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

Table 3-1212: IP revisions support

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

## Changes in 11.29.19

Ports added:

- `display_trace`

Too fast a pixel clock can slow the rest of the simulation.

## Iris and MTI instances for PL370\_HDLCD

This model has the following Iris instances:

**Table 3-1213: PL370\_HDLCD Iris instances**

InstanceName	ComponentName
PL370_HDLCD	PL370_HDLCD
PL370_HDLCD.busmaster	PVBusMaster
PL370_HDLCD.busslave	PVBusSlave
PL370_HDLCD.timer	ClockTimerThread
PL370_HDLCD.timer.timer	ClockTimerThread64
PL370_HDLCD.timer.timer.thread	SchedulerThread
PL370_HDLCD.timer.timer.thread_event	SchedulerThreadEvent

This model has the following MTI trace components:

**Table 3-1214: PL370\_HDLCD MTI instances**

InstanceName	ComponentName
PL370_HDLCD.busmaster	PVBusMaster
PL370_HDLCD.busslave	PVBusSlave

## Ports for PL370\_HDLCD

**Table 3-1215: Ports**

Name	Protocol	Type	Description
clk_in	ClockSignal	Slave	Master clock input, typically 24MHz, to drive pixel clock timing.
display	LCD	Master	Connection to visualization component.
display_trace	FrameTracingProtocol	Master	Test/Debug Frame Capture connection.
intr	Signal	Master	Interrupt signaling line for flyback events.
pvbus	PVBus	Slave	Slave port for connection to PV bus master/decoder.
pvbus_m	PVBus	Master	DMA port for collecting video data from memory/framebuffer.

Parameters for PL370\_HDLCD

**diagnostics**

**Type**  
int

**Default value**  
0x0

**Description**  
Diagnostics level.

**disable\_snooping\_dma**

**Type**  
bool

**Default value**  
0x0

**Description**  
Disable DMA snooping.

**force\_frame\_rate**

**Type**  
int

**Default value**  
0x32

**Description**  
Force frame rate to the value of the parameter in frames per simulated second, regardless of the input clock. When 0, use the input clock as a pixel clock.

3.10.92 PL390\_GIC

Generic Interrupt Controller (PL390). This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

Table 3-1216: IP revisions support

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

About PL390\_GIC

The GIC provides support for three interrupt types:

- Software Generated Interrupts (SGI)
- Private Peripheral Interrupts (PPI)
- Shared Peripheral Interrupts (SPI)

You can set:

- Security state for an interrupt
- Priority state for an interrupt
- Enabling or disabling state for an interrupt
- Processors that receive an interrupt

A processor interface consists of a pair of interfaces called `pvbuss_cpu` and `pvbuss_distributor`. The `enable_cx` and `match_cx` signals identify the originator of a transaction on `pvbuss_cpu`. Similarly, the `enable_dx` and `match_dx` signals identify the originator of a transaction on `pvbuss_distributor`. `X` corresponds to the number of a processor interface.

Note

To reduce compile time, the registers are not available by default. To activate them, uncomment either of the following statements in `PL390_GIC.lisa`:

```
// #define FEW_CADI_REGISTER
// #define ALL_CADI_REGISTER
```

## Iris and MTI instances for PL390\_GIC

This model has the following Iris instances:

**Table 3-1217: PL390\_GIC Iris instances**

InstanceName	ComponentName
PL390_GIC	PL390_GIC
PL390_GIC.busslave_cpu	PVBusSlave
PL390_GIC.busslave_distributor	PVBusSlave

This model has the following MTI trace components:

**Table 3-1218: PL390\_GIC MTI instances**

InstanceName	ComponentName
PL390_GIC.busslave_cpu	PVBusSlave
PL390_GIC.busslave_distributor	PVBusSlave

## Ports for PL390\_GIC

**Table 3-1219: Ports**

Name	Protocol	Type	Description
cfgsdisable	Signal	Slave	Set preventing write accesses to security-critical configuration registers.

Name	Protocol	Type	Description
enable_c[8]	ValueState	Slave	Compared with masked PVBUS master id to select processor interface: (master_id & enable_c<n>) == match_c<n>.
enable_d[8]	ValueState	Slave	Compared with masked PVBUS master id to select distributor interface: (master_id & enable_d<n>) == match_d<n>.
legacy_nfiq[8]	Signal	Slave	Legacy FIQ interrupt for processor Interface <n>.
legacy_nirq[8]	Signal	Slave	Input interrupt signals.
match_c[8]	ValueState	Slave	Mask on the PVBUS master id to select processor interface: (master_id & enable_c<n>) == match_c<n>.
match_d[8]	ValueState	Slave	Mask on the PVBUS master id to select distributor interface: (master_id & enable_d<n>) == match_d<n>.
nfiq[8]	Signal	Master	Send out FIQ signal to processor <n>.
nirq[8]	Signal	Master	Send out IRQ signal to processor <n>.
ppi_c0[16]	Signal	Slave	Private peripheral interrupt for processor 0 (num_cpus> = 1).
ppi_c1[16]	Signal	Slave	Private peripheral interrupt for processor 1 (num_cpus> = 2).
ppi_c2[16]	Signal	Slave	Private peripheral interrupt for processor 2 (num_cpus> = 3).
ppi_c3[16]	Signal	Slave	Private peripheral interrupt for processor 3 (num_cpus> = 4).
ppi_c4[16]	Signal	Slave	Private peripheral interrupt for processor 4 (num_cpus> = 5).
ppi_c5[16]	Signal	Slave	Private peripheral interrupt for processor 5 (num_cpus> = 6).
ppi_c6[16]	Signal	Slave	Private peripheral interrupt for processor 6 (num_cpus> = 7).
ppi_c7[16]	Signal	Slave	Private peripheral interrupt for processor 7 (num_cpus> = 8).
pvbuss_cpu	PVBUS	Slave	Slave port for connection to processor interface.
pvbuss_distributor	PVBUS	Slave	Slave port for connection to distributor interface.
reset_in	Signal	Slave	Reset signal.
spi[988]	Signal	Slave	Shared peripheral interrupt inputs.

## Parameters for PL390\_GIC

### ARCHITECTURE\_VERSION

#### Type

int

#### Default value

0x1

#### Description

set architecture version in periph\_id register.

### AXI\_IF

#### Type

bool

#### Default value

0x1

**Description**

set interface type in peripheral identification register 8.

**C\_ID\_WIDTH****Type**

int

**Default value**

0x20

**Description**

width of the cpu interface master id.

**D\_ID\_WIDTH****Type**

int

**Default value**

0x20

**Description**

width of the distributor interface master id.

**ENABLE\_LEGACY\_FIQ****Type**

bool

**Default value**

0x1

**Description**

provide legacy fiq interrupt inputs.

**ENABLE\_LEGACY\_IRQ****Type**

bool

**Default value**

0x1

**Description**

provide legacy irq interrupt inputs.

**ENABLE\_PPI\_EDGE****Type**

bool

**Default value**

0x0

**Description**

ppi edge sensitive.

**ENABLE\_TRUSTZONE****Type**

bool

**Default value**

0x1

**Description**

support trustzone.

**INIT\_ENABLE\_C0****Type**

int

**Default value**

0xffffffff

**Description**

initial value of register ENABLE\_C0.

**INIT\_ENABLE\_C1****Type**

int

**Default value**

0xffffffff

**Description**

initial value of register ENABLE\_C1.

**INIT\_ENABLE\_C2****Type**

int

**Default value**

0xffffffff

**Description**

initial value of register ENABLE\_C2.

**INIT\_ENABLE\_C3****Type**

int

**Default value**

0xffffffff

**Description**

initial value of register ENABLE\_C3.

**INIT\_ENABLE\_C4****Type**

int

**Default value**

0xffffffff

**Description**

initial value of register ENABLE\_C4.

**INIT\_ENABLE\_C5****Type**

int

**Default value**

0xffffffff

**Description**

initial value of register ENABLE\_C5.

**INIT\_ENABLE\_C6****Type**

int

**Default value**

0xffffffff

**Description**

initial value of register ENABLE\_C6.

**INIT\_ENABLE\_C7****Type**

int

**Default value**

0xffffffff

**Description**

initial value of register ENABLE\_C7.

**INIT\_ENABLE\_D0****Type**

int

**Default value**

0xffffffff

**Description**

initial value of register ENABLE\_D0.

**INIT\_ENABLE\_D1****Type**

int

**Default value**

0xffffffff

**Description**

initial value of register ENABLE\_D1.

**INIT\_ENABLE\_D2****Type**

int

**Default value**

0xffffffff

**Description**

initial value of register ENABLE\_D2.

**INIT\_ENABLE\_D3****Type**

int

**Default value**

0xffffffff

**Description**

initial value of register ENABLE\_D3.

**INIT\_ENABLE\_D4****Type**

int

**Default value**

0xffffffff

**Description**

initial value of register ENABLE\_D4.

**INIT\_ENABLE\_D5****Type**

int

**Default value**

0xffffffff

**Description**

initial value of register ENABLE\_D5.

**INIT\_ENABLE\_D6****Type**

int

**Default value**

0xffffffff

**Description**

initial value of register ENABLE\_D6.

**INIT\_ENABLE\_D7****Type**

int

**Default value**

0xffffffff

**Description**

initial value of register ENABLE\_D7.

**INIT\_MATCH\_C0****Type**

int

**Default value**

0x0

**Description**

initial value of register MATCH\_C0.

**INIT\_MATCH\_C1****Type**

int

**Default value**

0x1

**Description**

initial value of register MATCH\_C1.

**INIT\_MATCH\_C2****Type**

int

**Default value**

0x2

**Description**

initial value of register MATCH\_C2.

**INIT\_MATCH\_C3****Type**

int

**Default value**

0x3

**Description**

initial value of register MATCH\_C3.

**INIT\_MATCH\_C4****Type**

int

**Default value**

0x4

**Description**

initial value of register MATCH\_C4.

**INIT\_MATCH\_C5****Type**

int

**Default value**

0x5

**Description**

initial value of register MATCH\_C5.

**INIT\_MATCH\_C6****Type**

int

**Default value**

0x6

**Description**

initial value of register MATCH\_C6.

**INIT\_MATCH\_C7****Type**

int

**Default value**

0x7

**Description**

initial value of register MATCH\_C7.

**INIT\_MATCH\_D0****Type**

int

**Default value**

0x0

**Description**

initial value of register MATCH\_D0.

**INIT\_MATCH\_D1****Type**

int

**Default value**

0x1

**Description**

initial value of register MATCH\_D1.

**INIT\_MATCH\_D2****Type**

int

**Default value**

0x2

**Description**

initial value of register MATCH\_D2.

**INIT\_MATCH\_D3****Type**

int

**Default value**

0x3

**Description**

initial value of register MATCH\_D3.

**INIT\_MATCH\_D4****Type**

int

**Default value**

0x4

**Description**

initial value of register MATCH\_D4.

**INIT\_MATCH\_D5****Type**

int

**Default value**

0x5

**Description**

initial value of register MATCH\_D5.

**INIT\_MATCH\_D6****Type**

int

**Default value**

0x6

**Description**

initial value of register MATCH\_D6.

**INIT\_MATCH\_D7****Type**

int

**Default value**

0x7

**Description**

initial value of register MATCH\_D7.

**NUM\_CPU****Type**

int

**Default value**

0x8

**Description**

number of cpu interfaces.

**NUM\_LSPI****Type**

int

**Default value**

0x1f

**Description**

number of lockable shared peripheral interrupts.

**NUM\_PPI****Type**

int

**Default value**

0x10

**Description**

number of peripheral interrupts.

**NUM\_PRIORITY\_LEVELS****Type**

int

**Default value**

0x100

**Description**

number of priority levels.

**NUM\_SGI****Type**

int

**Default value**

0x10

**Description**

number of software generated interrupts.

**NUM\_SPI****Type**

int

**Default value**

0x3dc

**Description**

number of shared peripheral interrupts.

### 3.10.93 PMU

PMU (Performance Monitoring Unit). This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1220: IP revisions support**

Revision	Quality level
0.0	Alpha support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

### Changes in 11.29.19

Parameters added:

- `pm_64bit_ext`

### Iris and MTI instances for PMU

This model has the following Iris instances:

**Table 3-1221: PMU Iris instances**

InstanceName	ComponentName
PMU	PMU

### Ports for PMU

**Table 3-1222: Ports**

Name	Protocol	Type	Description
<code>apb_bus_s</code>	<a href="#">PVBUS</a>	Slave	-
<code>clk_in</code>	<a href="#">ClockSignal</a>	Slave	-

### Parameters for PMU

#### **diagnostics**

##### Type

int

##### Default value

0x2

##### Description

Diagnostics 0-4 (0:FATAL 1:ERROR 2:WARNING 3:INFO 4:DEBUG - DEFAULT==2).

#### **feat\_rme**

##### Type

bool

##### Default value

0x0

##### Description

RME Support.

**is\_amu****Type**

bool

**Default value**

0x0

**Description**

AMU or PMU.

**num\_monitors****Type**

int

**Default value**

0x1

**Description**

Number of PMU monitors.

**pm\_64bit\_ext****Type**

bool

**Default value**

0x0

**Description**

64bit programmer view extension.

**pm\_dual\_page\_ext****Type**

bool

**Default value**

0x0

**Description**

Dual page in APB address space.

**pm\_edgedetect\_ext****Type**

bool

**Default value**

0x0

**Description**

Edge detect.

**pm\_export\_ext****Type**

bool

**Default value**

0x0

**Description**

Event output - exported event.

**pm\_fzo\_ext****Type**

bool

**Default value**

0x0

**Description**

Freeze on overflow.

**pm\_mpam\_filter\_ext****Type**

bool

**Default value**

0x0

**Description**

MPAM filtering.

**pm\_oac\_ext****Type**

bool

**Default value**

0x0

**Description**

Observability and access control.

**pm\_sos\_filter\_ext****Type**

bool

**Default value**

0x1

**Description**

Secure operating state filtering.

**pm\_sshot\_ext****Type**

bool

**Default value**

0x1

**Description**

Snapshot.

**pm\_threshold\_ext****Type**

bool

**Default value**

0x0

**Description**

Threshold.

**pm\_tro\_ext****Type**

bool

**Default value**

0x0

**Description**

Trace interface.

**pmevfiltr2\_present****Type**

bool

**Default value**

0x0

**Description**

Event filtering registers 2 present.

**pmevfiltr\_present****Type**

bool

**Default value**

0x0

**Description**

Event filtering registers present.

**pmimpdef\_present**

**Type**

bool

**Default value**

0x0

**Description**

Implementation defined register present.

**pmoflow\_present**

**Type**

bool

**Default value**

0x0

**Description**

Overflow interrupt present.

3.10.94 PPUMTWakerequest

Power Policy Unit (PPU) v8.2 Multi-threaded Core Wakerequest Logic. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-1223: IP revisions support

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

Ports for PPUMTWakerequest

Table 3-1224: Ports

Name	Protocol	Type	Description
cpu_pchannel_m	PChannel	Master	-
ppu_pchannel_s	PChannel	Slave	-
thread_wake_request[2]	Signal	Slave	-
wakerequest	Signal	Master	-

Parameters for PPUMTWakerequest

**mt\_mode**

Type

bool

Default value

0x0

Description

Multi-threaded mode.

**thread0\_op\_mode\_bit**

Type

int

Default value

0x10

Description

Thread0 Operation Mode bit of DEVPACTIVE.

**thread1\_op\_mode\_bit**

Type

int

Default value

0x11

Description

Thread1 Operation Mode bit of DEVPACTIVE.

3.10.95 PPUv0

Power Policy Unit (PPU) v0.8 architectural model. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-1225: IP revisions support

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

Iris and MTI instances for PPUv0

This model has the following Iris instances:

**Table 3-1226: PPUv0 Iris instances**

InstanceName	ComponentName
PPUv0	PPUv0
PPUv0.busslave	PVBusSlave

This model has the following MTI trace components:

**Table 3-1227: PPUv0 MTI instances**

InstanceName	ComponentName
PPUv0	PPUv0
PPUv0.busslave	PVBusSlave

### Ports for PPUv0

**Table 3-1228: Ports**

Name	Protocol	Type	Description
irq	Signal	Master	-
powerdown	Signal	Master	-
ppuhwstat	Value	Master	-
pvbus_s	PVBus	Slave	-
smpen	Signal	Slave	-
standbywfi	Signal	Slave	-
wakerequest	Signal	Slave	-

### Parameters for PPUv0

#### **default\_power\_state\_on**

##### Type

bool

##### Default value

0x0

##### Description

Default power state ON.

#### **device\_channels**

##### Type

int

##### Default value

0x0

##### Description

Number of device channels (0: P-Channel, 1-8: Q-Channels).

**dynamic\_off****Type**

bool

**Default value**

0x0

**Description**

Dynamic Off.

**dynamic\_on****Type**

bool

**Default value**

0x0

**Description**

Dynamic On.

**dynamic\_warm\_reset****Type**

bool

**Default value**

0x0

**Description**

Dynamic Warm Reset.

**full\_ret****Type**

int

**Default value**

0x0

**Description**

Full Retention (0: not supported, 1: static, 2: dynamic).

**func\_ret****Type**

int

**Default value**

0x0

**Description**

Functional Retention (0: not supported, 1: static, 2: dynamic).

**logic\_ret****Type**

int

**Default value**

0x0

**Description**

Logic Retention (0: not supported, 1: static, 2: dynamic).

**mem\_off****Type**

int

**Default value**

0x0

**Description**

Memory Off (0: not supported, 1: static, 2: dynamic).

**mem\_ret****Type**

int

**Default value**

0x0

**Description**

Memory Retention (0: not supported, 1: static, 2: dynamic).

**revision****Type**

string

**Default value**

"rOp0"

**Description**

Revision.

**use\_active\_signal****Type**

bool

**Default value**

0x0

**Description**

Use device-active signal.

### 3.10.96 PPUv1

Power Policy Unit (PPU) v1.1 architectural model. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1229: IP revisions support**

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### About PPUv1

Software can determine which features the PPU supports by reading the PPU Identification Register 0, `PPU_IDR0` and the PPU Identification Register 1, `PPU_IDR1`.

The following power policies are offered by the PPU model, in order of increasing priority:

- Off.
- Emulated Off.
- Memory Retention.
- Emulated Memory Retention.
- Logic Retention.
- Full Retention.
- Memory Off.
- Functional Retention.
- On.
- Warm Reset.
- Debug Recovery Reset.

For the power mode transition rules, see [Arm Power Policy Unit Architecture Specification](#).

There are 16 operating mode values. The meaning of these values is specific to the device that is connected to the PPU. The operating mode can only be configured to change during a power transition of ON to ON.

The PPU model supports static and dynamic transitions on the P-Channel interface. It does not yet support Q-Channel.

`DEVPACTIVE` and `DEVSTATE` have the following bit encodings:

#### DEVPACTIVE bits [10:0]

Each bit indicates a required power mode.

**DEVPSTATE bits [3:0]**

The integer formed by this bitfield indicates a power mode.

**DEVPACTIVE bits [23:16]**

Operating mode. The interpretation of these bits depends on the `DEVPACTIVE` use model (Ladder or Independent).

**DEVPSTATE bits [7:4]**

The integer formed by this bitfield indicates an operating mode.

Communication over the Low Power Interface (`PREQUEST` and `PACTIVE`) uses blocking calls and does not model any delays. See [PChannel protocol] for further details.

For the AMBA Low Power Interface Specification Arm Q-Channel and P-Channel Interfaces, see [AMBA Low Power Interface Specification](#).

For static transitions, software sets the policy as the required power mode. The PPU then sends a `REQUEST` with the required power state to the attached device. The device can `ACCEPT` or `DENY` it. For dynamic transitions, software sets the policy as a minimum power mode. Based on whether the device has sent a signal using `DEVPACTIVE`, the PPU sends a `PREQUEST` with the required power state to the attached device. The device can `ACCEPT` or `DENY` it.

The PPU model is automatically reset by the simulation engine when the model starts up. Reset can also occur through the `reset_in` port. The PPU model is reset only when the signal value is `signal::Set`. Use `signal::Set` instead of zero, its integer value, to prevent unexpected behavior.

The `ppuhwstat` port notifies the power state change inside the PPU and the definition of each bit is the same as `DEVPACTIVE[10:0]`.

The `smpen` and `standbywfi` ports are defined in PPUv0 and are not supported in PPUv1.

**Differences between the model and the RTL**

- Q-Channel is not supported
- The PPU model has been validated with devices supporting only ON and OFF power modes. Arm has not tested the case where a connected device supports other power modes offered by the PPU.

**Iris and MTI instances for PPUv1**

This model has the following Iris instances:

**Table 3-1230: PPUv1 Iris instances**

InstanceName	ComponentName
PPUv1	PPUv1
PPUv1.busslave	PVBusSlave

This model has the following MTI trace components:

**Table 3-1231: PPUv1 MTI instances**

InstanceName	ComponentName
PPUv1	PPUv1
PPUv1.busslave	PVBusSlave

### Ports for PPUv1

**Table 3-1232: Ports**

Name	Protocol	Type	Description
dev_clk_en_out	Signal	Master	Domain clock enable
dev_emu_clk_en_out	Signal	Master	Domain emulated mode clock enable
dev_emu_isolaten_out	Signal	Master	Domain emulated isolation control.
dev_isolaten_out	Signal	Master	Domain isolation control.
dev_poresetn_out	Signal	Master	Domain power on reset
dev_ret_resetn_out	Signal	Master	Domain retention reset.
dev_warm_resetn_out	Signal	Master	Domain warm reset
devpactive	PChannel	Master	P-Channel port
irq	Signal	Master	PPU IRQ signal
powerdown	Signal	Master	Notify whether or not the PPU is in OFF state.
ppuhwstat	Value	Master	Notify the power state change inside the PPU. The definition of each bit is the same as DEVPACTIVE[10:0].
pvbuss_s	PVBus	Slave	PPU APB bus slave port
reset_in	Signal	Slave	PPU reset signal input
wakerequest	Signal	Slave	Input port for the wakerequest signal. It is ORed with PACTIVE[8] (ON) inside the PPU as input to PPU DEVPACTIVE[8] (ON). The "is_core_ppu" parameter controls whether there is additional logic to hold this signal until the PPU is in OFF/OFF_EMU state.

### Parameters for PPUv1

#### RevD\_support

##### Type

bool

##### Default value

0x1

##### Description

Whether to support Rev D locked IRQ.

#### bypass\_handshake

##### Type

bool

##### Default value

0x0

**Description**

Bypass pcsn handshake.

**dbg\_recov****Type**

int

**Default value**

0x0

**Description**

Debug Recovery Reset (0: not supported, 1: static mode only, 2: both dynamic & static mode).

**default\_op\_dyn\_en****Type**

bool

**Default value**

0x0

**Description**

Whether to enable operating mode dynamic transition by default.

**default\_op\_policy****Type**

int

**Default value**

0x0

**Description**

Default operating policy.

**default\_power\_state\_on****Type**

bool

**Default value**

0x0

**Description**

Default power state ON.

**default\_pwr\_dyn\_en****Type**

bool

**Default value**

0x0

**Description**

Whether to enable dynamic power mode transition by default.

**device\_channels****Type**

int

**Default value**

0x0

**Description**

Number of device channels (0: P-Channel, 1-8: Q-Channels).

**dynamic\_off****Type**

bool

**Default value**

0x0

**Description**

Dynamic Off.

**dynamic\_on****Type**

bool

**Default value**

0x0

**Description**

Dynamic On.

**dynamic\_warm\_reset****Type**

bool

**Default value**

0x0

**Description**

Dynamic Warm Reset.

**full\_ret****Type**

int

**Default value**

0x0

**Description**

Full Retention (0: not supported, 1: static mode only, 2: both dynamic & static mode).

**func\_ret****Type**

int

**Default value**

0x0

**Description**

Functional Retention (0: not supported, 1: static mode only, 2: both dynamic & static mode).

**is\_core\_ppu****Type**

bool

**Default value**

0x0

**Description**

PPU is core\_ppu type which means wake\_request would wait till PPU is OFF/OFF\_EMU.

**lock\_support****Type**

bool

**Default value**

0x1

**Description**

Whether to support OFF lock feature.

**logic\_ret****Type**

int

**Default value**

0x0

**Description**

Logic Retention (0: not supported, 1: static, 2: dynamic).

**mem\_off****Type**

int

**Default value**

0x0

**Description**

Memory Off (0: not supported, 1: static mode only, 2: both dynamic &amp; static mode).

**mem\_ret****Type**

int

**Default value**

0x0

**Description**

Memory Retention (0: not supported, 1: static mode only, 2: both dynamic &amp; static mode).

**mem\_ret\_emu****Type**

int

**Default value**

0x0

**Description**

Emulated Memory Retention (0: not supported, 1: static mode only, 2: both dynamic &amp; static mode).

**num\_opmode\_cfg****Type**

int

**Default value**

0x0

**Description**

Number of operating modes.

**off\_emu****Type**

int

**Default value**

0x0

**Description**

Emulated Off (0: not supported, 1: static mode only, 2: both dynamic &amp; static mode).

**off\_mem\_ret\_trans\_cfg****Type**

bool

**Default value**

0x0

**Description**

OFF to MEM\_RET direct transition configuration (0: not allowed, 1: allowed).

**op\_active\_cfg****Type**

int

**Default value**

0x0

**Description**

Operating mode active configuration (0: Ladder use model, 1: Independent user model).

**revision****Type**

string

**Default value**

"r1p1"

**Description**

Revision.

**use\_active\_signal****Type**

bool

**Default value**

0x0

**Description**

Use device-active signal.

### 3.10.97 PPUv1\_Cluster\_Wakerequest\_Logic

PPUv1 wake request stall logic. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1233: IP revisions support**

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

### Ports for PPUv1\_Cluster\_Wakerequest\_Logic

**Table 3-1234: Ports**

Name	Protocol	Type	Description
cluster_wake_request	Signal	Master	-
core_wake_request_in[8]	Signal	Slave	-
core_wake_request_out[8]	Signal	Master	-
ppuhwstat	Value	Slave	-
reset_in	Signal	Slave	-

### Parameters for PPUv1\_Cluster\_Wakerequest\_Logic

#### **core\_ppu\_wakerequest\_stall\_condition\_after\_reset**

##### Type

bool

##### Default value

0x0

##### Description

Set Stall Condition of Core WakeRequest (from GIC) for Core PPU after reset.

#### **disable\_core\_ppu\_wakerequest\_input\_stall**

##### Type

bool

##### Default value

0x0

##### Description

Disable wakerequest input stall of Core PPU. This feature is enabled by default to mimic the P-Channel request stall when Cluster PPU is in OFF.

#### **enable\_cluster\_wakeup\_if\_cluster\_on\_funcret**

##### Type

bool

##### Default value

0x1

**Description**

enable cluster wakeup logic. If it's disabled, core\_wake\_request\_in[x] will be directly connected to core\_wake\_request\_out[x] and cluster\_wake\_request port is disabled.

**3.10.98 RSE\_CPU\_Private\_Region**

RSE CPU processor private region. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1235: IP revisions support**

Revision	Quality level
1.46	Alpha support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**Iris and MTI instances for RSE\_CPU\_Private\_Region**

This model has the following Iris instances:

**Table 3-1236: RSE\_CPU\_Private\_Region Iris instances**

InstanceName	ComponentName
RSE_CPU_Private_Region	RSE_CPU_Private_Region
RSE_CPU_Private_Region.apb_nonsecure	PVBusSlave
RSE_CPU_Private_Region.apb_secure	PVBusSlave

This model has the following MTI trace components:

**Table 3-1237: RSE\_CPU\_Private\_Region MTI instances**

InstanceName	ComponentName
RSE_CPU_Private_Region.apb_nonsecure	<a href="#">PVBusSlave</a>
RSE_CPU_Private_Region.apb_secure	<a href="#">PVBusSlave</a>

**Ports for RSE\_CPU\_Private\_Region****Table 3-1238: Ports**

Name	Protocol	Type	Description
apb_nonsecure	<a href="#">PVBus</a>	Slave	-
apb_secure	<a href="#">PVBus</a>	Slave	secure & non-secure Subordinate APB Interface
reset_in	<a href="#">Signal</a>	Slave	Reset in signal

Parameters for RSE\_CPU\_Private\_Region

**CPUID\_RESET\_VALUE**

**Type**  
int

**Default value**  
0x0

**Description**  
CPUID Registers Reset Value.

**diagnostics**

**Type**  
int

**Default value**  
0x2

**Description**  
Diagnostics 0-4 (0:FATAL 1:ERROR 2:WARNING 3:INFO 4:DEBUG - DEFAULT==2).

3.10.99 RSE\_SystemControl

RSE System Control Registers. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-1239: IP revisions support

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**Iris and MTI instances for RSE\_SystemControl**

This model has the following Iris instances:

Table 3-1240: RSE\_SystemControl Iris instances

InstanceName	ComponentName
RSE_SystemControl	RSE_SystemControl
RSE_SystemControl.busmaster	PVBusMaster
RSE_SystemControl.busslave	PVBusSlave
RSE_SystemControl.scp_rom_busmapper	PVBusMapper

This model has the following MTI trace components:

**Table 3-1241: RSE\_SystemControl MTI instances**

InstanceName	ComponentName
RSE_SystemControl.busmaster	PVBusMaster
RSE_SystemControl.busslave	PVBusSlave
RSE_SystemControl.scp_rom_busmapper	PVBusMapper

## Ports for RSE\_SystemControl

**Table 3-1242: Ports**

Name	Protocol	Type	Description
boot_addr_out	Value_64	Master	Address when boot_en is enabled
boot_en_out	Signal	Master	Enables channel 0 to load first command after reset from boot_addr
boot_memattr_out	Value	Master	Memory attribute setting for the boot_addr
boot_shareattr_out	Value	Master	Shareability attribute for the boot_attr
busmaster_control	PVTransactionMaster	Master	-
cpu0_lockup_reset_request	Signal	Slave	-
cpu0_warm_reset_request	Signal	Slave	-
cpu1_lockup_reset_request	Signal	Slave	-

## Parameters for RSE\_SystemControl

### COLDRESET\_MODE

#### Type

uint32\_t

#### Default value

0

Note: The external agents like BMC or ICU or reset controller can be used to reset the RSE in real hardware but in FVP we don't support these external agents Hence can't support full functionality of COLDRESET\_MODE=1 So keeping COLDRESET\_MODE default value to 0

### CPU0RSTREQENRST

#### Type

bool

#### Default value

0x0

#### Description

CPU 0 Warm Reset Request Enable Default Value.

### CPU0WAITRST

#### Type

bool

#### Default value

false

Note: If CPU0WAITRST is changed to 0x1, then RSE has to make use of DMA boot-flow and DMA has to release the RSE CPU wait signal, this is not currently implemented in FVP. So keeping CPU0WAITRST default value to false(0)

**CPU1WAITRST****Type**

bool

**Default value**

0x1

**Description**

Whether to hold cpu1 in reset at boot.

**CPU2WAITRST****Type**

bool

**Default value**

0x1

**Description**

Whether to hold cpu2 in reset at boot.

**CPU3WAITRST****Type**

bool

**Default value**

0x1

**Description**

Whether to hold cpu3 in reset at boot.

**DMA\_BOOT\_EN\_REG\_RESET****Type**

int

**Default value**

0x1

**Description**

Default Reset value of DMA\_BOOT\_EN register.

**GRETRREG\_RESET****Type**

int

**Default value**

0x0

**Description**

GRETREG Reset value.

**LCM\_DCU\_FORCE\_DISABLE\_REG\_RESET****Type**

int

**Default value**

0x55555555

**Description**

Default Reset value of LCM\_DCU\_FORCE\_DISABLE register.

**NUMCPU****Type**

int

**Default value**

0x1

**Description**

Number of Cortex-M CPU cores in the subsystem.

**NUMDMACHANNEL****Type**

int

**Default value**

0x2

**Description**

Number of DMA Channels.

**NUMVMBANK****Type**

int

**Default value**

0x2

**Description**

Number of Volatile Memory Banks.

**RSE\_DMA\_BOOT\_ADDR****Type**

int

**Default value**

0x407c00

**Description**

[25:0] bits of this parameter are mapped to bits [27:2] of DMA boot\_addr signal and the DMA\_BOOT\_ADDR register.

**RSE\_DMA\_BOOT\_REGION****Type**

int

**Default value**

0x1

**Description**

[3:0] bits of this parameter are mapped to bits [31:28] of DMA boot\_addr signal.

**SWRESETREQ\_BIT****Type**

int

**Default value**

0x5

**Description**

Software Reset Request Bit.

**allow\_lockup\_mask****Type**

bool

**Default value**

0x1

**Description**

Whether to allow masking of CPU lockup reset.

**diagnostics****Type**

int

**Default value**

0x0

**Description**

Diagnostics.

**reset\_vector\_addr**

**Type**  
int

**Default value**  
0x11000000

**Description**  
Reset Vector Address.

3.10.100 SMMUv3AEM

This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-1243: IP revisions support

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

Changes in 11.29.19

- Parameters added:
- hide\_warning\_ACCESSEN\_GPCEN\_set\_to\_1\_in\_a\_single\_write

About SMMUv3AEM

The SMMUv3 Architecture Envelope Model component is an architectural model that implements the SMMUv3.0 to SMMUv3.4 architectures for I/O virtualization of devices, except for the limitations listed below.

The SMMUv3 specifies that input addresses are conceptually 64 bits. The SMMUv3AEM model assumes that the input address is 64 bits. If the SoC has less than 64 bits as an input address bus then if the SoC wants to use the high address space (and use TTB1) then it must sign extend the address from the upstream peripherals to get to 64 bits.

Limitations

- No power control
- AMBA stash operations, destructive read and destructive hint operations are not supported on PVBUS and also are not supported by the device.
- The PMU has limited functionality. Only a subset of the architecturally mandatory events are supported, as indicated by the `SMMU_PMC0_CEID0` fields. The PMU is intended for demonstration purposes only and for driver development.

Between 11.17 and 11.18, the point of triggering for events changed for 'TLB miss' and this might lead to an (architecturally valid) change in the values captured in some circumstances.

- It has limited RAS support configured by the `ras` parameter
- PCIe No\_snoop transactions are not supported
- SMMUV3.3 PMCG filtering by MPAM PARTID and PMG is not supported.
- SMMUV3.4 D128 descriptors are not supported.

## Notes

- A bad configuration renders the model inactive.
- Some configurations can be adjusted by configuration pins. These are only sampled at the negative edge of the reset pin. If you want to use these pins then you must drive them before sending a negative edge on the reset pin. During simulation reset the component driving them must also drive this transition again.
- Debug reads to the registers do not disturb the state.
- Writes to registers with Update flags, including debug writes, are ignored if the Update flag is already set to one.
- Debug and real accesses to the registers must be 32 bits or 64 bits.
- The model deals with groups of transactions with the same attributes and a similar range of addresses. The mapping used is remembered by the bus infrastructure and is used for subsequent sufficiently similar transactions without requiring intervention from the SMMU model, and is not traced, for instance.

The range of addresses that the mapping is valid for is determined by the SMMU model, depending on architectural and model-implementation details. However, as it is unaware of any sign-extension or the mapping that the SoC does, the SoC is responsible for subsequently narrowing the range of addresses for which this mapping is valid. Typically, this is done automatically when using PVBUSMapper.

- If the downstream system of the SMMU needs to distinguish the kinds of SMMU-originated accesses then:
  - For SMMU-originated writes, MSIs are issued using attributes determined by the parameter `msi_attribute_transform`, whilst Event queue writes are always issued with `ExtendedID=0, UserFlags=0, MasterID=0xFFFFffff` unless overridden by the parameter `tw_qs_attribute_transform`.
  - For SMMU-originated reads and compare-and-swap (CAS) operations, `tw_qs_attribute_transform` can be used.
  - If your system does table walks and queue accesses through TBUO (`separate_tw_msi_qs_port == false`), then care must be taken to distinguish table walk and queue traffic from normal translated traffic.

- If `SMMU_IDR1.TABLES_PRESET` or `SMMU_IDR1.QUEUES_PRESET` is set then see parameter `PRESET_REL_base_address` and the parameters it mentions.

Embedded implementations of the SMMU are allowed to have the queues/stream table in a 'close' RAM, either on-chip or in the SMMU itself. For the model, it is up to the integrator to supply this memory and for the SMMU model to be able to access it. Thus if the actual hardware has the memory built into the SMMU then it will be necessary for the integrator to wrap this model with a bus decoder and a memory model to more closely model the embedded implementation.

## Security State Determination (SSD)

The model uses the term SSD to mean the security state that the transaction, register, structure, or event belongs to. In the SMMUv3 architecture, the sideband signal `SEC_SID` holds this information for the transactions, but uses a different encoding.

Before RME, `SEC_SID` was a one-bit signal. With RME, in the hardware, it was expanded to two bits. To retain backwards compatibility in the model, `SEC_SID` remains as one-bit in the parameter `howto_identify`, but the second bit can be expressed with `SEC_SID_bit_1`, and its negative logic version `nSEC_SID_bit_1`.

Security state	SSD	SEC_SID_bit_1	SEC_SID
secure	0	0	1
non-secure	1	0	0
root (reserved)	2	1	1
realm	3	1	0

## Parameters for parsing transaction attributes

Some of the parameters are strings that share a common parsing format for extracting from and placing information into the transaction's attributes.

They can extract and place information into the following fields of a transaction's attributes:

- `ManagerID64` (64 bits)
- `MasterID` (32 bits) (This is the lower 32 bits of `ManagerID64`)
- `ExtendedID` (64 bits)
- `UserFlags` (32 bits)

The string parameter is parsed as a comma-separated list of:

```
lhs_expression=rhs_expression
```

The `lhs_expression` and `rhs_expression` can be an entire symbol, for example:

```
StreamID
```

or a bit, or bit slice:

```
StreamID[16]
StreamID[31:20]
```

In `rhs_expression`, numeric constants (or slices of numeric constants) are also allowed:

```
StreamID[16]=1
StreamID[16]=10[2]
```

A single symbol might be assigned from multiple non-contiguous arrays of bits from a mix of different RHS symbols:

```
StreamID[16]=1, StreamID[31:30]=ExtendedID[1:0],
StreamID[15:0]=UserFlags[31:16], ...
```

In those cases where a left hand symbol can also appear on the right hand side, it is possible to swap bits and transform the symbol. For example, the following expression swaps bits 0 and 1 of the `ExtendedID`:

```
ExtendedID[0]=ExtendedID[1], ExtendedID[1]=ExtendedID[0]
```

Any bits of the attributes that have no transform specified are retained from the input.

The `lhs_expression` and `rhs_expression` must have the same bit width.

## Iris and MTI instances for SMMUv3AEM

This model has the following Iris instances:

**Table 3-1245: SMMUv3AEM Iris instances**

SMMUv3AEM.tbv[7]	PVBusMapper
SMMUv3AEM.tbv[8]	PVBusMapper
SMMUv3AEM.tbv[9]	PVBusMapper

## Ports for SMMUv3AEM

**Table 3-1247: Ports**

Name	Protocol	Type	Description
axi_stream_msi_addr_to_match_s	Value_64	Slave	Any SMMU-originated MSI which exactly matches the address in this port will be sent through the AXI stream port axi_stream_msi_m which is usually connected to the GIC through axi_stream_msi_s. As MSIs are 32 bit aligned then if bits[1:0] != 0 or the address is above OAS then this is effectively disabled. The parameter smmu_msi_device_id is the DeviceID to send on the interface. See also the parameters: axi_stream_msi_TID and axi_stream_msi_TDEST. The default value of this port is set by the parameter axi_stream_msi_addr_to_match. This port is sampled at negedge of reset_in and must be set before the negedge of the reset signal.
axi_stream_msi_m	PVBus	Master	Manager port used for sending SMMU originated MSIs directly to the GIC when axi_stream_msi_enabled == true
clk_in	ClockSignal	Slave	Clock signal
conf_reset_of_SMMU_GBPA_ABORT	Signal	Slave	System reset value of SMMU_GBPA.ABORT. This port is sampled at negedge of reset_in and must be set before the negedge of the reset signal.
conf_reset_of_SMMU_S_GBPA_ABORT	Signal	Slave	System reset value of SMMU_S_GBPA.ABORT. This port is sampled at negedge of reset_in and must be set before the negedge of the reset signal.
conf_system_supports_bgptm	Signal	Slave	System supports broadcast TLBI PAALL and TLBI RPA for supporting RME. This port is sampled at negedge of reset_in and must be set before the negedge of the reset signal.

Name	Protocol	Type	Description
conf_system_supports_btm	Signal	Slave	System supports BTM and will be reflected in the IDR registers. This signal can override the value set by the parameters configuring the IDR registers. If BTM (Broadcast Table Maintenance) is not supported then DVM messages will be ignored. This port is sampled at negedge of reset_in and must be set before the negedge of the reset signal.
conf_system_supports_cohacc	Signal	Slave	System supports COHACC and will be reflected in the IDR registers. This signal can override the value set by the parameters configuring the IDR registers. If COHACC is set then page walks and SMMU-generated accesses will have the required shareability set, otherwise they will be marked as non-shareable. This port is sampled at negedge of reset_in and must be set before the negedge of the reset signal.
conf_system_supports_httu	Signal	Slave	System supports HTTU and will be reflected in the IDR registers. See parameter support_for_httu_when_starts_disallowed for the use of this signal. This port is sampled at negedge of reset_in and must be set before the negedge of the reset signal.
conf_system_supports_sev	Signal	Slave	System supports SEV and will be reflected in the IDR registers. This signal can override the value set by the parameters configuring the IDR registers. This port is sampled at negedge of reset_in and must be set before the negedge of the reset signal.
identify	SMMUv3AEMIdentifyProtocol	Master	Map the transaction to the tuple (StreamID, SubstreamID, SubstreamIDValid, SSD)
irq_out_command_queue_sync_ns	Signal	Master	Pulsed interrupt output signal for non-secure CMD_SYNC having a completion signal of SIG_IRQ.
irq_out_command_queue_sync_rl	Signal	Master	Pulsed interrupt output signal for realm CMD_SYNC having a completion signal of SIG_IRQ.
irq_out_command_queue_sync_s	Signal	Master	Pulsed interrupt output signal for secure CMD_SYNC having a completion signal of SIG_IRQ.
irq_out_event_queue_ns	Signal	Master	Pulsed interrupt output signal for the non-secure event queue becoming non-empty.
irq_out_event_queue_rl	Signal	Master	Pulsed interrupt output signal for the realm event queue becoming non-empty.
irq_out_event_queue_s	Signal	Master	Pulsed interrupt output signal for the secure event queue becoming non-empty.
irq_out_gerror_ns	Signal	Master	Pulsed interrupt output signal for non-secure SMMU_GERROR(N) signaling an error.
irq_out_gerror_rl	Signal	Master	Pulsed interrupt output signal for realm SMMU_GERROR(N) signaling an error.
irq_out_gerror_s	Signal	Master	Pulsed interrupt output signal for secure SMMU_GERROR(N) signaling an error.
irq_out_gpf_far	Signal	Master	For RME-enabled SMMUs. A new error reported in SMMU_ROOT_GPF_FAR will pulse this interrupt.
irq_out_gpt_cfg_far	Signal	Master	For RME-enabled SMMUs. A new error reported in SMMU_ROOT_GPT_CFG_FAR will pulse this interrupt.

Name	Protocol	Type	Description
irq_out_ns	Signal	Master	Pulsed interrupt output signal combined from all non-secure (non-RAS) interrupts. This delivers a pulse if any of the interrupt pins of the specified world also deliver a pulse. SW will have to poll all the different reasons to see why it was delivered.
irq_out_pmcg_ns_as_value	Value	Master	Non-secure PMCG interrupt value port. Value port representing a set of Performance Monitor Counter Group interrupts. There is an unknown number of PMCGs and so an unknown number of PMCG interrupts. There may not necessarily even be an interrupt per group. We export the interrupt to be generated as a unsigned. The 'pmcg_index' is exported on the top 16 bits and the 'pmcg_counter' (that overflowed) on the bottom 16 bits. Any configured MSI for this group will be the next transaction out of the pvbush_m_tw_msi_qs port. The architecture supports an MSI from a PMCG could come out of a different port (say the TBU manager port that a PMCG might be associated with). However the AEM only supports it coming out of the TCU port (pvbush_m_tw_msi_qs).
irq_out_pmcg_s_as_value	Value	Master	Secure PMCG interrupt value port. Value port representing a set of Performance Monitor Counter Group interrupts. There is an unknown number of PMCGs and so an unknown number of PMCG interrupts. There may not necessarily even be an interrupt per group. We export the interrupt to be generated as a unsigned. The 'pmcg_index' is exported on the top 16 bits and the 'pmcg_counter' (that overflowed) on the bottom 16 bits. Any configured MSI for this group will be the next transaction out of the pvbush_m_tw_msi_qs port. The architecture supports an MSI from a PMCG could come out of a different port (say the TBU manager port that a PMCG might be associated with). However the AEM only supports it coming out of the TCU port (pvbush_m_tw_msi_qs).
irq_out_pri_queue	Signal	Master	Pulsed interrupt output signal for the non-secure PRI queue.
irq_out_pri_queue_rl	Signal	Master	Pulsed interrupt output signal for the realm PRI queue.
irq_out_ras_cri_as_value	Value	Master	RAS Critical error interrupt value port. The number of RAS error record groups is dependent on the configuration. As each error record group could have its own interrupts then we write to this value port the error record group number (which is dependent on the configuration) to simulate an interrupt pulse. We only support modelling edge-triggered interrupts. The value passed is formatted as follows: bits[23:16] the ras error group index (if multiple error groups) (0 atm) bits[15:8] node id bits[7:0] the ras record index in the node.
irq_out_ras_eri_as_value	Value	Master	RAS Error Handling Interrupt value port. The number of RAS error record groups is dependent on the configuration. As each error record group could have its own interrupts then we write to this value port the error record group number (which is dependent on the configuration) to simulate an interrupt pulse. We only support modelling edge-triggered interrupts. The value passed is formatted as follows: bits[23:16] the ras error group index (if multiple error groups) (0 atm) bits[15:8] node id bits[7:0] the ras record index in the node.

Name	Protocol	Type	Description
irq_out_ras_fhi_as_value	Value	Master	RAS Fault Handling Interrupt value port. The number of RAS error record groups is dependent on the configuration. As each error record group could have its own interrupts then we write to this value port the error record group number (which is dependent on the configuration) to simulate an interrupt pulse. We only support modelling edge-triggered interrupts. The value passed is formatted as follows: bits[23:16] the ras error group index (if multiple error groups) (0 atm) bits[15:8] node id bits[7:0] the ras record index in the node.
irq_out_rl	Signal	Master	Pulsed interrupt output signal combined from all realm (non-RAS) interrupts. This delivers a pulse if any of the interrupt pins of the specified world also deliver a pulse. SW will have to poll all the different reasons to see why it was delivered.
irq_out_s	Signal	Master	Pulsed interrupt output signal combined from all secure (non-RAS) interrupts. This delivers a pulse if any of the interrupt pins of the specified world also deliver a pulse. SW will have to poll all the different reasons to see why it was delivered.
logptsz_s	Value	Slave	RME: This is a four bit signal that encodes the region size that a single LOGPT entry covers. The default value of this port is derived from the parameter <code>rme_logpt_entry_covers_log2size_in_bytes</code> which is in a different format to the port. If a valid value is driven then it will be put in the field <code>SMMU_ROOT_GPT_BASE_CFG.LOGPTSZ</code> . The port uses the same encoding as the field. If an invalid value is driven to this pin and <code>legacy_tz_en</code> is low then the model will obey the setting of the parameter <code>out_of_range_logptsz_s</code> . This port is sampled at negedge of <code>reset_in</code> and must be set before the negedge of the reset signal.
legacy_tz_en	Signal	Slave	For an RME-enabled SMMU then tie this high to get non-RME behaviour See also the parameter <code>SMMU_ROOT_IDR0</code> . This port is sampled at negedge of <code>reset_in</code> and must be set before the negedge of the reset signal.
pvbus_control_s	PVBus	Slave	Register subordinate port
pvbus_id_routed_m	PVBus	Master	This is a special "id-routed" port for transmitting ATC invalidates and PRI Responses upstream into the PCIe EndPoints, it is not a normal bus. The FastSim ATC invalidate protocol specifies how to route and deal with this this port. See the parameter <code>output_id_routed_transform</code> It is assumed that the StreamID can uniquely route the transaction if there are multiple PCIe Root Complexes.
pvbus_m[64]	PVBus	Master	The TBU manager ports that carry transactions that have been translated from the correspondingly numbered <code>pvbus_s[]</code> port.
pvbus_m_tw_msi_qs	PVBus	Master	Manager port used for Table Walks, MSIs and Queue access when <code>separate_tw_msi_qs_port=true</code>
pvbus_s[64]	PVBus	Slave	The TBU subordinate ports that receive transactions to be translated. They will exit the SMMU through the same numbered <code>pvbus_m[]</code> port.
reset_in	Signal	Slave	Reset signal
sev_out	Signal	Master	Event signal

## Parameters for SMMUv3AEM

### **PRESET\_REL\_base\_address**

#### **Type**

uint64\_t

#### **Default value**

0

If using preset addresses (SMMU\_IDR1.QUEUES\_PRESET/TABLES\_PRESET) then the queue and table base registers become fixed. If SMMU\_IDR1.REL then the addresses are relative to the base of the register file and this parameter tells the model what address to add to the queue/table addresses to calculate the actual address.

This is for 'embedded implementations' where the memory for these structures is held within the SMMU itself or in a 'close' RAM. The model does not contain any RAM and the integrator must supply a RAM at the appropriate address.

If the preset tables/queues overlap, the RAM has to implement separate secure and non-secure address spaces.

See also: \* TABLES\_PRESET\_smmu\_{s,r}strtab\_base \*  
TABLES\_PRESET\_smmu\_{s,r}strtab\_base\_cfg \* QUEUES\_PRESET\_smmu\_{s,r}cmdq\_base \*  
QUEUES\_PRESET\_smmu\_{s,r}eventq\_base \* QUEUES\_PRESET\_smmu\_{r}priq\_base (no secure PRIQ)

### **QUEUES\_PRESET\_smmu\_cmdq\_base**

#### **Type**

uint64\_t

#### **Default value**

0

If SMMU\_IDR1.QUEUES\_PRESET == 1 then this is the value that appears in SMMU\_CMDQ\_BASE and SMMU\_CMDQ\_BASE becomes read-only.

See also parameter PRESET\_REL\_base\_address.

### **QUEUES\_PRESET\_smmu\_eventq\_base**

#### **Type**

uint64\_t

#### **Default value**

0

If SMMU\_IDR1.QUEUES\_PRESET == 1 then this is the value that appears in SMMU\_EVENTQ\_BASE and SMMU\_EVENTQ\_BASE becomes read-only.

See also parameter PRESET\_REL\_base\_address.

#### **QUEUES\_PRESET\_smmu\_priq\_base**

##### **Type**

uint64\_t

##### **Default value**

0

If SMMU\_IDR1.QUEUES\_PRESET == 1 and SMMU\_IDR0.PRI == 1 then this is the value that appears in SMMU\_PRIQ\_BASE and SMMU\_PRIQ\_BASE becomes read-only.

See also parameter PRESET\_REL\_base\_address.

#### **QUEUES\_PRESET\_smmu\_r\_cmdq\_base**

##### **Type**

uint64\_t

##### **Default value**

0

If SMMU\_IDR1.QUEUES\_PRESET == 1 then this is the value that appears in SMMU\_R\_CMDQ\_BASE and SMMU\_R\_CMDQ\_BASE becomes read-only.

See also parameter PRESET\_REL\_base\_address.

#### **QUEUES\_PRESET\_smmu\_r\_eventq\_base**

##### **Type**

uint64\_t

##### **Default value**

0

If SMMU\_IDR1.QUEUES\_PRESET == 1 and SMMU\_ROOT\_IDR0.REALM\_IMPL == 1 then this is the value that appears in SMMU\_R\_EVENTQ\_BASE and SMMU\_R\_EVENTQ\_BASE becomes read-only.

See also parameter PRESET\_REL\_base\_address.

#### **QUEUES\_PRESET\_smmu\_r\_priq\_base**

##### **Type**

uint64\_t

##### **Default value**

0

If `SMMU_IDR1.QUEUES_PRESET == 1` and `SMMU_IDR0.PRI == 1` and `SMMU_ROOT_IDR0.REALM_IMPL == 1` then this is the value that appears in `SMMU_PRIQ_BASE` and `SMMU_PRIQ_BASE` becomes read-only.

See also parameter `PRESET_REL_base_address`.

#### **`QUEUES_PRESET_smmu_s_cmdq_base`**

##### **Type**

`uint64_t`

##### **Default value**

0

If `SMMU_IDR1.QUEUES_PRESET == 1` and `SMMU_S_IDR1.SECURE_IMPL == 1` then this is the value that appears in `SMMU_S_CMDQ_BASE` and `SMMU_S_CMDQ_BASE` becomes read-only.

See also parameter `PRESET_REL_base_address`.

#### **`QUEUES_PRESET_smmu_s_eventq_base`**

##### **Type**

`uint64_t`

##### **Default value**

0

If `SMMU_IDR1.QUEUES_PRESET == 1` and `SMMU_S_IDR1.SECURE_IMPL == 1` then this is the value that appears in `SMMU_S_EVENTQ_BASE` and `SMMU_S_EVENTQ_BASE` becomes read-only.

See also parameter `PRESET_REL_base_address`.

#### **`SMMU_AIDR`**

##### **Type**

`uint32_t`

##### **Default value**

0

`SMMU_AIDR` contains the Major and Minor architectural revisions numbers

#### **`SMMU_IDR0`**

##### **Type**

`uint32_t`

##### **Default value**

-

`SMMU_IDR0`. The following fields are further combined with the port `conf_system_supports_{sev,httu,btm,cohacc}`:- `* sev * ht tu * btm * cohacc`

NOTE that SMMU\_IDR0.RME\_IMPL is the value that the SMMU should have if the SMMU is currently RME-aware. It will be forced to zero if the SMMU has been forced to be unaware of RME by legacy\_tz\_en.

**SMMU\_IDR1****Type**

uint32\_t

**Default value**

-

SMMU\_IDR1.

**SMMU\_IDR2****Type**

uint32\_t

**Default value**

0

SMMU\_IDR2 holds the BA\_VATOS field.

**SMMU\_IDR3****Type**

uint32\_t

**Default value**

0

SMMU\_IDR3 is reserved.

**SMMU\_IDR4****Type**

uint32\_t

**Default value**

0

SMMU\_IDR4 is Imp def.

**SMMU\_IDR5****Type**

uint32\_t

**Default value**

0

SMMU\_IDR5 contains, amongst others the output address encoded size (OAS).

**SMMU\_IDR6****Type**

uint32\_t

**Default value**

0

SMMU\_IDR6 is **RES0** if Enhanced Command Queues do not exist (SMMU\_IDR1.ECMDQ == 0).

Otherwise, SMMU\_IDR6 contains information about the configuration of the ECMDQs.

**SMMU\_IIDR****Type**

uint32\_t

**Default value**

0

SMMU\_IIDR contains fields for the implementer, product revision, etc.

**SMMU\_MPAMIDR****Type**

uint32\_t

**Default value**

0

SMMUv3.2: If SMMU\_IDR3.MPAM == 1 then SMMU\_MPAMIDR holds further ID information for Memory Partitioning And Monitoring (MPAM) extension.

This is optional in SMMUv3.2 and is backported to SMMUv3.1.

**SMMU\_ROOT\_IDR0****Type**

uint32\_t

**Default value**

0

If SMMU\_ROOT\_IDR0 is 0 then the SMMU is RME-unaware.

Otherwise...

legacy\_tz\_en is a pin that when high disables RME and the SMMU\_ROOT\_IDR0 register reads as zero.

The effective value of legacy\_tz\_en is derived from

- the last signalled value sampled at negedge of reset

- or if never signalled, the inverse of ROOT\_IMPL (bit[0]) of this parameter.

Thus, ROOT\_IMPL should be zero if we want `legacy_tz_en` to start as high regardless of the actual configuration we want in the SMMU\_ROOT\_IDR0 register when the SMMU is RME-aware.

In other words, if the SMMU is to be RME-aware, then all parameters should be configured as though the SMMU is currently RME-aware with the exception that SMMU\_ROOT\_IDR0.ROOT\_IMPL is the inverse of the default value of `legacy_tz_en`.

SMMU\_ROOT\_IDR0.BGPTM is the default value of the pin `conf_system_supports_bgptm`.

#### **SMMU\_ROOT\_IIDR**

##### **Type**

uint32\_t

##### **Default value**

0

The value of the SMMU\_ROOT\_IIDR register. If is zero then will be the same as SMMU\_IIDR.

#### **SMMU\_R\_AIDR**

##### **Type**

uint32\_t

##### **Default value**

0

The value of SMMU\_R\_AIDR.

#### **SMMU\_R\_IDR0**

##### **Type**

uint32\_t

##### **Default value**

0

The value of SMMU\_R\_IDR0.

#### **SMMU\_R\_IDR3**

##### **Type**

uint32\_t

##### **Default value**

0

The value of SMMU\_R\_IDR3.

**SMMU\_R\_IDR6****Type**

uint32\_t

**Default value**

0

The value of SMMU\_R\_IDR6 that configures the ECMDQs.

**SMMU\_R\_MECIDR****Type**

uint32\_t

**Default value**

0

The value of SMMU\_R\_MECIDR.

**SMMU\_R\_MPAMIDR****Type**

uint64\_t

**Default value**

0xFFFFFFFFFFFFFFFF

NOTE this parameter is 64 bits but the ID register is 32 bits.

This parameter is the value of SMMU\_R\_MPAMIDR, or if ~0ull then it will have the following default values:

- PARTID\_MAX/PMG\_MAX from the SMMU\_MPAMIDR
- HAS\_MPAM\_NS from the SMMU\_S\_MPAMIDR if it exists, otherwise 0.

**SMMU\_S\_IDR0****Type**

uint32\_t

**Default value**

0

Secure IDR0 register.

**SMMU\_S\_IDR1****Type**

uint32\_t

**Default value**

-

SMMU\_S\_IDR1 Indicates if there is a secure side by bit 31.

#### **SMMU\_S\_IDR2**

##### **Type**

uint32\_t

##### **Default value**

0

SMMU\_S\_IDR2 Reserved

#### **SMMU\_S\_IDR3**

##### **Type**

uint32\_t

##### **Default value**

0

SMMU\_S\_IDR3 Reserved

#### **SMMU\_S\_IDR4**

##### **Type**

uint32\_t

##### **Default value**

0

SMMU\_S\_IDR4 IMP DEF

#### **SMMU\_S\_IDR6**

##### **Type**

uint32\_t

##### **Default value**

0

SMMU\_S\_IDR6 is **RES0** if Secure Enhanced Command Queues do not exist (SMMU\_S\_IDR0.ECMDQ == 0).

Otherwise, SMMU\_S\_IDR6 contains information about the configuration of the ECMDQs.

#### **SMMU\_S\_MPAMIDR**

##### **Type**

uint32\_t

##### **Default value**

0

SMMUv3.2: If SMMU\_IDR3.MPAM == 1 then SMMU\_S\_MPAMIDR holds further ID information for Memory Partitioning And Monitoring (MPAM) extension.

This is optional in SMMUv3.2 and is backported to SMMUv3.1.

#### **TABLES\_PRESET\_smmu\_r\_strtab\_base**

##### **Type**

uint64\_t

##### **Default value**

0

If SMMU\_IDR1.TABLES\_PRESET == 1 and SMMU\_ROOT\_IDR0.REALM\_IMPL == 1 then this is the value that appears in SMMU\_R\_STRTAB\_BASE and SMMU\_R\_STRTAB\_BASE becomes read-only.

See also parameter PRESET\_REL\_base\_address.

#### **TABLES\_PRESET\_smmu\_r\_strtab\_base\_cfg**

##### **Type**

uint32\_t

##### **Default value**

0

If SMMU\_IDR1.TABLES\_PRESET == 1 and SMMU\_ROOT\_IDR0.REALM\_IMPL == 1 then this is the value that appears in SMMU\_R\_STRTAB\_BASE\_CFG and SMMU\_R\_STRTAB\_BASE\_CFG becomes read-only.

See also parameter PRESET\_REL\_base\_address.

#### **TABLES\_PRESET\_smmu\_s\_strtab\_base**

##### **Type**

uint64\_t

##### **Default value**

0

If SMMU\_IDR1.TABLES\_PRESET == 1 and SMMU\_S\_IDR1.SECURE\_IMPL == 1 then this is the value that appears in SMMU\_S\_STRTAB\_BASE and SMMU\_S\_STRTAB\_BASE becomes read-only.

See also parameter PRESET\_REL\_base\_address.

#### **TABLES\_PRESET\_smmu\_s\_strtab\_base\_cfg**

##### **Type**

uint32\_t

##### **Default value**

0

If `SMMU_IDR1.TABLES_PRESET == 1` and `SMMU_S_IDR1.SECURE_IMPL == 1` then this is the value that appears in `SMMU_S_STRTAB_BASE_CFG` and `SMMU_S_STRTAB_BASE_CFG` becomes read-only.

See also parameter `PRESET_REL_base_address`.

#### **`TABLES_PRESET_smmu_strtab_base`**

##### **Type**

`uint64_t`

##### **Default value**

0

If `SMMU_IDR1.TABLES_PRESET == 1` then this is the value that appears in `SMMU_STRTAB_BASE` and `SMMU_STRTAB_BASE` becomes read-only.

See also parameter `PRESET_REL_base_address`.

#### **`TABLES_PRESET_smmu_strtab_base_cfg`**

##### **Type**

`uint32_t`

##### **Default value**

0

If `SMMU_IDR1.TABLES_PRESET == 1` then this is the value that appears in `SMMU_STRTAB_BASE_CFG` and `SMMU_STRTAB_BASE_CFG` becomes read-only.

See also parameter `PRESET_REL_base_address`.

#### **`all_error_messages_through_trace`**

##### **Type**

`bool`

##### **Default value**

false

Some conditions in the SMMU are so strange that the software programming the SMMU has done something wrong. At this point messages are output to either `ArchMsg.Error.*` or `ArchMsg.Warning.*` or to the error stream of the simulator. Outputting to the error stream of the simulator may cause it to return with a non-zero exit status.

If you set this option to true then instead of using the error stream of the simulator it will always use a trace stream allowing the simulation to exit with a zero exit status.

#### **`allow_non_secure_access_to_SMMU_S_INIT`**

##### **Type**

`bool`

**Default value**

false

If the system has no software operating as a secure agent then set this parameter. This allows non-secure accesses to the SMMU\_S\_INIT register and allows the non-secure software to reset the TLB, clearing out any 'secure' TLB entries.

If the SMMU does not implement the security extensions (SMMU\_S\_IDR1.SECURE\_IMPL == 0) then this parameter is ignored.

**apply\_ste\_instcfg\_privcfg\_on\_all\_ats\_translated\_accesses****Type**

bool

**Default value**

false

This parameter is ignored if any of the following are true:

- SMMU\_IDR1.ATTR\_PERMS\_OVR == 0
- SMMU\_IDR3.PASIDTT == 1 and the transaction has a PASID

Otherwise, if this parameter is:

- false: STE.INSTCFG/PRIVCFG will only be applied to ATS-TranslatedTransactions if STE.EATS==split-stage.
- true: STE.INSTCFG/PRIVCFG will be applied to all ATS-TranslatedTransactions regardless of the value of STE.EATS.

**ats\_split\_stage\_dbm\_update\_do\_with\_ATSRequest****Type**

unsigned

**Default value**

0

When doing split-stage ATS, then the DBM update for the final stage 2 descriptor can be done either whilst processing the ATS request or delayed until it actually sees the PCIe Translated Transaction using the stage 2 descriptor.

**0**

do when the actual transaction is seen

**1**

do when processing the ATS request

**2**

do it randomly with 50% chance.

**axi\_stream\_msi\_TDEST****Type**

uint32\_t

**Default value**

0

ID of the AXI stream subordinate port on the GIC that receives SMMU originated MSIs sent directly. The name of the GIC port is `axi_stream_msi_s`.

**Note**

If `axi_stream_msi_addr_to_match[1:0] != 0`, or the address is above OAS then this is effectively disabled.

See also:

- `axi_stream_msi_addr_to_match`
- `axi_stream_msi_TID`

**axi\_stream\_msi\_TID****Type**

uint32\_t

**Default value**

0

ID of the AXI stream manager port that sends SMMU TCU originated MSIs directly to the GIC. The name of the SMMU port is `axi_stream_msi_m`.

**Note**

If `axi_stream_msi_addr_to_match[1:0] != 0`, or the address is above OAS then this is effectively disabled.

See also:

- `axi_stream_msi_addr_to_match`
- `axi_stream_msi_TDEST`

**axi\_stream\_msi\_addr\_to\_match****Type**

uint64\_t

**Default value**

0xFFFFFFFFFFFFFFFF

If the last two bits are 0, any SMMU-originated MSI which exactly matches the address will be sent through the AXI stream port `axi_stream_msi_m` which is usually connected to the GIC.

This parameter drives the value of the `axi_stream_msi_addr_to_match_s` port at simulation reset. For every reset after that, the value of the port will be sampled and used if changed.

Note

The entire address must match, including bits [1:0]. As MSIs are 32 bit aligned then if `axi_stream_msi_addr_to_match[1:0] != 0`, or the address is above OAS then this is effectively disabled.

See also:

- `axi_stream_msi_TID`
- `axi_stream_msi_TDEST`

### **behaviour\_of\_sampled\_at\_reset\_signals**

#### **Type**

unsigned

#### **Default value**

0

Some configuration signals into the SMMU are sampled on negedge of reset.

However, it can sometimes be hard to arrange to drive a configuration pin before the negedge of reset.

The configuration pins are sampled:

0

at negedge reset.

1

at negedge reset, but if a later change occurs at the same simulated time, and no transactions have occurred, then they will be resampled and the SMMU reset again.

### **cmdq\_max\_number\_of\_commands\_to\_buffer**

#### **Type**

uint32\_t

#### **Default value**

10

The command queues can buffer fetched commands before issuing them. This parameter is roughly the maximum number of commands to do this for. The programmer visible effects are that just because the CONS pointer shows a command has been consumed does not necessarily mean that it has been issued (and completed). Higher values accentuate this effect.

**dpt\_configure\_ATS\_formed\_entries****Type**

string

**Default value**

"all\_enabled\_stages, vmsa\_and\_gpc"

A comma-separated list of options.

If the string is "" / "none", then no ATS-formed DPT TLB entries are used.

Otherwise...

One of:

- "all\_enabled\_stages" / "" – use all enabled VMSA stages (default)
- "last\_enabled\_stage" – use only the last enabled VMSA stage.

The DPT entry size, one of:

- "vmsa\_and\_gpc" / "" – store as the smaller of the VMSA and GPC region (default)
- "vmsa\_only" – store as the VMSA region

ATS-formed entries and DPT-formed entries can be distinguishable, one of:

- "on\_fault\_always\_walk" / "" – ATS-formed and DPT-formed entries are not distinguished (default)
- "on\_fault\_walk\_if\_ATS\_formed" – ATS-formed entries are not definitive and will cause a walk. DPT-formed entries are definitive and will not cause a walk.

An ATS-formed entry can still be inserted if the only reason it fails is because of the final GPC check, one of:

- "only\_if\_passes\_final\_PA\_GPC\_check"
- "even\_if\_fails\_final\_PA\_GPC\_check"

Example:

"all\_enabled\_stages, vmsa\_and\_gpc"

If we find a DPT TLB entry that is ATS-formed or the implementation does not distinguished ATS-formed or DPT-formed entries then:

- for downgradeable transactions, then if the entry does not allow the transaction but would allow the downgraded transaction:
  - "do\_not\_prefer\_downgrade\_over\_DPT\_walk" – walk the DPT to see if the non-downgraded transaction would be allowed.
  - "prefer\_downgrade\_over\_DPT\_walk" (default) – just do the downgrade and avoid a DPT walk.

- for a NOPpable transaction, then if the entry does not allow the transaction:
  - “do\_not\_prefer\_found\_entry\_NOP\_over\_DPT\_walk” – walk the DPT to see if the original transaction is allowed.
  - “prefer\_found\_entry\_NOP\_over\_DPT\_walk” (default) – just **NOP** the transaction and avoid a DPT walk.

NOTE that if no entry is found then a NOPpable transaction will still perform a walk.

### **dpt\_configure\_invalidation**

#### **Type**

string

#### **Default value**

“”

Configure when entries are invalidated when performing a DPT check.

A comma-separated list of options.

Choose one of:

- lookup\_fault\_invalidates\_any\_existing\_entries / “” (default)
- lookup\_fault\_leaves\_any\_existing\_entries

Choose one of:

- noaccess\_fault\_invalidates\_any\_existing\_entries / “” (default)
- noaccess\_fault\_leaves\_any\_existing\_entries

### **enable\_device\_id\_checks**

#### **Type**

bool

#### **Default value**

true

If this parameter is true then the DeviceIDs seen by the GIC are:

- **for client devices**

`DeviceID = StreamID + translated_device_id_base`

- **for SMMU-generated MSIs**

`smmu_msi_device_id`

This parameter enables two checks:

- If the DeviceID is used in the `output_attribute_transform` parameter, if it overflows 32 bits then the model warns. If the DeviceID is not used, it is assumed that the external agent that forms the DeviceID warns if it overflows.

- If the SMMU supports MSIs, the model checks that the GIC is able to distinguish an MSI generated by the SMMU from one generated by a client device.

As the exact mechanism to determine the DeviceID is in the system and not necessarily under control of the SMMU then you can disable these warnings using this parameter.

See also the parameters: `output_attribute_transform` and `msi_attribute_transform`.

### **`hide_warning_ACCESSEN_GPCEN_set_to_1_in_a_single_write`**

#### **Type**

bool

#### **Default value**

false

The architecture recommends against setting `SMMU_ROOT_CR0.ACCESSEN` and `SMMU_ROOT_CR0.GPCEN` to 1 in the same write if it is possible that a concurrent client device transaction could appear at the SMMU. This is because there could be a time window where the client device transaction sees effective values `ACCESSEN == 1` and `GPCEN == 0` and so would bypass GPC checking.

If your system cannot generate this possibility then you can set this parameter to true and turn off the warning that software has set both `ACCESSEN` and `GPCEN` to 1 at the same time.

### **`hide_warning_EOPD_differs_from_what_would_be_cached`**

#### **Type**

bool

#### **Default value**

false

When this parameter is set to true, warnings that the effective EOPD value differs from what would be cached in the TLB are disabled. False (warnings are showed) by default.

### **`hide_warning_NoStreamID_transaction_for_unsupported_PAS_or_MPAM_SP`**

#### **Type**

bool

#### **Default value**

false

When RME is not supported then a NoStreamID transaction with `PAS[1] == 1` or `MPAM_SP[1] == 1` is treated as though `PAS[1] == 0` and `MPAM_SP[1] == 0`. This is usually a system construction error and is not expected to occur.

The SMMU warns when this occurs, but the warning can be hidden by setting this parameter.

## howto\_identify

### Type

string

### Default value

“use-identify”

If `use-identify` then the SMMU uses the `identify` port to determine the `ssid`, `streamID`, `SubstreamID`. Otherwise, this string extracts them from the transaction’s attributes.

Examples:

```
SEC_SID=ExtendedID[63], SSV=ExtendedID[62], SubstreamID=ExtendedID[51:32],  
StreamID=ExtendedID[31:0]
```

or

```
nSEC_SID=ExtendedID[63], StreamID=ExtendedID[55:24], nSSV=ExtendedID[20],  
SubstreamID=ExtendedID[19:0]  
StreamID[31:24]=0, StreamID[23:0]=ExtendedID[23:0], SSV=1[0], ...
```

Note

If you are not using the `use-identify` option then the configuration string is parsed according to the rules in the section ‘Parameters for parsing transaction attributes’.

LHS Symbols:

#### **SIDV**

Indicates that the StreamID is valid.

#### **SSV**

Indicates that the SubstreamID is valid.

#### **SEC\_SID / SEC\_SID\_bit\_1**

Bits 0 and 1 respectively of the StreamID Security State

#### **StreamID**

(32 b) valid if `sidv` is 1 or both `sidv` and `nsidv` are unused.

#### **SubstreamID**

(20 b) is valid if `ssv` is true.

#### **nSEC\_SID / nSEC\_SID\_bit\_1 / nSSV / nSIDV**

Negative logic of above parameters. Different attributes are independent and can use negative or positive logic.

RHS Symbols:

#### **ExtendedID / ManagerID64 / MasterID / UserFlags**

Incoming PVBUS transaction attributes

`SEC_SID` is 1b in the model. For RME systems, in hardware, then `SEC_SID` is 2b, in the model `SEC_SID_bit_1` represents bit[1].

`SIDV == 0` indicates a NoStreamID transaction and the SSD is the PAS of the transaction, `SEC_SID` is not used.

Negative and positive logic symbols for the same attribute is an error.

The model uses the term SSD (Security State Determination) to mean which security state the transaction, register, structure, event, etc. belongs to.

In the SMMUv3 Architecture, the side-band signal `SEC_SID` holds the information for the transactions, but uses a different encoding.

Before RME, `SEC_SID` was a one bit signal. With RME, in the hardware, it was expanded to 2b. To retain backwards compatibility in the model, `SEC_SID` remains as 1b in this parameter, but the second bit can be expressed with `SEC_SID_bit_1` (and its negative logic version `nSEC_SID_bit_1`)

Security state	SSD	SEC_SID_bit_1	SEC_SID
secure	0	0	1
non-secure	1	0	0
root (reserved)	2	1	1
realm	3	1	0

For those systems that support NoStreamID transactions, and `howto_identify` is not using the port, first the SMMU determines the value of `SIDV` or `nSIDV` to see if the transaction is a NoStreamID transaction (`SIDV == 0` or `nSIDV == 1`). If so then the rest of the `howto_identify` string is ignored as the information extracted relates only to StreamID transactions. Instead more information is extracted using the parameter `howto_identify_NoStreamID_extra_info`.

In AMBA systems, the equivalent signal to `SIDV` is called either `ARMMUVALID` OR `AWMMUVALID`. Collectively they are known as `AxMMUVALID`.

**howto\_identify\_NoStreamID\_extra\_info**

**Type**

string

**Default value**

""

The behavior of this parameter depends on `howto_identify`

- if it equals 'use-identify' then this must be "", otherwise there is an error.
- if it identifies a NoStreamID transaction (`SIDV=0`) then this parameter includes one or more of
  - `MPAM_SP`
  - `MPAM_PARTID`
  - `MPAM_PMG`

- MECID
- HWATTR\_KIND\_0
- in any other case, this parameter is ignored.

Fields set in this parameter must not overlap the `sidv/nsidv` fields in `howto_identify`

Example:

```
MPAM_PMG[7:0]=ExtendedID[62:55], MPAM_PARTID[15:0]=ExtendedID[54:39],
MPAM_SP[1:0]=ExtendedID[38:37], MECID[15:0]=UserFlags[31:16]
HWATTR_KIND_0[3:0]=ExtendedID[42:39]
```

The parameter is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

## **httu\_early\_st2\_permission\_fault\_if\_af\_update\_at\_stage1**

### **Type**

unsigned

### **Default value**

0

If a stage 1 descriptor needs an HTTU update, but the descriptor is unwriteable at stage 2 and also a stage 1 permission fault occurs, then the architecture permits either the stage 1 or stage 2 permission fault to be recorded.

0 – stage 1 permission check check stage 1 descriptor writeable at stage 2 if AF- or DBM-update required

1 – check stage 1 descriptor writeable at stage 2 if AF-update required stage 1 permission check check stage 1 descriptor writeable at stage 2 if DBM-update required

2 – do behaviour 1 or 2 randomly with a 50% chance.

## **httu\_memory\_types\_supported**

### **Type**

string

### **Default value**

“rawaWB, raWB, waWB, naWB”

This is a comma-separated list of memory types that are **IMPLEMENTATION DEFINED** as supporting HTTU. However, the system must have Far Atomic support for the specified memory address and memory type.

Device types:

- nGnRnE, nGnRE, nGRE, GRE

Normal memory types are composed of an ‘inner’ and an ‘outer’ cacheability. The model only supports types where the inner and outer are identical.

- Normal non-cacheable types
  - nc\_nb, nc
- Cacheable types are of the form (na?|(ra)?(wa)?)(WT|WB)(tr)?
  - na/ra/wa – no/read/write allocate
  - WT/WB – write through/write back
  - tr – transient
  - exceptions:
    - ‘na’ and ‘tr’ are incompatible
    - without ‘na’ then you must specify at least one of ra/wa. Example: “WT” is illegal, “raWT” is legal.

rawaWB is always supported and it is optional.

Examples:

- “rawaWB, raWB, waWB, naWB” – only the WB type is supported
- “nc” – rawaWB and the normal non-cacheable type are supported

### **imp\_def\_L1CD\_L2Ptr\_out\_of\_range**

#### **Type**

unsigned

#### **Default value**

0

If an L1CD.L2Ptr is out of range of IAS/OAS as appropriate then what happens is controlled by this parameter: 0 – if is an IPA, then Stage 2 Translation Fault, if is a PA then truncate to OAS. 1 – generate C\_BAD\_SUBSTREAMID if an IPA and > IAS, or if a PA and > OAS. 2 – generate C\_BAD\_SUBSTREAMID if an IPA and > IAS, or F\_CD\_FETCH if a PA and > OAS. 3 – truncate the IPA or PA to IAS/OAS as appropriate

NOTE that if the model is configured as SMMUv3.1 then this parameter is IGNORED, and behaves as though this parameter was set to 1. The SMMUv3.1 architecture actually allows more behaviours but the model will only implement this one.

NOTE that the SMMUv3.0 allows more behaviours than can be expressed by this parameter.

**imp\_def\_PID0****Type**

unsigned

**Default value**

0x83

If imp\_def\_has\_PID\_CID is true then this is the PID0 value.

**imp\_def\_PID1****Type**

unsigned

**Default value**

0xb4

If imp\_def\_has\_PID\_CID is true then this is the PID1 value.

**imp\_def\_PID2****Type**

unsigned

**Default value**

0xb

If imp\_def\_has\_PID\_CID is true then this is the PID2 value.

**imp\_def\_PID3****Type**

unsigned

**Default value**

0x0

If imp\_def\_has\_PID\_CID is true then this is the PID3 value.

**imp\_def\_PID4****Type**

unsigned

**Default value**

0x4

If imp\_def\_has\_PID\_CID is true then this is the PID4 value.

**imp\_def\_S1ContextPtr\_out\_of\_range****Type**

unsigned

**Default value**

0

If an STE is fetched that uses a stage 1 then if: - Stage 1 only and S1ContextPtr > OAS, or - Stage 1+2 and S1ContextPtr > IAS then what happens is IMP DEF and this parameter controls the behaviour:- 0 – stage 1 only – C\_BAD\_STE – stage 1+2 – C\_BAD\_STE 1 – stage 1 only – C\_BAD\_STE – stage 1+2 – truncate to IAS 2 – stage 1 only – truncate to OAS – stage 1+2 – C\_BAD\_STE 3 – stage 1 only – truncate to OAS – stage 1+2 – truncate to IAS 4 – stage 1 only – truncate to OAS – stage 1+2 – Stage 2 translation fault 5 – stage 1 only – C\_BAD\_STE – stage 1+2 – Stage 2 translation fault The architecture also allows for F\_CD\_FETCH, but the model does not support this.

NOTE that in SMMUv3.1 then the only allowed values of this parameter are 0 or 5.

**imp\_def\_alloccfg****Type**

unsigned

**Default value**

0

ALLOCCFG overrides the read/write/transient hints on cacheable types. However these are hints and an implementation may choose to treat them differently.

**0**

apply the alloc hints as architecturally specified

**1**

ignore all ALLOCCFG fields (treated as zero)

**2**

apply ALLOCCFG only when MTCFG == 1

**imp\_def\_apply\_dre\_dcp\_to\_full\_ats****Type**

bool

**Default value**

false

STE.DRE and STE.DCP control the downgrade of certain transactions to **NOP**.

If this parameter is true, then for ATS-TranslatedTransactions using STE.EATS == all\_stages or use\_dpt then the STE.DRE/STE.DCP controls are applied.

For ATS-TranslatedTransactions using STE.EATS == eats\_use\_dpt then the controls are always applied.

For SMMUv3.4 and later, or if SMMU\_IDR3.DPT == 1 then this parameter is ignored and treated as 'true'.

### **imp\_def\_ats\_attribute\_stashing**

#### **Type**

unsigned

#### **Default value**

0

The SMMU architecture allows an ATS request to return the attributes with which to make the Translated Access. PCIe does not define any transaction attributes in the ARM sense and so the mechanism for doing this is IMP DEF. Usually this would be done by packing them into the high order address bits of the return response.

In the model, then the representation of the ATS reply returns the attributes directly and it is up to the ATC whether it wants to use them or not.

The parameter configures what to place in those architectural attributes in the ATS Reply.

**0**

the architectural attributes

**1**

Inner Write Back, Outer Write Back, Inner Shared, read and write allocate, User-Data

**2**

Inner Write Back, Outer Write Back, Outer Shared, read and write allocate, User-Data

The SMMU cannot force an ATC to use these attributes, it is simply the attributes that are returned in the non-PCIe part of the ATS reply.

### **imp\_def\_ats\_response\_stu**

#### **Type**

unsigned

#### **Default value**

0

A successful ATS Response with RW != 0 can return any-sized region from the STU to the actual region size. The chosen size is:

- 0 – use the full size of the region
- 1 – use the STU
- 2 – use half the size of the region

**imp\_def\_cohacc\_effect****Type**

unsigned

**Default value**

0

SMMU\_IDR0.COACC is a system property. However, the exact nature of the transactions that the SMMU emits is an IMP DEF property when COACC == 0:

**0**

COACC == 0 forces the output attributes of SMMU-generated accesses to non-shared.

**1**

The only effect of COACC is what is reported in SMMU\_IDR0.COACC and has no effect on the output attributes of SMMU-generated accesses.

**imp\_def\_contiguous\_bit\_handling****Type**

unsigned

**Default value**

0

If the Contiguous bit is set in a translation table descriptor then modify how it is cached:

- 0 – use the full size of the contiguous region
- 1 – ignore the contig bit for determining the region size
- 2 – use half the size of the contiguous region

See imp\_def\_gpt\_contiguous\_bit\_handling for GPT Contig bit handling.

**imp\_def\_effective\_ATTR\_TYPES\_OVR\_is\_false\_per\_port****Type**

string

**Default value**

"0"

SMMU\_IDR1.ATTR\_TYPES\_OVR == 1 means that the STE and SMMU\_(S\_)GBPA MTCFG/SHCFG/ALLOCCFG have an effect.

However, an implementation is allowed to ignore this being one for specific ports and *not* apply the overrides MTCFG/SHCFG/ALLOCCFG despite SMMU\_IDR1.ATTR\_TYPES\_OVR == 1.

This parameter is a comma-separated lists of port ranges (indexed from 0) for those ports where SMMU\_IDR1.ATTR\_TYPES\_OVR behaves as 0. For example:

```
0, 10-20, 40
```

### **imp\_def\_gpt\_contiguous\_bit\_handling**

#### **Type**

unsigned

#### **Default value**

0

If we find a GPT Contiguous descriptor then modify how it is cached:

- 0 – use the full size of the contiguous region
- 1 – ignore the contig bit for determining the region size and use PGS
- 2 – use half the size of the contiguous region

See `imp_def_contiguous_bit_handling` for VMSA Contig bit handling.

### **imp\_def\_has\_PID\_CID**

#### **Type**

bool

#### **Default value**

true

If this is true then the SMMU model will have the standard PID/CID ID registers. Only the PID0..PID4 registers can be customized and the parameters `imp_def_PID0..imp_def_PID4` are used.

### **imp\_def\_no\_InD\_PnU\_on\_downstream\_system**

#### **Type**

bool

#### **Default value**

false

SMMUv3.4 deprecated the SMMU emitting the Instruction/Data (InD) and the Privileged/User (PnU) markings onto the downstream interconnect as:

- many interconnects have no way to represent them,
- the downstream system should not care about the value of these fields.

If this parameter is set to true then all transactions are marked as Privileged-Data on the downstream interconnect.

From SMMUv3.4, this parameter is ignored and has the effective value 'true'.

**imp\_def\_ns\_bit\_for\_s\_gatos\_on\_s1\_bypass\_non\_sel2****Type**

uint32\_t

**Default value**

0

This parameter only has an effect if SEL2 == 0.

When SEL2 == 0, Secure virtualisation is not supported and only stage 1 is supported for Secure Streams.

In this case, the Secure ATOS interface does not provide a mechanism to specify the input NS bit to the stage 1 translation. The input bit is IMP DEF and only has an effect if the transaction has no SubstreamID and bypasses by S1DSS.

This parameter specifies the IMP DEF input bit: 0 – secure 1 – non-secure 2 – random

See also `imp_def_ns_bit_for_s_vatos_on_s1_bypass` which configures something similar for the Secure VATOS (not GATOS) interface.

**imp\_def\_ns\_bit\_for\_s\_vatos\_on\_s1\_bypass****Type**

uint32\_t

**Default value**

0

When a Secure VATOS operations for a translation that bypasses stage 1 by S1DSS then the output NS bit is the same as the input NS bit of the translation.

The architecture does not provide an input NS bit in the SMMU\_S\_VATOS\_ADDR register and it is treated as an IMP DEF value.

This parameter specifies that value: 0 – secure 1 – non-secure 2 – random

See also `imp_def_ns_bit_for_s_gatos_on_s1_bypass_non_sel2` which configures something similar for the Secure GATOS (not VATOS) interface.

**imp\_def\_ras\_access\_control\_policy****Type**

string

**Default value**

"use-imp\_def\_ras\_allow\_non\_secure\_accesses\_if\_supports\_secure"

The access control of the RAS nodes:

- "" / "use-imp\_def\_ras\_allow\_non\_secure\_accesses\_if\_supports\_secure"

- The parameter `imp_def_ras_allow_non_secure_accesses_if_supports_secure` is used to determine access
- “non-secure”
  - Allow access to all PAses.
- “secure”
  - Only allow access to secure and root. If secure is not implemented then will allow access to non-secure.
- “root-only”
  - The register file is only accessible to root-pas transactions. If root is not implemented then it will act as though this parameter was: “use-`imp_def_ras_allow_non_secure_accesses_if_supports_secure`”

### **`imp_def_ras_allow_non_secure_accesses_if_supports_secure`**

#### **Type**

bool

#### **Default value**

false

If two security worlds are supported, i.e.: `SMMU_S_IDR1.SECURE_IMPL == 1` then if this parameter is true, then non-secure accesses are allowed to access any RAS registers (see parameter ‘ras’). Otherwise, non-secure accesses are **RAZ/WI**.

If only a single security state (non-secure) is supported, then this parameter is ignored and non-secure accesses are always allowed.

See also `imp_def_ras_access_control_policy` that can override this parameter.

### **`imp_def_reset_unknown_fields_to_zero`**

#### **Type**

bool

#### **Default value**

false

Many fields and registers in the SMMUv3 architecture reset to an **UNKNOWN** value. However, many implementations will choose to reset to 0. By setting this parameter to true then those fields will be initialised to zero.

### **`imp_def_rme_gpf_syndrome_for_PMCg_MSIs`**

#### **Type**

string

#### **Default value**

“other\_gpf”

An MSI access from a PMCG that experiences a GPF is permitted to be reported as either of:

- REASON = GERROR and FAULTCODE = OTHER\_GPF
- REASON = TRANSACTION

The values of this string are one of: \* other\_gpf \* transaction

See also the parameter `imp_def_rme_gpf_syndrome_for_RAS_MSIs`

#### **`imp_def_rme_gpf_syndrome_for_RAS_MSIs`**

##### **Type**

string

##### **Default value**

"other\_gpf"

An MSI access from a RAS record interrupt that experiences a GPF is permitted to be reported as either of:

- REASON = GERROR and FAULTCODE = OTHER\_GPF
- REASON = TRANSACTION

The values of this string are one of: \* other\_gpf \* transaction

See also the parameter `imp_def_rme_gpf_syndrome_for_PMCG_MSIs`

#### **`imp_def_rme_mpam_info_from_NoStreamID_on_gpt_walks`**

##### **Type**

string

##### **Default value**

""

The MPAM related fields in `howto_identify_NoStreamID_extra_info` can be used on the GPT walks for NoStreamID transactions.

If empty then `imp_def_rme_mpam_info_from_NoStreamID_on_gpt_walks_ignored` is obeyed.

If non-empty then is a comma-separated list.

One of:

- `mpam_sp:pas` – the PAS is used as the MPAM\_SP
- `mpam_sp:incoming` or "" – the incoming MPAM\_SP is used, or 0 if it doesn't have one.

One of:

- `partid/pmg:0` – the PARTID/PMG is 0

- `partid/pmg:incoming` – the PARTID/PMG is the untruncated incoming, or 0 if it doesn't have one.
- `partid/pmg:truncate_or_0` or `""` – same as `partid/pmg:incoming` but truncated to the appropriate `SMMU_MPAMIDR` / `SMMU_S_MPAMIDR` or `SMMU_R_MPAMIDR`. If the register does not exist, use 0.
- `partid/pmg:truncate` – same as `partid/pmg:truncate_or_0` but if the register does not exist, use the maximum bit width of implied by all of registers that do exist.

See also: `imp_def_rme_mpam_info_on_NoStreamID`.

### **`imp_def_rme_mpam_info_from_NoStreamID_on_gpt_walks_ignored`**

#### **Type**

bool

#### **Default value**

false

The MPAM related fields set in `howto_identify_NoStreamID_extra_info` are ignored when this parameter is set. This parameter only makes sense when `howto_identify` equals `use-identify` so in any other case it must be false.

When this parameter is set the MPAM information for GPT walks is:

- `MPAM_SP` = PAS
- `MPAM_PARTID` = 0
- `MPAM_PMG` = 0

This parameter is ignored if `imp_def_rme_mpam_info_from_NoStreamID_on_gpt_walks` is not empty.

### **`imp_def_rme_mpam_info_on_NoStreamID`**

#### **Type**

string

#### **Default value**

""

The MPAM related fields in `howto_identify_NoStreamID_extra_info` can be used for the MPAM information on downstream NoStreamID transactions.

If non-empty then is a comma-separated list of options.

One of:

- `mpam_sp:pas` – the PAS is used as the `MPAM_SP`
- `mpam_sp:incoming` or `""` – the incoming `MPAM_SP` is used, or 0 if it doesn't have one.

One of:

- `partid/pmg:0` – the PARTID/PMG is 0
- `partid/pmg:incoming` – the PARTID/PMG is the untruncated incoming, or 0 if it doesn't have one.
- `partid/pmg:truncate_or_0` Or "" – same as `partid/pmg:incoming` but truncated to the appropriate `SMMU_MPAMIDR` / `SMMU_S_MPAMIDR` OR `SMMU_R_MPAMIDR`. If the register does not exist, use 0.
- `partid/pmg:truncate` – same as `partid/pmg:truncate_or_0` but if the register does not exist, use the maximum bit width of implied by all of registers that do exist.

See also: `imp_def_rme_mpam_info_from_NoStreamID_on_gpt_walks`.

### **`imp_def_split_ATS_attributes_is_stage1`**

#### **Type**

bool

#### **Default value**

false

If using split stage ATS, then it is IMP DEF whether the stage 1 attributes are returned to the ATS request or stage 2.

This only has a meaning if the SMMU can stash attributes in the ATS response.

### **`imp_def_truncate_out_of_range_streamids_on_invalidate_commands`**

#### **Type**

bool

#### **Default value**

false

If this parameter is true then the StreamID fields of the following commands will be truncated to (S\_)SIDSIZE:

- `CMD_ATC_INV`
- `CMD_CFGI_STE`
- `CMD_CFGI_STE_RANGE`
- `CMD_CFGI_CD`
- `CMD_CFGI_CD_ALL`

Otherwise, these commands will **NOP**.

### **`imp_def_v3_atos_fault`**

#### **Type**

unsigned

**Default value**

0

For an IPA to PA ATOS translation that encounters a Stage 1 Address Size Fault then the PAR.REASON field reports: \* in SMMUv3.1, 'Stage 1' (0) \* in SMMUv3.0, 'Stage 1' (0) or 'Input' (3) depending on the implementation.

This parameter is ignored for SMMUv3.1.

For SMMUv3.0 then the values are: 0 – report as 'Input' (3) 1 – report as 'Stage 1' (0)

**ish\_is\_osh****Type**

bool

**Default value**

false

When set, any transaction that would use the architectural inner shareable domain is converted to use the outer shareable domain.

NOTE that this parameter should match the equivalent ish\_is\_osh from the PE. If an incompatible value of the ish\_is\_osh parameter is configured for the PE and the SMMU, data coherency may be compromised.

**mec\_attribute\_transform****Type**

string

**Default value**

""

**Note**

The parameter is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

If MEC is supported, this is applied to *all* downstream transactions to transport the MEC information.

- "" or "none" – no transform
- How to alter the output attributes. Example:

```
"UserFlags[31:16]=MECID[15:0]"
```

RHS/LHS Symbols:

- ExtendedID/ManagerID64/MasterID/UserFlags.

RHS Symbols:

- MECID

Any bits with no transform are unchanged.

Note

Attribute transforms applied before this:

- for client transactions `output_attribute_transform / output_attribute_transform_for_NoStreamID`.
- for table walks `tw_qs_attribute_transform`.
- for MSIs `msi_attribute_transform`.
- if MPAM is enabled `mpam_attribute_transform`.

## **`mpam_attribute_transform`**

### **Type**

string

### **Default value**

"ExtendedID[62:55]=MPAM\_PMG, ExtendedID[54:39]=MPAM\_PARTID, ExtendedID[38]=MPAM\_NS"

Note

The parameter is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

If MPAM is supported, this is applied to *all* downstream transactions to transport the MPAM information.

- "" or "none" – no transform
- How to alter the output attributes. Example:

```
"ExtendedID[62:55]=MPAM_PMG, ExtendedID[54:39]=MPAM_PARTID,
ExtendedID[38]=MPAM_SP[0]"
```

RHS/LHS Symbols:

- ExtendedID/ManagerID64/MasterID/UserFlags.

RHS Symbols:

- MPAM\_PARTID
- MPAM\_PMG
- MPAM\_NS
- MPAM\_SP

- numeric literals

Any bits with no transform are unchanged.

- attribute transforms applied before this:
  - for client transactions `output_attribute_transform / output_attribute_transform_for_NoStreamID`.
  - for table walks `tw_qs_attribute_transform`.
  - for MSIs `msi_attribute_transform`.
- `mec_attribute_transform` is applied after this.
- for translated transactions from client devices then `MPAM_NS = ! SEC_SID`.

### **`mpam_sp_options`**

#### **Type**

unsigned

#### **Default value**

2

The width of the MPAM\_SP output side-band information.

The SMMU architecture says that the SMMU is a four-space MPAM component when RME-DA is implemented. However, it can potentially be converted to a two-space MPAM at the edge of the SMMU.

This parameter controls the width of the MPAM\_SP output side-band information:

- 1 – 1b, conventionally the side-band is then called `MPAM_NS`. Any 2b MPAM\_SP value generated will have bit[1] forced to zero.
- 2 – 2b, the side-band is 2b

The same effect can be achieved by using the parameter `mpam_attribute_transform` to only export a single bit of the MPAM\_SP. However, this option allows a model system to be built with a single static version of `mpam_attribute_transform` and then dynamically switch its behaviour more simply.

### **`msi_attribute_transform`**

#### **Type**

string

#### **Default value**

"ExtendedID[31:0]=smmu\_msi\_device\_id, ManagerID64[31:0]=0xFFFFffff"

Transform downstream attributes of MSI transactions.

The parameter is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

- "" or "none" – no transform
- How to alter output attributes of SMMU-generated MSIs. Example:

```
"UserFlags[15:0]=smmu_msi_device_id[31:16],
ManagerID64[15:0]=smmu_msi_device_id[15:0],
ExtendedID=0"
```

LHS Symbols:

**ExtendedID / ManagerID64 / MasterID / UserFlags**

Outgoing PVBUS transaction attributes

RHS Symbols:

**smmu\_msi\_device\_id**

The value stored in the parameter with the same name

**interrupt\_kind**

The selected bit corresponds to the interrupts listed below

**0/1**

EVENTQ s/ns

**2**

PRIQ

**3/4**

CMD\_SYNC s/ns

**5/6**

GERROR s/ns

**7/8**

PMCG s/ns

**9/10/11**

RAS FHI/ERI/CRI

**12/13**

gpf\_far/gpt\_cfg\_far

**14/15/16/17**

Realm EVENTQ/PRIQ/CMDQ/GERROR

**HWATTR\_KIND\_0**

PBHA information

**Numeric Literals**

Any number. Ex: 0x1234

ExtendedID/ManagerID64/MasterID/UserFlags start with values {0, 0xFFFFFFFF, 0xFFFFFFFF, 0} respectively.

Any bits with no transform are unchanged.

This transform can be used to determine the DeviceID passed to the GIC to distinguish MSIs generated by the SMMU from those generated by client devices.

See also `output_attribute_transform` and `enable_device_id_checks`.

After 11.25 the `interrupt_kind` field was extended to 5 bits. This is strictly a non-backwards compatible change. However, the original 3 bits were insufficient to express all the interrupt kinds that exist.

---

**msi\_ra\_wa\_tr**

**Type**

uint32\_t

**Default value**

7

A bitmap of the Read Allocation, Write Allocate and Transient hints for MSIs to cacheable memory: bit[0] Transient bit[1] Write Allocate bit[2] Read Allocate If not Write Allocate then it will be forced to Read Allocate as a limitation of AMBA.

**non\_arch\_incoming\_stronger\_than\_iWB\_oWB\_forces\_output\_iNC\_oNC\_or\_stronger**

**Type**

string

**Default value**

{}

If not empty, then this enables a specific non-architectural behaviour on the comma-separated list of port indexes, or ranges. For example:

0, 10-20, 40

In the normal translation process, then the input attributes are usually replaced by the attributes from the page tables or SMMU\_(S\_)GBPA.

The behaviour is:

if incoming attributes are iWB-oWB use the architectural attributes else use the stronger of iNC-oNC-osh and the architectural attributes.

This is useful if the ports represent transactions from the PCIe subsystem and the PCIe devices output: \* iWB-oWB if not No\_Snoop -> output is architectural attributes \* iNC-oNC-osh if No\_Snoop -> output is iNC-oNC-osh or stronger

#### **normalize\_input\_normal\_non\_iWB\_oWB\_to\_iNC\_oNC\_osh**

##### **Type**

bool

##### **Default value**

false

When set, use Inner Non Cacheable, Outer Non Cacheable, Outer Shareable for any upstream transaction that would use any of the following attributes: \* Normal Non-cacheable Bufferable \* Normal Non-cacheable Non-bufferable \* Write-through

NOTE that this parameter should match the equivalent configuration from the PE. If an incompatible value of this parameter is configured for the PE and the SMMU, data coherency may be compromised.

#### **number\_of\_ports**

##### **Type**

unsigned

##### **Default value**

1

The number of port pairs that the SMMU has.

#### **nw\_dcp\_extra\_drop\_conditions**

##### **Type**

string

##### **Default value**

""

NW-DCP is a hint and can be dropped for any reason.

This is a comma-separated list of:

- "INST" – NW-DCP is architecturally 'data' but by enabling this option then STE.INSTCFG is applied and it can fault due to SIF and, for rl-ssd, preventing instruction access to ns-PAS.
- "SIF-cached" – NW-DCP needs any of rxw permissions to go downstream. If SIF has been cached into the TLB entry then it will have removed execute permission and so for an execute-only page the NW-DCP would be denied.

If you set this option then, for NW-DCP, the SMMU will behave as if SIF was cached.

The parameter `ordering_of_PAN_and_xn_by_ns_pas` can force TLB-caching of SIF and takes precedence over this option.

- “combined-st2” – when considering the stage 2 permissions then they are first combined with any stage 1 permissions before applying the permission check.
- “combined-st1-st2” – always fetches all stages and combine before applying the permissions check.

### **`ordering_of_PAN_and_xn_by_ns_pas`**

#### **Type**

unsigned

#### **Default value**

0

Execution from ns-pas can be forbidden:

- for secure, this is controlled by `SMMU_S_CR0.SIF`.
- for realm, this is mandatory. In the model, we call this RIF and is always cached in the TLB.

When PAN is interpreted as EPAN then whether SIF/RIF is applied before or after PAN can get different results for the direct permission model.

In the model, the following options are available:

0 – PAN applied first, SIF not cached in the TLB, RIF cached in the TLB. 1 – PAN applied first, SIF/RIF cached in the TLB. 2 – SIF/RIF cached in the TLB, then PAN applied

NOTE that if you cache SIF in the TLB then all SIF faults are no longer traced separately as SIF faults but as permission faults – which architecturally they are reported as. As RIF is always cached in the TLB, then they are not distinguished in the trace separately to permission faults.

### **`out_of_range_CMD_ATC_INV_Size`**

#### **Type**

unsigned

#### **Default value**

0

If `CMD_ATC_INV.Size > 52` then the model is allowed to:- 0 – raise `CERROR_ILL` 1 – treat as **NOP**

The architecture also allows for an **UNKNOWN** invalidate size to be used as well but the model does not support this.

**out\_of\_range\_l0gptsz\_s****Type**

int32\_t

**Default value**

-1

If the port l0gptsz\_s is driven to an invalid value and that value is used then the following behaviors are possible:

- -2 – report the incoming value in SMMU\_ROOT\_GPT\_BASE\_CFG.LOGPTSZ and all transactions will report a GPT Config Error if GPC checking is enabled.
- -1 – produce an error and make the model unusable (default)
- invalid LOGPTSZ encoding – report this value in SMMU\_ROOT\_GPT\_BASE\_CFG.LOGPTSZ and all transactions will report a GPT Config Error if GPC checking is enabled.

All other values are reserved and act as -1.

**output\_attribute\_transform****Type**

string

**Default value**

"ExtendedID[31:0]=DeviceID"

Transform downstream attributes of StreamID transactions.

**Note**

The parameter is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

- "" or "none": no transform
- How to alter output attributes. Example:

```
"ExtendedID[15:0]=DeviceID[15:0], UserFlags[31]=nSSV, UserFlags[19:0]=SubstreamID,
ManagerID64[10]=ManagerID64[11], ManagerID64[11]=ManagerID64[10]"
```

RHS/LHS Symbols:

**ExtendedID / ManagerID64 / MasterID / UserFlags**

Incoming/Outgoing PVBUS transaction attributes

RHS Symbols:

**DeviceID**

StreamID + translated\_device\_id\_base

**StreamID / SubstreamID / SEC\_SID / SEC\_SID\_bit\_1 / SIDV / SSV**

Architectural information. See parameter `howto_identify` for more information.

**nSEC\_SID / nSEC\_SID\_bit\_1 / nSSV / nSIDV**

Negative logic of above parameters. Different attributes are independent and can use negative or positive logic.

**St1PBHA / St2PBHA**

Page Based Hardware Attributes from leaf descriptors (zero if not used).

**STE\_IMPDEF1**

STE[127:116]

**HWATTR\_KIND\_0**

PBHA information in the format of MMU-700 and later

**Numeric Literals**

Any number. Ex: 0x1234

Any bits with no transform are unchanged.

Pre-RME, the SEC\_SID *input* to the SMMUv3 was a single bit. RME added a second bit. In order for the model to be backwards-compatible, the SEC\_SID *symbol* in this parameter remains as a single bit and a new symbol SEC\_SID\_bit\_1 has to be used to refer to the second bit of the SEC\_SID *input*.

- `mpam_attribute_transform` and `mec_attribute_transform` are applied in order after this.
- See also `output_attribute_transform_for_NoStreamID` for NoStreamID transactions.

**output\_attribute\_transform\_for\_NoStreamID**

**Type**

string

**Default value**

“ExtendedID[31:0]=0, ExtendedID[32]=1”

The parameter is parsed according to the rules in the section ‘Parameters for parsing transaction attributes’.

Transform downstream attributes of NoStreamID transactions.

- “” or “none”: no transform

- How to alter output attributes. Example:

```
"ExtendedID[15:0]=0, UserFlags[31]=1, UserFlags[19:0]=0,
ManagerID64[10]=ManagerID64[11],
ManagerID64[11]=ManagerID64[10] ManagerID64[9:6]=HWATTR_KIND_0"
```

RHS/LHS Symbols: \* ExtendedID/ManagerID64/MasterID/UserFlags: incoming/outgoing attributes.

RHS Symbols: \* SIDV = 0, nSIDV = 1 (fixed values to indicate NoStreamID) \* PAS \*  
HWATTR\_KIND\_0

Any bits with no transform are unchanged.

Note

- mpam\_attribute\_transform and mec\_attribute\_transform are applied in order after this.
- see also output\_attribute\_transform for StreamID transactions.

## output\_id\_routed\_transform

### Type

string

### Default value

"Address[43:12]=StreamID, PAS=SSD"

Note

The parameter is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

The SMMU generates the following ID-routed transaction on the pvbus\_id\_routed\_m bus:

- ATC Invalidate
- PRI Response

This parameter controls how the SMMU should express:

- the StreamID
- the Trusted (T) bit

The value is a comma-separated list of assignments:

```
Address[27:12]=StreamID[15:0], ExtendedID[60]=T, ExtendedID[15:0]=StreamID[31:16]
```

Address bits[11:0] cannot be used.

The LHS can be one of:

- PAS
- MasterID / ManagerID64 / ExtendedID / UserFlags
- Address

The RHS can be one of:

- a numeric constant
- SSD
- T or negative version nT
- StreamID

For realm (or 'Trusted') transactions, then  $ssd=0b11$ ,  $T=1$ ,  $nT=0$ . For non-secure (or 'Non-Trusted') transactions, then  $ssd=0b01$ ,  $T=0$ ,  $nT=1$ .

### **percent\_commit**

#### **Type**

uint32\_t

#### **Default value**

20

Percentage of times that a read of a register with Update will commit the update. 0 means commit immediately.

### **percent\_commit\_Update\_clear**

#### **Type**

uint32\_t

#### **Default value**

20

Percentage of times that a read of a register with a pending Update clear will lower the Update flag.

### **pmu**

#### **Type**

string

#### **Default value**

""

What to instantiate as a PMU.

NOTE that all events and counters are intended for demonstration purposes only and should not be treated as in any way reflecting accurate values for a real implementation. The model's internal representation of actions differ significantly from real hardware and the particular value obtained from the counters should not be used for benchmarking.

Values of this parameter are: \* "" – no PMU \* "distributed-0" \* "distributed-1"

distributed-0: \* a PMCG per TBU (number\_of\_ports, up to 63 ports) \* a single PMCG for a TCU \*  
Connect a debugger to see the configuration.

distributed-1: \* same as distributed-0, except for supporting MSIs and MPAM on the MSIs if  
MPAM is supported by rest of the SMMU.

## **ports\_that\_ignore\_PnU\_InD\_on\_transactions\_with\_no\_SubstreamID**

### **Type**

string

### **Default value**

""

Some bus systems (notably PCIe) do not support marking a transaction as Privileged/User or Instruction/Data unless the transaction has a SubstreamID.

This accepts a comma separated list of numbers and ranges, for example:

0, 10-12, 15

If the number P is named in this list then the upstream pvbus\_s[P] will have all transactions with no Substream considered to be User and Data.

## **prefetch\_only\_requests**

### **Type**

unsigned

### **Default value**

0

The simulator supports 'prefetch-only' DMI requests, which can occur at any time and for any reason and are intended to be invisible to the end execution of the model and to the user.

**0**

deny all prefetch-only requests

**1**

- use debug requests for any page table walks
  - form and use debug TLB/cache entries
  - any faults will not record, but deny the prefetch request

**2**

- treat prefetch-only requests like normal transactions
  - use normal page table walk transactions
  - use and form normal TLB/cache entries

- faults will alter the programmer-visible state of the SMMU

0 is the safest.

1 treats the access like a debug request and requires that debug page table walks are treated correctly downstream. Any descriptors that need HTTU to allow the transaction to proceed will fail the request.

2 is dangerous, it uses real transactions and reports faults that are unphysical. Real transactions can be `wait()`ed and this disobeys the SystemC spec for `get_direct_mem_ptr()`.

## **ras**

### **Type**

string

### **Default value**

""

What to instantiate for RAS handling.

Values of this parameter are: \* "" – no RAS records \* "MMU\_600" \* "MMU\_700" \* "MMU\_S3"

MMU\_600: \* only corrected errors reported.

See also `imp_def_ras_allow_non_secure_accesses_if_supports_secure`.

## **register\_accesses\_to\_root\_or\_realm\_pas\_when\_no\_rme**

### **Type**

uint32\_t

### **Default value**

0

When RME is not implemented or disabled by `legacy_tz_en`:

**0**

root and realm register PAS accesses are not **RAZ/WI**

**1**

root and realm register PAS accesses are treated as **RAZ/WI**

## **reset\_value\_of\_SMMU\_GBPA**

### **Type**

uint32\_t

### **Default value**

0

Reset value of SMMU\_GBPA

**reset\_value\_of\_SMMU\_S\_GBPA****Type**

uint32\_t

**Default value**

0

Reset value of SMMU\_S\_GBPA

**rme\_ats\_request\_pa\_strategy****Type**

uint32\_t

**Default value**

0

When RME\_IMPL == 0, the PA of an ATS Request's response is permitted but not required to undergo a GPT check:

0 – do not check the PA 1 – do the check against the PA 2 – check the PA 50% of the time

Translated transactions are required to always undergo a GPT check whatever happens.

This parameter is ignored if RME\_IMPL==1 and the PA is required to be checked.

**rme\_da\_force\_better\_configuration****Type**

string

**Default value**

""

RME-DA requires that the SMMU be integrated into a system for which SMMU\_IDR0.COHAAC == 1 and SMMU\_IDR0.IDR0.HTTU == both\_af\_and\_dirty (2).

The model has pins:

- conf\_system\_supports\_cohacc
- conf\_system\_supports\_httu

that can control these ID fields.

In addition, RME-DA requires that the fundamental SMMU has certain properties that are configured by its ID codes.

This parameter allows you to selectively ignore the pins and bad ID to produce a good configuration by forcing the required values.

Whether the SMMU has RME-DA or not is identified by SMMU\_ROOT\_IDR0.REALM\_IMPL.

This is a comma-separated list of fields to force when RME-DA is configured by SMMU\_ROOT\_IDR0.REALM\_IMPL:

- in SMMU\_IDR0:
  - “Hyp”
  - “S1P”
  - “S2P”
  - “TTF”
  - “NS1ATS”
  - “COHACC”
  - “HTTU”
  - “RME\_IMPL”
- “SSIDSIZE” in SMMU\_IDR1
- “BBML” in SMMU\_IDR3

You can also use “all” to set all.

### **rme\_10gpt\_entry\_covers\_log2size\_in\_bytes**

#### **Type**

uint32\_t

#### **Default value**

30

Each LOGPT entry covers:

```
2**rme_10gpt_entry_covers_log2size_in_bytes
```

bytes of address space.

The valid values for this parameter are: 30, 34, 36, 39

This parameter is reported in an encoded format as the read-only field:

```
SMMU_ROOT_GPT_BASE_CFG.LOGPTSZ
```

This parameter can be overridden by the port `10gptsz_s` when sampled on negedge of reset.

### **rme\_speculation\_control**

#### **Type**

string

#### **Default value**

“”

This is a comma-separated list of flags that control when and how the model will perform speculation for RME.

**root\_register\_page\_offset****Type**

uint64\_t

**Default value**

0

This is the offset from SMMU\_BASE of the Root register file page which is 64 KiB in size. It must not overlap any other part of the register map.

**secure\_state\_controls\_access\_to\_SMMU\_S\_INIT****Type**

bool

**Default value**

true

With RME access control of the SMMU\_S\_INIT belongs to Root. This parameters allows Root to delegate access control to the secure state, enabling secure software to reset the TLB, clearing out any TLB entries.

If RME is implemented and this parameter is 0, allow\_non\_secure\_access\_to\_SMMU\_S\_INIT has no effect.

If the SMMU does not implement RME then this parameter is ignored.

**seed****Type**

uint32\_t

**Default value**

0x12345678

Used to seed the pseudo-random number generator that the SMMU model uses.

**separate\_tw\_msi\_qs\_port****Type**

bool

**Default value**

true

True if there is a separate port which is used to walk configuration tables, translation tables, issue MSIs and access the queues. If this is false then pvbus\_m[0] will be used.

**size\_of\_cd\_cache****Type**

uint32\_t

**Default value**

0

The number of entries in the cache holding CD structures. If this is zero it is treated as a large number ('infinite') but it is bounded so that the host memory usage of the cache is also bounded.

**size\_of\_dpttlb****Type**

uint32\_t

**Default value**

0

The number of entries in the DPT TLB. If this is zero then it is treated as a large number ('infinite') but it is bounded so that the host memory usage of the cache is also bounded.

**size\_of\_gpttlb****Type**

uint32\_t

**Default value**

0

The number of entries in the GPT TLB. If this is zero then it is treated as a large number ('infinite') but it is bounded so that the host memory usage of the cache is also bounded.

**size\_of\_llcd\_cache****Type**

uint32\_t

**Default value**

0

The number of entries in the cache holding L1CD descriptors. If this is zero it is treated as a large number ('infinite') but it is bounded so that the host memory usage of the cache is also bounded.

**size\_of\_llste\_cache****Type**

uint32\_t

**Default value**

0

The number of entries in the cache holding L1STE descriptors. If this is zero it is treated as a large number ('infinite') but it is bounded so that the host memory usage of the cache is also bounded.

**size\_of\_register\_file****Type**

uint64\_t

**Default value**

0x100000

This is the power of two size that the register file occupies in the memory map. It is used to generate a mask for the addresses received on pvbus\_control\_s to decode the desired register offset.

The default for this parameter is 1 MiB.

**size\_of\_ste\_cache****Type**

uint32\_t

**Default value**

0

The number of entries in the cache holding STE structures. If this is zero it is treated as a large number ('infinite') but it is bounded so that the host memory usage of the cache is also bounded.

**size\_of\_tlb****Type**

uint32\_t

**Default value**

0

The number of entries in the TLB. If this is zero it is treated as a large number ('infinite') but it is bounded so that the host memory usage of the cache is also bounded.

**smmu\_msi\_device\_id****Type**

uint32\_t

**Default value**

0

When appropriately enabled, assume that MSIs that are generated by the SMMU are presented to the GIC with this DeviceID.

See parameters `msi_attribute_transform` and `enable_device_id_checks`.

**smmu33\_begin\_offset\_of\_qcp0****Type**

uint32\_t

**Default value**

-

This is the offset from SMMU\_BASE of the first QCP page. The architecture requires that if more than one world of QCPs are present then they are in the order non-secure and then secure QCPs and form one continuous address space in the register file.

**support\_for\_httu\_when\_starts\_disallowed****Type**

unsigned

**Default value**

0

SMMU\_IDR0.HTTU describes to the programmer whether the SMMU and system support HTTU. Typically an SMMU that is capable of HTTU will have a configuration pin that says whether the system supports HTTU or not.

The SMMU model determines SMMU\_IDR0.HTTU as follows: \* If the parameter SMMU\_IDR0 indicates any kind of support for HTTU, then the configuration pin turns support on and off between that value and no support for HTTU. \* If the parameter SMMU\_IDR0 indicates no HTTU support, allow the pin to turn on support to that specified by this parameter.

Values for this parameter are the same as for the SMMU\_IDR0.HTTU field: \* 0 – no support for HTTU \* 1 – AF flag only \* 2 – AF flag and DBM update

**tlb\_when\_do\_f\_tlb\_conflict\_on\_overlap****Type**

unsigned

**Default value**

0

If a TLB entry is created by a walk and it overlaps an existing entry, there are some architectural situations where the result is known. For all others, then an implementation is allowed to use an **UNPREDICTABLE** combination of the two entries, or it can generate F\_TLB\_CONFLICT:

**0**

never generate

**1**

sometimes generate

**2**

always generate

Conflicts between global and non-global entries are not detected by the model.

### **translated\_device\_id\_base**

#### **Type**

uint32\_t

#### **Default value**

0

When appropriately enabled, assume that client device accesses are translated to a DeviceID as seen by the GIC of:

```
StreamID + translated_device_id_base
```

See parameter `output_attribute_transform` and `enable_device_id_checks`.

### **treat\_debug\_read\_accesses\_as\_speculative\_accesses**

#### **Type**

bool

#### **Default value**

false

The SMMU architecture has the concept of speculative accesses. If you set this flag to true, then debug read accesses flowing from the upstream system through the SMMU will be interpreted as speculative.

The difference is that a speculative read will: \* participate in HTTU \* if it encounters a (non-HTTU) fault will always return abort

Debug writes are still considered as debug accesses. All speculative writes would be aborted and this is not a useful behaviour for the SMMU to emulate.

### **tw\_qs\_attribute\_transform**

#### **Type**

string

#### **Default value**

""

Transform downstream attributes of table walk and queue transactions.

The parameter is parsed according to the rules in the section 'Parameters for parsing transaction attributes'.

- "" or "none" – no transform
- How to alter the output attributes. Example:

```
"ExtendedID[35:32]=HWATTR_KIND_0"
```

RHS/LHS Symbols:

**ExtendedID / ManagerID64 / MasterID / UserFlags**

Incoming/Outgoing PVBUS transaction attributes

RHS Symbols:

**HWATTR\_KIND\_0**

PBHA information

**kind**

Transaction kind

- For a read:
  - 0/1**  
L1STE/STE
  - 2/3**  
L1CD/CD
  - 4/5**  
S1/S2 TTD (including CAS)
  - 6**  
CMDQ
  - 7**  
VMS
  - 11/12**  
LOGPT/L1GPT
  - 13/14**  
LODPT/L1DPT
- For a write:
  - 0**  
EVENTQ
  - 1**  
PRIQ

ExtendedID/ManagerID64/MasterID/UserFlags start with values {0, 0xFFFFFFFF, 0xFFFFFFFF, 0} respectively.

Any bits with no transform are unchanged.

**Note**

See also `output_attribute_transform` and `msi_attribute_transform`.

---

**`unpred_httu_percent_do_discretionary_AF`****Type**

unsigned

**Default value**

50

If a descriptor could have a discretionary update of the AF flag on then what is the percentage of the time that the AF update should occur.

**`unpred_httu_percent_do_discretionary_DBM`****Type**

unsigned

**Default value**

50

If a descriptor could have a discretionary DBM update to make the descriptor WriteableDirty then what is the percent of the time time that the DBM update should occur.

**`unpred_translated_access_out_of_range_of_oas`****Type**

unsigned

**Default value**

1

If a Translated Access is presented to the SMMU that is > OAS then it is CONSTRAINED UNPRED as to whether the transaction will either: 0 – be truncated to OAS and go downstream 1 – be aborted, no event written

**`wait_atos_ticks`****Type**

uint64\_t

**Default value**

0

This is the time to wait before doing an ATOS operation. If bit 32 is set (0x1\_0000\_0000) then the time waited for is a uniform randomly distributed time [0,max(2,(t & 0xFFFFffff))-1].

**wait\_cmdq\_ticks****Type**

uint64\_t

**Default value**

0

This is the time to wait before doing something on the command queue. If bit 32 is set (0x1\_0000\_0000) then the time waited for is a uniform randomly distributed time  $[0, \max(2, (t \& 0xFFFFffff)) - 1]$ .

**wait\_eventq\_ticks****Type**

uint64\_t

**Default value**

0

This is the time to wait before doing something on the event queue. If bit 32 is set (0x1\_0000\_0000) then the time waited for is a uniform randomly distributed time  $[0, \max(2, (t \& 0xFFFFffff)) - 1]$ .

**wait\_misc\_async\_actions\_ticks****Type**

uint64\_t

**Default value**

0

This is the time to wait before doing an async action that could be delayed is performed. If bit 32 is set (0x1\_0000\_0000) then the time waited for is a uniform randomly distributed time  $[0, \max(2, (t \& 0xFFFFffff)) - 1]$ .

**wait\_msi\_ticks****Type**

uint64\_t

**Default value**

0

This is the time to wait before sending an MSI. If bit 32 is set (0x1\_0000\_0000) then the time waited for is a uniform randomly distributed time  $[0, \max(2, (t \& 0xFFFFffff)) - 1]$ .

**wait\_pri\_req\_ticks****Type**

uint64\_t

**Default value**

0

This is the time to wait before processing a PRI Request. If bit 32 is set (0x1\_0000\_0000) then the time waited for is a uniform randomly distributed time  $[0, \max(2, (t \ \& \ 0xFFFFffff)) - 1]$ .

**wait\_pri\_resp\_ticks****Type**

uint64\_t

**Default value**

1

This is the time to wait before sending a PRI Response back to the PCIe subsystem. When a PRI Response is an auto-response then the ATC might immediately make a new ATS request, that immediately fails, immediately makes a PRI Request, or auto-responds, etc. To break this loop, then we introduce a minimum time on all PRI Responses to give other components in the system a chance to run. If bit 32 is set (0x1\_0000\_0000) then the time waited for is a uniform randomly distributed time  $[0, \max(2, (t \ \& \ 0xFFFFffff)) - 1]$ .

**when\_fetch\_vms****Type**

unsigned

**Default value**

0

Architecturally, there is flexibility in how a VMS is cached and thus: \* when it will be fetched \* the prioritization of F\_VMS\_FETCH.

Of the many architecturally-allowed options, the model offers two:

0 – fetched and cached immediately after the STE is fetched  
1 – fetched and cached immediately after the CD is fetched

In both cases, then the VMS is cached in the STE and CMD\_CFGI\_VMS\_PIDM is a **NOP**.

**width\_of\_agbpa\_impdef****Type**

uint32\_t

**Default value**

16

Width of the SMMU\_s\_AGBPA.IMPDEF field.

### 3.10.101 SMSC\_91C111

10/100 Non-PCI Ethernet Controller(SMSC 91C111). This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1249: IP revisions support**

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### About SMSC\_91C111

This component provides the register interface of the SMSC part and can be configured to act as an unconnected Ethernet port, or an Ethernet port connected to the host by an Ethernet bridge.

It uses a banked register model of primarily 16-bit registers. There are also indirectly accessible registers for the PHY unit.

If a MAC address is not specified in the `mac_address` parameter, the simulator takes the default MAC address, which is randomly generated. This provides some degree of MAC address uniqueness when running models on multiple hosts on a local network.

DHCP servers allocate the IP addresses, but because they sometimes do this based on the MAC address provided to them, using random MAC addresses might interact unfortunately with some DHCP servers.

- [Configuring the networking environment for Linux](#)

#### Iris and MTI instances for SMSC\_91C111

This model has the following Iris instances:

**Table 3-1250: SMSC\_91C111 Iris instances**

InstanceName	ComponentName
SMSC_91C111	SMSC_91C111
SMSC_91C111.SMSC_slave	PVBusSlave

This model has the following MTI trace components:

**Table 3-1251: SMSC\_91C111 MTI instances**

InstanceName	ComponentName
SMSC_91C111.SMSC_slave	PVBusSlave

## Ports for SMSC\_91C111

Table 3-1252: Ports

Name	Protocol	Type	Description
clock	<a href="#">ClockSignal</a>	Slave	Clock input, typically 25MHz, which sets the master transmit/receive rate.
eth	<a href="#">VirtualEthernet</a>	Master	Ethernet port.
intr	<a href="#">Signal</a>	Master	Interrupt signal.
pvbus	<a href="#">PVBUS</a>	Slave	Slave port for register access.
state	<a href="#">ValueState_64</a>	Master	State port to retrieve state of host bridge

## Parameters for SMSC\_91C111

**cache\_size****Type**

int

**Default value**

0x10000

**Description**

Size of cache memory in SMSC MMU.

**enabled****Type**

bool

**Default value**

0x0

**Description**

Host interface connection enabled.

**mac\_address****Type**

string

**Default value**

"00:02:f7:ef:00:00"

**Description**

Host/model MAC address.

**not\_lan911x****Type**

bool

**Default value**

0x0

**Description**

Gracefully fail SMSC LAN911x driver probe.

**promiscuous****Type**

bool

**Default value**

0x1

**Description**

Put host into promiscuous mode.

### 3.10.102 SP804\_Timer

ARM Dual-Timer Module(SP804). This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1253: IP revisions support**

Revision	Quality level
r1p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**Iris and MTI instances for SP804\_Timer**

This model has the following Iris instances:

**Table 3-1254: SP804\_Timer Iris instances**

InstanceName	ComponentName
SP804_Timer	SP804_Timer
SP804_Timer.busslave	PVBusSlave
SP804_Timer.clk_div0	ClockDivider
SP804_Timer.clk_div1	ClockDivider
SP804_Timer.counter0	CounterModule
SP804_Timer.counter1	CounterModule

This model has the following MTI trace components:

**Table 3-1255: SP804\_Timer MTI instances**

InstanceName	ComponentName
SP804_Timer.busslave	PVBusSlave
SP804_Timer.clk_div0	ClockDivider
SP804_Timer.clk_div1	ClockDivider

## Ports for SP804\_Timer

Table 3-1256: Ports

Name	Protocol	Type	Description
clock	<a href="#">ClockSignal</a>	Slave	Clock input, typically 1MHz, driving master count rate.
irq_out0	<a href="#">Signal</a>	Master	Interrupt signaling.
irq_out1	<a href="#">Signal</a>	Master	Interrupt signaling.
pvbuss	<a href="#">PVBuss</a>	Slave	Slave port for register access.
timer_en[2]	<a href="#">ClockRateControl</a>	Slave	Port for changing the rate of timer n.

## Parameters for SP804\_Timer

**clk\_div0.div****Type**

int

**Default value**

0x1

**Description**

Clock Rate Divider. This parameter is not exposed via CADI and can only be set in LISA.

**clk\_div0.mul****Type**

int

**Default value**

0x1

**Description**

Clock Rate Multiplier. This parameter is not exposed via CADI and can only be set in LISA.

**clk\_div1.div****Type**

int

**Default value**

0x1

**Description**

Clock Rate Divider. This parameter is not exposed via CADI and can only be set in LISA.

**clk\_div1.mul****Type**

int

**Default value**

0x1

**Description**

Clock Rate Multiplier. This parameter is not exposed via CADI and can only be set in LISA.

**3.10.103 SP805\_Watchdog**

ARM Watchdog Module(SP805). This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1257: IP revisions support**

Revision	Quality level
r1p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**Iris and MTI instances for SP805\_Watchdog**

This model has the following Iris instances:

**Table 3-1258: SP805\_Watchdog Iris instances**

InstanceName	ComponentName
SP805_Watchdog	SP805_Watchdog
SP805_Watchdog.busslave	PVBusSlave
SP805_Watchdog.clocktimer	ClockTimerThread
SP805_Watchdog.clocktimer.timer	ClockTimerThread64
SP805_Watchdog.clocktimer.timer.thread	SchedulerThread
SP805_Watchdog.clocktimer.timer.thread_event	SchedulerThreadEvent

This model has the following MTI trace components:

**Table 3-1259: SP805\_Watchdog MTI instances**

InstanceName	ComponentName
SP805_Watchdog.busslave	PVBusSlave

**Ports for SP805\_Watchdog****Table 3-1260: Ports**

Name	Protocol	Type	Description
clk_in	<a href="#">ClockSignal</a>	Slave	Clock input, typically 1MHz, driving master count rate.
irq_out	<a href="#">Signal</a>	Master	Interrupt signaling.
pvbus_s	<a href="#">PVBus</a>	Slave	Slave port for register access.
reset_in	<a href="#">Signal</a>	Slave	Reset signaling.
reset_out	<a href="#">Signal</a>	Master	Reset signaling.

## Parameters for SP805\_Watchdog

### **simhalt**

#### Type

bool

#### Default value

0x0

#### Description

Halt on reset.

## 3.10.104 SP810\_SysCtrl

PrimeXsys System Controller(SP810) NB: Only EB relevant functionalities are fully implemented.  
This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1261: IP revisions support**

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

### Iris and MTI instances for SP810\_SysCtrl

This model has the following Iris instances:

**Table 3-1262: SP810\_SysCtrl Iris instances**

InstanceName	ComponentName
SP810_SysCtrl	SP810_SysCtrl
SP810_SysCtrl.busslave	PVBusSlave
SP810_SysCtrl.clkdiv_clk0	ClockDivider
SP810_SysCtrl.clkdiv_clk1	ClockDivider
SP810_SysCtrl.clkdiv_clk2	ClockDivider
SP810_SysCtrl.clkdiv_clk3	ClockDivider

This model has the following MTI trace components:

**Table 3-1263: SP810\_SysCtrl MTI instances**

InstanceName	ComponentName
SP810_SysCtrl.busslave	PVBusSlave
SP810_SysCtrl.clkdiv_clk0	<a href="#">ClockDivider</a>
SP810_SysCtrl.clkdiv_clk1	<a href="#">ClockDivider</a>

InstanceName	ComponentName
SP810_SysCtrl.clkdiv_clk2	ClockDivider
SP810_SysCtrl.clkdiv_clk3	ClockDivider

## Ports for SP810\_SysCtrl

**Table 3-1264: Ports**

Name	Protocol	Type	Description
clk_in	ClockSignal	Slave	Clock input.
hclkdivsel	ValueState	Master	Define the processor clock/bus clock ratio. Not fully implemented. Using this port has unpredictable results.
npwr	Signal	Slave	Power on reset. Not fully implemented. Using this port has unpredictable results.
pll_en	Signal	Master	PLL enable output. Not fully implemented. Using this port has unpredictable results.
pvbuss	PVBus	Slave	Slave port for register access.
ref_clk_in	ClockSignal	Slave	Clock source used by the Timer and Watchdog modules.
remap_clear	StateSignal	Master	Remap clear request output.
remap_stat	StateSignal	Slave	Remap status input. Not fully implemented. Using this port has unpredictable results.
sleep_mode	Signal	Master	Control clocks for SLEEP mode. Not fully implemented. Using this port has unpredictable results.
sys_id	ValueState	Slave	Unused port.
sys_mode	ValueState	Slave	Present system mode. Not fully implemented. Using this port has unpredictable results.
sys_stat	ValueState	Slave	System status input. Not fully implemented. Using this port has unpredictable results.
timer_clk_en[4]	ClockRateControl	Master	Timer clock enable n.
wd_clk_en	Signal	Master	Watchdog module clock enable output. Not fully implemented. Using this port has unpredictable results.
wd_en	Signal	Slave	Watchdog module enable input. Not fully implemented. Using this port has unpredictable results.

## Parameters for SP810\_SysCtrl

### clkdiv\_clk0.div

#### Type

int

#### Default value

0x1

#### Description

Clock Rate Divider. This parameter is not exposed via CADI and can only be set in LISA.

### clkdiv\_clk0.mul

#### Type

int

**Default value**

0x1

**Description**

Clock Rate Multiplier. This parameter is not exposed via CADI and can only be set in LISA.

**clkdiv\_clk1.div****Type**

int

**Default value**

0x1

**Description**

Clock Rate Divider. This parameter is not exposed via CADI and can only be set in LISA.

**clkdiv\_clk1.mul****Type**

int

**Default value**

0x1

**Description**

Clock Rate Multiplier. This parameter is not exposed via CADI and can only be set in LISA.

**clkdiv\_clk2.div****Type**

int

**Default value**

0x1

**Description**

Clock Rate Divider. This parameter is not exposed via CADI and can only be set in LISA.

**clkdiv\_clk2.mul****Type**

int

**Default value**

0x1

**Description**

Clock Rate Multiplier. This parameter is not exposed via CADI and can only be set in LISA.

**clkdiv\_clk3.div****Type**

int

**Default value**

0x1

**Description**

Clock Rate Divider. This parameter is not exposed via CADI and can only be set in LISA.

**clkdiv\_clk3.mul**

**Type**

int

**Default value**

0x1

**Description**

Clock Rate Multiplier. This parameter is not exposed via CADI and can only be set in LISA.

**sysid**

**Type**

int

**Default value**

0x0

**Description**

System Identification Register.

**use\_s8**

**Type**

bool

**Default value**

0x0

**Description**

Use Switch 8 (S1-S4).

**3.10.105 SSU**

Safety Status Unit. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1265: IP revisions support**

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

## Iris and MTI instances for SSU

This model has the following Iris instances:

**Table 3-1266: SSU Iris instances**

InstanceName	ComponentName
SSU	SSU
SSU.pvbus_slave	PVBusSlave

This model has the following MTI trace components:

**Table 3-1267: SSU MTI instances**

InstanceName	ComponentName
SSU	SSU
SSU.pvbus_slave	PVBusSlave

## Ports for SSU

**Table 3-1268: Ports**

Name	Protocol	Type	Description
c_error_in	Signal	Slave	Critical interrupts to the SSU
clk_in	ClockSignal	Slave	Clock input
cold_reset_in	Signal	Slave	Cold reset signal
nc_error_in	Signal	Slave	Non critical interrupts to the SSU
pvbus_s	PVBus	Slave	To access FMU model registers
ssu_out	ValueState	Master	SSU output port
warm_reset_in	Signal	Slave	Warm reset signal

## Parameters for SSU

### diagnostics

#### Type

int

#### Default value

0x2

#### Description

Diagnostics 0-4 (0:FATAL 1:ERROR 2:WARNING 3:INFO 4:DEBUG - DEFAULT:2).

### sm\_implemented

#### Type

bool

#### Default value

0x0

**Description**

Safety Mechanism Implemented.

**3.10.106 SecureAlarmManager**

Security Alarm Manager. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1269: IP revisions support**

Revision	Quality level
0.93	Alpha support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

**Iris and MTI instances for SecureAlarmManager**

This model has the following Iris instances:

**Table 3-1270: SecureAlarmManager Iris instances**

InstanceName	ComponentName
SecureAlarmManager	SecureAlarmManager
SecureAlarmManager.apb	PVBusSlave

This model has the following MTI trace components:

**Table 3-1271: SecureAlarmManager MTI instances**

InstanceName	ComponentName
SecureAlarmManager.apb	PVBusSlave

**Ports for SecureAlarmManager****Table 3-1272: Ports**

Name	Protocol	Type	Description
apb	PVBus	Slave	APB Subordinate Interface - Access to registers
clk_in	ClockSignal	Slave	Clock in signal
config_done_trig_ack_in	Signal	Slave	Config done ack signal
config_done_trig_req_out	Signal	Master	Config done req signal
event_in[61]	Signal	Slave	Event in signal
event_status_out[64]	Signal	Master	Event status out signal
nCOLDRESETAON_in	Signal	Slave	Coldreset in signal
reset_in	Signal	Slave	Reset in signal
response_action_out[8]	Signal	Master	Response action out signal

Parameters for SecureAlarmManager

NUM\_SAMNEC

Type  
int

Default value  
0x3

Description  
Number of SAM event counters.

NUM\_SAMNRA

Type  
int

Default value  
0x7

Description  
Number of SAM response actions.

diagnostics

Type  
int

Default value  
0x2

Description  
Diagnostics 0-4 (0:FATAL 1:ERROR 2:WARNING 3:INFO 4:DEBUG - DEFAULT==2).

3.10.107 SecureCache

SecureCache. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

Table 3-1273: IP revisions support

Revision	Quality level
1.13	Alpha support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

Iris and MTI instances for SecureCache

This model has the following Iris instances:

**Table 3-1274: SecureICache Iris instances**

InstanceName	ComponentName
SecureICache	SecureICache
SecureICache.DECRYPT_RAM_0	PVBusSlave
SecureICache.DECRYPT_RAM_1	PVBusSlave
SecureICache.HTR_RAM	PVBusSlave
SecureICache.SIC_BusMapper	PVBusMapper
SecureICache.SIC_BusMapper0	PVBusMapper
SecureICache.SIC_BusMapper1	PVBusMapper
SecureICache.ZERO_RAM	PVBusSlave
SecureICache.apb	PVBusSlave

This model has the following MTI trace components:

**Table 3-1275: SecureICache MTI instances**

InstanceName	ComponentName
SecureICache.DECRYPT_RAM_0	PVBusSlave
SecureICache.DECRYPT_RAM_1	PVBusSlave
SecureICache.HTR_RAM	PVBusSlave
SecureICache.SIC_BusMapper	PVBusMapper
SecureICache.SIC_BusMapper0	PVBusMapper
SecureICache.SIC_BusMapper1	PVBusMapper
SecureICache.ZERO_RAM	PVBusSlave
SecureICache.apb	PVBusSlave

## Ports for SecureICache

**Table 3-1276: Ports**

Name	Protocol	Type	Description
apb	PVBus	Slave	APB4 Subordinate Interface - Access to registers
htr_ram_pvbus_s	PVBus	Slave	To Read and Write pre-calculated SHA-256 Digests
irq_out	Signal	Master	To indicate interrupts
pvbus_m	PVBus	Master	To read from External RAM
pvbus_s	PVBus	Slave	Receives Transactions from CPU
reset_in	Signal	Slave	reset

## Parameters for SecureICache

### SIC\_AUTH\_ENABLE

#### Type

bool

**Default value**

0x0

**Description**

SIC Authentication enabled [default==false].

**SIC\_DECRYPT\_ENABLE****Type**

bool

**Default value**

0x0

**Description**

SIC Decryption enabled [default==false].

**SIC\_DR\_CNT****Type**

int

**Default value**

0x1

**Description**

SIC config: Decryption Region Count (0x0==1, 0x1==2[default], 0x2==4).

**SIC\_HTR\_RAM\_SIZE****Type**

int

**Default value**

0x20

**Description**

SIC config: Hash Tag RAM Size (0x1==1KB, 0x2==2KB, 0x4==4KB, 0x8==8KB, 0x10=16KB, 0x20=32KB[default]).

**SIC\_MAX\_CODE\_SIZE****Type**

int

**Default value**

0x400

**Description**

SIC config: Maximum Code Size supported (n==nKB[default,1024(1MB)]).

**SIC\_PAGE\_RAM\_SIZE****Type**

int

**Default value**

0x10

**Description**

SIC config: Page RAM Size (0x4==4KB, 0x8==8KB[default], 0x10=16KB).

**SIC\_PAGE\_SIZE****Type**

int

**Default value**

0x3

**Description**

SIC config: Page Size (0x0==128B, 0x1==256B, 0x2=512B, 0x3=1KB[default], 0x4=2KB, 0x5=4KB).

**SIC\_PMON\_EN****Type**

bool

**Default value**

0x0

**Description**

SIC config: Performance Montior enable [default==false].

**diagnostics****Type**

int

**Default value**

0x2

**Description**

Diagnostics 0-4 (0:FATAL 1:ERROR 2:WARNING 3:INFO 4:DEBUG - DEFAULT==2).

### 3.10.108 SystemFMU

System level Fault Management Unit. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1277: IP revisions support**

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

## Iris and MTI instances for SystemFMU

This model has the following Iris instances:

**Table 3-1278: SystemFMU Iris instances**

InstanceName	ComponentName
SystemFMU	SYSTEM_FMU
SystemFMU.pvbus_slave	PVBusSlave

This model has the following MTI trace components:

**Table 3-1279: SystemFMU MTI instances**

InstanceName	ComponentName
SystemFMU	SYSTEM_FMU
SystemFMU.pvbus_slave	PVBusSlave

## Ports for SystemFMU

**Table 3-1280: Ports**

Name	Protocol	Type	Description
c_error_in[26]	Signal	Slave	Critical interrupts from the device side FMUs
c_error_out	Signal	Master	Critical error input from the system FMU
clk_in	ClockSignal	Slave	Clock input
cold_reset_in	Signal	Slave	Cold reset signal
nc_error_in[26]	Signal	Slave	Non critical interrupts from the device side FMUs
nc_error_out	Signal	Master	Non critical error input from the system FMU
pvbus_s	PVBus	Slave	To access FMU model registers
warm_reset_in	Signal	Slave	Warm reset signal

## Parameters for SystemFMU

### diagnostics

#### Type

int

#### Default value

0x2

#### Description

Diagnostics 0-4 (0:FATAL 1:ERROR 2:WARNING 3:INFO 4:DEBUG - DEFAULT==2).

**upstream\_fmus\_cfg****Type**

int

**Default value**

0x1

**Description**

Number of upstream FMUs that can be connected to the System level FMU.

### 3.10.109 System\_RAS\_Agent

System level RAS agent. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1281: IP revisions support**

Revision	Quality level
r0p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### Iris and MTI instances for System\_RAS\_Agent

This model has the following Iris instances:

**Table 3-1282: System\_RAS\_Agent Iris instances**

InstanceName	ComponentName
System_RAS_Agent	SYSTEM_RAS_AGENT
System_RAS_Agent.pvbus_subordinate	PVBusSlave

This model has the following MTI trace components:

**Table 3-1283: System\_RAS\_Agent MTI instances**

InstanceName	ComponentName
System_RAS_Agent.pvbus_subordinate	PVBusSlave

#### Ports for System\_RAS\_Agent

**Table 3-1284: Ports**

Name	Protocol	Type	Description
apb	PVBus	Slave	To access RAS agent registers
clk_in	ClockSignal	Slave	Input Clock - RAS agent is in this clock domain
cri_in[56]	Signal	Slave	Critical Error Interrupt from the downstream RAS agent
cri_out	Signal	Master	CRI_OUT is the consolidated status of the Critical Error Interrupt from this and the downstream RAS agent(s).

Name	Protocol	Type	Description
eri_in[56]	Signal	Slave	Error Recovery Interrupt from the downstream RAS agent
eri_out	Signal	Master	consolidated status of the Error Recovery Interrupt from this and the downstream RAS agent(s).
fhi_in[56]	Signal	Slave	Fault Handling Interrupt from the downstream RAS agent
fhi_out	Signal	Master	consolidated status of the Fault Handling Interrupt from this and the downstream RAS agent(s).
reset_in	Signal	Slave	Input reset - Connect to the system cold reset.
valid_in[56]	Signal	Slave	Incoming Valid from a downstream RAS agent indicates the presence of at least one valid error record.
valid_out	Signal	Master	outgoing Valid from the downstream RAS agent(s) contains at least one valid error record.

## Parameters for System\_RAS\_Agent

### NUM\_DOWNSTREAM\_RAS\_AGENTS

#### Type

int

#### Default value

0x1

#### Description

Number of downstream RAS agents for which the proxy error record is maintained.

### SYNC\_ENABLE

#### Type

int

#### Default value

0x0

#### Description

Enables synchronization on the Interrupt lines and valid line before assigning it to the corresponding bits in the ERR<n>STATUS register. 1-bit per downstream RAS Agent.

### diagnostics

#### Type

int

#### Default value

0x2

#### Description

Diagnostics 0-4 (0:FATAL 1:ERROR 2:WARNING 3:INFO 4:DEBUG - DEFAULT==2).

### 3.10.110 TZC\_400

TrustZone Address Space Controller. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1285: IP revisions support**

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

#### About TZC\_400

The TZC-400 determines, under software control, whether a particular bus master is permitted to issue Non-secure accesses to a particular physical address.

The component has:

- Eight address regions in addition to the base region, region 0.
- A programmable control block for security-access permissions configuration through the Advanced Peripheral Bus (APB).
- Up to four address filters that share common set region set-up registers.
- Software configurable permission check failure reporting and interrupt signaling.
- Filtering with a Non-Secure Access ID (NSAID).
- A gate keeper, to allow or block accesses to the filter unit.
- Configurable reset values of region configuration registers and other key configuration registers.

This component has the following subcomponents:

#### TZFilterUnits

The TZC-400 has four TZFilterUnits. The `BUILD_CONFIG` register sets the configuration. The `rst_build_config` parameter controls the register. The value of `rst_build_config` varies with the system. See the system design documentation or system integration documentation. For AEMvA, it is `0x3003F08`.

#### TZDummyDevice

An internal dummy device that mimics **RAZ/WI** for TZFilterUnits. The system uses it when there is a permission violation and a bus returns Transaction OK.

#### Differences between the model and the RTL

Unlike the hardware, this component does not have:

- Asynchronous clocks. The model does not need clocks for data transfer, or clock signals.
- QoS Virtual Network (QVN) support. Specifically, it does not implement the `vnet` bits[27:24] in `FAIL_ID_<x>` registers.
- Fast Path and Fast Path ID. In the model, transactions occur at similar speeds.

- 256 outstanding accesses globally for each read or write Normal Paths and configurable 8, 16, or 32 outstanding accesses on Fast Path read access. The model does not support QVN. This concept is meaningless for a PV level model.
- Configurable address bus width, data bus width, transaction ID tag, and USER bus width. A single bus implementation, PVBUS, covers these AXI bus hardware implementation details.

This component does not implement:

- The vnet bits[27:24] in `FAIL_ID_<x>` registers.
- Any background logic for the speculation control register. This does not affect model behavior.

## Configuration

- Configure `master_id_from_label` OR `id_mapping`, `rst_build_config`, and `rst_region_attributes_0` before running the model to set the desired behaviors. Otherwise, the system resets all region configuration registers, `rst_action`, and `rst_gate_keeper` to 0, and resets `rst_build_config` and `rst_region_attributes_0` to sensible default values.
- Configure either `id_mapping` OR `master_id_from_label` at model init, or a warning message appears.
- The syntax of `id_mapping` is:

```
<masterid_0>:<nsaid_0>,<masterid_1>:<nsaid_1>,<masterid_n>:<nsaid_n>
```

Separate the mapping pairs by a comma. The masterid is the ID of the bus master, such as the parameter `CLUSTER_ID` on Cortex-A15/7, `cluster_id` port of Cortex-A15/7, or `master_id` parameter for Cortex-M3.

## Iris and MTI instances for TZC\_400

This model has the following Iris instances:

**Table 3-1286: TZC\_400 Iris instances**

InstanceName	ComponentName
TZC_400	TZC_400
TZC_400.apbslave[0]	PVBusSlave
TZC_400.filter0	filter0
TZC_400.filter0.BusMapper	PVBusMapper
TZC_400.filter1	filter1
TZC_400.filter1.BusMapper	PVBusMapper
TZC_400.filter2	filter2
TZC_400.filter2.BusMapper	PVBusMapper
TZC_400.filter3	filter3
TZC_400.filter3.BusMapper	PVBusMapper

This model has the following MTI trace components:

**Table 3-1287: TZC\_400 MTI instances**

InstanceName	ComponentName
TZC_400.apbslave[0]	PVBusSlave
TZC_400.filter0.BusMapper	PVBusMapper
TZC_400.filter1.BusMapper	PVBusMapper
TZC_400.filter2.BusMapper	PVBusMapper
TZC_400.filter3.BusMapper	PVBusMapper

## Ports for TZC\_400

**Table 3-1288: Ports**

Name	Protocol	Type	Description
apbslave_s	PVBus	Slave	Bus access for control register.
filter_pvbus_m[4]	PVBus	Master	Outgoing bus traffic from filter units.
filter_pvbus_s[4]	PVBus	Slave	Incoming bus traffic to filter units.
tzc_reset	Signal	Slave	Reset signal from external master.
tzcint	Signal	Master	TrustZone interrupt signal, controlled by ACTION register.

## Parameters for TZC\_400

### diagnostics

#### Type

int

#### Default value

0x0

#### Description

Diagnostics.

### id\_mapping

#### Type

string

#### Default value

"0:0,1:0,2:0,3:0,4:0,5:0,6:0,7:0,8:0,9:0,10:0,11:0,12:0,13:0,14:0,15:0"

#### Description

Mapping from Master ID to NSAID.

### master\_id\_from\_label

#### Type

bool

#### Default value

0x0

**Description**

Obtain Master ID from label (ignores id\_mapping).

**rst\_action****Type**

int

**Default value**

0x0

**Description**

ACTION register value at reset.

**rst\_build\_config****Type**

int

**Default value**

0x3003f08

**Description**

BUILD\_CONFIG register value at reset.

**rst\_gate\_keeper****Type**

int

**Default value**

0x0

**Description**

GATE\_KEEPER register value at reset.

**rst\_region\_attributes\_0****Type**

int

**Default value**

0xf

**Description**

Region 0 Secure attributes.

**rst\_region\_attributes\_1****Type**

int

**Default value**

0x0

**Description**

Region 1 Secure attributes.

**`rst_region_attributes_2`****Type**

int

**Default value**

0x0

**Description**

Region 2 Secure attributes.

**`rst_region_attributes_3`****Type**

int

**Default value**

0x0

**Description**

Region 3 Secure attributes.

**`rst_region_attributes_4`****Type**

int

**Default value**

0x0

**Description**

Region 4 Secure attributes.

**`rst_region_attributes_5`****Type**

int

**Default value**

0x0

**Description**

Region 5 Secure attributes.

**`rst_region_attributes_6`****Type**

int

**Default value**

0x0

**Description**

Region 6 Secure attributes.

**`rst_region_attributes_7`****Type**

int

**Default value**

0x0

**Description**

Region 7 Secure attributes.

**`rst_region_attributes_8`****Type**

int

**Default value**

0x0

**Description**

Region 8 Secure attributes.

**`rst_region_base_high_1`****Type**

int

**Default value**

0x0

**Description**

Region 1 base memory address (high 32 bits).

**`rst_region_base_high_2`****Type**

int

**Default value**

0x0

**Description**

Region 2 base memory address (high 32 bits).

**`rst_region_base_high_3`****Type**

int

**Default value**

0x0

**Description**

Region 3 base memory address (high 32 bits).

**`rst_region_base_high_4`**

**Type**

int

**Default value**

0x0

**Description**

Region 4 base memory address (high 32 bits).

**`rst_region_base_high_5`**

**Type**

int

**Default value**

0x0

**Description**

Region 5 base memory address (high 32 bits).

**`rst_region_base_high_6`**

**Type**

int

**Default value**

0x0

**Description**

Region 6 base memory address (high 32 bits).

**`rst_region_base_high_7`**

**Type**

int

**Default value**

0x0

**Description**

Region 7 base memory address (high 32 bits).

**`rst_region_base_high_8`**

**Type**

int

**Default value**

0x0

**Description**

Region 8 base memory address (high 32 bits).

**rst\_region\_base\_low\_1**

**Type**

int

**Default value**

0x0

**Description**

Region 1 base memory address (low 32 bits).

**rst\_region\_base\_low\_2**

**Type**

int

**Default value**

0x0

**Description**

Region 2 base memory address (low 32 bits).

**rst\_region\_base\_low\_3**

**Type**

int

**Default value**

0x0

**Description**

Region 3 base memory address (low 32 bits).

**rst\_region\_base\_low\_4**

**Type**

int

**Default value**

0x0

**Description**

Region 4 base memory address (low 32 bits).

**rst\_region\_base\_low\_5**

**Type**

int

**Default value**

0x0

**Description**

Region 5 base memory address (low 32 bits).

**rst\_region\_base\_low\_6**

**Type**

int

**Default value**

0x0

**Description**

Region 6 base memory address (low 32 bits).

**rst\_region\_base\_low\_7**

**Type**

int

**Default value**

0x0

**Description**

Region 7 base memory address (low 32 bits).

**rst\_region\_base\_low\_8**

**Type**

int

**Default value**

0x0

**Description**

Region 8 base memory address (low 32 bits).

**rst\_region\_id\_access\_0**

**Type**

int

**Default value**

0x0

**Description**

Region 0 NSAID permissions.

**rst\_region\_id\_access\_1**

**Type**

int

**Default value**

0x0

**Description**

Region 1 NSAID permissions.

**rst\_region\_id\_access\_2**

**Type**

int

**Default value**

0x0

**Description**

Region 2 NSAID permissions.

**rst\_region\_id\_access\_3**

**Type**

int

**Default value**

0x0

**Description**

Region 3 NSAID permissions.

**rst\_region\_id\_access\_4**

**Type**

int

**Default value**

0x0

**Description**

Region 4 NSAID permissions.

**rst\_region\_id\_access\_5**

**Type**

int

**Default value**

0x0

**Description**

Region 5 NSAID permissions.

**rst\_region\_id\_access\_6**

**Type**

int

**Default value**

0x0

**Description**

Region 6 NSAID permissions.

**`rst_region_id_access_7`**

**Type**

int

**Default value**

0x0

**Description**

Region 7 NSAID permissions.

**`rst_region_id_access_8`**

**Type**

int

**Default value**

0x0

**Description**

Region 8 NSAID permissions.

**`rst_region_top_high_0`**

**Type**

int

**Default value**

0x0

**Description**

Region 0 (default) top memory address.

**`rst_region_top_high_1`**

**Type**

int

**Default value**

0x0

**Description**

Region 1 top memory address (high 32 bits).

**`rst_region_top_high_2`**

**Type**

int

**Default value**

0x0

**Description**

Region 2 top memory address (high 32 bits).

**`rst_region_top_high_3`**

**Type**

int

**Default value**

0x0

**Description**

Region 3 top memory address (high 32 bits).

**`rst_region_top_high_4`**

**Type**

int

**Default value**

0x0

**Description**

Region 4 top memory address (high 32 bits).

**`rst_region_top_high_5`**

**Type**

int

**Default value**

0x0

**Description**

Region 5 top memory address (high 32 bits).

**`rst_region_top_high_6`**

**Type**

int

**Default value**

0x0

**Description**

Region 6 top memory address (high 32 bits).

**`rst_region_top_high_7`**

**Type**

int

**Default value**

0x0

**Description**

Region 7 top memory address (high 32 bits).

**`rst_region_top_high_8`**

**Type**

int

**Default value**

0x0

**Description**

Region 8 top memory address (high 32 bits).

**`rst_region_top_low_1`**

**Type**

int

**Default value**

0x0

**Description**

Region 1 top memory address (low 32 bits).

**`rst_region_top_low_2`**

**Type**

int

**Default value**

0x0

**Description**

Region 2 top memory address (low 32 bits).

**`rst_region_top_low_3`**

**Type**

int

**Default value**

0x0

**Description**

Region 3 top memory address (low 32 bits).

**`rst_region_top_low_4`**

**Type**

int

**Default value**

0x0

**Description**

Region 4 top memory address (low 32 bits).

**`rst_region_top_low_5`**

**Type**

int

**Default value**

0x0

**Description**

Region 5 top memory address (low 32 bits).

**`rst_region_top_low_6`**

**Type**

int

**Default value**

0x0

**Description**

Region 6 top memory address (low 32 bits).

**`rst_region_top_low_7`**

**Type**

int

**Default value**

0x0

**Description**

Region 7 top memory address (low 32 bits).

**`rst_region_top_low_8`**

**Type**

int

**Default value**

0x0

**Description**

Region 8 top memory address (low 32 bits).

### 3.10.111 TZFilterUnit

TrustZone Filter Unit. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1289: IP revisions support**

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

### Iris and MTI instances for TZFilterUnit

This model has the following Iris instances:

**Table 3-1290: TZFilterUnit Iris instances**

InstanceName	ComponentName
TZFilterUnit	TZFilterUnit
TZFilterUnit.BusMapper	PVBusMapper

This model has the following MTI trace components:

**Table 3-1291: TZFilterUnit MTI instances**

InstanceName	ComponentName
TZFilterUnit.BusMapper	PVBusMapper

### Ports for TZFilterUnit

**Table 3-1292: Ports**

Name	Protocol	Type	Description
control	<a href="#">TZFilterControl</a>	Master	Configuration port.
pvbus_m	<a href="#">PVBus</a>	Master	Master bus port.
pvbus_s	<a href="#">PVBus</a>	Slave	Slave bus port.

## 3.10.112 TZIC

ARM TrustZone Interrupt Controller(SP890). This model is written in LISA+.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1293: IP revisions support**

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

### About TZIC

The TZIC provides a software interface to the secure interrupt system in a TrustZone design. It provides secure control of the nFIQ and masks out the interrupt sources chosen for nFIQ from the interrupts that are passed onto a non-secure interrupt controller.

## Iris and MTI instances for TZIC

This model has the following Iris instances:

**Table 3-1294: TZIC Iris instances**

InstanceName	ComponentName
TZIC	TZIC
TZIC.busslave	PVBusSlave

This model has the following MTI trace components:

**Table 3-1295: TZIC MTI instances**

InstanceName	ComponentName
TZIC.busslave	PVBusSlave

## Ports for TZIC

**Table 3-1296: Ports**

Name	Protocol	Type	Description
fiq_out	Signal	Master	FIQ interrupt to processor.
input[32]	Signal	Slave	32 interrupt input sources.
irq_out[32]	Signal	Master	32 IRQ output ports.
nsfiq_in	Signal	Slave	Connects to the nFIQ output of the non-secure interrupt controller.
pvbus	PVBus	Slave	Slave port for connection to PV bus master/decoder.
sfiq_in	Signal	Slave	Daisy chaining secure FIQ input, otherwise connects to logic 1 if interrupt controller not daisy chained.

## 3.10.113 TrustedRAM

Trusted RAM. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1297: IP revisions support**

Revision	Quality level
0.4	Alpha support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

## Iris and MTI instances for TrustedRAM

This model has the following Iris instances:

**Table 3-1298: TrustedRAM Iris instances**

InstanceName	ComponentName
TrustedRAM	TrustedRAM

InstanceName	ComponentName
TrustedRAM.apb	PVBusSlave

This model has the following MTI trace components:

**Table 3-1299: TrustedRAM MTI instances**

InstanceName	ComponentName
TrustedRAM.apb	PVBusSlave

## Ports for TrustedRAM

**Table 3-1300: Ports**

Name	Protocol	Type	Description
apb	PVBus	Slave	APB Subordinate Interface - Access to registers
reset_in	Signal	Slave	Reset in signal

## Parameters for TrustedRAM

### TRBC\_RESET\_VALUE

#### Type

int

#### Default value

0xb

#### Description

TRBC Registers Reset Value.

### diagnostics

#### Type

int

#### Default value

0x2

#### Description

Diagnostics 0-4 (0:FATAL 1:ERROR 2:WARNING 3:INFO 4:DEBUG - DEFAULT==2).

## 3.10.114 VHT\_VIOBridge

Arm VHT Virtual I/O interface. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1301: IP revisions support**

Revision	Quality level
r1p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

### Ports for VHT\_VIOBridge

**Table 3-1302: Ports**

Name	Protocol	Type	Description
pvbuss_s	PVBus	Slave	Target port for access to VIOBridge registers

### Parameters for VHT\_VIOBridge

#### **vio\_basename**

##### Type

string

##### Default value

""

##### Description

Basename of scripts to use for VIO.

#### **vio\_path**

##### Type

string

##### Default value

""

##### Description

Path to find python scripts for VIO.

## 3.10.115 VHT\_VSIBridge

Arm VHT Virtual stream interface. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1303: IP revisions support**

Revision	Quality level
r1p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

## Ports for VHT\_VSIBridge

**Table 3-1304: Ports**

Name	Protocol	Type	Description
intr	Signal	Master	Interrupt raising signal
pdbus_m	PVBus	Master	Requester port for access to ememory
pdbus_s	PVBus	Slave	Completer port for access to VSIBridge registers

## Parameters for VHT\_VSIBridge

### **vsi\_basename**

#### Type

string

#### Default value

""

#### Description

Basename of scripts to use for VSI.

### **vsi\_idx**

#### Type

int

#### Default value

0x0

#### Description

Index to use for VSI.

### **vsi\_path**

#### Type

string

#### Default value

""

#### Description

Path to find python scripts for VSI.

## 3.10.116 VHT\_VSocket

Arm VHT Virtual socket bridge interface. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1305: IP revisions support**

Revision	Quality level
r1p0	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

### Ports for VHT\_VSocket

**Table 3-1306: Ports**

Name	Protocol	Type	Description
pvbuss_m	PVBus	Master	Port for VSocket bridge to access external memory
pvbuss_s	PVBus	Slave	Target port for access to VSocket bridge registers

### Parameters for VHT\_VSocket

#### name

#### Type

string

#### Default value

""

#### Description

Name of the component.

## 3.10.117 v7\_VGIC

System VGIC architecture version v7. This model is written in C++.

This model supports the following revisions of the IP at the given quality levels:

**Table 3-1307: IP revisions support**

Revision	Quality level
N/A	Full support

For an explanation of the quality levels, see [1.3 Quality level definitions](#) on page 22.

### Iris and MTI instances for v7\_VGIC

This model has the following Iris instances:

**Table 3-1308: v7\_VGIC Iris instances**

InstanceName	ComponentName
v7_VGIC	v7_VGIC
v7_VGIC.vgic_bus_slave	PVBusSlave

This model has the following MTI trace components:

**Table 3-1309: v7\_VGIC MTI instances**

InstanceName	ComponentName
v7_VGIC	v7_VGIC
v7_VGIC.vgic_bus_slave	PVBusSlave

## Ports for v7\_VGIC

**Table 3-1310: Ports**

Name	Protocol	Type	Description
cfgsdisable	Signal	Slave	Disable write access to some GIC registers.
configuration	v7_VGIC_Configuration_Protocol	Slave	Configure the mapping of the core number (from MasterID) to the core interface number.
fiq_in[8]	Signal	Slave	FIQ inputs.
fiq_out[8]	Signal	Master	FIQ outputs.
irq_in[8]	Signal	Slave	IRQ inputs.
irq_out[8]	Signal	Master	IRQ outputs.
ppi_core0[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 0.
ppi_core1[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 1.
ppi_core2[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 2.
ppi_core3[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 3.
ppi_core4[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 4.
ppi_core5[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 5.
ppi_core6[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 6.
ppi_core7[16]	Signal	Slave	Private peripheral interrupts (ID16-ID31) for cpu 7.
pvbus_s	PVBus	Slave	Bus port for accessing distributor registers.
reporting_interface	VGICReportingProtocol	Slave	Logging interface.
reset_signal	Signal	Slave	Reset signal input.
spi[988]	Signal	Slave	SPI inputs.
vfiq_out[8]	Signal	Master	Virtual FIQ outputs.
virq_out[8]	Signal	Master	Virtual IRQ outputs.
wakeup_fiq[8]	Signal	Master	Wakeup signal for FIQ.
wakeup_irq[8]	Signal	Master	Wakeup signal for IRQ.

## Parameters for v7\_VGIC

### core-impl-id

#### Type

int

#### Default value

0x3902043b

#### Description

Implementation ID to present for the cores.

**dist-impl-id****Type**

int

**Default value**

0x3902043b

**Description**

Implementation ID to present for the distributor.

**enable\_log\_errors****Type**

bool

**Default value**

0x0

**Description****enable\_log\_fatal****Type**

bool

**Default value**

0x0

**Description****enable\_log\_warnings****Type**

bool

**Default value**

0x0

**Description****enabled****Type**

bool

**Default value**

0x1

**Description**

Enable the component. If it is disabled then all register writes will have no effect.

**number-of-cores****Type**

int

**Default value**

0x8

**Description**

Number of core interfaces to present.

**number-of-ints****Type**

int

**Default value**

0xe0

**Description**

Number of interrupt pins. Will be rounded down to the nearest multiple of 32.

**number-of-lrs****Type**

int

**Default value**

0x40

**Description**

Number of list registers.

**vgic-version****Type**

int

**Default value**

0xb

**Description**

Version number of the VGIC interface.

## 4. Plug-ins for Fast Models

This chapter describes the plug-ins that are available for Fast Models.

Prebuilt plug-ins can be found at `$PVLIB_HOME/plugins/<OS_compiler>/`. The source code for some of these plug-ins is provided as programming examples, under `$PVLIB_HOME/examples/MTI/`.

### 4.1 Loading a plug-in

The method of loading a plug-in depends on the type of model being used.

#### 4.1.1 --plugin command-line option

To load a plug-in, use the `--plugin <path_to_plugin>/<plugin_name>` option.

To load more than one plug-in, use multiple `--plugin` options.

Specify plug-in parameters using one or more `-c` options when launching the model, or use a configuration file.

For example the following command:

- Loads the TarmacTrace plug-in.
- Sets the TarmacTrace `trace-file` parameter.

```
./isim_system --plugin $plugin_dir/TarmacTrace.so -C TRACE.TarmacTrace.trace-  
file=tTrace.log
```

#### 4.1.2 scx::scx\_load\_plugin() method

Fast Models that are exported to SystemC can call the method `scx::scx_load_plugin()` to hard code the path to the plug-in, before calling `sc_start()`.

For example:

```
scx::scx_load_plugin("$PVLIB_HOME/plugins/Linux64_GCC-10.3/TarmacTrace.so");
```

#### Related information

- [scx::scx\\_load\\_plugin](#)

### 4.1.3 FM\_TRACE\_PLUGINS environment variable

If it is not possible to specify a trace plug-in to the launching tool, use the environment variable `FM_TRACE_PLUGINS`. This variable must be set to the full path of the plug-in.

For example, on Linux:

```
export FM_TRACE_PLUGINS=<installation_path>/plugins/<OS_Compiler>/TarmacTrace.so
```

or on Windows:

```
set FM_TRACE_PLUGINS=<installation_path>\plugins\<OS_Compiler>\<version>\TarmacTrace.dll
```

To set multiple trace plug-ins at the same time, separate them with semicolons, for example:

```
set FM_TRACE_PLUGINS=%PVLIB_HOME%\plugins\Win64_VC2019\Release\TarmacTrace.dll;
%PVLIB_HOME%\plugins\Win64_VC2019\Release\GenericTrace.dll
```

You can also load the same plug-in multiple times. Give each instance a name by adding a prefix `<instancename>=` to each plug-in path or paths.

Specify parameters for plug-ins that you load using `FM_TRACE_PLUGINS`, using the following syntax:

```
|<param0_without_prefix=value>||<param1_without_prefix=value>||
<paramN_without_prefix=value>|<absolute_path_to_plugin.dll>
```

where `<param*_without_prefix=value>` means you must specify the parameter without the prefix that would be used on the command line. For example, use `trace-file=file.txt` instead of `TRACE.TarmacTrace.trace-file=file.txt`.

For example, on Linux:

```
export FM_TRACE_PLUGINS='|trace-file=/home/work/trace.txt||end-instruction-
count=1000|$PVLIB_HOME/plugins/Linux64_GCC-9.3/TarmacTrace.so'
```

or on Windows:

```
set FM_TRACE_PLUGINS=^|trace-file=c:\work\trace.txt^|^|end-instruction-count=1000^|
%PVLIB_HOME%\plugins\Win64_VC2019\Release\TarmacTrace.dll
```

Note

- Do not specify a pipe character `|` at the end of the environment variable value.
- Separate individual parameters with two pipe characters `||`, not one.
- Separate the plug-in from the parameters using a single pipe character `|`.
- Do not specify quotes around paths that contain spaces, or escape spaces. Spaces are resolved automatically.

- Do not specify environment variables within this environment variable.
- Specify the parameters before you specify the plug-in.
- On Windows, you can either set the environment variable using the **Advanced System Settings** window, or if you are using the command line, you might need to escape each pipe character, for example `^|`.
- The parameter values that you set using this environment variable are not displayed by the `--list-params` or `-l` command-line options. This is because the environment variable is processed at a later stage, when launching the simulation.

---

## 4.2 Customizing a plug-in

You can customize the behavior of a plug-in using parameters.

Plug-in parameters are set in the same way as model parameters. They have the following format:

```
-C <PLUGIN_TYPE>.<plugin_name>.<parameter>=<value>
```

The `PLUGIN_TYPE` value varies depending on the plug-in type, for example:

```
-C TRACE.TarmacTrace.trace-file=trace.log
```

```
-C CRYPTO.Crypto.verbose=1
```

## 4.3 ArchMsgTrace

The Architecture Message Trace plug-in prints warning and error messages to `stdout` or to a file when software performs operations that are not recommended, for instance because they are unpredictable.

The plug-in connects to all trace sources that have the `ArchMsg` prefix, which are normal MTI trace sources, but with a specific format. These trace sources can also be used with the `GenericTrace` plug-in, but the `ArchMsgTrace` plug-in has extra capabilities.

When the model emits an `ArchMsg` trace event, `ArchMsgTrace` outputs a message in the format:

```
category: component.hierarchy.name: ...
```

The trace sources have names of the form:

```
component.hierarchy.ArchMsg.category.name[#supplementalEventName]
```

where:

- `category` is usually `Warning`, `Error`, or `Info`.
- `name` is a short string that uniquely identifies the condition.
- `supplementalEventName` is an optional identifier for a supplemental event, which is an event that provides more information about the initial event. For example, if a cache contains mismatching attributes, which triggers an `ArchMsg` trace event, a supplemental event might be emitted for each cache line affected.

The trace source can also include a line that defines a more human-readable description of the event. This line can contain fields which `ArchMsgTrace` replaces in the output string with values from the trace source.

`ArchMsgTrace` can be configured to suppress:

- Specific trace sources.
- Specific categories.
- Repeated events of the same type.

To suppress specific trace sources or categories, use a whitespace-separated list of patterns, optionally including wildcards (`*` and `?`).

Repeated events can only be suppressed if the `ArchMsg` trace source declares a key field.

`ArchMsgTrace` searches for the key field in the following way:

- It looks for the string `"\nPRIMARY KEY <key-field-name>"` in the description of the trace source and uses that field name if the string exists.
- If not found, it looks for a field named `"KEY"`.
- Otherwise, the `ArchMsg` trace source has no key field and cannot be suppressed.

If the `suppress_repeated` parameter is true, the plug-in suppresses repeated events for the same trace source that have the same key field value. For example, the key field might represent the PC and so repeated events for the same PC can be suppressed.

To see a list of all possible `ArchMsg` trace sources that the model can emit, run it with the `ListTraceSources` plug-in. Then search the output for trace sources with the `ArchMsg` prefix.

---

Some examples of `ArchMsg` trace sources are:

#### **`ArchMsg.Error.BusActiveDuringReset`**

A transaction was received at the bus slave port whilst reset was asserted.

#### **`ArchMsg.Warning.cache_contents_unknown`**

Execution that depends on unknown cache contents.

#### **`ArchMsg.Warning.warning_atomic_to_unsupported_memory`**

Atomic access to an unsupported memory type.

**ArchMsg.Warning.decode\_unpred\_other**

Use of unpredictable instruction.

**ArchMsg.Warning.recursive\_exception**

Recursive exception.

**Related information**

[ListTraceSources](#) on page 5189

### 4.3.1 ArchMsgTrace - parameters

This section describes the parameters for the ArchMsgTrace plug-in.

Each parameter is prefixed with `TRACE.ArchMsgTrace`, for example:

```
TRACE.ArchMsgTrace.exit_on_first_output
```

**Table 4-1: ArchMsgTrace parameters**

Name	Type	Default value	Allowed values	When set	Description
exit_on_first_output	bool	false	true, false	Init time	Exit the simulation process after the first message has been written.
filter_tags	string	"ALL"	""	Init time	Space-separated list of tags that are matched against the tag(s) of the trace events. The trace event message is printed if any of the tags matches. If the value is empty or ALL, all the messages are printed. Available tags: - ALL - UNPREDICTABLE - IMP_DEF.
suppress_categories	string	"Why"	""	Init time	Space-separated list of categories which should not be printed.
suppress_repeated	bool	true	true, false	Init time	Suppress repeated messages from similar call sites.
suppress_sources	string	""	""	Init time	Space-separated list of components or events that should not be printed.
trace-file	string	""	""	Init time	ArchMsgTrace output file.

## 4.4 ASTFplugin

ASTFplugin is an MTI plug-in that enables Fast Models to generate trace output in Architectural Structured Trace Format (ASTF).

ASTF is a binary, compressible trace format that captures the architectural execution of each of the CPUs in a system. It supports the collection of traces from complex workloads of up to billions of instructions in length. The format was designed to achieve a balance between compactness, ease of interpretation, and strong forwards and backwards compatibility.

ASTF and associated tools have been developed to support workload tracing, workload analysis, and to drive CPU performance models.

ASTFplugin can be used in combination with [ToggleMTIPlugin](#).

Note

- ASTFplugin is supported on Linux hosts only.
- ASTFplugin and the ASTF specification are in development and further iterations are expected. For the status of ASTFplugin, the version of the specification it supports, and any limitations and known issues, see the Fast Models release notes.

### Additional reading

- The ASTF specification is included in the Fast Models package in the `$FVLIB_HOME/Docs/` directory.
- For answers to some common queries about ASTFplugin, see the [ASTFplugin FAQs](#).
- For best practices for preparing an ASTF trace for performance prediction of a workload see [Workload Trace Generation Best Practices](#).
- For how to use a Fast Models FVP to capture an ASTF trace, see [How to generate ASTF traces of workloads running on Fast Models](#).

## 4.4.1 ASTFplugin - parameters

This section describes the parameters for the ASTFplugin plug-in.

Each parameter is prefixed with `TRACE.ASTFplugin`, for example:

```
TRACE.ASTFplugin.encoding-method
```

**Table 4-2: ASTFplugin parameters**

Name	Type	Default value	Allowed values	When set	Description
encoding-method	int	0x2	0x0 - 0x2	Runtime	ASTF record encoding method. 0: Uncompressed; 1: Compressed LZMA; 2: Compressed ZLib.
timestamp-enable	bool	true	true, false	Init time	Timestamp records will become part of the output if enabled.
timestamp-period	int	0x5	0x1 - 0x7fffffffffffffffff	Init time	This parameter sets the simulated time between two timestamps in micro-seconds.
trace-file	string	""	""	Runtime	Trace file pathname and prefix to write out to. Will be appended with component path, session number and .astf suffix.
verbosity	int	0x2	0x0 - 0x2	Runtime	Output verbosity level. 0: FATAL; 1: ERROR; 2: WARNING.

## 4.4.2 ASTFplugin usage notes

Be aware of the following points when using ASTFplugin.

- Load ASTFplugin in the same way as other plug-ins, using the syntax:

```
./isim_system <isim_params> --plugin /path/to/ASTFplugin.so <astf_plugin_params>
```

- ASTFplugin generates trace files with a `.astf` extension. During the simulation, these trace files might be incomplete. Incomplete trace files have a `.astf.part` extension and cannot be processed using the ASTF tools.
- The output trace files have a four digit enumerator field in the name. For example `FVP_Base_Cortex_A55.cluster0.cpu0.0000.astf`. This enumerator field is always present, regardless of whether ASTFplugin is used together with ToggleMTIPlugin. If ToggleMTIPlugin instructs ASTFplugin to stop and then resume, a new file is created for each CPU with each enumerator field incremented by one. However, if a CPU was not active when ToggleMTIPlugin instructed ASTFplugin to record, the respective output file is not created.
- ASTFplugin tries to register callbacks for MTI trace sources for the Scalable Vector Extension (SVE). If SVE is not enabled, ASTFplugin reports warnings to the console. You can ignore these warnings if SVE operations do not need to be recorded or if SVE is intended to be disabled.
- To improve performance, ASTFplugin is multithreaded. As the plug-in handles large streams of data, avoid using SMT or Hyper-Threading or running the threads on different sockets on a multi-socket host system. For optimal performance, we recommend you use `taskset` to restrict the model to using a specified set of N+1 host cores where N is the number of cores simulated in the model.

## 4.4.3 Additional ASTF support in Fast Models

In addition to ASTFplugin, Fast Models includes some other tools and libraries that support ASTF.

- The `trprint`, `trcheck`, `trdd`, `trimage`, and `trpidannotate` tools enable you to process the ASTF trace file. For details, see [ASTF tools](#).
- [ToggleMTIPlugin](#), installed in `$PVLIB_HOME/plugins/<OS_Compiler>/`, can be used together with ASTFplugin to limit trace generation to specific regions of interest.
- `libastf` library and header files:

### **`$PVLIB_HOME/astf_tools/lib/libastf.a`**

Library for reading and writing ASTF trace files. It exposes both C++ and C interfaces. For documentation, including a basic C++ example, see `$PVLIB_HOME/Docs/astf/libastf-api/libastf-api.txt`.

### **`$PVLIB_HOME/astf_tools/include/astf.h`**

Specifies the C++ and C interfaces to `libastf`. For documentation of each API function, see `$PVLIB_HOME/Docs/astf/libastf-api/<C++_function_name>.txt`.

### **`$PVLIB_HOME/astf_tools/include/astf_records.h`**

ASTF library record definitions.

- An example Python script, `$PVLIB_HOME/examples/pyIris/inst_count_trace_control.py`. It uses the `iris.debug` Python module to demonstrate using `ToggleMTIPlugin` to limit tracing to specific parts of the application. For usage instructions, run the script with the `-h` option. For more information, see the comments in the source file.

## Related information

[Iris Python Debug Scripting User Guide](#)

### 4.4.4 ASTF tools

The ASTF-related tools `trcheck`, `trdd`, `trimage`, `trpidannotate`, and `trprint` are installed in `$PVLIB_HOME/astf_tools/`. They enable you to process the trace files that `ASTFplugin` outputs, for example to view them in a human-readable format.

#### **trcheck**

Verifies the correctness of the trace files against the semantics defined in the ASTF format specification. For documentation, see `$PVLIB_HOME/Docs/astf/tools/trcheck.txt`.

#### **trdd**

Slices, copies, and (re)compresses the trace files. It can cut pieces from a trace file or re-encode a trace file by using a different compression level. For documentation, see `$PVLIB_HOME/Docs/astf/tools/trdd.txt`.

#### **trimage**

Analyses and profiles instructions and branches across multiple ASTF files. For documentation, see `$PVLIB_HOME/Docs/astf/tools/trimage.txt`.

#### **trpidannotate**

Annotates Context records in the trace files to correct the PID/TID information that was collected during tracing. For documentation, see `$PVLIB_HOME/Docs/astf/tools/trpidannotate.txt`.

#### **trprint**

Enables viewing and printing trace files in a human-readable format. For documentation, see `$PVLIB_HOME/Docs/astf/tools/trprint.txt`.

### 4.4.5 ASTFplugin FAQs

These FAQs answer some common queries about `ASTFplugin`.

#### **How do I trace a workload running in a multi-core Linux environment?**

I want to trace an application's workload running in a guest multi-core Linux environment but Linux OS migrates applications between cores. What should I do?

When using the `HLT` method of toggling trace with `ToggleMTIPlugin`, ASTF tracing in Fast Models is per-core. So, you must enable the `enable_trace_special_hlt_imm16` and `trace_special_hlt_imm16` parameters for all of the cores in the simulation.

See also [How to use ToggleMTIPlugin](#).

### What are the architectural limitations of ASTFplugin?

ASTF v0.11 supports up to Armv9.3-A. The plug-in is not guaranteed to work for architecture versions later than that.

### Does ASTF trace generation have a maximum trace file size?

No, it runs until your disk space is full and is killed by your OS.

### How much trace data should I capture?

A minimum trace log size of around 100M instructions is recommended to account for cache warming. A maximum of 10B instructions is recommended for efficient post-processing and analysis.

### If I generate traces for multiple programs, how do I distinguish between them in the trace logs?

If the guest Linux kernel is configured with 'CONFIG\_PID\_IN\_CONTEXTIDR' enabled, PID information is included in the `context` section of the trace logs. For example:

```
5 context : CPU in EL0, non-secure, thread-mode PID: 29193
```

PID information is only recorded if there is a PID change on a core.

### Can ASTFplugin trace process and thread IDs?

ASTFplugin supports recording PID/TID information through the `CONTEXTIDR_EL1` register, if the guest supports it. However that requires an additional pass for full PID/TID information. Is there a way to collect PID/TID information that doesn't require a re-run?

It is possible to do this with some additional post-processing. ASTFplugin traces PIDs using the `CONTEXTIDR_EL1` register and includes them in the trace, if they are available, in the first run. To fully match up the PIDs and TIDs in the trace, you then need to generate a PID-TID map from the OS and use the `trpidannotate` tool to amend the trace with the appropriate TID information.

See also [ASTF tools](#).

### Are timing controls, for example `cpi_div` and `cpi_mu1`, or Timing Annotation settings changeable at runtime?

No, they are only changeable at instantiation time.

### How does the plug-in distinguish between different clusters and cores?

The plug-in has no concept of the cluster and core topology of the model. It simply queries whether each component can execute code. If it can, the plug-in attaches itself to the trace sources

of the component that it needs to generate the ASTF streams. If not, it ignores that component. The resulting file names that include the clusters and cores are generated by the model and accepted by the plug-in.

### Why do files seem to be missing?

For example, in a model with two CPUs, I want to record two blocks. Files `cpu0.0000.astf` and `cpu1.0000.astf` record the first block and `cpu0.0001.astf` records the second block. Why is `cpu1.0001.astf` missing?

If a CPU is inactive while the plug-in is recording, the plug-in omits generating the associated file. Otherwise, the file would only contain the ASTF header and nothing else. So if a file is missing, it might be because that CPU was not active while the plug-in was recording.

### Why does the running counter for my files sometimes start with 0000 and sometimes with 0001?

When you request the plug-in to stop recording, it increments the running counter to ensure the next block's ASTF files have a different filename to those of the current block.

By default, the plug-in starts recording after it has initialised. However, if you request the plug-in to stop recording immediately, it increments the running counter and produces no `cpu*.0000.astf` files, because none of the CPUs had the chance to execute code. If you then request the plug-in to continue recording, the next block's stream files will have the 0001 counter value in their names.

### Why do I see messages about missing trace sources?

For example:

```
trace source SVE_LOADS/SVE_STORES not detected -> omitting registration
```

The plug-in is not feature-aware and therefore does not know if a CPU supports SVE. As a result, it always tries to register `SVE_LOADS` and `SVE_STORES` trace sources. If a CPU does not support SVE and this message appears, you can safely ignore it.

## 4.5 BranchPrediction

The `BranchPrediction` plug-in enables branch prediction modeling in Fast Models. The `BranchPrediction` plug-in is deprecated. It might be modified or removed in a future release.

Branch prediction is an aspect of Timing Annotation. For more details, see [Timing Annotation](#) in the Fast Models User Guide.

The type of branch predictor to use is selected using the `predictor-type` parameter. It can be one of the following example branch predictors that Arm provides, or a user-defined one:

#### FixedDirectionPredictor

Always takes a preset fixed direction.

**BiModalPredictor**

Standard 2-bit strength predictor.

**GSharePredictor**

Standard global history sharing predictor.

**HybridPredictor**

Selects the majority result from the bimodal predictor, fixed-direction predictor, and a random predictor.

**CortexA53Predictor**

Cortex®-A53 branch predictor. This is the default.

## 4.5.1 BranchPrediction - parameters

This section describes the parameters for the BranchPrediction plug-in.

Each parameter is prefixed with `BranchPrediction.BranchPrediction`, for example:

```
BranchPrediction.BranchPrediction.bpstat-branchcount
```

**Table 4-3: BranchPrediction parameters**

Name	Type	Default value	Allowed values	When set	Description
bpstat-branchcount	int	-0x1	0x0 - 0x7fffffffffffffffff	Init time	The number of branch instructions to display. Set to -1 to display all branch instructions.
bpstat-pathfilename	string	""	""	Init time	The path and filename of the branch statistics log.
mispredict-latency	int	0x8	0x0 - 0x7fffffffffffffffff	Init time	The number of instructions that are flushed for every misprediction.
predictor-type	string	"CortexA53Predictor"	""	Init time	The type of branch predictor to use.

## 4.5.2 BranchPrediction output example

This example command line configures and loads the BranchPrediction plug-in, using the FVP\_Base\_Cortex\_A73 example platform.

```
./isim_system -a __image.axf \
...
--plugin $PVLIB_HOME/plugins/Linux64_GCC-9.3/BranchPrediction.so \
-C BranchPrediction.BranchPrediction.predictor-type=BiModalPredictor \
-C BranchPrediction.BranchPrediction.mispredict-latency=8 \
-C BranchPrediction.BranchPrediction.bpstat-pathfilename=bpstat.txt \
-C BranchPrediction.BranchPrediction.bpstat-branchcount=5
```

This command produces the following log file, called `bpstat.txt`:

```
Processor Core: ARM_Cortex-A73
Cluster instance: 0
Core instance: 0
Mispredict Latency: 8
Image executed: _image.axf
PredictorType: BiModalPredictor
Total branch calls: 7757
Total Mispredictions: 130
Average prediction accuracy: 0.983241
Conditional Branches: 139
Total unique branch instructions: 289
--Branch instructions--
  PC Addr      Calls    Mispredict Accuracy
[0] 0x0         2         0          1
[1] 0x80000000  1         0          1
[2] 0x8000000c 10         0          1
[3] 0x80000014 10         0          1
[4] 0x8000001c 10         0          1
```

### 4.5.3 Other ways to report branch mispredictions

These are some alternative ways to report branch mispredictions.

- The `GenericTrace` plug-in can generate MTI trace events that report branch mispredictions. For example:

```
--plugin $PVLIB_HOME/plugins/Linux64_GCC-9.3/GenericTrace.so \
-C TRACE.GenericTrace.trace-sources=BRANCH_MISPREDICT
```

The `BranchPrediction` plug-in must also be loaded to generate these events.

- The `BranchPrediction` plug-in is integrated with the PMU event counters. On a Linux boot simulation, you can track the number of simulated branch mispredictions in an application by loading the `BranchPrediction` plug-in and running the `perf` tool. For example, the following command displays the number of branch mispredictions that are made in an application called `testapp`:

```
perf stat e branch-misses testapp
```

## 4.6 CADIIPCRemoteConnection

Use this plug-in to make a remote CADI connection to a model.

The remote connection can be from a client on a different host machine, or from a client on the same host but using a specific port.

To enable remote connections, set the `enable_remote_cadi` plug-in parameter to true and specify an IP address to listen to, or `0.0.0.0` to listen to all adapters. Also, you must start a CADI server with the `-s` model parameter.

The default values for this plug-in restrict connections to be from the localhost (127.0.0.1) only.

## 4.7 CDE

Custom Datapath Extension (CDE) allows you to improve performance and efficiency by adding application domain-specific features to embedded processors, while maintaining the advantages of the Arm® software ecosystem.

CDE allows you to add a customizable module inside some Cortex®-M processors. This module is driven by the pre-decoded CDE instructions and shares the same interface as the standard Arithmetic Logic Unit (ALU) of the processor.

Fast Models implements CDE using Model Trace Interface (MTI) plug-ins, with parameters to allow the plug-ins to be configured at runtime. The following Fast Models support CDE:

- [ARMCortexM33CT](#)
- [ARMCortexM52CT](#)
- [ARMCortexM55CT](#)
- [ARMCortexM85CT](#)
- [ARMAEMv8MCT](#)

The following model parameters are exposed for configuring CDE:

### **has\_cde**

Controls whether CDE is enabled. If enabled, a plug-in must be provided.

### **--plugin <path/to/plugin.so>**

This option can be specified multiple times, once for each CDE plug-in implementation.

Alternatively, plug-ins can be loaded by setting the `FM_PLUGINS` or `FM_TRACE_PLUGINS` environment variable.

### **cpu.cde\_impl\_name=<plugin\_name>**

The CDE implementation name to use with this core. If multiple CDE plug-in implementations are provided, each core can be requested to use a specific plug-in by using `cpu<n>.cde_impl_name=...`

Two example plug-ins are available, `CDETester` and `CDEConstant`. They are provided as pre-built libraries and as source code, located in `$PVLIB_HOME/plugins/source/`, to help with implementing your own plug-ins.

### 4.7.1 CDETester

CDETester is a basic example plug-in that allows you to specify at runtime which CDE instructions are supported by individual coprocessors and to specify the behavior, either nop or undefined.

To specify the instructions that coprocessors support, provide a plug-in parameter of the form:

```
CDE.CDETester.cde_tester_trivial.cps_implemented_instr=0xn
```

where `0xn` represents a hexadecimal bitmask of coprocessors that implement this instruction and `instr` represents a CDE instruction name.

The full list of CDE instruction names is as follows, where `a` represents dual variants and `v` represents vector variants:

- `cx1`
- `cx2`
- `cx3`
- `cx1d`
- `cx2d`
- `cx3d`
- `vcx1`
- `vcx2`
- `vcx3`
- `vcx1v`
- `vcx2v`
- `vcx3v`

Accumulate variants are handled in the same function implementation as the non-accumulate variants.

The bitmask takes the form:

**bits [7:0]**

For non-accumulate variants.

**bits [23:16]**

For accumulate variants.

The plug-in also allows control over which coprocessors implement CDE through the `CDE.CDETester.cde_tester_trivial.cps_implemented=0xn` parameter, where `0xn` represents a hexadecimal bitmask of coprocessors that implement CDE.

An example invocation to enable cx1 and cx1a (accumulate) for CP3 might be written as:

```
CDE.CDETester.cde_tester_trivial.cps_implemented=0x8 // enable CDE support for CP3
CDE.CDETester.cde_tester_trivial.cps_implemented_cx1=0x80008 // enable CX1 and CX1A
on CP3 (behaves as nop rather than undef)
```

On Linux, you can retrieve an up-to-date list of parameters from the model by using:

```
-l | grep -i cdetester
```

## 4.7.2 CDETester - parameters

This section describes the parameters for the CDETester plug-in.

Each parameter is prefixed with `CDE.CDETester`, for example:

```
CDE.CDETester.cde_tester_trivial.cps_implemented
```

**Table 4-4: CDETester parameters**

Name	Type	Default value	Allowed values	When set	Description
<code>cde_tester_trivial.cps_implemented</code>	int	0xff00ff	0x0 - 0xffffffff	Init time	Bitmask indicating coprocessors implemented.
<code>cde_tester_trivial.cps_implemented_cx1</code>	int	0xff00ff	0x0 - 0xffffffff	Init time	Coprocessor enables CX1 instructions ([23:16] for CX1A, [7:0] for CX1).
<code>cde_tester_trivial.cps_implemented_cx1d</code>	int	0xff00ff	0x0 - 0xffffffff	Init time	Coprocessor enables CX1D instructions ([23:16] for CX1DA, [7:0] for CX1D).
<code>cde_tester_trivial.cps_implemented_cx2</code>	int	0xff00ff	0x0 - 0xffffffff	Init time	Coprocessor enables CX2 instructions ([23:16] for CX2A, [7:0] for CX2).
<code>cde_tester_trivial.cps_implemented_cx2d</code>	int	0xff00ff	0x0 - 0xffffffff	Init time	Coprocessor enables CX2D instructions ([23:16] for CX2DA, [7:0] for CX2D).
<code>cde_tester_trivial.cps_implemented_cx3</code>	int	0xff00ff	0x0 - 0xffffffff	Init time	Coprocessor enables CX3 instructions ([23:16] for CX3A, [7:0] for CX3).
<code>cde_tester_trivial.cps_implemented_cx3d</code>	int	0xff00ff	0x0 - 0xffffffff	Init time	Coprocessor enables CX3D instructions ([23:16] for CX3DA, [7:0] for CX3D).
<code>cde_tester_trivial.cps_implemented_vcx1</code>	int	0xff00ff	0x0 - 0xffffffff	Init time	Coprocessor enables VCX1 instructions ([23:16] for VCX1A, [7:0] for VCX1).
<code>cde_tester_trivial.cps_implemented_vcx1v</code>	int	0xff00ff	0x0 - 0xffffffff	Init time	Coprocessor enables VCX1 (Vector) instructions ([23:16] for VCX1A (Vector), [7:0] for VCX1 (Vector)).
<code>cde_tester_trivial.cps_implemented_vcx2</code>	int	0xff00ff	0x0 - 0xffffffff	Init time	Coprocessor enables VCX2 instructions ([23:16] for VCX2A, [7:0] for VCX2).
<code>cde_tester_trivial.cps_implemented_vcx2v</code>	int	0xff00ff	0x0 - 0xffffffff	Init time	Coprocessor enables VCX2 (Vector) instructions ([23:16] for VCX2A (Vector), [7:0] for VCX2 (Vector)).
<code>cde_tester_trivial.cps_implemented_vcx3</code>	int	0xff00ff	0x0 - 0xffffffff	Init time	Coprocessor enables VCX3 instructions ([23:16] for VCX3A, [7:0] for VCX3).

Name	Type	Default value	Allowed values	When set	Description
cde_tester_trivial.cps_implemented_vcx3v	int	0xff00ff	0x0 - 0xffffffff	Init time	Coprocessor enables VCX3 (Vector) instructions ([23:16] for VCX3A (Vector), [7:0] for VCX3 (Vector)).
has_cde_tester_trivial	bool	true	true, false	Init time	Whether the CDETester plugin is implemented (undefs all CDE instructions).

### 4.7.3 CDEConstant

This is an example plug-in that provides an implementation for every CDE instruction variant, for example [v]cxn, [v]cxnA, and [v]cxnD. Each instruction simply performs an XOR with some arguments and a constant.

To load this plug-in, use the following parameters when launching the model:

```
--plugin path/to/plugin/CDEConstant.so -C cpu.has_cde=1 -C
cpu.cde_impl_name=CDE_CONSTANT
```

### 4.7.4 CDEConstant - parameters

This section describes the parameters for the CDEConstant plug-in.

Each parameter is prefixed with `CDE.CDEConstant`, for example:

```
CDE.CDEConstant.has_cde_constant
```

**Table 4-5: CDEConstant parameters**

Name	Type	Default value	Allowed values	When set	Description
has_cde_constant	bool	true	true, false	Init time	Whether the CDEConstant plugin is implemented.

### 4.7.5 Implementing a CDE plug-in

Fast Models supports prototyping of custom instructions through a modular plug-in system, which uses the Model Trace Interface (MTI) framework.

Multiple CDE plug-ins can be registered with the model and each core can be instructed which plug-in behavior to use. Run-time configuration of CDE plug-ins is performed using plug-in parameters, although plug-in developers can use alternative approaches, for example configuration files.

This guide shows how to implement a basic MTI-based CDE plug-in, using the CDETester plug-in as an example. It is intended to be a quick start to plug-in development, and does not describe details about MTI. To learn more about MTI, see [Model Trace Interface Reference Manual](#). The source code for CDETester can be found in `$PVLIB_HOME/plugins/source/CDETester/`.

A CDE plug-in performs three main tasks:

- MTI and CDE interface registration.
- Handling parameters.
- Implementing CDE instructions.

### Related information

- [CDETester](#)

#### 4.7.5.1 Prerequisites for implementing a CDE plug-in

To build the CDE plug-in examples, you need the following:

- A compiler that matches the Fast Models build you are using.
- A recent version of CMake.
- An installation of the Fast Models package and libraries.

#### 4.7.5.2 CDE plug-in registration

After a CDE plug-in has been loaded into the model through the `--plugin` argument, or the `FM_TRACE_PLUGINS` environment variable, it must register itself with the CDE interface registry using the MTI framework API.

The CDE interface registry is responsible for:

- Managing all loaded CDE plug-ins.
- Passing any parsed arguments to the relevant CDE plug-in.
- Assigning CDE plug-ins to cores, as requested by the model arguments.

The CDE interface registry requires an interface name and version to be registered through MTI, as shown in `CDETester.cpp` and `CDETesterTrivialImpl.h`.

#### 4.7.5.3 CDE plug-in parameters

After the plug-in has registered itself with the CDE interface registry, the model passes any parsed command-line parameters to the CDE plug-in they are associated with.

The parameters to the `CDETester` example plug-in allow you to specify which custom instructions result in a no operation (nop) for each coprocessor. Any instructions that are not enabled result in an Undefined Instruction exception being raised.

The plug-in handles parameters that it receives from the model in `CDETester.cpp` by passing them through the `CDETesterFactory` interface to the handler implementation in `CDETrivialImpl::consumeParameter()`, defined in `CDETesterTrivialImpl.cpp`.

## Related information

- [CDETester](#)

### 4.7.5.4 CDE plug-in instruction handler interface

After plug-in registration and optional parameter handling, the plug-in should implement handlers for all available CDE instructions, even if it does not intend to implement custom functionality for all instruction variants.

To help you do this, Fast Models provides a utility header, `$PVLIB_HOME/include/ct/CDE/CDEInstHandlerInterface.h`. This header defines the `CDEInstHandlerInterface` class for handling CDE instruction calls, which plug-ins must inherit.

This interface declares pure virtual methods for each CDE instruction variant, for example dual and accumulator, as well as the structures containing decode information and call results. A typical signature follows this pattern:

```
CDEResult64 CDETrivialImpl::exec_cx2_d(const CX2DecodeInfo& decode_info, uint64_t
rfd_val, uint32_t rn_val)
```

The `CDETester` example plug-in inherits this interface in `CDETesterBaseImpl.h` and implements the instructions in `CDETesterTrivialImpl.h` and `CDETesterTrivialImpl.cpp`.

### 4.7.5.5 CDE plug-in instruction implementations

Each CDE instruction is mapped to a single function definition, except for accumulate variants, which are handled by checking for the accumulate flag in the parameters passed to the instruction implementations.

The full list of instructions that a plug-in is expected to implement is given in [CDETester](#).

Each instruction implementation accepts as parameters:

- A structure containing decoded instruction opcode parameters, including register numbers and immediate. For example `CX1DecodeInfo`.
- The contents of registers specified in the instruction opcode.

Instruction implementations should return a result structure of varying size, for example `CDEResult32` or `CDEResult64`. This structure indicates whether the instruction is supported, and if so, the return value and the number of cycles taken for execution, which is used in trace and performance analysis.

If a plug-in needs to raise an Undefined Instruction exception for a particular instruction, it can simply return a default-initialized result structure.

For full details of the expected function declarations and parameter types, see the file `$PVLIB_HOME/include/ct/CDE/CDEInstHandlerInterface.h`.

#### 4.7.5.6 Building the CDE plug-in

During plug-in development, either modify the example `cMakeLists.txt` files provided with the CDE plug-ins to reflect any changes to the file structure, or alternatively, use your own build system.

To build the example plug-ins:

1. Run `cmake` on the root directory of the plug-in to generate the project file, for example a Makefile or Visual Studio solution.
2. Run `make`.

### 4.7.6 CDE API

Reference documentation for the CDE API.

The CDE API is defined in the following header files, which are located in `$PVLIB_HOME/include/ct/CDE/`:

- `CDEFactoryInterface.h`
- `CDEInstHandlerInterface.h`
- `CDERegistryInterface.h`

#### 4.7.6.1 CDEFactoryInterface.h

Defines the interface for obtaining an instance of a `CDEInstHandlerInterface` for a specific core.

##### 4.7.6.1.1 CDE::CDEFactoryInterface class

The factory interface for obtaining an instance of a `CDEInstHandlerInterface` for a specific core.

##### 4.7.6.1.2 CDE::CDEFactoryInterface::instantiateCDEInstHandler()

Instantiate a `CDEInstHandlerInterface` for a given core. The caller owns the result.

```
virtual std::unique_ptr<CDEInstHandlerInterface>  
instantiateCDEInstHandler(std::string component_hierarchy) = 0;
```

#### **component\_hierarchy**

String representing the hierarchy of the current component.

#### 4.7.6.1.3 CDE::CDEFactoryInterface::CDEImplName()

Return the name of the CDE implementation. A core can use this method to disambiguate multiple CDE implementations in a simulation.

```
virtual std::string CDEImplName() const = 0;
```

#### 4.7.6.1.4 CDE::CDEFactoryInterface::CDEImplDescription()

Description of the CDE implementation.

Return the description of the CDE implementation that can be instantiated.

```
virtual std::string CDEImplDescription() const = 0;
```

#### 4.7.6.1.5 CDE::CDEFactoryInterface::CDEImplProviderName()

Provider name of the CDE implementation.

Return the name of the component providing the CDE implementation, for example a plug-in. This name might be used in informative diagnostic messages.

```
virtual std::string CDEImplProviderName() const = 0;
```

### 4.7.6.2 CDEInstHandlerInterface.h

Defines the interface for executing CDE instructions.

#### 4.7.6.2.1 CDE::CDEResult32 struct

32-bit result of a CDE instruction.

##### Members

##### **instr\_not\_supported**

Whether the instruction is supported.

##### **value**

Return value of the instruction.

##### **cycles**

Number of cycles of instruction execution.

#### 4.7.6.2.2 CDE::CDEResult64 struct

64-bit result of a CDE instruction.

##### Members

###### **instr\_not\_supported**

Whether the instruction is supported.

###### **value**

Return value of the instruction.

###### **cycles**

Number of cycles of instruction execution.

#### 4.7.6.2.3 CDE::CDEResult128 struct

128-bit result of a CDE instruction.

##### Members

###### **instr\_not\_supported**

Whether the instruction is supported.

###### **value\_lo**

Low 64 bits of the return value of the instruction.

###### **value\_hi**

High 64 bits of the return value of the instruction.

###### **cycles**

Number of cycles of instruction execution.

#### 4.7.6.2.4 CDE::CX1DecodeInfo struct

Decoded information for the cx1 instruction.

##### Members

###### **accumulate**

Whether to accumulate with existing register contents.

###### **coproc**

Number of coproc.

###### **imm**

Immediate value.

###### **rd\_num**

General-purpose destination register number.

#### 4.7.6.2.5 CDE::CX2DecodeInfo struct

Decoded information for the cx2 instruction.

##### Members

###### **accumulate**

Whether to accumulate with existing register contents.

###### **coproc**

Number of coproc.

###### **imm**

Immediate value.

###### **rd\_num**

General-purpose destination register number.

###### **rn\_num**

General-purpose source register number.

#### 4.7.6.2.6 CDE::CX3DecodeInfo struct

Decoded information for the cx3 instruction.

##### Members

###### **accumulate**

Whether to accumulate with existing register contents.

###### **coproc**

Number of coproc.

###### **imm**

Immediate value.

###### **rd\_num**

General-purpose destination register number.

###### **rn\_num**

General-purpose source register number.

###### **rm\_num**

General-purpose source register number.

#### 4.7.6.2.7 CDE::VCX1DecodeInfo struct

Decoded information for the vcx1 instruction.

##### Members

###### **accumulate**

Whether to accumulate with existing register contents.

###### **coproc**

Number of coproc.

###### **imm**

Immediate value.

###### **vd\_num**

Source and destination vector register number.

#### 4.7.6.2.8 CDE::VCX2DecodeInfo struct

Decoded information for the vcx2 instruction.

##### Members

###### **accumulate**

Whether to accumulate with existing register contents.

###### **coproc**

Number of coproc.

###### **imm**

Immediate value.

###### **vd\_num**

Source and destination vector register number.

###### **vm\_num**

Source vector register number.

#### 4.7.6.2.9 CDE::VCX3DecodeInfo struct

Decoded information for the vcx3 instruction.

##### Members

###### **accumulate**

Whether to accumulate with existing register contents.

###### **coproc**

Number of coproc.

**imm**

Immediate value.

**vd\_num**

Source and destination vector register number.

**vn\_num**

Source vector register number.

**vm\_num**

Source vector register number.

#### 4.7.6.2.10 [CDE::CDEInstHandlerInterface class](#)

Interface for executing CDE instructions.

This class defines the following methods for executing CDE instructions:

**exec\_cx1()**

cx1 instruction.

**exec\_cx1\_d()**

cx1D instruction.

**exec\_cx2()**

cx1 instruction.

**exec\_cx2\_d()**

cx2D instruction.

**exec\_cx3()**

cx3 instruction.

**exec\_cx3\_d()**

cx3D instruction.

**exec\_vcx\_1\_s()**

vcx1 instruction with S register.

**exec\_vcx\_1\_d()**

vcx1 instruction with D register.

**exec\_vcx\_1\_q()**

vcx1 instruction with Q register.

**exec\_vcx\_2\_s()**

vcx2 instruction with S register.

**exec\_vcx\_2\_d()**

vcx2 instruction with D register.

**exec\_vcx\_2\_q()**

vcx2 instruction with Q register.

**exec\_vcx\_3\_s()**

vcx3 instruction with S register.

**exec\_vcx\_3\_d()**

vcx3 instruction with D register.

**exec\_vcx\_3\_q()**

vcx3 instruction with Q register.

**exec\_vcx\_1\_beatwise()**

vcx1 instruction for one beat. Caller handles predicated writeback.

**exec\_vcx\_2\_beatwise()**

vcx2 instruction for one beat. Caller handles predicated writeback.

**exec\_vcx\_3\_beatwise()**

vcx3 instruction for one beat. Caller handles predicated writeback.

**4.7.6.2.11 CDE::CDEInstHandlerInterface::getCDECoprocessorMask()**

Return a bitmask indicating which coprocessor numbers this CDE implementation subsumes.

```
virtual uint8_t getCDECoprocessorMask() = 0;
```

**4.7.6.3 CDERegistryInterface.h**

Defines the interface to allow components, for instance plug-ins, to contribute CDE implementations to the simulation.

**4.7.6.3.1 CDE::CDERegistryInterface class**

Interface to register the CDE factory.

```
class CDERegistryInterface : public eslapi::CAInterface
```

This class is the interface to register the CDE factory into the Fast Models simulation component registry.

**4.7.6.3.2 CDE::CDERegistryInterface::registerCDEFactory()**

Register the CDE factory with the simulation.

```
virtual bool registerCDEFactory(std::ostream& error_stream, CDEFactoryInterface*  
interface) = 0;
```

**error\_stream**

The error stream.

**interface**

The CDE factory interface used to register.

#### 4.7.6.3.3 CDE::CDERegistryInterface::unregisterCDEFactory()

Unregister the CDE factory from the simulation.

```
virtual void unregisterCDEFactory(CDEFactoryInterface* interface) = 0;
```

**interface**

The CDE factory interface used to unregister.

#### 4.7.6.3.4 CDE::CDERegistryInterface::sendToCores()

Instantiate a CDEInstHandler and send it to the core.

The core can then call the CDE instruction execution functions provided by the plug-in on that CDEInstHandler.

```
virtual bool sendToCores() = 0;
```

## 4.8 CDELoader

CDELoader is a framework to enable rapid Arm Custom Instruction (ACI) prototyping.

It was introduced in Fast Models 11.27 as an alternative to the existing Custom Datapath Extension (CDE) plug-in framework.

To simplify the task of implementing Arm custom instructions, the CDELoader framework handles the required plug-in setup. The ACI developer only needs to provide a shared object, the ACI library.

The framework has the following parts:

**CDELoader**

A Fast Models plug-in designed to remove the need for MTI setup from ACI development. At runtime, CDELoader loads the shared object and executes the custom instruction implementation it provides.

CDELoader can accept multiple shared objects, allowing each core to specify which one to use. It also supports runtime configuration through an opaque string, which the ACI library can process according to its own requirements.

## API layer

A C99 API that defines the interface that the ACI library is bound by. It is located in `$PVLIB_HOME/include/ct/CDE/ACILibraryAPI.h`. It includes functions related to:

- Library creation, deletion, naming, and versioning.
- Custom instruction execution. These are the `aci_exec_*` functions.
- [Custom instruction mnemonics](#).

## ACI library

A shared object that provides implementations for the custom instructions and library functions.

As the CDELoader framework uses a C99 API, the library can be written in C or in another language that can produce ABI-compatible shared objects and can interface with C. For example, C++, Rust, Go, or Python, through C extensions.

Note

Languages other than C can require extra wrapper code to ensure proper interaction with the C99 API and to meet the shared object requirements. The implementation and compatibility details might vary depending on the language and toolchain used.

An example ACI library, called ACIConstant, is provided as both a pre-built library and as source code, located in `$PVLIB_HOME/plugins/source/ACIConstant/` to help you implement your own libraries. This plug-in mirrors the example [CDEConstant](#) implementation for the [CDE](#) plug-in framework.

This figure shows the framework:

**Figure 4-1: CDELoader and ACI library**

The following model parameters are exposed for using CDELoader:

**-C `cpu.has_cde=[0|1]`**

Controls whether this core enables CDE.

**-C `cpu.cde_impl_name=<aci_library_name>`**

Sets the ACI library name to use with this core. The library name is returned by `aci_get_library_name()`.

If multiple shared objects are provided, each core can request to use a specific implementation by using `cpu<n>.cde_impl_name=...`

**--plugin <path/to/CDELoader.so>**

Loads the CDELoader plug-in. Alternatively, set the `FM_PLUGINS` environment variable to the full path of the plug-in. For more details, see [Loading a plug-in](#).

For the CDELoader plug-in parameters, see [CDELoader - parameters](#).

For example:

```
./isim_system \
-C cpu_has_cde=1 \
--plugin $plugin_dir/CDELoader.so \
-C cpu.cde_impl_name=ACI_LIBRARY_NAME \ # defined in aci_get_library_name()
-C CDE.CDELoader.aci_object_files="path/to/aci_library_obj_file, path/to/another/
aci_library_obj_file" \
-C CDE.CDELoader.aci_parameters="Opaque string parameter to be processed by the ACI
library"
```

## 4.8.1 CDELoader - parameters

This section describes the parameters for the CDELoader plug-in.

Each parameter is prefixed with `CDE.CDELoader`, for example:

```
CDE.CDELoader.aci_object_files
```

**Table 4-6: CDELoader parameters**

Name	Type	Default value	Allowed values	When set	Description
aci_object_files	string	""	""	Init time	Comma-separated list of path to shared objects to load.
aci_parameters	string	""	""	Init time	Opaque string parameter to be processed by the ACI library.

## 4.8.2 ACI library implementation

Each CDE instruction is mapped to a single function definition, except for accumulate variants which are handled by checking for the accumulate flag in the parameters passed to the instruction implementations.

The following table lists the CDE instruction functions that an ACI library must implement. A *d* suffix represents a dual variant and a *v* suffix represents a vector variant.

**Table 4-7: Mapping CDE instructions to ACI library function definitions**

Instruction	ACILibraryAPI.h function
cx1	aci_exec_cx1()
cx2	aci_exec_cx2()

Instruction	ACILibraryAPI.h function
cx3	aci_exec_cx3()
cx1d	aci_exec_cx1_d()
cx2d	aci_exec_cx2_d()
cx3d	aci_exec_cx3_d()
vcx1 (single-register variant)	aci_exec_vx1_s()
vcx2 (single-register variant)	aci_exec_vx2_s()
vcx3 (single-register variant)	aci_exec_vx3_s()
vcx1 (double-register variant)	aci_exec_vx1_d()
vcx2 (double-register variant)	aci_exec_vx2_d()
vcx3 (double-register variant)	aci_exec_vx3_d()
vcx1v	aci_exec_vx1_beatwise()
vcx2v	aci_exec_vx2_beatwise()
vcx3v	aci_exec_vx3_beatwise()

The library must also implement some library-related functions. For full details of the library function definitions, see `$PVLIB_HOME/include/ct/CDE/ACILibraryAPI.h`.

If you do not wish to support a particular instruction or instruction variant, the function implementation can simply return `ACI_STATUS_NOT_IMPLEMENTED`.

The ACI API defines an opaque pointer, `ACIHandle`, which, for complex implementations, can be mapped to an object of a class that handles the library functions. For simple and quick implementations, you can ignore the handle pointer.

### ACI library dependencies

CDELoader dynamically loads shared objects that are standalone and do not depend on external libraries, for example compiler-specific libraries.

To resolve the external dependencies, either include them statically when compiling the shared object or ensure they exist in a path that is visible to the model. Always list all dependencies for your shared objects and check they are present before running the model.

### 4.8.3 ACIConstant example ACI library

You can find the source code for an example ACI library which implements `ACILibraryAPI.h` in `$PVLIB_HOME/plugins/source/ACIConstant/ACILibrary.cpp`.

The implementation mirrors the output of the [CDEConstant](#) plug-in.

The example is also provided as a pre-built library. To load this library, add the following parameters when launching the model:

```
--plugin $plugin_dir/CDELoader.so \  
-C cpu.has_cde=1 \  
-C cpu.cde_impl_name=ACI_CONSTANT \  
-C CDE.CDELoader.aci_object_files=$plugin_dir/ACIConstant.so
```

Alternatively, you can build the library yourself using the example Makefile provided with the ACIConstant source code. If you have problems loading the library while running the model, ensure all necessary compiler-specific libraries are visible to the model.

## 4.8.4 Custom instruction mnemonics

This is an optional feature that allows you to specify meaningful, human-readable mnemonics for your custom instructions to improve the readability of log files.

`ACILibraryAPI.h` declares a struct named `ACIMnemonics` which contains the strings used as custom mnemonics. These strings can be retrieved using the `aci_get_custom_mnemonics()` function, and they can subsequently be used by trace plug-ins loaded with the model.

Refer to the [ACIConstant example ACI library](#) source code for an example on how to define custom mnemonics.

## 4.8.5 ACI library API

Reference documentation for the ACI library API.

The ACI library API is defined in the header file `ACILibraryAPI.h`, which is located at `$PVLIB_HOME/include/ct/CDE/ACILibraryAPI.h`.

### 4.8.5.1 ACIHandle

Opaque type specifying a handle for the ACI library. This handle is passed to all the `aci_exec_*` functions.

```
typedef struct ACIHandleInstance* ACIHandle;
```

#### 4.8.5.2 aci\_get\_library\_version()

Return the library version, ACI\_API\_VERSION.

This is part of a check conducted by the model to confirm that both it and the library are operating on the same version of this API.

```
ACI_EXPORT uint16_t aci_get_library_version(void);
```

#### 4.8.5.3 aci\_get\_library\_name()

Return the library name.

The model parameter `cpu.cde_impl_name` is used to select the library. This parameter can be used to quickly change which library is used when providing multiple libraries. Each core can request to use a specific library by using `cpu<n>.cde_impl_name=...`

```
ACI_EXPORT const char* aci_get_library_name(void);
```

#### 4.8.5.4 aci\_get\_coprocessor\_mask()

Provide a bitmask that signifies the coprocessor numbers encompassed by this ACI implementation.

```
ACI_EXPORT uint8_t aci_get_coprocessor_mask(void);
```

#### 4.8.5.5 aci\_set\_param()

Sets the parameter provided to the model for the ACI library.

```
ACI_EXPORT void aci_set_param(const char* parameter);
```

##### **parameter**

A generic string that can be processed in any way that fits the library's implementation. This can be set using the model parameter `CDELoader.aci_parameters`.

#### 4.8.5.6 aci\_new()

Constructor of the ACI library.

Return a handle object which can be nullptr if there is no handle needed.

```
ACI_EXPORT ACIHandle aci_new(void);
```

### 4.8.5.7 aci\_free()

Destructor of the ACI library.

```
ACI_EXPORT void aci_free(ACIHandle handle);
```

**handle**

Object to free, can be ignored if there was no handle allocated.

### 4.8.5.8 ACICX1DecodeInfo struct

Decode information of cx1 instruction.

**Members****accumulate**

Whether to accumulate with existing register contents.

**coproc**

Number of coproc.

**imm**

Immediate value.

**rd\_num**

General-purpose destination register number.

### 4.8.5.9 aci\_exec\_cx1()

Instruction CX1.

Return ACI\_STATUS\_OK on success, or ACI\_STATUS\_NOT\_IMPLEMENTED if instruction is not implemented.

```
ACI_EXPORT ACI_Status aci_exec_cx1(ACIHandle handle,
                                   const ACICX1DecodeInfo* decode_info,
                                   uint32_t rd_val,
                                   uint32_t* result);
```

**handle**

ACI handle object created by aci\_new().

**decode\_info**

Decoded fields for the CX1 instruction.

**rd\_val**

Value of the destination register.

**result**

Pointer to the value returned by the CX1 instruction.

#### 4.8.5.10 `aci_exec_cx1_d()`

Instruction CX1D.

Return `ACI_STATUS_OK` on success, or `ACI_STATUS_NOT_IMPLEMENTED` if instruction not implemented.

```
ACI_EXPORT ACI_Status aci_exec_cx1_d(ACIHandle handle,
                                   const ACICX1DecodeInfo* decode_info,
                                   uint64_t rfd_val,
                                   uint64_t* result);
```

**handle**

ACI handle object created by `aci_new()`.

**decode\_info**

Decoded fields for the CX1D instruction.

**rfd\_val**

Value of the first of the destination register pair.

**result**

Pointer to the value returned by the CX1D instruction.

#### 4.8.5.11 `ACICX2DecodeInfo` struct

Decode information of cx2 instruction.

### Members

**accumulate**

Whether to accumulate with existing register contents.

**coproc**

Number of coproc.

**imm**

Immediate value.

**rd\_num**

General-purpose destination register number.

**rn\_num**

General-purpose source register number.

#### 4.8.5.12 aci\_exec\_cx2()

Instruction CX2.

Return `ACI_STATUS_OK` on success, or `ACI_STATUS_NOT_IMPLEMENTED` if instruction not implemented.

```
ACI_EXPORT ACI_Status aci_exec_cx2(ACIHandle      handle,
                                   const ACICX2DecodeInfo* decode_info,
                                   uint32_t         rd_val,
                                   uint32_t         rn_val,
                                   uint32_t*        result);
```

**handle**

ACI handle object created by `aci_new()`.

**decode\_info**

Decoded fields for the CX2 instruction.

**rd\_val**

Value of the destination register.

**rn\_val**

Value of the source register.

**result**

Pointer to the value returned by the CX2 instruction.

#### 4.8.5.13 aci\_exec\_cx2\_d()

Instruction CX2D.

Return `ACI_STATUS_OK` on success, or `ACI_STATUS_NOT_IMPLEMENTED` if instruction not implemented.

```
ACI_EXPORT ACI_Status aci_exec_cx2_d(ACIHandle      handle,
                                      const ACICX2DecodeInfo* decode_info,
                                      uint64_t         rfd_val,
                                      uint32_t         rn_val,
                                      uint64_t*        result);
```

**handle**

ACI handle object created by `aci_new()`.

**decode\_info**

Decoded fields for the CX2D instruction.

**rfd\_val**

Value of the first of the destination register pair.

**rn\_val**

Value of the source register.

**result**

Pointer to the value returned by the CX2D instruction.

#### 4.8.5.14 ACICX3DecodeInfo struct

Decode information of cx3 instruction.

##### Members

**accumulate**

Whether to accumulate with existing register contents.

**coproc**

Number of coproc.

**imm**

Immediate value.

**rd\_num**

General-purpose destination register number.

**rn\_num**

General-purpose source register number.

**rm\_num**

General-purpose source register number.

#### 4.8.5.15 aci\_exec\_cx3()

Instruction CX3.

Return `ACI_STATUS_OK` ON SUCCESS, OR `ACI_STATUS_NOT_IMPLEMENTED` if instruction not implemented.

```
ACI_EXPORT ACI_Status aci_exec_cx3(ACIHandle      handle,
                                   const ACICX3DecodeInfo* decode_info,
                                   uint32_t         rd_val,
                                   uint32_t         rn_val,
                                   uint32_t         rm_val,
                                   uint32_t*         result);
```

**handle**

ACI handle object created by `aci_new()`.

**decode\_info**

Decoded fields for the CX3 instruction.

**rd\_val**

Value of the destination register.

**rn\_val**

Value of the source register.

**rm\_val**

Value of the source register.

**result**

Pointer to the value returned by the CX3 instruction.

#### 4.8.5.16 `aci_exec_cx3_d()`

Instruction CX3D.

Return `ACI_STATUS_OK` on success, or `ACI_STATUS_NOT_IMPLEMENTED` if instruction not implemented.

```
ACI_EXPORT ACI_Status aci_exec_cx3_d(ACIHandle handle,
                                     const ACICX3DecodeInfo* decode_info,
                                     uint64_t rfd_val,
                                     uint32_t rn_val,
                                     uint32_t rm_val,
                                     uint64_t* result);
```

**handle**

ACI handle object created by `aci_new()`.

**decode\_info**

Decoded fields for the CX3D instruction.

**rfd\_val**

Value of the first of destination register pair.

**rn\_val**

Value of the source register.

**rm\_val**

Value of the source register.

**result**

Pointer to the value returned by the CX3D instruction.

#### 4.8.5.17 `ACIVCX1DecodeInfo` struct

Decoded information for the vcx1 instruction.

### Members

**accumulate**

Whether to accumulate with existing register contents.

**coproc**

Number of coproc.

**imm**

Immediate value.

**vd\_num**

Source and destination vector register number.

**4.8.5.18 aci\_exec\_vcx1\_s()**

Instruction VCX1 with Single-register.

Return `ACI_STATUS_OK` on success, or `ACI_STATUS_NOT_IMPLEMENTED` if instruction not implemented.

```
ACI_EXPORT ACI_Status aci_exec_vcx1_s(ACIHandle      handle,
                                     const ACIVCX1DecodeInfo* decode_info,
                                     uint32_t          sd_val,
                                     uint32_t*         result);
```

**handle**

ACI handle object created by `aci_new()`.

**decode\_info**

Decoded fields for the VCX1 instruction.

**sd\_val**

32-bit value of the floating-point source and destination register.

**result**

Pointer to the value returned by the VCX1 instruction.

**4.8.5.19 aci\_exec\_vcx1\_d()**

Instruction VCX1 with Double-register.

Return `ACI_STATUS_OK` on success, or `ACI_STATUS_NOT_IMPLEMENTED` if instruction not implemented.

```
ACI_EXPORT ACI_Status aci_exec_vcx1_d(ACIHandle      handle,
                                     const ACIVCX1DecodeInfo* decode_info,
                                     uint64_t          dd_val,
                                     uint64_t*         result);
```

**handle**

ACI handle object created by `aci_new()`.

**decode\_info**

Decoded fields for the VCX1 instruction.

**dd\_val**

64-bit value of the floating-point source and destination register.

**result**

Pointer to the value returned by the VCX1 instruction.

#### 4.8.5.20 aci\_exec\_vcx1\_beatwise()

Instruction VCX1 for one beat. Caller handles predicated writeback.

Return `ACI_STATUS_OK` on success, or `ACI_STATUS_NOT_IMPLEMENTED` if instruction not implemented.

```
ACI_EXPORT ACI_Status aci_exec_vcx1_beatwise(ACIHandle          handle,
                                             const ACIVCX1DecodeInfo* decode_info,
                                             uint32_t          d_val,
                                             uint8_t           beat,
                                             uint8_t           elmt_mask,
                                             uint32_t*         result);
```

##### **handle**

ACI handle object created by `aci_new()`.

##### **decode\_info**

Decoded fields for the VCX1 instruction.

##### **d\_val**

32-bit value of the source and destination vector register.

##### **beat**

Beat-number to index into the Q regs.

##### **elmt\_mask**

Element mask.

##### **result**

Pointer to the value returned by the VCX1 instruction.

#### 4.8.5.21 ACIVCX2DecodeInfo struct

Decoded information for the vcx2 instruction.

##### **Members**

##### **accumulate**

Whether to accumulate with existing register contents.

##### **coproc**

Number of coproc.

##### **imm**

Immediate value.

##### **vd\_num**

Source and destination vector register number.

##### **vm\_num**

Source vector register number.

#### 4.8.5.22 aci\_exec\_vcx2\_s()

Instruction VCX2 with Single-register.

Return `ACI_STATUS_OK` on success, or `ACI_STATUS_NOT_IMPLEMENTED` if instruction not implemented.

```
ACI_EXPORT ACI_Status aci_exec_vcx2_s(ACIHandle          handle,
                                     const ACIVCX2DecodeInfo* decode_info,
                                     uint32_t             sd_val,
                                     uint32_t             sm_val,
                                     uint32_t*             result);
```

**handle**

ACI handle object created by `aci_new()`.

**decode\_info**

Decoded fields for the VCX2 instruction.

**sd\_val**

32-bit value of the floating-point source and destination register.

**sm\_val**

32-bit value of the floating-point source register.

**result**

Pointer to the value returned by the VCX2 instruction.

#### 4.8.5.23 aci\_exec\_vcx2\_d()

Instruction VCX2 with Double-register.

Return `ACI_STATUS_OK` on success, or `ACI_STATUS_NOT_IMPLEMENTED` if instruction not implemented.

```
ACI_EXPORT ACI_Status aci_exec_vcx2_d(ACIHandle          handle,
                                     const ACIVCX2DecodeInfo* decode_info,
                                     uint64_t             dd_val,
                                     uint64_t             dm_val,
                                     uint64_t*             result);
```

**handle**

ACI handle object created by `aci_new()`.

**decode\_info**

Decoded fields for the VCX2 instruction.

**dd\_val**

64-bit value of the floating-point source and destination register.

**dm\_val**

64-bit value of the floating-point source register.

**result**

Pointer to the value returned by the VCX2 instruction.

#### 4.8.5.24 `aci_exec_vcx2_beatwise()`

Instruction VCX2 for one beat. Caller handles predicated writeback.

Return `ACI_STATUS_OK` on success, `ACI_STATUS_NOT_IMPLEMENTED` if instruction not implemented.

```
ACI_EXPORT ACI_Status aci_exec_vcx2_beatwise(ACIHandle handle,
                                             const ACIVCX2DecodeInfo* decode_info,
                                             uint32_t d_val,
                                             uint32_t m_val,
                                             uint8_t beat,
                                             uint8_t elmt_mask,
                                             uint32_t* result);
```

**handle**

ACI handle object created by `aci_new()`.

**decode\_info**

Decoded fields for the VCX2 instruction.

**d\_val**

32-bit value of the source and destination vector register.

**m\_val**

32-bit value of the source vector register.

**beat**

Beat-number to index into the Q regs.

**elmt\_mask**

Element mask.

**result**

Pointer to the value returned by the VCX2 instruction.

#### 4.8.5.25 `ACIVCX3DecodeInfo` struct

Decoded information for the vcx3 instruction.

### Members

**accumulate**

Whether to accumulate with existing register contents.

**coproc**

Number of coproc.

**imm**

Immediate value.

**vd\_num**

Source and destination vector register number.

**vn\_num**

Source vector register number.

**vm\_num**

Source vector register number.

#### 4.8.5.26 `aci_exec_vcx3_s()`

Instruction VCX3 with Single-register.

Return `ACI_STATUS_OK` on success, or `ACI_STATUS_NOT_IMPLEMENTED` if instruction not implemented.

```
ACI_EXPORT ACI_Status aci_exec_vcx3_s(ACIHandle          handle,
                                     const ACIVCX3DecodeInfo* decode_info,
                                     uint32_t             sd_val,
                                     uint32_t             sn_val,
                                     uint32_t             sm_val,
                                     uint32_t*            result);
```

**handle**

ACI handle object created by `aci_new()`.

**decode\_info**

Decoded fields for the VCX3 instruction.

**sd\_val**

32-bit value of the floating-point source and destination register.

**sn\_val**

32-bit value of the floating-point source register.

**sm\_val**

32-bit value of the floating-point source register.

**result**

Pointer to the value returned by the VCX3 instruction.

#### 4.8.5.27 `aci_exec_vcx3_d()`

Instruction VCX3 with Double-register.

Return `ACI_STATUS_OK` on success, or `ACI_STATUS_NOT_IMPLEMENTED` if instruction not implemented.

```
ACI_EXPORT ACI_Status aci_exec_vcx3_d(ACIHandle          handle,
                                     const ACIVCX3DecodeInfo* decode_info,
```

```
uint64_t dd_val,
uint64_t dn_val,
uint64_t dm_val,
uint64_t* result);
```

**handle**

ACI handle object created by `aci_new()`.

**decode\_info**

Decoded fields for the VCX3 instruction.

**dd\_val**

64-bit value of the floating-point source and destination register.

**dn\_val**

64-bit value of the floating-point source register.

**dm\_val**

64-bit value of the floating-point source register.

**result**

Pointer to the value returned by the VCX3 instruction.

#### 4.8.5.28 `aci_exec_vcx3_beatwise()`

Instruction VCX3 for one beat. Caller handles predicated writeback.

Return `ACI_STATUS_OK` on success, or `ACI_STATUS_NOT_IMPLEMENTED` if instruction not implemented.

```
ACI_EXPORT ACI_Status aci_exec_vcx3_beatwise(ACIHandle handle,
const ACIVCX3DecodeInfo* decode_info,
uint32_t d_val,
uint32_t n_val,
uint32_t m_val,
uint8_t beat,
uint8_t elmt_mask,
uint32_t* result);
```

**handle**

ACI handle object created by `aci_new()`.

**decode\_info**

Decoded fields for the VCX3 instruction.

**d\_val**

32-bit value of the source and destination vector register.

**n\_val**

32-bit value of the source vector register.

**m\_val**

32-bit value of the source vector register.

**beat**

Beat-number to index into the Q regs.

**elmt\_mask**

Element mask.

**result**

Pointer to the value returned by the VCX3 instruction.

#### 4.8.5.29 ACIMnemonics struct

Optional custom mnemonics for the custom instructions.

##### Members

**cx1**

Instruction CX1 mnemonic.

**cx1a**

Instruction CX1 (Accumulator variant) mnemonic.

**cx1d**

Instruction CX1D mnemonic.

**cx1da**

Instruction CX1D (Accumulator variant) mnemonic.

**cx2**

Instruction CX2 mnemonic.

**cx2a**

Instruction CX2 (Accumulator variant) mnemonic.

**cx2d**

Instruction CX2D mnemonic.

**cx2da**

Instruction CX2D (Accumulator variant) mnemonic.

**cx3**

Instruction CX3 mnemonic.

**cx3a**

Instruction CX3 (Accumulator variant) mnemonic.

**cx3d**

Instruction CX3D mnemonic.

**cx3da**

Instruction CX3D (Accumulator variant) mnemonic.

**vcx1\_s**

Instruction VCX1 (Single-register variant) mnemonic.

**vcx1a\_s**

Instruction VCX1 (Single-register accumulator variant) mnemonic.

**vcx1\_d**

Instruction VCX1 (Double-register variant) mnemonic.

**vcx1a\_d**

Instruction VCX1 (Double-register accumulator variant) mnemonic.

**vcx1\_v**

Instruction VCX1 vector mnemonic.

**vcx1a\_v**

Instruction VCX1 vector (Accumulator variant) mnemonic.

**vcx2\_s**

Instruction VCX2 (Single-register variant) mnemonic.

**vcx2a\_s**

Instruction VCX2 (Single-register accumulator variant) mnemonic.

**vcx2\_d**

Instruction VCX2 (Double-register variant) mnemonic.

**vcx2a\_d**

Instruction VCX2 (Double-register accumulator variant) mnemonic.

**vcx2\_v**

Instruction VCX2 vector mnemonic.

**vcx2a\_v**

Instruction VCX2 vector (Accumulator variant) mnemonic.

**vcx3\_s**

Instruction VCX3 (Single-register variant) mnemonic.

**vcx3a\_s**

Instruction VCX3 (Single-register accumulator variant) mnemonic.

**vcx3\_d**

Instruction VCX3 (Double-register variant) mnemonic.

**vcx3a\_d**

Instruction VCX3 (Double-register accumulator variant) mnemonic.

**vcx3\_v**

Instruction VCX3 vector mnemonic.

**vcx3a\_v**

Instruction VCX3 vector (Accumulator variant) mnemonic.

## 4.9 Crypto

The `crypto` plug-in enables Armv8 and Armv9 processor models to support the Armv8.0 Cryptographic Extensions and Armv8.3 architected Pointer Authentication algorithms.

The `crypto` plug-in is available for download from the [Arm Developer website](#).

When the plug-in is loaded:

- All Armv8 and Armv9 processors in the system implement all functionality from the Armv8.0 Cryptographic Extensions by default, although you can disable it for specific processors by setting their `CRYPTODISABLE` parameter.
- All Armv8.3 and Armv9 processors in the system implement the architected algorithms for Pointer Authentication and Generic Authentication by default. Plug-in parameters control which processors in the system have architected algorithms enabled.

AEMs, for example, AEMvACT, have parameters that allow you to restrict the `crypto` plug-in features. These parameters use the same encodings as the flags within the AArch32 `ID_ISAR5` and AArch64 `ID_AA64ISAR0_EL1` system registers. You can set these parameters for a specific AEM core using this syntax:

```
-C cpu.cpu<X>.<feature_name>=<value>
```

Where `feature_name` can be one of the following:

- `crypto_aes`, with these possible values:
  - 0**  
No AES instructions are implemented
  - 1**  
The `AESE`, `AESD`, `AESMC`, and `AESIMC` instructions are implemented
  - 2**  
As 1, but in addition, the `PMULL` and `PMULL2` instructions can operate on 64-bit data values. This is the default value.
- `crypto_sha1`, with these possible values:
  - 0**  
No SHA-1 instructions are implemented
  - 1**  
The `SHA1C`, `SHA1P`, `SHA1M`, `SHA1H`, `SHA1SU0`, and `SHA1SU1` instructions are implemented. This is the default value.
- `crypto_sha256`, with these possible values:
  - 0**  
No SHA-256 instructions are implemented
  - 1**  
The `SHA256H`, `SHA256H2`, `SHA256SU0`, and `SHA256SU1` instructions are implemented. This is the default value.

- `crypto_sha3`, with these possible values:
  - 0**  
No Armv8.4 SHA-3 instructions are implemented. This is the default value.
  - 1**  
SHA-3 instructions are implemented if Armv8.4 is enabled.
  - 2**  
SHA-3 instructions are implemented.
- `crypto_sha512`, with these possible values:
  - 0**  
No Armv8.4 SHA-512 instructions are implemented. This is the default value.
  - 1**  
SHA-512 instructions are implemented if Armv8.4 is enabled.
  - 2**  
SHA-512 instructions are implemented.
- `crypto_sm3`, with these possible values:
  - 0**  
No Armv8.4 SM-3 instructions are implemented. This is the default value.
  - 1**  
SM-3 instructions are implemented if Armv8.4 is enabled.
  - 2**  
SM-3 instructions are implemented.
- `crypto_sm4`, with these possible values:
  - 0**  
No Armv8.4 SM-4 instructions are implemented. This is the default value.
  - 1**  
SM-4 instructions are implemented if Armv8.4 is enabled.
  - 2**  
SM-4 instructions are implemented.

For example, to disable the AES instructions on core 0:

```
./isim_system --plugin Crypto.so -C cpu.cpu0.crypto_aes=0
```

These parameters are only available for AEMs. For other Armv8-A and Armv9-A models, the behavior is fixed to the default values.

---

## 4.9.1 Crypto - parameters

This section describes the parameters for the Crypto plug-in.

Each parameter is prefixed with `CRYPTO.Crypto`, for example:

```
CRYPTO.Crypto.authentication_algorithm
```

**Table 4-8: Crypto parameters**

Name	Type	Default value	Allowed values	When set	Description
<code>authentication_algorithm</code>	string	"QARMA5"	""	Init time	Choice of PACAlgorithm. Valid values: "QARMA5", "QARMA3". "QARMA3" can be enabled only if the core feature <code>has_qarma3_pac</code> is true. Default value: "QARMA5". The pattern is a comma separated list of glob-style patterns. These patterns are matched against the instance name of cores in the system. If a pattern matches then the Architected algorithm is installed on the core if that core supports ARMv8.3. For example: - "*", install the algorithm on all supported cores - "cluster0.*", install the algorithm on all cores in cluster0 - "cluster0.cpu0" install the algorithm only on cluster0.cpu0 - "cluster0.*,cluster1.cpu1" install the algorithm on all cores in cluster0 and also cluster1.cpu1 - "" (an empty string), do not install the algorithm on any core .
<code>generic_authentication_core_pattern</code>	string	"*"	""	Init time	install the ARMv8.3 Architected Generic Authentication algorithm only on ARMv8.3 cores matching one of these patterns. The pattern is a comma separated list of glob-style patterns. These patterns are matched against the instance name of cores in the system. If a pattern matches then the Architected algorithm is installed on the core if that core supports ARMv8.3. For example: - "*", install the algorithm on all supported cores - "cluster0.*", install the algorithm on all cores in cluster0 - "cluster0.cpu0" install the algorithm only on cluster0.cpu0 - "cluster0.*,cluster1.cpu1" install the algorithm on all cores in cluster0 and also cluster1.cpu1 - "" (an empty string), do not install the algorithm on any core .
<code>pointer_authentication_core_pattern</code>	string	"*"	""	Init time	install the ARMv8.3 Architected Pointer Authentication algorithm only on ARMv8.3 cores matching one of these patterns. The pattern is a comma separated list of glob-style patterns. These patterns are matched against the instance name of cores in the system. If a pattern matches then the Architected algorithm is installed on the core if that core supports ARMv8.3. For example: - "*", install the algorithm on all supported cores - "cluster0.*", install the algorithm on all cores in cluster0 - "cluster0.cpu0" install the algorithm only on cluster0.cpu0 - "cluster0.*,cluster1.cpu1" install the algorithm on all cores in cluster0 and also cluster1.cpu1 - "" (an empty string), do not install the algorithm on any core .
<code>verbose</code>	int	0x0	0x0 - 0x1	Init time	verbosity level. 0, terse. 1, verbose.

## 4.10 GDBRemoteConnection

The `GDBRemoteConnection` plug-in allows the model to be debugged using GDB. It is included in the Third Party IP add-on package to Fast Models.

For more details about the add-on package, contact [Arm Technical Support](#).

Load the plug-in using the following command-line options:

- `--allow-debug-plugin`, or the short version, `-D`
- `--plugin`

For example:

```
./isim_system --allow-debug-plugin --plugin GDBRemoteConnection.so
```

Then, a suitable GDB can be connected to the model using the GDB `target` command.

`GDBRemoteConnection` supports the following operations:

- Connection to models that contain a single core cluster.
- Read and write of core registers.
- Read and write of memory.
- Run, stop, single step.
- Breakpoints.
- Connection to AArch32 and AArch64 models.

### 4.10.1 GDBRemoteConnection limitations

This section describes the limitations of the `GDBRemoteConnection` plug-in.

- Connections are only allowed to single-core simulations, not to multiprocessor or multicluster simulations.
- No tracepoint support.
- No parameter support.
- The memory view only shows the current memory space.
- The disassembly only uses the current instruction set.
- Breakpoints can only be set on the current memory space.

You cannot use GDB when debugging software that uses semihosting. When a program tries to use semihosting with the GDB plug-in, the GDB debugger wrongly reports having hit a breakpoint:

```
Program received signal SIGTRAP, Trace/breakpoint trap.
```

When using the `GDBRemoteConnection` plug-in, start the simulation with the `-D` (or `-s`) flag. Attaching the `GDBRemoteConnection` plug-in to a running simulation can cause segmentation faults on the simulation and the GDB client.

## 4.11 GenericCounter

GenericCounter is an example MTI plug-in that prints to stdout the number of occurrences of a specific trace source when the simulation terminates.

GenericCounter only counts a single trace source, which is set using the `TRACE.GenericCounter.trace-source` parameter. To count multiple trace sources, load the plug-in multiple times. In this case, each plug-in instance has a unique name which you use instead of GenericCounter when setting its parameters. The names are either set implicitly or explicitly. This example sets them explicitly as `counter1` and `counter2`:

```
--plugin counter1=path/to/GenericCounter.so \
--plugin counter2=path/to/GenericCounter.so \
-C TRACE.counter1.trace-source=EXCEPTION \
-C TRACE.counter2.trace-source=READ_ACCESS
```

Otherwise, each plug-in instance has an implicit name which consists of the plug-in name and a sequential suffix, for example `GenericCounter`, `GenericCounter0`, `GenericCounter1` and so on. This example uses the implicit names:

```
--plugin path/to/GenericCounter.so --plugin path/to/GenericCounter.so \
-C TRACE.GenericCounter.trace-source=EXCEPTION \
-C TRACE.GenericCounter0.trace-source=READ_ACCESS
```

The source code for this plug-in is provided in `$PVLIB_HOME/examples/MTI/GenericCounter/`.

### 4.11.1 GenericCounter - parameters

This section describes the parameters for the GenericCounter plug-in.

Each parameter is prefixed with `TRACE.GenericCounter`, for example:

```
TRACE.GenericCounter.print_on_event
```

**Table 4-9: GenericCounter parameters**

Name	Type	Default value	Allowed values	When set	Description
<code>print_on_event</code>	string	""	""	Init time	If set, print the count information to stdout when <code>print_on_event</code> trace source fires. If empty, only print the count information at the end of the simulation or when the <code>print_stats</code> parameter is written to.
<code>print_stats</code>	int	0x0	0x0 - 0x0	Runtime	On write, print count information to stdout.
<code>trace-source</code>	string	"INST"	""	Init time	The trace source to be counted. Example: <code>BRA_DIR</code> .

## 4.12 GenericTrace

GenericTrace is a flexible MTI plug-in that allows you to configure which events are traced, using a comma-separated list of trace sources. Output can be printed to a file or to the terminal.

Specify one or more trace sources using the `trace-sources` parameter, for example:

```
./isim_system --plugin $PVLIB_HOME/plugins/Linux64_GCC-9.3/GenericTrace.so -C
TRACE.GenericTrace.trace-sources=EXCEPTION,EXCEPTION_RETURN
```

To see a list of the available trace sources for each component in the model that provides trace, run the model with the `ListTraceSources` plug-in. See [ListTraceSources](#) for details.

The `trace-sources` parameter provides flexibility:

- To specify trace sources that match a pattern, use the `*` or `?` wildcards, for example:

```
TRACE.GenericTrace.trace-sources=EXCEPTION*
```

- To collect a trace source for a specific component only, prepend the trace source with the hierarchical path of the component, for example:

```
TRACE.GenericTrace.trace-sources=FVP_Base_AEMvA.cluster0.cpu0.EXCEPTION
```

You can optionally use wildcards in either or both of the names of the trace component and the trace source, for example:

```
TRACE.GenericTrace.trace-sources=FVP_Base_AEMvA.cluster0.*.EXCEPTION*
```

- To trace specific fields in a trace source, append a field mask. For example to trace only the second field (`pc`) of the `INST` trace source, use:

```
TRACE.GenericTrace.trace-sources=INST=0x2
```

Or, to filter out the 8th field (`ELEMENT_SIZE`) from the `CORE_STORES` trace source, use:

```
TRACE.GenericTrace.trace-sources=CORE_STORES=0xFFF7F
```

- If no trace sources are specified, `GenericTrace` by default traces all the instructions.

The source code for this plug-in is provided as a programming example in `$PVLIB_HOME/examples/MTI/GenericTrace/source/`.

This plug-in can be used with [ToggleMTIPlugin](#).

### 4.12.1 GenericTrace - parameters

This section describes the parameters for the GenericTrace plug-in.

Each parameter is prefixed with `TRACE.GenericTrace`, for example:

```
TRACE.GenericTrace.collect-latest-data-only
```

**Table 4-10: GenericTrace parameters**

Name	Type	Default value	Allowed values	When set	Description
collect-latest-data-only	bool	false	true, false	Init time	Collect only latest N trace source fires and print upon destruction.
enabled	bool	true	true, false	Runtime	If set to true, tracing is enabled.
flush	bool	false	true, false	Runtime	If set to true, the trace file is flushed after every event. This has a performance impact but could be used to better debug crashes.
hide-fieldnames	bool	false	true, false	Runtime	Do not print field names when printing trace output.
latest-data-size	int	0x1	0x0 - 0x7fffffffffffffff	Init time	Size of latest data to store in buffer for capturing only the latest trace source fires.
mti_enum_wrap_value_in_quotes	bool	false	true, false	Init time	Enclose MTI_ENUM values in quotes.
perf-period	int	0x0	0x0 - 0x7fffffffffffffff	Init time	Print performance information every N instructions. 0 means disabled.
print-timestamp	bool	false	true, false	Runtime	Start each trace entry with the host time.
shorten-paths	bool	true	true, false	Runtime	If set to true, the component paths of trace events are shortened by removing the common prefix. The minimal, non-ambiguous path suffix remains. If all traced sources belong to the same components, no path is logged. Default is true.
simulated-timestamp	bool	false	true, false	Runtime	Start each trace entry with the simulated time.
start-icount	int	0x0	0x0 - 0x7fffffffffffffff	Init time	Start tracing on a certain instruction count. Tracing starts up to 2048 instructions before this count.

Name	Type	Default value	Allowed values	When set	Description
stop-icount	int	0x7fffffffffffffff	0x0 - 0x7fffffffffffffff	Init time	Stop tracing on a certain instruction count. Tracing stops up to 2048 instructions after this count.
stop_on_event	bool	false	true, false	Init time	Stop the simulation when any event is triggered.
trace-file	string	""	""	Runtime	The trace file to write into. If STDERR, prints to stderr. If empty, prints to stdout.
trace-file-limit	int	0x0	0x0 - 0x7fffffffffffffff	Init time	The limit of the size of the output file in bytes. The simulation is stopped when this size is reached. If 0, it is unlimited.
trace-sources	string	"INST"	""	Runtime	A comma-separated list of trace sources to be traced. A component path can be prepended, with components separated by dots. Both the component path and the trace source name can contain the wildcards * and ?. A field mask as a number in hex or decimal format can be appended with =. Example: my.subsystem.core.cpu*.TRACE_SOURCE=0x08.
verbose	bool	false	true, false	Runtime	Print some debugging information.

## 4.12.2 GenericTrace plug-in usage example

This example shows how to use the GenericTrace plug-in to trace accesses by the graphics driver to the registers of a GPU register model.

### Procedure

1. Use the ListTraceSources plug-in to list the trace sources that the platform provides. It is located in \$PVLIB\_HOME/plugins/<OS\_compiler>/:

```
${PATH_Model} --plugin $PVLIB_HOME/plugins/Linux64_GCC-9.3/ListTraceSources.so
```

The plug-in prints the following information to the terminal:

- All components that provide trace, including the GPU model, for example:

```
Component (292) providing trace: Kits3_Subsys.css.gpu
```

- The trace sources provided by the GPU model. For example, these are some generic trace sources provided by Mali™ GPU models:

#### **INFO\_ReadRegister**

Access time, addresses, data, and names of the registers that were read.

#### **INFO\_Reset**

GPU reset data.

#### **INFO\_WriteRegister**

Access time, addresses, and names of the registers that were updated, and the data before and after the update.

**INFO\_Irq**

Name and state of the IRQ signal from the GPU. The name indicates the type of IRQ signal; GPU, Job Manager, or MMU. The state can be Y for Set, or N for Clear.

**WARN\_ReadToWriteOnlyRegister**

Warning messages and addresses for the write-only registers that have been read by the graphics driver.

**WARN\_WriteToReadOnlyRegister**

Warning messages and addresses for the read-only registers that have been written by the graphics driver.

**WARN\_AccessToUnimplementedRegister**

Warning messages and addresses for the invalid registers that have been accessed by the graphics driver.

2. To trace all events from the GPU model, launch the platform with the following additional options:

```
--plugin $PVLIB_HOME/plugins/Linux64 GCC-9.3/GenericTrace.so \
-C TRACE.GenericTrace.trace-sources=Kits3_Subsys.css.gpu.* \
-C TRACE.GenericTrace.enabled=1 \
-C TRACE.GenericTrace.verbose=1 \
-C TRACE.GenericTrace.print-timestamp=1 \
-C TRACE.GenericTrace.trace-file=dp-trace-generic.log
```

Where:

- Kits3\_Subsys.css.gpu is the GPU model listed in Step 1.
- Kits3\_Subsys.css.gpu.\* means trace all the GPU-supported trace sources. Alternatively, (not shown in this example):
  - To trace one specific GPU trace source only, add it as a suffix to the GPU model. For instance, Kits3\_Subsys.css.gpu.INFO\_ReadRegister.
  - To trace multiple specific trace sources, use a comma-separated list. For instance, Kits3\_Subsys.css.gpu.INFO\_ReadRegister, Kits3\_Subsys.css.gpu.INFO\_WriteRegister.
- The trace-file option specifies the log file in which to save the trace output. If it is not used, the trace results are shown on the host terminal.

## Results

The host terminal or the log file shows details about the driver-accessed registers, such as the register addresses, data, and the access time. For example:

```
HOST_TIME=1557460.545195s INFO_ReadRegister: REG_OFFSET=0x0000000000000000

```

### 4.12.3 Mapping between SYSREG\_UPDATE trace sources and SPSR registers

For tracing updates to SPSR\_\* registers, GenericTrace maps the fields in the registers to fields in SYSREG\_UPDATE32 or SYSREG\_UPDATE64 trace sources.

The mapping is shown in the following table:

**Table 4-11: Mapping between SYSREG\_UPDATE\* trace sources and register encodings for SPSR\_\* registers**

SYSREG_UPDATE32 or SYSREG_UPDATE64 field	Register field
opc0	R
opc	M
CRn	M1
CRm	O
opc2	O

## 4.13 ListTraceSources

ListTraceSources is an MTI plug-in that displays a complete and self-documenting list of the trace sources that a model provides, without running the model.

The plug-in prints output for each component in the model, either to stdout or to a file. For example:

```
...
Component (4) providing trace: FVP_VE_Cortex_A7x1.cluster.cpu0 (ARM_Cortex-A7,
11.4.60)
=====
Component is of type "ARM_Cortex-A7"
Version is "11.4.60"
#Sources: 195

Source ASYNC_MEMORY_FAULT (Context ID Register write.)
  Field FAULT type:MTI_UNSIGNED_INT size:4 (Fault status in ESR format)
  Field VADDR type:MTI_SIGNED_INT size:8 (Virtual Address (or 0 if unavailable))
  Field PADDR type:MTI_UNSIGNED_INT size:8 (Physical Address (or 0 if
unavailable))
...

```

The source code for this plug-in is also provided as a programming example in `$PVLIB_HOME/examples/MTI/ListTraceSources/source/`.

### 4.13.1 ListTraceSources - parameters

This section describes the parameters for the ListTraceSources plug-in.

Each parameter is prefixed with `TRACE.ListTraceSources`, for example:

```
TRACE.ListTraceSources.file
```

**Table 4-12: ListTraceSources parameters**

Name	Type	Default value	Allowed values	When set	Description
file	string	""	""	Init time	File to write the list of trace sources to. Default is to write to the console.
print_components_only	bool	false	true, false	Init time	If true, the plug-in prints the trace component information only, not the sources or fields.

## 4.14 PipelineModel

Use the `PipelineModel` plug-in to estimate the performance of workloads within a Fast Models environment.

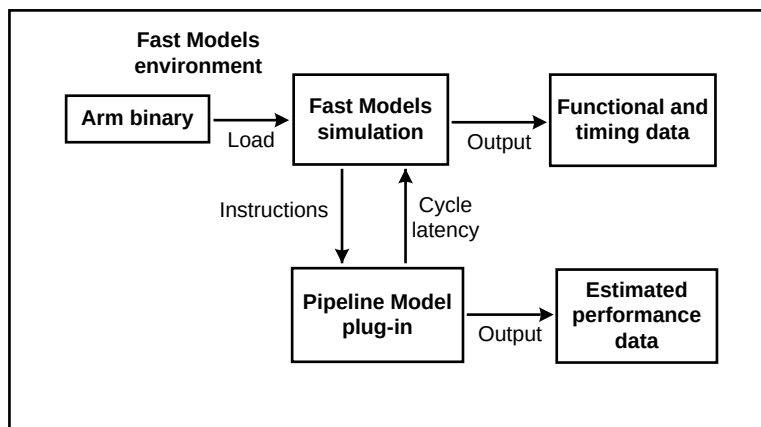

The `PipelineModel` plug-in is deprecated. It might be modified or removed in a future release.

The plug-in models first-order effects of microarchitecture components on the overall Cycles Per Instruction (CPI) value. Examples of such effects are data and structural hazards due to instruction dependencies.

The `PipelineModel` is implemented as a Fast Models plug-in. It processes instruction traces and injects cycle latencies into the simulation. The plug-in is non-intrusive to the functional accuracy of the simulation.

**Figure 4-2: Overview of PipelineModel plug-in**

Fast Models provides the following prebuilt example PipelineModel plug-ins:

### CortexA53PipelineModel

An approximation of the performance characteristics of the in-order, dual issue properties of the Cortex®-A53 processor. The model provides estimated performance characteristics of a given compute-bound workload in terms of Cycles Per Instruction.

The model should not be used as a reference for hardware performance as it has limitations, such as the absence of a cache model.

## InOrderPipelineModel

An implementation of a single-issue 4-stage pipelined processor that illustrates the basic components of a CPU. It demonstrates how components such as Fetch, Decode, and Execute can be implemented as a Fast Models plug-in. The source code is provided in `$PVLIB_HOME/plugins/source/PipelineModel/Cores/InOrder/`. It contains a README and a makefile for building the example.

Note

The model does not represent any Arm® core and is intended only as a guide for developing more advanced PipelineModels using Fast Models.

The `PipelineModel` is an aspect of Timing Annotation. For more details, see [Timing Annotation](#) in the Fast Models User Guide.

### 4.14.1 CortexA53PipelineModel - parameters

This section describes the parameters for the `CortexA53PipelineModel` plug-in.

Each parameter is prefixed with `PipelineModel.CortexA53PipelineModel`, for example:

```
PipelineModel.CortexA53PipelineModel.core-type
```

**Table 4-13: CortexA53PipelineModel parameters**

Name	Type	Default value	Allowed values	When set	Description
core-type	string	""	""	Init time	Core type description.
end-pc	string	"0x00000000"	""	Init time	End processing instructions after this pc.
instance-name	string	""	""	Init time	Cluster and core num description.
output	string	""	""	Init time	Defaults to stdout. Specify STDERR or a filename.
start-pc	string	"0x00000000"	""	Init time	Start processing instructions from this pc.

### 4.14.2 InOrderPipelineModel - parameters

This section describes the parameters for the `InOrderPipelineModel` plug-in.

Each parameter is prefixed with `PipelineModel.InOrderPipelineModel`, for example:

```
PipelineModel.InOrderPipelineModel.core-type
```

**Table 4-14: InOrderPipelineModel parameters**

Name	Type	Default value	Allowed values	When set	Description
core-type	string	""	""	Init time	Core type description.

Name	Type	Default value	Allowed values	When set	Description
instance-name	string	""	""	Init time	Cluster and core num description.

### 4.14.3 PipelineModel example

This example shows how the `PipelineModel` plug-in generates data. This example uses a single issue, 6-stage pipeline. The stages are Fetch, Decode, Issue, EX1, EX2, and WR.

		0	1	2	3	4	5	6	7	8	9	10
[0]	ADD R1, R2, R3	IF	ID	IS	X0	X1	WR					
[1]	MUL R4, R1, R2		IF	ID	IS	IS*	X0	X1	WR			
[2]	ADD R5, R4, R6			IF	ID	ID*	IS	IS*	X0	X1	WR	
[3]	ADD R7, R8, R9				IF	IF*	ID	ID*	IS	X0	X1	WR

In this instruction sequence, pipeline stalls are shown with an asterisk. The following stalls occur:

- Instruction [1] stalls one cycle in the Issue stage until R1 has been written.
- Instruction [2] stalls one cycle in the Decode stage due to a structural hazard because the Issuer is still in use by Instruction [1].
- Instruction [2] stalls one cycle in the Issue stage until R4 has been written.
- Instruction [3] stalls one cycle in the Fetch stage due to a structural hazard because the Decoder is still in use by Instruction [2].
- Instruction [3] stalls one cycle in the Decode stage due to a structural hazard because the Issuer is still in use by Instruction [2].

The `PipelineModel` plug-in uses the accumulated stalls for each instruction to calculate the runtime latency as follows:

- Instruction [0] latency = 0 cycles.
- Instruction [1] latency = 1 cycle.
- Instruction [2] latency = 2 cycles.
- Instruction [3] latency = 2 cycles.

In this example, there are five stall cycles in total. At the end of the simulation, the `PipelineModel` plug-in uses the accumulated stalls to produce a total cycle count. It uses the cycle count to determine the final Cycles Per Instruction (CPI) or Instructions Per Cycle (IPC) value.

#### 4.14.4 Naming the plug-in instance

You can optionally assign a name to the plug-in instance. This is useful in a multiprocessor platform if you load the same plug-in multiple times. The assigned name is used to identify which plug-in instance the parameters apply to.

For example, the following commands load the `PipelineModel` plug-in twice and assign the names `CortexA53_0` and `CortexA53_1` to the first and second instances respectively:

```
--plugin CortexA53_0=CortexA53PipelineModel.so
--plugin CortexA53_1=CortexA53PipelineModel.so
```

You can then specify the plug-in instance name in the plug-in parameters. For example:

```
-C PipelineModel.CortexA53_0.core-type=ARM_Cortex-A53
-C PipelineModel.CortexA53_0.instance-name=Base.cluster0.cpu0

-C PipelineModel.CortexA53_1.core-type=ARM_Cortex-A53
-C PipelineModel.CortexA53_1.instance-name=Base.cluster0.cpu1
```

#### 4.14.5 Example command lines

The following command lines show how to load the `PipelineModel` plug-in in a variety of configurations. Any parameters that are not relevant to the examples have been omitted. All examples use the `FVP_Base_Cortex_A53` example platform unless otherwise stated.

##### Default usage, with no options

The following command line attaches the plug-in to any instance and sends output to `stdout`:

```
./isim_system
...
--plugin $PVLIB_HOME/plugins/Linux64_GCC-9.3/CortexA53PipelineModel.so
```

##### Single cluster, single processor platform

The following command line attaches the plug-in to `FVP_Base_Cortex_A53.cluster0.cpu0`. It outputs the file `stat.txt`:

```
./isim_system
...
-C cluster0.NUM_CORES=1
--plugin $PVLIB_HOME/plugins/Linux64_GCC-9.3/CortexA53PipelineModel.so
-C PipelineModel.CortexA53PipelineModel.core-type=ARM_Cortex-A53
-C PipelineModel.CortexA53PipelineModel.instance-
name=FVP_Base_Cortex_A53.cluster0.cpu0
-C PipelineModel.CortexA53PipelineModel.output=stat.txt
```

## Single cluster, multiprocessor platform, default usage

The following command line attaches the plug-in to all Cortex®-A53 processors:

```
./isim_system
...
-C cluster0.NUM_CORES=4
--plugin $PVLIB_HOME/plugins/Linux64_GCC-9.3/CortexA53PipelineModel.so
```

## Single cluster, multiprocessor platform

The following command line loads two plug-in instances in a dual-processor platform. The first plug-in instance is named `cortexA53_0` and is attached to `FVP_Base_Cortex_A53.cluster0.cpu0`. The second plug-in instance is named `cortexA53_1` and is attached to `FVP_Base_Cortex_A53.cluster0.cpu1`:

```
./isim_system
...
-C cluster0.NUM_CORES=2
--plugin CortexA53_0=$PVLIB_HOME/plugins/Linux64_GCC-9.3/CortexA53PipelineModel.so
--plugin CortexA53_1=$PVLIB_HOME/plugins/Linux64_GCC-9.3/CortexA53PipelineModel.so
-C PipelineModel.CortexA53_0.core-type=ARM_Cortex-A53
-C PipelineModel.CortexA53_0.instance-name=FVP_Base_Cortex_A53.cluster0.cpu0
-C PipelineModel.CortexA53_1.core-type=ARM_Cortex-A53
-C PipelineModel.CortexA53_1.instance-name=FVP_Base_Cortex_A53.cluster0.cpu1
```

## Multicluster, single processor platform

The following command line uses the `FVP_Base_Cortex_A73x1_A53x1` example platform. It names the plug-in instance `core1` and attaches it to `FVP_Base_Cortex_A73x1_A53x1.cluster1.cpu0`:

```
./isim_system
...
--plugin Core1=$PVLIB_HOME/plugins/Linux64_GCC-9.3/CortexA53PipelineModel.so
-C PipelineModel.Core1.core-type=ARM_Cortex-A53
-C PipelineModel.Core1.instance-name=FVP_Base_Cortex_A73x1_A53x1.cluster1.cpu0
```

## Plug-in core-type mismatch

The following command line specifies a Cortex®-A55 processor. This mismatches the platform, which is `FVP_Base_Cortex_A53`. The plug-in fails to load:

```
./isim_system
...
--plugin $PVLIB_HOME/plugins/Linux64_GCC-9.3/CortexA53PipelineModel.so
-C PipelineModel.CortexA53PipelineModel.core-type=ARM_Cortex-A55
```

## Plug-in instance-name mismatch

The following command line specifies an `instance-name` that does not exist. The plug-in fails to load:

```
./isim_system
-C cluster0.NUM_CORES=1
...
--plugin $PVLIB_HOME/plugins/Linux64_GCC-9.3/CortexA53PipelineModel.so
-C PipelineModel.CortexA53PipelineModel.core-type=ARM_Cortex-A53
```

```
-C PipelineModel.CortexA53PipelineModel.instance-
name=FVP_Base_Cortex_A53.cluster0.cpu1
```

## Range processing

The following command-line arguments set an address range. The `PipelineModel` only processes instructions within this range:

```
...
-C PipelineModel.CortexA53PipelineModel.start-pc=0x80000001
-C PipelineModel.CortexA53PipelineModel.end-pc=0x8000FFFF
```

If the start and end of the range are identical, the `PipelineModel` processes all instructions, which is the same as not specifying a range at all.

## Cycle limit

To run the `PipelineModel` with a cycle limit, use the model option `--cyclelimit`. When the cycle limit is reached, the simulation terminates and the output file is generated.

The following command line arguments causes the `PipelineModel` to process all instructions until the cycle limit is reached:

```
...
--cyclelimit=30000000
--plugin $PVLIB_HOME/plugins/Linux64_GCC-9.3/CortexA53PipelineModel.so
```

Note

The `--cyclelimit` option starts counting from the instruction at the beginning of the simulation, not from the instruction at `start-pc`. If the cycle limit is reached before the `start-pc` is hit, the `PipelineModel` does not process any instructions.

## 4.14.6 PipelineModel output

At the end of the simulation, the `PipelineModel` generates a Cycles Per Instruction (CPI) value along with other performance data. You can use this for further analysis.

For example:

```
Elapsed time: 8 seconds
Instructions per second: 484186
Simulated CPU speed: 1.484186 MHz
CPU cycles: 5159984
RAW stalls: 3551018
Instructions issued: 3873492
Instructions retired: 3873491
Loads executed: 921403
Stores executed: 923306
IPC: 0.750679
CPI: 1.33213
```

The CPI value is the primary metric that measures the performance of workloads. It is calculated using the formula:

$$\text{CPI} = \text{cycles elapsed} / \text{instructions retired}$$

The lower the CPI, the better the performance. As a general indication, a CPI of 0.5 on a dual-issue, in-order or out-of-order processor means that an instruction takes 0.5 cycles to complete. In this case, the pipeline units are maximized and no latencies are generated.

Conversely, performance can be measured in Instructions Per Cycle (IPC), where:

$$\text{IPC} = \text{instructions retired} / \text{cycles elapsed}$$

The higher the IPC, the better the performance. As a general indication, an IPC of two on a dual issue, in-order or out-of-order processor means that on average, two instructions commit in each cycle.

## 4.15 RunTimeParameterTest

`RunTimeParameterTest` is an example MTI plug-in that demonstrates how to add new string, integer, and boolean parameters at runtime.

This plug-in is provided only as source code, in `$PVLIB_HOME/examples/MTI/RunTimeParameterTest/source/`.

## 4.16 Sidechannel

The Sidechannel plug-in allows communication between the software on the host and software on the target. It is no longer used.

## 4.17 TarmacText

`TarmacText` is an MTI plug-in that extracts the architectural execution trace, also known as Tarmac, of a processor. `TarmacText` extracts the trace in a textual form and saves it in a file.

`TarmacText` is deprecated. We recommend you only use it if you specifically require the `TarmacText` trace format. Otherwise, use the `TarmacTrace` plug-in instead.

---

The plug-in allows you to trace multiple components simultaneously, saving the generated traces in different files.

Enable trace generation by setting the `component` parameter to the required component name or space-separated names for multiple components. The default value of `component` is empty, which means the plug-in finds and traces all active processors.

Output filenames are composed of a common prefix, configurable with the `log` parameter, followed by the name of the component, and terminated with the extension `.log`. The default value of the prefix is `tarmac`.

Note

The platform name is trimmed from the component name.

### 4.17.1 TarmacText - parameters

This section describes the parameters for the TarmacText plug-in.

Each parameter is prefixed with `TarmacText.`, for example:

```
TarmacText.component
```

**Table 4-15: TarmacText parameters**

Name	Type	Default value	Allowed values	When set	Description
<code>component</code>	string	<code>"*"</code>	""	Init time	A space-separated list of components to trace. Supports globbing (see <code>man 7 glob</code> ). Does not restrict nor extend the list of components for which the ExecStep Iris EventSource will be published.
<code>evs</code>	string	""	""	Init time	Filename to log the binary tarmac into. Supports the substitution pattern <code>@COMP@</code> .
<code>exec</code>	string	""	""	Init time	Shell command to execute to process the binary tarmac on the fly. Supports the substitution pattern <code>@COMP@</code> . The command must accept on its standard input the tarmac event stream.
<code>flush</code>	bool	<code>false</code>	<code>true</code> , <code>false</code>	Init time	Whether to flush the output files specified by the <code>log</code> parameter as often as possible. Decreases the performance.
<code>log</code>	string	<code>"tarmac.@COMP@.log"</code>	""	Init time	Filename to log the tarmac text into. Supports the substitution pattern <code>@COMP@</code> .
<code>start</code>	int	<code>0</code>	<code>≥0</code>	Init time	The amount of cycles as defined by the PERIODIC event to wait for before starting to trace. This can be used to reduce the impact of the tracing on performance until the portion of interest is reached. Does not impact the ExecStep Iris EventSource.

## 4.18 TarmacTrace

TarmacTrace is an MTI plug-in that prints Tarmac trace to `stdout` or to a file. This section describes the format of the output.

The trace might include instructions executed, program flow, updates to registers, memory accesses made by Arm® cores in the simulation, and other information. Plug-in parameters control the amount and type of information that is traced.

This plug-in can be used with [ToggleMTIPlugin](#).

### 4.18.1 TarmacTrace - parameters

This section describes the parameters for the TarmacTrace plug-in.

Each parameter is prefixed with `TRACE.TarmacTrace`, for example:

```
TRACE.TarmacTrace.end-instruction-count
```

**Table 4-16: TarmacTrace parameters**

Name	Type	Default value	Allowed values	When set	Description
end-instruction-count	int	0x0	0x0 - 0x7fffffffffffffffff	Init time	The instruction count when the tracing should be stopped. Default is to never stop tracing.
instruction-count-is-per-target	bool	true	true, false	Init time	If true (default) then the start-instruction-count and end-instruction-count parameters apply to individual targets separately. If false, all components start and stop tracing at once when the first component reaches the instruction count.
loadstore-display-width	int	0x8	0x0 - 0x40	Init time	Memory transactions can involve up to 64 bytes. For easier readability these can be broken up into multiple memory access records with a smaller number of bytes. 0 means do not break up any transaction.
quantum-size	int	0x2710	0x1 - 0x7fffffffff	Init time	Set the default quantum size used to compute when the tracing should start and stop, in instructions. This is overridden by the <code>CORE_INFO.QUANTUM_SIZE</code> trace source field of the component, if present.
quiet	bool	false	true, false	Init time	Limit output to trace information.
start-instruction-count	int	0x0	0x0 - 0x7fffffffffffffffff	Init time	The instruction count when the tracing should start. Default is to trace from the beginning.

Name	Type	Default value	Allowed values	When set	Description
trace-file	string	""	""	Runtime	Trace output file. The default is an empty string, which means stdout unless MTI_TARMAC_LOG is set. STDOUT means stdout. STDERR means stderr. Setting this parameter at runtime causes the current trace file to be flushed and closed and a new one to be opened. Writing at runtime, STDOUT, STDERR, and MTI_TARMAC_LOG are not supported when trace-file-per-comp=1.
trace-file-per-comp	bool	false	true, false	Init time	Write trace to multiple files.
trace-inst-stem	string	""	""	Init time	Base instance path to select a group of instances to trace.
trace_aarch64_vfp_full_width	bool	false	true, false	Init time	Trace a write to an S or D register in AArch64 as a write to the corresponding V register.
trace_atomic	bool	true	true, false	Init time	Trace memory update by atomic operation.
trace_branches	bool	false	true, false	Init time	Trace changes of the program flow like direct or indirect branches and exception returns.
trace_bte	bool	true	true, false	Init time	Trace opcode rejected by BTE.
trace_bus_accesses	bool	false	true, false	Init time	Trace bus accesses by the core. This includes accesses by the caches of the core. This considerably slows down the model.
trace_cache	bool	true	true, false	Init time	Trace cache fills and evictions.
trace_core_registers	bool	true	true, false	Init time	Trace the core registers R0-R14, the CPSR, and the SPSR registers.
trace_cp15	bool	true	true, false	Init time	Trace writes to CP15 registers.
trace_dap	bool	true	true, false	Init time	Trace accesses on the debug access port.
trace_ete	bool	true	true, false	Init time	Trace packets generated by the ETE.
trace_events	bool	true	true, false	Init time	Trace events, for example exceptions and mode changes.
trace_exception_reasons	bool	true	true, false	Init time	Trace INFO_EXCEPTION_REASONS (M-class only so far).
trace_generic_events	bool	false	true, false	Init time	Trace generic events.
trace_gic	bool	true	true, false	Init time	Trace GIC register writes and updates.
trace_gic_reads	bool	false	true, false	Init time	Trace GIC register reads.
trace_gic_signal_changes	bool	false	true, false	Init time	Trace GIC FIQ/IRQ Signal Changes.
trace_gic_state_change	bool	false	true, false	Init time	Trace GIC interrupt state changes.
trace_gic_table_walks	bool	false	true, false	Init time	Trace GIC table walks.
trace_gicv3	bool	true	true, false	Init time	Trace GICv3 memory mapped accesses.
trace_gicv3_comms	int	0x0	0x0 - 0x7	Init time	Trace GICv3 communications between cores and distributor. Bitfield; 1 = trace CPU; 2 = trace RD0; 4 = trace internal.

Name	Type	Default value	Allowed values	When set	Description
trace_gicv3_its	bool	false	true, false	Init time	Trace GICv3 ITS command execution.
trace_gicv3_reads	bool	false	true, false	Init time	Trace GICv3 memory mapped reads.
trace_gicv5_stream_comm	bool	false	true, false	Init time	Trace GICv5<->CPUIF stream commands.
trace_gpt	bool	true	true, false	Init time	Trace packets generated by the GPT.
trace_hacdbss	bool	true	true, false	Init time	Trace packets generated by the HACDBS.
trace_hdbss	bool	true	true, false	Init time	Trace packets generated by the HDBSS.
trace_instructions	bool	true	true, false	Init time	Trace instructions.
trace_loads_store_memtype	bool	false	true, false	Init time	Show memory type information for core loads and stores.
trace_loads_stores	bool	true	true, false	Init time	Trace loads and stores that are triggered by instructions. These might go into the memory subsystem, into a cache, or into a TCM. This considerably slows down the model.
trace_mask_s_regs	bool	false	true, false	Init time	Represent non-updated bytes as ---- in S-registers trace.
trace_memory	bool	false	true, false	Init time	Trace memory accesses just outside the core.
trace_mmu	bool	true	true, false	Init time	Trace mmu tablewalks and associated information.
trace_mpu_events	bool	false	true, false	Init time	Trace MPU events.
trace_spe	bool	true	true, false	Init time	Trace SPE data written to memory.
trace_tag_loads_stores	bool	true	true, false	Init time	Trace tag loads and stores that are triggered by MTE instructions. These might go into the memory subsystem, into a cache, or into a TCM. This considerably slows down the model.
trace_vfp	bool	true	true, false	Init time	Trace the VFP and Neon registers, including FPSCR and FPEXC.
unbuffered	bool	false	true, false	Init time	Trace events as they arrive and flush each fwrite. Prints IT even when IS should be printed.
updated-registers	bool	false	true, false	Init time	Trace the updated value of registers rather than the written value.
use_inst_end_for_inst_counter	bool	false	true, false	Init time	When using the instruction count as the timestamp, if true, increase the instruction count at INST_END instead of INST. When using the simulation time as the timestamp, this parameter has no effect.
use_instr_cnt_as_timestamp	bool	true	true, false	Init time	Use the instruction count as the timestamp instead of the simulation time.

## 4.18.2 TarmacTrace file format

This topic describes conventions used in the syntax definitions for each trace type.

In the syntax definition for each trace type:

**[X|Y]**

Indicates a choice between X and Y.

**{X}**

Indicates that X is optional or configuration-dependent.

This is the common address definition that is used in the trace command syntax:

```
<vaddr>{ : <paddr><pas> }
```

where:

**<vaddr>**

is the virtual address in hexadecimal format. See the note after this list.

**<paddr>**

is the physical address of the instruction in hexadecimal. See the note after this list. <paddr> is only present if it is different to <vaddr>.

**<pas>**

is the address space of the physical address. Either **\_NS** for Non-secure PAS, **\_RT** for Root PAS, **\_RL** for Realm PAS, or not present for Secure PAS.

**Note**

For 64-bit addresses, the value is written as either:

- 8 hex digits, if the value can be represented in 32 bits.
- 16 hex digits otherwise.

This is the virtual regime definition that is used in the trace command syntax:

```
0x<vbase>{ _NS } <el>{ vmid=<vmid> }{ , nG asid=<asid> }
```

where:

**0x<vbase>**

is the virtual address in hexadecimal format.

**\_NS**

if present, specifies that the address is Non-secure. If not present, the address is Secure.

**<el>**

is the translation regime that owns the mapping. One of:

- **EL1\_n**, meaning the Non-secure EL1&0 translation regime.

- EL2\_n
- EL1\_s
- EL3\_s

**<vmid>**

if present, is the VMID for Non-secure, non-hyp regimes.

**nG**

if present, specifies that the virtual regime is non-global.

**<asid>**

if present, is the ASID, for non-global regimes.

### 4.18.3 Tarmac Trace output example

This example output from the Tarmac Trace plug-in shows various types of trace output, including instruction, memory access, register, translation table walk, and TLB traces.

```
...
89 clk IT (89) 80000164 f9000820 O EL1h_n : STR x0,[x1,#0x10]
89 clk MW8 80002010:000080002010_NS 00000000_80000705
90 clk IT (90) 80000168 d28080a0 O EL1h_n : MOV x0,#0x405
90 clk R X0 00000000000000405
...
98 clk IT (98) 80000188 d5181000 O EL1h_n : MSR SCTLR_EL1,x0
98 clk R SCTLR_EL1 00000000:00001005
98 clk TTW ITLB LPAE 1:1 000080002010 0000000080000705 : BLOCK ATTRIDX=1 NS=0 AP=0
SH=3 AF=1 nG=0 16E=0 PXN=0 XN=0 ADDR=0x0000000080000000
98 clk TLB FILL cpu0.UTLB 1G 0x80000000_NS EL1_n vmid=0:0x008000000000_NS Normal
InnerShareable Inner=WriteBackWriteAllocate Outer=WriteBackWriteAllocate_xn=0 pxn=0
ContiguousHint=0 xs=0
...
```

This trace shows three instructions:

- The first instruction is an `STR`, which stores the 64-bit value from register `x0` to the address in `x1 + 10` byte offset:

```
89 clk IT (89) 80000164 f9000820 O EL1h_n : STR x0,[x1,#0x10]
89 clk MW8 80002010:000080002010_NS 00000000_80000705
```

In more detail:

- `IT` is a label that indicates the type of trace event described by the line. `IT` means instruction taken. To interpret the values in this line, see [Instruction trace](#). For example:
  - `89` means this is the 89th instruction.
  - `clk` means that the preceding number is an instruction count. If `ps` was displayed here instead, this would indicate the first value is a timestamp.
  - `0x80000164` is the address from which the instruction was fetched.
  - `0xf9000820` is the 32-bit opcode of the instruction.

- o indicates the CPU execution state, in this case AArch64.
  - EL1h\_n indicates the current Exception level and Security state.
  - The rest of the line following the colon is the assembly language representation of the instruction.
- mw8 indicates an 8-byte memory write. To interpret the values in this line, see [Processor memory access trace](#). For example:
  - 0x80002010 is the virtual address to which the data was written. The value after the colon is the corresponding physical address. In this example, they are the same. The \_ns suffix indicates that it is Non-secure memory.
  - 0x00000000\_80000705 is the value of the data written. Each group of 8 digits is separated using an underscore.
- The second instruction is a mov, which moves the value 0x405 into register x0:

```
90 clk IT (90) 80000168 d28080a0 O EL1h_n : MOV x0,#0x405
90 clk R X0 00000000000000405
```

- r indicates a register trace. To interpret the values in this line, see [Register trace](#). For example:
  - x0 is the name of the register being written to.
  - 0x405 is the new value of x0, which is the value that was moved by the mov instruction.
- The third instruction is an msr, which writes the value 0x1005 from register x0 to System register SCTLR\_EL1.

Writing to bit 0 of SCTLR\_EL1 enables the MMU, so that all subsequent memory accesses will be done through the MMU.

The next memory access following this instruction is an instruction fetch (not shown), so a Translation Table Walk (TTW) is required to find its address.

Following the TTW, the Translation Lookaside Buffer (TLB) is updated with the new entry that caches some of the values resulting from the TTW, for example region size, base address, cachability and sharability. This appears as a TLB trace:

```
98 clk IT (98) 80000188 d5181000 O EL1h_n : MSR SCTLR_EL1,x0
98 clk R SCTLR_EL1 00000000:00001005
98 clk TTW ITLB LPAAE 1:1 000080002010 0000000080000705 : BLOCK ATTRIDX=1 NS=0
AP=0 SH=3 AF=1 nG=0 16E=0 PXN=0 XN=0 ADDR=0x0000000080000000
98 clk TLB FILL cpu0.UTLB 1G 0x80000000 NS EL1_n vmid=0:0x0080000000 NS
Normal InnerShareable Inner=WriteBackWriteAllocate Outer=WriteBackWriteAllocate
xn=0 pxn=0 ContiguousHint=0 xs=0
```

- TTW indicates a translation table walk trace. To interpret the values in this line, see [Translation table walk trace](#). For example:
  - ITLB means instruction TLB.
  - LPAAE means Large Physical Address Extension (LPAAE)-format translation table entries.

- 1:1 means Walk stage 1, Walk level 1.
- 0x000080002010 is the page base address and the page attributes.
- 0x0000000080000705 is the raw translation table entry.
- Following the colon is the parsed result. In this case, the LPAE region descriptor.
- TLB indicates a TLB trace. To interpret the values in this line, see [TLB trace](#). For example:
  - FILL means a TLB fill operation.
  - cpu0.UTLB means the operation is taking place on a Unified TLB, which is shared for I-side and D-side accesses.
  - 1G means the TLB entry is for a 1GB page.
  - 80000000\_ns means the entry has a page base address of 0x80000000 and is Non-Secure.
  - EL1\_n means the entry is for EL1.
  - vmid=0:0x008000000000\_ns means the entry is tagged with a specific VMID.
  - Normal InnerShareable means the entry is tagged as Normal Inner-Sharable.
  - Inner and outer are the inner and outer cache attributes for this entry.
  - xn=0 means the entry is tagged NOT Execute Never.
  - pxn=0 means the entry is tagged NOT Privileged Execute Never.
  - ContiguousHint=0 means the entry is not tagged as part of a set of contiguous entries that can be cached as one entry.
  - xs=0 means the page for this TLB entry is NOT XS, indicating either lack of support for FEAT\_XS in the core, or it is non-XS memory.

#### 4.18.4 Instruction trace

If enabled, this trace source generates one record for every instruction started.

The records (lines) of the instruction trace have this syntax:

```
<time> <scale> <cpu> [IT|IS] (<inst_id>) <addr> <opcode> [A|T|X|O] <mode>_<security> :
<disasm>
```

##### <time>

Either the simulation time timestamp or the instruction count, depending on the value of the `TRACE.TarmacTrace.use_instr_cnt_as_timestamp` parameter.

##### <scale>

Unit for <time>. `ps` means simulation time, `clk` means instruction count.

##### <cpu>

Processor, or other component, that gave the instruction.

**[IT|IS]****IT**

Instruction passed the condition code (taken).

**IS**

Instruction failed the condition code (skipped).

**<inst\_id>**

Tick count of this processor, which is equivalent to the number of instructions that are executed, except for certain instructions like `WFI/WFE` (decimal value).

**<addr>**

Fetch source address for this instruction. Formatted according to the common address definition, see [TarmacTrace file format](#).

**<opcode>**

16-bit or 32-bit hexadecimal opcode of the instruction.

**[A|T|X|O]**

Instruction set:

**A**

A32

**T**

T32

**X**

T32EE

**O**

A64

**<mode>**

Processor execution mode.

AArch32 modes are `svc`, `irq`, `fiq`, `usr`, `mon`, `sys`, `abt`, `und`, `hyp`.

AArch64 modes are `EL3h`, `EL3t`, `EL2h`, `EL2t`, `EL1h`, `EL1t`, `EL0t`.

**<security>**

Processor security state (`s` or `ns`).

**<disasm>**

Disassembly of the instruction.

## 4.18.5 Program flow trace

If enabled, every executed branch instruction triggers this trace source, which is a more efficient way to reconstruct the program flow than by tracing every instruction.

Output syntax:

```
<time> <scale> {<cpu>} [FD|FI] (<inst_id>) <addr> <targ_addr> [A|T|X|O]
```

### <time>

Either the simulation time timestamp or the instruction count, depending on the value of the `TRACE.TarmacTrace.use_instr_cnt_as_timestamp` parameter.

### <scale>

Unit for <time>. `ps` means simulation time, `clk` means instruction count.

### <cpu>

Processor, or other component, that gave the instruction.

### [FD|FI]

Program flow change by:

#### FD

A direct branch.

#### FI

An indirect branch.

### <inst\_id>

Tick count of this processor, which is equivalent to the number of instructions that are executed, except for certain instructions like `WFI/WFE` (decimal value).

### <addr>

Fetch source address for this instruction. Formatted according to the common address definition, see [TarmacTrace file format](#).

### <targ\_addr>

Address (virtual) at which the execution continues. Formatted according to the common address definition.

### [A|T|X|O]

Instruction set after the branch:

#### A

A32.

#### T

T32.

#### X

T32EE.

#### O

A64

## 4.18.6 Register trace

If enabled, this source traces all writes to the processor registers.

This trace source includes writes to core registers `R0` to `R14`, `X0` to `X30`, `CPSR`, and `SPSR`, VFP registers such as `S0` to `S31`, `D0` to `D31`, `FPCR`, and `FPEXC`, and writes to system registers including `CP14`, `CP15`, and `GIC`. Banked registers are traced separately using the mode as a suffix to the register name, for example `r13` (current register `R13`) and `r13_mon` (banked register `R13`).

Output syntax:

`<time> <scale> {<cpu>} R <register> <value>`

### **<time>**

Either the simulation time timestamp or the instruction count, depending on the value of the `TRACE.TarmacTrace.use_instr_cnt_as_timestamp` parameter.

### **<scale>**

Unit for `<time>`. `ps` means simulation time, `clk` means instruction count.

### **<cpu>**

Processor, or other component, that gave the instruction.

### **<register>**

Register name. Banked core registers can have a mode appended to them with a single underscore. Banked `CP14/CP15` registers have `_s` or `_ns` appended to indicate access of either the Secure or Non-secure banked register.

Note

In Arm®v8 and Arm®v9, when the register name is `cpsr`:

- In AArch64 state, `cpsr` is used to trace PSTATE changes. The bit format of `<value>` follows the `SPSR_ELx` AArch64 format.
- In AArch32 state, the bit format of `<value>` follows the `CPSR` format.

### **<value>**

Hexadecimal value that is written to the register (64 bits maximum).

If the SVE plug-in is loaded in the model, there are additional registers in the program view. The output examples below show how these registers are traced when the value changes. These data values can be very large.

```
8463 clk cpu0 IT (8439) 000282c0:0000152282c0_NS 053fc01f O EL1h_n : SEL
z31.B,p0,z0.B,z31.B
8463 clk cpu0 R z31 00000000_00000000_00000000_00000000
```

**R** indicates a register write. **z0** to **z31** are the vector registers. The written data are hexadecimal digits, which are separated by an underscore every 32 bits. The length of the written data varies with the configuration, depending on the vector length.

```
9756 clk cpu0 IT (9732) 01000074:000011000074_NS 2518e3e0 O EL1t_n : PTRUE p0.B,ALL
9756 clk cpu0 R p0 ffff
```

**R** indicates a register write. **p0** to **p15** are the predicate registers. The written data are hexadecimal digits. If they are long enough to require one, the digits are separated by an underscore every 32 bits. The length of the written data varies with the configuration, depending on the vector length. Predicate registers contain 1 bit per byte of vector register length.

### 4.18.7 Cache maintenance trace

If enabled, traces all cache maintenance operations that the processor initiates.

Output syntax:

```
<time> <scale> <cpu> CACHE MAINTENANCE <side> <operation> <scope> <data> {<pagesize>
<mentype>}
```

#### <time>

Either the simulation time timestamp or the instruction count, depending on the value of the `TRACE.TarmacTrace.use_instr_cnt_as_timestamp` parameter.

#### <scale>

Unit for `<time>`. A value of `ps` means simulation time, `clk` means instruction count.

#### <cpu>

Processor, or other component, that gave the instruction.

#### <side>

Data or instruction cache.

#### <operation>

Clean, invalidate, or both.

#### <scope>

By MVA or set/way, to Point of Coherency or Point of Unification, Inner Sharable or not.

#### <data>

Data that is associated with the operation. If the operation is by MVA, formatted according to the common address definition, see [TarmacTrace file format](#), otherwise use raw hexadecimal.

#### <pagesize>

If the operation is by MVA, this element is the size of the memory region that is described by the TLB entry that contains the MVA.

**<memtype>**

If the operation is by MVA, this element is the type of memory in the TLB entry that contains the MVA.

## 4.18.8 Cache content trace

Traces the movement of data into and out of the cache.

Output syntax:

```
<time> <scale> <cpu> CACHE <id> LINE <line> <operation> 0x<paddr><ns>
```

**<time>**

Either the simulation time timestamp or the instruction count, depending on the value of the `TRACE.TarmacTrace.use_instr_cnt_as_timestamp` parameter.

**<scale>**

Unit for <time>. A value of `ps` means simulation time, `clk` means instruction count.

**<cpu>**

Processor, or other component, that gave the instruction.

**<id>**

Level and side, or system identifier, of the cache.

**<line>**

Identifier of this line uniquely within this cache, expressed in hexadecimal.

**<operation>**

Notification for this cache line. One of the following options:

**ALLOC**

(Processor caches) Line contains new read data.

**INVAL**

(Processor caches) Line contains no data.

**DIRTY**

(Processor caches) Line contains new write data.

**CLEAN**

(Processor caches) Write data is written back, still valid for reads.

**FILL**

(System caches) Line is filled.

**EVICT**

(System caches) Line is evicted due to space pressure.

**CLEAN**

(System caches) Line is cleaned due to maintenance operation.

**INVAL**

(System caches) Line is invalidated due to maintenance operation.

**<paddr>**

Cache line physical address in hexadecimal.

**<ns>**

Cacheline security. Blank for Secure regime, or `_ns` for Non-secure regime.

## 4.18.9 Translation table walk trace

If enabled, this source traces all translation table walks initiated by the processor.

Output syntax:

```
<time> <scale> <cpu> [TTW|TTU] <side> <format> <stage>:<level> <address> <data> :  
<result>
```

**<time>**

Either the simulation time timestamp or the instruction count, depending on the value of the `TRACE.TarmacTrace.use_instr_cnt_as_timestamp` parameter.

**<scale>**

Unit for `<time>`. `ps` means simulation time, `clk` means instruction count.

**<cpu>**

Processor, or other component, that gave the instruction.

**[TTW|TTU]**

Translation table walks (reads) or translation table update (writes).

**<side>**

Data or instruction TLB.

**<format>**

VMSA or LPAE format translation table entries.

**<stage>**

Walk stage, within the range 1-2.

**<level>**

Walk level, within the range 1-3.

**<address>**

Physical address of lookup in hexadecimal.

**<data>**

Raw translation table entry in hexadecimal.

**<result>**

Parsed result. One of the following options:

**ABORTED**

The memory access caused a synchronous abort and no data was returned.

**FAULT**

The data that was returned is not valid for this stage and level.

**RESERVED**

The data that was returned is not valid for this stage and level.

**TABLE** {<attr>=<value>}+

Pointer to the next level of lookup, in LPAAE format.

**BLOCK** {<attr>=<value>}

LPAAE region descriptor.

**SUPERSECTION** {<attr>=<value>}

VMSA region descriptor.

**SECTION** {<attr>=<value>}

VMSA region descriptor.

**PAGETABLE** {<attr>=<value>}

Pointer to the next level of lookup, in VMSA format.

**LARGEPAGE** {<attr>=<value>}

VMSA region descriptor.

**SMALLPAGE** {<attr>=<value>}

VMSA region descriptor.

## 4.18.10 Granule protection table walk trace

If enabled, this source traces Granule Protection Table (GPT) walks. This event is triggered by GPT lookups.

Output syntax:

```
<time> <scale> <cpu> GPTW [ISIDE|DSIDE] L<level> <address> <descaddr> : <data>
<result>
```

**<time>**

Either the simulation time timestamp or the instruction count, depending on the value of the `TRACE.TarmacTrace.use_instr_cnt_as_timestamp` parameter.

**<scale>**

Unit for <time>. `ps` means simulation time, `clk` means instruction count.

**<cpu>**

Processor, or other component, that gave the instruction.

**[DSIDE|ISIDE]**

Data or instruction TLB.

**<level>**

GPT fetch level, either 0 or 1.

**<address>**

Physical address of the lookup.

**<descaddr>**

Physical address of the GPT descriptor.

**<data>**

GPT data that was read.

**<result>**

Parsed result. One of the following values:

**BLOCK TYPE=0x01 GPI=<gpi> PGS=<pgs>**

GPT descriptor is a Block descriptor. <gpi> is the GPI value of the fetched GPT entry. <pgs> is the physical granule size.

**CONTIGUOUS TYPE=0x01 GPI=<gpi> CRS=<crs>**

GPT descriptor is a Contiguous descriptor. <gpi> is the GPI value of the fetched GPT entry. <crs> is the contiguous region size.

**TABLE TYPE=0x03 ADDR=<addr>**

GPT descriptor is a Table descriptor. <addr> is the next-level table address in hexadecimal.

**GRANULE TYPE=0x0f GPI=<gpi> PGS=<pgs>**

GPT descriptor is a Granule descriptor. <gpi> is the GPI value of the fetched GPT entry. <pgs> is the physical granule size.

**INVALID**

GPT entry is invalid.

## 4.18.11 TLB trace

If enabled, this source traces TLB entries that are filled and evicted by the processor.

Output syntax:

```
<time> <scale> <cpu> [TLB|WALKCACHE] FILL <id> <size> <virtualregime>:<paddr>
{<mentype>} {<attr>=<value>}+
```

or

```
<time> <scale> <cpu> [TLB|WALKCACHE] EVICT <id> <size> <virtualregime>
```

**<time>**

Either the simulation time timestamp or the instruction count, depending on the value of the `TRACE.TarmacTrace.use_instr_cnt_as_timestamp` parameter.

**<scale>**

Unit for <time>. *ps* means simulation time, *clk* means instruction count.

**<cpu>**

Processor, or other component, that gave the instruction.

**<id>**

Identifies which TLB or walk cache to trace.

**<size>**

Size of the region being mapped.

**<virtualregime>**

Virtual address and regime of the region being mapped, formatted according to the common virtual regime definition.

**<paddr>**

Physical base address of mapped region, formatted according to the common address definition, see [TarmacTrace file format](#).

**<memtype>**

For TLB entries, the memory type of the result. One of the following options:

**Device- [G|nG] [R|nR] [E|nE] {(<alias>) }**

Device memory, where:

**[G|nG]**

Gathering or nongathering.

**[R|nR]**

Reordering or nonreordering.

**[E|nE]**

Early write acknowledgement or not.

**<alias>**

Device-nGnRnE was previously known as StronglyOrdered.

**Normal [NonShareable|Shareable] Inner=<cachetype> Outer=<cachetype>**

Normal memory, where:

**[NonShareable|Shareable]**

Shareability

**<cachetype>**

[NonCacheable|WriteBack|WriteThrough] {NonReadAllocate} {Non}  
{WriteAllocate}

**[NonCacheable|WriteBack|WriteThrough]**

Cacheability

**{NonReadAllocate}**

For cacheable memory, Read allocate hint. (Read allocate is assumed if not specified.)

**{Non}{WriteAllocate}**  
For cacheable memory, Write allocate hint.

4.18.12 Event trace

If enabled, traces exceptions, interrupts, and exception returns. In AArch64, it also traces changes to the SPSel and to the current exception level, by generating a CoreEvent\_ModeChange.

Output syntax:

<time> <scale> {<cpu>} E <value> {<mode>} {<value1>} <number> <desc>

**<time>**  
Either the simulation time timestamp or the instruction count, depending on the value of the TRACE.TarmacTrace.use\_instr\_cnt\_as\_timestamp parameter.

**<scale>**  
Unit for <time>. ps means simulation time, clk means instruction count.

**<cpu>**  
Processor, or other component, that gave the instruction.

**<value>**  
A value that is associated with the event, formatted according to the common address definition, see [TarmacTrace file format](#).

**<mode>**  
For mode change events only, the new mode being entered.

**<value1>**  
Where available, the hexadecimal representation of a second value that is associated with the event.

**<number>**  
Event number.

**<desc>**  
Event name.

In the following table, the CoreEvent\_CURRENT\_\* and CoreEvent\_LOWER\_\* events cover all the ways in which exception entry can happen in AArch64 state. For example, CoreEvent\_CURRENT\_SPx\_SYNC corresponds to a synchronous exception taken from Current Exception level with SP\_ELx, x>0.

CoreEvent\_LOWER\_64\_IRQ corresponds to an IRQ or vIRQ taken from Lower Exception level, where the implemented level immediately lower than the target level is using AArch64.

Table 4-17: Supported values for value, number, and desc

Number	Event description	Value
0x00000001	CoreEvent_Reset	-

Number	Event description	Value
0x00000002	CoreEvent_UndefinedInstr	-
0x00000003	CoreEvent_SWI	SWI number
0x00000004	CoreEvent_PrefetchAbort	-
0x00000005	CoreEvent_DataAbort	-
0x00000007	CoreEvent_IRQ	-
0x00000008	CoreEvent_FIQ	-
0x0000000E	CoreEvent_ImpDataAbort	-
0x00000019	CoreEvent_ModeChange	New mode
0x00000080	CoreEvent_CURRENT_SPO_SYNC	-
0x00000081	CoreEvent_CURRENT_SPO_IRQ	-
0x00000082	CoreEvent_CURRENT_SPO_FIQ	-
0x00000083	CoreEvent_CURRENT_SPO_ABORT	-
0x00000084	CoreEvent_CURRENT_SPx_SYNC	-
0x00000085	CoreEvent_CURRENT_SPx_IRQ	-
0x00000086	CoreEvent_CURRENT_SPx_FIQ	-
0x00000087	CoreEvent_CURRENT_SPx_ABORT	-
0x00000088	CoreEvent_LOWER_64_SYNC	-
0x00000089	CoreEvent_LOWER_64_IRQ	-
0x0000008A	CoreEvent_LOWER_64_FIQ	-
0x0000008B	CoreEvent_LOWER_64_ABORT	-
0x0000008C	CoreEvent_LOWER_32_SYNC	-
0x0000008D	CoreEvent_LOWER_32_IRQ	-
0x0000008E	CoreEvent_LOWER_32_FIQ	-
0x0000008F	CoreEvent_LOWER_32_ABORT	-

### 4.18.13 Processor memory access trace

If enabled, this source traces processor data accesses.

Output syntax:

```
<time> <scale> {<cpu>} M<rw><sz><attrib> <addr><data>
```

**<time>**

Either the simulation time timestamp or the instruction count, depending on the value of the `TRACE.TarmacTrace.use_instr_cnt_as_timestamp` parameter.

**<scale>**

Unit for <time>. `ps` means simulation time, `clk` means instruction count.

**<cpu>**

Processor, or other component, that gave the instruction.

**<rw>****R**

Read access.

**W**

Write access.

**<sz>**

Size of the data transfer in bytes (1, 2, 4, 8).

**<attrib>**

Optional access attribute:

**X**

Exclusive access.

**T**

Translated (unprivileged) access.

**L**

Locked access (SWP, SWPB instructions).

**\_CAS<suffix>**

Compare and swap operation, where <suffix> is either *c* or *d*. *\_CASc* shows the value to compare and *\_CASd* shows the value that will be written to memory if the comparison matches.

**Note**

The value that is stored in memory as a result of a compare and swap operation is shown by an *MU* trace source.

**<addr>**

Virtual address that is used to access memory. Formatted according to the common address definition, see [TarmacTrace file format](#).

**<data>**

Hexadecimal value of data transferred. The data padding is according to the size of the transfer. Data of 64 bits or more contains an underscore (*\_*) separator every eight characters (32 bits).

## 4.18.14 Processor memory update trace

If enabled, this source traces memory update accesses caused by atomic operations.

Output syntax:

```
<time> <scale> {<cpu>} MU<sz>_<atomic_op> <addr> <data>
```

**<time>**

Either the simulation time timestamp or the instruction count, depending on the value of the `TRACE.TarmacTrace.use_instr_cnt_as_timestamp` parameter.

**<scale>**

Unit for <time>. `ps` means simulation time, `clk` means instruction count.

**<cpu>**

Processor, or other component, that gave the instruction.

**<sz>**

Size of the data transfer in bytes (1, 2, 4, 8, 16).

**<atomic\_op>**

Atomic operation performed on this memory address:

**ADD**

Atomic add operation.

**BIC**

Atomic bit clear operation.

**CASc**

Atomic compare and swap operation.

**EOR**

Atomic exclusive or operation.

**ORR**

Atomic bit set operation.

**SMAX**

Atomic signed max operation.

**SMIN**

Atomic signed min operation.

**SWP**

Atomic swap operation.

**UMAX**

Atomic unsigned max operation.

**UMIN**

Atomic unsigned min operation.

**<addr>**

Physical address that is used to access memory. Formatted according to the common address definition, see [TarmacTrace file format](#).

**<data>**

Hexadecimal value of data that is stored in memory as a result of the atomic operation. Data of 64 bits or more contains an underscore ( `_` ) separator every eight characters (32 bits).

## 4.18.15 Memory bus trace

If enabled, this source traces transactions that are initiated through the memory bus master port of the processor. These accesses use physical addresses.

Output syntax:

```
<time> <scale> {<cpu>} B<rw><sz><fd><lk><p><s> I<wrcbs> O<wrcbs> <master_id> <addr>
<data>
```

### <time>

Either the simulation time timestamp or the instruction count, depending on the value of the `TRACE.TarmacTrace.use_instr_cnt_as_timestamp` parameter.

### <scale>

Unit for <time>. `ps` means simulation time, `clk` means instruction count.

### <cpu>

Processor, or other component, that gave the instruction.

### <rw>

**R**

Read access.

**W**

Write access.

### <sz>

Size of the data transfer in bytes.

### <fd>

**I**

Opcode fetch.

**D**

Data load/store or an MMU access.

### <lk>

**L**

Locked access.

**X**

Exclusive access.

**\_**, **underscore**

Normal access.

**<p>****P**

Privileged access.

**\_, underscore**

Normal access.

**<s>****S**

Secure access.

**N**

Non-secure access.

**I<wrcbs>**

Inner cache attributes. See o&lt;wrcbs&gt;.

**O<wrcbs>**

Outer cache attributes:

**<w>****W**

Allocate on write.

**\_, underscore**

No allocate on write.

**<r>****R**

Allocate on read.

**\_, underscore**

No allocate on read.

**<c>****C**

Cacheable access.

**\_, underscore**

Non-cacheable access.

**<b>****B**

Bufferable access.

**\_, underscore**

Non-bufferable access.

**<s>**

**s**

Shareability access.

**\_, underscore**

Non-shareability access.

**<master\_id>**

Master ID of the transaction.

**<addr>**

Physical address that is used to access memory, in hexadecimal format.

**<data>**

Hexadecimal value of data transferred. The data padding is according to the size of the transfer. Byte ordering is from lowest to highest byte. This ordering means that for accesses in little endian mode, the data occurs mirrored compared to the register/memory access records.

## 4.19 ToggleMTIPlugin

ToggleMTIPlugin is an MTI plug-in that can be used to limit the generation of trace by another plug-in to specific areas of interest.

Generating trace output throughout a simulation session can reduce simulation speed and result in very large trace files. ToggleMTIPlugin helps to avoid these problems by enabling you to toggle trace generation during the simulation. Toggling trace means that if trace is on, it is turned off, and vice versa.

ToggleMTIPlugin can be used with the following plug-ins:

- ASTFplugin
- GenericTrace
- TarmacTrace

### 4.19.1 ToggleMTIPlugin - parameters

This section describes the parameters for the ToggleMTIPlugin plug-in.

Each parameter is prefixed with `TRACE.ToggleMTIPlugin`, for example:

```
TRACE.ToggleMTIPlugin.diagnostics
```

**Table 4-18: ToggleMTIPlugin parameters**

Name	Type	Default value	Allowed values	When set	Description
diagnostics	bool	false	true, false	Init time	Print diagnostics.
disable_mti_from_start	bool	false	true, false	Init time	Enable or disable MTI callbacks from start of simulation.
disable_mti_runtime	bool	false	true, false	Runtime	Enable or disable MTI callbacks at runtime.
hlt_imm16	int	0xf000	0x0 - 0xffff	Init time	16-bit integer used in HLT instruction meant to be used by this plugin.
use_hlt	bool	true	true, false	Init time	If true, use HLT #imm16 instruction to toggle MTI behavior.

### 4.19.2 How to use ToggleMTIPlugin

As with other plug-ins, load ToggleMTIPlugin using the `--plugin` command-line option when launching the model.

**Note**

- When loading ToggleMTIPlugin and any other trace plug-ins using the `--plugin` option, ToggleMTIPlugin must be the last plug-in to be specified on the command line.
- We recommend you disable trace generation from the start of the simulation, using the plug-in parameter `disable_mti_from_start=1`, then enable it when execution reaches the region of interest.

There are two alternative ways to use ToggleMTIPlugin. You cannot use both in the same simulation session. Use the `use_hlt` plug-in parameter to control which one to use:

- `use_hlt = 1`

To use this method, set the `hlt_imm16` plug-in parameter to an integer value. The application will use this value as the operand in `HLT` instructions to toggle MTI callbacks.

You must also set the following parameters on the core model that is running the application:

#### **enable\_trace\_special\_hlt\_imm16**

Set to true to enable the parameter `trace_special_hlt_imm16`.

#### **trace\_special\_hlt\_imm16**

Specifies the integer value that is used as the operand to `HLT` instructions to cause the usual `HLT` execution to be skipped. If the value matches the value specified in the `hlt_imm16` plug-in parameter, tracing is toggled.

- `use_hlt = 0`

To use this method, set the runtime plug-in parameter `disable_mti_runtime` during the simulation session to either true to disable tracing, or false to enable tracing. Changes to the `disable_mti_runtime` parameter are ignored unless `use_hlt` is zero.

To change `disable_mti_runtime` at runtime, use a debugger, for example Iris Monitor or use the `iris.debug` Python module. The example Python script `$PVLIB_HOME/examples/pyIris/inst_count_trace_control.py`, demonstrates how to do this.

## 5. Fast Models examples

The following top-level example directories are installed under `$PVLIB_HOME/examples/`.

**Table 5-1: Fast Models examples directories**

Directory name	Description
LISA	LISA+ source code and project files for FVPs.
LISAPlus	Example LISA+ components that show how to capture and generate MTI trace, remap PVBUS transactions, and handle burst transactions.
MTI	MTI plug-in examples that show how to extract and use trace information from models. These examples are also available as pre-built libraries under <code>\$PVLIB_HOME/plugins/</code> : <ul style="list-style-type: none"> <li>GenericCounter</li> <li>GenericTrace</li> <li>ListTraceSources</li> </ul>
SystemCExport	<ul style="list-style-type: none"> <li>Source code and makefiles for EVS platform examples and SVPs</li> <li>LISA+ source for bridges and EVS components</li> <li>Header files required for exporting LISA+ protocols to SystemC</li> </ul>

On Microsoft Windows, the Fast Models installer creates a copy of the examples in `%USERPROFILE%\ARM\FastModelsPortfolio_%FM-VERSION%\examples\`. This copy allows you to save configuration changes to the examples without needing Administrator permissions.

### 5.1 LISA examples

LISA+ source and project files for FVPs.

The LISA platform examples are Integrated SIMulators (ISIMs). For more information about building and running them, see [Build and run an FVP example](#).

The following LISA examples are provided:

**Table 5-2: LISA examples**

Example	Description
BusComponents	Example LISA+ components that demonstrate different ways of using the PVBUS interface.
Common	FVP-specific LISA+ components that are common to different types of FVPs.
CSS	Source and project files for Reference Design FVPs. These FVPs model compute subsystems (CSS) that target specific market segments. Reference software stacks are available for them, see <a href="#">Arm Ecosystem FVPs</a> for more information.

Example	Description
FVP_Base	Source and project files for Base Platform FVP examples. For information about the Base Platform, see <a href="#">Base Platform</a> .
FVP_BaseR	Source and project files for BaseR Platform FVP examples.
FVP_Base_RevC	Source and project files for Base Platform RevC FVP examples. For information about the Base Platform RevC, see <a href="#">Base Platform RevC</a> .
FVP_Coproc_Demo	Example implementation of the <code>Coprocessor</code> interface. Registers the coprocessor with a ARMCortexM33CT or ARMAEMv8MCT model. For more information, see <a href="#">CoprocBusProtocol protocol</a> .
FVP_MPS2	Source and project files for MPS2-based example platforms. For information about the MPS2 platforms, see <a href="#">MPS2</a> .
FVP_MPS3	Source and project files for MPS3-based example platforms that support the Arm®Corstone™ SSE-300 Example Subsystem. For more information, see <a href="#">Arm Corstone SSE-300 Example Subsystem Technical Reference Manual</a> .
FVP_VE	Source and project files for VE FVPs. For information about the VE platform, see <a href="#">Versatile Express</a> .
VP_PChannel	Shows how to create power controllers to control the power state of the cores and cluster, using the PChannel protocol. For information about PChannel, see <a href="#">PChannel protocol</a> .

## 5.2 Build and run an FVP example

The FVP examples are located under `$PVLIB_HOME/examples/LISA/`.

### Before you begin

Ensure the following:

- You have installed Fast Models and SystemC 2.3.4 and have set the environment variables as described in [Installation](#) in the Fast Models User Guide.
- You have set up a Fast Models license, either using FlexNet Licensing or [User-Based Licensing](#).
- You are using a supported Operating System and have set up a compatible toolchain, from those listed in [Requirements for Fast Models](#) in the Fast Models User Guide.

### About this task

You can build an FVP example in either of the following ways:

- From a terminal, using the `simgen` command.
- From System Canvas.

### Procedure

1. To build an FVP example from a terminal using `simgen`, enter the following commands:

```
cd $PVLIB_HOME/examples/LISA/FVP_Base/Build_Cortex-A55
simgen -b -p FVP_Base_Cortex-A55.sgproj --configuration Linux64-Release-GCC-9.3
```

where:

**-b**

means build the target.

**-p**

specifies the SimGen project file, with a `.sgproj` extension.

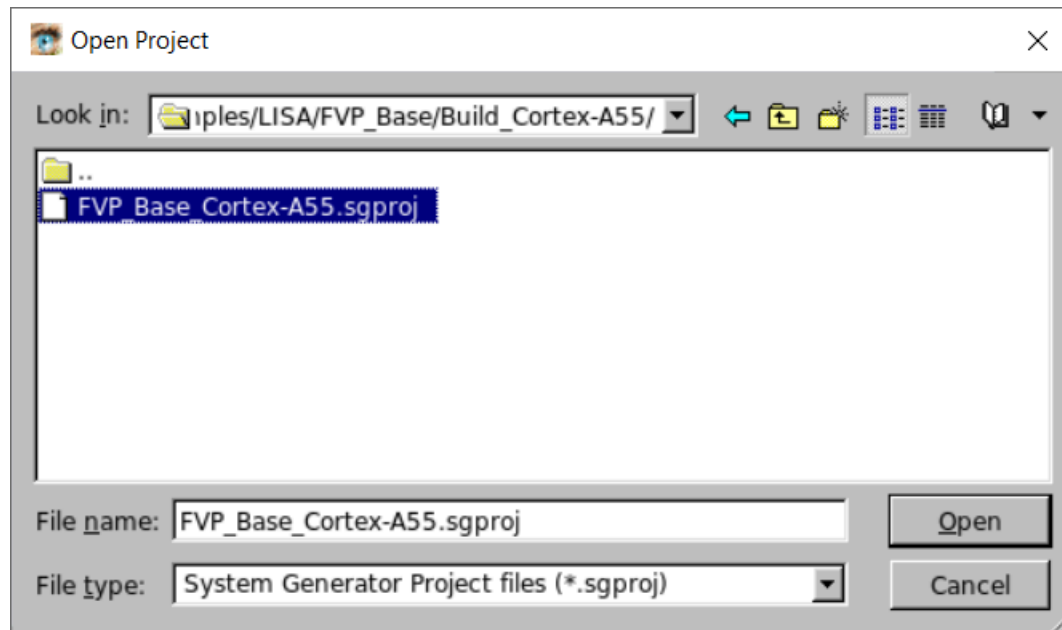

**--configuration**

specifies the build configuration name. In this example, we are performing a release build on Linux using GCC 9.3.

This command generates an executable named `isim_system` in `$PVLIB_HOME/examples/LISA/FVP_Base/Build_Cortex-A55/Linux64-Release-GCC-9.3/`.

2. To use System Canvas:
  - a. Start System Canvas by opening a terminal and typing `sgcanvas`.
  - b. In System Canvas, select **File > Load Project...** to load the `.sgproj` file for the example you want to build. This example uses `$PVLIB_HOME/examples/LISA/FVP_Base/Build_Cortex-A55/FVP_Base_Cortex-A55.sgproj`.

**Figure 5-1: System Canvas Open Project dialog box**

While the project is loading, you can ignore any errors like the following that might appear in the Output window:

```
Error (5104): undefined compile time parameter 'uart_base' in numeric expression
```

- c. Select the build configuration from the Active Project Configuration drop-down menu on the main toolbar:

**Figure 5-2: Select Active Project Configuration menu**

- d. Click **Build** to build the FVP executable.

If you changed the active project configuration, click **Yes** when prompted to save the modified project file. The output from the build process is shown in the output window at the bottom of System Canvas. If the build is successful, the last message displayed is **Model Build process completed successfully**.

- e. The generated executable is named `isim_system`. In this example, it is created in `$PVLIB_HOME/examples/LISA/FVP_Base/Build_Cortex-A55/Linux64-Release-GCC-9.3`.
3. You can run `isim_system` either from the terminal or from within System Canvas:
- To run `isim_system` from the terminal:
    - a. Navigate to the directory where it is located.
    - b. To see a full list of command-line options for `isim_system`, run it with the `--help` option:

```
./isim_system --help
```

- c. The following example command line shows how to load an application on `isim_system`:

```
./isim_system -a FVP_Base_Cortex_A55.cluster0.*=$PVLIB_HOME/images/image.axf -C bp.secure_memory=0
```

where:

**-a**

is the name of the application to load. Optionally it also specifies which core instances to run it on, in this case all cores in cluster0.

**-C**

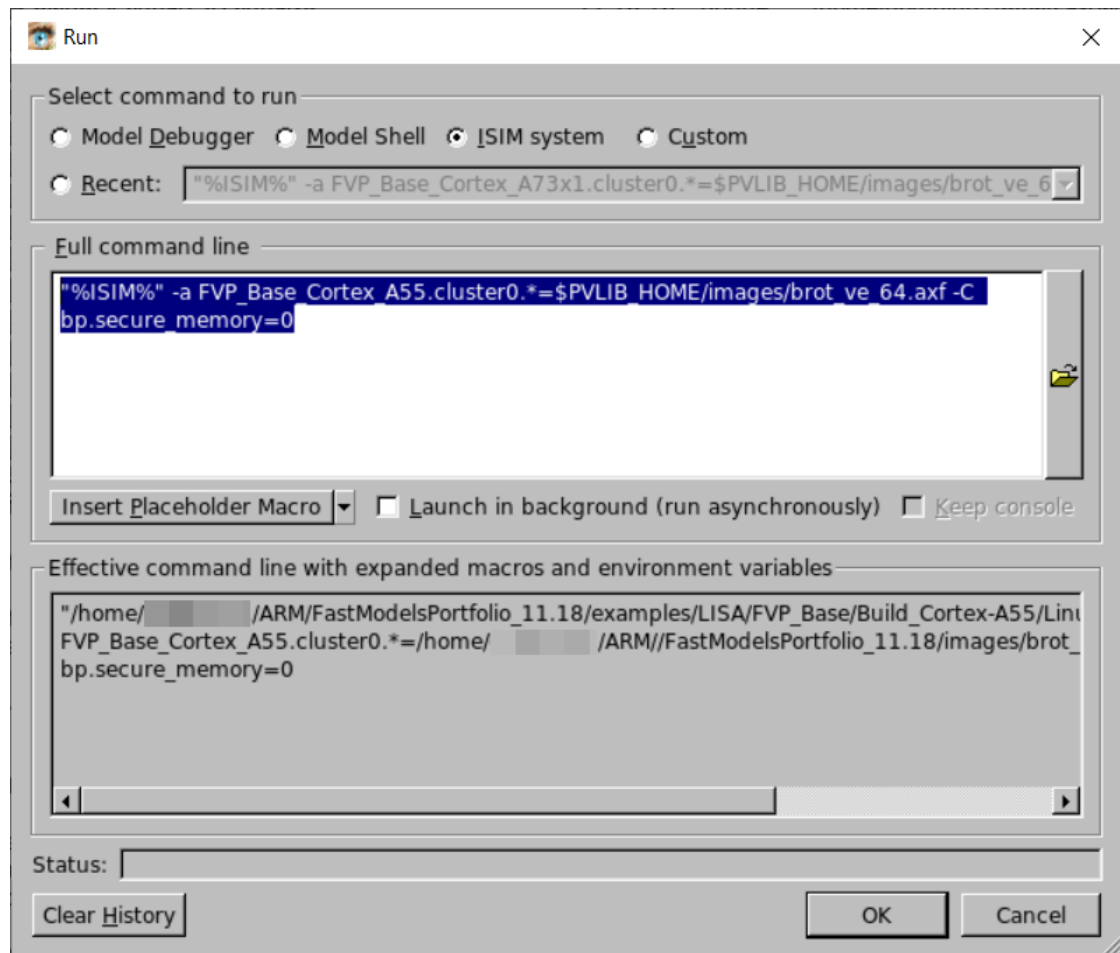

is a configuration parameter. To see a full list of the available parameters, run the model with the `--list-params` option. To specify multiple parameters, it can be more convenient to place them in a text file, each parameter on a new line, and pass them to the model when starting it using `--config-file <filename>`.

- d. The ISIM starts running, displaying the output in a CLCD window.
- e. To exit the simulation, press **Ctrl+C**.

- To run `isim_system` in System Canvas:
  - a. Click Run.
  - b. In the Run dialog box, select the **ISIM system** checkbox, then enter the following command under **Full command line**:

```
"%ISIM%" -a FVP_Base_Cortex_A55.cluster0.*=$PVLIB_HOME/images/image.axf -C  
bp.secure_memory=0
```

**Figure 5-3: System Canvas Run dialog box**

- c. Click **OK**. The ISIM starts running, displaying the output in a CLCD window.
- d. To exit the simulation, click **Kill**.

### Next steps

See the [System Canvas tutorial](#) in the Fast Models Tools User Guide for information on modifying, rebuilding, and debugging the example.

### Related information

[System Generator](#)

[System Canvas](#)[Fast Models glossary](#)[LISA examples](#) on page 5224

## 5.3 LISAPlus examples

Source code and System Canvas project files for some example LISA+ components.

**Table 5-3: LISAPlus examples**

Example	Description
CapturingTraceFromLISA	Instantiates and uses an MTI plug-in from a LISA+ component. Uses the SimpleTrace plug-in as an example.
GeneratingTraceFromLISA	Generates MTI trace information from a LISA+ component.
PVBusBursts	Uses a PVBusMaster to generate burst read transactions, which are handled by a PVBusSlave.
RemappingWithPVBusMapper	Uses the PVBusMapper component to remap transactions based on their attributes.

### Related information

[PVBusMapper](#) on page 201[PVBusMaster](#) on page 202[PVBusSlave](#) on page 206

## 5.4 MTI examples

Example MTI plug-ins that show how to use MTI to extract and use trace information from models.

The following MTI examples are provided:

**Table 5-4: MTI examples**

Example	Description
CallTrace	Displays a function call sequence by tracing the PC field of INST trace sources, then compares the output with values in a symbol table. See the <a href="#">readme</a> for more information.
CountingCacheStats	Registers counters for cache-related trace sources, for example CACHE_READ_HIT. Prints the cache stats before terminating.
DCCTrace	Prints the value of DBGDTRXX_EL0 when data is written. Updates the TxFull bit in MDSCR to indicate the data was read. See the <a href="#">readme</a> for more information.
GenericCounter	Registers a counter for trace sources. Prints the counter value for each INST trace source before terminating.  This example is also available as a pre-built library, see <a href="#">GenericCounter</a> .
GenericTrace	A flexible plug-in that traces one or more trace sources specified by the user. Prints the trace to a text file or to stdout.  This example is also available as a pre-built library, see <a href="#">GenericTrace</a> .

Example	Description
ITMtrace	Captures instrumentation trace macrocell (ITM) packets, which enables you to use ITM with a Cortex®-M class model.  For more information about this plug-in, see <a href="#">Trace Cortex-M software with the Instrumentation Trace Macrocell (ITM)</a> on Arm Community.
ListTraceSources	Displays either the trace sources provided by all trace components in the model, or just the trace components, to a text file or to stdout, without running the simulation. For more information, see <code>readme.txt</code> .  This example is also available as a pre-built library, see <a href="#">ListTraceSources</a> .
RunTimeParameterTest	Uses MTI to set runtime parameters.
SimpleTrace	Simple trace plug-in that prints a trace of the PC.
SoftwareTrigger	Traces SEMIHOSTING_PRECALL trace events, intercepts semihosting calls, and prints out register information. For more information, see the <code>readme</code> .
TraceOnBreak	Similar to the SimpleTrace example, but prints the PC value only when a breakpoint is hit.

## Related information

[Fast Models Model Trace Interface Reference Manual](#)

## 5.5 SystemCExport examples

Components and platform models that are created by exporting LISA+ components or platforms to SystemC. Also, bridge components for converting transactions between LISA+ protocols and SystemC.

**Table 5-5: SystemCExport examples**

Directory	Description
Bridges	LISA+ source for <a href="#">bridge components</a> .
Common	Source files and makefile rules that are common to the EVS and SVP examples.
Common/ Protocols	Header files that are required for the export of LISA+ protocols to SystemC.
EVS_Components	LISA+ files and project files for EVS (Exported Virtual Subsystem) components. These are LISA+ components with a SystemC wrapper and bridges that allow them to be used in a SystemC simulation.
EVS_Platforms	LISA+ source and makefiles for EVS platform examples.  An EVS platform is a LISA+ platform that has been exported as a SystemC object to allow it to be integrated into a SystemC simulation.  The EVS platform examples are minimal platforms that are designed for a specific use case, for example running the Dhrystone benchmark application or booting Linux.  The Dhrystone image <code>dhrystone_v8.axf</code> is provided in the Fast Models Third Party IP package. It is loaded from <code>\$PVLIB_HOME/images/</code> .  For more information about building an EVS platform, see <a href="#">Build and run an EVS platform example</a> .

Directory	Description
SVP_Platforms	<p>SVPs (SystemC Virtual Platforms) are platform models in which each component or subsystem has been individually exported to SystemC using the Fast Models Multiple Instantiation (MI) feature. For more information, see <a href="#">SVP build target</a> in the Fast Models User Guide.</p> <p>SVP platforms can be modified by replacing EVS components with other Fast Models EVSs, or with native SystemC components.</p> <p>For more information about building an SVP, see <a href="#">Build and run an SVP example</a>.</p>

## 5.6 Build and run an EVS platform example

The EVS platform examples are located under `$PVLIB_HOME/examples/SystemCExport/EVS_Platforms/`.

### Before you begin

Ensure the following:

- You have installed Fast Models and SystemC 2.3.4 and have set the environment variables as described in [Installation](#) in the Fast Models User Guide.
- You have set up a Fast Models license, either using FlexNet Licensing or [User-Based Licensing](#).
- You are using a supported Operating System and have set up a compatible toolchain, from those listed in [Requirements for Fast Models](#) in the Fast Models User Guide.

### About this task

Follow these instructions to build and run one of the EVS platform examples. This tutorial uses the `EVS_Dhrystone_Cortex-A75x1` example, which is a minimal platform that is designed to run the Dhrystone benchmark application.

### Procedure

1. These examples are built using a Makefile. Open a terminal and navigate to the directory containing the example, and run `make`, specifying the build configuration, for example:

```
cd $PVLIB_HOME/examples/SystemCExport/EVS_Platforms/EVS_Dhrystone/Build_Cortex-A75x1
make rel_gcc93_64
```

This command creates the target executable `EVS_Dhrystone_Cortex-A75x1.x` and copies into the current directory the shared object files that are required to run it.

2. To see a full list of command-line options for the EVS platform, run it with the `--help` option:

```
./EVS_Dhrystone_Cortex-A75x1.x --help
```

3. The Dhrystone image is available in the Third Party Add-ons for Fast Models package. Download this package from [Product Download Hub](#).
4. Install the Third Party Add-ons for Fast Models package to the location of your existing Fast Models installation. The package installs some example images, including `dhrystone_v8.axf` into `$PVLIB_HOME/images/`.

- From the terminal, enter the following command to launch the platform and load the Dhrystone image, specifying 10000000 as the number of runs through the benchmark:

```
echo 10000000 | ./EVS_Dhrystone_Cortex-A75x1.x -a $PVLIB_HOME/images/dhrystone_v8.axf
```

- The simulation runs, printing output to the terminal.

### Next steps

See the [System Canvas tutorial](#) in the Fast Models Tools User Guide for information on modifying, rebuilding, and debugging the example.

## 5.7 Build and run an SVP example

The SystemC Virtual Platform (SVP) examples are located under `$PVLIB_HOME/examples/SystemCExport/SVP_Platforms/`.

### Before you begin

Ensure the following:

- You have installed Fast Models and SystemC 2.3.4 and have set the environment variables as described in [Installation](#) in the Fast Models User Guide.
- You have set up a Fast Models license, either using FlexNet Licensing or [User-Based Licensing](#).
- You are using a supported Operating System and have set up a compatible toolchain from those listed in [Requirements for Fast Models](#) in the Fast Models User Guide.

### About this task

Follow these instructions to build and run one of the SVP examples.

### Procedure

- These examples are built using a Makefile. Open a terminal, navigate to the directory containing the example, and run `make`, specifying the build configuration, for example:

```
cd $PVLIB_HOME/examples/SystemCExport/SVP_Platforms/SVP_Base/Build_Cortex-A57x1
make rel_gcc93_64
```

This command creates the target executable `svp_Base_Cortex-A57x1.x` and copies into the current directory the shared object files that are required to run the platform.

- To see a full list of command-line options for the platform, run it with the `--help` option:

```
./SVP_Base_Cortex-A57x1.x --help
```

- Optionally, some example images are available in the Third Party Add-ons for Fast Models package. Download this package from [Product Download Hub](#).
- Install the package to the location of your existing Fast Models installation. The package installs the images into `$PVLIB_HOME/images/`.

5. The following example command-line launches the platform, using the `-a` option to load one of the images:

```
./SVP_Base_Cortex-A57x1.x -a $PVLIB_HOME/images/brot_ve_64.axf
```

6. The simulation starts running, displaying the output in a CLCD window.
7. To exit the simulation, press **Ctrl+C**.

### Next steps

See the [System Canvas tutorial](#) in the Fast Models Tools User Guide for information on modifying, rebuilding, and debugging the example.

# Product and document information

Read the information in these sections to understand the release status of the product and documentation, and the conventions used in Arm documents.

## Product status

All products and services provided by Arm require deliverables to be prepared and made available at different levels of completeness. The information in this document indicates the appropriate level of completeness for the associated deliverables.

### Product completeness status

The information in this document is Final, that is for a developed product.

## Revision history

These sections can help you understand how the document has changed over time.

### Document release information

The Document history table gives the issue number and the released date for each released issue of this document.

#### Document history

Issue	Date	Confidentiality	Change
1129-00	16 May 2025	Non-Confidential	Update for v11.29
1128-00	19 February 2025	Non-Confidential	Update for v11.28
1127-00	16 September 2024	Non-Confidential	Update for v11.27
1126-00	19 June 2024	Non-Confidential	Update for v11.26
1125-00	13 March 2024	Non-Confidential	Update for v11.25.
1124-00	6 December 2023	Non-Confidential	Update for v11.24.

Issue	Date	Confidentiality	Change
1123-00	13 September 2023	Non-Confidential	Update for v11.23.

1121-00	22 March 2023	Non-Confidential	Update for v11.21.
1120-00	7 December 2022	Non-Confidential	Update for v11.20.
1119-00	14 September 2022	Non-Confidential	Update for v11.19.
1118-00	15 June 2022	Non-Confidential	Update for v11.18.
1117-00	16 February 2022	Non-Confidential	Update for v11.17.
1116-00	6 October 2021	Non-Confidential	Update for v11.16.
1115-00	29 June 2021	Non-Confidential	Update for v11.15.
1114-01	30 March 2021	Non-Confidential	Document update 1 for v11.14.
1114-00	17 March 2021	Non-Confidential	Update for v11.14.
1113-00	9 December 2020	Non-Confidential	Update for v11.13.
1112-00	22 September 2020	Non-Confidential	Update for v11.12.
1111-00	9 June 2020	Non-Confidential	Update for v11.11.
1110-00	12 March 2020	Non-Confidential	Update for v11.10.
1109-00	28 November 2019	Non-Confidential	Update for v11.9.
1108-00	5 September 2019	Non-Confidential	Update for v11.8.

Issue	Date	Confidentiality	Change
1107-00	17 May 2019	Non-Confidential	Update for v11.7.
1106-01	25 March 2019	Non-Confidential	Update for v11.6.1.
1106-00	27 February 2019	Non-Confidential	Update for v11.6.
1105-00	23 November 2018	Non-Confidential	Update for v11.5.
1104-01	17 August 2018	Non-Confidential	Update for v11.4.2.
1104-00	22 June 2018	Non-Confidential	Update for v11.4.
1103-00	23 February 2018	Non-Confidential	Update for v11.3.
1102-00	17 November 2017	Non-Confidential	Update for v11.2.
1101-00	31 August 2017	Non-Confidential	Update for v11.1.
1100-00	31 May 2017	Non-Confidential	Update for v11.0. Document numbering scheme has changed.

## Change history

For information about the functional changes to Fast Models, see the [Fast Models Release Notes](#).

## Conventions

The following subsections describe conventions used in Arm documents.

### Glossary

The Arm Glossary is a list of terms used in Arm documentation, together with definitions for those terms. The Arm Glossary does not contain terms that are industry standard unless the Arm meaning differs from the generally accepted meaning.

See the Arm Glossary for more information: [developer.arm.com/glossary](https://developer.arm.com/glossary).

### Typographic conventions

Arm documentation uses typographical conventions to convey specific meaning.

Convention	Use
<i>italic</i>	Citations.
<b>bold</b>	Interface elements, such as menu names.  Terms in descriptive lists, where appropriate.
monospace	Text that you can enter at the keyboard, such as commands, file and program names, and source code.
monospace <u>underline</u>	A permitted abbreviation for a command or option. You can enter the underlined text instead of the full command or option name.
<and>	Encloses replaceable terms for assembler syntax where they appear in code or code fragments.  For example: <div>MRC p15, 0, &lt;Rd&gt;, &lt;CRn&gt;, &lt;CRm&gt;, &lt;Opcode_2&gt;</div>
SMALL CAPITALS	Terms that have specific technical meanings as defined in the <i>Arm® Glossary</i> . For example, <b>IMPLEMENTATION DEFINED</b> , <b>IMPLEMENTATION SPECIFIC</b> , <b>UNKNOWN</b> , and <b>UNPREDICTABLE</b> .

We recommend the following. If you do not follow these recommendations your system might not work.

Your system requires the following. If you do not follow these requirements your system will not work.

You are at risk of causing permanent damage to your system or your equipment, or harming yourself.

This information is important and needs your attention.

A useful tip that might make it easier, better or faster to perform a task.

**Remember**

A reminder of something important that relates to the information you are reading.

---
